BOHUN, WILLIAM DE, EARL OF NORTHAMPTON (*d.* 1360), was the fifth son of Humphrey de Bohun VIII [q. v.], fourth earl of Hereford, and Elizabeth Plantagenet daughter of King Edward I, and was a distinguished soldier. He was probably born about 1310. He is said to have taken part with the young king, Edward III, in 1330, in the suppression of Mortimer. In 1337, upon the advancement of Edward, prince of Wales, to the duchy of Cornwall, William de Bohun was created earl of Northampton on 16 March, and received grants of the castle and manor of Stamford and lordship of Grantham, Lincolnshire, and the castles and manors of Fotheringhay, Northamptonshire, and Okeham, Rutlandshire, in male tail. In the same year he was appointed one of the commissioners to treat with Philip of France on Edward's claim to the French crown, and subsequently a commissioner to treat with David Bruce. He took part in Edward's expedition which sailed for Antwerp in July 1338, and in 1340 was present at the naval victory of Sluys on 24 June. In 1342 he was appointed the king's lieutenant and captain-general in Brittany, and defeated the French at Morlaix and took La Roche Darrien by assault. On the conclusion of a truce for three years he returned to England, and next year accompanied Henry, earl of Lancaster, into Scotland, marching to the relief of Loughmaben Castle, in Dumfriesshire, of which he was governor. He was again in Brittany at the close of the year, and again in 1345 and 1346; and took part in Edward's campaign in the latter year, distinguishing himself in a skirmish on the Seine, and being present at the battle of Cressy on 26 August. During the next two years he continued to serve in France, and in 1349 was a commissioner for concluding a truce. In 1350 William de Bohun was appointed warden of the marches towards Scotland, and the next year was appointed to negotiate a peace with that kingdom. In 1352 he was commissioner of the array of troops in Essex and Hertford to oppose the landing of the French. He was again in the north in 1353 and following years, and in 1355 served in the French campaign. In 1356 he was commissioned to treat for the ransom of David Bruce, and in 1357–9 was abroad in Gascony. He died 16 Sept. 1360, and was buried at Walden in Essex.

Bohun, who was K.G., married Elizabeth, daughter of Bartholomew de Badlesmere, and widow of Edmund Mortimer. His son, Humphrey, succeeded him, and in 1361, as heir to his uncle Humphrey, earl of Hereford and Essex, united in his person the three earldoms of Hereford, Essex, and Northampton.

[Chronicles of Walt. de Hemingburgh and Thos. Walsingham; Dugdale's Baronage, i. 185.] E. M. T.

BOILEAU, Sir JOHN PETER (1794–1869), archæologist, was the son of John Peter Boileau, the descendant of a Huguenot family who claimed descent from Etienne Boileau, first grand provost of Paris in 1250. The father went to India with his relative, General Cailland, where he filled the highest offices in the presidency of Madras, and returned to England with an ample fortune in 1785. He purchased the estate of Tacolnestone in Norfolk, but died at his residence at Mortlake in Surrey, 10 March 1837, in his ninety-first year. By his wife Henrietta, eldest daughter and coheiress of the Rev. George Pollen, he was father of the subject of the present memoir. John Peter Boileau was born in Hertford Street, Mayfair, London, 2 Sept. 1794, being his father's eldest son. He became second lieutenant, 9 Sept. 1813, of the Rifle Corps, a regiment raised by his uncle, General Manningham, and served for some years, when he was placed on half-pay, 14 Aug. 1817. In 1836 he purchased the estate of Ketteringham, Norfolk, and was created a baronet, 24 July 1838, on the occasion of the coronation of her majesty. He afterwards made other purchases in the neighbourhood of Ketteringham, at Hethall and Hetherset, and in the vicinity of Yarmouth became the proprietor of Burgh Castle in Suffolk, the ancient Gariononum, perhaps the most remarkable example of Roman masonry in any part of England. It is to be remembered to his honour as an antiquary that he purchased that interesting remain to prevent it falling into hands which might have wrought its destruction. At Ketteringham he made great improvements by the erection of a spacious Gothic hall, and his house was richly stored with paintings, books, and many choice monuments of antiquity. Boileau was elected a fellow of the Royal Society, 1 June 1843, and of the Society of Antiquaries, 9 Dec. 1852. On the formation of the Norfolk and Norwich Archæological Society in December 1845 he was nominated one of the vice-presidents, and in 1849, on the death of Bishop Stanley, he succeeded to the office of president. To vol. v. of 'Norfolk Archæology' he communicated 'An old Poem on Norfolk, written temp. Elizabeth,' and 'A Notice of a Sceatta found at Burgh Castle,' and in vol. vii. are his remarks 'On some Reaping Machines of the Ancient Gauls.' In 1850 he sent to the Archæological Institute an account of 'An Examination of some Roman Remains at Redenham in Hampshire.' On the nomination of Earl Stanhope he served for two periods of four years as one of the vice-presidents of the Society of Antiquaries, from 1858 to 1862, and from 1863 to 1867. He excelled as a chairman, having a rapid appreciation of any subject brought to his attention and a pleasing tact in discussing its merits. In addition to the institutions already named he was a vice-president of the Zoological Society, the Statistical Society, the Archæological Institute, and the Society of Arts, Manufactures, and Commerce, in all of which he for a long period took a prominent part and a most lively interest. He was also a vice-president of the British Association, a vice-president of the Royal Institution in Albemarle Street, president of the Norwich School of Design, and a fellow of the Geological Society. He served the office of sheriff in Norfolk in 1844. As a country gentleman he performed the duties of his position with scrupulous care, urbanity of manner, and genial kindness of heart. He suffered for some months from chronic bronchitis, and resided on that account at Torquay, where his death occurred 9 March 1869. His body was brought thence to Ketteringham and deposited in the family vault. Boileau married, 14 Nov. 1825, Lady Catherine Sarah Elliot, third daughter of Gilbert, first earl of Minto. She was born 2 July 1797, and died 22 June 1862. As a memorial to his wife he fitted up the Catherine ward in the Norfolk County Hospital. The eldest surviving son, now Sir Francis George Manningham Boileau, a barrister of Lincoln's Inn, has succeeded to his father's title and estates.

[The History and Topography of Ketteringham, by Joseph Hunter, F.S.A., in Norfolk Archæology, being the Transactions of the Norfolk and Norwich Archæological Society, iii. 245–314 (1852), and Notice of the Excavations at Burgh Castle by H. Harrod, F.S.A., in ii. pt. i. 146–60 (1856); The Register and Magazine of Biography, i. 292–4 (1869).] G. C. B.

BOIS, JOHN (1561–1644), translator of the bible, was born at Nettlestead, Suffolk, 3 Jan. 1561. For the spelling of his surname see his printed publications and the signature to his will in Peck's 'Cromwell.' His father, William Bois, the son of a clothier at Halifax, was educated at Michael House, Cambridge (included in Trinity College by Henry VIII), and acquired proficiency in music and Hebrew. Under Bucer's influence he became a protestant, and retired to a farm at Nettlestead, near Hadleigh. He married Mirabel Pooley. He was presented to the rectory of Elmset, and afterwards to that of West Stow, near Bury St. Edmunds, by Pooley, his brother-in-law, and died 22 April 1591, at the age of seventy-eight. Of several

children John was the only one who grew up. His father taught him, and between his fifth and sixth years he could both read the Hebrew bible and write the characters elegantly. He went to Hadleigh grammar school (where he was a schoolfellow of John Overall, afterwards bishop of Norwich), and thence to St. John's, Cambridge, of which John Still, rector of Hadleigh (afterwards bishop of Bath and Wells), was master. He says he went up to Cambridge 27 Feb. 1575; he was admitted 1 March, and on the foundation 12 Nov. His tutor was Henry Copinger, and on the appointment of Copinger as master of Magdalen, Bois was transferred thither. When Copinger's appointment was reversed, Bois was allowed to return to St. John's. He studied hard at Greek, in which he wrote letters in his fifteenth year, and is said to have worked in the university library from four in the morning till eight at night. When elected fellow in 1580 he was ill with small-pox, and was carried in blankets to be admitted, so preserving his seniority. Medicine was his intended profession; he gave it up because he fancied himself affected with every disease he read of. He was ordained deacon on Friday, 21 June 1583, by Edmund Freake, bishop of Norwich (Ely was then vacant), and next day priest by dispensation. He was first elected Greek lecturer at Cambridge on 4 Nov. 1584, and re-elected at intervals till 1595. It was his custom to give extra lectures in his room at four in the morning, when most of the fellows attended. He succeeded his father in 1591 as rector of West Stow, but resigned the living when his mother went to reside with her brother Pooley. Holt, rector of Boxworth, five miles from Cambridge, left a will by which he nominated Bois as his successor and expressed a wish that he should marry his daughter. Bois was instituted to the living 13 Oct. 1596, and married the daughter 7 Feb. 1598-9. His college gave him 100*l.* when he resigned his fellowship. Mrs. Bois was a bad economist; and an accumulation of debt was only discharged by the sale, at great loss, of Bois's fine library. There was a temporary estrangement, but the story that Bois thought of expatriating himself seems mere gossip. He soon reconciled himself to circumstances, and continued to leave all pecuniary matters in his wife's hands. He took boarders, and had a succession of young scholars in his house to teach them, along with his children and some of the neighbouring poor. A clerical society of twelve was established by him, to meet on Fridays and exchange the results of study. Though not living in the university, he was appointed in 1604 one of the Cambridge translators for King James's bible, and did his own part (in the Apocrypha) and that of another (in the section from Chronicles to Canticles). No pay was given for this work, but the translators got their commons. He was one of the six selected to go up to London and revise the whole translation when the several parts had been done, a labour which occupied nine months, each member of this committee receiving thirty shillings a week from the Stationers' Company. This was the extent of his recompense, though Peck identifies him with the John Boys, D.D., nominated fellow of the projected college at Chelsea (Fuller, *Ch. Hist.* lib. x. p. 52), but this was John Boys, dean of Canterbury [q. v.] Bois gave his labour for many years in aid of Sir Henry Savile's noble edition of St. Chrysostom's works (printed 1610-13, eight vols. fol., the date on the title-pages is 1612), and got a present of a single copy for his pains. He was under the impression that Savile intended him for a fellowship at Eton, but was prevented by death (19 Feb. 1622-3) from giving him this appointment. However, on 25 Aug. 1615, Lancelot Andrewes, then bishop of Ely, had instituted him to a prebend in his cathedral. In Bentham's 'Catalogue of the Principal Members of the Conventual and Cathedral Church of Ely,' Camb., 1756, 4to, he is called B.D., and it is said that he held the first and second stalls in 1615. As a clergyman Bois was exemplary, preaching plain sermons with much preparation, but without notes. He was also liberal to the poor. A curious story is told of his stating to four successive bishops of Ely his scruples about baptising a stray child, over the usual age, but too young to make a personal profession of faith. He lived by rule and fasted on a system of his own, sometimes twice a week, sometimes once in three weeks. He was fond of walking, and had learned from William Whitaker, master of St. John's (*d.* 4 Dec. 1595), to study standing, never in a window, and not to go to bed with cold feet. In his sixty-eighth year (1628) he retired to Ely. His wife died 16 May 1642. He made his will 6 June 1643, and died at Ely 14 Jan. 1644. He was not buried till 6 Feb. He had four sons and two daughters, but only his second son John and second daughter Anne survived him.

His extant writings are: 1. Notes to various parts of Chrysostom's works, and two Latin Letters to Sir H. Savile (the second characterises Chrysostom's writings) all in vol. viii. of Savile's 'Chrysostom,' Eton, 1612, fol. 2. Commendatory Epistle (dated 21 Sept. 1629) prefixed to Richard Francklin, B.D., of Elsworth's '*Ὀρθοτονία*, seu Tractatus de Tonis

in Lingua Græcanica,' 1630, small 8vo; another edition 1633, small 8vo (Francklin had drawn up this treatise on the Greek accents six years before for a pupil and kinsman; Bois was probably the friend, 'vir omni literatura insignis,' who suggested that he should revise and perfect the work. Cole's account is incorrect). 3. 'Veteris Interpretis cum Beza aliisq; recentioribus Collatio in Quatuor Evangeliis, & Apostolorum Actis. In qua annon sæpiùs absque justa satis causa hi ab illo discesserint disquiritur. Autore Johanne Boisio, Ecclesiæ Eliensis Canonico. Opus auspiciis Reverendi Præsulis, Lanceloti Wintonensis Episcopi, τοῦ μακαρίτου, cœptum & perfectum, &c.,' London, 1655, small 8vo. (Of this posthumous work few copies were printed, and the wretched type and paper have a foreign look; it consists of brief critical notes on words and passages of the Greek text, in which the renderings of the Vulgate are in the main defended, but Bois frequently proposes more exact translations of his own, both Latin and English; he finished Matthew 13 Aug., Mark 30 Sept. 1619; Luke 24 Aug., John 13 Oct. 1621; Acts 9 April 1625: his manuscript extended a little way into the Epistle to Romans.) Caleb Dalechamp, of Sedan (M.A. Trin. Coll. Camb.), dedicates to Bois, as the first of living Greek scholars, his 'Harrisonus Honoratus,' appended to 'Christian Hospitalitie,' Camb. 1632, 4to (in memory of Thomas Harrison, B.D., vice-master of Trinity).

BOISIL, Saint (*d.* 664), superior of the monastery of Melrose, under the Abbot Eata, is stated by Forbes (*Kalendar of Scottish Saints*, p. 281) to have been trained by St. Cuthberht, but according to Bæda (*Hist. Eccles.* iv. 27) St. Cuthberht was trained by him at Melrose, receiving from him both the knowledge of the scriptures and an example of good works. Bæda, who received his information from Sigfrid, a monk of Jarrow, trained also by Boisil at Melrose, states that on seeing Cuthberht when he arrived, Boisil immediately exclaimed, 'Behold a servant of the Lord,' and obtained from Abbot Eata permission 'that he should receive the tonsure and be enrolled among the brethren' (*Vita S. Cuth.* c. vi.) He is said by Bæda to have twice appeared in dreams to a companion of the famous Ecgberht, who in consequence of the vision made a journey to Iona (Bæda, *Hist. Eccles.* v. 9). When Cuthberht was smitten in the great sickness of 664, Boisil assured him of his recovery. Shortly afterwards Boisil was himself mortally smitten, as he had foretold three years before to Abbot Eata, and during his sickness foretold to Cuthberht his future fortunes, and that he would be a bishop. St. Cuthberht succeeded him as superior of Melrose. Relics of him were preserved at Durham. He gives the name to St. Boswell's, Roxburghshire. He is commemorated on 9 Sept., although his name appears in the Scottish calendars on 23 Feb. Boisil is said to have written 'De Fide quæ per charitatem operatur;' 'In Evangelium Joannis;' 'Meditationes;' and 'De Trinitate excerpta ex D. Augustino et aliis.'

BOISSIER, GEORGE RICHARD (1791–1858), ecclesiologist, was educated at Magdalen College, Cambridge (B.A. 1828), became incumbent of Oakfield, Penshurst, Kent, and died 23 June 1858. While an undergraduate he published anonymously a very interesting architectural work, entitled 'Notes on the Cambridgeshire Churches,' Cambridge and London, 1827, 8vo.

BOIT, CHARLES (*d.* 1726?), enamel painter, was born at Stockholm. His father was a Frenchman. He learned the business of a jeweller, and proposed, upon coming to England, to follow that avocation, but was 'upon so low a foot' that he seems to have lacked the wherewithal to establish a business, and was forced to travel about the country teaching drawing. He engaged the affections of one of his pupils, but, the affair being unhappily discovered before the marriage had been solemnised, Boit, by some high-handed perversion of justice, was thrown into prison.

He spent the two years of his confinement in learning the art of enamelling. Leaving prison, he established himself in London, and in the practice of his new art soon grew to celebrity. 'His prices,' says

Walpole, 'are not to be believed.' He received a commission to paint 'a large plate of the Queen, Prince George, the principal officers and ladies of the court, and Victory, introducing the Duke of Marlborough and Prince Eugene; France and Bavaria prostrate upon the ground, &c., &c.' The size of the plate was to be from 22 to 24 inches high by 16 to 18 inches wide. For this modest fancy Boit obtained an advance of 1,000*l.* and made extensive preparations for the work. In these, it is said, he wasted between seven and eight hundred pounds. Meanwhile the prince died, and the work was stopped for some time. Boit, however, secured a further advance of 700*l.* and proceeded. In consequence of the revolution at court he was ordered to displace the Marlboroughs, and to introduce figures of 'Peace and Ormond, instead of Victory and Churchill.' After this nothing prospered with him. Prince Eugene refused to sit, the queen died, Boit incontinently ran into debt. He fled to France, changed his religion, got a pension of 250*l.* per annum, and was greatly admired. He died suddenly at Paris about Christmas 1726. His principal enamel is one of the imperial family of Austria, preserved at Vienna; it is on gold, and is 18 inches high by 12 inches wide. Another of considerable size represented Queen Anne sitting with Prince George standing by her. Horace Walpole possessed a copy by him of Luca Giordano's 'Venus, Cupid, Satyr, and Nymphs,' and also 'a fine head' of Admiral Churchill. He mentions that Miss Reade, the artist, had a 'very fine head' of Boit's own daughter, enamelled by him from a picture of Dahl.

[Walpole's Anecdotes of Painters, ii. 633–5; Fiorillo's Geschichte der zeichenden Künste, v. 522.] E. R.

BOITARD, LOUIS PETER (*fl.*1750), engraver and designer, was born in France, and was a pupil of La Farge. His father brought him to England. He made many engravings after Canaletto, Huet, Pannini, and others. One of his best known plates represents the Rotunda at Ranelagh, after Pannini. In 1747 he supplied forty-one large plates for Spence's 'Polymetis,' and he engraved the illustrations to Paltock's 'Peter Wilkins,' 1750, and the 'Scribleraid' of Richard Owen Cambridge, 1751. Besides these he executed many vignettes, minor designs, and portraits, among the last one of 'Elizabeth Canning;' and he is said to have been a humourist and a member of the Artists' Club. His wife was English; and he had a son of the same name and profession, who was perhaps the designer of the large satirical plate entitled 'The Present Age,' 1767, which is to be found in the British Museum print room. The date of his death is unknown, being stated by some authorities as 1758, by others as after 1760.

[Bryan's and Redgrave's Dicts.; Nagler; Stephens's Catalogue of Satirical Prints in the British Museum, iv. 412.] A. D.

BOKENHAM or BOKENAM, OSBERN (1393–1447?), poet in the Suffolk dialect, was born, according to his own statement, on 6 Oct. 1393. His birthplace was near 'an old pryory of blake canons,' which may be identified with Bokenham—the modern Old Buckenham—Norfolk, famous at one time for its Augustinian priory. He spent five years in early life at Venice, and was subsequently a frequent pilgrim to Rome and to other parts of Italy. He specially mentions a pilgrimage to Monte Fiasko ('Mownt Flask'). His permanent home was in the Augustinian convent of Stoke Clare, Suffolk, of which he was a professed member. He was a man of wide reading, familiar with Ovid, Cicero, Gower, Chaucer, and Lydgate, besides many theological authors. He was intimate with ladies of high rank, and, in accordance with their suggestion, he drew up in English a series of thirteen poems commemorating the lives of twelve holy women and of the 11,000 virgins. With the legends he incorporated much autobiographical detail. Bokenham's work is preserved in the British Museum among the Arundel MSS. (No. 327). Its colophon runs: 'Translaytyd into englys be a doctor of dyuinite clepyd Osbern Bokenam [a suffolke man], frere austyn of the conuent of Stokclare [and was doon wrytyn in Cantbryge by hys . . . ffrere Thomas Burgh]. The yere of our lord a thousand foure hundryth seuyn & fourty, etc.' Bokenham in the prologue to his first poem—on St. Margaret—which he began on 6 Sept. 1443, states that he wrote at the request of his friend Thomas Burgh of Cambridge, the transcriber of the Arundel MS., and begged him to conceal the authorship. The poem on St. Anne is inscribed to Katherine Denston, wife of John Denston; that on St. Magdalena, begun in 1445, to Isabel Bourchier, countess d'Eu, sister of the Duke of York; that on St. Elizabeth to Elizabeth Vere, countess of Oxford, with all of whom Bokenam was on terms of intimacy. Bokenham's chief authority is the 'Legenda Aurea' of Jacobus a Voragine, archbishop of Genoa, whom he freely quotes as Januense, i.e. Genuensis. For the story of St. Agnes Bokenam depended on Ambrose's version of the

legend (cf. AMBROS. *Opp.* v. Epist. lib. iv. cp. 34). Bokenham writes 'after the language of Suthfolke speche,' and his versification consists at times of ten-syllabled rhyming couplets, at times of the *ottava rima*, and at times of seven-lined alternately rhymed stanzas. His book is a very valuable specimen of the Suffolk dialect of the fifteenth century. It has been twice printed: (1) for the Roxburghe Club in 1835, in black letter, at the expense of Lord Clive; and (2) by C. Horstmann, at Heilbronn in 1883, in Dr. Eugen Kölbing's 'Altenglische Bibliothek.' The second edition adheres to the Arundel MS. more carefully than the first, and is far richer in critical apparatus. Horstmann has also shown Bokenham to be author of 'Mappula Mundi,' a translation of Higden's 'Polychronicon' (cf. *Englische Studien*, 1886).

Bokenham is also credited on internal evidence with the authorship of 'This Dialogue betwix a Seculer asking and a Frere answeryng at the grave of Dame John of Acres, shewith the lyneal descent of the lordis of the honoure of Clare fro the tyme of the fundation of the Freeris in the same honoure, the yere of our Lord MCCXLVIII, unto the first day of May, the yere MCCLVI.,' printed in Dugdale's 'Monasticon Anglicanum,' vi. 1600. The dialogue is given in both English and Latin verse, and the former very closely resembles some passages in the 'Lyvys of the Seyntys.' Bokenham apparently died during 1447, the year in which Thomas Burgh completed his transcription of the poems.

[The Lyvys of Seyntys, printed for the Roxburghe Club, 1835; Bokenam's Legenden, herausgegeben von C. Horstmann, Heilbronn, 1883; Tanner's Bibl. Brit.; Dugdale's Monast. Angl. vi. 1600.] S. L.

BOKYNGHAM or BUCKINGHAM, JOHN (*d.* 1398), bishop of Lincoln, was rector of Olney, prebendary of Lichfield, and dean in 1349; he was appointed to the archdeaconry of Northampton in 1351, and in 1352 received from the king the prebend of Gretton in the church of Lincoln. He was keeper of the privy seal to Edward III. He has been identified by Godwin with a scholastic theologian of the same name, who, according to Bale (*Scriptores*, ii. 72), wrote 'Quæstiones Sententiarum' and 'Ordinariæ deceptationes.' Of these the 'Quæstiones' has been printed with the title 'Joannis Bokingham Angli opus acutissimum in quatuor libros Sententiarum, Parisiis, p. Joann. Barbier, MDV,' 4to (PANZER, vii.), and is in the Bodleian Library. The identity, however, of the bishop with the scholastic doctor is purely conjectural, and may be safely rejected, as Bokyngham does not seem to have been a man of learning. On the sudden death of Reginald Brian, bishop of Worcester, postulated to the see of Ely, in 1361 the monks of Ely elected John Bokyngham, but the election was quashed by the pope. In 1362 Urban, at the request of the king, made Bokyngham bishop of Lincoln by provision. Having been examined at St. Omer by two abbots appointed by the pope, and pronounced fit for the episcopate, he was consecrated on 25 June in the following year. On entering on his bishopric he took 8*d.* in the mark from his clergy. His diocese, which included Oxford and Lutterworth, was the headquarters of the Lollard movement. Swynderby, one of the most violent of the Wycliffite preachers, was exceedingly popular at Leicester. The bishop attempted to stop his preaching, and managed to turn him out of the chapel of St. John the Baptist. Swynderby was, however, upheld by the people. He used two great stones which lay outside the chapel as a pulpit, and declared that as long as he had the good will of the people he would 'preach in the king's highway in spite of the bishop's teeth.' In May 1382 Bokyngham attended the synod called the council of 'the earthquake,' held in London by Archbishop Courtenay, in which the propositions ascribed to the Wycliffite preachers were pronounced heretical, and, in common with other bishops, published in his diocese the archbishop's mandate on the subject. In the summer of that year Bokyngham, in virtue of letters obtained by Courtenay from the king, caused Swynderby to be arrested, and, in spite of the opposition of the people of Leicester, convicted him of heresy. Swynderby appealed to the king and the Duke of Lancaster. The case was brought before parliament, but he was handed over to the bishop, and recanted his errors. Although Bokyngham upheld the policy of the archbishop against the Lollards, he was not blind to the abuses prevailing in the church, and in 1394 held a visitation of Lincoln cathedral, which brought to light many delinquencies among the members of the chapter. He does not seem to have approved the policy which turned the liberation of the church from papal power into her subjection to the crown; for when, acting in virtue of a statute of 1389, 13 Ric. II (*Rolls of Parl.* iii. 273), the king forbade an appointment to the archdeaconry of Buckinghamshire until his right to present had been settled in his court, he allowed the office to be filled by an exchange. The king next claimed to appoint to the archdeaconry of Leicester, then held by an alien absentee, the Cardinal Orsini ('de Urcinis'). A long suit followed, in which the

bishop unsuccessfully defended the claim of the incumbent. In the course of the suit he summoned the cardinal to defend his own right, and on his neglect delivered the office to the king's nominee, whom he finally instituted, when the suit was decided against himself. At the same time some of Bokyngham's appointments were made in accordance with the king's will. Thus, in 1393, he gave a prebend to Roger Walden, Richard's secretary, afterwards made treasurer and archbishop; and the gift of another prebend in 1395 to Thomas Haxey, agent of the Earl of Nottingham, must also be considered as due to court influence in spite of the part afterwards taken by Haxey in the parliament of 1397. Bokyngham, however, had shown some independence of action, enough probably to rouse the king's dislike. Richard may also have desired the rich see of Lincoln for his cousin, Henry Beaufort, as a means of binding that branch of the house of Lancaster closely to himself, so as to counterbalance the influence of the Earl of Derby. Boniface IX was in such need of English help that he willingly lent himself to do the king's pleasure, and in 1397 translated Bokyngham to the see of Lichfield. Indignant at being thus removed to a far less wealthy and important bishopric than that he had held so long, Bokyngham refused to be translated. He retired to the monastery of Christ Church at Canterbury, where he died 10 March 1398. He was a benefactor to his cathedral church and to New College, Oxford, and also took part in building Rochester bridge.

[Anglia Sacra, i. 49, 449, 663; Le Neve's Fasti; Knighton's Twysden, 2627–2668; Walsingham, i. 298, ii. 55, 228; Fasciculi Zizaniorum, 286, 334; Foxe's Acts and Monuments, i. 607; Bokyngham's Register, Hutton extr., Harleian MS. 6952.] W. H.

BÖLCKOW, HENRY WILLIAM FERDINAND (1806–1878), ironmaster, the son of Heinrich Bölckow, of Varchow, in the grand-duchy of Mecklenburg, by his wife Caroline Dussher, was born at Sulten, in Mecklenburg, 8 Dec. 1806. About 1821 his parents placed him in a merchant's office at Rostock. There he made the acquaintance of a gentleman at Newcastle-on-Tyne; at his suggestion came to England, and went into business with him in 1827. He liked England; was made a naturalised British subject; in 1841 selected the town of Middlesborough as the seat of his future operations; entered into partnership with Mr. John Vaughan; erected blast furnaces and commenced the manufacture of iron. Soon after this period Mr. Vaughan discovered the Cleveland ironstone mines. The success of their business in a short time enabled them to multiply their works: they acquired collieries, limestone quarries, machine works, gasworks, and brickfields; and Middlesborough became a centre of such great importance that it received a charter of incorporation in 1853. Bölckow was elected the first mayor. The population of the town had then risen to 40,000, and the production of ironstone to 4,000,000 tons per annum. Bölckow presented to the inhabitants the Albert Park, at a cost of more than 20,000*l.* (11 Aug. 1868). In the following year he spent 7,000*l.* in the erection of the St. Hilda's schools. When the town was granted parliamentary representation, Bölckow was unanimously elected the first member, 16 Nov. 1868, and held that position until his death. In 1871 the firm of Bölckow & Vaughan was formed into a limited liability company with a capital of 3,500,000*l.*, the founder of the business becoming chairman of the company. Bölckow collected a fine gallery of pictures, nearly all of them being by living French and English artists (*Athenæum*, 22 Nov. 1873, pp. 664–6). He died at Ramsgate 18 June 1878, and was buried in Marton churchyard on 22 June. He married first, in 1841, Miriam, widow of C. Hay, who died in 1842, and secondly, in 1851, Harriet, only daughter of James Farrar, of Halifax.

[English Cyclopædia, Biography, Supplement, 1872, pp. 273–4; Practical Magazine, i. 81–90 (1873), with portrait; Times, 19 June 1878, p. 11, col. 4; Illustrated London News, lxxii. 613 (1878).] G. C. B.

BOLD, HENRY (1627–1683), poetical writer, was born in 1627, and was a descendant of the ancient Lancashire family of Bold of Bold Hall. He was the fourth son of Captain William Bold of Newstead in Hampshire. He was educated at Winchester School; thence went to Oxford, and in 1645 was elected a probationer fellow of New College. From this position he was dislodged in 1648 by the parliamentary visitors, and he then settled in London, and is described as 'of the Examiner's Office in Chancery.' He died in Chancery Lane on 23 Oct. 1683, and was buried at West Twyford near Acton. His books, which are of exceptional rarity, are as follows:

1. 'Wit a Sporting in a Pleasant Grove of New Fancies.' By H. B., London, 1657. This was considered by Freeling to be the rarest book he had. Prefixed is what professes to be a portrait of the author, but which was really engraved as that of Christian Ravus, or Ravius, an orientalist and friend of Ussher. It is found in his 'Discourse

of the Oriental Tongues,' London, 1649, and, after serving as the effigies of Bold, was used with another alias as the frontispiece of the 'Occult Physick' of William Williams of Gloucestershire, 1660, and of the 'Divine Poems and Meditations' by William Williams of the county of Cornwall, London, 1677. In 'Wit a Sporting' Bold has stolen much from Herrick, and nearly fifty pages are from Thomas Beedome's 'Poems Divine and Humane,' London, 1641. 2. 'St. George's Day, sacred to the coronation of his most excellent majesty Charles II,' London, 1661 (3 folio leaves). 3. 'On the Thunder happening after the Solemnity of the Coronation of Charles II,' 1661 (a sheet in verse). 4. 'Poems Lyrique, Macaronique, Heroique, &c. By Henry Bold olim è N. C. Oxon.,' London, 1664. This is dedicated to Colonel Henry Wallop, and has commendatory verses by Alexander Brome, Dr. Valentine Oldis, and by his two brothers, William Bold and Norton Bold, C.C.C. Oxon. S. The songs in the volume are licentious, but there are also a number of occasional pieces, several of them addressed to Charles II. 'Expect the second part,' says the author, but no second part is known. Wood is mistaken when he states that this volume contains 'Scarronides; or Virgil Travestie.' This was the work of Charles Cotton. 5. 'Latine Songs, with their English, and Poems. By Henry Bold, formerly of N. Coll. in Oxon, afterwards of the Examiner's Office in Chancery. Collected and perfected by Captain William Bold,' London, 1685—a posthumous collection from the author's scattered papers. The translations justify the commendations of Anthony à Wood, but the songs selected are often gross and worthless. There is a spirited Latin version of 'Chevy Chace,' and Bold's rendering of Suckling's famous song begins:—

Cur palleas, Amasie?
Cur quæso palleas?
Si non rubente facie,
Squallente valeas?
Cur quæso palleas?

Another HENRY BOLD was of Christ Church, Oxford, chaplain to the Earl of Arlington, fellow of Eton College, and chanter in Exeter Cathedral. He died at Montpellier, 'as 'twas reported,' in 1677.

Man. ed. Bohn, 1864.] W. E. A. A.

BOLD, JOHN (1679–1751), divine, born at Leicester in 1679, entered St. John's College, Cambridge, in 1694, and proceeded B.A. in 1698. He was master of a small school at Hinckley, Leicestershire, from 1698 to 1732 (which brought him in 10*l.* a year), and was curate of Stoney Stanton near Hinckley (at a salary of 30*l.*) from May 1702 until his death on 29 Oct. 1751. Bold wholly devoted himself to the religious welfare of his parishioners, and, although without private means, lived so frugally that he was able out of his small income to relieve his necessitous neighbours, and to make several charitable bequests at his death. He was the author of: 1. 'The Sin and Danger of neglecting the public service of the Church,' 1745, which was frequently reissued by the Society for Promoting Christian Knowledge. 2. 'Religion the most delightful Employment.' 3. 'The Duty of worthy Communicating recommended and explained.'

[A very eulogistic memoir by the Rev. R. B. Nickolls is printed in Nicholls's Illustrations, v. 130–42.] S. L.

BOLD, SAMUEL (1649–1737), controversialist, apparently a native of Chester, was brought up under the care of William Cook, a distinguished nonconformist divine, who was ejected from St. Michael's Church, Chester, in 1662, and died in 1684. Bold was instituted vicar of Shapwick in Dorsetshire in 1674, but resigned or was ejected in 1688; he was instituted rector of Steeple in the Isle of Purbeck in 1682, and held the living for fifty-six years, till his death. In 1721 he succeeded to the adjacent parish of Tyneham, united to Steeple by act of parliament. In 1682, when a brief for the persecuted protestants in France was commanded to be read in the churches, Bold preached, from the epistle for the day, a sermon against persecution, which he shortly afterwards published. The sermon reached a second edition in the same year, and raised a great outcry, which only impelled Bold to publish a 'Plea for Moderation towards Dissenters.' He here justifies his general praise of nonconformist divines by many special instances, mentioning, amongst others, Mr. Baxter and Mr. Hickman as 'shining lights in the church of God.'

The grand jury at the next assize presented Bold for the sermon and also for the 'Plea,' and he was cited before the court of Bishop Gulston of Bristol, where he was accused of having 'writ and preached a scandalous libel.' Bold wrote answers to these charges, but, his 'answers being said to be worse than

the books,' he was commanded, on pain of suspension, to preach three recantation sermons and to pay the expenses of Andrew Cosen, the complainant, styled by the bishop 'gent.,' but in reality his lordship's butler. Meantime Bold had fared no better in a prosecution in the civil courts. A third offence was there alleged against him—that he had written a letter befriending a certain dissenting apothecary in Blandford. For the letter and the two publications he was sentenced to pay three fines, and lay seven weeks in prison till they were paid. After this the sudden death of the bishop and of the promoter in the civil suit freed him from further annoyance. In 1720, to protect himself from false reports, Bold republished the sermon against persecution, adding a short account of his subsequent troubles. In 1688 he published 'A Brief Account of the Rise of the name Protestant, and what Protestantism is. By a professed Enemy to Persecution.' In 1690 he engaged in a controversy with Dr. Comber, author of a 'Scholastical History of the Primitive and General Use of Liturgies in the Christian Church,' which Bold perceived to be written to afford a pretext for persecuting dissent; in 1691 he followed it up with a second tract completing his refutation. In 1693 he published a devotional treatise entitled 'Christ's Importunity with Sinners to accept of Him,' which had been probably already published in 1675. The republication contains an affectionate dedication to Mrs. Mary Cook, the widow of William Cook, his early tutor. In 1696, an epidemic having caused many deaths in his parish, he published eight 'Meditations on Death,' written during 'the leisure bodily distempers have afforded me.'

In 1697 he began his tracts in support of Locke's essays on the 'Reasonableness of Christianity' and the 'Human Understanding.' The 'Reasonableness of Christianity' appeared in 1695, and was violently attacked by a Rev. John Edwards as Socinian. Locke replied with a 'Vindication' of his essay, to which Edwards answered in a tract entitled 'Socinianism Unmasked,' &c. At this point Bold entered the field, publishing in 1697 a 'Discourse on the true Knowledge of Christ Jesus,' in which he insists, with Locke, that Christ and the apostles considered it enough for a christian to believe that Jesus was the Christ. To the sermon he appended comments on Locke's essay and 'Vindication,' declaring the essay 'one of the best books that had been published for at least 1,600 years,' and criticising Edwards's tracts. Edwards immediately retorted, twitting Bold as 'Mr. L.'s journeyman,' and produced a second tract from Bold with a preface on the meaning of the terms 'reason' and 'antiquity' as employed in the Socinian controversy. This was in 1697; in 1698 a third tract of Bold's appeared, answering some 'Animadversions,' &c., published at Oxford. In 1699 he brought out a 'Consideration of the Objections to the Essay on the Human Understanding.' Locke acknowledged Bold's support in his 'Second Vindication' of his essay; and in 1703 Bold visited Locke at Oates. He was then meditating the publication of further tracts which Locke dissuaded him from proceeding with. They were, however, published in 1706, and consist of a 'Discourse concerning the Resurrection of the Same Body,' and two letters on the necessary immateriality of created thinking substance. The letters discuss and condemn the views expressed in Broughton's 'Psychologia' and Dr. Norris's 'Essay towards the Theory of an Ideal World.' The discourse deals with Dr. Whitby's arguments against Locke. In 1717 Bold's publisher brought out another tract demanding toleration, entitled 'The Duty of Christians with regard to Human Interpretations and Decisions, when proposed to be believed and submitted to by them, as necessary parts of the Christian Religion. By a Clergyman in the country;' and in 1724 appeared his last controversial work, 'Some Thoughts concerning Church Authority.' This was occasioned by the Bishop of Bangor's famous sermon on the nature of the kingdom of Christ, and his 'Preservative against the Principles and Practices of Nonjurors,' of which Bold heartily approved. Bold was answered by several persons, among others by Conyers Place, who condemns his 'wild pamphlet and clouterly invective' as 'time-serving,' 'stupid,' 'adulatorial,' and 'nauseously' full of 'stupid and affected cant.' In the year before his death Bold published a 'Help to Devotion,' containing a short prayer on every chapter in the New Testament. His devotional works show the sincerity, humility, and sweetness of his character. He died in 1737.

[Monthly Magazine, xxii. 148; Wallace's Antitrinitarian Biography; Locke's Works; Notes and Queries, 1st series, xi. 137; for Bold's works see Brit. Mus. Cat. and Dr. Williams's Library; a Letter on Images, by S. B., London, 1760, in the Brit. Mus. Library, is probably by Bold.]

R. B.

BOLDERO, EDMUND, D.D. (1608–1679), master of Jesus College, Cambridge, was a native of Bury St. Edmunds in Suffolk, and received his education in Ipswich School, whence he proceeded to the univer-

sity of Cambridge, where he was admitted to a fellowship of Pembroke Hall on 4 Feb. 1631, and took the degree of M.A. He became curate of St. Lawrence, Ipswich, in 1643. Soon after the establishment of the Commonwealth he was ejected from his fellowship and sent in captivity to London, where he was 'detained under a long and chargeable confinement.' He suffered much in the royalist cause in England, and in Scotland under the Marquis of Montrose, and it is said that he narrowly escaped hanging. On the Restoration he was created D.D. at Cambridge by royal mandate. Bishop Wren of Ely, to whom he was chaplain, presented him to the rectory of Glemsford, Suffolk, on 15 Feb. 1661–2, and also to the rectories of Westerfield and Harkstead in the same county. The same prelate nominated him master of Jesus College, Cambridge, to which office he was admitted on 26 April 1663, and presented him to the rectory of Snailwell, Cambridgeshire, on 13 July in the same year. Boldero was vice-chancellor of the university in 1668 and 1674. He died at Cambridge on 5 July 1679, and was buried in Jesus College chapel.

T. C.

BOLEYN, ANNE. [See ANNE, 1507–1536.]

BOLEYN, GEORGE, VISCOUNT ROCHFORD (*d.* 1536), was the son of Sir Thomas Boleyn, earl of Wiltshire [q. v.], and brother of Anne Boleyn. Of the date of his birth we have no record, and the earliest notice of him is in the year 1522, when his name appears, joined with that of his father, as the holder of various offices about Tunbridge granted to them by patent on 29 April (*Calendar of Henry VIII*, iii. 2214). On 2 July 1524 he received a grant to himself of the manor of Grimston in Norfolk (*ib.* iv. 546). Four years later, on 26 Sept. 1528, he further received an annuity from the crown of fifty marks, payable by the chief butler of England out of the issues of the prizes of wines, and on 15 Nov. of the same year a number of offices in connection with the royal palace of Beaulieu, or Newhall, in Essex; to which was added, on 1 Feb. 1528-9, that of chief steward of the honour of Beaulieu (*ib.* 4779, 4993, 5248). By this time his sister Anne had become the avowed object of the king's attentions, and there can be no doubt to what influence these honours were due. In the summer of 1528, while with the king at Waltham, he and some others attending the court fell ill of the sweating sickness, causing the king at once to remove to Hunsdon; but another courtier, William Cary, the husband of Anne Boleyn's sister Mary, was carried off by the disease, and the offices above referred to at Beaulieu were rendered vacant by his death (*ib.* 4403, 4413). At this time Boleyn was also master of the buckhounds (*Calendar*, v. pp. 306, 312, 321). On 27 July 1529 he was appointed governor of Bethlehem Hospital (*ib.* iv. No. 5815). Towards the end of that year he was sent to France with Dr. Stokesley, who was shortly afterwards made bishop of London, to consult with Francis and the Duke of Albany on various modes of counteracting the emperor's influence, and how to prevent the assembling of a general council (*ib.* 6073). His allowance as ambassador was forty shillings a day (*ib.* v. p. 315). As yet his designation was only squire of the body or gentleman of the privy chamber; but just about this time he appears to have been knighted and received the title of Viscount Rochford, by which name the fallen Cardinal Wolsey granted him, by Cromwell's advice, an annuity of two hundred marks out of the revenues of his bishopric of Winchester to secure his favour. By this name also he signed, along with the rest of the nobility, a memorial to Pope Clement VII, urging him to consent without delay to the king's wishes on the subject of his divorce from Catherine of Arragon (*ib.* iv. No. 6513).

On 15 July 1531 he was joined with his father in a grant of the stewardship of Rayleigh and other offices in Essex (*ib.* v. No. 364). In February 1533 he received a summons to parliament as Lord Rochford. Next month he was again sent on embassy to France, to inform Francis I that King Henry had married his sister Anne Boleyn, and trusted to him to support him against any papal excommunication (*ib.* vi. Nos. 229, 230). He returned early in April (*ib.* 351), and in less than two months was sent abroad again, in company with the Duke of Norfolk and others, to dissuade Francis from his proposed meeting with the pope at Marseilles, which, however, actually took place later in the year. He went back to England, and returned while Norfolk remained in France (*ib.* Nos. 613, 661, 831, 918, 954, 973). He was at home again in September, and was present at the christening of his niece, the infant Princess Elizabeth at

Greenwich (*ib.* No. 1111). In October he set up his household at the royal manor of Beaulieu, from which the king ordered the Princess Mary to remove to make way for him (*ib.* No. 1296). In 1534 he was twice sent over to France, mainly about an interview which Henry was eager to have with the French king, but which it was necessary in the end to put off (*ib.* vii. Nos. 469, 470, 958). In June of that year he was made warden of the Cinque Ports (*ib.* 922 (16)), and in November he received the French admiral Brion, who was sent to Henry VIII in embassy on his landing at Dover, where he entertained him four days till his whole train had disembarked and conducted him to Blackheath (*ib.* 1416, 1427).

On 10 April 1535 he obtained a grant from the crown of the manor of South, in Kent, which had been granted to Sir Thomas More (*Patent Roll*, 26 Hen. VIII, pt. 1, m. 32). Soon after his services were once more employed in a mission to France, to qualify some of the conditions on which Henry had offered the hand of his infant daughter Elizabeth to the Duke of Angoulême (HERBERT in KENNETT, ii. 179). This is the last we hear of him in any public capacity before his melancholy end. On May day in 1536 he was one of the challengers in that tournament at Greenwich from which the king abruptly departed; next day he was arrested and taken to the Tower, the queen, his sister, being arrested that day also and consigned to the same fortress. The two were arraigned together on Monday, 15 May, for acts of incest and high treason, and judgment of death was pronounced against each. Two days later (17 May) Lord Rochford, with four other alleged paramours of Anne Boleyn, were beheaded on Tower Hill, the execution of Anne herself being deferred till the 19th.

[Calendar of State Papers, Henry VIII (of which the principal specific references have been cited above); Third Report of the Deputy Keeper of Public Records, App. ii. 243; Wriothesley's Chronicle.] J. G.

BOLEYN, GEORGE (*d.* 1603), dean of Lichfield, was not improbably the son of George Boleyn, Viscount Rochford [q. v.], who is usually reported to have left no male issue. In his will (preserved at Somerset House) he mentions that he was a kinsman of Lord Hunsdon, who was the grandson of Mary, eldest daughter of Sir Thomas Boleyn, father of the ill-fated Viscount Rochford. A close study of the State Papers and other records reveals the fact that the family of the Boleyns (or Bullens) suffered constant persecution and spoliation at the hands of Henry VIII, and afterwards of Elizabeth. Viscount Rochford's large estates passed to the crown upon his execution. If we suppose George Boleyn, afterwards dean of Lichfield, to have been a son of Viscount Rochford, it is intelligible that he should have entered Trinity Hall, Cambridge, in the position of a sizar, November 1544. At Cambridge Boleyn was a pupil of John Whitgift, afterwards archbishop of Canterbury. In 1552 he graduated B.A., and in 1560 commenced master of arts. On 3 Aug. 1560 he was installed prebendary of Ulleskelf in the church of York; afterwards he became rector of Kempston in Nottinghamshire, and prebendary of the church of Chichester; on 21 Dec. 1566 he was preferred to a canonry of the church of Canterbury, and in the following year graduated B.D. At the proceedings of the metropolitical visitation of the church of Canterbury in September 1573 various charges were laid against Boleyn. It was alleged that he had threatened to nail the dean to the wall; that he had struck one of the canons, William King, a blow on the ear; had attempted to strike another canon, Dr. Rush; had struck a canon in the chapter-house, and had thrashed a lawyer. It must be granted that Boleyn was of a hasty temper; indeed he frankly admitted that he was accustomed to swear when provoked. But he did not long trouble the peace of the resident canons. On the last day of February 1574–5 he was presented by the dean and chapter of Canterbury to the rectory of St. Dionis Backchurch, London; and on 22 Dec. 1576 he was installed dean of Lichfield, having taken the degree of D.D., as a member of Trinity College, earlier in the same year. He was made prebendary of Dasset Parva on 16 Nov. 1577, but resigned that post in or about February 1578–9. In 1582 he became involved in a lengthy and serious dispute with John Aylmer, the bishop of his diocese. It appears that the bishop, 'being necessitous on his coming into the diocese, laboured all he could to supply himself from his clergy' (STRYPE, *Whitgift*, i. 201, ed. 1822). Boleyn, a man 'prudent and stout,' strenuously resisted the aggressive action of the bishop, finally making his appeal to the lords of the privy council, who appointed the archbishop of Canterbury to institute a visitation. Among the Lansdowne MSS. (39, fol. 22) is preserved a letter (part of which is printed in Strype's 'Annals of the Reformation,' iii. i. 251–2, ed. 1824) from Boleyn to Lord Burghley touching the dispute. The writer speaks of himself as 'no dissembler, but one that would speak the truth, were it good or bad, well or ill.' In or about August 1592 Boleyn resigned the

rectory of St. Dionis Backchurch, and in 1595, after much opposition, was appointed to the rectory of Bangor. He died in January 1602–3, and was buried in Lichfield Cathedral, where there is a monument to him.

It is stated in Willis's 'Survey of Cathedrals' (ii. 825) that 'Dean Boleyn was kinsman to Queen Elizabeth, who would have made him bishop of Worcester, but he refused it.' In his will he writes: 'Her majestie gave me all that ever I have and subjectes gave me nothing.'

Among the Lansdowne MSS. (45, fol. 152) is a letter of Boleyn's to Lord Burghley, dated 10 June 1589, asking his lordship to use his influence with Dr. Still, master of Trinity College, Cambridge, to procure a scholarship at that college for a poor youth whom Boleyn had educated. In Add. MS. 5937 (fol. 36, verso) is a letter to Boleyn from James Strangeman, the genealogist, preferring a request to be allowed the use of the old books in the cathedral library of Lichfield. Some letters of Boleyn's are preserved among the Lambeth MSS. and the State Papers. There are some curious allusions to Boleyn in the 'Protestatyon of Martin Marprelate.' It appears that he had a dog named Spring, and that on one occasion, when he was in the pulpit, 'hearing his dogg cry, he out with this text: whie how now hoe, can you not lett the dogg alone there? come Springe, come Spring.' At another time, as he was delivering a sermon, 'taking himself with a fault he said there I lyed, there I lyed.' In Manningham's 'Diary' (ed. Camden Society, p. 148) there is another story about Boleyn's dog.

[Cooper's Athenæ Cantabrigienses; Le Neve's Fasti, ed. Hardy, i. 57, 563, 599, iii. 220; Willis's Survey of Cathedrals, i. 172, ii. 825; Antiquities of Lichfield, 5, 57; Strype's Whitgift, i. 201–209, ed. 1822; Strype's Annals of the Reformation, III. i. 251–2, 592, III. ii. 206–8, ed. 1824; Strype's Life of Parker, ii. 301, ed. 1821; Lansdowne MSS. 39 (fol. 22), 45 (fol. 152); Calendar of State Papers, Dom. Ser., 1581–90, pp. 329, 426; Newcourt's Repertorium, i. 330; Dean Boleyn's Will, preserved at Somerset House; Protestatyon of Martin Marprelate.] A. H. B.

BOLEYN, SIR THOMAS, EARL OF WILTSHIRE (1477–1539), was the second son of Sir William Boleyn of Blickling, Norfolk, and grandson of Sir Geoffrey Boleyn, a wealthy London merchant, who was lord mayor in 1457. The manor of Blickling, purchased originally by Sir Geoffrey of the veteran Sir John Fastolf, descended to Sir James Boleyn, the elder brother of Sir Thomas. His mother was Margaret, daughter and coheir of Thomas Butler, Earl of Ormonde. According to his own statement he was fifty-two years old in 1529 (*Calendar of Henry VIII*, iv. p. 2581), and must therefore have been born in 1477. In 1497, when he was twenty, he was in arms with his father against the Cornish rebels. In 1509 he was appointed keeper of the exchange at Calais and of the foreign exchange in England, and in 1511 the reversion of the keepership of the royal park of Beskwood in Nottinghamshire was granted to him (*ib.* i. Nos. 343, 1477). That same year he accepted the challenge of King Henry VIII and three other knights to a tourney on the birth of a prince (*ib.* No. 1491), and shortly afterwards obtained a contingent reversion of some of the forfeited lands of Viscount Lovel granted by Henry VII to the Earl of Oxford, of which he no doubt came into possession on the earl's death without issue in 1513 (*ib.* No. 1774). In 1511 also he had a grant of lands in Kent (*ib.* No. 1814), and early next year he was appointed, in conjunction with Sir Henry Wyatt, constable of Norwich castle (*ib.* No. 3008), and received other grants and marks of royal favour besides. At this time he was sent in embassy to the Low Countries with Sir Edward Poynings, where he remained for about a year, with an allowance of twenty shillings a day (*ib.* ii. pp. 1456, 1461). On 5 April 1513 he and his colleagues concluded with Margaret of Savoy at Mechlin the Holy league, by which the Emperor Maximilian, Pope Julius II, and Ferdinand of Spain combined to make war on France (*ib.* i. Nos. 3859, 3861). He took part in the invasion of France in the following summer with a retinue of a hundred men (*ib.* No. 4307); but nothing is recorded of his exploits in the war. He appears to have made some exchange of lands with the crown in or before the year 1516 (*ib.* ii. No. 2210). Even then he must have occupied a distinguished position at the court of Henry VIII, for on 21 Feb. in that year he was one of four persons who bore a canopy over the Princess Mary at her christening (*ib.* No. 1573). In 1517 he was appointed sheriff of Kent (*ib.* No. 3783). On 26 Oct. in that year he obtained a license to export from his mill at Rochford in Essex, in a 'playte' or small vessel of his own, called the Rosendell, all 'wode, billet, and . . .' (a word illegible in the original), made (which apparently means cut or manufactured) within the lordship of Rochford (*ib.* No. 3756). Early in 1519 he went in embassy to Francis I, and he remained in France till the beginning of March 1520. During this period the famous interview of the Field of the Cloth of Gold was projected, and it was Boleyn who negotiated the preliminary arrangements. He was

admitted to great familiarity with Francis I, and was evidently quite at home in the language and manners of the French court. He himself does not appear to have been a witness of the interview, which took place in June 1520, though it had been arranged beforehand that he should go; but he was required to be present at the meeting of Henry VIII and the Emperor Charles V, which took place immediately afterwards, in July, at Gravelines (*ib.* iii. No. 906).

In May 1521 he was on the special commission for London, and also for Kent, before which the indictment was found against the unfortunate Duke of Buckingham (*ib.* No. 1284). In the autumn of that year, during the conferences held at Calais, in which Wolsey professed to mediate between the French and the imperialists, he was used as an agent in various communications with the latter, and was afterwards sent to the Emperor at Oudenarde. In May 1522 he was appointed to attend the king at Canterbury on the emperor's arrival in England, and his name appears as a witness to one of the acts in connection with the treaty of Windsor on 20 June. A little later in the same year he was sent with Dr. Sampson to the emperor in Spain in order to promote joint action in the war against France. He seems to have taken a French ship at sea on the voyage out, and made prisoners of some Breton merchants, who, being sent to England, received license to import 300 'waie' of salt for their ransom (*ib.* No. 2729). In April 1523 he received letters of recall, and he returned in May following. A private letter, dated 28 April in this year, says that he received a writ of summons to parliament as a baron along with Sir William Sandys, Sir Maurice Berkeley, and Sir Nicholas Vaux (*ib.* No. 2982), but the writer was certainly misinformed. Not only was Boleyn still in Spain at the time the letter was written, but he is mentioned long afterwards by the same designation by which he had been styled for years before, viz. as knight for the royal body. It was on 16 June 1525 that he was first ennobled as Viscount Rochford, when the king's illegitimate son was created duke of Richmond; shortly before which he had a rather anxious duty as commissioner for the forced loan in the county of Kent to prevent the outbreak of disturbances.

There cannot be a doubt that not only his elevation to the peerage, but several earlier tokens of royal favour besides, were due to the fascination his daughter had begun to exercise over the king. Early in 1522 he filled the office of treasurer of the household, and he is so styled in a patent of 24 April in that year granting him the manor of Fobbing in Essex. On the 29th of the month various offices about Tunbridge were granted to him and his son George in survivorship. In May 1523 he was made K.G. On 1 Sept. the keepership of Beskwood park, of which he had before received a grant in reversion, was given him and Sir John Byron in survivorship. It was, perhaps, about the same time that he received also the keepership of Thundersley Park in Essex, the grant of which is enrolled without date in the fifteenth year of Henry VIII (*Calendar*, iv. p. 125). In 1524 or 1525 he was made steward of the lordship of Swaffham in Norfolk (*ib.* p. 568). Some correspondence that he had with Sir John Daunce is preserved, relating to the repairs of the manors of Tunbridge and Penshurst (*ib.* Nos. 1501, 1550, 1592). In December 1525 he was assessed for the subsidy at 800*l.* (*ib.* p. 1331), an income probably equal to about 10,000*l.* a year in our day. On 17 May 1527 he received a commission in conjunction with Clerk, bishop of Bath, and Sir Anthony Browne to go to France and take the oath of Francis I to the new treaty between him and Henry. He was one of the English noblemen who received pensions from Francis for promoting a good understanding between the two countries. He took his place in the parliament which met in November 1529, and on 8 Dec. he was created Earl of Wiltshire and Ormonde (*ib.* Nos. 6043, 6085). The latter earldom had for many years been in dispute between him and Sir Piers Butler, who had actually borne the title; but the matter was referred to the king's arbitration, who, making Sir Piers an allotment out of the lands, compelled him to relinquish the title in favour of Boleyn (*Calendar*, ii. Nos. 1230, 1269, iv. 3728, 3937, 5097). On 24 Jan. 1530 he was appointed lord privy seal. The authority for the patent of this office had already been issued four days previously; at which time he received a commission along with Stokesley, afterwards bishop of London, and Lee, afterwards archbishop of York, to go to the Emperor Charles V, and explain to him the king's reasons for seeking a divorce from his aunt, Catherine of Arragon (*ib.* iv. 6111, 6154–5, 6163). The pope and the emperor at that time had met together at Bologna, and the ambassadors were further commissioned to treat with both of them, and with other potentates, for a general peace. But, of course, the main object was to counteract, as far as possible, the influence which the emperor would bring to bear upon the pope in favour of Catherine. The ambassadors, however, failed to impress the former with the justice

of the king's cause; and the latter very naturally kept his sentiments to himself. It was on this occasion that—according to that most untrustworthy authority, Foxe—although sent ambassador from the king of England, he declined to pay the pope the accustomed reverence of kissing his toe. The story may be true, for to one who stood so high in the favour of a powerful sovereign the discourtesy involved no very serious consequences. But the graphic addition that a spaniel, brought by the earl from England, at once gave his holiness's foot the salutation refused by his master, seems rather to show the spirit in which the tale is told than to invite our confidence in its veracity. The incident is avowedly related 'as a prognosticate of our separation from the see of Rome.'

From Bologna Wiltshire took his departure into France, where he remained for some time trying to get the doctors of the university of Paris to give an opinion in the king's favour on the divorce question. He returned to England in August (*Calendar*, iv. 6571, 6579). From this time he was generally resident at the court, and the notices of him in state papers are frequent enough; but there is little to tell of his doings that deserves particular mention. What there is certainly does not convey a very high opinion of the man. Not many weeks after Wolsey's death he gave a supper to the French ambassador, at which he had the extremely bad taste to exhibit a farce of the cardinal's going to hell (*ib.* v. No. 62). When the authority of the bishops was attacked in the parliament of 1532, he was, naturally enough, one of the first to declare that neither pope nor prelate had a right to make laws; and he offered to maintain that proposition with his body and goods (*ib.* No. 850). That he became a leader, or rather a patron, of the protestant party, was no more than might have been expected from his position, his daughter's greatness and the fortunes of his house being so closely connected with a revolt against church authority. Yet he was one of those who in 1533 examined the martyr Frith for denying the real presence; while he commissioned Erasmus from time to time to write for him treatises on religious subjects, such as on preparation for death, on the Apostles' Creed, or on one of the Psalms of David (Erasmi *Epp.* lib. xxix. 34, 43, 48). The last thing recorded of him that is at all noteworthy is, that he and Sir William Paulet were sent on 13 July 1534 to the Princess Mary to induce her to renounce her title and acknowledge herself an illegitimate child! (*Calendar*, vii. 980). He died (as appears by a letter of his servant Robert Cranewell to Lord Cromwell) at his family mansion of Hever, in Kent, on 13 March 1539 (manuscript in Public Record Office).

BOLINGBROKE, Earl of. [See St. John, Oliver, 1580?–1646.]

BOLINGBROKE, Viscount. [See St. John, Henry, 1678–1751.]

BOLINGBROKE, HENRY (1785–1855), writer on Demerara, was born at Norwich 25 Feb. 1785, the son of Nathaniel Bolingbroke. He sailed for Demerara 28 Nov. 1798, and returned to England 21 Oct. 1805. He sailed to Surinam, in Guiana, on 3 March 1807; here he was deputy vendue master for six years, and returned to Plymouth 25 June 1813. On 7 Oct. 1815 he married Ann Browne of Norton. Latterly he was in business in Norwich, where he died 11 Feb. 1855. He published 'A Voyage to the Demerary,' 1807 (this work was prepared for the press by William Taylor, of Norwich, who rewrote some of the chapters).

[Biog. Dict. of Living Authors, 1816; Robberds's Mem. of W. Taylor, 1843, ii. 254 private information.] A. G.

BOLLAND, Sir WILLIAM (1772–1840), lawyer and bibliophile, the eldest son of James Bolland, of Southwark, was educated at Reading School under Dr. Valpy, and admitted a pensioner at Trinity College, Cambridge, 26 Sept. 1789, at the age of seventeen. During his school days he wrote several prologues and epilogues for the annual dramatic performances in which the scholars took part, and for which Dr. Valpy's pupils were famous. At Cambridge he took his degree of B.A. in 1794, and M.A. in 1797. For three successive years (1797, 1798, and 1799) he won the Seatonian prize by his poems on the respective subjects of miracles, the Epiphany, and St. Paul at Athens, which were printed separately, and also included in the 'Seatonian Prize Poems' (1808), ii. 263–97. On leaving Cambridge he determined upon adopting law as his profession, and was called to the bar at the Middle Temple 24 April 1801. Bolland practised at the Old Bailey with great success; he was thoroughly conversant with commercial law, and was one of the four city pleaders (1804–29). From April 1817 until he was raised to the bench he was recorder of Reading. He was a candidate for the common serjeantcy of the city of London in 1822, but in those days of heated political excitement was defeated by the late Lord Denman. In November 1829 he was created a baron of the exchequer, and

held that appointment until January 1839, when he resigned on account of failing health. On 14 May 1840 he died at Hyde Park Terrace, London. Lady Bolland, whom he married 1 Aug. 1810, was his cousin Elizabeth, the third daughter of John Bolland, of Clapham. An anonymous satire, 'The Campaign, to his Royal Highness the Duke of York, Britannia in the year 1800 to C. J. Fox,' was written by Bolland in 1800, but not issued for sale, the author confining its publicity to his friends. Although he published but little, he was known for many years as an enthusiastic student of early English literature. Dibdin dwells with unction on the pleasures of the dinner-parties of Hortensius—the fancy name by which he designated Sir William Bolland—and extols the merits of his library. It was at a dinner-party in Bolland's house on the Adelphi Terrace that the Roxburghe Club was originated, and its first publication was his gift. This was 'Certain Bokes of Virgiles Aenēis turned into English meter. By the right honorable lorde, Henry, earle of Surrey.' The books were the second and fourth, and the reprint, bearing the date of 1814, though the dedication was signed 17 June 1815, was taken from a copy of the original edition of 1557, which is preserved at Dulwich College. His collections were sold in the autumn after his death, his library of about three thousand articles producing about 3,000*l.* The bust of Sir William Bolland is a familiar object to all who have studied in the library of Trinity College, Cambridge. A portrait by James Lonsdale is now in the National Portrait Gallery.

[Foss's Judges; Dibdin's Bibliographical Decameron, 1817, iii. 27–8, Bibliomania, 1876, 132–3, 588–91, and Reminiscences, i. 368–9; Gent. Mag. 1840, pp. 433–4.] W. P. C.

BOLLARD, NICHOLAS (*fl.* 1500?), naturalist, was the author of a work on arboriculture which is often met with in contemporary manuscript. It is entitled 'A Tretee of Nicholas Bollard departid in 3 parties: 1 Of gendryng of Trees; 2 of graffynge; the third forsoth of altracions.' At least five copies are now in the British Museum (*Cotton MS.* Jul. D. viii. 11; *Addit. MS.* 5467; *Sloane MSS.* 7 f. 92, 122 f. 83 *b*, 686 f. 41); another is in the Cambridge University Library (Ee. i. 13 ff. 124 *a*–129). Bishop More and Ralph Thoresby owned copies of the 'Tretee,' which has never been printed. Bale states that Bollard was also the author of a treatise called 'Experimenta Naturalia,' and that he saw a copy of the work at the house of Thomas Caius at Oxford, but it is not otherwise known. Tanner asserts that Bollard was educated at Oxford.

[Tanner's Bibl. Brit.; Thoresby's Ducatus Leod., ed. Whittaker, p. 83; Cat. of MSS. in the Brit. Mus. and Camb. Univ. Lib.] S. L.

BOLRON, ROBERT (*fl.* 1674–1680), informer, was a native of Newcastle-on-Tyne. He is stated to have been apprenticed to a jeweller at Pye Corner, London, whom, after a twelvemonth, he abandoned to enlist as a foot soldier. On his return to England from the second Dutch war, he happened to visit an acquaintance who was a servant with Sir Thomas Gascoigne, of Barmbow Hall, Yorkshire, and on his recommendation he was appointed manager of the collieries of Sir Thomas. Through his marriage with Mary Baker, formerly a servant in Sir Thomas's household, he also held the lease of the farm of Shippon Hall. According to his own account shortly after his engagement efforts were made, which, through the agency of his wife, herself a pervert, were ultimately successful, to win him over to the Roman catholic faith. Large bribes were then offered to him to engage in the papist plot against the life of the king, but, realising the wickedness of those designs, he resolved to give information to the local magistrates, on whose refusal to act on it, he hastened to London, and made a deposition before the Earl of Shaftesbury. His statements were corroborated by Lawrence Maybury, a former servant of Sir Thomas Gascoigne. Maybury had, however, been discharged by his master for theft, and Bolron, on account of his having made free with the money received for coals, had been threatened with prosecution by Lady Tempest, daughter of Sir Thomas Gascoigne. The baronet, who had reached his eighty-fifth year, was, in February 1680, put upon his trial; but although the detailed accusations against him made a considerable impression, a verdict was returned in his favour.

[Narrative of Robert Bolron, of Shippon Hall, gent., concerning the late horrid Popish Plot and Conspiracy for the Destruction of his Majesty and the Protestant Religion, 1680; The Papists' Bloody Oath of Secresy and Litany of Intercession for England, with the manner of taking the oath, upon their entering into any grand conspiracy against the Protestants, as it was taken in the chapel belonging to Barmbow Hall, the residence of Sir Thomas Gascoigne, from William Rushton, a popish priest (1680); An Abstract of the Accusations of Robert Bolron and Lawrence Maybury, servants, against their late Master, Sir Thomas Gascoigne, knt. and bart. of Barmboo, in Yorkshire, for High Treason, with his Trial and Acquittal February 1680 (1680); Attestation of a certain Intercourse had between Robert

Bolron and Mr. Thomas Langhorn, wherein is manifested the falsehood and perjury of the said Bolron (1680); State Trials, vii. 962–1043.]

BOLTON, Dukes of. [See Paulet, Charles, first Duke, 1625?–1699; Paulet, Charles, second Duke, 1661–1722; Paulet, Charles, third Duke, 1685–1754; Paulet, Harry, sixth Duke, 1719–1794.]

BOLTON, Duchess of (1708–1760). [See Fenton, Lavinia.]

BOLTON, first Baron (1746–1807). [See Orde, Thomas.]

BOLTON or BOULTON, EDMUND (1575?–1633?), historian and poet, was born about 1575, according to an impress drawn with his own pen (Brit. Mus. *Harl. MS.* 6521, f. 152). In the midst of the ocean rises a peaked rock on the top of which a falcon is seated. The motto is 'Innocentia Tutus,' and beneath it is written 'Edmundus Maria Boltonus, ætatis 47, 1622.' The falcon belled which he bore in his arms was common to several families of the name of Bolton, but it does not appear to which of them he belonged. He himself speaks of his descent from the family of Basset, and also of the Duke of Buckingham having acknowledged him as a poor kinsman. This latter circumstance gives credibility to a statement by Oldys that he had seen in a manuscript of Bolton's a remark that he passed his younger days about Goadby in Leicestershire. The statement receives further support from his having been early known to the Beaumonts of Grace-Dieu. His family brought him up in the catholic faith, to which he adhered through life. Writing to the secretary Conway on behalf of a catholic priest, he says that King James, whose servant he had been, allowed 'him with his wife and family to live in peace to that conscience in which he was bred' (*Calendar of State Papers*, Dom. 1625). He himself added the name of Mary to his baptismal name.

According to a memorial to Sir Hugh Hammersley, lord mayor of London, written in 1632, when he was in distress, 'he lived many years on his own charge a free commoner at Trinity Hall, Cambridge' (*Harl. MS.* 6521). From the university he removed to the Inner Temple and 'lived in the best and choicest company of gentlemen.' About 1606 he married. He alludes to his university life in his 'Elements of Armories,' where Sir Amias, who represents himself, says 'you turne mee thereby to the Vniversity againe as it were, for that I cannot satisfie your allowable desire, but by the vse of some such pickt flowers, as heretofore, in that sweet noursery of generous knowledges, came to my hand howsoeuer' (p. 20).

Bolton was an indefatigable student and amassed large stores of historical and antiquarian learning. Ritson describes him as 'a profound scholar and eminent critic,' while in the judgment of Hunter he claims as an antiquary to stand beside Camden, Selden, and Spelman. Early in life he formed an acquaintance with Camden, and he made extensive travels in England and Ireland in search of antiquities. As his religion stood in the way of his progress on any of the ordinary roads to distinction, he adopted the desperate expedient of trusting to literature as the source of his livelihood. He first appeared as an author in 1600, when he was associated with Sidney, Spenser, Raleigh, and other poets, as a contributor to 'England's Helicon.' But even in the profession of literature his religion proved a hindrance, for when he had composed a life of Henry II for an edition of Speed's 'Chronicle,' it was rejected on account of his having given too favourable a representation of the conduct and character of St. Thomas of Canterbury. In one of his letters to Sir Robert Cotton he complains bitterly of the impositions of the booksellers. It would seem that the Marquis of Buckingham obtained for him some place about the court of King James I, but what particular office it was has not been discovered.

In 1617 he proposed to the king a design for a royal academy or college, and senate of honour, on the most magnificent scale. The scheme was afterwards spoken of in favourable terms by the Marquis of Buckingham in the House of Peers, and in 1624 the details were finally settled. The academy royal of King James was to have been a corporation with a royal charter, and was to have a mortmain of 200*l.* a year and a common seal. It was to consist of three classes of persons, who were to be called tutelaries, auxiliaries, and essentials. The tutelaries were to be knights of the Garter, with the lord chancellor, and the chancellors of the two universities; the auxiliaries were to be lords and others selected out of the flower of the nobility, and councils of war, and of the new plantations; and the essentials, upon whom the weight of the work was to lie, were to be 'persons called from out of the most able and most famous lay gentlemen of England, masters of families, or being men of themselves, and either living in the light of things or without any title of pro-

fession, or art of life for lucre, such persons being already of other bodies.' The members of the academy were to have extraordinary privileges, and among others were to have the superintendence of the review, or the review itself, of all English translations of secular learning, to authorise all books which did not handle theological arguments, and to give to the vulgar people indexes expurgatory and expunctory upon all books of secular learning printed in English. The members were to wear a riband and a jewel, and Bolton even speculated on the possibility that Windsor Castle might be converted into an English Olympus, and assigned to the members as the place in which to hold their chapters. Eighty-four persons were selected by Bolton as the original members. Among the most remarkable names are those of Sir Thomas Aylesbury, George Chapman, Sir Edward Coke, Sir Robert Cotton, Sir Kenelm Digby, Sir Dudley Digges, Michael Drayton, Thomas Habington, Sir Thomas Hawkins, Hugh Holland, Ben Jonson, Inigo Jones, Sir Thomas Lake, Sir Toby Matthew, Endymion Porter, Sir William Segar, Sir Richard St. George, John Selden, Sir Henry Spelman, and Sir Henry Wotton. The project was favourably entertained by King James, and seemed on the point of being accomplished, when his majesty died. It did not find equal favour in the court of Charles I; and the Duke of Buckingham, who had been its main supporter, growing indifferent to it, the whole scheme fell to the ground.

Besides his grand idea of the establishment of an order of men of science and literature to be in some way connected with the order of the Garter, he proposed that a grand collection should be formed of what history had preserved for England, that a minute history of the city of London should be written, that a map on a very extensive scale of the country around London should be prepared, and that a life of the Duke of Buckingham, commensurate with his great deservings, should be drawn up.

All his schemes failed. He was now becoming advanced in years. He had a wife and three sons, and very slender means of support—none indeed at last, for there can be no doubt that he is the 'Edmund Bolton of St. James, Clerkenwell,' who being assessed as a recusant convict at 6*l.* in goods, is returned by a collector of the subsidy of 1628 as having to his knowledge no lands or tenements, goods or chattels on which the tax could be levied, 'but hath been a prisoner in the Fleet' ever since the assessment was made. The same return was made in 1629, the only difference being that his place of detention was then not the Fleet but the Marshalsea. It was after this that he made his appeal to the city authorities, and he appears to have made some progress with the work; but here he found himself anticipated by his friend Ben Jonson, who had promised to prepare for them 'Chronological Annals;' and when he talked of the history and the map costing 3,000*l.* or 4,000*l.*, Sir Hugh Hammersley told him plainly that in prosecuting the application he would but be beating the air. The latest letter of his at present known is addressed to Henry, Lord Falkland, on 20 Aug. 1633. Probably he died soon afterwards, but the exact date of his death is not known.

His works are: 1. 'The Shepheard's Song: a Caroll or Himne for Christmas.' In 'England's Helicon,' 1600. To 'England's Helicon' Bolton also contributed 'A Pastoral Ode' and three other pieces. 2. 'The Elements of Armories,' Lond. 1610, 4to (anon.) Dedicated to Henry, earl of Northampton. The work consists of a dialogue or conference between two knights, Sir Eustace and Sir Amias, continuing through thirty-five chapters. It is written in a very pedantic style, but many curious examples are brought forward and illustrated by woodcuts, spiritedly executed. The original manuscript of this curious book is in the library of Christ Church at Oxford. 3. 'Life of King Henry II.' This was intended for insertion in Speed's 'Chronicle,' but as it was thought to give a too favourable account of St. Thomas à Becket, it was rejected and another 'Life' by Dr. Thomas Barcham was substituted for it. 4. 'Carmen Personatum. In quo, Maria Regina Scotorum gratulatur sibi de corpore suo, ab obscurâ et deuiâ urbeculâ, Petriburgo, filii sui Iacobi Regis pietate, ad lucem Wesmonasterii Proauum suorum sepulchreti officiosissimè traducto: A.D. MDCXII. Tabulæ ad monimentum eiusdem Reginæ pensili ab authore destinatum.' Cotton MS. Titus A, xiii. 178–184. 5. 'The Roman Histories of Lucius Iulius Florus, from the foundation of Rome, till Cæsar Augustus, for aboue DCC yeares, & from thence to Traian neare CC yeares, divided by Florus into IV ages. Translated into English.' Lond. 1618, 12mo; 1636, 16mo. The dedication to the Duke of Buckingham is signed 'Philanactophil.' This word, which Bolton often used afterwards, was invented by himself, and may be interpreted 'friend of the king's friend.' 6. 'Hypercritica, or a Rule of Judgment for writing or reading our History's: Delivered in four Supercensorian addresses by occasion of a Censorian Epistle, prefix'd by Sir Henry

Savile, knight, to his Edition of some of our oldest Historians in Latin, dedicated to the late Queen Elizabeth' (1618?). This small piece is frequently quoted for the notices it contains of contemporary poets. It was published by Dr. Anthony Hall at the end of 'Nicolai Triveti Annalium Continuatio, ut et Adami Murimuthensis Chronicon, &c.,' Oxford, 1722, and it is reprinted in Haslewood's 'Ancient Critical Essays upon English Poets and Poësy,' vol. ii. Lond. 1815. 7. 'Nero Cæsar, or Monarchie depraved. An historicall worke. Dedicated, with leaue, to the Dvke of Bvckingham, Lord Admirall. By the Translator of Lucivs Florvs,' Lond. 1624, fol; 2nd edit. enlarged, 1627. This is a life of Nero with particular notes of transactions in Britain. Bolton brings coins and medals to illustrate statements by historians. The Harleian MS. 6521 consists, for the most part, of extracts from ancient authors, gathered in preparation for this book and for a similar work which he contemplated on the life of Tiberius. At the end of some copies of 'Nero Cæsar' there is a tract entitled: 8. 'An Historicall Parallel; or a Demonstration of the notable oddes, for the more use of Life, betweene reading large histories, and briefe ones, how excellent soever, as those of Lucius Florus. Heretofore, privately written to my good and noble friend Endymion Porter, Esq., one of the Gentlemen of the Princes bed-chamber.' 9. 'Commentaries Roial. Comprehending the end of King James, & beginning of King Charles. The historical part illuminated with coignes of Honour.' The contents of this book, with its dedication to King Charles I, are preserved in the Royal MS. 18 A. lxxi. The treatise itself is in the State Paper Office. 10. 'The Cities Advocate, in this Case or Question of Honor and Armes, Whether Apprenticeship extinguisheth Gentry?' Lond. 1629, 4to. The second edition is entitled 'The Cities great concern, in this Case or Question of Honour and Arms, Whether Apprenticeship extinguisheth Gentry? Discoursd; with a clear refutation of the pernicious error that it doth,' Lond. 1675, 12mo. The tract is generally but wrongly attributed to John Philipot, Somerset herald. 11. 'The Cabanet Royal, with the chief prouisions which constitute and furnish it for the seruice of Civil Wisdome, & Civil Glorie, Toucht vpon in an Epistle Roial, 23 Octob. 1627.' Dedicated to King Charles I. Royal MS. 18 A, lxxi. 12. 'Vindiciæ Britannicæ, or London righted by rescues and Recoveries of antiquities of Britain in general, & of London in particular, against unwarrantable prejudices, and historical antiquations amongst the learned; for the more honour, & perpetual just uses of the noble island & the city.' This book was never printed, though prepared by the author for the press. 13. Latin verses before Camden's 'Britannia,' before Andrewes' 'Unmasking of a Feminine Machiavell,' 1604, and before Jonson's 'Volpone,' 1605. Ritson ascribes to him a sonnet 'to Lucie countesse of Bedford' prefixed to Drayton's 'Mortimeriados,' 1596. The 'E. B.' who in 1606 published the 'Hero and Leander' of Marlow and Chapman was not Bolton, but Edward Blount [q. v.] In the Tanner MSS. in the Bodleian (lxxiii. 256) are a few verses by Bolton to the Duke of Buckingham in 1624.

BOLTON, Sir GEORGE (*d.* 1807?), writer on firearms, was preceptor to the royal princesses in writing, geography, &c. He was knighted on 3 April 1799, and died about 1807. He published 'Remarks on the present defective state of Fire-arms, with an explanation of a newly invented patent Gunlock,' London, 1795, 8vo.

[Townsend's Calendar of Knights (1828), 8; Watt's Bibl. Brit.] T. C.

BOLTON, JAMES (*fl.* 1775–1795), was a self-taught naturalist in humble life, residing near Halifax in Yorkshire, who drew and etched all his own illustrations. He described the plants of Halifax in Watson's 'History of the Parish of Halifax,' London, 1775, 4to.

His larger works were: 1. 'Filices Britannicæ,' Leeds, 1785, 4to. 2. 'A History of Funguses growing about Halifax,' four vols. 4to, Halifax and Huddersfield, 1788–91. 3. 'Harmonia Ruralis,' an essay towards a natural history of British song-birds, Stan-

nary, near Halifax, two vols. 1794–6. 4. 'A History of British Proper Ferns, &c.,' 1795.

[Monthly Rev. vols. lxxvi. lxxix. 1st ser.; vol. viii. 2nd ser.] G. T. B.

BOLTON, JAMES JAY (1824–1863), evangelical clergyman, was the fifth son of the Rev. Robert Bolton, rector of Christchurch, Pelham, U.S., his mother being a daughter of the Rev. William Jay of Bath. Bolton was born at Southdown College, near Weymouth, Dorsetshire, 11 Feb. 1824. His early years were spent at Henley-on-Thames, where his father was at the time minister of a dissenting chapel. At the age of twelve he went with his parents to America, where circumstances placed his father in charge of an episcopal congregation. He was educated at Dr. Muhlenburg's, College Point, New York, after staying for some time at Brook Farm, New Rochelle, and Pelham. Thence he returned to England and entered at Corpus Christi College, Cambridge, where he obtained a scholarship in his first year, and took his degree in 1848. From 1849 to 1851 he was curate of Saffron Walden, Essex; afterwards he removed to St. Michael's, Chester Square, Pimlico, as curate to the Rev. J. H. Hamilton, and was appointed later to the incumbency of St. Paul's Episcopal Chapel, Kilburn. Here he married, 30 June 1853, Lydia Louisa, third daughter of the Rev. W. W. Pym, rector of Willian, Hertfordshire. Bolton died, aged 39, at the parsonage, Kilburn, 8 April 1863.

Of Bolton's sermons some were arranged chronologically by his brother, and published, with a brief memoir, three months after his death. A second series of 'Selected Sermons' was published in 1866. As a children's preacher Bolton has perhaps never been surpassed. He contributed largely to the 'Family Treasury,' the 'Sunday Scholars and Teachers' Magazine,' and juvenile publications of a kindred tone. He also published 'The Church Missionary Operations vindicated,' 1854; 'Faith's Report to Mourning Parents, or How it fares with Holy Children when they die,' 1855; 'Our Celestial Guest, or Stirring Thoughts about the Holy Spirit,' 1855; 'Beleaguered but Defiant, an exposition of a precious verse,' 1858; 'Life Lessons,' 1862; 'The Yoke lightened, an address to servants' (a posthumous publication), 1873.

BOLTON, SIR RICHARD (1570?–1648), lawyer, son of John Bolton, of Fenton, Staffordshire, was born about 1570. He practised for a time as a barrister in England, which he left for Ireland with the object, it has been alleged, of avoiding the results of a censure passed on him by the court of Star-chamber. At the close of 1604 he obtained employment as temporary recorder of Dublin. In the following year he was appointed recorder of that city, 'during good behaviour,' at an annual salary of 25*l*. Bolton was despatched in 1608 to London as law-agent to the municipality of Dublin in connection with suits relating to their customs and privileges. Sir Arthur Chichester, lord-deputy of Ireland, in a letter dated 15 Oct. 1608, commended Bolton to the Earl of Salisbury. Bolton was admitted to the Society of King's Inns, Dublin, in 1610. Through government influence he was elected in 1613, in opposition to the Roman catholic candidate, one of the representatives of the city of Dublin in the parliament of which the noted Sir John Davies became the speaker. He resigned the recordership of Dublin in the same year. Bolton received knighthood in 1618 from Sir Oliver St. John, lord-deputy for Ireland. Under privy seal dated Westminster 31 Dec. 1618, and patent of the 10th of the ensuing February, Bolton was appointed solicitor-general for Ireland. In 1621 Bolton published at Dublin, in a folio volume, a selection of statutes passed in parliaments held in Ireland, under the title 'The Statutes of Ireland, beginning the third year of King Edward the Second, and continuing untill the end of the Parliament begunne in the eleventh year of the reign of our most gratious Soveraigne Lord King James and ended in the thirteenth year of his raigne of England, France, and Ireland. Newly perused and examined with the Parliament rolls; and divers statutes imprinted in this booke which were not formerly printed in the old booke.' Bolton dedicated this work to his benefactor, Lord-deputy Sir Oliver St. John, who had encouraged him to undertake it. Bolton became attorney-general to the Court of Wards at Dublin in 1622, and was appointed chief baron of the exchequer in Ireland in 1625. To his printed volume of the statutes an addition containing those of the tenth and eleventh year of Charles I was published in 1635. Bolton published in 1638, at Dublin, a folio volume with the following title: 'A Justice of the Peace for Ireland, consisting of two bookes. The first declaring th' exercise of that office by one or more Justices of Peace out of Session. The second setting forth the forme of proceeding in sessions and the matters to be enquired of and handled therein. Composed by Sir Richard Bolton, Knight, Chief Baron of His Majesties Court of Ex-

chequer in Ireland. Whereunto are added many presidents of indictments of treasons, felonies, misprisions, præmunires and finable offences of force, fraud, omission and other misdemeanors of severall sorts more than ever heretofore have been published in print.'

In December 1639 Bolton was appointed to the chancellorship of Ireland, in place of Sir Adam Loftus, with a moiety of the profits derivable from chancery writs, together with 500*l.* per annum, during his tenure of office. As chancellor, Bolton presided in the parliament commenced at Dublin in March 1639–1640. On 11 Feb. 1640-41 the House of Lords acquitted him from a charge of having endeavoured to prevent the continuance of the existing parliament. With a letter dated the eighteenth of that month Bolton transmitted to the committee of the house attending the king in England a schedule of grievances of Ireland voted by the lords at Dublin on the same day. Bolton was regarded as a chief adviser of Strafford in his attempts to introduce arbitrary government. On 27 Feb. 1640-41 a committee was appointed by the House of Commons in Ireland to draw up charges against the chancellor, Bolton; Bramhall, bishop of Derry; Sir Gerard Lowther, chief justice of the common pleas; and Sir George Radcliffe, to impeach them of high treason. The chancellor, as chairman of the house, had to receive the articles against himself. The house, on 1 March 1640-41, ordered that the lord chancellor should enter into recognisances to appear when the articles should be exhibited. After some further debate the peers left it to the lords justices to do as they saw fit, as there were no precedents. They further declared 'the sense of the house that the lord chancellor was not fit to execute that place, nor to sit at the council board, and that they desired a new speaker.' Sir William Ryves, justice of the king's bench, appointed by letters patent speaker of the House of Lords in Ireland, during pleasure, in the absence of the chancellor, entered upon office on 11 May 1641. In the following July the lords justices communicated to the House of Commons the king's desire that they should forbear proceeding further with the impeachment. Bolton, as member of the privy council at Dublin, signed the despatch of 25 Oct. 1641, announcing to the Earl of Leicester, lord-lieutenant, then in England, the commencement of hostile movements in Ireland. He took part in the preparation of an elaborate statement, transmitted to the House of Lords, London, in November 1641, in relation to the English administrative system in Ireland, recently brought to light through the labours of the royal commission on historical manuscripts. By a resolution of 21 June 1642, that no members should sit or vote until they had taken the oath of supremacy, the House of Commons excluded the Roman catholic representatives, among whom were those who had been most active in the proceedings against Bolton and his associates. On the same day Bolton and Lowther petitioned the house, and it was unanimously resolved to proceed no further upon the articles of accusation against them. On the following day Bolton was restored by the lords to his place as chancellor, and on 2 Aug. 1642 resumed his position in their house. A reproduction of Bolton's autograph as a member of the privy council appears on plate liii. of part iv. sec. 2 of the 'Facsimiles of National Manuscripts of Ireland.' Captain William Tucker frequently mentions Bolton in his contemporary journal, recently published for the first time in the second volume of the 'History of the Irish Confederation and War in Ireland.' Bolton was actively engaged in negotiations connected with the cessation of hostilities between England and the Irish in 1643. In 1643-4 Bolton was a principal counsellor of the lord-lieutenant, Ormonde, in negotiating with the Irish confederation concerning peace. His name appears first amongst those of the privy council who signed the proclamation issued at Dublin on 30 July 1646 announcing the conclusion of a treaty of peace between Charles I and his Roman catholic subjects in Ireland. In writings condemnatory of the terms of that peace Bolton was represented as more devoted to the parliament of England than to the king, and much opposed to concessions to the Roman catholics of Ireland. A contemporary answer to some of the allegations against Bolton is extant in an unpublished manuscript in the British Museum. Bolton signed the instructions on 26 Sept. 1646 to those who were commissioned to treat with the English parliament for succours after the peace had been rejected by the Irish. He joined in the statement on the condition of Ireland of 19 Feb. 1646-7 submitted by Ormonde to Charles I, and preserved in the twentieth volume of the Carte Papers in the Bodleian Library. Sir Richard Bolton died in November 1648. By his first wife, Frances, daughter of Richard Walter of Stafford, he left one son, Edward, and several daughters. His second wife was Margaret, daughter of Sir Patrick Barnewall. In 1661 the peers at Dublin ordered that the books of their house for 1640 and 1641 should be expunged 'where they contained anything that did intrench

'What was Nazianzen's commendation of Basil might bee Bolton's; hee thunder'd in his life and lightned in his conversation.' The biographer of Joseph Alleine writes: 'Reverend Mr. Bolton, while walking in the streets, was so much cloathed with majesty, as by the notice of his coming, in the words "Here comes Mr. Bolton," was as it were to charm them [the populace] into order when vain or doing amiss.' Finally, in the preface to his 'Usury' (1637), it is said: 'It is observed of this holy and reverend man that he was so highly esteemed in Northamptonshire, that his people who beheld his white locks of hair would point at him and say, "When that snow shall be dissolved, there shall be a great flood," and so it proved; for there never was a minister in that county who lived more beloved or died more lamented. Floods of tears were shed over his grave.'

[Much more than quoted will be found in Bagshawe's Life; Abram's Blackburn; Bolton's Genealogical and Biographical Account—in this his will *in extenso*, and a woodcut of his birthplace; Brook's Puritans; Churton's Nowell, p. 7; Neal's Puritans, ii. 229; Morton's Monuments of the Fathers and Reformers, 1706; Bridges's Hist. of Northamptonshire, ii. 87; Baines's Lancashire; Bolton's Works; an autograph letter to Hildersam, Catalogue of Ayscough, 2728, No. 4221 in British Museum; letter from Rev. W. E. Buckley, Middleton Cheney.] A. B. G.

BOLTON, ROBERT, LL.D. (1697–1763), dean of Carlisle, was born in London in April 1697. His father was a merchant in Lambeth, who died when his son was in his third year. It has been erroneously stated that he was a native of Northamptonshire (GILPIN, *Memoirs*, ed. Jackson, 1877, p. 80). He received his first education at Kensington, and thence proceeded to Oxford, being admitted a commoner of Wadham College on 12 April 1712, where he was subsequently elected a scholar. He commenced B.A. in 1715, and M.A. 13 June 1718, 'expecting to be elected fellow in his turn; but in this he was disappointed, and appealed without success to the Bishop of Bath and Wells, the visitor' (CHALMERS, *Biog. Dict.*) In July 1719 he was transferred to Hart Hall, and soon afterwards took holy orders. In 1722 he was chosen fellow of Dulwich College, and, on the resignation of Dr. Joseph Butler, preacher at the Rolls Chapel, London, 1729, on the nomination of Sir Joseph Jekyll, master of the rolls. He was a favourite with John Robinson, bishop of London, with whom he resided for about two years. From Ruffhead's 'Life of Pope' it appears that he became acquainted at Fulham with Mrs. Grace Butler, of Rowdell, Sussex, and on the death of her daughter Elizabeth, Bolton wrote an epitaph for her gravestone in Twickenham churchyard. The epitaph led Pope to write some verses on the same lady, which Ruffhead printed, according to his own account, for the first time, but they before appeared in the 'Prompter,' No. viii., and afterwards in the works of Aaron Hill, who by mistake ascribes Bolton's original epitaph to Pope (CHALMERS). As fellow of Dulwich College, he took up residence there on 10 March 1722, but resigned his fellowship on 1 May 1725. He then removed to Kensington, living mainly upon a small fortune he possessed, and became intimate with William Whiston, to whom he was indebted for introduction both to Jekyll and to Lord Hardwicke. John Whiston, in a manuscript contribution to an early edition of Chalmers's 'Biographical Dictionary,' claims that Bolton was in sympathy with his father's (William Whiston) opinions, and for long hesitated to subscribe the Thirty-nine Articles, but that 'at last he did so, as articles of peace, and so far as authorised by Scripture.' Bolton was preferred to the deanery of Carlisle by Hardwicke, and admitted 1 Feb. 1734–5. Later (1738) he was instituted vicar of St. Mary's, Reading. He held both benefices conjointly for life, and was non-resident (from 1738 at least) in his deanery, though he raised 400*l.* for augmentation of poor livings in the diocese of Carlisle.

He published a considerable number of books. His first was a sermon on Galatians vi. 10 'before the hospitals' in London, 1739. This was succeeded by another on the 'Wo denounced by Christ to them of whom all men shall speak well,' 1722. These works were well received, and he became extremely popular as a preacher on special occasions. The most characteristic of his productions was his 'Deity's Delay in punishing the Guilty considered on the Principles of Reason,' 1751. Bolton issued a collection of tracts (so called) on the 'Choice of Company,' on 'Intemperance in Eating and Drinking,' on 'Pleasure,' on 'Public Worship,' and 'Letter to a young Nobleman on leaving School' (1761 and 1762). He died in London on 26 Nov. 1763, having come to town to consult Dr. Addington. He was buried in the churchporch of St. Mary's, Reading, and his own and the epitaphs of his family are still to be read there.

Funeral Sermon by Wray; Coates's History of Reading; Hutchinson's Cumberland, 1796; local researches.] A. B. G.

BOLTON, SAMUEL, D.D. (1606–1654), divine and scholar, who has been wrongly identified both with a son and a brother of Robert Bolton, B.D. [see BOLTON, ROBERT, 1572–1631], was born in London in 1606, and educated at Christ's College, Cambridge (LE NEVE, *Fasti*, ed. Hardy, iii. 690, 607). In 1643 he was chosen one of the Westminster assembly of divines. It is stated that he was successively minister of St. Martin's, Ludgate Street, of St. Saviour's, Southwark, and of St. Andrew's, Holborn. He was appointed, on the death of Dr. Bainbrigge in 1645, master of Christ's College, Cambridge, and served as vice-chancellor of the university in 1651. Although with 'no ministerial charge' he 'preached gratuitously every Lord's day for many years.' It is believed that it was this Samuel Bolton who, in 1648, attended the Earl of Holland upon the scaffold (WHITELOCKE, *Mem.* p. 387). He died, after a long illness, 15 Oct. 1654. In his will he gave orders that he was to be 'interred as a private christian, and not with the outward pomp of a doctor; because he hoped to rise in the day of judgment and appear before God, not as a doctor, but as an humble christian.' Dr. Calamy preached his funeral sermon. His books are rare. They are: 1. 'A Tossed Ship making for a Safe Harbour; or a Word in Season to a Sinking Kingdom,' 1644. 2. 'A Vindication of the Rights of the Law and the Liberties of Grace,' 1645. 3. 'The Arraignment of Error,' 1646. 4. 'The Sinfulnesse of Sin,' 1646. 5. 'The Guard of the Tree of Life,' 1647. 6. 'The Wedding Garment,' and posthumously, 7. 'The Dead Saint speaking to Saints and Sinners,' 1657 (portrait prefixed).

[Brook's Puritans, iii. 223–4; Clark's Lives, pt. i. 43–7; Calamy's Funeral Sermon, 1654; Bolton's Genealogical and Biographical Account; Abram's Blackburn, p. 264.] A. B. G.

BOLTON, WILLIAM (*d.* 1532), architect, was made, about 1506, prior of the monastery of St. Bartholomew at Smithfield. He is supposed to have designed the chapel of Henry VII at Westminster for no better reason than that that monarch refers to Bolton in his will as 'maister of the works.' His works at Canonbury and Harrow-on-the-Hill are mentioned by Stow. He died at Harrow 15 April 1532.

[Dict. Arch. Soc. 1853; Stow's Survey, &c. London, 1720, iii. 235; Weever's Funeral Monuments, London, 1631, p. 434.] E. R.

BOLTS, WILLEM or WILLIAM (1740?–1808), a Dutch adventurer, was born about the year 1740, and after being, according to his own account, brought up in a merchant's office, and afterwards in Lisbon at the time of the earthquake, he found himself in Calcutta in 1759. In that year there was a great lack of civil servants in the Bengal presidency, and to supply this deficiency many merchants, including Bolts, were admitted into the Bengal civil service. He made use of his new appointment to engage in private trade, and entered into partnership with two members of the council at Calcutta, John Johnstone and William Hay. Bolts, who had become the head of a large business and had been appointed second in council at Benares in 1764, soon accumulated a large fortune. In 1764 the court of directors reprimanded Bolts for using the authority of the company in order to further his own private speculations, and in 1765 he was recalled from Benares for the same reason. On 1 Nov. 1766 he resigned the civil service in order to carry on his speculations unhindered, and was appointed an alderman of Calcutta, and from that time his quarrels with the company, and especially with the governor of Bengal, Mr. Verelst, who had succeeded Clive after his second administration, entered a more acute phase. The new governor was determined to put down private trading. In this respect Bolts was one of the worst offenders. He employed a large number of agents, chiefly Armenian, but he was very unscrupulous in his mercantile arrangements. He was also distrusted because he was a foreigner, and in close communication with the heads of the Dutch factory at Dacca and with M. Gentil, a Frenchman high in favour at the court of Sujah Dowlah. After many warnings, Bolts was arrested on 23 Sept. 1768, and deported to England. On reaching England in April 1769 he at once appealed to the court of directors, who would have nothing to do with him and declared him a 'very unprofitable and unworthy servant,' and in 1771 commenced a lawsuit against him. In 1772 he published his 'Considerations on India Affairs,' a large volume in quarto, in which he attacked the whole system of the English government in Bengal, and particularly complained of the arbitrary power exercised by the authorities, and of his own deportation by Mr. Verelst. The volume caused some excitement and was at once answered by Verelst himself in another quarto volume, which Bolts again attacked in a second volume of 'Considerations' in 1775. A translation of his volumes by J. N. Demeunier, who was afterwards a distinguished

member of the States-General, into French was published in 1778. His lawsuits with the company and the cost of publishing his books nearly ruined him, for he had not been able to realise more than 30,000*l.* out of the fortune of 90,000*l.* which he had accumulated in India, owing to his deportation, and he was glad, somewhere about 1778, to accept an offer of the Empress Maria Theresa to enter the Austrian service. He was made a colonel at once and sent out to India to found establishments there for an Austrian East India Company. He founded six, and was on the way to make another fortune, when the death of Maria Theresa in 1780 ruined his hopes, for her son the Emperor Joseph refused to carry on her plans. After this he probably lived at Vienna till 1808, when he came to Paris to start some fresh speculative scheme, probably founded on his own knowledge of Austrian finances, for in the 'Biographie des Contemporains' it is said that he was ruined by the outbreak of war with Austria, and according to the same authority he died a ruined man in a hospital in Paris in the same year.

[Biographie des Contemporains, 1836; Biographie Universelle (Michaud); Considerations on India Affairs, particularly respecting the Present State of Bengal and its Dependencies, by William Bolts, merchant and alderman or judge of the honourable the mayor's court of Calcutta, 2 vols. 4to, 1772 and 1775; A View of the Rise, Progress, and Present State of the English Government in Bengal, including A Reply to the Misrepresentations of Mr. Bolts and other writers, by Harry Verelst, 4to, 1772.] H. M. S.

BOMELIUS, ELISEUS or LICIUS (*d.* 1574?), physician and astrologer, was the son of Henry Bomelius, a native of Bommel in Holland, who was from 1540 to 1559 Lutheran preacher at Wesel in Westphalia; was the author of several religious and historical books of wide repute, and died in 1570 at Duisburg. The Dutch original of 'the summe of the holy Scripture and ordinarye of Christian teaching,' published in London in 1548, is attributed to Henry Bomelius in the British Museum Catalogue. Henry Bomelius was a friend of Bishop Bale, who lived for some time at Wesel, and he contributed Latin verses in the author's praise to Bale's 'Illustrium Maioris Britanniæ . . . Summarium' (Wesel, 1548), and to his 'Scriptorum . . . Catalogus' (1557). Young Bomelius was said by his contemporaries to be a native of Wesel. Owing probably to Bale's advice, he was educated at Cambridge, where he proceeded to the degree of doctor of medicine. He was well received by the English reformers and contributed an 'epigramma' in Latin elegiacs to an edition of Thomas Becon's early works published in 1560. Henry Bennet, of Calais [q. v.], in dedicating his 'Life of Œcolampadius' to James Blount, sixth Baron Mountjoy (30 Nov. 1561), praises Mountjoy for entertaining with 'zealous affection Heliseus Bomelius, a German, who readeth unto your honour the liberal sciences, and whom Phillip Melancthon hath in familiar letters praysed highly for erudicion and godlynes.' At a little later date Bomelius is said to have lived in the house of Lord Lumley. As a physician and astrologer Bomelius rapidly made a high reputation in London. 'People,' writes Strype (*Life of Parker*, ii. 1), 'resorted to him to be cured of their sicknesses, having a wonderful confidence in him and in his magic.' Sir William Cecil is said to have consulted Bomelius as to the queen's length of life, during one of the early negotiations for her marriage. 'An almanacke and pronostication of master Elis Bomelius for ye yere of our lorde god 1567 autorysshed by my lorde of London [Edmund Grindal],' is entered on the Stationers' register for 1566-7 (Arber's *Transcript*, i. 335). No copy of this book, which, according to Tanner, was published in 12mo, and dealt with the effects of two eclipses, is now known to be extant.

In 1567 Bomelius was arrested at the instance of Dr. Thomas Francis, president of the College of Physicians, for practising medicine without license of the college. He was lodged in the King's Bench prison. On 27 May 1567 he wrote to Cecil praying for an opportunity to expose Dr. Francis's ignorance of astronomy and Latin, and in succeeding letters to the lord treasurer he petitioned for his release and for pecuniary assistance. On 3 May 1568 he supplicated at Oxford for incorporation as a doctor of medicine of Cambridge (*Oxf. Register*, Oxf. Hist. Soc. i. 270). Early in 1569 Bomelius's wife stated before the council of the College of Physicians that her husband had given due satisfaction for his offence to the queen and the lord treasurer, and petitioned for the council's consent to his liberation. The council demanded payment of a 20*l.* fine and 15*l.* costs, which Bomelius's poverty did not allow him to pay. On 2 June 1569 the council appears to have offered Bomelius his release on condition of his giving a bond of 100*l.* to abstain henceforth from the practice of medicine, but early in 1570 he would seem to have been still a prisoner, and his wife was in frequent communication with Archbishop Parker as to the conditions of his release.

Before Easter 1570 he was 'an open prisoner' of the king's bench, and in April 1570 Parker 'was minded to have taken bond of Bomelius shortly to have departed the realm,' but Bomelius temporarily frustrated this purpose by announcing in a letter to Parker that he had knowledge of a terrible danger hanging over England. The archbishop sent the letter to Cecil and urged him to examine Bomelius in the privy council. But Cecil entered into private correspondence with the doctor in the expectation of discovering a conspiracy. All, however, that Bomelius communicated to Cecil was a statement as to the queen's nativity and a portion of a book 'De Utilitate Astrologiæ,' in which he tried to prove that great revolutions take place every 500 years, and that as rather more than 500 years had elapsed since the Norman conquest, England must be in imminent peril. Cecil treated Bomelius's announcements with deserved contempt, and Bomelius therefore resolved to quit the country. An ambassador from Russia named Ssavin, who was in London at the time, offered to take him to Russia, and with that offer Bomelius closed. The English government did not hinder his departure, and late in 1570 Bomelius, who had promised to supply Cecil with political information and to send him small presents yearly, was settled in Russia. When Sir Jerome Horsey began his travels in that country (1572), he frequently met Bomelius at Moscow, and he writes that Bomelius was then living in great pomp at the court of Ivan (Vassilovitch) IV, was in high favour with the czar as a magician, and was holding an official position in the household of the czar's son. He is said by Horsey to have amassed great wealth, which he transmitted by way of England to his native town of Wesel, and to have encouraged the czar, by his astrological calculations, to persist in an absurd project of marrying Queen Elizabeth. But he habitually behaved (according to Horsey) as 'an enymie to our nation,' and falsely represented that Elizabeth was a young girl. After a few years of prosperity, Bomelius was charged (about 1574) with intriguing with the kings of Poland and Sweden against the czar. He was arrested with others and cruelly racked, but he refused to incriminate himself. He was subsequently subjected to diabolical tortures and died in a loathsome dungeon. Horsey, who gives a full description of his death, characterises him as 'a skilful mathematician, a wicked man, and practiser of much mischief.' In 1583 Bomelius's widow returned to England with Sir Jerome Bowes.

No books of Bomelius are now known, but Henry Bennet of Calais, when speaking of his 'erudicion and godlynes' in his 'Life of Œcolampadius,' adds: 'Albeit hys learned workes published geve due testimony thereof.' The prescriptions in Gervase Markham's 'English Housewife' (1631) are taken (see p. 5) from a manuscript by Bomelius and Dr. Burket.

Leigh), pp. 202–6.]

S. L.

BONAR, ARCHIBALD (1753–1816), divine, fifth son of John Bonar [q. v.], minister first at Cockpen and then at Perth, was born at Cockpen on 23 Feb. 1753, and educated at the high school and university of Edinburgh. He was licensed to preach on 29 Oct. 1777, ordained minister of the parish of Newburn, Fife, on 31 March 1779, and translated to the North-west Church, Glasgow, on 17 July 1783. His health compelled him to resign this charge, and on 19 April 1785 he was settled in the parish of Cramond, where he died on 8 April 1816. He was twice married: (1) on 15 Aug. 1782 to Bridget, eldest daughter of the Rev. Mr. Black, minister of Perth, who died on 4 Jan. 1787; and (2) on 16 Aug. 1792 to Ann, daughter of Andrew Bonar, and had issue two sons and three daughters. He wrote: 1. 'Genuine Religion the best Friend of the People,' 1796. 2. 'Two Volumes of Sermons,' 1815–17; the second volume was published after his death, to which a memoir by his brother James [q. v.] is prefixed.

[Family papers in possession of Horatius Bonar, W.S., Edinburgh; Memoir pref. to Sermons, vol. ii. 1817; Scott's Fasti Eccl. Scot. pt. i. 135.]

H. B-R.

BONAR, JAMES (1757–1821), solicitor of excise in Scotland, eighth son of John Bonar (1722–1761) [q. v.], minister of Cockpen and Perth, was born on 29 Sept. 1757. He was educated at the high school of Edinburgh, and attended the university. He early entered the excise office, but found time to become a distinguished scholar. He was a member of the Speculative Society of Edinburgh University, being admitted 9 Dec. 1777, and elected an extraordinary member on 24 Dec. 1781, and was for several years treasurer of the Royal Society, Edinburgh. He was one of the original promoters of the Astronomical Institution, and one of the founders of the Edinburgh Subscription

Library in 1794. He died on 25 March 1821, leaving, by his wife Marjory Maitland (to whom he was married in March 1797), five sons and three daughters. He was author of the article on 'Posts' in 'Encyclopædia Britannica,' 1794; the articles on 'Alphabet Characters,' 'Etymology,' 'Excise,' 'Hieroglyphics,' &c., in 'Edinburgh Encyclopædia,' 1808–18; 'Disquisition on the Origin and Radical Sense of the Greek Prepositions,' 1804; he edited the new edition of 'Ewing's Greek Grammar,' and contributed many articles to the 'Edinburgh Magazine,' 'Missionary Magazine,' and 'Scottish Register,' 1790–5. He published an English edition of Holbein's 'Dance of Death,' 1788, and wrote the memoir of his brother, Archibald Bonar [q. v.], which is prefixed to the second volume of his sermons.

[Family papers in possession of Horatius Bonar, W.S., Edinburgh; History of the Speculative Society (1845); manuscript Life, with list of his writings, written by his son.] H. B-R.

BONAR, JOHN, the elder (1722-1761), Scottish divine, was born at Clackmannan on 4 Nov. 1722. His father—also John Bonar—was then tutor at Kennet. His mother was Jean Smith, daughter of William Smith of Clackmannan. His father was ordained minister of the united parishes of Fetlar and North Yell, in Shetland, in 1729, and John was sent to his grandfather's manse at Torphichen, Linlithgowshire. There he received the usual parish-school education, and then proceeded to the university of Edinburgh, where he matriculated 27 April 1742. He was licensed as a preacher of the gospel 5 June 1745, and ordained 22 Aug. 1746 as the minister of the parish of Cockpen, near Dalkeith. Whilst there he married, November 1746, Christian, daughter of Andrew Currier, W.S., Edinburgh (she died 22 Nov. 1771). In 1756 he received and declined a presentation to the parish or abbey church of Jedburgh. He was called to the second or collegiate church of Perth, and was settled there 29 July 1756. He came to the front as a persuasive preacher of the gospel on the old evangelical lines. In 1750 he printed anonymously 'Observations on the Conduct and Character of Judas Iscariot' (reprinted in 1822); and in 1752 a noticeable sermon on the 'Nature and Necessity of a Religious Education,' which was preached before the Society in Scotland for Propagating Christian Knowledge. In 1755 he published anonymously 'An Analysis of the moral and religious Sentiments contained in the Writings of Sopho [i.e. Lord Kames] and David Hume, Esq.' It was addressed to the 'General Assembly of the Church of Scotland.' This work is sometimes wrongly attributed to Rev. George Anderson. It was replied to angrily in 'Observations upon the Analysis,' but never answered. In 1760 he preached his 'Nature and Tendency of the Ecclesiastical Constitution in Scotland' before the synod of Perth and Stirling, which afterwards formed an important publication, and was reprinted in the 'Scots Preacher.' He was at his death engaged on a work, which he left unfinished, to have been entitled 'The Example of Tyre, a Warning to Britain.' He died at Perth 21 Dec. 1761, in the fortieth year of his age.

[Dr. Hew Scott's Fasti Ecclesiæ Scoticanæ; Memoir prefixed to vol. ii. of Sermons of the Rev. Archibald Bonar of Cramond, and Memoir prefixed to 'Judas Iscariot,' 1822; communications from Rev. Andrew Whyte, M.A., Clackmannan, the Rev. John Calder, presbytery clerk of Stirling, and Horatius Bonar, Esq., of Edinburgh. Rev. Dr. Andrew A. Bonar, Glasgow, grandson of John Bonar, possesses a manuscript of his grandfather, which contains interesting jottings of two visits paid by him to the scenes of revival in Kilsyth and Cambuslang.] A. B. G.

BONAR, JOHN, the younger (1747–1807), solicitor of excise in Scotland, eldest son of John Bonar the elder [q. v.], divine, was born on 22 Aug. 1747, and died 1 April 1807. He was educated at the university of Edinburgh, entered the government service, and became first solicitor of excise in Scotland. He, along with William Creech, John Bruce (afterwards professor of logic in Edinburgh University), Henry Mackenzie (author of the 'Man of Feeling'), and Mr. Belcher of Invermay, founded the Speculative Society, now the chief debating society in the Edinburgh University. Lord Melville had a high opinion of his abilities, and placed great confidence in his judgment on all revenue questions. He wrote 'Considerations on the proposed Application to His Majesty and Parliament for the Establishment of a Licensed Theatre in Edinburgh,' 1767. He was joint editor of a volume entitled 'Miscellaneous Pieces of Poetry selected from various Eminent Authors, among which are interspersed a few Originals,' 1765.

[Family papers in possession of Horatius Bonar, W.S., Edinburgh; History of the Speculative Society (1845).] H. B-R.

BONAVENTURA, THOMASINE (*d.* 1510?), Cornish benefactress, was a peasant girl, born at Week St. Mary, five or six miles south of Bude, soon after the middle of the fifteenth century. She married, successively,

three rich London merchants, the last being Sir John Percyvall, who in 1486 was sheriff, was knighted by Henry VII, and in 1498, the year of the marriage, was elected lord mayor of London. He died about 1504, and had a chantry in the church of St. Mary Woolnoth. Dame Percyvall survived her third husband, and at his death retired to her native place, where she occupied herself in 'repairing of highways, building of bridges, endowing of maidens, relieving of prisoners, feeding and appareling the poor,' &c. (CAREW). She also built and endowed a chantry and college there, of which some slight remains still exist, including the initial letter of her christian name over a doorway. Here 'divers of the best gentlemen's sons of Devon and Cornwall' were educated. Her will is said to have been dated about the year 1510. The chantry was suppressed temp. Edward VI.

[Carew's History of Cornwall; Churchwardens' Accounts of St. Mary Woolnoth in Gent. Mag. xlii. 41 (1854); Herbert's History of the Livery Companies of London; Hawker's Footprints of Men of Former Times in Cornwall.] W. H. T.

BOND, DANIEL (1725–1803), painter, is supposed to have been born in London. In 1762 and 1763 he exhibited landscapes at the rooms of the Society of Arts in the Strand. In 1764 he was awarded by that society twenty-five guineas, the second premium, and in 1765 fifty guineas, the first premium, for landscape paintings in oil-colours (*A Register of the Premiums and Bounties given by the Society instituted in London for the Encouragement of Arts, Manufactures, and Commerce, from the original institution in the year* MDCCIV). For many years he was engaged in a manufactory at Birmingham as superintendent of the decorative department. His productions are described as highly finished landscapes, broad in treatment, after the style of Wilson, R.A. (*Gent. Mag.* lxxiv. 1101, and REDGRAVE). He seems to have amassed property enough to live a retired life during his latter years. He died at Hagley Row, Edgbaston, Birmingham, 18 Dec. 1803 (*Gent. Mag.* lxxiii. 1259). In 1804, a few months after his death, a number of his pictures and drawings were sold by auction in London.

[Pilkington's Dictionary of Painters; Edwards's Anecdotes of Painters, London, 1808; Redgrave's Dictionary of Artists of the English School.] W. H-H.

BOND, DENNIS (*d.* 1658), politician, of a good family belonging to the isle of Purbeck, carried on the business of a woollen-draper in Dorchester, of which town he was among the first fifteen capital burgesses nominated in the new charter granted by Charles I in 1629, bailiff the following year, and mayor in 1635. He was returned to parliament by the borough along with Denzil Hollis in 1640. A casual reference in Clarendon's 'History of the Rebellion' shows that at the outset of his parliamentary career he was already a decided adherent of the party of reform. The king having (January to June 1642) filled up certain vacant places on the episcopal bench, the House of Commons resolved to present a petition deprecating the making of new appointments 'till the controversy should be ended about the government of the church,' and a committee was nominated 'to draw up reasons' in support of the petition, of which both Falkland and Hyde, although they had opposed the resolution, were invited to become members, an offer which was of course declined. On this Clarendon observes: 'There was a gentleman who sat by, Mr. Bond, of Dorchester, very severe and resolved against the church and the court, who with much passion and trouble of mind said to them, "For God's sake be of the committee; you know none of our side can give reasons."' What part Bond played during the civil war remains obscure; but we may fairly conjecture that it was a not inactive one, since his name appears in the list of the commissioners nominated by 'act of the Commons' (6 Jan. 1648–9) to try the king for high treason. He was not, however, one of those who signed the warrant of execution, nor is he mentioned in the list of commissioners present on any of the days (from 20 to 27 Jan.) during which the trial was in progress. Probably he was deterred by scruples of conscience or want of resolution. On 14 Feb. he was elected a member of the council of state, of which he continued to be a member, being re-elected every year, until 1653. During this period he must have led a busy life, as the records show that he sat on many of the committees into which the council divided itself for the more efficient despatch of business. The most important of those on which Bond sat were the committee for trade and foreign affairs and the admiralty committee, both of course standing committees. He was also from time to time a member of minor committees, constituted to serve temporary purposes, such as disposing of the prisoners taken at Worcester, considering how best to prevent the exportation of coin, or raising money to pay the judges. On two occasions, 12 July 1652 and 23 March 1652–3, he was elected to the presidency of the council, an office tenable for a month only. After the dissolution of the Long parliament

(19 April 1653) a new council of state was formed upon a reduced scale, and Bond was not included therein, nor apparently in any subsequent council. Yet in 1655 we find him mentioned as a member of the council's committee for trade. Probably being regarded as a person of special knowledge in that department, he was by an irregularity placed on the committee, though not a member of the council. He represented Weymouth and Melcombe Regis in the short-lived parliament of 1654, and was returned by the same constituency in 1656. He died on 30 Aug. 1658, 'the windiest day,' says Wood, 'that had before happened for twenty years, being then tormented with the strangury and much anxiety of spirit.' Cromwell's death following on 3 Sept. suggested to some royalist of a punning humour a *jeu de mots* which was popular in its time, and which, though the precise form which its author gave it has been forgotten, was to the effect that the devil had taken Bond for Oliver's appearance. He was buried in Westminster Abbey, but his body was exhumed in September 1661 and transferred to the churchyard of St. Margaret's close by. He seems to have had his fair share of the pride of long descent; for he drew up and had engrossed on vellum an elaborate account of his own pedigree, of the complete accuracy of which modern genealogical authorities are by no means satisfied. He also made an alteration in the family scutcheon, which has been retained by his descendants. He had an estate at Lutton, Dorset, and was twice married. His first wife, married in 1610, was Joan, daughter of John Gould, of Dorchester, by whom he had two sons, viz. John, afterwards eminent as a puritan divine [see BOND, JOHN, *d.* 1676], and William, who achieved no particular distinction, and died in 1669 without male issue. In 1622 he married Lucy, daughter of William Lawrence, of Steeple, Dorset. His son by this marriage, NATHANIEL, born 1634, was educated at All Souls College, Oxford, where he graduated B.C.L. 14 Dec. 1654, having on 14 April of the same year been admitted a student of the Inner Temple. He was called to the bar 26 May 1661. In the parliament of 1680 he represented Corfe Castle, and the following year was returned for Dorchester, and in 1695 for the same place. In 1683 he was appointed recorder of Weymouth, became serjeant-at-law 2 May 1689, and king's serjeant 1693, being then knighted. On the accession of Queen Anne he was not summoned to the usual ceremony of taking the oaths, and consequently lost his rank of serjeant. In 1660 he bought from his elder brothers, John and William, the Lutton estate, and in 1686 from John Lawrence the reversion of the adjoining estate of Creech Grange, which fell into possession in 1691, and has ever since been the seat of the family. He married (1) Elizabeth, youngest daughter of the Rev. J. Churchill, rector of Steeple, who died without issue 18 Dec. 1674; (2) Mary, daughter of Lewis Williams, Esq., of Chitterton, Dorset, by whom he had two sons, Dennis and John. He died in 1707, and was buried at Steeple. His wife died in 1728, and was buried at the same place.

J. M. R.

BOND, GEORGE (1750–1796), lawyer, second son of George Bond, of Farnham, Surrey, by the daughter of Sir Thomas Chitty, knight, was a member of the Middle Temple, and obtained a large practice at the Surrey sessions. He belonged to a class of lawyers now happily approaching extinction, whose chief strength consists in playing upon the susceptibilities of ignorant juries. Enthralled by his coarse and vulgar humour, the jurors of his native county, Surrey, were almost at his mercy, and tradition says that a not uncommon form of verdict at the Surrey sessions was: 'We finds for Serjeant Bond and costs.' He was made a serjeant in 1786, and a king's serjeant in 1795. He died 19 March 1796. He married in 1793 a lady named Cooke, of Conduit Street, a granddaughter of one of the prothonotaries of the common pleas.

J. M. R.

BOND, HENRY JOHN HAYLES, M.D. (1801–1883), professor at Cambridge, was a younger son of the Rev. W. Bond, fellow of Caius College and rector of Wheatacre, Norfolk, in which village he was born in 1801. He was educated at the Norwich grammar school under Dr. Valpy. He studied medicine at Cambridge, London, Edinburgh, and Paris, graduated M.B. at Corpus Christi, Cambridge, 1825, M.D. 1831. Before the latter

date he had settled in Cambridge, where he had a large practice. In 1851 he was appointed regius professor of physic in succession to Dr. Haviland. From 1858 to 1863 he was a member of the General Medical Council. He resigned his professorship in 1872, having practically retired from practice some time before. He published nothing but an excellent syllabus of his lectures, but his tenure of office was contemporary with a great rise in the reputation of the medical school at Cambridge. He was a man of great integrity and ability, but shy and retiring. He married a daughter of William Carpenter, esq., Toft Marks, Norfolk, niece of Sir E. Berry, bart., and left a large family. He and his father present a case of remarkable longevity, for the year of his death was the 117th from the year of his father's university degree. He died 3 Sept. 1883.

[Lancet, 15 Sept. 1883; Medical Journal, same date; information from Dr. Bond's family.]

E. S. S.

BOND, JOHN (1550–1612), physician and classical scholar, was born at Trull, a village two miles from Taunton, in Somersetshire, and was educated in 'grammaticals,' as Wood says, at Winchester; became a student at Oxford in 1569, and took a degree in arts four years after, being then either one of the clerks or chaplains of New College, and much noted for his proficiency in academical learning. In 1579 he proceeded in arts, and had soon after the mastership of the free school of Taunton in his own county conferred on him by the warden and society of New College. Gilbert Sheldon, afterwards archbishop of Canterbury, is said to have been one of his pupils for a short time. At length, being in a manner worn out with the drudgery of a school—he speaks of it in one of his prefaces as a stone sustained by him for twenty years and more—he, for diversion, 'I cannot say,' writes his biographer, 'for profit,' practised physic, though he had taken no degree in that faculty at the university, and became at length eminent therein. Bond is probably to be identified with the John Bond who was chief secretary to the lord chancellor of England (Egerton). Thomas Coriat, in his letters, desires the recommendation of his dutiful respects to many lovers of virtue and literature, among which, next to that of Ben Jonson, is 'Maister John Bond, my countreyman, chiefe secretarie unto my lorde chancellour.' One of Bond's name occurs as member for Taunton in the parliaments of 1601 and 1603.

Bond's chief works were his commentaries on Horace and Persius, the former dedicated to Henry, Prince of Wales, under date 7 Aug. 1606. Bond's 'Commentaries on Horace' appear in a miniature edition issued by the Elzevirs; they are to be found in all the principal editions of the Latin poet. His 'Commentaries on Persius' were published after their author's death by Roger Prowse, who married his daughter Elizabeth. They were dedicated by Prowse to James Mountague, bishop of Bath and Wells. Prowse says he thought it a pity that Bond's Persius, because his father-in-law had not put the last hand to it, should be left unedited, seeing that his Horace had won a wide reputation. Bond's writings, says Wood, are used by the juniors of our universities and in many free schools, and more admired and printed beyond the seas than in England. He has written, says the same biographer, if not published, 'other things; but such I have not yet seen.' At the time of his death, which happened on 3 Aug. 1612, he was possessed of several lands and tenements in Taunton, Wilton, and Newenton. He was buried in the church of Taunton, called St. Mary Magdalene, and over his grave was this epitaph:—

Qui medicus doctus, prudentis nomine clarus,
Eloquii splendor, Pieridumque decus,
Virtutis cultor, pietatis vixit amicus;
Hoc jacet in tumulo, spiritus alta tenet.

No traces of the monument at present remain.

Bond was certainly one of the best scholiasts of his age. His notes are brief and pointed. Many of his observations are extracted from Lambinus. He tells us in the preface to his Horace that the work was the outcome of certain notes or *scholia*, which he caused his pupils to set down in writing, that they might better remember them. Achaintre, who highly praised Bond's notes, incorporated them with his Paris edition, 1806, as the work of the most famous of the scholiasts, and noted that more than fifteen editions of his Horace had then left the press in France, Great Britain, Germany, and Belgium.

The full titles of Bond's works are: 1. 'Quinti Horatii Flacci Poemata, scholiis sive annotationibus, quæ brevis Commentarii vice esse possint illustrata,' Lond. 1606; Leyden, 1606, 1630, 1668; Frankfort, 1629; Hanover, 1621; Amst. 1686, 12mo (best edition); Leipzig, 1623, 1655; printed several times after, both in London and abroad. 2. 'Auli Persii Flacci Satyræ sex, cum posthumis Commentariis Joannis Bond,' Lond. 1614; Paris, 1644; Amst. 1645, 1659; Nuremberg, 1625, 1631, 1633.

BOND, JOHN, LL.D. (1612–1676), puritan divine, was a member of an old Dorsetshire family which settled in that county in the reign of Henry VI, but was born at Chard, in Somersetshire (Ep. Dedicat. to *Occasus Occident.*) on 12 April 1612. His father was Dennis Bond [q. v.] He was educated at Dorchester under John White, and afterwards entered at St. Catharine's College, Cambridge, of which he became a fellow. He took his B.A. degree in 1631, became M.A. in 1635, and LL.D. ten years later. After leaving Cambridge he was for some time a lecturer at Exeter, and then succeeded his old master, White, as minister of the Savoy. In 1643 he became a member of the assembly of divines, and in December 1645 succeeded to the mastership of the Savoy. In the same year, Selden having declined the mastership of Trinity Hall, Cambridge, Dr. King was chosen by the fellows; but, parliament interposing on behalf of Bond, he was elected master on 7 March 1646. Three years later he was made professor of law at Gresham College, London, and in 1654 became assistant to the commissioners of Middlesex and Westminster for ejecting scandalous ministers and schoolmasters. He was appointed vice-chancellor of Cambridge University in 1658, but lost his preferments at Cambridge and London on the Restoration. He retired to Dorsetshire, where he died at Sandwich, in the isle of Purbeck, and was buried at Steeple on 30 July 1676. He is thought by some to be identical with the John Bond who was member for Melcombe Regis in the last parliament of Charles I, recorder of Weymouth and Melcombe Regis in 1645, and subsequently a recruiter in that district for the Long parliament (Hutchins' *Dorsetshire*, ed. Ship and Hodson).

He published the following sermons: 1. 'A Door of Hope,' 1641. 2. 'Holy and Royal Activity,' 1641. 3. 'Sermon at Exeter before the Deputy Lieutenants,' 1643. 4. 'Salvation in a Mystery,' 1644. 5. 'Ortus Occidentalis,' 1645. 6. 'Occasus Occidentalis,' 1645. 7. 'Grapes amongst Thorns,' 1648. 8. 'A Thanksgiving Sermon,' 1648.

Professors, 1740, p. 247; Coker's Survey of Dorsetshire, 1732, p. 49; Hutchins's History and Antiq. of Dorsetshire, ed. Ship and Hodson, 1861, i. 603, 607, ii. 438, 440, 451, 453; Willis's Notitia Parliament. ii. 437, iii. 244.] A. R. B.

BOND, JOHN JAMES (1819–1883), chronologist, born 9 Dec. 1819, entered the public service at the age of twenty-one as a clerk, assisting Mr. (afterwards Sir) Henry Cole, his brother-in-law, in the arrangement of the public records when they were transferred from Whitehall to the Royal Riding School of Carlton House. He was senior assistant keeper of her majesty's record office at the time of his death, which occurred on 9 Dec. 1883. He compiled a useful work of reference, entitled 'Handy Book of Rules and Tables for verifying dates of historical events, and of public and private documents; giving tables of regnal years of English sovereigns, with leading dates, from the Conquest to the present time,' London, 1866, 1869, and 1875, 8vo.

[Times, 11 Dec. 1883; Cat. of Printed Books in Brit. Mus.] T. C.

BOND, JOHN LINNELL (1766–1837), architect, was educated at the Royal Academy, where he gained a gold medal in 1786. He occasionally exhibited at the academy up to 1797. After devoting some years to the study of ancient architecture in Italy and Greece, he commenced the practice of his profession in London, and designed several large mansions. He also prepared the architectural design for Waterloo Bridge. To the 'Literary Gazette' he contributed a number of papers on architectural subjects. He was well versed in the classics, and left behind him a translation of Vitruvius. He died in Newman Street, 6 Nov. 1837.

[Gent. Mag. new ser. viii. 655; Literary Gazette for 1837, p. 724; Redgrave's Dictionary of Artists of the English School, pp. 46–7.]

BOND, MARTIN (1558–1643), merchant of London, was son of William Bond, an alderman of London and merchant adventurer, who was sheriff in 1567; owned Crosby Place, Bishopsgate, to which he added a turret; died 30 May 1576, and was buried 14 June in St. Helen's Church, Bishopsgate. The epitaph on the monument erected to his memory there describes him as 'most famous in his age for his great adventures both by sea and land.' Martin Bond was born in 1558. He was, like his father, a merchant adventurer, and belonged to the Haberdashers' Company. As captain of the train-bands of the city he marched at their head to Tilbury in 1588, and remained chief captain till his death. He laid the foundation-stone of the new Aldgate in 1607. Some Roman coins were found, and Bond caused two to be copied as medallions in stone, and placed them as decorations on

the outer side of the gate. From 1619 to 1636 he was treasurer of St. Bartholomew's Hospital, and became one of the benefactors of the foundation. His portrait in oils is preserved in the hospital, and also a pewter inkstand bearing his arms and the inscription 'the gift of Mr. Martin Bond, 1619.' He died in May 1643, and has an elaborate monument (erected by William Bond, a nephew, and renovated by the Haberdashers' Company in 1868) in the north aisle of St. Helen's Church, Bishopsgate. On it he is represented sitting in armour in a tent, outside which a servant holds his horse, and two sentries are on guard with matchlocks in their hands.

[J. E. Cox's Annals of St. Helen's, Bishopsgate, 63, 64, 84, 96, 97, 333, 423; Stow's Survey, ed. 1633.] N. M.

BOND, NICHOLAS (1540-1608), president of Magdalen College, Oxford, born in 1540, was a native of Lincolnshire. He matriculated as a pensioner of St. John's College, Cambridge, 27 May 1559; was elected a Lady Margaret scholar on 27 July following; proceeded B.A. in 1563-4; became a fellow of Magdalen College, Oxford, in 1565; was admitted M.A. at Oxford, 17 Oct. 1574, and D.D. 15 July 1580. In 1574 he received from the crown the rectory of Bourton-on-the-water, Gloucestershire; in 1575 resigned his fellowship at Magdalen; on 24 March 1581-2 was installed canon of Westminster; in 1584 was recommended by Archbishop Whitgift to the queen for the mastership of the Temple, vacant by the death of Richard Alvey [q. v.] In October 1585 he complained to the bishop of Winchester that he was unable to contribute towards the furnishing of troops for the Low Countries, and begged exemption from the charge. Early in 1586 Cecil noted in a memorandum that Bond deserved promotion to a deanery. He became rector of Britwell, Oxfordshire, on 3 May 1586, and of Alresford, Hampshire, in 1590; he also held the offices of chaplain of the Savoy and chaplain-in-ordinary to the queen.

Bond was vice-chancellor of Oxford University from 16 July 1589 to 16 July 1590, and from 13 July 1592 to 13 July 1593. On 5 April 1590 he became president of Magdalen College. The queen had directed the fellows of the college to elect Bond to that office some months previously; but another candidate, Ralph Smith, then received a majority of the votes, and Bond's friends had recourse to a ruse by which the announcement of the result was delayed beyond the statutable time within which the fellows were lawfully able to exercise their rights of election. The duty of appointing the president thus reverted to the crown, and it was exercised in favour of Bond. Bond was brought into personal relations with Queen Elizabeth on her visit to Oxford in September 1592, during his second tenure of the vice-chancellorship. He received Prince Henry when the prince took up his residence at Magdalen, 27 Aug. 1605 (Nichols's *Progresses*, i. 547). As an executor of the will of the Countess of Sussex, 10 Sept. 1595, Bond helped to found Sidney Sussex College, Cambridge, on the site of the dissolved Greyfriars House. There is a letter from Bond to Lord Lisle relating to some property of Magdalen College among the Addit. MSS (15914, f. 66) at the British Museum. Bond died on 8 Feb. 1607-8, and was buried in the chapel of Magdalen College, where there is an inscription to his memory. He left 10*l.* and some books to the Bodleian Library. He contributed Latin verses to the collection published at Oxford on the death of Queen Elizabeth, and Wood prints in his 'Annals' some notes sent by Bond to Archbishop Bancroft concerning a complaint made by Sir Christopher Hatton of the defective discipline of the university during Bond's first tenure of the vice-chancellorship. Bond is sometimes erroneously confounded with Nicholas Bownde [q. v.]

[Cooper's Athenæ Cantab. ii. 243-5; Wood's Fasti (Bliss), i.; Wood's Annals, ii. 243-5; Le Neve's Fasti, iii.; Cal. State Papers (Dom.), 1581-90.] S. L.

BOND, OLIVER (1760?-1798), republican, born in Ulster about 1760, was the son of a dissenting minister, and connected with several respectable families. Bond settled in Dublin, where he embarked extensively as a merchant in the woollen trade, and became possessed of considerable wealth. He was one of the earliest in planning measures for effecting a union of religious sects and promoting parliamentary reform in Ireland. For these objects the 'Society of United Irishmen' was constituted in 1791, and of it Bond became an energetic member. He acted as secretary to a meeting of this body at Dublin in February 1793, under the presidency of Lord Mountgarret's son, the Hon. Simon Butler, one of the king's counsel-at-law. On this occasion the society by resolutions unanimously condemned the government for measures which they viewed as adverse to the liberties of the people. In further resolutions the meeting deplored the intended war against France, and asserted the necessity for the total emancipation of the catholics of Ireland and

for the reform of parliament. In consequence of these resolutions Butler and Bond were summoned before the House of Lords at Dublin. At the bar there, in March 1793, they avowed the publication of the resolutions. The lords resolved that the paper was a libel. They decreed that Bond and Butler should be imprisoned for six months in Newgate, that each of them should pay a fine of five hundred pounds, and remain in confinement until these sums had been discharged. In Newgate addresses were presented to Butler and Bond by deputations from meetings of the United Irishmen. After the failure of the efforts to obtain emancipation and parliamentary reform for Ireland by peaceable means, an organisation was formed to establish an Irish republic independent of England. Of this movement Bond was regarded as the mainspring. He became a member of its northern executive committee and of the Leinster directorate, the meetings of which were generally held at his house. Resolutions declaratory of determination to be satisfied with nothing short of the entire and complete regeneration of Ireland were passed at a meeting there in February 1798. In the following month Bond and several members of the directory were arrested at his house and imprisoned. Bond was tried in July 1798 on a charge of high treason, and defended by Curran, who impeached the testimony of Thomas Reynolds, an informer, on whose statements the charges against him were mainly based. The attorney-general characterised Bond as 'a man of strong mind and body, and of talents which, if perverted to the purposes of mischief, were formidable indeed.' The jury returned a verdict of guilty, and Bond was sentenced to be hanged. His fellow-prisoners, without stipulating for their own lives, signed a proposal that if the government would spare him they would give every information respecting their organisation, both at home and in France, and consent to voluntary exile. This proposition, although opposed by some members of the government, was accepted by the Marquis Cornwallis, then viceroy, who had reason to consider that there was very little prospect of being able to convict any of these state prisoners. Bond died suddenly in prison in the following September, and was buried in the cemetery of St. Michan's Church, Dublin. The 'enlightened republican' principles of Bond, his high intellectual qualities, elevated sentiments, and patriotic views, were eulogised by his political associate and fellow-prisoner, William James MacNevin, M.D., who became a resident in America. Bond's widow removed with her family from Ireland to that country, and died at Baltimore in 1843.

BOND, THOMAS (1765–1837), topographical writer, born at Looe, Cornwall, in 1765, was nominally in the profession of the law, but, having a private fortune, never sought practice. In 1789 he was appointed town clerk of East Looe, and also (a separate office) town clerk of West Looe, the same year that a relative and namesake was elected mayor of East Looe. In 1823, while still in office, he published 'Topographical and Historical Sketches of the Boroughs of East and West Looe, in the County of Cornwall, with an account of the Natural and Artificial Curiosities and Pictorial Scenery of the Neighbourhood,' eight plates and several woodcuts, London, 1823, 8vo, pp. 308. This work, written as a 'labour of love,' describes seaside places near Plymouth, which were popular resorts in summer for health and recreation. The views of Looe are by his relative, Mrs. Davies Gilbert. Bond was a great reader, and his knowledge of the law of tenures was extensive. He died much respected at East Looe 18 Dec. 1837, and, being unmarried, left the greater portion of his property to Davies Gilbert, esq. F.R.S., one of his nearest relatives.

[Courtney and Boase's Bibl. Cornub. i. 32; Gent. Mag. 1838, p. 667.] J. W.-G.

BOND, WILLIAM (*d.* 1735), dramatist, was, according to the 'London Magazine' (1735), 'a near relation to the Lord Viscount Gage, and an author of several poetical pieces.' The following are known as works of his: 1. A very poor tragedy called 'The Tuscan Treaty, or Tarquin's Overthrow' (*Miscellaneous Plays*, vol. xlvi.), announced as having been 'written by a gentleman lately deceased and altered by W. Bond.' It was unsuccessfully acted at Covent Garden in 1733. 2. A translation of G. Buchanan's 'Impartial Account of the Affairs of Scotland from the Death of James V to the Tragical End of Earl Murray.' Of this work two editions were published in 1722, one with and one without the Latin text. 3. Contributions to the 'Plain Dealer,' conducted in 1724 by Aaron Hill, who also supplied him

with a prologue to the 'Tuscan Treaty.' Dr. Johnson says that Bond and Hill wrote the 'Plain Dealer,' each six essays by turns, and the character of the work was observed regularly to rise in Hill's week and fall in Bond's; whence Savage called them the two contending powers of light and darkness. He died in June 1735 in a fainting fit, into which he fell while acting Lusignan in Aaron Hill's adaptation of Voltaire's 'Zaïre,' at the great room in York Buildings, before this play was brought out at Drury Lane. He is said to have been a man of little ability, who yet depended chiefly for subsistence on his literary exertions. He was a native of Suffolk.

BONE, HENRY (1755–1834), painter, was born at Truro 6 Feb. 1755. His father was a cabinetmaker and carver of unusual skill. In 1767 Bone's family removed to Plymouth, where Henry was apprenticed, in 1771, to William Cookworthy, the founder of the Plymouth porcelain works, and the first manufacturer of 'hard-paste' china in England. In 1772 Bone removed, with his master, to the Bristol china works, and here he remained for six years, working from 6 a.m. to 6 p.m., and at night studying drawing. The china decoration by Bone is of high merit, and is said to have been marked with the figure 1 in addition to the factory-mark, a small cross. On the failure of the Bristol works in 1778 Bone came to London with one guinea of his own in his pocket, and five pounds borrowed from a friend. He first found employment in enameling watches and fans, and afterwards in making enamel and water-colour portraits. Dr. Wolcot (Peter Pindar) now became his friend, and by his advice Bone made professional tours in Cornwall. On 24 Jan. 1780 he married Elizabeth Vandermeulen, a descendant of William III's battle-painter; and by her he had twelve children, ten of whom survived. In the same year he exhibited his first picture at the Royal Academy, a portrait of his wife, an unusually large enamel for the period. He now gave himself up entirely to enamel-painting, and continued frequently to exhibit at the Academy, initialing most of his works. One large enamel (the largest ever executed up to that time), 'A Muse and Cupid,' he exhibited in 1789. In 1800 he was appointed enamel painter to the Prince of Wales; in 1801 an associate of the Royal Academy and enamel painter to George III, continuing to hold the appointment during the reigns of George IV and William IV. On 15 April 1811 he was elected a royal academician, and shortly afterwards produced a still larger enamel (eighteen inches by sixteen), after Titian's 'Bacchus and Ariadne.' More than four thousand persons inspected it at Bone's house. The picture was sold to Mr. G. Bowles of Cavendish Square for twenty-two hundred guineas, which sum was paid (either wholly or partly) in a cheque on Fauntleroy's bank. Bone cashed the cheque on his way home, and next day the bank broke (cf. Owen's *Two Centuries of Ceramic Art in Bristol*, and the *Annual Biography* for 1836). Bone's next great works were a series of historical portraits of the time of Elizabeth; the 'Cavaliers distinguished in the Civil War;' and a series of portraits of the Russell family. The Elizabethan series did not prove a financial success; they were exhibited at his house at 15 Berners Street. In 1831 his eyesight failed, and after having lived successively at Spa Fields, 195 High Holborn, Little Russell Street, Hanover Street, and Berners Street, he moved in that year to Somers Town, and reluctantly received the Academy pension. Here he died of paralysis on 17 Dec. 1834, not without complaining of the neglect with which he had latterly been treated. Some time before his death he offered his collections, which had been valued at 10,000*l.*, to the nation for 4,000*l.*; but the offer was declined, and on 22 April 1836 they were sold by auction at Christie's, and so dispersed. Other important sales of his works took place in 1846, 1850, 1854, and 1856. Specimens of his skill, which are all of very high quality, are now eagerly sought after by collectors. Two of his sons became artists; one went into the navy, one into the army, and another was called to the bar. Bone has been well called the 'prince of enamelers,' for he has rarely, if ever, been equalled in that extremely difficult, yet imperishable, branch of the pictorial art. Mr. J. Jope Rogers has published a voluminous catalogue of 1,063 works of the Bone family in the 'Journal of the Royal Institution of Cornwall,' No. xxii., for March 1880—one half of which number were the work of Henry Bone, R.A. He is said to have been 'a man of unaffected modesty and generosity; friendship and integrity adorned his private life.' Chantrey carved a fine bust of Bone, and Opie, Jackson, and Harlow each painted his portrait.

[European Mag. 1822; Sandby's History of the Royal Academy; Annual Biography for 1836.] W. H. T.

BONE, HENRY PIERCE (1779–1855), artist, son of Henry Bone [q. v.], was born on 6 Nov. 1779, and received his art education from his father. He commenced as a painter in oils, and when twenty years of age exhibited some portraits. In 1806 he began painting classical subjects, and continued doing so until 1833, when he reverted to his father's art of enameling. This mode of painting he continued to practise until he ceased to exhibit, which was in 1855, the year of his death. In 1846 he published a catalogue of his enamels. He was appointed successively enamel painter to Queen Adelaide, and to her present majesty, also to the late prince consort; and he died at 22 Percy Street, Bedford Square, on 21 Oct. 1855. Though his enamels did not attain the supreme excellence of his father's, they display very considerable ability, and he was not only a rapid sketcher, but his designs for classical and scripture subjects were bold and skilful.

[Redgrave's Dictionary of Artists of the English School; Bibliotheca Cornubiensis; writer's Collections of Artists' Drawings, &c.]

W. H. T.

BONE, ROBERT TREWICK (1790–1840), painter, was a younger brother of Henry Pierce Bone [q. v.], and was born on 24 Sept. 1790. He also was a pupil of his father, with whom he resided for twenty years. He first exhibited at the Royal Academy in 1813, and again in 1815, but ceased doing so after 1838. In 1817 he gained a premium of 100*l.* from the British Institution for his painting of 'a Lady with her Attendants at the Bath.' He does not appear to have done much, if anything, in enamel painting, but confined himself almost exclusively to sacred, classic, and domestic subjects. His works, though generally small, are tasteful and sparkling, and he was a member of the Sketching Club. He died from the effects of an accident on 5 May 1840.

[Redgrave's Dictionary of British Artists; Bibliotheca Cornubiensis; writer's Collections of Artists' Drawings, &c.] W. H. T.

BONER, CHARLES (1815–1870), author, was the second child and only son of Charles Boner, of Bath, who died at Twickenham 14 Aug. 1833. He was born at Weston, near Bath, 29 April 1815; was educated at Bath from 1825 to 1827, and then at Tiverton grammar school from 1827 to 1829. From 1831 to 1837 he was tutor to the two elder sons of John Constable, the painter. After his mother's death in 1839, he accepted an invitation from Baron August Doernberg to take up his abode with him in Germany. Some time later, having perfected himself in the language of the country, he accompanied the baron to Ratisbon, where he had the offer of a very honourable post in the family of the Prince Thurn und Taxis. Charles Boner was the lifelong friend of the prince. His pupils valued his society, and he became intimate with a large number of the friends of the art- and literature-loving prince. Whilst in London in 1844 he entered into an arrangement to contribute to the 'Literary Gazette,' and he contributed a series of articles on the German poets, which brought him much more fame than profit.

The majority of Boner's poems are dated from St. Emeran, Ratisbon, where he spent twenty years in the family of the Prince Thurn und Taxis. He soon won a place among the poets of the day, and his translations from the German, especially of H. C. Andersen's 'A Danish Story Book' in 1846, and 'The Dream of Little Tuck' in 1848, are remarkably faithful and idiomatic. In 1845 he made the acquaintance of Miss Mary Russell Mitford, with whom he carried on a literary correspondence for ten years. One of the last acts of his life was an attempt to edit Miss Mitford's letters to himself, but this work was reserved for other hands. He published 'C. Boner's Book for those who are young, and those who love what is natural and truthful,' in 1848; 'Chamois Hunting,' in 1853, a new edition of which appeared in 1860; 'H. Masius's Studies from Nature,' and 'Cain,' in 1855; 'The New Dance of Death and other Poems,' in 1857; and 'Verses,' in 1858. After he left Ratisbon in 1860 he made Munich his home. His daughter, Marie, was married, 27 Feb. 1865, to Professor Theodor Horschelt, the painter, of Munich. As special correspondent of the 'Daily News,' he went to Vienna in August 1865, his connection with that paper lasting from the time when the treaty of commerce between England and Austria was arranged until the conclusion of the seven weeks' war. He also wrote for the 'New York Tribune' and many other papers. In 1867 he went to Salzburg to be present at the meeting of Napoleon III and the Emperor of Austria, and wrote a very graphic description of the scene. One of the last events of importance in his life was a visit to Trieste, where he attended the funeral of the Emperor Maximilian, and compiled a very interesting memoir of that unfortunate prince. Boner's chief works not yet mentioned are 'Forest Creatures,' 1861; 'Transylvania, its Products and People,' 1865; 'Guide for Travellers in the Plain and on the Mountain,' 1866; and 'Siebenbürgen, Land und Leute,' 1868.

Boner died in the house of Professor Horschelt, 5 Louisenstrasse, Munich, 9 April 1870.

[Memoirs and Letters of Charles Boner, edited by Rosa M. Kettle, 1871, 2 vols.] G. C. B.

BONHAM, SIR SAMUEL GEORGE (1803–1863), colonial governor, was the son of Captain George Bonham, of the maritime service of the East India Company, by his second wife, Isabella, only daughter of Robert Woodgate, of Dedham, Essex. Bonham's father was drowned in 1810. He had one sister, Isabella, who married Ferdinand, count d'Outhement. In 1837, after a period of service with the East India Company, he was appointed governor of Prince of Wales's Island, Singapore, and Malacca. For ten years he held this post, until in 1847 he was appointed to succeed Sir John Davis as governor of Hongkong and her majesty's plenipotentiary and superintendent of trade in China, and in the following year was made a companion of the Bath. On arriving at Hongkong Bonham found the admittance of foreigners within the walls of Canton to be the burning question of the day. By the terms of the treaty Englishmen were entitled to enter the city, but with obstinate persistency the Chinese refused to acknowledge the right, and Sir John Davis, after having exhausted his diplomatic skill in trying to induce them to give way, left the dispute to his successor in much the same condition in which he in his turn had received it. In February 1849 Bonham met the viceroy Sü at the Bogue Forts to discuss the point, and declared his determination to insist on his right of entry. On this becoming known within the city the literati became so threatening that the English government directed Bonham to abstain from his intention. At this time the attitude of the Chinese towards foreigners was very hostile, and the assassination of Senhor Amaral, the governor of the Portuguese city of Macao, showed the lengths they were prepared to go to rid themselves of any European officials who were inclined to oppose their policy. On the news of the assassination reaching Hongkong Bonham despatched a man-of-war to Macao, and by this act probably saved the Portuguese settlers from a general massacre. Individually, Bonham's relations with the viceroy of Canton—the Chinese official appointed to manage foreign affairs—were of a friendly character; and in reply to a remonstrance on his part on the prevalence of piracy in the neighbourhood of Hongkong, the viceroy testified to his confidence in Bonham as well as to his own weakness, by asking for the assistance of a British ship to suppress the pirates. His request was granted, and a successful expedition was the result. In the course of the same year (1850) Bonham attempted to open direct communication with the central government at Peking, and in furtherance of this object sent Mr. Medhurst with a despatch to the Peiho, but the effort proved fruitless. In 1851 Bonham was made a knight commander of the Bath as a reward for his services in China, and on his return to England in 1853 a baronetcy was conferred upon him. From this time he ceased to take any part in public affairs. He died on 8 Oct. 1863. Bonham married in 1846 Ellen Emelia, eldest daughter of Thomas Barnard, by whom he had issue one son, George Francis, born in 1847, who succeeded to the baronetcy.

[The Chinese Repository, vols. xvii.–xx.; Burke's Baronetage, 1860; Foreign Office List, 1860.] R. K. D.

BONHAM, THOMAS, M.D. (*d.* 1629?), physician, was educated at St. John's College, Cambridge, where he graduated M.D., in which degree he was incorporated at Oxford on 9 July 1611. He practised his profession in London, and was an assistant to the Society of Medicine-Chirurgians. His death occurred about 1629. He left sundry books and papers to his servant, Edward Poeton, by whom they were methodised and published under the title of 'The Chyrurgians Closet, or Antidotarie Chyrurgicall,' Lond. 1630, 4to. The work was dedicated by Poeton, then residing at Petworth in Sussex, to Frances, countess of Exeter.

[Addit. MSS. 5816, f. 93, 5863, f. 86; Wood's Fasti Oxon. (Bliss), i. 346.] T. C.

BONHOTE, ELIZABETH (1744–1818), authoress, was the wife of Daniel Bonhote, solicitor of Bungay, and captain of the 2nd company of Bungay volunteers. Her first work was published in 1773 anonymously. It was the 'Rambles of Mr. Frankley, by his Sister,' a work describing the characters seen in a ramble in Hyde Park, and was immediately translated into German at Leipzig, 1773. About 1787 Mrs. Bonhote wrote, while in delicate health, for her children's guidance, a series of moral essays, called the 'Parental Monitor,' which was published in 1788 by subscription. In 1789 two novels by Mrs. Bonhote were issued: 'Olivia,' 3 vols., and 'Darnley Vale, or Emelia Fitzroy,' 3 vols., the last reviewed in the 'Monthly Review' (i. 223). In 1790 Mrs. Bonhote wrote 'Ellen Woodley,' 2 vols. (*Monthly Review*, ii. 351). In 1796 there were two reprints of her 'Parental Monitor,' one in London and

one in Dublin. In 1797 appeared, at the Minerva Press, 'Bungay Castle,' 2 vols., a novel which Mrs. Bonhote was permitted to dedicate to the Duke of Norfolk. In 1804, during a residence at Bury, her husband died (*Gent. Mag.* vol. lxxiv. part ii. p. 1246). In 1810 she published 'Feeling, or Sketches from Life; a Desultory Poem,' Edinburgh. This was anonymous, and was Mrs. Bonhote's last production. She died at Bungay in July 1818, aged 74 (*Gent. Mag.* vol. lxxxviii. part ii. p. 88).

[Watt's Bibl. Brit.; Gent. Mag. vol. lxxiv. part ii. p. 1246, vol. lxxxviii. part ii. p. 88.] J. H.

BONIFACE, Saint (680–755), the apostle of Germany, was an Englishman, whose original name was Winfrid or Winfrith, born at Kirton, or Crediton, in Devonshire, in the year 680. The name of Boniface has been said to have been given to him by Pope Gregory II at his consecration as bishop; but as it occurs earlier it was more probably assumed when he became a monk. When quite a child, influenced by the discourse of some monks who visited his father's house, he expressed an earnest desire to devote himself to a monastic life, and, the opposition of his father being at length withdrawn, he entered a monastery at Exeter. He then removed to the house of Nutshalling, or Nursling (which was afterwards destroyed by the Danes), near Winchester, where he had the advantage of better teaching. Here he learned grammar, history, poetry, and rhetoric, and biblical interpretation, and himself became famous as a preacher and expounder of Scripture. At the age of thirty he was ordained priest. The honour in which he was already held is indicated by the fact of his having been sent, at some period between the years 710 and 716, by the synod of Wessex to Brihtwald, archbishop of Canterbury, on a mission the purport of which is unknown, but which was probably intended to draw closer the ties between the clergy of Wessex and the see of Canterbury. Boniface might have taken advantage of such an opportunity to push his fortunes in the church of his own country; but he was imbued with the zeal of the missionary, and his whole mind was bent upon continuing the work of preaching the gospel in Frisia, the country in which the Englishman Willibrord had already been labouring since 692, and had established his see at Wittaburg, or Utrecht.

In 716 Boniface crossed the sea, accompanied by only two monks, but he found the Frisians in no condition to receive his teaching. War had broken out. The pagan chief Radbod—the same who had at first consented to be baptised, but who, on learning that the souls of his unbelieving forefathers must necessarily be among the damned, drew back, preferring 'to be there with his ancestors, rather than in heaven with a handful of beggars'—was in the midst of one of those struggles with the Franks in which his life was passed. He had commenced an active persecution of the Christians, had destroyed churches and rebuilt heathen temples. He consented, however, to an interview with Boniface, but refused him leave to preach in his dominions. Boniface could only return to England to his monastery of Nursling. Here he might now have settled down into a quiet path of life, for, on the death of their abbot, the brethren would have elected Boniface to his place. But, eager for a more active career, he refused the offer, and in 718, provided with a letter from his bishop, Daniel of Winchester, and supported by Archbishop Brihtwald, he set out for Rome to seek papal sanction for his missionary enterprise. The pope (Gregory II) readily entered into his views, and on 15 May 719 formally laid upon him the work of converting the heathen tribes of Germany.

Armed with Gregory's letters of authority and a supply of relics, Boniface set out for Bavaria and Thuringia. These districts were already partly christian, and Boniface was proceeding with a survey of the state of the church there, when news arrived of the death of Radbod. At once he embarked on the Rhine and joined Willibrord in Frisia, and there he laboured with success for the next three years. Willibrord, now growing old, looked to Boniface to succeed him, but the declaration of this wish was the signal for Boniface to retire. He excused himself from accepting the proposed honour; he was not yet fifty, and therefore unfit for so high an office; finally he pleaded the task which had been laid on him by the pope of propagating the gospel in Germany—a duty which had been already too long delayed. Taking leave, then, of Willibrord, Boniface journeyed into Hessia. Here two local chiefs gave him leave to settle at Amanaburg (Amöneburg) on the river Ohm, and in a short time he had converted them and their followers and baptised many thousands of Hessians.

On hearing the news of his success Pope Gregory summoned the missionary to Rome, A.D. 722, and, after exacting from him a profession of faith in the Trinity, he consecrated him a bishop on 30 Nov. 723, and at the same time bound him by oath ever to respect the authority of the papal see. The imposition of such an oath on a missionary was an innovation, although it had been required of bishops within the proper patri-

archate of Rome. On his return to Germany in 723 Boniface took with him a code of regulations for the church, which was supplied by Gregory, and above all a letter of introduction to Charles Martel, in which the pope invoked his assistance in favour of the missionary bishop. Charles is said by some to have received Boniface with coldness (Robertson, *Hist. Christian Church*), but he gave him permission to preach beyond the Rhine and granted him letters of protection. The value of the prince's countenance is fully acknowledged by Boniface in a letter which he wrote at a later period to his friend Bishop Daniel of Winchester: 'Without the protection of the prince of the Franks I could neither rule the people of the church nor defend the priests or clerks, the monks or handmaidens of God; nor have I the power to restrain pagan rites and idolatry in Germany without his mandate and the awe of his name' (Jaffé, *Mon. Moguut.* 157).

Hessia and Thuringia, the countries to which Boniface now directed his steps, had received the teaching of christian missionaries, but without a regular system; their preachers being chiefly drawn from the Irish church, 'in which diocesan episcopacy was as yet unknown, and the jurisdiction was separate from the order of a bishop; they had brought with them its peculiar ideas as to the limitation of the episcopal rights; they were unrestrained by any discipline or by any regard for unity; they owned no subjection to Rome, and were under no episcopal authority' (Robertson, iv. 5). They also held the doctrine of lawfulness of marriage for the clergy. Trained in totally different ideas of discipline, Boniface, on his arrival in the country, found himself at once in opposition to these teachers, and was henceforth involved in never-ending disputes with them. He also discovered that the Hessians were practising a strange mixture of the creed of the Gospel with pagan rites; while professing christianity, they still worshipped in their sacred groves, and some even offered sacrifice. It was with the view of correcting such abuses in a way which was palpable and could not be mistaken, that Boniface determined with his own hands to fell one of the chief objects of superstitious reverence —the great oak tree of Geismar near Fritzlar, sacred to the god of thunder. Scarcely, we are told, had he struck the first blows, when a gust of wind seemed to shake the branches and the aged tree fell, breaking into four pieces. The awe-stricken pagans gave up their gods, and with the wood of the tree Boniface built a chapel to St. Peter. Churches and monasteries now arose on all sides; the work of conversion made rapid progress; and the bishop was joined by many of his countrymen and countrywomen from England to assist in the good work. The success of English missionaries among the Frisians and Germans is no doubt largely to be attributed to similarity of language and the facility with which they would learn kindred tongues.

On the accession of Gregory III to the papal chair in 732 Boniface received the pall of an archbishop, and in 738 he again visited Rome, where he was received with the distinction merited by his great success. Returning northwards in 739 he was prevailed upon by Odilo, duke of Bavaria, to remain awhile in that country and organise the Bavarian church. Only one bishop existed, and there was no system of ecclesiastical government. Boniface effected an organisation by dividing the country into four bishoprics—Salzburg, Passau, Regensburg, and Freising—and then again turned his face northwards.

But it was not only with the evangelisation of heathen Germany that Boniface had now to do. His powers of organisation and reform were to be utilised in favour of the Frankish church. While, however, his successes beyond the Rhine were undisputed, at the Frankish court he found himself thwarted by the nobles who were in possession of church property, and by the easy-living bishops, more given to fighting and hunting than to the cure of souls. In 741 both Gregory III and Charles Martel died. Charles's sons, Carloman in Austrasia and Pepin in Neustria, were ready to support Boniface, and the new pope Zacharias extended his powers, appointing him his legate and imposing upon him the reformation of the whole Frankish church. Boniface forthwith erected four bishoprics for Hessia and Thuringia, viz. Würzburg, Eichstädt, Buraburg or Bierberg (afterwards removed to Paderborn), and Erfurt, to which he appointed four of his followers, Burchard, Willibald (the future writer of his 'Life'), Albinus, and Adelar. In 742, at the request of Carloman, was held a council, which in the course of the next few years was followed by others, for the reformation of the church. These councils, moreover, partook of the nature of national assemblies, the members not being confined to ecclesiastics; and while Boniface's office of papal commissioner was recognised, the decrees were issued by the Frankish princes in their own name. The canons were directed towards the establishment of order and the reform of lax abuses, the celibacy of the clergy, and the restoration of church property which had

been alienated by Charles Martel. The opposition, however, with which the last-named reform was met proved too strong, and it was finally abandoned. The discontent of the Frankish bishops at these measures extended in some instances even to a refusal to accept promotion. With heretical and irregular teachers Boniface had also to contend, and in his conduct attending their repression modern writers have found reasons for censure.

Adalbert, a man of Gaulish descent, a fanatic who pretended possession of a letter written in the name of our Lord and sent down from heaven, and who passed through the land disparaging the saints and martyrs and dedicating churches in his own honour, was condemned, at Boniface's instance, in a council held at Soissons in 744. Clement, by birth an Irish Scot, who despised ecclesiastical authority, held the writings of the fathers in scorn, and entertained heretical opinions on the salvation of unbelievers and on predestination, was also proceeded against, but both he and Adalbert continued to cause trouble and ultimately required more rigorous repression. A third person with whom Boniface differed was Virgil, an Irish ecclesiastic, the point of contention being the question of the validity of baptism, even when administered by an ignorant priest in bad Latin, which Virgil maintained. In this opinion he was upheld by the pope. He afterwards became bishop of Salzburg, in spite of Boniface's opposition, who charged him with holding heretical views in astronomy, which extended to a belief in the existence of other worlds like our own; and he was eventually canonised.

About this period, 742 or 744, Boniface laid the foundation of the famous abbey of Fulda, with the aid of a noble Bavarian, Sturmi, who became its first abbot. The house was placed under a rule still more strict than that of St. Benedict.

Hitherto Boniface had been an archbishop without a see. The consolidation of the German church now required that this want should be supplied. He first turned his eyes on Cologne, probably as a central point from which to control the church of Frisia as well as that of Germany. Willibrord had died in 739, at the advanced age of eighty-one, and since that time Boniface had regarded Frisia as falling within the scope of his legatine jurisdiction. But before final arrangements were made for his taking possession of the see of Cologne, now (A.D. 744) vacant, events took place which led to his establishment at Mentz. The late bishop Gerold of that see had been slain in an expedition against the Saxons, and had been succeeded by his son Gewillieb. The latter determined to avenge his father's death, and, having discovered the Saxon by whom Gerold had been killed, he treacherously stabbed him with his own hand. In the eyes of the Frankish nobles such an act of violence was of little consequence, and does not appear in any way to have affected Gewillieb's position and character as a bishop. But Boniface, whose duty it was to enforce a stricter discipline in the church, brought the matter before a council, and Gewillieb resigned his bishopric. Hereupon Boniface was called upon by the Frankish nobles, against his will, to fill the vacancy, A.D. 746. Pope Zacharias confirmed him in his new see, and placed under his jurisdiction the dioceses of Worms, Spires, Tongres, Cologne, and Utrecht, in addition to those of Germany which had been established by his efforts.

The next few years were passed by Boniface in the discharge of the many duties of his high position, still struggling with ill-will and opposition from his bishops and clergy, and harassed by the pagans, who in frequent inroads pillaged and burned his churches. Important political changes also took place in these years. In 747 Carloman retired to lead a monk's life in Monte Cassino, leaving the whole power of the Frankish kingdom in the hands of Pepin, who in 752 assumed the title of king. Boniface is said to have officiated at his coronation at Soissons, but the evidence on this point is doubtful, and it has even been argued that he was opposed to the transfer of the crown to the new line. He was now upwards of seventy years of age, and the cares of his office weighed heavily upon him. He sought to be relieved, and had already obtained license to appoint a successor if he should feel the approach of death. He now received Pepin's consent to the consecration of his countryman Lull to the see of Mentz, and resigned his office into his hands in 754. Lull, however, did not receive the pall for twenty years.

Boniface now turned his face again to that land which had had such an attraction for him in his early years. He set out once more as a missionary bishop to Frisia, and, consecrating Eoban to the see of Utrecht, he preached with him among the heathen tribes. We are told that again he baptised many thousands, and, wishing to hold a confirmation of his new disciples, he appointed the eve of Whitsun-day, 5 June 755, for the ceremony, at a place near Dokkum on the Bordau, between eastern and western Frisia. But when the day arrived, instead of the converts, a

band of armed pagans appeared and surrounded the camp. The younger of his followers prepared for resistance, but Boniface forbade it, exhorting them to submit to the death of martyrs, in the sure hope of salvation. The whole company, numbering fifty-two, and including bishop Eoban as well as Boniface, was massacred upon the spot. The remains of Boniface were eventually carried to the abbey of Fulda, the place where he had hoped to spend his last days.

In his twofold character of missionary and reformer Boniface's actions were throughout made subordinate to the authority of Rome. In his view, that authority was the only means of spreading christianity and of maintaining the discipline of churches once established. 'He went forth to his labours with the pope's commission. On his consecration to the episcopate after his first successes he bound himself by oath to reduce all whom he might influence to the obedience of St. Peter and his representatives. The increased powers and the wider jurisdiction bestowed upon him by later popes were employed to the same end. He strove continually not only to bring heathens into the church, but to check irregular missionary operations and to subject both preachers and converts to the authority of Rome' (Robertson, iv. 5). It is this attachment to the pope's authority which has laid him open to the attacks of writers such as Mosheim and Schröckh, who have accused him of 'an ambitious and arrogant spirit, a crafty and insidious disposition, an immoderate eagerness to augment sacerdotal honours and prerogatives,' and of being 'a missionary of the papacy rather than of christianity.' Such charges, and a still more serious one, that he used force as an instrument of conversion, are without proof and may be passed over unnoticed. No man in a high position, such as his, can altogether avoid mistakes, and he may sometimes have failed in his judgment of men. But small blemishes cannot detract from the high character of Boniface as one who followed without deviation and with unflagging energy the path of duty in difficult times. Nor was his obedience to Rome merely a blind obedience. Where religion and morality were concerned he did not hesitate to speak freely in remonstrance against the too indulgent views of the papal court in matters which in his opinion required stricter discipline. He would resist the pope himself in what he considered an encroachment on his archiepiscopal functions. When Stephen II, during a visit to Pepin, presumed to consecrate a bishop of Metz, it was, we are told, only the intervention of the prince which prevented a rupture between the pope and Boniface.

Besides his great foundation of Fulda, Boniface also established monasteries at Fritzlar, at Utrecht, at Amanaburg, and at Ordorf or Ohrdruf. For the instruction of the brethren of these houses, he invited scholars from England. The correspondence which he kept up with princes and ecclesiastics and others of his native land is still preserved among his letters, and proves the interest which he continued to feel in the welfare of the English church; and from it may also be gathered details on the social condition of the times which are not without interest. In a letter written to Ecgberht, archbishop of York, between 735 and 755, we find the record of an exchange of books, and a request for a copy of the Commentaries of Bæda; and in another addressed, between 732 and 745, to his old friend Bishop Daniel of Winchester, now blind, he too speaks of failing sight, and asks that the fine manuscript of the Prophets, so fairly and clearly written by Winbert, abbot of Nursling, may be sent to him: no such book can be had abroad, and his impaired vision can no longer read with ease the small character of ordinary manuscripts.

Besides his epistles, Boniface has left a set of ecclesiastical statutes, in thirty-six articles, and a collection of fifteen sermons; and, in Latin verse, a composition on the virtues and vices, entitled 'Ænigmata,' and a few other shorter pieces. A fragment of a work on penance has also, but on insufficient authority, been ascribed to him. In addition to these, it appears from a reference in a letter of Pope Zacharias of the year 748 that Boniface was also the author of a work 'De Unitate Fidei Catholicæ,' which Mabillon (*Acta SS. Ord. S. B.*) has thought to be nothing more than the ecclesiastical statutes already referred to, but which was, more probably, an independent treatise, written to confute the heresies of Adalbert and others. The profession of faith which he made at Rome previous to his consecration is likewise lost. Some other works attributed to him appear to be certain of his epistles under distinct titles. Lastly, a 'Life of St. Livinus,' to which his name has been attached, is a work of more recent date, and a 'Life of St. Libuinus,' also improperly assigned to him, was written by Hucbald.

BONIFACE OF SAVOY (*d.* 1270), archbishop of Canterbury, was the eleventh child of Thomas I, count of Savoy, by his second wife, Marguerite de Faussigny. The date of his birth is uncertain; but in his early youth he was destined for an ecclesiastical career. The numerous stock of the house of Savoy had to be provided for, and Boniface seems to have accepted a clerical life as a means of political advancement. As a boy he entered the Carthusian order, and while yet a young man was elected in 1234 bishop of Belley, near Chambery. In 1241 he was given the administration of the bishopric of Valence in Dauphiny during a vacancy. His connection with England was due to the marriage of Henry III with Eleanor, second daughter of Raymond Berengar, count of Provence, and Beatrix of Savoy, a sister of Boniface. The needy members of the house of Savoy used their relationship with the queen of Henry III as a means of seeking their fortune in England. The see of Canterbury, vacant by the death of Edmund Rich, was considered an excellent provision for Boniface. The king's nomination was made in 1241, and the monks of Christ Church were not bold enough to resist. But there were rapid changes in the papacy, and a long vacancy; and it was not till the end of 1243 that the election of Boniface was confirmed by Pope Innocent IV, soon after his accession.

In 1244 Boniface visited England for the first time. He was a man of a practical turn of mind, and gave his attention first to the financial condition of his see. He found that he inherited a considerable debt from his predecessors, and that the king had still further impoverished the possessions of the archbishopric during the vacancy. He showed his discontent, and the leaders of the reforming party had hopes that he would not be a mere instrument of the king. Bishop Grosseteste of Lincoln welcomed him, and begged him to prevail on the king to end a vacancy of the see of Winchester arising from the resistance of the chapter to the nomination of another of the king's uncles (GROSSETESTE, *Ep.* No. 36). With this request Boniface complied, and brought about a reconciliation between the king and the man chosen by the chapter. Probably he wished for the help of the English bishops to repair the shattered finances of the archbishopric. He demanded that the whole province of Canterbury should aid in paying off the debt, and wished to gain the consent of the suffragans to this demand. For this purpose he joined with his suffragans in opposing the king's nomination of Robert Passelew to the see of Chichester, on the ground that he had not sufficient theological knowledge. It was an objection which might have been urged against himself; but Boniface was not concerned with consistency. The king appealed to the pope; but Boniface carried his point, and the king's nominee was rejected. Thus Boniface asserted his independence of the king, and showed his capacity as a man of business by organising a more economical management of the temporalities of the archbishopric. He contrived to raise some money in England, and at the end of 1244 set out for the council of Lyons.

At Lyons he was consecrated by Pope Innocent IV on 15 Jan. 1245. His brother Philip was archbishop of Lyons, and was a military prelate, of whose forces the pope had need. Boniface, who was young, bold, and handsome, aimed also at a military career. During the council he commanded the pope's guard, and obtained from the pope a grant of the firstfruits of vacant benefices within the province of Canterbury for seven years. This was given on the plea of paying off the debt on the archbishopric. Having thus provided for the only duty of an archbishop which seemed to him important, he devoted himself to family politics, and did not return to England till the end of 1249, when he was enthroned at Canterbury on 1 Nov. His main object still was to amass money, and for this purpose he copied the procedure of the great ecclesiastical reformer of the age, Bishop Grosseteste, and instituted a rigorous visitation of his diocese. What Grosseteste undertook to restore discipline, Boniface pursued to impose fines. The monks of Christ Church were made to pay for deviating from their rules, and the monks of Feversham and Rochester fared no better. But Boniface was not content with the visitation of his own diocese. He proceeded to extend it to the whole province of Canterbury. He went to London, and instead of taking possession of his palace of Lambeth he borrowed the house of the bishop of Chichester. This was a sign that he did not intend to stay in England, and the monks resolved to resist the archbishop's claim to carry off their revenues for his own political

purposes abroad. Henry III granted to Boniface the royal right of purveyance in London. The Londoners resisted; but the archbishop's Provençal troops were too strong for them. The people were subjected to the military rapine of a foreign army.

In this state of popular irritation Boniface proceeded to the visitation of St. Paul's Cathedral. The dean and chapter refused him admission, on the ground that they were subject to their bishop only as visitor. Boniface ordered the doors of the cathedral to be forced open. When he could not gain admission to the chapter-house, he excommunicated the disobedient prebendaries. Next day he visited the priory of St. Bartholomew. All London was in uproar, and the archbishop thought it wise to don armour beneath his vestments, and go with an armed retinue. At St. Bartholomew he was received with all honour as the primate; but the canons were in their stalls, ready for service, not in the chapter-house, to receive their visitor. Furious at the jeers of the mob on the way, the archbishop rushed into the choir and ordered the canons to go to the chapter-house. When the subprior protested, Boniface felled him with his fist, and beat him unmercifully, crying out, 'This is the way to deal with English traitors.' A tumult ensued. The archbishop's vestments were torn, and his armour was exposed to view. The rage of the Londoners was furious, and Boniface had to flee in a boat to Lambeth. He retired to his manor at Harrow, and announced his intention of visiting the abbey of St. Albans. This was felt to be too much. The suffragan bishops met at Dunstable, and agreed to join in resistance to the primate. Boniface on this showed considerable good sense in retiring from a position which had become untenable. He suspended his visitation, and set out for the papal court, whither he invited the discontented bishops to send their proctors (1250). He admitted that he had been hasty, and practically withdrew his claims to visit outside his diocese contrary to previous custom. When his fit of passion was over, and he had time for reflection, Boniface showed a conciliatory spirit.

He did not return to England till the end of 1252, when he heard that his official had been imprisoned by the order of the bishop-elect of Winchester, Aymer of Lusignan [q.v.], the king's half-brother. He proceeded with dignity to investigate this matter, and pronounced sentence of excommunication against Aymer, who declared it to be null and void. Boniface went to Oxford and laid his case before the university, a step which announced his adherence to the national party, which was growing strong against Henry III's feeble misgovernment. The pressure of this national party forced Henry III to make some pretence of amendment, and on 13 May 1253 he swore with unusual solemnity, in Westminster Hall, to observe the provisions of the great charter. Archbishop Boniface pronounced excommunication against all who should violate the liberties of England. Henry III showed some sense of humour by suggesting that his own amendment must be followed by that of others. He urged Boniface and some other prelates to prove their repentance by resigning the preferment which they had obtained contrary to the laws of the church. Boniface answered that they had agreed to bury the past and provide for the future.

At this time Boniface seems to have wished to do his duty. He was conscious of his own unfitness for the post of archbishop, and listened to the counsels of Grosseteste and the learned Franciscan, Adam de Marisco. But his good resolutions did not last long. In 1255 he went to the help of his brother Thomas, who was imprisoned for his tyranny by the people of Turin. Boniface brought money and troops for the siege of Turin, and succeeded in procuring his brother's release. During his absence he summoned a newly elected bishop of Ely to Belley for consecration—an unheard-of proceeding which led to a protest from the suffragans of the province of Canterbury. In 1256 Boniface returned to England, and again behaved as though the air of England inspired him with a fictitious patriotism. He made common cause with the English bishops in withstanding the exactions of the pope and king. During 1257 and 1258 several meetings were held under his presidency to devise measures for opposing the claims of the papal nuncio. When the parliament of Oxford devised its 'Provisions' for the purpose of controlling the king, Archbishop Boniface seems to have been one of the twenty-four commissioners, and, if so, was nominated by the king, and not by the barons. He certainly was one of the council of fifteen which was entrusted by the commissioners with the supervision of government. He was not, however, a politician capable of influencing English affairs, and his name is scarcely mentioned in the period during which the hostility between the king and the barons became more pronounced. He seems gradually to have drifted more and more to the king's side, until he became a scheming partisan, and found it safe to retire to France at the end of 1262. He was at Boulogne in 1263, and joined the papal legate in excommunicating the rebellious barons.

He summoned his suffragans to Boulogne, and gave them the excommunication to be published. The bishops obeyed the primate so far as to meet him at Boulogne, but took care that their papers were confiscated at Dover. In the beginning of 1264 Boniface was at Amiens, pleading the king's cause in the arbitration which had been referred to Louis IX. When war broke out, Boniface was one of the foremost members of the party of exiles who raised forces in France and intrigued against the barons. On the triumph of the royalists in 1265 Boniface returned to England. It would seem that he was not considered strong enough to conduct the reactionary policy by which Henry III proposed to reduce the rebellious party in the church. His reputation suffered through the activity of the papal legate, Cardinal Ottobone, who left his mark on the history of the English church by the constitutions enacted under his guidance in the council of London in 1268. In this legislative work Boniface was incapable of taking any share. When Edward set out for a crusade in 1269, Boniface offered to accompany him. He does not, however, seem to have gone further than Savoy, where he died, at the castle of St. Helena, on 18 July 1270, and was buried in the burying-place of the Savoy house at Hautecombe.

Archbishop Boniface did nothing that was important either for church or state in England. He was a man of small ability, even in practical matters, with which alone he was competent to deal. He is praised for three things only: he freed the see of Canterbury from debt; he built an almshouse at Maidstone; and he finished the erection of the great hall at Lambeth which Hubert Walter had begun.

[The life of Boniface has to be gleaned from scattered notices in Matthew Paris, Matthew of Westminster, the annals contained in Luard's Annales Monastici, the letters of Bishop Grosseteste, Shirley's Royal Letters of the Reign of Henry III, the letters of Adam de Marisco in Brewer's Monumenta Franciscana, and the documents in Rymer's Fœdera, vol. i. A connected account is given by Godwin, De Præsulibus Angliæ, and from the foreign side by Guichenon, Histoire de la Maison royale de Savoie, i. 259; in greater detail by Hook, Lives of the Archbishops of Canterbury, vol. iii.] M. C.

BONINGTON, RICHARD PARKES (1801–1828), painter in oil and water colours, was born at the village of Arnold, near Nottingham, on 25 Oct. 1801. His grandfather was governor of Nottingham gaol, to which post his father succeeded, but the latter lost it through irregularities. His mother's name was Parkes, and she kept a ladies' school at Arnold, which was afterwards moved to Nottingham; but it was broken up by the imprudent conduct of her husband, and the family went to Calais. The father had previously taken to painting, and he exhibited a landscape at the Royal Academy in 1797, and a portrait in 1808, and published a few coloured prints. At Calais he set up a bobbin net lace factory with Clarke and Webster, and was one of the first to promote in this locality an industry which has since become very prosperous there. His partnership was, however, broken up in 1818, and he subsequently kept a lace shop with Webster in Paris. When very young Richard showed a great love for art and acting. He is said to have sketched 'everything' at three years old, and to have drawn with accuracy, and even taste, when seven or eight. At Calais he gained instruction from Louis Francia, the water-colourist. At Paris, when only fifteen, he studied at the Louvre. It was there, in 1816 or 1817, that Eugène Delacroix, then himself a student, was first struck with Bonington's skill, as he watched him silently copying old pictures, generally Flemish landscapes, in water-colours, and a friendship soon sprang up between them. 'Je l'ai beaucoup connu et je l'aimais beaucoup,' he writes in a letter published in Bürger's study of Bonington in C. Blanc's 'Histoire des Peintres.' At this time painting in water-colour was almost unknown in France, and his drawings, whether originals or copies, sold rapidly when exhibited in the shop windows of M. Schroth and Madame Halin. He became a pupil at the Institute, and for a while (in 1820 certainly) drew in the *atelier* of Baron Gros. His progress was very rapid, but he is said to have disregarded academic precepts, and also to have displeased Gros by his laxity, till one day, after seeing one of his water-colours in a shop, Gros embraced him before all the pupils, and told him to leave his *atelier* and *marcher seul*. He also studied and sketched much in the open air, taking excursions down the Seine. In 1822 he for the first time exhibited at the Salon, and obtained a premium of 430 francs from the Société des Amis des Arts for his two drawings—Views at Lillebonne and Havre.

In 1824 the same society purchased his 'Vue d'Abbeville' at the Salon, where Bonington also exhibited a coast scene with fishermen selling their fish, and a 'Plage sablonneuse.' He as well as two other Englishmen, Constable and Copley Fielding, received a medal. The work of English artists in this year's Salon is acknowledged to have revolutionised the landscape art of France, and Bonington had certainly no small share

in founding that illustrious modern school which, commencing with Paul Huet, has produced the genius of Rousseau, and Corot, and Diaz. It must have been about this time that he was engaged to make drawings for Baron Taylor's great work, 'Voyages Pittoresques dans l'ancienne France.' The second volume of the section devoted to Normandy was published in 1825, and contained several fine lithographs after Bonington, of which the view of the 'Rue du Gros-Horloge' is generally considered his masterpiece of the kind. He also contributed to the section on Franche-Comté, and published several 'Vues de Paris' et 'Vues prises en Provence,' working for the lithographers much as Turner did in England for the steel engravers. When in towns he is said to have sketched from a cab, in order to free himself from the curiosity of the vulgar, an expedient adopted also by Turner. A work called 'Restes et fragments du moyen âge,' called 'La petite Normandie' to distinguish it from the larger work of Baron Taylor, contains ten lithographs by Bonington, and he sometimes drew on stone the designs of others, as in Rugendas' 'Voyage au Brésil' and Pernot's 'Vues pittoresques d'Ecosse.'

It was not till 1824 or 1825 that Bonington began to paint in oil colours. In the latter year he went to England with Delacroix, where they studied the Meyrick collection of armour, and on their return to Paris they worked together for a time in Delacroix's studio. It was probably after this, and not in 1822 as has been stated, that Bonington visited Venice and other places in Italy. In 1826 he exhibited for the first time in England, sending two pictures of French coast scenery to the British Institution; but his name was so little known in his own country, that the 'Literary Gazette' declared that there was no such person as Bonington, and that the pictures were by Collins. The next year he exhibited at the Salon the first-fruits of his visit to Italy—two grand views of Venice, the Ducal Palace and the Grand Canal, and besides these the celebrated pictures of 'Francis I and the Queen of Navarre' and 'Henry III receiving the Spanish Ambassador,' a 'View of the Cathedral at Rouen,' and 'The Tomb of St. Omer.' The last, a water-colour, was highly praised in an article in 'Le Globe' after the artist's death, and was destroyed at the sack of the Palais Royal in 1848. To the Royal Academy he sent a French coast scene only, but in 1828 he sent over the most important of his Salon pictures of 1827—the 'Henry III' and the 'Grand Canal'—to the Royal Academy (as well as a coast scene), and to the British Institution the 'Ducal Palace,' together with the 'Piazzetta, St. Mark's,' which was purchased by Mr. Vernon and is now in the National Gallery.

In 1827 he took a studio in the Rue St. Lazare, where he lived in good style and enjoyed the intimacy of several rich amateurs. In this year he paid a visit to England, bearing a letter of introduction to Sir Thomas Lawrence from Mrs. Forster, the daughter of Banks the sculptor, which from diffidence he failed to deliver. In the spring of the next year he brought another from the same lady, and was received as a friend by the president. It was at this time that he painted his 'Deux femmes au milieu d'un paysage,' which was engraved for the 'Anniversary' of 1828. Next year his last sketch of 'The Lute' was engraved for the same annual, and his picture of 'A Turk' was exhibited at the British Institution. But meanwhile he had died. He had returned to Paris with his fame fully secured, and commissions flowed in upon him; but over-pressure and overwork, combined, it is said, with the effect of imprudent sketching in the sun, brought on brain fever, from which he recovered only to fall into a rapid decline. He came again to London, but died a few days later at the house of Messrs. Dixon & Barnett, 29 Tottenham Street, on 23 Sept. 1828, and was buried at St. James's Church, Pentonville. Sir Thomas Lawrence, Howard the academician, Robson the water-colour painter, Pugin the architect, and the Rev. J. T. Judkin attended the funeral. Bonington's remains were removed by faculty to All Souls' cemetery, Kensal Green, in 1837. The sale of his drawings at Sotheby's after his death realised 1,200*l*. He exhibited nine works in England, four at the Royal Academy and five (one posthumously) at the British Institution.

In person Bonington was tall and striking, his eyes were dark and penetrating, his eyebrows thick, his forehead square and lofty. His air was thoughtful and inclined to melancholy, and he stooped a little. His disposition was mild, generous, and affectionate.

Notwithstanding his early death Bonington achieved a position among the first artists of his time in France and England, and he is claimed by the schools of both countries. His fame has increased since his death, and whether he is regarded as a painter of coast and street scenes, or of historical *genre*, he is entitled to high rank both for power and originality. His French coast scenes are remarkable for their fine atmosphere, his views in Venice are bathed in warm and liquid air. He was a refined draughtsman; his touch was light and beautiful, and his

colour was brilliant and true with a gemlike quality of its own. He was distinguished by his technical skill in oil and water-colour and with the point. He was in short a man of rare and genuine artistic faculties, cultivated with great assiduity, and combined constant observation of nature with careful study of the methods of the old masters. In principle he was eclectic, desiring to unite the merits of all previous schools, and his pictures vary greatly in style and method. His earlier work in oils is marked by its impasto, especially in pictures where costumes form a striking feature, but he modified this greatly in his later work. His main faults as an artist are a want of firmness and solidity, especially in his figures, and his imagination was delicate and graceful rather than grand or passionate. In some of his designs he did not scruple to borrow figures bodily from well-known pictures, but he made them his own while preserving their life, so that this practice did not impair the value of his works or give them the quality of *pastiches*.

The principal purchasers of his pictures in England were the Duke of Bedford, the Marquis of Lansdowne, Mr. Thomas Baring, and Mr. Carpenter. The latter published some twenty engravings after pictures by Bonington in his own and other collections. In France the greatest collector was Mr. W. Brown of Bordeaux. At his sale, in May 1837, were fifty-two oil pictures and six drawings and water-colours which sold for what were then considered large prices. Several of his pictures are in the Hertford collection, now belonging to Sir Richard Wallace. At Lord Seymour's sale in Paris the late Lord Hertford bought 'Henry III receiving the Spanish Ambassador' for 49,000 francs, and at the 'Novar' sale at Christie's in 1878 'The Fish Market, Boulogne,' and 'The Grand Canal, Venice,' brought 3,150*l.* apiece. The Louvre contains a number of his studies and one famous picture—'Francis I, Charles V, and the Duchesse d'Etampes.' In the National Gallery are the 'Piazzetta, St. Mark's, Venice' (Vernon), a sketch in oil, 'Sunset' (Sheepshanks), and three water-colours. The British Museum possesses one water-colour and a sketch-book of Bonington, as well as a fine collection of lithographs by him and after him.

Bonington etched a plate of Bologna, which was published by Colnaghi, but this is his only known etching except six trials in soft-ground etching. He also made illustrations for many books, and of these the most curious are seven outline drawings in imitation of mediæval illuminations, which were published in a little work by J. A. F. Langlé called 'Les contes du gay sçavoir: Ballades, Fabliaux et Traditions du moyen âge,' Paris, 1828. A catalogue, by Aglaüs Bouvenne, of lithographs, &c., by Bonington was published in Paris in 1873; it mentions sixty-seven known works. A celebrated collection of his lithographs was made by M. Parguez. M. Burty compiled the catalogue of its sale.

BONNAR, GEORGE WILLIAM (1796-1836), wood-engraver, was born at Devizes on 24 May 1796. After having been educated at Bath, he was apprenticed to a wood-engraver in London, and acquired much skill both as a draughtsman and an engraver, distinguishing himself by his revival of the art of producing a gradation of tints by means of a combination of blocks. Together with John Byfield he engraved for 'The Dance of Death,' edited by Francis Douce in 1833, Holbein's 'Imagines Mortis,' from the Lyons edition of 1547. Some of his woodcuts appeared in the 'British Cyclopædia.' He died on 3 Jan. 1836.

[Redgrave's Dictionary of Artists, 1878.] R. E. G.

BONNAR, WILLIAM (1800-1853), painter, was a native of Edinburgh, and son of a respectable house-painter. After the usual precocious evidences of talent he was apprenticed to one of the leading decorative painters of his time, and ultimately became foreman of the establishment. On the occasion of George IV's visit to Edinburgh in 1822 Bonnar helped Mr. D. Roberts to decorate the assembly rooms for a state ball. A little while after some sign-boards which he had painted caught the attention of Captain Basil Hall, who sought out and encouraged the young painter. A picture called 'The Tinkers,' exhibited in 1824 at Waterloo Place, was received with much favour by the public. Shortly after the foundation of the Royal Scottish Academy Bonnar was made a member, and remained until his death 'one of its most consistent, independent, and useful members.'

Bonnar painted many pictures, of which a large number became popular when engraved. Among these may be mentioned 'The Strayed Children,' 'Peden at the Grave of Cameron.'

'The Benefactress; or, the Duchess of Buccleugh visiting the Widow and the Orphan,' 'The First Sermon of John Knox, in the Castle of St. Andrews,' and 'Robert Bruce watching the efforts of the Spider.' In rural scenes and pictures of child life, as well as in humorous pieces, Bonnar was thought to be particularly successful. As examples in these styles may be mentioned 'The Orphans,' 'The School-door,' 'The New Dress,' 'The Evening Prayer,' 'The Blessing,' 'The Gentle Shepherd,' 'The Cottar's Saturday Night,' 'Barney Kilmeny,' 'The Forsaken,' 'Dugald Dalgetty and the Duke of Argyle,' and 'Caleb Balderstone burnishing the Pewter Flagon.' The last two evince 'a strong sense of the ludicrous, and attest the versatility of his powers.' In his latter years Bonnar was engaged chiefly in painting portraits, many of which were engraved by his sons. 'In private life Mr. Bonnar was amiable and kind, in manner he was singularly modest and unobtrusive, and these qualities, together with his straightforward honesty and fearless independence, rendered him a useful and favourite member of the Scottish Academy.' He died in London Street, Edinburgh, on 27 Jan. 1853.

[Art Journal, March 1853; Scotsman, 2 Feb. 1853; Redgrave, Dictionary of Artists of the English School.] E. R.

BONNEAU, JACOB (*d.* 1786), painter, is supposed to have been the son of a French engraver who worked in London for the booksellers about the middle of the last century. In 1765–1778 he exhibited landscapes at the rooms of the Society of British Artists, of which body he was a member. In 1770 he exhibited at the Royal Academy 'St. John,' a water-colour drawing, and from that year until 1781 he was occasionally represented there by drawings, generally landscapes with figures, of poetical character. His principal occupation was that of a teacher of drawing and perspective. He died at Kentish Town 18 March 1786.

BONNELL, JAMES (1653–1699), accountant-general of Ireland, a man eminent for his saintly life, was descended from one of the many families of protestant refugees who fled to England from the Low Countries in the reign of Elizabeth to escape from the cruel persecution of the Spaniards under the Duke of Alva. The family settled at Norwich, and Bonnell's mother was a Norwich lady, the daughter of T. Sayer, esq. But Samuel Bonnell went into Italy, and lived for many years at Leghorn, and for a few at Genoa; at the latter place James was born. Samuel Bonnell, being a wealthy man and a stout royalist, rendered considerable pecuniary assistance to King Charles in his exile. Upon the Restoration the king did not repay his benefactor, but conferred upon him the accountant-generalship of Ireland, worth 800*l.* a year, his son's life being included in the patent with his own. James Bonnell's course was thus marked out for him. But from his earliest years he had shown a deep sense of religion, taking especial pleasure in devotional books. He lost his father when he was only eleven years of age, but he had the advantage of being trained by an excellent mother, who educated him with his sister in Dublin until he was old enough to be sent to Trim school, then under the direction of Dr. Tenison, afterwards bishop of Meath. He always retained a grateful remembrance of Dr. Tenison's religious care. From Trim he was removed to 'a private philosophy school' at Nettlebed in Oxfordshire, his friends fearing lest his piety should be corrupted in a university. The schoolmaster was a Mr. Cole, who had been principal of St. Mary's Hall, Oxford, but had been ejected for nonconformity. Samuel Wesley the elder accuses Cole of encouraging immorality in his house, but Bonnell distinctly exonerates him, by anticipation, from this charge. Cole's religious training seems to have consisted simply in preaching twice every Sunday to the family, and he exercised no efficient moral supervision over his pupils, who, according to Bonnell, were a vicious set. Bonnell also complains that there was 'no practice of receiving the sacrament in the place.' But his pure and well-trained nature was proof against temptation. After two years and a half he was removed to St. Catharine's Hall, Cambridge, being entered by his friend and kinsman, Mr. Strype, 'then of that house.' At Cambridge he passed a blameless course, pursuing his methods of devotion more strictly, and making many friends of a kindred spirit with his own, among others, Offspring Blackhall, afterwards bishop of Exeter, and James Calamy, brother of Dr. Calamy, his college tutor, to whom he was deeply attached. From Cambridge he removed into the family of Ralph Freeman, esq., of Aspeden Hall, Hertfordshire, as governor to his eldest son, for whose use he composed many of his 'Pious Meditations.' Bonnell continued in the family until 1678, when he accompanied his pupil into Holland, and spent nearly a year in the household of Sir Leoline Jenkins at Nimeguen. Sir Leoline was so impressed

with his character that he offered to use his powerful interest in his behalf. He went in the ambassador's company through Flanders and Holland, and so back to England. There he remained with his pupil until 1683, when young Mr. Freeman was sent into Italy and France. Bonnell joined him the next year at Lyons, and the two travelled together through several parts of France. On his return he undertook personally the official duties which, since his father's death, he had performed by deputy. The office of accountant-general of the Irish revenues was one of great trust, requiring a thorough knowledge of business. But he was quite equal to the post, and managed his work so well that he soon gained the esteem of the government and the love of all concerned with him. One thing alone troubled him—had he not a call to the sacred ministry? So he strove to find a man to whom he could entrust his responsible office while he himself became a christian clergyman. The man he sought was found, but the revolution of 1688 put a stop to the scheme. His substitute could not submit to the new *régime*, and Bonnell, not being able to find another to his mind, was forced to remain at his post. Mr. Freeman offered, in case he should take holy orders, to buy him a living; but this was quite contrary to Bonnell's principles. 'I will desire,' he writes, 'no place to please myself, especially in the church, but, indeed, nowhere else, but to serve God.' Bonnell anticipated the dangers which occurred during the reign of James II, and wrote to his friend and kinsman, Mr. Strype, about them. He resolved not to attempt to leave Dublin during the war. Whatever he received from his employment he gave to needy protestants. He was bitterly disappointed when he found there was so little reformation of manners after the troubles ceased, and, that he might assist more directly in the good work, he again determined to seek ordination; for which purpose he again arranged with a substitute to take his duties as accountant-general, but again the negotiation fell through, this time owing to his own failing health. In 1693 he married Jane, daughter of Sir Albert Conyngham, who had been a noted royalist, and after six years of happy union, in which he was blessed with two sons and one daughter, he passed to his rest. He was buried in St. John's Church, Dublin, and his funeral sermon was preached by the Bishop of Killaloe (Edward Wetenhall), who uses these remarkable words in his preface to the sermon: 'I am truly of opinion that in the best age of the church, had he lived therein, he would have passed for a saint.' His life was written by the Archdeacon of Armagh (William Hamilton), who fully bears out this encomium. Archdeacon Hamilton has wisely fortified himself by attaching to his 'Life' letters from several bishops who fully endorse all that he has written, and there does not appear to be a hint from any other source which would lead us to doubt the truthfulness of the account. Bonnell's piety was of the strictly church of England type, though he was tolerant of those who differed from him. During the greater part of his life he attended church twice every day, and made a point of communicating every Lord's day. He was a careful observer of all the festivals and fasts of the church, and made it a rule to repeat on his knees every Friday the fifty-first Psalm. He took a deep interest both in the 'religious societies' and the 'societies for the reformation of manners,' which form so interesting a feature in the church history of his day. Of the former, which flourished greatly at Dublin, we are told that 'he pleaded their cause, wrote in their defence, and was one of their most diligent and prudent directors;' of the latter 'he was a zealous promoter, was always present at their meetings, and contributed liberally to their expenses.' He gave one-eighth of his income to the poor, and his probity was so highly esteemed that the fortunes of many orphans were committed to his care. Bonnell was a man of great and varied accomplishments. 'He understood French perfectly, and had made great progress in Hebrew, while in philosophy and oratory he exceeded most of his contemporaries in the university, and he applied himself with success to mathematics and music.' Divinity was, however, of course his favourite study. He was a great reader of the early fathers, and translated some parts of Synesius into English. He also reformed and improved for his own use a harmony of the Gospels. His favourite writers were Richard Hooker and Thomas à Kempis. Many of his 'Meditations' (a vast number of which, on a great variety of subjects, are still extant) remind one slightly of the latter author.

[Hamilton's Exemplary Life and Character of James Bonnell, &c.; Christian Biography, published by Religious Tract Society.] J. H. O.

BONNER or **BONER, EDMUND** (1500?-1569), bishop of London, is said to have been the natural son of George Savage, rector of Davenham, Cheshire, by Elizabeth Frodsham, who was afterwards married to Edmund Bonner, a sawyer at Hanley in Worcestershire. This, however, was doubted by Strype, who tells us that his contempo-

rary, Nicholas Lechmore, one of the barons of the exchequer, had found evidences among his family papers that Bonner was born in lawful wedlock. About the year 1512 he studied at Pembroke College, Oxford, then called Broadgate Hall. In 1519 he took on two successive days (12 and 13 June) the degrees of bachelor of canon and of civil law, and was ordained about the same time. On 12 July 1525 he was admitted doctor of civil law. In 1529 we find him in Cardinal Wolsey's service as his chaplain, conveying important messages to the king and to the king's secretary, Gardiner, sometimes with formal instructions drawn up in writing. After the cardinal's fall he still remained in his service, and was sometimes, it appears, employed to communicate with Cromwell, of whose good offices the once great minister stood then so much in need. In 1530 he went with Wolsey to the north, and was with him at Cawood when he was arrested. Not long before, while with the cardinal at Scrooby, he wrote to Cromwell for some Italian books which Cromwell had promised to lend him to improve his knowledge of the language (Ellis's *Letters*, 3rd series, ii. 177).

In January 1532 he was sent to Rome by Henry VIII to protest against the king's being cited thither by the pope in the question of his divorce from Catherine of Arragon, and he remained at the papal court the whole of that year. The imperial ambassador, Chapuys, says in one of his despatches from London that he had been previously one of Queen Catherine's counsel (*Calendar of Henry VIII*, v. No. 762). It is somewhat strange that we have no other evidence of this, but Chapuys is not likely to have been misinformed. At the close of the year Bonner's zeal in the king's service was rewarded with the benefice of Cherry Burton near Beverley (*ib.* No. 1658). He is also stated to have received, but at what precise date does not appear, the rectories of Ripple in Worcestershire, and Bledon, which is probably Blaydon, in Durham. For a brief period in the beginning of 1533 he was in England, having been sent home by the other English agents at Bologna, where Clement VII then was, who had gone thither to meet the emperor; but he was instructed to return in February, and was at Bologna again by 6 March. Just at that moment a faint hope was entertained of some kind of arrangement between Henry and the pope to avert a breach with Rome, but it was soon found impracticable. Henry VIII, who had already secretly married Anne Boleyn, announced her publicly at Easter as his queen, and crowned her at Whitsuntide. For this he naturally incurred excommunication by the pope, who pronounced sentence accordingly on 11 July. Against this sentence Henry determined to appeal to a general council, and Bonner, who followed the pope towards the close of the year into France to his meeting with Francis I at Marseilles, intimated the appeal to Clement in person. The despatch in which he reported to the king how he had done so is printed in Burnet, and gives a very vivid account of the scene, for Bonner was a sharp observer of things. The proceeding was in every way vexatious and irregular, for Henry had no real desire for a council, which, indeed, he all along tried to avert; and the pope showed his internal irritation by folding and unfolding his pocket-handkerchief—'which,' wrote Bonner, 'he never doth but when he is tickled to the very heart with great choler'—while the datary was reading the appeal.

A very preposterous statement is made by Burnet, on no apparent authority whatever, that the pope was so enraged at Bonner's intimation of the appeal, that he talked of throwing him into a cauldron of melted lead, or burning him alive. One might just as easily imagine an English prime minister threatening to hang a foreign ambassador after a disagreeable interview. Bonner quietly discharged his commission and returned to England, where, in the spring of 1534, he was rewarded first with the living of East Dereham in Norfolk (*Calendar*, vii. No. 545). In 1535 he was made archdeacon of Leicester, and was installed on 17 Oct. At this time all the dignitaries of the church were required by sermons and writings to enforce the doctrine of the royal supremacy, and Bonner wrote a preface to a second edition, published in 1536, of Gardiner's treatise 'De verâ Obedientiâ.' About this time he was sent to Hamburg to cultivate an understanding between the king and the protestants of Denmark and northern Germany. From 1537 to 1539 he was prebendary of St. Paul's. In the spring of 1538 he went with Dr. Haynes to the emperor to dissuade him from attending the general council summoned by the pope at Vicenza; but they were refused audience. Later in the year he superseded Gardiner, bishop of Winchester, as ambassador at the French court, who was not over-well pleased with his treatment or with the manners of his successor; for Bonner certainly was not the man to make a disagreeable message more palatable to a rival or even to a superior. His language even to Francis I, on this embassy, was on one occasion singularly overbearing, and provoked that most courteous of kings to tell him in reply that, if it were not for the love of his

master, he would have had a hundred strokes of a halberd.

At the beginning of this embassy he was appointed bishop of Hereford. He seems to have had a promise of the bishopric before he went out, but his election took place on 27 Nov. 1538, while he was in France. He could not, however, return to be consecrated, and next year, without having obtained possession of his see, he was translated to London. Meanwhile he showed himself very zealous in promoting the printing of the great English Bible for the king at Paris. He was still in France when, on 20 Oct. 1539, he was elected bishop of London. He was confirmed on 11 Nov., and took out a commission from the king for the exercise of his episcopal functions on the 12th. On 4 April 1540 he was consecrated at St. Paul's, and on the 16th of the same month he was enthroned.

His name was naturally placed on the commission to treat of doctrine in 1540 after those of the two archbishops. Next year, under a commission to try heretics, he opened a session at the Guildhall. The cruel act of the Six Articles was to be put in force, and the prisons of London could not contain all the accused, so that in the end, apparently of sheer necessity, they were discharged. But one Richard Mekins, a poor lad of fifteen, who had spoken against the sacrament, and expressed his opinion that Dr. Barnes had died holy, was condemned to death and burned in Smithfield. His fate excited naturally much compassion, and hard things were spoken of the bishop in consequence; but it may be doubted, notwithstanding Foxe's coloured narrative, whether Bonner's action in the matter was more than official. The unhappy boy died repenting his heresies, and expressed at the stake—or, according to the puritan version, 'was taught to speak—much good of the bishop of London, and of the great charity that he showed him' (Hall's *Chronicle*, 841). As the poor lad gained nothing by the declaration, it is not clear how he could have been 'taught' to say anything but the truth.

So with other persecutions of which Bonner is accused, of which two occurred during the reign of Henry VIII. John Porter was committed to prison by him for reading aloud from one of the six bibles that Bonner had caused to be put up in St. Paul's Cathedral, and making comments of his own in direct violation of the episcopal injunctions. Foxe tells us that he was placed in irons and fastened with a collar of iron to the wall of his dungeon, of which cruel treatment he died within six or eight days. But it is clear that Bonner was only answerable for the sentence, not for the severity with which it was carried out. And as to the more memorable case of Anne Askew [q. v.], it is still more apparent that Bonner, so far from being cruelly inclined towards her, really tried his best to save her.

During the years 1542 and 1543, Bonner was ambassador to the emperor, whom he followed in the latter year from Spain into Germany. He returned from this embassy, and was in England during the last three years of Henry's reign, and it was during this period that Anne Askew was brought before him. The theory of his conduct first put forward by Foxe, and accepted with very little question even to this day, is that he was all along at heart what Foxe called an enemy of the Gospel—that is to say, of the Reformation—though he had favoured it in the first instance from motives of self-interest, and that immediately after the death of Henry VIII he showed himself in his true colours. It is not explained on this theory why a man whose principles were so very plastic under Henry became so very resolute under Edward, and suffered deprivation and imprisonment rather than submit to the new state of things. A more critical examination of the principles at issue in the different stages of the Reformation would make Bonner's conduct sufficiently intelligible. The main point established in the reign of Henry VIII was simply the principle of royal supremacy—that the church of England, like the state, was under the constitutional government of the king. To this principle minds like those of Bonner and Gardiner saw —at the time, at least—no reasonable objection. But the point which Somerset and others sought to establish under Edward VI was that church and state alike were under the uncontrolled authority of the privy council during a minority, and that it was in vain to plead constitutional principles against the pleasure of the ruling powers.

To this neither Bonner nor Gardiner could submit without protest. One of the first things instituted in the new reign was a general visitation, by which the power of the bishops was superseded for the time. The king's injunctions and the Book of Homilies were everywhere imposed. Bonner desired to see the commission of the visitors, which they declined to show, and accepted the injunctions and homilies with the qualification 'if they be not contrary to God's law and the statutes and ordinances of the church.' Unfortunately he repented his rashness, applied to the king for pardon, and renounced his protestation. Yet, in spite of this submission, he was sent to the Fleet, where he

remained, indeed, only a short time, while the commissioners introduced a new order of things in his diocese. Two years later, in 1549, he incurred a reprimand from the council for neglecting to enforce the use of the new prayer-book, and was ordered to preach at Paul's Cross on Sunday, 1 Sept., with express instructions as to the substance of what he was to say. He obeyed on all points but one. He was instructed to set forth among other things that the king's authority was as great during the minority as if he were thirty or forty years old; but this topic he passed over in silence. An information was laid against him on this account by Hooper and Latimer, and he was examined at great length on seven different days before Cranmer. In the end he was deprived of his bishopric on 1 Oct. and committed to the Marshalsea prison. This sentence was confirmed by the council 'which sat in the Star-chamber at Westminster' on 7 Feb. following, when he was fetched out of prison merely to have his disobedience more fully proved against him, and he was further adjudged 'to remain in perpetual prison at the king's pleasure, and to lose all his spiritual promotions and dignities for ever' (Wriothesley's *Chronicle*, ii. 34).

He accordingly remained in the Marshalsea prison till the accession of Queen Mary in 1553, when most of the acts done by the council during Edward VI's minority were at once reversed as being, in fact, unconstitutional. He was liberated on 5 Aug. in that year, and took possession of his see again, Ridley, who had been made bishop of London in his place, being regarded as an intruder. Ridley, indeed, who was implicated in a charge of treason by his advocacy of the pretensions of Lady Jane Grey, had already been taken prisoner before Bonner's liberation. Foxe, in his extreme desire to make out charges of cruelty against Bonner, says that, although Ridley had been kind to Bonner's mother, and allowed her to remain at Fulham during his imprisonment, Bonner declined to allow Ridley's sister and some other persons the benefit of certain leases granted to them by Ridley as bishop of London. Of course he could not recognise the validity of such leases without admitting that Ridley had been the lawful bishop of London; but whether he was ungrateful to Ridley or not we have no means of judging. That he was unpopular in London—at least with a considerable part of the population—even before the great persecution, is very probable. London was the great centre of what was afterwards called puritanism, and disrespect towards bishops was the cardinal principle of the new religion. In 1554, on a Sunday morning in April, a dead cat with a shaven crown, and with a piece of paper, 'like a singing-cake' or sacramental wafer, tied between its fore-paws, was found at daybreak hanging on the post of the gallows in Cheap. It was taken down and carried to Bonner, who caused it to be exhibited that day during the sermon at Paul's Cross. The lord mayor and corporation offered a reward for the discovery of the author of the outrage, and various persons were imprisoned on suspicion, but the true offender could not be detected.

In September 1554 Bonner visited his diocese, revived processions, restored crucifixes, images, and the like, and caused the texts of scripture painted on church walls during the preceding reign to be erased. He also drew up a book of 'profitable and necessary doctrine,' and a set of homilies, on which Bale, after the accession of Queen Elizabeth, published a weak and spiteful comment. Next year, after the reconciliation of the kingdom to Rome, began the great persecution, in which Bonner's agency, together with the highly coloured statements of Foxe, have brought his name into peculiar obloquy. And so strongly has the character clung to him of a fierce, inhuman persecutor, that even biographers who tell us, almost in one breath, from Foxe, that he undertook the burning of heretics cheerfully, and, from the surer testimony of documents, that he was admonished by letter from the king and queen not to dismiss the heretics brought before him so lightly as he and his brother bishops had done, seem unconscious that the two statements require to be brought into harmony. The truth is, that Mary's ill-starred marriage, against which her best friends in England remonstrated, and others broke out into rebellion, really handed over the government of England to Philip of Spain, and a severity towards heretics like that of the Spanish inquisition was the natural result.

The first of these martyrs, John Rogers, a priest, was examined and sentenced by the council. Bonner only degraded him from the priesthood before his execution. Nor does he appear to have meddled much with heretics, even when sent up to him by the sheriffs and justices, till he received the admonition above referred to from the king and queen, which was dated 24 May. Next day he and the lord mayor sat together in consistory in St. Paul's, and pronounced sentence on some men for their opinions on the sacrament. During the remainder of that year and nearly the whole of the three years following, condemnations and burnings of heretics were of appalling frequency all over England, and most frequent, as might have

been expected, in the diocese of London. In February 1556 Bonner was sent to Oxford with Thirlby, bishop of Ely, to degrade Archbishop Cranmer; but this is the only instance in which we read of his being so employed out of his diocese. The catalogue of burnings there is horrible enough. At Smithfield as many as seven were sometimes burned together; at Colchester, one day, five men and five women suffered; while at Chelmsford, Braintree, Maldon, and other towns in Essex, individual cases occurred from time to time.

That Bonner condemned these men is certain; that he took a pleasure in it, as Foxe insinuates, is by no means so clear. It may be that he did not protest as he might have done against the severity of an inhuman law. A victim himself to the injustice of puritanism in the days of King Edward, he saw tendencies destructive of the commonwealth in the opinions which he condemned, and rough remedies were but the fashion of the times. Still, though his functions were merely judicial, the revulsion of feeling created by these repeated severities extended to their agents, and there is no doubt at all that Bonner was unpopular. Even Queen Elizabeth, it is said, looked coldly on him, and refused him her hand to kiss when he, with the other bishops, went out to meet her at Highgate; but for some months he retained his bishopric, and in 1559 he sat both in parliament and in convocation. He was compelled, however, to make some arrangement with Bishop Ridley's executors, and was for some time confined to his house. In the course of the summer he and the whole of the bishops then in England, except Kitchin of Llandaff, refused to take the oath of supremacy, and were accordingly deprived of their bishopries and committed to prison. Bonner refused the oath on 30 May, and was imprisoned in the Marshalsea. There a few years later the oath of supremacy was again tendered to him by Dr. Horne, the new bishop of Winchester, as his diocesan, under the statute 5 Eliz. c. 1. On his refusal to take it he was indicted of a *præmunire*; but by his legal astuteness he raised the question whether Horne had been rightly consecrated as bishop even by statute law, and the objection was found so important that an act of parliament had to be passed to free the titles of the Elizabethan bishops from ambiguity. The charge was then withdrawn, and the oath was not again tendered to him. He died in the Marshalsea prison on 5 Sept. 1569, and was buried three days later at midnight in St. George's churchyard, Southwark, the hour being selected in order to avoid disturbances.

Sir John Harington, who was quite a boy when Bonner died, says that he was so hated that men would say of any ill-favoured fat fellow in the street, that was Bonner. This, however, tells us little of the real character of the man. The special merit by which he rose was that of being an able canonist, quick-witted and ready in argument. From some recorded anecdotes, it would appear that he had a quick temper also, and was given to language that nowadays would certainly be called unclerical. A number of his sharp repartees are preserved by Harington, which show that he was a man of lively and caustic humour, rather than the cold-blooded monster he is commonly supposed to have been.

[State Papers of Henry VIII; Calendar of Henry VIII; Foxe's Acts and Monuments; Burnet's Reformation; Strype; Wood's Athenæ (Bliss); Wriothesley's Chronicle (Camden Soc.); Machyn's Diary (Camden Soc.); Chronicle of Queen Jane and Queen Mary (Camden Soc.); Sir John Harington's Brief View of the State of the Church of England, p. 16. The Life and Defence of the Conduct and Principles of the venerable and calumniated Edmund Bonner, by a Tractarian British Critic, Lond. 1842 (this book is a very bad sarcasm, its aim not being biographical so much as polemical. It is attributed to the late prebendary Townsend of Durham, who had previously edited Foxe's Book of Martyrs).] J. G.

BONNER, RICHARD (*fl.* 1548), was the author of a black-letter treatise on 'The Right Worshipping of Christ in the Sacrament of Bread and Wine,' published in 1548. In the preface, addressed to Thomas (Cranmer), archbishop of Canterbury, the author styles himself 'your obedyent diocesan and dayly orator.'

[Maunsell's Cat. of English Bookes, 1595, p. 22; Ames's Typographical Antiqq., ed. Herbert, 1790, ii. 752; Strype's Eccles. Memorials, 1822, ii. i. 229.] A. R. B.

BONNEY, HENRY KAYE, D.D. (1780–1862), divine, was son of Henry Kaye Bonney, rector of King's Cliffe and prebendary of Lincoln, and was born 22 May 1780 at Tansor, Northamptonshire, of which parish his father was at that time rector. His father's family friend, Lord Westmorland, procured for him a foundation scholarship at the Charterhouse, where he obtained an exhibition, and went to Emmanuel College, Cambridge. Having been elected to one of the Tancred divinity studentships, he migrated to Christ's College. He became B.A. in 1802, M.A. 1805, D.D. 1824. He was ordained deacon in 1803 and priest in 1804, with a charge at Thirlby, in Lincolnshire. After a few months he went to live with his parents at King's Cliffe, and undertook

the parishes of Ketton and Tixover with Duddington. He was collated by Bishop Tomline, 8 Jan. 1807, to the prebend of Nassington in Lincoln Cathedral. Bonney was presented by the Earl of Westmorland to the rectory of King's Cliffe, in succession to his father, who died of paralysis 20 March 1810; and published in 1815, with a dedication to the Earl of Westmorland, the 'Life of the Right Reverend Father in God, Jeremy Taylor, D.D., Chaplain in Ordinary to King Charles the First, and Lord Bishop of Down, Connor, and Dromore,' 8vo, London, 1815. In 1821 Bonney dedicated to Lady Cicely Georgiana Fane his 'Historic Notices in reference to Fotheringay. Illustrated by Engravings,' 8vo, Oundle, &c. In 1820 he was appointed examining chaplain to Dr. Pelham, the new bishop of Lincoln, and was collated by the same prelate, 10 Dec. 1821, to the archdeaconry of Bedford. An order in council, 19 April 1837, transferred it from the diocese of Lincoln to the diocese of Ely. Bonney published the 'Sermons and Charges by the Right Reverend Father in God, Thomas Fanshaw Middleton, D.D., late Lord Bishop of Calcutta. With Memoirs of his Life,' 8vo, London, 1824. On 15 May 1827 he married Charlotte, the fourth daughter of John Perry, who, after a childless union of nearly twenty-four years, died at King's Cliffe 26 Dec. 1850. In the year of his marriage, 1827, Bonney was appointed to the deanery of Stamford by his intimate friend Dr. Kaye, then recently translated from the see of Bristol to that of Lincoln, and was advanced by the same prelate, 22 Feb. 1845, from the archdeaconry of Bedford to that of Lincoln, of which, soon after his appointment, he made a parochial visitation, and committed to writing an accurate account of every church under his supervision. As an archdeacon Bonney was indefatigable. In the early part of 1858 he was seized with paralysis, and never entirely recovered. He died at the rectory-house, King's Cliffe, 24 Dec. 1862, and was buried in his wife's grave in the churchyard of Cliffe, to the restoration of the church of which, then unfinished, he had shortly before contributed 500*l*.

He published his charges to the clergy of the archdeaconry of Bedford for the years 1823, 1843, and 1844, and the several charges delivered to the clergy and churchwardens of the archdeaconry of Lincoln at the visitations of 1850, 1854, and 1856. He also contributed a sermon, 'Sacred Music and Psalmody considered,' which had been first preached in Lincoln Cathedral, to the third volume of 'Practical Sermons by Dignitaries and other Clergymen of the United Church of England and Ireland,' 8vo, London, 1846.

[Crockford's Clerical Directory, 1860; Le Neve's Fasti; Gent. Mag. December 1862 et passim; Lincoln Gazette, 27 Dec. 1862; Morning Post, 29 Dec. 1862; Stamford Mercury, 26 Dec. 1862 and 2 Jan. 1863; Memoir appended to Kaye's Funeral Sermon.] A. H. G.

BONNOR, CHARLES (*fl.* 1777–1829 ?), actor and dramatist, was the son of a distiller in Bristol. After commencing life as apprentice to a coachmaker, he appeared on the Bath stage on 4 Oct. 1777 as Belcour, in Cumberland's comedy 'The West Indian.' He remained at Bath until the close of the season 1782–3, playing such characters as Charles Surface, Ranger, Touchstone, &c. On 7 July 1783 he appeared for his farewell benefit as Mercutio, and Puff in the 'Critic,' and announced his forthcoming departure for London. On 19 Sept. 1783 he made, as Brazen in the 'Recruiting Officer,' his first appearance at Covent Garden, speaking an address in which he introduced himself and Miss Scrace from Bath, and Mrs. Chalmers from York (Genest), or Norwich (*Biographia Dramatica*), who made their first appearance in the same piece. In London, as in Bath, his reception was favourable. At Covent Garden he produced for his benefit, on 6 May 1785, an interlude, called 'The Manager in Spite of Himself,' in which he played all the characters but one. This was followed at the same theatre, on 20 Dec. 1790, by a pantomime adapted from the French, and entitled 'Picture of Paris.' Neither of these pieces has been printed. Before the production of the first, Bonnor's direct connection as an actor with Covent Garden had been interrupted. In the year 1784 Bonnor was sent over by Harris, of Covent Garden, fer the purpose of establishing an English theatre in Paris. So prosperous were at first the negotiations, that the 'superb theatre which constitutes one of the grand divisions of the Thuilleries' was taken. The patronage of the Queen of France, on which he had counted, was withdrawn, and the scheme was abandoned. Meanwhile John Palmer, the owner of the Bath theatre, and the first proprietor of mail-coaches, who had been appointed comptroller-general of the post-office, availed himself of the abilities of Bonnor in the arrangement of his scheme for the establishment of a mail-coach service. This led to the appointment of Bonnor as deputy-comptroller of the post-office, and his consequent retirement from the stage. In the Royal Kalendar for 1788 Charles Bonner (*sic*) first appears as resident surveyor of the general post-office, and also as the deputy-surveyor

and comptroller-general in the same office, with a salary of 500*l.* In the Royal Kalendar of 1793 his name appears for the only time as the resident surveyor and comptroller of the inland department of the general post-office, with a salary of 700*l.* When Palmer vacated his functions (in 1792, according to Rose's 'Biographical Dictionary;' in 1795, according to the 'Biographia Dramatica'), Bonnor succeeded to the comptrollership of the inland department of the post-office. This he held two years. Changes were then made in the post-office, the comptrollership was abolished, and Bonnor retired on a pension. He published: 1. 'Mr. Palmer's Case explained . . . 1797.' 2. 'Letter to Benj. Hobhouse, Esq., M.P., on the subject of Mr. Palmer's Claim . . . 1800.' 3. 'Vindication against certain Calumnies on the subject of Mr. Palmer's Claim,' 4to, 1800. In the 'return of persons now or formerly belonging to the post-office department who receive pensions,' contained in the Parliamentary Papers for 1829, xi. 229, the name of Charles Bonnor appears as receiving a pension of 460*l.*, granted him from 1795 'for office abolished.' This return is dated 26 March 1827, at which date Bonnor was assumably alive. In the 'Gentleman's Magazine' for 1829, i. 651, the death at Gloucester of a Mr. Charles Bonnor is chronicled.

[Genest's Account of the English Stage; Baker, Reed, and Jones's Biographia Dramatica; Biographical Dictionary of Living Authors, 1816; Gent. Mag. 1829; Notes and Queries, 6th ser. xii. passim.] J. K.

BONNOR, THOMAS (*fl.* 1763–1807), topographical draughtsman and engraver, was a native of Gloucestershire. In 1763 he was awarded a premium by the Society of Arts, and he became one of the ablest topographical artists of his time. There are many plates of mansions, churches, and monuments drawn and engraved by him in Nash's 'Collections for the History of Worcestershire,' published in 1781–2; Collinson's 'History and Antiquities of the County of Somerset,' 1791; Bigland's 'Historical, Monumental, and Genealogical Collections relative to the County of Gloucester,' 1791–2; and Polwhele's 'History of Devonshire,' 1793–1806. He also designed some illustrations to the works of Richardson, Smollett, and Fielding, and in 1799 published four numbers of the 'Copperplate Perspective Itinerary,' containing views of Gloucester Cathedral and Goodrich Castle, for which he also wrote the descriptive text. He exhibited some drawings of architectural remains at the Royal Academy in 1807, and died between that date and the year 1812.

[Redgrave's Dictionary of Artists of the English School, 1878.] R. E. G.

BONNYCASTLE, JOHN (1750?–1821), author of several works on elementary mathematics, was born (probably about 1750) at Whitchurch, in Buckinghamshire. At an early age he went to London 'to seek his fortune,' and afterwards 'kept an academy at Hackney.' On the title-pages of the earlier editions of his first work ('The Scholar's Guide to Arithmetic') he is described as 'private teacher of mathematics.' He was at one time private tutor to the sons of the Earl of Pomfret. Between 1782 and 1785 he became professor of mathematics at the Royal Military Academy, Woolwich. He died on 15 May 1821. His chief works are: 1. 'The Scholar's Guide to Arithmetic.' The first edition of this book appeared in 1780. In 1851 appeared an eighteenth edition, 'edited by J. Rowbotham, corrected with additions by S. Maynard.' 2. 'Introduction to Algebra,' 1782. A thirteenth edition appeared in 1824, 'with addenda by Charles Bonnycastle,' the author's son. 3. 'Introduction to Astronomy,' 1786. This book is intended as a popular introduction to astronomy rather than as an elementary treatise. An eighth edition appeared in 1822. 4. An edition of Euclid's 'Elements,' with notes, 1789. 5. 'Introduction to Mensuration and Practical Geometry,' 1782 (thirteenth edition 1823). This book and the last were translated into Turkish. 6. 'A Treatise on Algebra,' 2 vols., 1813. 7. 'A Treatise on Plane and Spherical Trigonometry,' 1806. Besides elementary mathematical books, Bonnycastle was in early life a frequent contributor to the 'London Magazine.' He wrote also the introduction to a translation (by T. O. Churchill) of Bossut's 'Histoire des Mathématiques,' and a 'chronological table of the most eminent mathematicians from the earliest times' at the end of the book (1803). He seems to have been a man of considerable classical and general literary culture. Leigh Hunt, who used to meet him in company with Fuseli, of whom Bonnycastle was a great friend, has left a description of him in his book on 'Lord Byron and his Contemporaries.' He describes him as 'a good fellow,' and as 'passionately fond of quoting Shakespeare and of telling stories.' In conclusion, he suggests that, in common with scientific men in general, Bonnycastle 'thought a little more highly of his talents than the amount of them strictly warranted;' but, he adds, 'the delusion was not only pardonable but desirable in a man so zealous in the performance of his duties, and so much

of a human being to all about him, as Mr. Bonnycastle was.'

[Gent. Mag. 1821, i. 472, 482; Leigh Hunt's Lord Byron and his Contemporaries, ii. 32–6; Brit. Mus. Cat.; De Morgan's Arithmetical Books, p. 76; Dict. of Living Authors, 1816.]

T. W–R.

BONNYCASTLE, SIR RICHARD HENRY (1791–1847), lieutenant-colonel royal engineers, was the son of Professor John Bonnycastle [q. v.], and was born in 1791. He studied at the Royal Military Academy, Woolwich, as a cadet, and passed out as a second lieutenant of the royal engineers 28 Sept. 1808, becoming a first lieutenant in the following year. He served at the siege of Flushing in 1809, and in the American campaigns of 1812–14, during which he was present at the capture of Fort Castine, and the occupation of the part of the state of Maine east of the Penobscot, and was commanding engineer at the construction of the extensive works thrown up by the British on the Castine peninsula. He attained the rank of captain in 1814, in which year he married the daughter of Captain W. Johnston. Subsequently he served with the army of occupation in France. As commanding royal engineer in Upper Canada, he rendered very important services during the Canadian rebellion in 1837–9, particularly in February 1838, when, at the head of a force of militia and volunteers, in the absence of regular troops, he defeated the designs of the insurgents at Naparree, and the brigands at Hickory Island, for an attack on the city of Kingston. For these services he was knighted. He was afterwards commanding engineer in Newfoundland. He became a brevet-major in 1837, a regimental lieutenant-colonel in 1840, and retired from the service in 1847. He died on 3 Nov. 1847 at Kingston, Canada (*Times*, 4 Dec. 1847). Sir Richard, who was an excellent and painstaking officer and much esteemed, was author of: 1. 'Spanish America, a Descriptive and Historical Account,' &c., 2 vols. 8vo, with maps (London, 1818), a work which appears to have been compiled by the author, who was a good Spanish scholar, when at Woolwich after his return from France. 2. 'The Canadas in 1842,' 2 vols. 12mo (London, 1842). 3. 'Newfoundland in 1842,' 2 vols. 8vo (London, 1842), in which the author sought to call attention to the resources of that oldest and, at the time, least known of British colonies. 4. 'Canada and the Canadians in 1846,' 12mo (London, 1846). At his death he left a mass of interesting writings relating to Canada, which were afterwards published under the editorship of Lieutenant-colonel (since General) Sir J. E. Alexander, C.B., with the title 'Canada as it was and as it may be,' 2 vols. 8vo (London, 1852).

[Hart's Army Lists; Brit. Mus. Cat.; Canada as it was and as it may be (London, 1832).]

H. M. C.

BONOMI, JOSEPH, the elder (1739–1808), architect, was born of Italian parents at Rome 19 Jan. 1739. In 1767, on the invitation of the brothers R. and J. Adam, he came to England. He had an excellent knowledge of perspective, which conduced much towards his professional success. In 1775 he married a cousin of Angelica Kauffman. In 1783 he went with his wife and family to Italy. During that visit he received the diploma of Associate of the Clementine Academy at Bologna. In the following year, his return being hastened by the death of a son, he came back to England, and finally settled in practice in London. In his native country he stood in high repute. Already in 1776 he had made a design for a sacristy, which Pope Pius VI proposed to erect at St. Peter's at Rome, and in 1804 he received from the congregation of cardinals entrusted with the care of the metropolitan cathedral an honorary diploma, constituting him architect to the building. His knowledge of perspective, while it extended his fame and gave beauty to his designs, made him the innocent cause of that rupture which led to the retirement of Sir Joshua Reynolds from the presidency of the Royal Academy. A sufficient account of the quarrel, and of Bonomi's merely passive share in it, will be found in Leslie's and other lives of Sir Joshua. In 1789, by the casting vote of the president, he was elected an associate of the Academy. It was Sir Joshua's wish to have him made a full member, in order that the vacant chair of the professor of perspective might be suitably filled. The body of the Academy resisted the election, and Bonomi accordingly did not attain the dignity of full membership. He sent drawings to the exhibitions of the Royal Academy at various times between the years 1783 and 1806. He died in London on 9 March 1808, in his sixty-ninth year, and was buried in Marylebone Cemetery. His meritorious life and timely death are briefly epitomised in a Latin inscription, which will be found in the supplement to Lysons's 'Environs of London,' p. 227. A good list of his works is given in the 'Dictionary of the Architectural Publication Society,' 1853. He was a leader in the revival of Grecian architecture, and his buildings are chiefly in that style. Amongst them may be mentioned Dale Park, Sussex, built 1784–8 for John Smith, Esq., M.P., illustrated in Neale's

'Seats, &c.,' v. ser. 2; the gallery at Towneley Hall, Lancashire, built in 1789 for a collection since transferred to the British Museum; a gallery and small church at Packington, Warwickshire, for the Earl of Aylesford (NEALE, *Seats*, &c. iv.) For Langley Hall, Kent, the seat of Sir Peter Burrell, bart., he designed considerable additions. In 1792 he built the chapel in Spanish Place, Manchester Square, London. Langford Hall, Shropshire, designed by Bonomi, shows perhaps the earliest instance of a portico projecting sufficiently to admit carriages. His last and most celebrated work was an Italian villa at Roseneath, Dumbartonshire, for the Duke of Argyll. A ground-plan and perspective view of this building are given, amongst other places, in Gwilt's 'Encyclopædia,' pp. 228–9. The name of Bonomi occurs often in the novels of his time as that of an architect who should be consulted on all occasions in matters of architecture. Ignatius, the elder of his surviving sons, practised as an architect at Durham. Joseph, the younger [q. v.], became a celebrated artist and orientalist.

[Dictionary of the Architectural Publication Society, 1853; Gwilt's Encyclopædia of Architecture, p. 227; Leslie's Life of Sir Joshua Reynolds, ii. ch. 10; Redgrave's Dict. of Artists of Eng. School.] E. R.

BONOMI, JOSEPH, the younger (1796–1878), sculptor and draughtsman, was born at Rome on 9 Oct. 1796. His father was Joseph Bonomi the elder [q. v.], and Angelica Kauffman and Maria Cosway were sponsors at his baptism. The elder Bonomi, who had first come to England in 1767, settled here permanently soon after his son's birth, and Joseph became at an early age a student at the Royal Academy, where he won the silver medal for the best drawing from the antique, and also distinguished himself in sculpture, the study of which he afterwards pursued under Nollekens. In 1823 he revisited Rome, and in the following year accompanied Robert Hay to Egypt, the land with which his name was to be most enduringly linked. He there remained eight years, studying and drawing the monuments, in the company of Hay, Burton, Lane, and Wilkinson. His cheerful, indomitable spirit and easy *bonhomie* made him a general favourite, and during this period he acquired that remarkable skill in hieroglyphic draughtsmanship which has been excelled by Wilkinson alone. In 1833 he joined Arundale and Catherwood in their journey in Sinai and the Holy Land, where they were the first to visit the Mosque of Omar, so called, and made the detailed drawings upon which Fergusson founded his famous theory. On his return to England, his true eye and delicate pencil were immediately secured for the illustration of the Egyptological works of Wilkinson and Birch; but in 1842 his services were again in demand for the expedition which the Prussian government were sending to Egypt under Lepsius, and his duties in connection with this exploration kept Bonomi two years in the country. On his return from this second visit to Egypt, he made a series of drawings from which Warren and Fahey painted their panorama of the Nile, which enjoyed a considerable measure of success in London and some of the large towns. In 1853 Bonomi lent his valuable assistance to Owen Jones in the arrangement of the Egyptian Court at the Crystal Palace, and in 1861 he was appropriately appointed curator of Sir John Soane's Museum in Lincoln's Inn Fields. Here he remained until his death, 3 March 1878. Bonomi was no scholar, but as a hieroglyphic draughtsman he was admirable. His work may be found scattered through all the principal Egyptologists' publications of his time. He furnished the Egyptian illustrations for numerous papers in the 'Transactions of the Syro-Egyptian Society,' Birch's 'Gallery of Antiquities selected from the British Museum,' Hay's collection, the Hartwell House Museum, and many other works of importance. With Samuel Sharpe, especially, Bonomi constantly collaborated, illustrating most of that writer's books; in many cases it would be more correct to say that Sharpe supplied the text that explained Bonomi's drawings. The large work on 'Egypt, Nubia, and Ethiopia' is illustrated by Bonomi, and he also published a popular work on 'Nineveh,' regarded chiefly from the artistic and the scriptural points of view, which ran through several editions, and was reprinted in 1869. He invented a machine for measuring the proportions of the human body, and brought out an edition of Vitruvius Pollio, with a treatise on the proportions of the human figure. He was a useful contributor to the 'Transactions of the Royal Society of Literature' and other learned periodicals. His papers on obelisks and on other Egyptian monuments were especially valuable.

[Times, 5 March 1878; Athenæum, No. 2628 (March 1878); information from E. W. Lane, R. S. Poole, and others.] S. L.-P.

BONVILLE, ANTHONY (1621–1676), otherwise called TERILL, a jesuit father, son of Humphrey Bonville of Canford, Dorsetshire, by Maria, his wife, was born at Canford in 1621. His mother, being strongly attached

to the Roman creeds and ritual, seems to have early given a bias to her son's religious sentiments; and though his father was a protestant, Anthony was allowed to fall under the influence of Father Thomas Bennet (alias Blackfan), who had been an active missioner in the Hampshire district since 1634. He was soon persuaded by the practised disputant, and left England to be educated at St. Omer when in his fifteenth year. Thence he set out for Rome in 1640, and entered at the English college on 4 Dec. He was ordained priest in March 1647, and in the following June was received into the Society of Jesus at Rome. He was successively penitentiary at Loreto, professor of philosophy at Florence and Parma, and professor of theology and mathematics at Liège, where he died on 11 Oct. 1676. Father John Greaves, who died professor of Hebrew at Liège in 1652, was connected with Bonville on his mother's side. His published works were: 1. 'Conclusiones Philosophicæ,' Parma, 12mo, 1657. 2. 'Problema Mathematico-philosophicum tripartitum, de termino magnitudinis ac virium in animalibus,' Parma, 12mo, 1660. 3. 'Fundamentum totius Theologiæ Moralis, seu Tractatus de Conscientia probabili . . . auctore R. P. Antonio Terillo, Anglo, Soc. Jesu Sacerd. . . . In hoc tractatu . . . errores Jansenii circa ignorantiam invincibilem refutantur' . . . Liège, 4to, 1668. 4. 'Regula Morum sive tractatus bipartitus de sufficienti ad conscientiam rite formandam regula . . . Auctore R. P. Antonio Terillo . . . Opus posthumum,' Liège, fol. 1678.

[Foley's Records of the Society of Jesus, iii. (i.e. ser. v.–viii.), pp. 410, 420; Diary and Pilgrim Book, p. 353; De Backer's Bibliothèque des Ecrivains de la Comp. de Jésus (fol. Louvain, 1876) sub voc. Terill.] A. J.

BONVISI, ANTONIO (*d.* 1558), merchant, belonged to an ancient family of Lucca, which was descended from a councillor of Otho III in the tenth century, and members of which had held the post of gonfaloniere in their native town. The coat borne by them was on a field azure, an estoile of eight points, surmounted by an inescutcheon, parti per saltire argent and gules; crest an angel affronté. His family was settled in England before his time, and he perhaps was born here, as his denisation does not appear to be on the patent rolls. In 1513 he was already a thriving merchant, and laying the foundation of the great wealth for which he was famous. In that year he received from the king (Henry VIII) a remission of customs for five years in repayment of a loan to the crown. He dealt largely in wool, and also imported jewels and other foreign articles, for which Cardinal Wolsey was one of his principal customers. He acted also as banker for the government, transmitting money and letters to ambassadors in France, Italy, and elsewhere, and sometimes through his correspondents succeeded in obtaining earlier news of foreign events than the government did. He was a patron and friend of learned men, more especially of those who had visited and studied in Italy. Thomas Starkey, Thomas Winter, Florence Volusenus, and others express their obligations to him. Sir Thomas More, in one of his last letters from the Tower, speaks of himself as having been for nearly forty years 'not a guest, but a continual nursling of the house of Bonvisi,' and styles Antonio the most faithful of his friends. He sympathised with More from principle, as well as for friendship's sake, and was courageous enough to help Friar Peto, who had fled to the Low Countries after preaching a violent sermon against King Henry VIII. Cardinal Pole speaks of him in much the same terms as More does, as 'a special benefactor of all catholic and good persons, whom I will not leave unnamed, for worthy is he of name, and I doubt not but his name is in the Book of Life. It is Anthony Bonvyse, whom I think you all know, dwelling from his youth up among you (i.e. in London), being now a very old man.'

He resided at London, in Crosby Hall, Bishopsgate Street (Crosbyes Place it was then called), which he at first leased from the priory of St. Helen's, and after the dissolution of that monastery purchased from the king, together with a house in St. Mary Axe and the site of the friary at Moulsham, near Chelmsford. This was in 1542. The house in St. Mary Axe he sold in 1546 to Balthazar Guercy, a distinguished fellow of the College of Physicians, and formerly medical attendant to Queen Catherine of Arragon, who had already resided there for some time. His well-known aversion to the principles of the Reformation ('a rank papist' Wriothesley calls him) gave him a sense of insecurity in England, and in the beginning of the reign of Edward VI he obtained license to convey Crosby Hall to Ric. Heywood, in trust for himself and others after his death, and about the same time he procured a release and quittance for all sums of money paid to him by officers of the crown since 1544. Having thus settled his affairs, he fled to the continent. His house, with those of Drs. Clement and Guercy, was seized by the sheriffs of London on 7 Feb. 1550, and in the general pardon which concluded the acts of the parliament of 7 Edward VI (1553) he was specially excepted, together with Cardinal Pole, the two

doctors above mentioned, Dr. Story, who was executed for treason in the reign of Elizabeth, and a few others. Story, who made his will while in exile, appointed Bonvisi as his executor. He died on 7 Dec. 1558, and was buried at Louvain, leaving Benedict Bonvisi, son of his brother Martin, to inherit his English property, which he had recovered during the reign of Queen Mary. Among the state papers at the Public Record Office there are several letters signed 'Antonio Bonvisi,' but probably only two are by him; these are dated 1533. In the others written in 1536 the signature does not appear to be by the same writer.

BONWICKE, AMBROSE, the elder (1652–1722), schoolmaster and nonjuror, son of the Rev. John Bonwicke, B.D., rector of East Horsley, Surrey, was born on 29 April 1652, and entered the Merchant Taylors' School, London, at the age of eleven. The head-master at that time was John Goad, who had a high reputation for scholarship, but was suspected of being too favourably disposed towards the Romish communion, which he joined at a later period of life. Bonwicke passed creditably through the school, and on 11 June 1669, being then head monitor, was elected to St. John's College, Oxford. Of his career at the university we have a somewhat curious picture drawn by his own hand in letters to his father. These are filled with complaints of his poverty, due chiefly, it would seem, to the embarrassed condition of the college revenues. 'Vestes nostræ,' he writes in 1670, 'undique fatentur vetustatem et subter togam gestiunt latere ne suam indicarent raritatem, nec diutius multo dominum tegent, cum ipsæ dudum nudæ fuerunt.' A little later he complains 'non tam librorum inopia laboro, quam indusiorum.' In 1672 his entreaties for help become more urgent: 'pecuniolam aliquam emendico . . . mittas igitur, obsecro, viginti saltem, utinam triginta, ne diutius sim in ullo ære præterquam tuo.' Through the favour of Peter Mews, bishop of Bath and Wells, he was made tutor to Lord Stawell. Still retaining his fellowship, he proceeded to the degree of B.A. in 1673, M.A. in 1675, and to that of B.D. in 1682; but though ordained deacon in 1676, he did not take priest's orders until 1680. In 1686 Dr. Hartcliffe was elected to the head-mastership of Merchant Taylors' School, and King James, in pursuance of his settled policy, recommended 'in the most effectual manner . . . not doubting of ready compliance' (*Minutes of the Court of the M. T. Co.*), a Mr. Lee for the vacant post. The Merchant Taylors' Company, however, were not disposed to surrender their rights of patronage, and ultimately the king gave way, and Bonwicke was appointed. He entered upon his duties on 9 June 1686, and immediately obtained a license from the Bishop of London on signing the Articles and taking the oath of allegiance. His mastership promised well. Among his pupils were several who rose to distinction, the most noteworthy being Hugh Boulter, archbishop of Armagh, and Sir William Dawes, archbishop of York. Unfortunately, with the change of dynasty there came also a change in the relations between himself and the company which had control of the school. It was required of him to take the oath of allegiance to the new sovereign, or show cause for his refusal. Time was given him for deliberation, and 'to provide for himselfe' (*ib.*), and several of his old school and college friends tried to overcome his scruples. In this they wholly failed, and accordingly his notice of dismissal took effect at Michaelmas, 1691. He then opened a private school at Headley, Surrey, where William Bowyer was among his pupils, and from his evidence (NICHOLS, *Lit. Anecd.* i. 65–6) we gather that Bonwicke inspired both affection and respect in those with whom he had to do. His grateful pupil transcribed many of his letters, which were published by John Nichols in 1785 under the title of 'Miscellaneous Tracts,' and to his care as executor was consigned the manuscript life of Ambrose Bonwicke the younger, which presented 'A Pattern for Young Students in the University,' first published by Bowyer in 1729, and carefully edited by Professor J. E. B. Mayor in 1870. Bonwicke died on 20 Oct. 1722, having had twelve children by his wife Elizabeth, daughter of Philip Stubbs of St. Peter's, Cornhill, and sister of his old schoolfellow, Archdeacon Stubbs, whom Steele has eulogised in the 'Spectator.'

[Rawlinson MSS. in the Bodl. Libr.; Wilson's Hist. of Merchant Taylors' School; Robinson's Registers of the same; Nichols's Literary Anecdotes; Professor Mayor's Life of Bonwicke, Camb. 1870.] C. J. R.

BONWICKE, AMBROSE, the younger (1692–1714), nonjuror, eldest son of Ambrose

Bonwicke the elder [q. v.], was born 30 Sept. 1692 (*Register of Merchant Taylors' School*), and entered the school, of which his father had been head-master, in 1703 (*ib.*). He spent more than seven years there, and, having reached the head form, was eligible for election to St. John's College, Oxford. But his refusal at school to read the prayer for the queen and the house of Hanover deprived him of this advantage, and compelled him to seek admission at the sister university. Entering St. John's College, Cambridge, in August 1710, his exemplary conduct and acquirements quickly procured him a scholarship, the enjoyment of which was somewhat marred by the scruples of an over-sensitive conscience. The statutes, to his mind, not only enjoined personal obedience, but implied some control over others. 'Am I,' he asks his father, 'by the words "faciam ab aliis observari," which are part of the oath, obliged to tell lads continually their duty as far as I know it, and also to inform against transgressors?' Happily his mind was set at ease on this point, and he was able to continue in college, devoting himself to study and to religious exercises with an ardour which could not but burn itself out. His health gave way beneath the severity of his self-discipline and the closeness of his application, and on 5 May 1714, alone, with his books of devotion beside him, he died in his college study. His father, at the suggestion of William Bowyer, drew up an account of his son's life, but desired that its authorship should be concealed. Bowyer, however, who undertook to edit the book, disclosed the secret, and in 1729 published the memoir under the title, 'A Pattern for Young Students in the University, set forth in the Life of Mr. Ambrose Bonwicke, sometime Scholar of St. John's College in Cambridge.' It is interesting, not merely as a picture of college life a century and a half ago, but as showing the nature and development of the scrupulous conscience which made both father and son nonjurors.

[The Pattern, &c., by Bowyer, 1729, and ed. by J. E. B. Mayor, 1870; Nichols's Literary Anecd.; Wilson's Hist. of Merchant Taylors' School; Robinson's Reg. of same.] C. J. R.

BONYTHON, CHARLES (*d.* 1705), lawyer, was the son and heir of John Bonython of Bonython, Cornwall, who married Ann, daughter of Hugh Trevanion of Trelegan. He was admitted as a student at Gray's Inn on 26 Oct. 1671, and was called to the bar on 12 June 1678. In some of the popish plot cases he appeared for the crown, notably in that against Lord Castlemaine (Willis Bund's *Cases from the State Trials*, ii. 1073). From April 1683 to 1705 he held the lucrative appointment of steward of the courts at Westminster, an office which no doubt paved the way to his election as one of the members of parliament for Westminster (1685–87). On two subsequent occasions (October 1691 and July 1698) he threatened to contest that city again in the 'pure tory interest,' but in neither instance was he returned (*Letters of Rachel, Lady Russell*, ii. 92, and *James Vernon's Correspondence*, ii. 126). He was appointed a serjeant-at-law in 1692. On 30 April 1705, in a fit of madness, he 'shot himself through the body with a pistoll' in his London house. His two sons were also of Gray's Inn. Richard, the elder, 'a very engenious gentleman,' having sold the family estates, 'set fire to his chambers in Lincoln's Inn [should be Gray's Inn], burnt all his papers, bonds, &c., and then stabbed himself with his sword, but not effectually; he then threw himself out of the window, and died on the spot.' This occurred in 1720.

[Parochial Hist. of Cornwall, i. 287; Cummings's Cury and Gunwalloe, 80–9; Luttrell's Hist. Relation, i. 255, v. 545; Woolrych's Serjeants, ii. 464–5.] W. P. C.

BONYTHON, RICHARD (1580–1650?), an early American settler, was the second son of John Bonython of Bonython, and was baptised at St. Columb Major on 3 April 1580. His title of 'captain,' and a passage in the 'Winthrop Papers' (Massachusetts Historical Society, 4th ser. vii.), seem to prove that he served in the French wars with Sir Ferdinando Gorges, who like himself was a west-country man. In 1630 he received a grant of a large tract of land on the east side of the Saco river, in Maine, or, as it was then called, New Somersetshire, and settled on his property in 1631. He was a commissioner under Gorges for the government of Maine in 1636; and when Gorges obtained a royal charter of the province Bonython was named in 1640 one of his council, and acted in that capacity to 1647. His uprightness as a magistrate is the theme of constant praise, and it is added that he even entered a complaint against his own son, the turbulent John Bonython, who was outlawed for contempt of court, and bore an evil reputation throughout his life. Bonython died about 1650, leaving this son and two daughters The name is now extinct in America; but the descendants of his daughters are numerous, the poet Longfellow tracing his ancestry back to Bonython's third daughter. The reckless John Bonython is introduced by Whittier as a character in 'Mogg Megone.'

BOOKER, JOHN (1603–1667), astrologer, was born at Manchester 23 March 1602-3, as appears by his nativity among the Ashmolean MSS. He was originally apprenticed to a haberdasher in London, and was subsequently a writing-master at Hadley and clerk to two city magistrates. He must, however, have soon commenced the professional practice of astrology, to which he had been addicted 'from the time he had any understanding,' as the first number of his almanack, the 'Telescopium Uranium,' was published in 1631. He almost immediately obtained great reputation from a prediction of the deaths of Gustavus Adolphus and the elector palatine, founded upon a solar eclipse, and was soon afterwards appointed licenser of mathematical, by which is probably to be understood astrological, books. In 1640 Lilly thought him 'the greatest and most compleat astrologer in the world,' but revised his opinion when Booker, in his capacity of licenser, 'made many impertinent obliterations' in his 'Merlinus Anglicus Junior,' and 'at last licensed it according to his own fancy.' After the publication of Lilly's 'Introduction,' nevertheless, Booker 'amended beyond measure,' and Lilly allows that he always had 'a curious fancy in judging of thefts.' A violent controversy with Sir George Wharton [q. v.] occasioned several pamphlets. His quaintly-rhymed 'Dutch Fortune Teller' (1650) is very rare in the original edition. His 'Bloody Irish Almanack' contains some important particulars respecting the Irish rebellion, and he is the author of 'Tractatus Paschalis, or a Discourse concerning the Holy Feast of Easter' (1664). Upon the Restoration we find him petitioning for leave to continue the publication of his almanack, which seems to imply that he had lost his post as licenser. He died on 8 April 1667, after three years' indisposition from dysentery, leaving, says Lilly, the character of 'a very honest man, who abhorred any deceit in the art he practised.' This favourable judgment is confirmed by the internal evidence of his extensive correspondence preserved in the Ashmolean collection. Ashmole bought his books and papers for 140*l.*, and bestowed a gravestone and epitaph upon him, but where he does not say.

'The History of Dreams,' which was published under Booker's name after his death, is probably spurious.

[Lilly's History of his Life and Times; Life of Elias Ashmole; Black's Catalogue of the Ashmolean MSS.] R. G.

BOOKER, LUKE, LL.D. (1762–1835), divine and poet, was born at Nottingham on 20 Oct. 1762. His father, a schoolmaster, had four wives and thirteen children; to four sons he gave the names of the evangelists. Probably Booker was educated at home; W. T. (see below) says 'he never was at college.' He was ordained in 1785, without a title, and became lecturer at the collegiate church, Wolverhampton, and soon afterwards incumbent of St. Edmund's chapel of ease, Dudley. In 1806 he was presented by his brother-in-law, Richard Blakemore, to the rectory of Tedstone-de-la-Mere, Herefordshire. In 1812, on the death of the Rev. Dr. Cartwright, he became, in addition, vicar of Dudley, on the presentation of the third viscount. He was in great request as a preacher of charity sermons, of which he is said to have delivered 173, and to have collected in this way nearly 9,000*l.* He was not equally successful, though little less industrious, as a poet. Better remembered than any production of his own muse is a clever satirical poem, professing to be by W. T. of Wantage, printed in 'The Procession and the Bells; or the Rival Poets' (London, 1817, 12mo; reprinted, Dudley, 1833, 12mo), in which his person and manner, 'just like a moving steeple,' are delineated with irreverent freedom in Hudibrastic measure. The origin of this satire was the demolition of the old historic church of St. Thomas, Dudley, in opposition to the wishes of many parishioners. On the laying of the foundation-stone of the new edifice, 25 Oct. 1816, a motley public procession excited much ridicule. Booker died on 1 Oct. 1835, at Bower Ashton, near Bristol. He was four times married. He had lost his eldest son, a youth of thirteen, in 1810. Perhaps Booker's best title to literary note is his—1. 'Description and Historical Account of Dudley Castle,' Dudley and London, 1825, 8vo (a good piece of work, superseded as to the historical part by Twamley's 'History,' 1867). His publications were very numerous. The earliest seems to have been—2. 'Poems, on subjects Sacred, Moral, and Entertaining,' Wolverhampton, 1785, 2 vols. 8vo; 2nd edition, 1788, 3 vols. 18mo. This was followed by—3. 'The Highlanders, a Poem,' Stourbridge [1787?], 4to. 4. 'Miscellaneous Poems,' Stourbridge, 1789, 8vo. 5. 'Malvern, a Descriptive and Historical Poem,' Dudley, 1798, 4to. 6. 'The Hop-Garden, a didactic Poem,' Newport [1799?], 8vo. 7. 'Poems, inscribed to Viscount Dudley, having reference to his seat at Himley,' 1802, 4to. 8. 'Calista, or a Picture of Modern Life, a Poem,' 1803, 4to. 9. 'Tobias, a Poem,' 3 parts, 1805, 8vo. 10. 'Euthanasia, or the State of Man after Death,' 1822, 12mo.

11. 'Tributes to the Dead, more than 200 Epitaphs, many of them original,' 1830, 12mo. 12. 'The Springs of Plynlimmon, a Poem.' Wolverhampton, 1834, 12mo. The 'Gentleman's Magazine' mentions, without date: 13. 'The Mitre Oak,' and 14. 'Mandane, a Drama.' He published numerous single sermons and addresses. He wrote a 'Moral Review of the Conduct and Case of Mary Ashford, violated and murdered by Abraham Thornton,' Dudley, 1818, 8vo. (This poor girl was murdered, at the age of twenty, on 27 May 1817; Booker wrote her epitaph, partly in verse signed L. B., in Sutton churchyard.) He is sometimes quoted as the author of another piece suggested by the occurrence, 'The Mysterious Murder, or What's o'clock: a Melodrama in 3 acts; by G. L.,' Birmingham [1817?], 12mo. This was by George Ludlam, prompter at the Theatre Royal, Birmingham. Booker's pamphlet was much discussed, inasmuch as he assumed the guilt of the acquitted man. He also wrote: 'Suggestions for a candid Revisal of the Book of Common Prayer,' 'A Plain Form of Christian Worship for use of Workhouses and Infirmaries,' 'Select Psalms and Hymns for use of Churches,' and 'Illustrations of the Liturgy.'

A. G.

BOOLDE, WILLIAM (*fl.* 1455), topographer and historian, is said by Tanner (on the authority of a manuscript at Corpus Christi College, Cambridge) to have entered the monastery of Christ Church, Canterbury, on Lady Day, 1443, and to have been elected 'notarius' of the same monastery in 1455. The works ascribed to him by Tanner are 'Catalogus monasteriorum et castellorum in singulis Angliæ comitatibus, uti etiam in Scotia,' and 'Chronicon breve Regum Angliæ ab Arturo ad Henricum VI.'

[Tanner's Bibl. Brit. 112.] H. B.

BOOLE, GEORGE (1815–1864), mathematician and logician, was born on 2 Nov. 1815. His father was a small tradesman in Lincoln, and besides his own direct help—which must have been of some value, for he was an ingenious man with a decided turn for mechanics and elementary mathematics—was only able to give his son such instruction as a national school in Lincoln, and subsequently a small commercial school, afforded. From the age of sixteen Boole was himself employed in teaching, first at a school in Lincoln and then at one in the neighbouring village of Waddington. He was only in his twentieth year when he opened a school on his own account. During these earlier years every moment of spare time was devoted to his private study, and he thus acquired an extensive knowledge not only of Greek and Latin, but also of the modern languages, such as French, German, and Italian. His devotion to mathematics was of somewhat later growth than is usual in cases of such remarkable subsequent eminence.

In the year 1849 he was appointed to the mathematical chair in the newly formed Queen's College at Cork, where the rest of his life was spent in the active prosecution of his professorial duties. He afterwards held the office of public examiner for degrees in the Queen's University, with great success. The principal recognitions of his eminence by other public bodies during the next few years were the bestowal of a Royal Society medal in 1844, of the Keith medal by the Royal Society of Edinburgh in 1857, and the degrees of LL.D. and D.C.L. by the universities of Dublin and Oxford respectively. In 1855 he married Miss Everest, daughter of the Rev. T. R. Everest, a niece of the distinguished Indian surveyor, Colonel Everest, with whom he lived in perfect domestic happiness, and by whom he had a family of five daughters.

His constitution, which had never been very strong, was probably somewhat weakened by his strenuous studies. His death was rather sudden, the result of a feverish cold and congestion of the lungs following on exposure to the rain when going to the college. He died on 8 Dec. 1864. By the unanimous testimony of those who knew him he was a man of much sweetness and reverence of temper, of wide culture and sympathy, and of remarkable modesty.

His principal productions were in the province of pure mathematics. Besides two text-books, of very high merit and including much original research, on 'Differential Equations' and on 'Finite Differences,' he published a number of papers in various mathematical and other journals. Of these the most remarkable are his 'Researches on the Theory of Analytical Transformations,' contributed to the 'Cambridge Mathematical Journal' in 1841, the 'General Method in Analysis' (1844), 'The Comparison of Transcendents' (1857); also several papers on 'Differential Equations' (1862, 1864), these being published in the 'Philosophical Transactions of the Royal Society.' He also con-

tributed several papers on 'Probability' to the 'Philosophical Magazine' and to the 'Philosophical Transactions.'

It is, however, to his 'Laws of Thought' (1854), the leading principles of which had been published in the form of a pamphlet in 1847, under the title of 'The Mathematical Analysis of Logic,' that his most durable fame will attach. It is a work of astonishing originality and power, and one which has only recently come to be properly appreciated and to exercise its full influence on the course of logical speculation. Here Boole built almost entirely on his own foundations, for no previous attempts in this direction seem to have been known to him, nor indeed were there any in existence, with the exception of some remarkable but forgotten speculations of Lambert, and a few pregnant hints by Leibnitz and others. Boole's work is not so much an attempt (as used to be commonly said) to 'reduce logic to mathematics,' as the employment of symbolic language and notation in a wide generalisation of purely logical processes. His fundamental process is really that of continued dichotomy, or subdivision, in respect of all the class terms which enter into the system of propositions in question. This process in itself is essentially the same as that which Jevons has so largely employed in his various logical treatises, but in Boole's system it is exhibited in a highly abstract and mathematical form, and called Development. This process in its *à priori* form furnishes us with a complete set of possibilities, which, however, the conditions involved in the statement of the assigned propositions necessary reduce to a more limited number of actualities: Boole's system being essentially one for displaying the solution of the problem in the form of a complete enumeration of these actualities. As subsidiary to this, he has given a definite solution of the problem of logical elimination, viz. the statement of the relation of any one term to such a selection of the remaining terms as we may happen to seek. By these devices problems of a degree of complexity such as no previous logician had ever thought of approaching admit of solution. Theoretically indeed he has given a complete answer to the most general logical demand:—Given any number of propositions, involving any number of terms, find a full logical definition of any function of any of these terms, in respect of any selection of the remaining terms. These remarks apply to the first part of the 'Laws of Thought;' the second part deals with the application of these logical principles to the theory of probability.

Later speculators have made a few modifications, some of these being of real importance, in Boole's main theorems; but their principal work has been to introduce a number of practical simplifications into his methods, for his actual procedure was too cumbrous to be employed in any but comparatively simple examples. Amongst these writers may be mentioned: in England, Jevons, who was certainly the first to popularise the new conceptions of symbolic logic, and W. Maccoll; in America, C. H. Pierce, E. H. Mitchell, and Miss Ladd; and in Germany, H. Grassmann and Professor Schröder.

[Personal information from Mrs. Boole; obituary notice in Proc. of Royal Society.]

J. V.

BOONE, JAMES SHERGOLD (1799–1859), miscellaneous writer, was born on 30 June 1799. In 1812 he was sent to Charterhouse, where he distinguished himself, winning composition prizes in 1814 and 1816 (see *Charterhouse*, 1816). In 1816 he became a student of Christ Church, Oxford. In 1817 he obtained a Craven scholarship, won the chancellor's prize for Latin verse on 'The Foundation of the Persian Empire,' and the Newdigate for English verse (*The Christ Church Newdigate Prize Poems*, 1810–21 (1823), pp. 23–26). Whilst an undergraduate he wrote 'The Oxford Spy in Verse,' the first four 'dialogues' of which appeared in 1818, the fifth and last in 1819. This anonymous satire on Oxford University life created a great sensation at the time of its publication. In 1820 he received the chancellor's prize for the Latin essay, and contenting himself with an ordinary degree took his B.A. 24 May 1820. Soon after he left Oxford he was offered a seat in the House of Commons by an owner of a pocket borough who was struck with his great abilities. Boone declined this offer, and occupied his time in lecturing in London on the union and mutual relation of art and science. In June 1822 the first number of 'The Council of Ten' was published. Of this monthly periodical he was the editor and almost the sole contributor. Its life, however, was a short one, and it expired with its twelfth number. Boone took his degree of M.A. 4 March 1823, and about this time published 'Men and Things in 1823: a Poem in three Epistles with Notes,' in which he showed his great admiration for Canning. For some years he was a master at the Charterhouse; but having taken orders he accepted in June 1832 the appointment of incumbent of St. John's Church, Paddington. Here he remained until his death on 26 March 1859. A brass was erected to his memory in the

chancel of St. John's. He was a successful preacher. In 1859 he was appointed 'select preacher' at Oxford, but was prevented by his illness from ever fulfilling the duties of that office. At one time he was editor of the 'British Critic and Theological Review.' He was twice married. There were no children by either marriage.

He was the author of the following works: 1. 'An Essay on the Study of Modern History,' 1821, 8vo. 2. 'National Education: a Sermon,' &c., 1833, 8vo. 3. 'The Educational Economy of England.' Part i. on the External Economy of Education; or the Means of providing Instruction for the People, 1838, 8vo. 4. 'The Need of Christianity to Cities: a Sermon,' &c., 1844, 8vo. 5. 'One Manifold, or a System; Introductory Argument in a Letter addressed to Raikes Currie, Esq., M.P.,' 1848, 8vo. 6. 'Sermons on Various Subjects and Occasions, with a Brief Appendix on the Modern Philosophy of Unbelief,' 1853, 8vo. 7. 'Two Sermons on the Prospect of a General War,' 1854, 8vo. 8. 'The Position and Functions of Bishops in our Colonies; a Sermon,' &c., 1856, 8vo. 9. 'Sermons chiefly on the Theory of Belief,' 1860, 8vo.

[Mozley's Reminiscences (1882), ii. 200–4; Notes and Queries, 3rd ser. iii. 510, iv. 35, 98, 138, 153, 299; Brit. Mus. Cat.] G. F. R. B.

BOORDE or BORDE, ANDREW (1490?–1549), traveller and physician, 'Andreas Perforatus' as he jocosely calls himself, was born at 'Boords Hill in Holms dayle,' near Cuckfield, Sussex, some time before or about 1490, as by 1521 he was appointed suffragan bishop of Chichester, and must have therefore then been thirty years old. He was brought up at Oxford, and was received under age—and consequently against their rules—into the strictest order of monks, the Carthusians, evidently at the London Charterhouse. Andrew Boorde is therefore not to be identified with his namesake (the son of John Borde), the bondman or villein regardant—attached to the soil, and sellable with it—of the manor of Ditchling, Sussex, whom Lord Abergavenny manumitted on 27 June 1510 (Madox, *Form. Ang.* 1702, p. 420), for, if not a free man by birth, his monkhood had made him one. About 1517 he was falsely accused of being 'conversant with women;' and in or about 1521 was 'dyspensyd with the relygyon by the byshopp of Romes bulles, to be suffrygan off Chycester; the whych I neuer dyd execute the auctore' or authority. About 1528, after some twenty years of vegetarianism and fasting with the Carthusians, Boorde writes to the prior of the Hinton Charterhouse in Somerset, 'I am nott able to byd the rugorosite off your relygyon;' and he accordingly gets a dispensation from this religious or monkish vow from Prior Batmanson [q. v.], and goes over sea to school to study medicine. There he 'travelled for to have the notycyon and practes of Physycke in diuers regyons and countres, and returned into Englande' in 1530. He stayed with Sir Robert Drewry, attended and cured the Duke of Norfolk, and was by him 'conuocated to wayte on his prepotent Mageste,' Henry VIII. Then, desiring 'to haue a trewe cognyscyon of the practis of Physycke,' he passed 'ouer the seas agayne, and dyd go to all the vnyuersities and scoles approbated and beynge within the precinct of Chrystendome.' Of these he names Orleans, Poictiers, Toulouse, and Montpelier in France, and Wittenberg in Germany, and he quotes the practice of surgeons in Rome, and Compostella in Navarre, whither he went on pilgrimage with nine English and Scotchmen. By 29 May 1534 Boorde was back at the London Charterhouse, and took the oath of conformity (Rymer, xiv. 491–2). He was then 'keppt in thrawldom' there, and freed by Cromwell, whom he visited in Hampshire. Cromwell appears to have sent him abroad (on his third tour) to report on the state of feeling about Henry VIII; and to Cromwell he writes from Bordeaux on 20 June 1535: 'Sens my departyng from yow, I have perlustratyd Normandy, Frawnce, Gascony, and Byon [Bayonne]: the regyons also of Castyle, Byscay, Spayne, paarte of Portyngale, and returnyd thorow Arogon, Nauerne, and now am att Burdyose. . . and few frendys Ynglond hath in theys partes of Europe, as Jesus your louer knowth.' The pope, emperor, and all other christian kings (save the French) were, with their people, set against Henry. Boorde then fell ill; but he sent to Cromwell, doubtless from Spain, and with directions for their culture, 'the seedes off reuberbe, the whiche come owtt off Barbary. In thes partes ytt ys had for a grett tresure.' This was nearly two hundred years before the plant was cultivated in England (1742). On his recovery, Boorde returned to England, and went to Scotland, whence he wrote to Cromwell on 1 April 1536: 'I am now in Skotland, in a lytle vnyuersyte or study named Glasco, wher I study and practyce physyk . . . for the sustentacyon off my lyuyng.' He disliked the Scotch: 'trust yow no Skott, for they wyll yowse flatteryng wordes; and all ys falshode.' 'Also, it is naturelly geuen, or els it is of a deuellyshe dysposicion of a Scottysh man, not to loue nor fauour an Englishe man.' After a year's stay in Scot-

land, Boorde came back to London, attending a patient in Yorkshire on his road, and saw Cromwell. In London two horses were stolen from him; and in 1537—13 Aug. from Cambridge—he appealed to Cromwell to get them back from their buyers, and also recover 53*l.* owed to him by Londoners, who called him '*appostata*, and all-to-nowght' (good-for-nothing), and otherwise slandered him. Late in 1537, or after the dissolution of the religious houses in 1538, Boorde must have started for his longest tour abroad, and gone through Calais, Gravelines, Antwerp, Cologne, Coblentz, Worms, Venice, thence by ship to Rhodes and Joppa, and on to Jerusalem to see the Holy Sepulchre. He probably came back through Naples and Rome, crossed the Alps, and settled down for a time at his favourite university, Montpelier, 'the most nobilis vniuersite of the world for phisicions and surgions,' 'the hed vniuersite in al Europe for the practes of physycke.' There, by 1542, he had written his 'Fyrst Boke of the Introduction of Knowledge' (publ. 1547 ?)—the first printed 'Handbook of Europe'—his 'Dyetary' (publ. 1542 ?), his 'Breuyary of Health' (publ. 1547), and his lost 'Boke of Berdes' (beards). In his 'Dyetary' he embodied a little anonymous treatise ('The boke for to Lerne a man to be wyse, in buylding of his howse for the helth of body to holde quyetnes for the helth of his soule and body. The boke for a good husbande to lerne;' Robert Wyer [London, 1540 ?]), which he had either written previously himself, or which he then stole. His 'Boke of Berdes' (condemning them) we know only from the imperfect copy of an answer to it by one Barnes—'Barnes in the defence of the Berde' or 'The treatise answeryng the boke of Berdes,' London, 1543 ?, in which he accuses Boorde of getting drunk at a Dutchman's house, and vomiting over his long beard, which stank so next morning that he had to shave it off.

Boorde was no doubt in England when his 'Dyetary' was published in 1542, though its dedication to the Duke of Norfolk is dated from Montpelier, 5 May, for Barnes says that on Boorde's return, evidently to London, where many patients resorted to him, he 'had set forth iij bokes to be prynted in Fleet Strete.' He probably settled at Winchester, and in 1545 published a 'Pronosticacion,' as he most likely did in earlier and later years. In 1547 he may have been for a time in London—a 'Doctor Borde' was then the last tenant of the house appropriated to the master of the hospital of St. Giles's-in-the-Fields—to see to the publication of his books, which had been five years in the press: the 'Breuyary' (a medical treatise), its companion 'Astronamye' ('I dyd wrett and make this boke in iiii dayes, and wretten with one old pen with out mendyng'), and his 'Introduction of Knowledge,' besides a second edition of his 'Dyetary.' Soon after this, 'within this eight yere,' says the Bishop of Winchester, Dr. John Poynet, in 1556, Boorde was proved before the justices to have kept three loose women 'in his chamber at Winchester,' 'and the harlots openly in the stretes and great churche of Winchester [were] punished.' Whether for this, or some other and later offence, Boorde was put into the Fleet prison in London, and there, on 9 April 1549, made his will, leaving two houses in Lynn (which Recorder Conysby had given him), tenements in Pevensey, Sussex (which he got on the death of his brother), and houses and chattels in and about Winchester. He died soon after, probably near sixty years old, and his will was proved on 25 April 1549.

Besides the books above named, Boorde's 'Itinerary of England,' or 'Peregrination of Doctor Boorde,' was printed by Hearne in 1735 (*Ab. Pet. de Hen. III et Ric. II*, ii. 764–804); his 'Itinerary of Europe' (*Introduction*, p. 145), and his 'Boke of Sermons' (*Extrauagantes*, fol. vi.) are not known to exist; two bits of 'Almanacs' or 'Prognostications' in the British Museum for 1537 and 1540 (?) may or may not be his. The books &c. assigned to him without any evidence are: 'The Merie Tales of the Mad Men of Gotam,' 'Scogins Jests' ('an idle thing unjustly fathered upon Dr. Boorde,' says Anthony à Wood), 'The Mylner of Abynton,' and a jocose poem on friars, 'Nos Vagabunduli.' He is also absurdly supposed to have been the original Merryandrew. The 'Promptuarium Physices' and 'De iudicijs urinarium,' which Bale assigns to Boorde, may be his 'Breuyary,' and its second part, 'The Extrauagantes.' Besides the first Handbook of Europe, we owe to Boorde the first printed specimen of the Gypsy language, given in his description of Egypt in his 'Introduction.' His anticipation of Shakspere in the close of the passage following is well known: 'Englishmen be bold, strong, and mighty; the women be ful of bewty, and they be decked gaily. They fare sumptiously; God is serued in their churches deuoutly; but treson and deceyt among them is vsed craftyly, the more pitie; for yf they were true wythin themselfs, thei nede not to fere although al nacions were set against them' (*Introd.* ch. i. p. 119). For his treatment of another of Shakspere's topics, Englishmen's fantasticality in dress, Boorde made himself famous by his woodcut of an Englishman standing

naked, with a pair of shears in one hand and a piece of cloth over the other arm, above the lines—

I am an English man, and naked I stand here,
Musyng in my mynd what rayment I shal were;
For now I wyll were this, and now I wyl were that;
Now I wyl were I cannot tel what.

In spite of Boorde's sad slip at the end of his life, no one can read his racy writings without admiring and liking the cheery, frank, bright, helpful, and sensible fellow who penned them.

[Dr. F. J. Furnivall's edition of Boorde's Introduction and Dyetary for the Early English Text Society (extra series), 1870.] F. J. F.

BOOT, ARNOLD. [See BOATE.]

BOOTH, ABRAHAM (1734–1806), dissenting minister and author, was born at Blackwell, near Alfreton, Derbyshire, on 20 May 1734. While an infant he was removed to Annesley Woodhouse, Nottinghamshire, where his father had taken a small farm under the Duke of Portland, and as the eldest of a large family he assisted them until his sixteenth year, up to which time he was never more than six months at school; but on then leaving farm labour for the stocking-frame he was able to support himself and get some further elementary education. On reaching his twenty-fourth year he married Elizabeth Bowmar, a farmer's daughter, and soon afterwards opened a school at Sutton-in-Ashfield, Nottinghamshire.

Early in life the preaching of some baptists drew him over to a sense of religion, and in 1755 he was baptised by immersion, and commenced to preach in the midland counties. In 1760, when the baptists were first collected into churches, Booth became superintendent of the Kirby-Woodhouse congregation, but declined to be their pastor. Up to this time he had been a strenuous advocate of the Arminian doctrines, and, when twenty years old, had written a poem on 'Absolute Predestination,' but he now changed his views for the Calvinistic doctrines held by the Particular baptists, and seceded accordingly. Soon after he began to preach on Sundays as one of the latter sect at Sutton-in-Ashfield, Chesterfield, and other midland towns and villages, keeping school through the weekdays as his only source of income. At this period he composed his work 'The Reign of Grace,' 1768. Henry Venn, author of the 'Complete Duty of Man,' in consequence of reading Booth's work in manuscript, journeyed into Nottinghamshire to see him, and a lifelong friendship was the result. The preface to the first edition and also to the second edition, 1771, was by Venn. Of this work there have been nine English, one Edinburgh, and three American editions. Soon after its appearance the Particular baptist church of Little Prescot Street, Goodman's Fields, invited Booth to be their pastor. He accepted the call, and was ordained on 16 Feb. 1769. In 1770 he published 'The Death of Legal Hope, the Life of Evangelical Obedience,' London, 8vo, as a supplement to 'The Reign of Grace,' directed against the extremes of Arminianism and Antinomianism. Other editions followed in 1778 and 1794. These two works were translated and printed abroad. He published a new edition of Dr. Abbadie's work on 'The Deity of Jesus Christ,' 1777. In 1778 he published 'An Apology for the Baptists,' &c., a work written to oppose the principle of mixed communion. In 1784 he published 'Pædobaptism Examined,' an answer to the posthumous work of the celebrated Matthew Henry. This book grew to two thick volumes, 2nd edition, 1787; and was followed by 'A Defence of Pædobaptism Examined,' &c., 1792. In 1796 he published 'Glad Tidings to Perishing Sinners,' of which four other editions appeared successively, and in 1805 'Pastoral Cautions.'

Other works were: 'Essay on the Kingdom of Christ,' 1788 (of this two later English editions and one Boston (U.S.) have appeared; it was also translated into Welsh, and published at Aberystwith, 1810). 'Commerce in the Human Species,' published by the Abolition Society, 1792. 'The Amen to Social Prayer,' 1801, 2nd edition, 1813. 'Divine Justice essential to the Divine Character,' 1803. 'Elegy on Mr. James Hervey;' and numerous funeral sermons and addresses published separately. Booth also edited several editions of Wilson's 'Manual on Baptism,' and several articles of his are to be found in the 'Baptist Magazine,' 1809, 1810. Shortly before his death, when precluded from preaching, he wrote two essays, and two days before his death one on 'The Origin of Moral Evil,' which were afterwards published as 'Posthumous Essays,' 1808.

He died on 27 Jan. 1806, in the seventy-second year of his age, having been a minister fifty years. A neat marble tablet was erected to his memory in the Prescot Street chapel, of which he had been pastor thirty-five years. He was a man of strong muscular frame, and of sound constitution. His private life was distinguished by unsullied purity and kindliness. A lady member of his church once

left him a handsome legacy, but on finding there were poor relations of hers existing, he quietly went to the Bank of England and transferred the whole amount to them. His wife died four years before him, and he left several children.

This author's works, being considered by the baptists as a complete and unanswerable vindication of their doctrines, were collected and published in three volumes, London, 1813, 8vo, as 'The Works of Abraham Booth,' &c., but without comprising his writings on pædobaptism. In 1829 his 'Pædobaptism Examined,' &c., was republished in four volumes, 8vo, by the committee of the Particular Baptist Fund. Booth's portrait, engraved by Mackenzie, appears in William Jones's 'Essay on Booth,' Liverpool, 1808, and one engraved by Ridley and Hall is in the 'Baptist Ann. Reg.' 1800.

[Booth's Works; Jones's Essay, 1800; Dr. Rippon's Short Memoir (which is full of errors); allusions in the Works of R. Elliott, Wm. Miller, Dr. Williams of Oswestry, Dr. Gibbons, Rylands, and Bickersteth; Bapt. Mag. 1809–10; Brit. Mus. Catalogue.] J. W.-G.

BOOTH, BARTON (1681–1733), actor, was the youngest son of John Booth, a Lancashire squire, nearly related to the Earl of Warrington. Three years after his birth his father, whose estate was impaired, came to London and settled in Westminster. At nine years of age Booth was sent to Westminster School, then under the management of Dr. Busby. A taste for poetry soon developed itself. For Horace, according to a statement of Maittaire, who was at that time an usher in the school, he had 'a particular good taste,' and he delighted much 'in repeating parts of plays and poems, especially from Shakespear and Milton.' 'In his latter days,' continues Maittaire, as quoted by Theophilus Cibber in his 'Life of Booth' (p. 2), 'I have heard him repeat many passages from the "Paradise Lost" and "Samson Agonistes," &c., with such feeling, force, and natural harmony as might have waked the lethargic and made even the giddy attentive.' A performance of Pamphilus in a customary representation of the 'Andria' of Terence attracted much attention to Booth, secured him the consideration of Dr. Busby and his successor Dr. Knipe, and filled him with stage fancies. When, accordingly, it was proposed to remove him to Trinity College, Cambridge, preparatory to his entering the church, he took action on his own behalf with a view to adopting the stage as a profession. An application to Betterton was unsuccessful, the great actor not caring, it is supposed, to encourage a youth of family to take a step distasteful to his friends. Booth accordingly proceeded in June 1698 to Dublin and offered his services to Ashbury, the lessee of Smock Alley Theatre. An untrustworthy account of Booth, which has been accepted by Galt in his 'Lives of Actors,' represents him as having run away from Trinity College, Cambridge, joined a travelling company, and been the hero of some comic adventures. Ashbury gave the fugitive an engagement, or at least allowed him to appear. This he did in the character of Oroonoko, with sufficient success to obtain from the manager a much-needed douceur of five guineas. Records concerning the Irish stage are more untrustworthy even than those of the English. To this it must be attributed that Hitchcock's 'Historical View of the Irish Stage' mentions Booth, who, however, may possibly, though for many reasons it is improbable, have been another actor of the name, as playing about 1695—when he could only have been fourteen years of age—Colonel Bruce in 'The Comical Revenge, or Love in a Tub,' Freeman in 'She would if she could,' and Medley in 'The Man of Mode,' all by Etherege. After two seasons in Dublin Booth determined to try his fortune in London. He quitted Ireland accordingly, and, furnished with an introduction from Lord Fitzharding, lord of the bedchamber to Prince George of Denmark, made a second application to Betterton. Bowman the actor was also instrumental in bringing him to the notice of Betterton. This time Booth was successful. Before his first appearance at Lincoln's Inn Fields, which took place in 1700 as Maximus in 'Valentinian,' he is supposed to have played in a country company. So complete and immediate was the triumph of Booth, that Rowe, who in the year 1700 brought out his 'Ambitious Stepmother,' confided to him the part of Artaban. At Lincoln's Inn Fields Booth remained playing secondary characters until 1704, in which year he married Frances Barkham, a daughter of Sir William Barkham, bart., of Norfolk. This lady died about 1710 without issue. A free liver at first, Booth took warning by the contempt and distress in which drunkenness had plunged Powell, forswore all excess in drinking, and had resolution enough to keep his vow. On 17 April 1705 Booth accompanied Betterton to the new theatre erected by Sir John Vanbrugh in the Haymarket; on 15 Jan. 1708 he appeared with the associated companies at Drury Lane, playing Ghost to the Hamlet of Wilks. In the year 1713 the star of Booth rose in the ascendant. Although kept in the background by Wilks, who per-

petually subordinated him to Mills, an actor in every way his inferior, Booth had acquired a reputation as a tragedian. Downes, in his 'Roscius Anglicanus,' first published in 1708, speaks of him quaintly as 'a gentleman of liberal education, of form venust; of mellifluent pronunciation, having proper gesticulations, which are graceful attendants of true elocution; of his time a most complete tragedian.' It is difficult to realise in what characters, beyond the Ghost in 'Hamlet,' in which he was supposed to be unrivalled, his tragic reputation had at that time been made. Hippolitus in the 'Phædra and Hippolitus' of Smith is almost the only part of primary importance which had been trusted to him. Not till some years later (17 March 1712) did his performance of Pyrrhus in 'The Distressed Mother,' Philips's contemptible rendering of Racine's 'Phèdre,' win him the highest honours. A year later (14 April 1713) his impersonation of Cato in Addison's tragedy brought him to the front of his profession. With the performance of Cato, Booth's reputation reached a climax. No subsequent performance did anything to raise it, though such characters as Jaffier, Melantius (in the 'Maid's Tragedy'), Bajazet, Timon of Athens, and Lear now came to him. Something like a reaction, indeed, very easy to understand in the case of a success so rapid, set in, and has since been maintained. No player of reputation equal to Booth has obtained from subsequent times more grudging recognition. Cato was the means of bringing Booth fortune as well as honour. He had always received a large amount of aristocratic patronage, and when acting at Windsor found always, as he stated to Chetwood (*General History of the Stage*, pp. 92–3), a carriage and six horses provided by some nobleman to 'whip' him back to London. To the favour with which Booth was regarded by Lord Bolingbroke it is attributed that Colley Cibber, Doggett, and Wilks, the managers of Drury Lane, received the command of Queen Anne to admit him into the management. Of the revolt which this exercise of royal authority occasioned, Cibber, in his 'Apology,' gives a long description. The only title on which Wilks, Doggett, and Cibber held their license was their professional superiority. Cibber, writing long after the event, admits that Booth had likewise 'a manifest merit.' The years which followed Booth's promotion to the post of manager were undistinguished by many events outside the performance of the principal characters in the drama. An intrigue with Susan Mountfort, the daughter of Mrs. Mountfort, brought upon Booth accusations of mercenariness, from which his biographers have triumphantly acquitted him. In 1719 he married Hester Santlow, a dancer of more beauty than reputation, who was said to have lived under the protection of the Duke of Marlborough, and subsequently of Secretary Craggs. Mrs. Santlow had a considerable fortune, and to this was attributed the act of Booth, who, as Dennis states in his 'Letter on the Character and Conduct of Sir John Edgar,' knew of her irregular life. A perusal of Booth's poems to his mistress shows, however, that he was genuinely enamoured. Contrary to expectation, the marriage proved signally happy. Booth in his will speaks in handsome terms of his wife, to whom he left his whole estate, consisting of her own money, diminished by about one-third; and she, forty-five years after his death, in her ninety-third year, erected a monument to his memory in Westminster Abbey. As an actress Mrs. Booth was pleasing rather than great. Davies, in his 'Dramatic Miscellanies,' says of her Ophelia that 'figure, voice, and deportment in this part, raised in the minds of the spectators an amiable picture of an innocent, unhappy maid, but she went no farther' (iii. 126–7). Theophilus Cibber speaks of her with enthusiasm, so far as regards her moral qualities: 'she was a beautiful woman, lovely in her countenance, delicate in her form, a pleasing actress, and a most admirable dancer; generally allowed, in the last-mentioned part of her profession, to have been superior to all who had been seen before her, and perhaps she has not been since excelled. But, to do her justice, she was more than all this; she was an excellent good wife;—which he has frequently, in my hearing, talked of in such a manner as nothing but a sincere, heartfelt gratitude could express; and I was often an eye-witness (our families being intimate) of their conjugal felicity' (*Life of Barton Booth*, p. 33). Booth continued his theatrical duties till 1727, when he was seized with a fever which lasted six-and-forty days. He returned to the stage and appeared on 19 Dec. as Julio in 'The Double Falsehood' of Theobald. He played also in the winter and spring in 'Cato,' 'The Double Falsehood,' and 'Henry VIII.' A relapse ensued, his illness settled into jaundice, and he appeared no more upon the stage. In spite of the abstinence from drink, which itself was only comparative, he seems to have been a *gourmand*. He went to Belgium and afterwards lived at Hampstead in the vain pursuit of health, and died on Tuesday, 10 May 1733. In accordance with his own wishes, he was buried at Cowley near Uxbridge.

Highly favourable verdicts have been passed upon Booth by competent judges. Davies preferred his Brutus to that of Quin, but judged his Lear inferior on the whole to that of Garrick, though worthy of a comparison with it. Booth's Henry VIII, in which he succeeded Betterton, Davies greatly admired, as, he states, did Macklin and Quin. Theophilus Cibber says he had all 'the advantages that art or nature could bestow to make an admirable actor,' speaks in warm praise of his voice and perfect articulation, and dwells with enthusiasm upon his deportment, his dignity, and majesty. He praises especially his Hotspur and Lothario. Aaron Hill, in a letter addressed to Victor, one of Booth's biographers, speaks warmly of Booth's 'gestures,' of his 'peculiar grace,' his 'elegant negligence,' and his 'talent of discovering the passions where they lay hid in some celebrated parts.' Colley Cibber sneers at Booth, but his motives in so doing are transparently interested. Booth is the author of 'The Death of Dido, a Masque,' London, 8vo, 1716, said in the 'Biographia Britannica' to have been played in the same year at Drury Lane. He also wrote some poems and a Latin epitaph on Smith the actor. The poems have a certain conventional sprightliness and fancy, but are in no sense remarkable.

Victor), by consent of his wife, 1733.] J. K.

BOOTH, BENJAMIN (*fl.* 1789), writer on bookkeeping, was an American merchant, and wrote 'A Complete System of Bookkeeping . . . by an Improved Mode of Double Entry, . . . [with] . . . A New Method of stating Factorage Accounts, adapted particularly to the Trade of the British Colonies,' 4to, London, 1789. On the title-page Booth describes himself as a merchant of thirty years' standing, formerly of New York, and now of London. He became clerk in a store in New York about 1759; and introducing his system of bookkeeping when he had risen to be principal clerk, he used it in his own counting-house in the same city during the many years he traded there as a haberdasher. The war of independence and the peace having cut Booth off 'from pursuing the line of business to which' he 'had long been habituated,' he used his leisure in England to make known his system, which he held superior to those in vogue. Booth had humour and reading. In his sample invoices he has large imaginary dealings with Lemuel Gulliver, Peter Pindar, and Tristram Shandy. M'Culloch gives the title of Booth's book in 'Literature of Political Economy,' p. 139, with the erroneous date 1799.

[Booth's Complete System, pp. 5, 12, 24 (*n.*), 79, 185 et seq.] J. H.

BOOTH, DAVID (1766–1846), author of an 'Analytical Dictionary of the English Language,' was born at Kennetles, Forfarshire, on 9 Feb. 1766. He was almost entirely self-taught, the whole amount paid by his father for his instruction being eighteenpence for one quarter at the parish school. In early life he was engaged in business, and for some years was occupant of a brewery at Woodside, near Newburgh, Fifeshire. Although the undertaking was not unsuccessful, his interest in intellectual matters induced him to retire from it to become schoolmaster at Newburgh. Shortly before 1820 he removed to London, where, besides being engaged in general literature, he for several years superintended for the press the publications of the Society for the Diffusion of Useful Knowledge. In 1818 he published 'Tables of Simple Interest on a new Plan of Arrangement,' and in 1821 'The Tradesman, Merchant, and Accountant's Assistant, being Tables for Business in general on a new Plan of Arrangement.' His practical knowledge of brewing he also turned to account by writing for the Useful Knowledge Society 'The Art of Brewing,' 1829, and 'The Art of Wine-making in all its Branches, to which is added an Appendix concerning Cider and Perry,' 1834. The latter volume contains a description of the brewer's saccharometer, of which he was the inventor. In 1806 he had published an 'Introduction to an Analytical Dictionary of the English Language.' Circumstances did not permit him for some years to proceed further with the work, but in 1831 he brought out 'Principles of English Composition,' the second, third, and fourth chapters of which were reprinted from the 'Introduction to the Analytical Dictionary;' and in 1837 he published 'Principles of English Grammar.' The first volume of the dictionary, the only one published, appeared in 1835. Its special characteristics he stated to be that 'the words are explained in the order of their affinity, independent of alphabetical arrangement; and the signification of each is traced from its etymology, the present meaning being accounted for when it

differs from its former acceptation, the whole exhibiting in one connected narrative the origin, history, and modern usages of the existing vocabulary of the English tongue.' An idea of Booth's method of arrangement may be gathered from the following list of the first twelve words in their order of succession: Microcosm, man, wife, woman, male, female, masculine, feminine, human, baron, virility, virtue. While the work displays much ingenuity, and contains some curious information, it is marred in some respects by imperfect knowledge and hasty generalisation. The other works of Booth include 'Observations on the English Jury Laws in Criminal Cases, with respect to the distinction between unanimous verdicts, and verdicts by a majority,' 1833, strongly condemnatory of the 'unanimous verdict' system; 'A Letter to Rev. T. R. Malthus, being an answer to his criticism of Mr. Godwin's work on population;' and 'Eura and Zephyra, a classical Tale, with poetical Pieces.' He died at Balgonie Mills, Fifeshire, on 5 Dec. 1845. He received a grant of 50*l.* from the Royal Bounty Fund, and, it is said, was also relieved by the Literary Fund Society. Booth is thus characterised in 'Memoirs' of Dr. Robert Blakey: 'One of the most extraordinary personages I have met for some time. He is not, I believe, five feet high, of very dark visage, eyes very red and watery, and presenting altogether an impish and fiendish look. He was, however, very kind.'

[Gent. Mag. new series, xxvii. 322–3; Conolly's Dict. of Eminent Men of Fife, p. 70; Memoirs of Dr. Robert Blakey (1879), pp. 75–7.] T. F. H.

BOOTH, EDWARD. [See BARLOW.]

BOOTH, SIR FELIX (1775–1850), promoter of Arctic exploration, born in 1775, was third and youngest son of Philip Booth, of Mangham's Hill, Hertfordshire, of a county family sprung from the Booths of Dunham Massey, Cheshire. After receiving a liberal education, he became a city merchant, and eventually head of the prosperous firm of Booth & Co., distillers, residing in Great Portland Street, London, and Great Catworth, Huntingdonshire. He was a deputy lieutenant of Middlesex, and in 1828 was elected one of the sheriffs of London and Middlesex.

Captain Parry's third attempt to reach the Polar Sea, in 1824 and in 1827, had failed. The government had offered (58 Geo. III, cap. 20) a reward of 20,000*l.* for the discovery of a north-west passage in connection with the board of longitude, which took an active interest in geographical science during its existence up to 1828. Captain John Ross [q. v.] was anxiously endeavouring to promote a new expedition. Felix Booth, an intimate friend, would not join him, because the government reward gave it an appearance of commercial speculation, but in 1828, on the repeal of the act of parliament, under which only 5,000*l.* had been paid (viz. to Parry and his crew in 1819), the matter took another form. Although the Duke of Wellington declined Ross's offer, Booth undertook the venture 'for the credit of his country and to serve Captain Ross, thinking he was slighted in his old expedition.' Booth provided 17,000*l.* for the expenses of the expedition, to which Captain Ross had added 3,000*l.*, and the result of this munificence was an immense stride in the progress of geographical science. The grateful commander gave the name of his patron to several of his discoveries on land and sea—Gulf of Boothia, Isthmus of Boothia, Continent of Boothia Felix, Felix Harbour, Cape Felix, and Sheriff's Harbour; the district with the islands, rivers, lakes, &c., extending to 74° N. latitude along the north-eastern portion of America. The discovery most important to science was that of the magnetic pole at 96° 46′ 45″ W. longitude, and 70° 5′ 17″. Booth's connection with the successful expedition was rewarded with a baronetcy 27 March 1835, with remainder to heirs male of his elder brother.

Sir Felix Booth died very suddenly at Brighton on 25 Jan. 1850. Being unmarried he was succeeded in the baronetcy by his nephew, J. Williamson Booth, of Roydon Hall, on whose death, in 1877, his brother, Charles Booth, of Netherfield, succeeded as third baronet.

[Shillinglaw's Arctic Discovery; Ross's Narrative; Edinburgh Review, July 1835, Oct. 1853; Ann. Reg. 1833; Times, 13 May 1835; Roy. Geog. Soc. v. viii. ix.; Brighton Guardian, 1850; Acts of Parliament.] J. W.-G.

BOOTH, GEORGE (1622–1684), first LORD DELAMER OR DELAMERE, was descended from a younger branch of the Booths of Barton, Lancashire, which since 1433 had been settled at Dunham Massey, Cheshire (Pedigree in ORMEROD'S *Cheshire*, ed. Helsby, i. 534). He was the second son of William Booth by Vere, third daughter and coheiress of Sir Thomas Egerton, son of the lord chancellor of England, and was born in August 1622. His father dying in 1636, he became the ward of his grandfather, Sir George Booth of Dunham Massey, who on the outbreak of the civil war was one of

the chief supporters of the parliamentary party in Cheshire. The younger Booth therefore, as was to be expected, took an active part in the struggle on behalf of the parliament. On his grandfather's death in 1652 he succeeded to the baronetcy. In March 1654–5 he was appointed a military commissioner for Cheshire, and treasurer-at-war (*Cal. State Papers*, Dom. Ser. 1654, p. 78). He became representative of Cheshire in the Long parliament in May 1645 (list of the Long parliament in CARLYLE'S *Cromwell*), and was also returned to Cromwell's parliaments in 1654 and 1656. In 1659 he was chosen one of the committee of fourteen who were appointed by the excluded members to 'go up and try whether they could find admittance to their places' in the revised Rump parliament after the resignation of Richard Cromwell, but who 'found such a restraint put upon them that they scarce could get into the lobby' (EACHARD, *Hist. England*, 3rd ed. 740). As was therefore to be expected, he became one of the leaders of the party of Cromwellian malcontents, called 'the New Royalists,' who, with the cavaliers, concocted the 'general plot' for the restoration of Charles II. Arrangements were completed for a general rising on 5 Aug. in the various districts of the kingdom, and Booth, who, says Clarendon, 'was a person of the best fortune and interest in Cheshire, and for the memory of his grandfather of absolute power with the presbyterians' (*History* (1849), ii. 127), was constituted commander of the king's forces in Cheshire, Lancashire, and North Wales. Only in the district included in Booth's commission was the plot successful. For a considerable time Thurloe had, through treachery, been fully conversant with its various ramifications, and many suspected persons were put under arrest. Two several messengers were sent to warn Booth that the enterprise had miscarried, but both were suspected and stopped. In some other cases, where the leaders of the plot were neither warned by friends nor interfered with by the authorities, the lukewarmness of the support they obtained or the tempestuous character of the night rendered the intended rendezvous a failure. Totally ignorant of how matters had gone in other parts of the kingdom, Booth, along with the Earl of Derby, Colonel Egerton, and others, at the head of four thousand men, seized on the city of Chester, where they were shortly afterwards joined by Sir Thomas Middleton from Wales. The whole district was at once completely in their grasp. From Chester they issued a proclamation in which the name of the king was not mentioned, but which asserted that 'they had taken arms in vindication of the freedom of parliament, of the known laws, liberty and property, and of the good people of this kingdom, groaning under uncomfortable taxes.' Leaving a sufficient force to hold the town of Chester against the parliamentary general who still resolutely defended himself in the castle, Sir Thomas Middleton proceeded south into Wales, and Booth marched towards York, which it was supposed would inevitably fall into his hands. On the way thither he, however, learned that in other parts of England the whole enterprise had miscarried, and that Lambert, the general of the Rump, was on the march towards Cheshire. He therefore retraced his steps, and took up a position in a meadow near Nantwich bridge, on which he placed a guard. The two armies spent the night on the banks of the river, and in the morning Lambert, attacking with great impetuosity, drove the guard from the bridge and dispersed the royalists. After making his escape from the field of battle, Booth disguised himself in female attire, with the view of proceeding to London and thence to the continent; but his disguise having been penetrated by an innkeeper at Newport Pagnell, he was apprehended and conveyed to the Tower. The conjectures hazarded by different writers as to the manner in which the suspicions of the innkeeper were aroused are discounted by a very detailed and graphic account of the affair published at the time and entitled 'True Narrative of the manner of the Taking of Sir George Booth on Tuesday night last at Newport Pannel, being disguised in Woman's Apparel.' From this pamphlet, of which there is a copy in the British Museum, it appears that the suspicions of the innkeeper received their final confirmation from the fact that the three companions of the 'lady' purchased a razor from the barber whom they had called in to operate on themselves. The inn was surrounded while the process of shaving was going on, and Booth on being apprehended divulged who he was. The headlong flight of the forces of Booth and the ludicrous circumstances attending his capture furnished a tempting theme for contemporary ridicule. A sarcastic pamphleteer heads his broadsheet thus: 'Whether Sir George Booth's valour in the late engagement near Warrington, or his petticoats at Newport Pagnel will make him seem most like a woman in the eyes of the next generation?' and the incident is also the subject of some rather scurrilous verses entitled 'The Last Observations of Sir George

Booth,' appended to an account of 'The Dreadful and most Prodigious Tempest at Markfield in Leicestershire.'

Although the plot in behalf of Charles was thus externally a failure, it had undoubtedly no small effect in hastening the Restoration. Booth, after undergoing examination by Haslerig and Vane, was retained to be dealt with by the council of state, but afterwards was set at liberty on bail. He took his seat in the Convention parliament, and was the first of the twelve members, elected 7 May 1660, to carry to King Charles the reply of the commons to his majesty's declaration. On 13 July following the House of Commons ordered that the sum of 10,000*l.* should be conferred on him as a reward for his great services, the original sum proposed being 20,000*l.*, which was reduced by one half at his own request. On the occasion of the coronation he was, with five others, raised to the dignity of baron, his designation being Lord Delamere. Liberty was also given him to nominate six gentlemen to receive the honour of knighthood. In the same year he was appointed *custos rotulorum* of the county of Cheshire, an office which he retained till 1673, when he was succeeded in it by his son Henry. Retaining throughout life his early love of civil liberty, he latterly found himself in entire opposition to the general policy of Charles. He died at Dunham Massey 8 Aug. 1684, and was buried at Bowdon, in the vault of the family. On a brass let into the flag which covers the Dunham vault there is a eulogistic inscription to George Booth, written by one of his servants. By his first wife, Catherine Clinton, daughter and coheiress of Theophilus, earl of Lincoln, he had one daughter; and by his second wife, Elizabeth Grey, eldest daughter of Henry, earl of Stamford, he had seven sons and five daughters. Under his direction three manuscript volumes were compiled, chiefly containing genealogical documents relating to his own and the neighbouring families (Ormerod's *Cheshire*, ed. Helsby, i. xxxviii). The original volumes are still at Dunham, and important extracts from them made by Randle Holme are preserved in the British Museum (*MS. Harleian*, 2131).

T. F. H.

BOOTH, GEORGE (1675–1758), second Earl of Warrington, was the second son of Henry, earl of Warrington [q. v.], by Mary, daughter of Sir James Langham, of Cottesbrooke, and was born at Merehall, Cheshire, on 2 May 1675. On the death of his father, in 1694, he succeeded to the title, and also received the appointment of lord-lieutenant of Chester, another nobleman being nominated to discharge the duties during his minority. In 1702 he married Mary, daughter of Sir John Oldbury, a merchant in London. During the lady's lifetime he published anonymously, in 1739, 'Considerations upon the Institution of Marriage, with some thoughts concerning the force and obligation of the marriage contract, wherein is considered how far divorces may or may not be allowed. By a Gentleman. Humbly submitted to the judgment of the impartial.' It is an argument in favour of divorce on the ground of incompatibility of temper. From other sources we learn that he had been convinced of the advisability of admitting this as a sufficient reason by his own unhappy experiences. Luttrell (*Relation of State Affairs*, v. 162) states that the lady had a fortune of 40,000*l.*, and Philip Bliss, in a manuscript note in a copy of Walpole's 'Royal and Noble Authors,' now in the British Museum, adds: 'Some few years after my lady had consign'd up her whole fortune to pay my lord's debts, they quarrelled, and lived in the same house as absolute strangers to each other at bed and board.' Of the earl and his lady there is an amusing and not too flattering description in a letter by Mrs. Bradshaw, printed in 'Letters to and from Henrietta, countess of Suffolk' (1824), i. 97: 'The Earl and Countess of Warrington,' she writes, 'met us, which to me quite spoiled the feast; she is a limber dirty fool, and he the stiffest of all stiff things.' Besides his pamphlet on divorce the earl was the author of a 'Letter to the writer of the "Present State of the Republic of Letters," vindicating his father from the re-

flections against him in Burnet's 'History of his own Time.' He died on 2 Aug. 1758, and was buried in the vault at Bowdon. His wife died in 1740. Their only child, Mary, married, in 1736, Henry Grey, fourth earl of Stamford, who inherited the estates in Cheshire and Lancashire, and in whose son the title of Earl of Warrington was revived in 1796.

BOOTH, GEORGE (1791–1859), Latin verse writer, was born 12 Nov. 1791 at Masborough House, Rotherham, and was the youngest son of William Booth of Masborough, and of Brush House, Ecclesfield, a descendant of an old and considerable family at Newton-le-Willows, Lancashire. After being at Eton he went to Cambridge as pensioner of Trinity College in May 1809. He left Cambridge in consequence of delicate health and removed to Oxford, where he matriculated as commoner of Lincoln College in May 1811. He took his B.A. degree in 1813, that of M.A. in 1816, and in 1823 was created bachelor of divinity. He was ordained deacon as curate of Nether Hoyland, Wath-upon-Dearn, in the diocese of York, in December 1815, and priest in the following month. In 1816 he was elected to a fellowship of Magdalen College, Oxford, which he retained until 1834. Of this college he was made vice-president in 1830, and dean of divinity in 1832. In 1833 he was instituted to the vicarage of Findon, Sussex, which he held until his death, a period of twenty-six years. He died at Findon 21 June 1859, aged 67.

He was author of 'Nugæ Canoræ,' Oxon. 1826, 4to, and 'Sicut Lilium, ad Choristes Coll. S. M. Magd. Oxon. Carmen hortativum,' 1854.

[Information supplied by Rev. J. R. Bloxam, D.D., from his MS. Register of Magdalen Coll.] C. W. S.

BOOTH, HENRY (1652–1694), second Baron Delamere and first Earl of Warrington, lord of the treasury under William III, was the second son of George, Lord Delamere [q. v.] by his second wife, Elizabeth Grey, eldest daughter of Henry, earl of Stamford, and was born on 13 Jan. 1651-2. In 1673 he succeeded his father as *custos rotulorum* of the county of Chester. Like his father, he was warmly attached to the principles of civil liberty, and, as knight of the shire for Cheshire (1678–81), opposed the vacillating and intermittent attempts of Charles II to strengthen the royal prerogative. He strongly denounced the fatal expedient of substituting government by favourites for the support of an honest and loyal parliament, asserting that for monarchs to dispense with parliaments was 'to lay aside the staff that supports them to lean upon a broken reed.' He proposed the introduction of a bill disqualifying those members of the 'pension parliament' who had received bribes from the court for serving in parliament in future or for holding under the government any office civil or military, and compelling those who had received money for secret service to the crown to refund it. As was to be expected from the decided character of his religious beliefs and his extreme protestant sentiments, he was also especially active in promoting the Exclusion Bill. While thus zealously defending what he regarded as the constitutional and religious liberties of England, he denounced with great boldness the corruption and tyranny which had crept into the administration of justice. He protested against the prerogative assumed by the privy council of imprisoning suspected persons without trial, and proposed that inquiry should be made into the corruption of the judges, who he asserted had 'perverted the law to the highest degree, turning the law upside down that arbitrary power may come in upon their shoulders.'

This uncompromising course of conduct aroused so much displeasure at court that he was removed from the commission of the peace, and from the office of *custos rotulorum* of Cheshire. In 1683 he was committed to the Tower on suspicion of being concerned in the Rye House plot, but on 28 Nov. he was admitted to bail (*Proceedings upon the Bayling of the Earl of Macclesfield*, &c., 1683). On the death of his father in 1684, he succeeded him as Lord Delamere. Shortly after the accession of James II (1685) he was again committed to the Tower, and although for a short time admitted to bail, he was, on 26 July 1685, committed a third time. On the assembling of parliament in November he stated his case in a petition to the House of Lords, who, having sent a deputation to wait upon the king to know why Lord Delamere was absent from his place, were answered that directions had already been given for his trial for high treason. The special charge against him was that at the time of Monmouth's rebellion he had gone secretly to Cheshire with the view of inciting a rising in the north of England. That Delamere fully sympathised with the designs of Monmouth is placed beyond doubt by the argu-

ments he used in supporting, after the Revolution, a motion for the removal of the sentence of attainder; but his journey to Cheshire he satisfactorily explained by a wish to visit a favourite child who was dangerously ill, and the desire, at that time of suspicion and jealousy, to keep out of the way. As, moreover, Thomas Saxon, the only witness who would positively swear to the correspondence of Delamere and Monmouth, so hopelessly contradicted himself that he was afterwards convicted of perjury, there was absolutely no case against him, and the committee of the lords, contrary to the advice of Jeffreys, who acted as lord high steward, gave a unanimous verdict of acquittal. The verdict was, according to Burnet (*Own Time*, i. 668), received with 'great joy by the whole town, which was now turned to be as much against the court as it had been of late years for it.' The joy did not arise from any special interest in Delamere personally, but from intense satisfaction that the reign of terror had shown such palpable signs of waning influence. The acquittal of Delamere marks in fact the beginning of successful resistance to the arbitrary authority of the court, and the rise of that new tide of political sentiment which was to prove fatal to the Stuart dynasty.

After the verdict Lord Delamere returned to Dunham Massey, taking little or no part in political affairs until the landing of the Prince of Orange, when he called together his tenants, and informing them that they had to choose whether 'they would be slaves and papists or protestants and freemen,' exhorted every one who had a good horse either to take the field or provide a substitute. Appearing at Manchester with fifty men armed and mounted, he speedily gathered a formidable force with which he marched south to join the prince. The statement of Sir John Dalrymple (*Memoirs*, 2nd ed. vol. ii. Appendix, 339) that 'Lord Delamere was not sufficiently expeditious in joining the Prince of Orange,' is therefore as much at variance with fact as are the premises of which it is a corollary that 'this was never forgiven by King William.' In December 1688 Delamere was deputed, along with the Marquis of Halifax and the Earl of Shrewsbury, to intimate to King James the desirability of his removing from the palace at Whitehall to some place outside the metropolis. The ungrateful task he discharged with such delicate consideration for the feelings of the king, that James afterwards stated that he had 'treated him with much more regard than the other two lords to whom he had been kind, and from whom he might better have expected it.' On 31 Jan. 1688-9, Lord Delamere supported in strong terms the motion in the House of Lords for declaring the throne vacant, asserting that 'if King James came again, he was resolved to fight against him, and would die single, with his sword in his hand, rather than pay him any obedience' (Clarendon, *Diary*, ii. 257). The decided character of his political sentiments, coupled with the special service he had rendered the cause of the Prince of Orange in the north of England, marked him out for important promotion under the new dynasty. On 13 Feb. 1688-9 he was chosen a privy councillor, and on 9 April following he received the second place at the board of the treasury with the office of chancellor of the exchequer, Mordaunt, who was created Earl of Monmouth, receiving the first place. On the 12th of the same month he was made lord-lieutenant of the city and county of Chester, and on 19 July was reappointed to his old office of *custos rotulorum* of the county. These appointments are a sufficient indication that King William had not been mortally offended by anything in his conduct at the Revolution. His retirement from the treasury board on 17 April 1690 can moreover be explained with unmistakable clearness on other grounds. The board as originally constituted comprehended elements utterly antagonistic. In their political convictions the Earl of Monmouth and Delamere were in a certain sense at one, but even here it has to be remembered that the opinions of Monmouth were modified by his fickle and pleasure-loving temperament, while the puritanic traditions of Delamere and the precise and logical character of his mind unfitted him for recognising the importance of compromise in practical politics. Apart from politics the two statesmen had nothing in common, and, according to Burnet, 'though most violent whigs they became great enemies' (*Own Time*, ii. 5). While their influence was weakened by their mutual antipathy, the real power passed into the hands of Godolphin, who, though his sympathies were in reality Jacobite, and though he occupied only the third place at the board, secured almost from the beginning, by his pre-eminent administrative talents and his skill in intrigue, the chief confidence of the king. While his colleagues, according to Burnet, were infusing jealousies of the king into the nation, he took care to interpret their conduct so as to infuse jealousies of them into the king. The task of Godolphin, so far as Delamere was concerned, was not a difficult one, for Delamere made no secret of his strong desire for more stringent restrictions of the royal prerogative,

and his attitude towards the Bill of Rights, and the bill for the recognition of William and Mary, was such as to make a breach between him and the court inevitable. But though compelled to retire from the treasury, the greatness of his past services was not forgotten. He was created Earl of Warrington, and in view of the expenses incurred by him at the Revolution he received a pension of 2,000*l.* and 'a grant of all lands discovered in five or six counties belonging to the Jesuits' (LUTTRELL, *Relation of State Affairs*, ii. 22). In October 1691 he was chosen mayor of Chester. In his place in the House of Lords he continued to manifest his anxiety for the principles which he believed to have been at stake at the Revolution, and in January 1692-3 he signed a petition against the rejection of the Place Bill. He died in London on 3 Jan. 1693-4, and was interred in the family vault in Bowdon church, where, in the south side of the Dunham chancel, there is a monument to his memory. By his marriage to Mary, sole daughter and heiress of Sir James Langham of Cottesbrooke, he had four sons and two daughters.

In a contemporary poem, entitled 'The King of Hearts,' Warrington is styled a 'restless malcontent even when preferred,' and there are undoubted evidences throughout his career of narrowness of temper, and an inability to recognise in any circumstances the value of expediency. Burnet mentions, with seeming acceptance, a rumour that while in office 'he sold everything that was in his power' (*Own Time*, ii. 5); but his son George, second earl of Warrington [q. v.], in the 'Letter' in defence of his father, calls this a *scandalum magnatum*, and asserts that it will not bear the least examination. No one was more outspoken than Warrington in his denunciations of corruption. The minor charge of greed brought against him by Lord Macaulay had its origin in an insufficient knowledge of the facts. Macaulay, after mentioning that on resigning office Warrington received a pension of 2,000*l.* a year, adds that notwithstanding this 'to the end of his life he continued to complain bitterly of the ingratitude with which he and his party had been treated.' In support of this rather sweeping assertion he appends a note to the effect that 'it appears from the Treasury Letter Book of 1690 that Delamere continued to dun the government for money after his retirement' (chap. xv.) This undoubtedly Delamere did, but only for money that was his due, not for additional favours; for it would appear from the list of King William's debts, drawn up at the request of Queen Anne, that Warrington never received more of his pension than the first half-yearly instalment. Whatever faults of temper may be chargeable against him, there is therefore no tangible evidence to support the accusation of sordid selfishness, and indeed he seems to have possessed a sincere and noble patriotism very rare among the leading statesmen of those troubled times. His religious views were strongly tinged with puritanism, and so far as regards the observance of the decencies of private life and attention to the outward duties of religion, he left, in the words of Dunton (*Life and Errors*, ed. 1818, i. 344), 'a correct and almost perfect example.'

The 'Works of Henry, late Lord Delamere,' consisting of several of his principal speeches in parliament, political pamphlets, advice to his children, prayers used by him in his family, &c., appeared in 1694, and in the same year a volume of his speeches delivered on various occasions at Chester. Some of his speeches were published separately. He is also the author of 'The late Lord Russell's Case,' 1689, and the reputed author of a 'Dialogue between a Lord-Lieutenant and one of his Deputies,' published anonymously in 1690.

BOOTH, HENRY (1788–1869), railway projector, was the son of Thomas Booth, a Liverpool corn merchant, and was born in Rodney Street, Liverpool, on 4 April 1788. He was privately educated at Gateacre, near Liverpool, and then for some time was engaged in his father's office. He afterwards carried on business on his own account as a corn merchant, but with no great success, till in 1822 he found his proper sphere when the scheme to make a railway between Liverpool and Manchester was brought before the public. Of this scheme he was one of the chief promoters, and acted as honorary secretary to the committee; he also wrote the prospectus of the new line, and a great number of reports, &c., connected with it. In 1825 the bill came before parliament. It was thrown out after a costly struggle. Next year it was carried, and Booth was appointed secretary and treasurer of the company. He was also managing director, and took an active part in the construction of the line, which was begun in June 1826 and finished in 1830. It was mainly due to him that steam

locomotive engines were fixed upon as the working power of the railway, and that his friend George Stephenson was successful in the famous competition which the directors held at Rainshill in October 1829. 'It was,' says Robert Stephenson, 'in conjunction with Mr. Booth that my father constructed the "Rocket" engine which obtained the prize at the celebrated competition which took place a little prior to the opening of the Liverpool and Manchester railway' (SMILES, *Lives of the Engineers*, 1862, vol. iii. appendix, p. 495). To Booth is due the suggestion of a multitubular boiler, which gave a very large and effective heating surface (see his letter quoted, with remarks, in SMILES's *Life of George and Robert Stephenson*, 1868, p. 320 et seq.) Booth had indeed a remarkable mechanical genius; also to him are due the coupling screws, spring buffers, and lubricating material for carriage axles, all of which are still in use on our railways.

When, in 1846, the London and North-Western Railway Company was formed from a union of various companies, Booth was appointed secretary for the northern section, and in October 1848 he was chosen a director. He retired from office on 18 May 1859, after being presented (9 April 1859) with 5,000 guineas by the company as a token of gratitude for valuable and faithful service. He spent the remainder of his life in his native town, where for some years he acted as a borough magistrate. He died at his residence, Eastbourne, Princes Park, Liverpool, on 28 March 1869. His wife, the eldest daughter of Abraham Crompton, of Chorley Hall, whom he had married on 27 Aug. 1812, three daughters, and one son, survived him.

In religion Booth was a unitarian, and in politics a moderate liberal. His friend Professor W. B. Hodgson, of Edinburgh, describes him as a 'grave, reserved, reticent, somewhat even stern man,' 'above all things just and truthful,' and 'of rare consistency, thoroughness, and trustworthiness.' He was an indefatigable worker, 'never idle and never hurried,' and was the 'main agent' in the organising of the vast railway system that during his active lifetime spread over the United Kingdom.

Booth wrote: 1. 'Rationale of the Currency Question' (1847), in which he defended the principle of Peel's Banking Act of 1844, considering it defective, 'not on account of what it has done, but on account of what it has left undone,' and so was led to suggest additional precautions to avoid or mitigate commercial panics. 2. 'Case of the Railways considered' (1852). 3. 'A Letter to Lord Campbell on the 9th and 10th Vict. cap. 93' (1854), in which he vigorously protested against Lord Campbell's act of 1846 rendering railway companies pecuniarily liable for loss of life caused in accidents on their lines. He declared 'that the great sufferers by the establishment of railways are the railway companies. To the public they have been very nearly universal gain,' and yet they were made subject to the losses occasioned by the operation of this act, which was made still worse by the manner in which juries interpreted it. He specially objected to the principle that those who paid the same fare should have a varying value, according to their position, put upon their lives. 'Bishops,' he remarks, with some humour, '"appointed prior to 1st January 1848," are absolutely dangerous, and must rank in the same category with "lucifer matches," and as for my lords of Canterbury and York, or "C. J. London," they must be regarded altogether as "prohibited articles."' 4. 'Moral Capability' (1814). 5. 'An Account of the Liverpool and Manchester Railway' (Liverpool, 1830). 6. 'Free Trade as it affects the People,' and 'A Reformed Parliament' (Liverpool and London, 1833). 7. 'Letter to His Majesty's Commissioners on Railways in Ireland' (1836, unpublished, but described in Memoir. It urged the advisability of following one great plan in constructing the national railroads). 8. 'Observations on the Force of the Wind and the Resistance of the Air' (Liverpool, 1839). 9. 'Uniformity of Time considered especially in reference to Railways and the Electric Telegraph' (1847). 10. 'Master and Man, a dialogue, in which are discussed some of the important questions affecting the Social Condition of the Industrious Classes' (1853). 11. 'A Letter on the Approaches to St. George's Hall' (Liverpool, 1857). 12. 'Taxation, direct and indirect, in reply to the Report of the Financial Reform Association' (1860), an argument against a system of entirely direct taxation. 13. 'The Struggle for Existence, a Lecture' (London and Liverpool, 1861). 14. 'Considerations on the Licensing Question' (Liverpool, 1862). 15. 'The Question of Comparative Punishments considered in reference to Offences against the Person as compared with Offences against the Pocket, with some observations on Prison Discipline' (Liverpool, 1863). 16. A pamphlet on Atlantic Steam Navigation.

Booth was also the author of fugitive contributions to newspapers. It may be stated that those of his works dealing with special economic subjects are written in accordance with the doctrine of the orthodox *laissez-faire* school.

[Memoir of the late Henry Booth by Robert Smiles, with letter from Professor Hodgson (1869); Supplement to Liverpool Daily Post (30 March 1869).] F. W-T.

BOOTH, JAMES (*d.* 1778), conveyancer, was born at St. Germain-en-Laye, where his father, who was a Roman catholic and a Jacobite, resided. Roman catholics being disabled by the statute 7 and 8 William III cap. 24 from practising at the bar, Booth, who adhered to the faith in which he had been educated, took out a license to practise as a conveyancer, and early acquired a considerable amount of business, owing partly to his own skill and ingenuity, and partly to the advantage which, in consequence of the various penal laws then in force, the Roman catholics of that day supposed that they derived from consulting a member of their own sect. On the death of Nathaniel Pigott, the most eminent conveyancer of his day, and also a Roman catholic, Booth succeeded to his position. His conveyances enjoyed the highest possible repute with the profession, and being often copied and used as precedents by inferior practitioners, they set the fashion in conveyancing during a great part of the last century. In one respect, however, they contrasted very unfavourably with those of his predecessor Pigott. Whereas Pigott's deeds had been models of conciseness, Booth's were remarkably prolix. He wrote no treatise on the subject, nor did he publish a collection of precedents. His knowledge of the statute of uses, however, was unique in his time. He is said to have been consulted by the Duke of Cumberland whether he could recover a legacy left him by his father, George II, the new king having torn up the will, and to have advised that 'a king of England has by the common law no power to bequeath personal property;' he is also said to have drafted George III's will. He was for some years an intimate friend of Lord Mansfield. His disposition was genial and his habits convivial. In politics he was a tory. Rather late in life he married the daughter of the titular archbishop Sharp, from whom he was subsequently separated. In his later years he suffered considerably from cataract. He died on 14 Jan. 1778.

[Butler's Hist. Mem. Eng. Ir. and Scot. Cath. (3rd ed.), iv. 360; Reminisc. (4th ed.) ii. 274; Gent. Mag. lv. pt. i. 243, 340; Law and Lawyers, ii. 84.] J. M. R.

BOOTH, JAMES, LL.D. (1806–1878), mathematician and educationist, was the son of John Booth, and was born at Lava, co. Leitrim, 25 Aug. 1806. He entered Trinity College, Dublin, in 1825, was elected scholar in 1829, graduated B.A. in 1832, M.A. in 1840, and LL.D. in 1842. In 1834 he was awarded Bishop Berkeley's gold medal for Greek. He did not succeed in obtaining a fellowship of his college, though he had a high place in the contest on several occasions. He left Ireland in 1840, and became principal of Bristol College, where he had Mr. F. W. Newman and Dr. W. B. Carpenter as colleagues. The institution closed in 1841, and in 1843 he was appointed vice-principal of the Liverpool Collegiate Institution. In 1848 he gave up this office, and migrated to London. He had been ordained at Bristol in 1842, and acted there as curate till he moved to Liverpool. In 1854 he was appointed minister of St. Anne's, Wandsworth, and in 1859 was presented to the vicarage of Stone, near Aylesbury, by the Royal Astronomical Society, to which society the advowson had been given in 1844 by Dr. Lee. He was also chaplain to the Marquis of Lansdowne, and justice of the peace for Buckinghamshire. He was elected F.R.S. in 1846, and F.R.A.S. in 1859. He was president of the Liverpool Literary and Philosophical Society from 1846 to 1849, and delivered an introductory address in 1846. He contributed many mathematical papers to various societies. The titles of twenty-nine of these contributions are given in the 'Royal Society Catalogue of Scientific Papers.' They were republished, with additions, in two volumes, entitled 'A Treatise on Some New Geometrical Methods.' The first volume, relating chiefly to tangential co-ordinates and reciprocal polars, was issued in 1873; the second, containing papers on elliptic integrals and one on conic sections, came out in 1877. His earliest separate publication seems to have been a tract 'On the Application of a New Analytic Method to the Theory of Curves and Curved Surfaces,' published at Dublin in 1840. Dr. Booth was the inventor of the tangential co-ordinates known as the Boothian co-ordinates, which, however, were previously introduced by Plücker in 1830 in a paper in 'Crelle's Journal,' though the fact was unknown to Booth when he published his own discovery. His educational writings undoubtedly exercised considerable influence in the promotion of popular education. In 1846 he published a paper on 'Education and Educational Institutions considered with reference to the Industrial Professions and the Present Aspect of Society' (Liverpool, 8vo, pp. 108), and in the following year another paper entitled 'Examination the Province of the State, or the Outlines of a Practical System for the Extension of National Education' (8vo, pp. 74). In 1852 he became a member of the Society of Arts, and at his suggestion

the weekly 'Journal' of the society was begun. He was treasurer and chairman of the council of the society from 1855 to 1857. Some of the addresses which he delivered about that period were published by the society. Their titles are: 'How to Learn and What to Learn; two lectures advocating the system of examinations established by the Society of Arts' (1856); and 'Systematic Instruction and Periodical Examination' (1857). He was the main instrument in the establishment and organisation of the Society of Arts examinations, a system which was afterwards modified and developed by Mr. Harry Chester. He was also instrumental in preparing the reports on 'Middle Class Education,' issued in 1857 by the society, and in that year he annotated and edited for the same body the volume of 'Speeches and Addresses of His Royal Highness the Prince Albert.' He published also the following, and probably other addresses: 'On the Female Education of the Industrial Classes' (1855); 'On the Self-Improvement of the Working Classes' (1858). Booth was an eloquent preacher, and published: 'The Bible and its Interpreters, three sermons' (1861); 'A Sermon on the Death of Admiral W. H. Smyth, D.C.L., F.R.S.' (1865); 'The Lord's Supper, a Feast after Sacrifice' (1870). He died at the vicarage at Stone, Buckinghamshire, 15 April 1878, aged 71 years. His wife, daughter of Mr. Daniel Watney of Wandsworth, died in 1874.

[J. W. L. Glaisher in Monthly Notices of the Royal Astronomical Soc. xxxix. 219-25; Journal of the Society of Arts, xxvi. 483; the Guardian (copied from the Times), 1878, p. 576; Clergy List, 1842, p. 78.] C. W. S.

BOOTH, JAMES (1796-1880), secretary to the board of trade, fourth son of Thomas Booth of Toxteth Lodge, near Liverpool, was born about the year 1796, and after passing some time at St. John's College, Cambridge, was admitted to the Society of Lincoln's Inn on 7 Nov. 1818, when he was stated to be twenty-one years of age. He was called to the bar there on 10 Feb. 1824, and practised with some success in the chancery courts. He was a member of the royal commission for inquiring into the municipal corporations of England and Wales in 1833. In 1838 he was applied to by the speaker to prepare for the use of the House of Commons what were called breviates of the private bills. Booth's engagement was at first temporary, but at the end of the session of 1839 he was appointed counsel to the speaker, and examiner of recognisances. During the recess he undertook the preparation of skeleton bills in an improved form for all the more important classes of bills. These became familiarly known as the 'model bills,' and reference was constantly made to them by the select committees when bills falling within any of the classes came before them. In the preparation of these bills Booth had the co-operation of Mr. Robert John Palk, counsel to the chairman of the committees of the House of Lords. Booth's great work, however, was the preparation of the Clauses Consolidation Acts. Booth accepted the office of secretary to the board of trade on 10 Oct. 1850, which he held until 1865. Subsequently to the passing of the Clauses Consolidation Acts he gave great assistance to Sir John Romilly in the preparation of various legislative measures for the government, the principal of these being the act to regulate the proceedings of the high court of chancery in Ireland, passed in 1850. For his services he received an extra pension. After his retirement he acted on the commission for inquiring into trades unions and other associations, 12 Feb. 1867, and prepared the draft report which appeared in the eleventh and last report of the commissioners 9 March 1869. His literary productions were chiefly confined to the various law magazines. In 1871 a work was published under the title of 'The Problem of the World and the Church reconsidered, in three letters to a friend by A Septuagenarian.' Of this book Booth edited and brought out a second and revised edition in 1873, and six years later edited a third edition, with an introduction written by himself. He was created a C.B. on 6 July 1866. He died at 2 Princes Gardens, Kensington, on 11 May 1880, in his eighty-fourth year. He married in 1827 Miss Jane Noble, but was left a widower in 1872.

[Times, 15 May 1880, p. 8; Law Times, lxix. 71 (1880).] G. C. B.

BOOTH, JOHN (1584-1659), of Twemlowe, genealogist of Cheshire, was descended from an old family in that county, his father being John Booth of Twemlowe, and his mother, Isabella, daughter of Richard Lowndes of Smallwood. He was born in July 1584. Succeeding to the property on the death of his father, he occupied his leisure in genealogical researches into Cheshire pedigrees, those in the later generations being compiled from the visitations of 1568, 1580, and 1613, and the earlier ones from charters and similar documents. As a genealogist he was supposed to be inferior only to Sir Peter Leycester, who frequently acknowledges indebtedness to his labours. The original copy of his pedigrees is still preserved at Twemlowe Hall, and besides several copies in the pos-

session of private persons, there is one in the Heralds' College. He died unmarried, and was buried at Goosetrey, 25 Nov. 1659.

[Ormerod's Cheshire (ed. Helsby), i. lxxxix, iii. 137.] T. F. H.

BOOTH, JUNIUS BRUTUS (1796–1852), actor, was born on 1 May 1796 in the parish of St. Pancras, London. Through his grandmother, Elizabeth Wilkes, he claimed to be related to the famous John Wilkes, after whom one of his sons was named, and to whose influence was possibly owing his own baptismal name and that of his brother, Algernon Sidney Booth. Richard Booth, his father, the son of a silversmith, left England while a youth for the purpose of fighting against his country in the war of American independence, was captured, escaped apparently all punishment, and settled peacefully in Queen Street, Bloomsbury, as a lawyer. After learning printing, studying law in his father's office, accepting a commission as midshipman on board the Boxer (Captain Blyth or Bligh), and fortunately for himself not joining the ship, which soon after went down with all hands except one, Booth made in 1813 his first appearance as an amateur in a wretched little theatre in Pancras Street, Tottenham Court Road, in which he played Frank Rochdale in 'John Bull.' His first essay as a regular actor was made on 13 Dec. of the same year, under the management of Mr. Penley, as Campillo, a servant, in the 'Honeymoon,' at a theatre in Peckham. He was then transferred to the theatre in Deptford, and, after an incapacitating attack of illness, he joined (1814) his manager at Ostend, and played with him there and at various towns in Belgium and Holland. After undergoing many hardships, and, according to one biographical sketch, forming in Brussels a matrimonial or quasi-matrimonial connection, he returned to England and obtained an engagement for the winter season of 1815 at Covent Garden. During the summer he played at Worthing. On 18 Oct. he made, as Sylvius in 'As you like it,' his first regular appearance in London, the occasion being the dêbut as Rosalind of Mrs. Alsop, a daughter of Mrs. Jordan. He was kept steadily in the background, and at the close of the season he retired to Worthing, at the theatre of which town he became acting manager. Here and at Brighton he played Sir Giles Overreach and other leading characters with sufficient ability to lead the management of Covent Garden to engage him as a rival to Kean. On Wednesday, 12 Feb. 1817, he appeared as Richard III, and, in spite of some opposition attributed to the partisans of Kean, obtained a success. After repeating the performance the following evening, he broke with Mr. Harris, the manager, on a question of payment. Kean, who heard the news of this dispute, visited Booth and brought him to Drury Lane, where liberal terms were offered and accepted. On Thursday, 20 Feb. 1817, accordingly, Booth appeared at Drury Lane as Iago to the Othello of Kean. The performance was not repeated. Finding that the management did not intend to allow him equal chances with Kean, and suspecting, probably not without cause, that the engagement was made for the purpose of shelving him, he again changed front, and concluded with the Covent Garden management an engagement on the same terms that were given him at Drury Lane. When, accordingly, on 22 Feb. an immense audience assembled to greet his reappearance at Drury Lane, Booth was not forthcoming, and an apology for his absence had to be made. The result of a proceeding by which in the course of less than a fortnight he had disappointed audiences at the two leading houses was to raise a great pother and to assign Booth a prominence he was unable subsequently to maintain. His resemblance to Kean in appearance, stature, and voice, and his close adherence to the style of his great predecessor, had attracted much attention to him, and his acting had met with general approval. Upon the reappearance of Booth at Covent Garden on 25 April a storm of opposition was encountered. 'Richard III' was acted in dumb show, and the attempted explanation of Fawcett, the stage manager, and the proffered apologies of Booth were rejected. Booth then printed his apology, and essayed again on 1 March to play Richard. A second tumult ensued. On the 3rd he was more successful, and the playbills for that date contain his thanks to the public which had pardoned him. Proceedings against the Covent Garden management and against Booth were commenced by the Drury Lane management, but were discontinued as Booth sank from the place he had occupied. On 8 March Booth played Sir Giles Overreach, and shortly afterwards appeared as Posthumus in 'Cymbeline,' Fitzharding in the 'Curfew,' and Mortimer in the 'Iron Chest.' From this period his fame declined, until, when for his benefit he appeared as Richard and Jerry Sneak in the 'Mayor of Garratt,' the house was almost empty. After playing during the following years at various country theatres and at the Coburg, he appeared on 7 Aug. 1820 as Iago at Drury Lane, supporting Kean, who was playing a farewell engagement previous to his departure for

America. Booth's Drury Lane engagement terminated on 13 Jan. 1821. On the 18th of the same month, according to his daughter and latest biographer, he married Mary Ann Holmes. He shortly afterwards took his wife, viâ Madeira, to America, and landed at Norfolk, Va., on 30 June 1821. On 6 July he opened at Richmond as Richard; on 5 Oct. 1821 he played Richard III at the Park Theatre, New York. In 1825 he returned to England and appeared at Drury Lane as Brutus. The following year he played at Rotterdam, Brussels, &c., and returned to America. In 1828 he managed the Camp Theatre, New Orleans, and played in French Oreste in the 'Andromaque' of Racine. In 1836-7 England was again revisited, Drury Lane, the Surrey, and Sadler's Wells being the scenes of his London performances. After his return to New York he started for the south, and attempted to drown himself on the route, but was saved by means of a boat. In this unfortunate voyage, however, he broke his nose, and marred thus his appearance and his voice. During the last ten years of his life he withdrew to some extent from the stage, living on a farm he had purchased near Baltimore, but performing occasionally in Boston and New Orleans. His last appearance was at his benefit on 19 Nov. 1852 at the St. Charles Theatre, New Orleans. He then took the parts of Sir Edward Mortimer and of John Lump in 'The Review, or the Wag of Windsor,' a musical farce. While on his way by sea to Cincinnati he died on 30 Nov. 1852. His body was taken to Boston, and, after some change of sepulture, was ultimately placed in Greenmount cemetery, Baltimore. Booth was a good second-rate actor. The most competent judges of the day placed him below Kean, C. Kemble, and Macready, but before Wallack and Conway. His popularity was marred by his habit of disappointing audiences by non-appearance on nights for which he was announced. This was attributable in part to intemperance, in part to insanity. In his occasional fits of moroseness he attempted once, as has been seen, his own life, and more than once, it is said, that of another. Some wild tricks are assigned him, and once he made an effort to obtain the post of light-house keeper at Cape Hatteras lighthouse. Amongst his surviving children were Edwin Booth, still a favourite actor, Junius Brutus Booth, jun., John Wilkes Booth, mournfully celebrated, and Mrs. Asia Booth Clarke, his biographer, the wife of a well-known comedian.

[Genest's History of the Stage; Clarke's The Elder and the Younger Booth, Boston (U.S.A.), 1882; Dramatic Magazine, 1829; Oxberry's Dramatic Biography, vol. iv. 1826; Vanderhoff's Dramatic Reminiscences, London, 1860; London Magazine, 1820.] J. K.

BOOTH or **BOTHE, LAWRENCE** (*d.* 1480), bishop of Durham, and afterwards archbishop of York, sprang from a wealthy family of good position. He was the youngest son of John Booth, of Barton in Lancashire, by his second wife, Maud, daughter of Sir John Savage, a Cheshire knight. Two of his half-brothers became bishops—William, archbishop of York; and John, bishop of Exeter. He went to Pembroke Hall in Cambridge, studied the civil and canon laws in which he became a licentiate, and was in 1450 appointed master of his college. During his residence in Cambridge he became chancellor of the university and rector of Cottenham in Cambridgeshire. While chancellor (about 1458), he started a movement for the building of an arts school and a civil law school (Mullinger, *University of Cambridge to* 1535, p. 300). Outside the university preferment was showered thick upon him. In 1449 he became a prebendary of St. Paul's, and, after being thrice transferred to more valuable stalls, he became on 22 Nov. 1456 dean of that cathedral. In 1452 he became archdeacon of Stow in the diocese of Lincoln, but resigned in the same year. In 1453 he was made provost of Beverley. In 1454 he was appointed archdeacon of Richmond. He was also a prebendary of York and of Lichfield.

Booth's main business, however, was legal and political rather than ecclesiastical. He became chancellor to Queen Margaret, and, apparently about 1456, keeper of the privy seal (*Paston Letters*, ed. Gairdner, i. 408). In the same year he became a commissioner to renew the existing truce with Scotland. On 28 Jan. 1457 he was appointed one of the tutors and guardians of the Prince of Wales. On 15 Sept. in the same year he was appointed bishop of Durham, by provision of Calixtus II. Henry VI had already solicited the pope to nominate his physician, John Arundell, to the vacant see, but the more energetic supplication of Queen Margaret for her chancellor, together with the request of many nobles, and the remembrance of an old recommendation of Henry himself, determined Calixtus to appoint Booth, whose position, wisdom, noble birth, northern origin, and local knowledge made him, in the pope's opinion, peculiarly fitted to be bishop of the great palatinate (Rymer, xi. 404-5). Henry did not press his physician's claims, and on 25 Sept. Booth was consecrated by his brother, the archbishop

of York. On 18 Oct. the temporalities were restored to him. He still continued privy seal, and in September 1459 negotiated a truce with the Scots at Newcastle-upon-Tyne. At the end of the same year he attended the Coventry parliament which impeached the partisans of the Duke of York, where he swore allegiance to Henry VI, and acted as a trier of petitions. He seized as the prerogative of his franchise the numerous forfeitures of Warwick within the palatinate. Yet though apparently a decided partisan of the house of Lancaster, he attended the parliament of Edward IV that met after the battle of Towton, served as a trier of petitions, and had his right to forfeitures within the bishopric specially reserved (*Rot. Parl.* 1 E. IV). But he must have given some fresh cause of offence, perhaps have helped Queen Margaret in her northern campaigns, for on 28 Dec. 1462 his temporalities were seized by the crown; officers were appointed in the diocese as in the case of a vacancy; the coals, which even then formed some part of the wealth of the lords of Durham, were ordered to be sold, and he is spoken of in an official document as the late Bishop of Durham (SURTEES, app. to vol. i. cxxxiii–iv). The suspension continued until 17 April 1464, when his temporalities were restored, probably in return for submission and repentance. On 15 April he was allowed as a special favour to absent himself for three years from all parliaments and councils, and live wherever he liked within England (RYMER, xi. 518). There is no record of his acts between 1464 and 1471. Within that interval of retirement he had found some means to convince Edward of his fidelity, for in 1471 he got the Warwick forfeitures within his palatinate, and took an oath to maintain the succession of the Prince of Wales. In the same year, and again in 1472 and 1473, his serving as a trier of petitions shows that he was restored to his parliamentary duties. On 21 June 1473 a royal license admitted his right to coin in Durham not only 'monetæ sterlingorum,' as had of old been the custom with his predecessors, but also 'moneta obolorum' (RYMER, xi. 783). During the same year the illness of Bishop Stillington, the chancellor, and the inconvenience of transacting the business of the office during the session of parliament by deputies or keepers, led to the transference of the great seal to Bishop Booth on 27 July. He presided in the parliament of that year, prorogued it, and, shortly after its reassembling, dismissed it, after having exhorted the commons to deal liberally with the king in his approaching war with France (*Parl. Hist.* ii. 344). But the burden of the office seems to have been too great for him, and on 25 May 1474 he was succeeded by Bishop Rotherham, who remained in office for the rest of the reign, and successfully concluded the business begun by Booth (*Cont. Croyland*, Gale, i. 557). There seems no good authority for Lord Campbell's story of Booth's extreme incompetence. That Booth's retirement from the chancery was not caused by want of favour at court is shown by the king putting in his custody the temporalities of the archbishopric of York within ten days of the death of the disgraced Archbishop Neville (28 June 1476. RYMER, xii. 28). This decided step of Edward's secured Booth's translation to the archbishopric. He was installed with great solemnity on 8 Sept. on the throne vacated by his brother twelve years before. He was the first bishop of Durham promoted to York, a translation rather common in later times. Both at York and Durham he succeeded a Neville, a family with which he had established a connection by marrying one of his nieces to the Earl of Westmorland. During his twenty years' tenure of the see of Durham he had rebuilt the gates of Auckland Castle and the neighbouring buildings.

Booth did not long survive his appointment to York. He died on 19 May 1480, and was buried in the collegiate church of Southwell beside his brother, Archbishop William. Both brothers had made Southwell their favourite residence, and were great benefactors to the church there. Lawrence's main benefaction to the see of York was the purchase of the manor of Battersea in Surrey, the building of a house on it, and the transferring of it to the archbishopric. Up to his death he retained the mastership of Pembroke Hall, as the scholars of that society were proud of having as their head a man in such high position, and who also was a liberal benefactor of the college.

[William de Chambre's Hist. Dunelm. in Anglia Sacra, i. 777, with Wharton's note, and in Raine's Hist. Dunelm. Scriptores Tres.; Rolls of Parliament; Rymer's Fœdera; Paston Letters; Hist. Croyland cont.; cont. of T. Stubbs's Hist. Ebor. The Torr MSS., Le Neve's Fasti, Godwin's De Præsulibus, Drake's Eboracum, and Surtees' History of Durham are more modern authorities. Booth's will is printed in Raine's Testamenta Eboracensia (Surtees Soc.), iii. 248–250. The life of Booth in Campbell's Chancellors (i. 389) is thoroughly inaccurate: that in Foss (Judges of England, iv. 420–3, Biographia Juridica, 105) is much better.] T. F. T.

BOOTH, PENISTON, D.D. (1681–1765), dean of Windsor, published a single sermon, 'Of Baptism,' 8vo, on Gal. iii. 27, in 1718.

He was prebendary of Lincoln (1719–1746). On 9 May 1722 he was appointed canon of Windsor; on 26 April 1729 was installed dean of Windsor; and on 23 July 1733 was collated chancellor of London. By 1749 he had made many improvements in the deanery. Two of the plates in Pote's 'History of Windsor,' concerning St. George's Chapel (pp. 60 and 72), are inscribed to him and his canons. He died on 21 Sept. 1765, aged 84.

[Cooke's The Preacher's Assistant, i. 376, ii. 45; Le Neve's Fasti (Hardy), ii. 361, iii. 376, 407; Pote's Hist. of Windsor, 60, 72, 123, 411, 413; Gent. Mag. 1765, xxxv. 443.] J. H.

BOOTH, ROBERT (*d.* 1657), puritan divine, was educated at Trinity College, Cambridge, where he graduated B.A. in 1600–7. He graduated M.A. in 1610, at which time he was a fellow of Emmanuel College. He was curate of Sowerby-bridge Chapel near Halifax, 1635–46, and in 1650 became minister of Halifax, where he was buried on 28 July 1657. He married Anne, daughter of Oswald Mosley of Ancoats, Manchester; she afterwards married Thomas Case [q. v.]

He was author of: 1. 'Synopsis totius Philosophiæ,' Harl. MS. 5356. This learned book, which is in an elegant handwriting, and illustrated with synoptical tables, is dedicated to Dr. Neville, master of Trinity College. 2. 'Encomivm Herovm, carmine ἀκροστίχῳ tentatvm,' London, 1620, 4to. Dedicated to Francis Bacon, Baron Verulam, lord high chancellor of England.

[Hallifax and its Gibbet-law (1708), 81; Watson's Hist. of Halifax (1775), 370, 443, 461; Cooper's manuscript collections for Athenæ Cantab.; Brook's Lives of the Puritans, iii. 533; Palmer's Nonconformists' Memorial, iii. 436; Green's Cal. of Domestic State Papers, ii. 22; Dugdale's Visitation of the County of Yorke (ed. Davies), 17, 358.] T. C.

BOOTH, Sir ROBERT (1626–1681), chief justice of the king's bench in Ireland, son of Robert Booth (*d.* 1657) [q. v.], was baptised at the Collegiate Church, Manchester, on 2 July 1626. After the death of his father, his mother remarried Thomas Case [q. v.], a parliamentarian, who directed Booth's education. He attended Manchester grammar school, was entered at Gray's Inn on 18 Feb. 1641–2, and proceeded to St. John's College, Cambridge, as a fellow-commoner, on 20 Sept. 1644. At Cambridge Henry Newcome, the author of the well-known diary, was a fellow-student. Booth was called to the bar on 26 Nov. 1649, and practised in London. Some letters of his, dated February 1659–60, are among the Legh MSS. at Lyme Hall, and prove that he regarded the Restoration with equanimity. On 1 Dec. 1660 he was appointed, on the recommendation of the chancellor of Ireland, Sir Maurice Eustace, and on account of his learning and loyalty, third judge in the Irish court of common pleas. Booth was knighted on 15 May 1668, became chief justice of common pleas in Ireland in 1669, and chief justice of the king's bench in Ireland in 1679. He was buried at Salford on 2 March 1680–1. He married his first wife, a daughter of Spencer Potts, esq., about 1651. The death of a son Benjamin by this marriage, at the age of eleven, is referred to at length in 'Mount Pisgah' (1670), a work of Thomas Case, Booth's stepfather. Booth's second wife was a daughter of Sir Henry Oxendon of Deane, near Wingham, Kent; she died on 27 Oct. 1669, leaving four daughters. Booth's will, dated 2 Aug. 1680, in the Prerogative Court of Canterbury, proves him to have possessed several Irish estates.

[A detailed notice of Booth by J. E. Bailey, F.S.A., in Notes and Queries, 6th ser., x. 130–2; see also Moseley Family Memoirs, p. 36; Gastrell's Notitia Cestriensis, ii. 94; Lascelles's Liber Hiberniæ; Newcome's Diary (Chetham Soc.), pp. 137, 305; Booker's Hist. of Blackley, p. 20; Manchester Foundations, ii. 85.]

S. L.

BOOTH, SARAH (1793–1867), actress, was born, according to Oxberry (*Dramatic Biography*), in Birmingham, in the early part of the year 1793. She is first heard of at Manchester, where, about 1804, she and her sister appeared as dancers. She remained there under the management of the elder Macready, who promoted her to the performance of characters such as Prince Arthur in 'King John.' In Doncaster, to which town as a member of Tate Wilkinson's company she subsequently went, a performance of Alexina in Reynolds's 'The Exile,' a character resigned in consequence of illness by Mrs. Stephen Kemble (Miss Satchell), attracted attention. Elliston, then managing the Royal Circus, which he rechristened the Surrey, heard of her. Her first appearance in London was made at this theatre in 1810 as Cherry, in a burletta founded on the 'Beaux' Stratagem,' Elliston himself playing Archer. On November 23 of the same year she played for the first time at Covent Garden, enacting Amanthis in the 'Child of Nature,' an adaptation from the French by Mrs. Inchbald. She remained at Covent Garden playing in the 'Miller and his Men,' the 'Dog of Montargis,' the 'Little Pickle,' &c., and being occasionally allowed to assume a character like Juliet. The rising fame of Miss O'Neil wrested from Sally Booth, as she

was always called, the hope of distinction in tragic parts, and she quitted Covent Garden until the retirement of her rival, when she returned and enacted Cordelia to the Lear of Junius Brutus Booth. She then played at the Olympic 19 Dec. 1821, at Drury Lane 2 Feb. 1822, at the Haymarket and Adelphi theatres, remaining long at none. Her powers were agreeable rather than impressive. She was small in stature, nervous, with hair inclining to red. In parts like Juliet she won favour by prettiness and girlishness. To the last her dancing remained a special attraction. Sally Booth claimed to be a descendant of Barton Booth [q. v.], and on the first appearance of Junius Brutus Booth [q. v.] desired him, it is said, to add a final *e* to his name, so as to prevent the suggestion of any connection between them. She died 30 Dec. 1867, having long quitted the stage.

[Genest's History of the Stage; Raymond's Life and Enterprises of Robert William Elliston, 1857; Oxberry's Dramatic Biography, 1826, vol. iv.; The Drama or Theatrical Magazine; Biography of the British Stage, 1824.] J. K.

BOOTH, THOMAS (*fl.* 1611), divine, was educated at Trinity College, Cambridge, where he graduated B.A. 1597–8, M.A. 1601, B.D. 1609. He was prebendary of Lincoln 1615–7. He published (with his initials) 'Concio ad Clerum jamdudum Cantabrigiæ habita in Luc. cap. 5, ver. 10,' London, 1611, 4to.

[Cooper's Athenæ Cantab. iii. 57.] T. C.

BOOTH, THOMAS (*d.* 1835), cattle breeder and improver, was owner and farmer of the estate of Killerby near Catterick, Yorkshire, where, in 1790, he turned his particular attention to the breeding of shorthorns, selecting his cows from Mr. Broader of Fairholme, and the bulls from the stock of his contemporaries, Messrs. Robert and Charles Colling. His great aim was to raise a useful class of animals, that, besides possessing beauty of form, would milk copiously, fatten readily, and when slaughtered turn out satisfactorily to the butcher. With these views he sought to reduce the bone of the animal, especially the length and coarseness of the legs, the prominency of the hips, the heavy bones of the shoulders, and those unsightly projections called shoulder points, which previously were great defects in the unimproved shorthorns. In these efforts he was most successful, and his cows and bulls for many years carried away the highest prizes at the chief exhibitions of stock. About the period of 1814 he was considered to be the most enterprising and skilful improver of cattle in his district, if not of his day.

He removed to Warlaby in 1819, and gave up the Killerby estate and part of the shorthorn herd to his eldest son, John Booth, taking the remainder with him to Warlaby, where he died in 1835. By his wife, Miss Bower, he had two sons, equally celebrated with their father as cattle breeders. John Booth, the eldest, had his own ideas about breeding stock. With infinite judgment he found among the pastures round Richmond fresh crosses for his cattle, and the public had such confidence in his judgment that they felt sure of his success in whatever he did. He found time to run horses at Catterick, and his dog Nips won the Wensleydale Cup in a coursing contest at Leyburn. For three seasons he was master of the Bedale hunt, and a constant attendant at the meets. Much of his time was also occupied in acting as a judge at exhibitions of stock. All his stock were sold off on 21 Sept. 1852, when forty-four lots averaged 48*l.* 12*s.* 8*d.* He died at Killerby on 7 July 1857, aged 68, and was buried at Ainderby. Shortly afterwards a window to his memory was erected in Catterick church. In 1819 he married Miss Wright, by whom he left several sons, well known in the county.

Richard Booth, the second son of Thomas Booth, inherited with his father's name his full share of his father's skill as a breeder, with an equal fondness for the pursuit. He removed to Studley farm in 1814, which was speedily stocked with shorthorns. He was a great believer in in-breeding, and when he sold off in 1834 the best cows were fine animals in direct descent from Twin Brother to Ben, a bull bred by his father as far back as 1790. He gave up Studley farm in 1834, and sold off the whole of his herd except Isabella by Pilot, and retired to Sharrow, near Ripon. On the death of his father in the following year he succeeded to the estate and shorthorn herd at Warlaby, and again turned his attention to breeding. The judges of those days had not yet learned to distinguish between flesh and fat, and although the Booth cattle did not always carry away the prizes, the butchers well knew their worth, as they made the best carcass meat. When the royal cattle shows began in 1844, although not approving of such exhibitions, he felt obliged to exhibit; and although at first the quality of his cattle was not understood, it was not very long before his name was often found in the lists of those receiving medals and other rewards. He died at Warlaby on 31 Oct. 1864, aged 76.

BOOTH, Sir WILLIAM (*d.* 1703), captain in the royal navy, was promoted to that rank in June 1673. After the peace with the Dutch he was for several years employed in the Mediterranean, and more especially against the Algerine pirates. On 8 April 1681, whilst in command of the Adventure, he engaged one of these corsairs named the Golden Horse, a vessel larger, more heavily armed, and with a more numerous ship's company. The fight was long and bloody; both ships were much shattered, but neither could claim the victory, when a stranger came in sight under Turkish colours. She proved, however, to be the English ship Nonsuch, commanded by Captain (afterwards Sir Francis) Wheler, and to her the Golden Horse at once submitted without further resistance. A somewhat acrimonious dispute afterwards arose between the officers and men of the two ships as to their relative share in the capture [see BENBOW, JOHN, vice-admiral], Captain Wheler assuming all the honour to himself, and claiming the whole profit of the prize. The question was referred by Booth to the admiralty, who, without any evidence beyond Booth's partial statement, directed the commander-in-chief to 'cause the colours of the Golden Horse to be delivered to Captain Booth as a mark of honour which we judge he hath well deserved,' and also an appointed share of the prize (Brit. Mus. *Addl. MS.* 19872, f. 67). He was knighted 12 Nov. 1682.

In 1683 he commanded the Grafton; in Feb. 1687-8 was made commissioner of the navy for 'general business'; in Sept. 1688 was appointed to the Pendennis of 70 guns; and in the following Oct. was appointed comptroller of the storekeeper's accounts at the navy. It would appear that his profession of allegiance to William III was a blind to enable him the better to act as agent to the exiled James; for on 16 March 1688-9 he went down to the Pendennis, then lying at Sheerness, and endeavoured by his influence and promises of money to persuade the lieutenants to agree with him in carrying over the ship to France; the plot also involved carrying over the Eagle fire-ship, commanded by Captain Wilford, who seemed to acquiesce. But Wilford got too drunk to act the part designed for him, and the lieutenants refused to have anything to do with it, or to let the Pendennis go; on which Booth, conceiving that he had gone too far, and that the affair could not be kept secret, fled to France. He died in February 1702-3.

[Charnock's Biog. Nav. i. 387; Minutes of Court-martial on Captain Robert Wilford, 30 July 1689, in Public Record Office.] J. K. L.

BOOTHBY, Sir BROOKE (1743-1824), poet, seventh baronet, eldest son of Sir Brooke Boothby, of Ashbourne Hall, Derbyshire, was born in 1743. When a young man he moved in London society, and he is mentioned by one of Mrs. Delany's correspondents as 'one of those who think themselves pretty gentlemen du premier ordre.' He joined the literary circle at Lichfield to which Miss Seward, Dr. Erasmus Darwin, Thomas Day, and the Edgeworths belonged, and was a member of a botanical society which Dr. Darwin started there. One of Miss Seward's odes and several of her printed letters are addressed to him. He resided some time in France, and became intimate with Rousseau. In his 'Observations on the Appeal from the Old Whigs,' &c., he enters into an earnest defence of Rousseau's character and works from the 'wanton butcherly attack' made by Burke. He succeeded to the baronetcy on the death of his father in 1789. He married Susannah, daughter and heiress of Mr. Robert Bristoe. The only child of this marriage died in 1791 at the early age of six years, and was interred in Ashbourne Church, where a monument by Thomas Banks, R.A., was erected to her memory.

He published the following: 1. 'A Letter to the Right Honourable Edmund Burke,' 1791 (8vo, pp. 120); a remonstrance with that statesman on the doctrines contained in his 'Reflections on the French Revolution.' 2. 'Observations on the Appeal from the New to the Old Whigs, and on Mr. Paine's Rights of Man,' in two parts, 1792 (8vo, pp. 283); the first part is a further defence of the principles of the French revolution, and the second is directed against Paine's arguments for equality. 3. 'Sorrows Sacred to the Memory of Penelope,' 1796 (fol. pp. 87); a volume of verse illustrated. 4. 'Britannicus, a Tragedy, from the French of Racine,' 1803, 8vo. 5. 'Fables and Satires, with a preface on the Esopean Fable,' Edinburgh, 1809, two volumes, 12mo. Sir Brooke Boothby died at Boulogne 23 Jan. 1824, aged 80, and was interred in the family cemetery at Ashbourne Church.

[Hist. and Topogr. of Ashbourne, 1839, pp. 35-38; Mrs. Delany's Corresp. iv. 262, 423; Seward's Memoirs of Darwin, p. 78; Seward's Letters; Playfair's British Family Antiquity, vi. 464; Baker's Biogr. Dramatica, i. 50, ii. 68.] C. W. S.

BOOTHBY, Miss HILL (1708-1756), friend of Dr. Johnson, born on 27 Oct. 1708, was grand-daughter of Sir William Boothby, third baronet, and daughter of Mr. Brook Boothby, of Ashbourne Hall, Derbyshire. Her mother was Elizabeth Fitzherbert, a daughter

of John Fitzherbert, of Somersall-Herbert. Miss Boothby was a woman of considerable ability. Miss Anna Seward calls her 'the sublimated methodistic Hill Boothby who read her bible in Hebrew.' She made the acquaintance of Dr. Johnson about three years before her death, while she was presiding over the household of a distant relation, Mr. Fitzherbert, of Tissington, near Ashbourne, for whose late wife she had entertained an enthusiastic affection. The acquaintance with Johnson soon ripened into a warm friendship. Johnson addresses her as 'sweet angel' and 'dearest dear,' and assures her that he 'has none other on whom his heart reposes.' His letters to her, preserved by Miss Seward, and now usually printed in the editions of Croker's 'Boswell,' are all in a like affectionate strain. In them he discloses the mystery of the orange-peel, which Boswell asked for in vain. According to Mrs. Piozzi, Johnson was annoyed by Miss Boothby's friendship for Lord Lyttelton, and was influenced by this jealousy in writing that nobleman's life. Croker doubted the story, arguing that only passionate love for Miss Boothby could have been a sufficiently strong motive to have thus influenced Johnson; and that a love of that kind between them was incredible. Miss Boothby died on 16 Jan. 1756; and her letters to Johnson, written with some vivacity, and generally in a tone of enthusiastic piety, were collected and published by Richard Wright, of Lichfield, in 1805, a book which also contains the fragment of Johnson's autobiography, and some verses to Miss Boothby's memory by Sir Brooke Boothby, her nephew [q. v.]. She is said to have been the original of Miss Sainthill in 'The Spiritual Quixote,' by the Rev. R. Graves (1773).

[See Miss Hill Boothby's letters to Dr. Johnson (London: printed for Richard Phillips, 6 Bridge Street, Blackfriars); Boswell's Johnson (Croker); Piozzi's Johnsoniana, § 73; Hayward's Piozzi, i. 256; Letters from Anna Seward from 1784–1807, some of which are extracted in Johnsoniana, part xxii.] E. S. S.

BOOTHBY, LOUISA CRANSTOUN, Lady (1812?–1858), actress. [See Nisbitt.]

BOOTHROYD, BENJAMIN, D.D. (1768–1836), independent minister and Hebrew scholar, was born at Warley, in the parish of Halifax, Yorkshire, on 10 Oct. 1768, and was the son of a poor shoemaker there. He was sent to the village school, and left it when six years old, able to read the Old and New Testaments; although an unruly child, he taught himself figures and ciphering. He helped his father to make shoes for a time, but when about fourteen years old he ran away with only a few pence in his pocket. Making westwards for Lancashire, he found work with a methodist, who treated him very kindly. With him he stayed till, hearing things were not well with his parents, he returned to Warley to superintend his father's trade, and was affectionately received and forgiven. About 1785 he vowed to devote himself to religion. He attended prayer meetings and spoke at them; he read Doddridge's works; was admitted a student of the dissenting college, North Howram, and was at once classed as of two years' standing. In 1790 he was chosen minister at Pontefract, and being ordained there, he succeeded in filling his chapel till it would not hold the congregation, and a new one had to be built.

At this time Boothroyd found that all that was left for his income, after paying expenses, was 20*l.* a year, and he opened a shop as a bookseller and printer. In 1801 he married a Miss Hurst of Pontefract. In 1807, having had a few materials for a history of the town presented to him by a Mr. Richard Hepworth, he added much more to these, and brought out, at his own press, his 'History of the Ancient Borough of Pontefract' (Preface, p. xiv). He resolved next to master Hebrew, for the purpose of producing a new Hebrew bible. He printed the work himself, and his wife helped him in correcting the proofs. It was brought out in quarterly parts, the issue beginning in 1810, and finishing in 1813, under the title of 'Biblia Hebraica,' and formed finally two volumes 4to. Seven years were spent over this undertaking. At the same time Boothroyd preached diligently; and published several excellent standard works, besides many sermons of his own. In his 'Sermon occasioned by the Death of Miss B. Shilito,' 1813, Boothroyd states (p. 34) that Miss Shilito attributed her 'conversion' to some talk with a son of Eugene Aram, a reaper of her brother's in Holderness.

In 1818 Boothroyd (who had accepted the degree of LL.D.) became co-pastor at Highfield Chapel, Huddersfield, with the Rev. William Moorhouse. In the same year he completed his 'New Family Bible and Improved Version,' in three vols. 4to, which had been suggested to him on a visit to York by Mr. Henry Tuke, a quaker. He printed many copies of this great book at his own press. It contained notes critical and explanatory, and called forth the highest praise (see Orme, *Bibliotheca Biblica*, p. 54; Cotton, *Editions of the Bible*, p. 116). In recognition of this achievement the university of Glasgow conferred on Boothroyd the degree of D.D. in 1824. In 1832 his wife died (*Evangelical*

Magazine, p. 108). By her he had four daughters and four sons (*ib.* 532). In 1835 Boothroyd completed an octavo edition of his 'Family Bible.' On 10 Jan. 1836 he was seized with a violent illness; after many months' suffering he died on 8 Sept. following. He was buried at Huddersfield.

[Evan. Mag. N. S. 1837, xv. 105–10, 374, 532; Gent. Mag. N. S. 1836, vi. 445; Darling's Cyclopædia Bibliographica (Authors), cols. 287, 369.] J. H.

BOOTT, FRANCIS, M.D. (1792–1863), physician, son of Kirk Boott, his father being English and his mother Scotch, was born at Boston, United States, on 26 Sept. 1792. After completing his education at Harvard University he was sent to England, where his studious habits and literary tastes soon led him to form intimacies with persons of like pursuits. For several years he journeyed backwards and forwards between England and America, making lifelong friendships in both countries, but especially in England. About 1820, when already married, he determined upon studying medicine, and placed himself under the tutelage of Dr. John Armstrong in London. Thence he removed to Edinburgh, where he took his doctor's degree in 1824. On his return to London in 1825 he commenced practice, and accepted the lectureship on botany in the Webb Street school of medicine; this chair however, though admirably conducted, he did not long hold. At the dying request of his friend Dr. Armstrong he edited his life. This book bears the following title: 'Memorials of the Life and Medical Opinions of John Armstrong, M.D. To which is added an Enquiry into the facts connected with those forms of fever attributed to malaria or marsh effluvium, by Francis Boott, M.D.,' 1833–34, two volumes. For seven years Boott practised very successfully in London, being especially noted for his treatment of fevers, in which he followed the practice of giving abundance of air to the patient, a course which at that time was vehemently objected to by the profession at large. In other respects, too, he was a judicious innovator, being one of the first to discard the black coat, white neckcloth, knee-breeches, and black silk stockings, for the ordinary costume of the day. This was then a blue coat with brass buttons, and yellow waistcoat, which he continued to wear to the last; and thus by outliving the fashion, as he had forestalled it, he came to be as well known in 1860 as he had been in 1830. Boott early retired from practice, and having inherited a competency he devoted himself for the last thirty-five years of his life to the cultivation of his literary, classical, and scientific tastes. As far back as 1819 he had become a fellow of the Linnean Society, and his leisure now permitted him to accept the office of secretary, which he held from 1832 to 1839. He was appointed treasurer in November 1856, which place he resigned in May 1861. His botanical labours were entirely confined to the study of the great genus *Carex*. The results of his labours have seen the light in a large folio work entitled 'Illustrations of the Genus Carex, by F. Boott, M.D. In four parts,' London, 1858–67. It was produced at his own expense, and distributed amongst botanists. His close attention to study tended to enfeeble his never very vigorous frame; but the immediate cause of his death was disease of the right lung, induced by pneumonia. It took place at 24 Gower Street, London, on 25 Dec. 1863. In connection with literature a most characteristic act of his was to erect in All Saints' Church, Cambridge, a tablet to the memory of Henry Kirke White, of whom he knew nothing personally, but whose life and poems he ardently admired. In addition to the works already mentioned Boott also published 'Two Lectures on Materia Medica' in 1837, and he prepared a monograph of 158 species of carex, which was printed in Sir William Jackson Hooker's 'Flora Boreali-Americana.' His wife was a Miss Hardcastle of Derby.

[Proceedings of Linnean Society, 1864, pp. xxiii–xxvii; Medical Times and Gazette, i. 77 (1864).] G. C. B.

BORDE, ANDREW (1490?–1549). [See BOORDE.]

BORDWINE, JOSEPH (*d.* 1835), professor at Addiscombe, was a native of America, and served for some time under General Whitlock, but was deprived of his commission in consequence of his having issued a pamphlet in which he commented rather severely on that general's conduct. He was made professor of fortification to the East India Company's College at Addiscombe, Surrey. In 1803 he was appointed an assistant in the quartermaster-general's department, and attached to the staff of the western district. A French invasion was expected, and Bordwine drew up a sketch of a new circular system of fortification for the defence of the country. He continued the work at intervals, and at last in 1809 published the 'Sketch,' which apparently attracted very little attention at the time. He was, however, prompted by his friends to take the subject up again in 1830, and the result was the issue in 1834 of a large 'Memoir of a Proposed New System of Permanent Fortification.' He died at Croydon 21 Feb. 1835.

[Gent. Mag. vol. for 1835; Introduction to the Memoir of a new System of Fortification.]

B. C. S.

BOREMAN or BOURMAN, ROBERT, D.D. (*d.* 1675), royalist divine, was a member of a family which came originally from the Isle of Wight, and brother of Sir William Bourman, clerk of the green cloth to King Charles II. He received his education at Westminster School, whence he was elected in 1627 to a scholarship at Trinity College, Cambridge. He graduated B.A. in 1631; was admitted a minor fellow of his college on 4 Oct. 1633, and a major fellow on 10 March 1634; and proceeded to the degree of M.A. in 1635. Like other royalists, he was deprived of his fellowship, but was restored to it in 1660. He was also created D.D. by virtue of letters mandatory from King Charles II dated 9 Aug. 1660 (KENNETT, *Register and Chron.* 226). On 15 Oct. in the same year he was admitted by the Archbishop of Canterbury—the see of Peterborough being then vacant—to the church of Blisworth, in Northamptonshire (*ib.* 281), and it seems that on 31 July 1662 he was formally admitted to that rectory by Dr. Lant, bishop of Peterborough (WOOD, *Fasti Oxon.* ii. 55 *n.*) He was admitted on 18 Nov. 1663 to the rectory of St. Giles's-in-the-Fields, on the presentation of the king, and on 19 Dec. 1667 he was installed as a prebendary of Westminster. He died a bachelor at Greenwich on 15 Nov. 1675, and was buried at that place.

Boreman bore the character of a pious and learned divine. It is to be regretted, however, that party feeling should have led him to make an utterly unfounded attack on the celebrated Richard Baxter, whom he charged in an anonymous work with being a 'man of blood,' for, addressing him, he wrote: 'I must tell you in your ear what I have heard, and is commonly reported, that in the late wars you slew a man with your own hand in cold blood' (*Αὐτοκατάκριτος: or Hypocrisie unvail'd*, 15). Baxter was highly indignant at this false charge, and began to write an answer to Boreman's pamphlet, though he eventually abandoned this design.

Boreman's works are: 1. 'The Countrymans Catechisme, or the Churches Plea for Tithes. Wherein is plainly discovered the Duty and Dignity of Christs Ministers, and the Peoples Duty to them,' Lond. 1652, 4to. 2. '*Παιδεία θρίαμβος*. The Trivmph of Learning over Ignorance, and of Truth over Falsehood. Being an Answer to foure Quæries. Whether there be any need of Universities? Who is to be accounted an Hæretick? Whether it be lawfull to use Conventicles? Whether a Lay man may preach? Which were lately proposed by a Zelot, in the Parish Church at Swacie [Swavesey] neere Cambridge,' Lond. 1653, 4to. Reprinted in the 'Harleian Miscellany' (1744), vol. i. 3. 'The Triumph of Faith over Death. Or the Just Man's Memoriall; compris'd in a Panegyrick and Sermon, at the Funerall of the Religious, most Learned Dr. Combar, late Master of Trinity Colledge in Cambridge, and Deane of Carlile. Delivered in Trinity Colledge Chappell on 29 March 1653,' London, 1654, 4to. Dedicated to William, earl of Portland. 4. 'A Mirrovr of Mercy and Iudgement. Or an Exact true Narrative of the Life and Death of Freeman Sonds, Esquier, Sonne to Sir George Sonds of Lees Court in Shelwich in Kent. Who being about the age of 19, for Murthering his Elder Brother on Tuesday the 7th of August, was arraigned and condemned at Maidstone. Executed there on Tuesday the 21. of the same Moneth, 1655,' London, 1655, 4to. Reprinted in 'Authentic Memorials of Remarkable Occurrences and Affecting Calamities in the family of Sir George Sondes, Bart.' Evesham [1790?], 12mo; also in the 'Harleian Miscellany,' x. 23 (Lond. 1813). 5. 'An Antidote against Swearing. With an Appendix concerning our Academical Oaths,' Lond. 1662, 8vo. 6. '*Αὐτοκατάκριτος*: or Hypocrisie unvail'd, and Jesuitisme unmaskt. In a Letter to Mr. R. Baxter, by one that is a lover of Unity, Peace, and Concord, and his Well-wisher,' Lond. 1662, 4to. 7. 'The Patern of Christianity: or the Picture of a true Christian. Presented at Northampton in a Sermon at a Visitation, May 12, 1663,' Lond. 1663, 4to. 8. 'A Mirrour of Christianity, and a Miracle of Charity; or a true and exact Narrative of the Life and Death of the most virtuous Lady Alice Dutchess Duddeley,' Lond. 1669, 4to. Dedicated to Lady Katherine Leveson, relict of Sir Richard Leveson, bart., and only surviving daughter of the duchess.

Boreman published and dedicated to Edward Hyde, earl of Clarendon, 'The True Catholicks Tenure' (Cambridge, 1662), written by his friend Dr. Edward Hyde. Several specimens of his poetry are met with among the loyal effusions of the university of Cambridge before the troublous times of the civil wars.

BORGARD, ALBERT (1659–1751), colonel, came of an ancient Danish family, and was born at Holbech, in Jutland, on 10 Nov. 1659. He joined the Danish army in 1675, during the war between Sweden and Denmark, and was made a gunner in 1676. He served throughout the war, and at its close, in 1679, held the rank of fire-worker, and was ordered to make a survey of the island of Zealand. 'In 1680,' he says, 'I, with another fireworker, was ordered to Berlin, in exchange of two Brandenburgher fireworkers, sent to Denmark to learn the difference of each nation's works, relating to all sorts of warlike and pleasant fireworks.' He served at the relief of Vienna, at the battle of Gran, and the siege of Buda. In 1688 he left the Danish service, on account of 'some injustice done him in his promotion,' and went to Poland as a volunteer; but he was offered a commission in the Prussian guards, which he accepted. In the Prussian army he served upon the Rhine, and at the siege of Bonn. In 1692 he left the Prussian army, with a commission to raise a regiment for the emperor; but failing in this design, he went in April to the camp of Louis XIV before Namur. He distinguished himself in the attack on the fortress; and the French king ordered him 1,000 crowns, and offered him a captain's commission. But Borgard, a sturdy protestant, refused the tempting offer, and joined Colonel Gore, whose acquaintance he had made at Bonn, as a volunteer.

Though but thirty-three years of age when he joined the English army, he had been present at eleven battles and twelve sieges, and was one of the most experienced artillery and engineer officers in the world. Gore introduced him to William III, who saw his ability, and made him a firemaster in the English service in 1693, and captain and adjutant of the artillery in Flanders in 1695. He was present at the battles of Steenkirk and Landen and the sieges of Huy and Namur. When at the peace of 1697 all the foreign artillerymen in English pay were dismissed, he, with only one other officer named Schlunt, was taken to England, and in 1698 made an engineer by William III's special command. In 1702 he helped to take Forts Ste.-Catherine, Matagorda, and Durand. On his return to England he married Barbara Bradshaw, by whom he had several children. After serving in Flanders he was gazetted lieutenant-colonel of artillery, and sent to command the artillery in Spain and Portugal in the army of Lord Galway. He took Valencia, d'Alcantara, Ciudad Rodrigo, and Alcantara, and made Galway's advance into Spain justifiable from a purely military point of view. In 1708 he superintended the reduction of the castle of San Felipe in Minorca. He was present with Stanhope at the battles of Almanza, Almanara, Saragossa, where he was wounded in four places, and at Villa Viciosa, where he was wounded, left for dead, and taken prisoner. On being exchanged he returned to England, and was appointed chief firemaster on 9 Aug. 1712. In 1713 he made use of some of his old Berlin lessons in 'pleasant fireworks,' and, to quote his own words, 'made pleasure fireworks which were burnt on the River Thames in the month of August over against Whitehall on the Thanksgiving-day for the peace made at Utrecht.' In 1715 he commanded the train of artillery sent to the Duke of Argyll in Scotland, in 1718 he was made assistant-surveyor of ordnance, and in 1719 commanded the artillery in the expedition to Vigo. This was Colonel Borgard's last piece of active service; but his greatest service of all was the formation of the regiment of royal artillery.

In his own account of his services Borgard says: 'In 1722 his late Majesty was graciously pleased to renew my old commission as colonel, and to give me the command of the regiment of artillery, established for his service, consisting of four companies.' His honourable behaviour as colonel-commandant is noted in a letter of his nephew, Major-general Albert Borgard Michelsen: 'He was strictly honest, and declared often, and shortly before he died, that he could safely affirm it upon oath that he had never made 6 pence out of his regiment above what the king allowed, and gave up the cloathing of the regiment to the Board of Ordnance, that he might not be suspected to have any profit of it. . . . He was in great favour with Prince George of Denmark, and with King George the 1st and 2nd' (Olsen, *General Lieutenant A. Borgard's Levnet og Bedrifter*, Appendix 2). Borgard was promoted major-general in 1735, and lieutenant-general in 1739; and when he died at Woolwich, on 7 Feb. 1751, at the great age of ninety-two, he left to his successor, General Belford, one of the finest corps of artillery in the world.

[Olsen's General-lieutenant Albert Borgard's Levnet og Bedrifter, Copenhagen, 1839; Biogr. Notes by Major Hime, reprinted from Proc. Roy. Artillery Instit. No. 4, vol. xiii. (with portrait).

See also a curious print and description of his 'pleasure fireworks' on the Thames on 7 July 1713 in Gent. Mag. for 1749, p. 202.] H. M. S.

BORGARUCCI, GIULIO, M.D. (*fl.* 1564–1579), court physician, was one of four sons of Carlo Borgarucci. Of his brothers, the eldest Borgaruccio edited several works of history and science; Prospero became professor of anatomy at Padua in January 1564, and obtained great reputation by his writings; and Giulio his elder brother, who was a physician, came to England as a protestant refugee, and was a member of the Italian branch of the 'Strangers' Church' in London, under the ministry of Girolamo Jerlito. In 1563, when London was visited by the plague, Borgarucci successfully treated the epidemic by bleeding. His brother Bernardino, a jurisconsult, was also then in London. Prospero also came to London during the plague, and learned from Giulio the use of a ball (*pomo*) compounded of balsamic substances, to be held in the hand, that its odour might counteract the effects of foul air. Borgarucci was admitted a member of the College of Physicians, and on 2 July 1572 was incorporated M.D. in the university of Cambridge. He was physician to the Earl of Leicester, who (*Leicester's Commonwealth*) is said to have made evil use of his knowledge of poisons. By patent of 21 Sept. 1573 he was made physician to the royal household for life, with an honorarium of 50*l.* per annum. The last trace of him is his letter of 21 Feb. 1578-9 to Lord Burghley (in whose house the Italian church originally assembled), asking the grant of a lease from the crown of the reversion of the parsonage of Middlewich, Cheshire. He is supposed to have died about 1581, and was succeeded as court physician by Roderigo Lopez. Borgarucci was married, and in October 1573 he wrote to Lord Burghley complaining that Sir William Cordell, master of the rolls, had for five months detained his wife from him in his house, nourishing her in his popish superstitions. The lady was not anxious to return, and a commission of delegates was appointed to inquire whether she was really Borgarucci's wife or the wife of another person. The case lasted several years; ultimately Borgarucci seems to have established his conjugal rights. From the fact that Archbishop Grindal took sides against Borgarucci, it is perhaps not unreasonable to suppose that the court physician was one of those who regarded as 'popish superstitions' some of the positions of anglican orthodoxy. He wrote a short commendatory epistle in Latin, following the 'Proeme' to John Banister's 'The Historie of Man, sucked from the sappe of the most approued Anathomistes,' &c. 1578, fol. (Cooper gives 1572 as the date of the work).

[Dedication (dated 4 Dec. 1564) to Prospero Borgarucci's 'De Peste perbrevis tractatus,' Venice, 1565, 8vo; see also the Italian edition, Trattato di Piste, 1565, 8vo, pp. 59, 105; Rose's Biog. Dict. 1857, art. Borgarucci, Prosper; Cooper's Ath. Cantab. i. 450; Bonet-Maury's Early Sources of Eng. Unit. Christianity (trans. Hall), 1884, p. 134.] A. G.

BORINGDON, second BARON (1772–1840). [See PARKER, JOHN.]

BORLAND, JAMES, M.D. (1774–1863), inspector-general of army hospitals, was born at Ayr, N.B., in April 1774, and entered the army medical department as surgeon's-mate in the 42nd Highlanders in 1792. Having been promoted on the staff next year, he made two campaigns under the Duke of York in Flanders, after which he proceeded to the West Indies as surgeon, 23rd royal Welsh fusiliers. He was then again transferred to the staff, and did duty in St. Domingo from 1796 until the last remnant of the British army was withdrawn from that pestilential shore in 1798. In 1799 he accompanied the expedition to the Helder, and after its failure was sent by the Duke of York to the headquarters of the French general, Brune, with a flag of truce, to arrange for the exchange of the wounded. For this service he was promoted to the then newly constituted rank of deputy-inspector of army hospitals. He was also attached to the Russian troops, which had co-operated with the British in North Holland, and had been ordered to winter in the Channel Islands until the breaking up of the ice in the Baltic should allow of their return home. For this service, rendered more onerous by an outbreak of malignant fever in Guernsey, he received the thanks of the czar, but he declined an invitation to enter the imperial service. Borland was chief medical officer of the army in the southern counties, under command of Sir David Dundas, at the time of the threatened French invasion. Becoming inspector-general of hospitals in 1807, he was at head-quarters in London at a period when many improvements in army hospital organisation were essayed. During the unfortunate expedition to the Scheldt, he volunteered for the duty of inquiring into the causes of the sickness and mortality at Walcheren, being associated with Dr. Lempriere, one of the physicians to the army, and Sir Gilbert Blane [q. v.], who had then left the navy and was in practice in London. The report of these commissioners, at whose recommendation the troops were

finally withdrawn, was ordered by the House of Commons to be printed among 'Accounts and Papers for 1810.' Its description is 'Papers relating to the Scheldt Expedition,' fol. 2, No. 104. From 1810 to 1816 Borland was principal medical officer in the Mediterranean, during which period he organised the hospitals of the Anglo-Sicilian contingent, the efficiency and unprecedented economy of which formed the subject of a special official minute on the breaking up of the force. His services during the outbreak of plague at Malta received the highest praise from Admiral Lord Exmouth. He also accompanied the force sent to assist the Austrians in expelling Murat from Naples, and the troops under Major-general Sir R. Macfarlane, despatched from Genoa, which held Marseilles and blockaded Toulon at the time of the Waterloo campaign. Borland retired on half-pay in 1816. He was appointed honorary physician to H.R.H. the Duke of Kent, and also received the order of St. Maurice and St. Lazare of Savoy. For many years he was resident at Teddington, Middlesex, where his sterling character and many kindly deeds won for him general esteem. He died at Teddington on 22 Feb. 1863, at the age of eighty-nine years.

[Gent. Mag. new series, xiv. 529, 666; Lancet, 1863, i. 641; Hart's Army Lists; Ayr Advertiser, 19 March 1863.] H. M. C.

BORLASE or BURLACE, EDMUND (*d.* 1682?), historic writer and physician, was son of Sir John Borlase, who received the appointment of master-general of the ordnance, Ireland, in 1634, and held office as lord justice there from 1640 to 1643. Edmund Borlase is stated by Anthony à Wood to have been educated at Dublin, and to have obtained the degree of doctor in physic at Leyden in 1650. He subsequently settled in Chester, where, according to Wood, he 'practised his faculty with good success to his dying day.' Borlase in 1660 received the degree of doctor of medicine from the university of Oxford. He enjoyed the patronage of Charles Stanley, earl of Derby, to whom he dedicated a treatise, published in 1670, on 'Latham Spa in Lancashire, with some remarkable Cases and Cures affected by it.' In 1675 Borlase published at London an octavo volume of 284 pages, with the following title: 'The Reduction of Ireland to the Crown of England; with the Governours since the Conquest by King Henry II, anno 1172; with some passages in their government. A brief account of the Rebellion, anno Dom. 1641. Also, the original of the Universitie of Dublin, and the Colledge of Physicians.' The work was mainly a compilation from printed books, and terminated at the year 1672. In it the author introduced some medical observations on diseases prevalent in Ireland. Among remedies for dysentery, he mentioned that recently, in cases of extremity, great use had 'been made of swine's dung drank in a convenient vehicle.' The compilation of a history of affairs in Ireland from 1641 to 1662 was undertaken by Borlase chiefly with the object of demonstrating that the administrators of the English government there had not acted adversely to the royal interests nor unjustly towards Irish catholics. For the purposes of his work, Borlase obtained a copy of an unpublished treatise on Irish affairs by Edward Hyde, earl of Clarendon. This he unskilfully altered and interpolated, to make it accord with his views. Borlase's work, after expurgation by Sir Roger L'Estrange, was published at London in 1680: 'The History of the execrable Irish Rebellion, trac'd from many preceding acts to the grand eruption, the 23 of October, 1641, and thence pursued to the Act of Settlement, 1662.' The publication attracted little attention, owing to the defective style and absence of the author's name. The appearance of Borlase's work induced James, earl of Castlehaven, to publish in the same year, at London, a small volume of 'Memoirs,' in which he gave an account of his 'engagement and carriage in the wars of Ireland.' Castlehaven's 'Memoirs' elicited a commentary which appeared at London in 1681, under the title of 'A Letter from a Person of Honour in the Country.' Borlase, at the instance of Anglesey, published in the following year 'Brief Reflections on the Earl of Castlehaven's Memoirs of his engagement and carriage in the wars of Ireland,' &c., London, 1682. This publication was anonymous, but the initials 'E. B.' were appended to the address to the king, prefixed to it. Borlase gave Bishop Burnet some materials for the 'History of the Reformation,' among which were papers relative to the English translation of the Bible. He was dead before 18 Feb. 1681–2 (*Sloane MS.* 1008, f. 49). A copy of Borlase's 'History of the Irish Rebellion' by him, in which he re-inserted the portions excised by the licenser of the press, together with Borlase's collections and correspondence connected with his 'History,' is now in the Sloane collection at the British Museum. Some of these papers were printed at Dublin in 1882, in the 'History of the Irish Confederation and War in Ireland, 1641–1643. Borlase's 'History' was republished at Dublin in 1743, without the author's name. In

this edition the word 'execrable' was omitted from the title, and some documents not previously printed were given in an appendix to the volume.

[Wood's Athenæ (Bliss), iii. 1024, iv. 185, 846; Nalson's Collections of Affairs of State, 1682–3; Sloane Manuscript No. 1008, British Museum; Copy of Borlase's History, with his manuscript additions; Ormonde Archives, Kilkenny Castle; Proceedings between James, Duke of Ormonde, and Arthur, Earl of Anglesey, London, 1682; Burnet's Hist. of Reformation of Church in England, Oxford, 1829, vols. ii. iii.] J. T. G.

BORLASE, HENRY (1806–1835), separatist clergyman, born at Helstone, Cornwall, on 15 Feb. 1806, was educated at Trinity College, Cambridge, graduating B.A. in 1828. After taking orders, he became curate at St. Keyne, near Liskeard, about December 1830. At the end of 1832 he resigned his curacy and withdrew from the established church. Taking up his residence in Plymouth, he joined a society, formed in 1831–2, which had received the name of Plymouth Brethren, a movement which has since assumed larger proportions, and developed many remarkable peculiarities. He has been spoken of as its founder, but this is incorrect; he was a great friend of Benjamin Newton, one of the originators of the society. Borlase considered that the established church, as a human institution, had fallen into apostasy, and that separation from apostasy was no schism. In 1834 he began the publication at Plymouth of a quarterly organ, the 'Christian Witness,' which continued to exist till 1840. At the beginning of 1834 he broke a blood-vessel, and was subsequently in very precarious health. He died on 13 Nov. 1835, at Plymstock, near Plymouth. He married Caroline Pridham. His contributions to the 'Christian Witness' were included in a small publication, without date, 'Papers by the late Henry Borlase, connected with the Present State of the Church.' Some biographical particulars are added by the anonymous editor.

[Notes and Queries (3rd ser.), v. 203; Cooper's Biog. Dict. 1883, p. 258; Registers of St. Keyne (per Rev. T. L. Symes); information from his sister, Mrs. Charles Grylls, and from R. N. Worth, F.G.S., Plymouth.] A. G.

BORLASE, Sir JOHN (1576–1648), soldier, was bred a soldier in the wars of the Low Countries, where he served with distinction before the truce in 1608. He also served in Sir Horace Vere's expedition to the Palatinate in 1620 (Rushworth, i. 15), and is mentioned as one of the commanders of the 6,000 English who were serving in the United Provinces in 1626 (Rushworth, i. 421). In 1633 he was appointed master of the ordnance in Ireland, apparently on the recommendation of Strafford, who had a high opinion of him (Strafford's *Correspondence*, i. 113–197, ii. 108–204). Lord Dillon and Sir William Parsons were appointed lords justices in 1640, but Dillon being considered dangerous as the brother-in-law of Strafford, Borlase was appointed in his room, 'by the importunity of the Irish committee then at court' (Nalson, ii. 564). This post he seems to have been unfit to fill, for though a good soldier, he understood nothing else, and had now grown old and indolent. As lord justice he gave himself very little trouble about the exercise of his authority, and left all to his colleague, Sir William Parsons (Carte's *Life of Ormonde*, bk. iii. 66). Sir John Temple, however, gives a much more favourable account of Borlase's government (*History of the Irish Rebellion*, p. 13). In April 1643 Sir Henry Tichborne became Borlase's colleague in place of Parsons, and nine months later (21 Jan. 1644) both were superseded by the appointment of the Marquis of Ormonde as lord-lieutenant. Borlase continued to hold the post of master of the ordnance till his death in the spring of 1648. He died in London 15 March 1647–8, and was buried in the church of Great St. Bartholomew. His estate had so suffered during the rebellion that Lady Borlase was obliged to apply to parliament for money to defray her husband's funeral and for her own support (*Journals*, 13 June 1649; see also the subsequent petitions of his family in the *Domestic State Papers of the Commonwealth*).

[Carte's Life of Ormonde; Strafford Correspondence; Rushworth's Historical Collections; Borlase's History of the Irish Rebellion. Gilbert's History of the Irish Confederation contains a collection of Borlase's official letters.] C. H. F.

BORLASE, WILLIAM (1695–1772), antiquary, descended, it is said, from a Norman family, who settled in the parish of St. Wenn, Cornwall, where they adopted the Cornish name of their place of residence (Borlase's *MSS.*) Pendeen, near St. Just, became their chief abode about the middle of the seventeenth century; and the Borlases took the royalist side in the civil war. William Borlase, the second son of John Borlase, M.P. for St. Ives in Cornwall, and Lydia Harris, his wife, of Hayne, Devonshire, a descendant of the Nevilles and Bouchiers, was born on 2 Feb. 1695 (*Quarterly Review*, cxxxix. 367). First educated at a school in Penzance, he was removed thence to Plymouth in 1709, and placed under a

Rev. Mr. Bedford; going afterwards to Tiverton School. In March 1712–13 he was entered at Exeter College, Oxford, where he took his degrees of B.A. and M.A. in due course. In 1719 he was ordained deacon, and in 1720 priest. In 1722 he was presented to the living of Ludgvan, near Penzance, and he now seems to have first paid particular attention to the natural history of his native county, and to the præhistoric antiquities of the hundred of Penwith. He was an acute observer and a careful draughtsman, and his observations, albeit sometimes of a too fanciful character (especially when he approaches the subject of the Druids), are often interesting and original. In 1724 he married Anne Smith, daughter of the rector of Illogan and Camborne. In 1730, when on a visit to Bath for the benefit of his health, he became acquainted with Pope, Ralph Allen, and other persons of eminence and ability; and his correspondence with them, and other distinguished persons whose acquaintance he afterwards made, continued during Borlase's life, and is preserved, in more than forty volumes, in the library of Castle Horneck, Penzance. A list of them is given in Courtney and Boase (*Bibl. Cornub.* i. 3415). In 1732 his brother, the Rev. Walter Borlase, LL.D., vice-warden of the Stannaries of Cornwall, died; and thereupon Borlase added the vicarage of St. Just, about twelve miles distant, to his other benefice. Notwithstanding his active researches in natural history and antiquities, William Borlase seems to have paid close attention to his clerical duties, which he is said to have performed with 'the most rigid punctuality and exemplary dignity' (Chalmers). In the summers of 1744 and 1745 Borlase came into conflict with John Wesley, whom, in his capacity of magistrate, he summoned before the justices. In 1748 he went to Exeter, to be present at the ordination of his eldest son, and whilst here made the acquaintance of Dean Lyttelton (afterwards bishop of Carlisle). This acquaintanceship seems to have led to the publication of the results of Borlase's labours, for in the following year appeared his essay on 'Spar and Sparry Productions, called Cornish Diamonds,' in the 'Philosophical Transactions.' This at once procured his election in 1750 as a fellow of the Royal Society. His contributions to the 'Philosophical Transactions' (nineteen in all) are catalogued in the 'Biographia Britannica,' ii. 425.

In 1753 he went to Oxford in order to bring out his 'Cornish Antiquities,' which was published in the following year. A second edition followed in 1759. In 1756 his account of the Scilly Islands appeared. It was an enlargement of one of his papers in the 'Philosophical Transactions,' and the work elicited from Dr. Johnson, in the 'Literary Review,' the criticism that 'this is one of the most pleasing and elegant pieces of local inquiry that our country has produced.' In 1757 Borlase revisited Oxford, this time with a view to bringing out his 'Natural History,' which appeared in 1758, illustrated, like the 'Antiquities,' with numerous plates after his own drawings. Some supplemental emendations of this work were printed in the 'Journal of the Royal Institution of Cornwall' for 1864 et seq. Shortly after 1758 he presented to the Ashmolean Museum the whole of his collections. A manuscript list of them, with some original letters, is in the Museum (W. H. Black's *Catalogue of Ashmolean MSS.*) In acknowledgment of this gift, and in recognition of his distinguished services to literature and archæology, the university conferred upon him by diploma, on 23 March 1766, the degree of doctor of laws. Although Borlase was now seventy years of age, he continued his literary pursuits, writing his 'Sacræ Exercitationes' (chiefly paraphrases of Ecclesiastes, the Canticles, and the Lamentations). He took deep interest in gardening, and in the formation and improvement of the public roads in his neighbourhood. He now also worked at a 'Parochial History of Cornwall,' never published. His latest literary work consisted of some speculations on the 'Creation and the Deluge,' but this, too, was not printed (although actually sent to the press), in consequence of Borlase's last illness. On 31 Aug. 1772 he died at Ludgvan, of which parish he had for fifty-two years been rector, in the seventy-seventh year of his age.

He left six sons, only two of whom survived him: the Rev. John Borlase, and the Rev. George Borlase, casuistical professor and registrar of the university of Cambridge.

[Nichols's Literary Anecdotes, iii. 78, 689, v. 291–303; Nichols's Illustrations, iv. 227, 445, 460, 468; Gent. Mag. lxxiii. part ii. 1114–17; Literary Magazine for May 1756; Tregellas's Cornish Worthies.] W. H. T.

BOROUGH, CHRISTOPHER (*fl.* 1579–1587), son of Stephen Borough [q. v.], was the chronicler of one of the most interesting journeys into Persia recorded in the pages of Hakluyt. This trading venture of the Muscovy Company left Gravesend on 19 June 1579 in charge of Arthur Edwards and others, with Borough as Russian interpreter. The fleet having arrived at St. Nicholas in the White Sea on 22 July, they

unloaded into smaller barks suitable for the inland navigation and descended the Northern Dwina to Vologda. Proceeding thence overland to the left bank of the Volga, they once more reshipped in three barks at Yaroslaw on 14 Sept., terminating the first portion of their voyage down this great Russian water-way at Astrakhan on 16 Oct., where they wintered. Borough and his party, leaving Edwards, the chief agent, in charge at Astrakhan, embarked on 1 May 1580 on board an English-built bark for Persia. After having cleared the intricate navigation of the mouths of the Volga, but not without damage and loss, they made for Derbend or some convenient port near it. Owing, however, to adverse winds, they were carried as far south as the Apsheron peninsula, where they anchored off Bildh (Biala). Here they were entertained by the captain or governor of Baku, who directed them to make once more for Derbend, the chief emporium for traffic in those parts. Here they traded for silk and other goods from 22 June to 3 Oct. Borough's descriptions of Derbend and the neighbourhood of the ancient city of the fire-worshippers, Baku, are most interesting, as showing, on the one hand, the growth of the Turkish power, and, on the other, the decadence of the Persian power on the then little-known shores of the Caspian Sea. Borough's thorough nautical training, received at the hands of both his father and uncle, is shown in the series of carefully made observations for latitude which are to be found in his narrative, and which are probably the earliest made with any degree of accuracy for these parts. After plying on and off the coast between Derbend and Baku to pick up stragglers, including two Spaniards who had fled from the Goletta near Tunis, Borough's party returned to Astrakhan after many perils at sea on 4 Dec., where they once more wintered. On the return of the open weather in the following April the traders to Persia set out on their homeward journey, and arrived at Rose Island, near St. Nicholas, on 16 July. The ship (William and John), laden with proceeds of the Persian voyage, shortly afterwards sailed for England, and arrived in the Thames on 25 Sept. 1581.

Borough's account of this journey reads as follows: 'Aduertisements and reports of the 6th voyage into the parts of Persia and Media for the Company of Merchants for the discouerie of new trades, in the yeares 1579, 80, and 81, gathered out of sundrie letters written by Christopher Burrough, servant to the saide companie, and sent to his uncle, Master William Burrough' (Hakluyt, i. 419–431). From another series of observations for latitude appended to the advertisements, made between July and November 1581, it would appear that Borough did not return to England with the fleet in that year, but found employment in visiting the English houses between Archangel and Astrakhan, where many of the observations were made.

In November 1587 Borough addressed a letter to the governors of the Muscovy Company upon their affairs in Russia; this document, probably on account of its great length, has not yet received the attention it deserves. Among other things, it seems to expose in the strongest possible way the devious policy of Sir Jerome Horsey and his harsh treatment of J. Peacock and other agents sent out by the company in 1585 to look into these matters (cf. *Russia of the Sixteenth Century*, edit. by Dr. E. W. Bond, Hakluyt Soc., 1858, p. xciii). In Borough Horsey found an uncompromising opponent, who preferred, as Horsey did not, the luxury of fearless truth-telling to making a rapid fortune by private trading at the company's expense. This letter also serves to determine the paternity of Borough, as in it he writes of 'my father's discouerie of the countrie,' which clearly points to Stephen Borough [q. v.] To this letter is appended a statement 'comparyng of the decay and improvement of the Russia trade,' the idea of improvement being the abolition of all the company's houses in Moscow and elsewhere, and the transfer of all business and traffic to the seaside house at St. Nicholas, in order to prevent private trading and political intrigue, in which Horsey was an adept. Of the dates of the birth and decease of Christopher Borough we have no information, but it will be convenient to add here that the earliest mention of the family known to us is that of Stephen de Burgh, as witness to a deed relating to Stocdone, in the manor of Northam, Devonshire, 30 Edw. III, 1302.

[Hakluyt's Navigations, Voyages, &c., 1559, vol. i.; Lansd. MS. 52 (37); Hist. MSS. Comm. 4th Report, p. 376*a*.] C. H. C.

BOROUGH, BURGH, or DE BURGO, JOHN (*d.* 1386), divine, was D.D. of Cambridge and rector of Collingham, Nottinghamshire. In July 1384 he was appointed to fill the post of chancellor of his university (Romilly, *Graduati Cantabr.* p. 362, Cambridge, 1846), after which he returned to his benefice, and died there in 1386 (Pits, *De Angliæ Scriptoribus*, p. 543; Tanner, *Bibl. Brit.* p. 113). His works consist of homilies and of a theological treatise, the 'Oculus Sacerdotis,' which long retained a

great popularity; part of it, the 'Pupilla Oculi de septem Sacramentorum Administratione,' was five times printed at Paris and Strassburg between the years 1510 and 1518.

Borough is to be distinguished from another John de Burgo or Burgensis, of Peterborough, a Benedictine, who flourished in 1340 (BALE, v. 62), and who is claimed by Leland (*Comm. de Script. Brit.* pp. 330 seq., cf. 328) as a chronicler.

[Authorities cited above.] R. L. P.

BOROUGH, SIR JOHN (*d.* 1643), Garter king of arms, whose name is often incorrectly written Burroughs, was grandson of William Borough, of Sandwich, Kent, by the daughter of Basil Gosall, of Nieuwkerk, Brabant, and son of John Borough, of Sandwich, by his wife, daughter of Robert Denne, of Dennehill, Kent. It was reported by some of his contemporaries that his father was a Dutchman who carried on business as a gardener or brewer at Sandwich. He received a classical education, and afterwards studied law at Gray's Inn, but he showed more aptitude for the study of records and antiquities than for the practice of the legal profession. In 1622 he was at Venice, and from that city he addressed several letters to Sir Robert Cotton, chiefly about the purchase of manuscripts, subscribing himself 'Your faithful servant and poore kinsman' (*Cotton MS.* Julius, C iii. 33, 34, 36). He was appointed in 1623 keeper of the records in the Tower of London. In June of the same year, by the favour of the earl marshal, to whom he was secretary, he was sworn herald-extraordinary by the title of Mowbray, and on 23 Dec. following he was created Norroy king of arms, at Arundel House in the Strand, in the place of Sir Richard St. George, who was created Clarenceux. He was M.P. for Horsham 1624, 1625, and 1626. On 17 July 1624 he was knighted, and in 1634 made Garter principal king of arms in the place of Sir William Segar, deceased.

As keeper of the records, when King Charles I was discussing the propriety of summoning the great council of peers, Borough was called in to enlighten the council by his learning in the records respecting those assemblies. He attended his sovereign when he went to Scotland to be crowned in 1633. On 14 April 1636 he obtained a grant to entitle him to the fees and perquisites of his office of Garter while employed beyond the seas for the king's special service (*State Papers*, Dom. Charles I, vol. cccxviii. art. 72). As principal king of arms he followed the fortunes of his sovereign in the field during the civil war, and had several narrow escapes while in the royal camp. For instance, Edward Norgate, Windsor herald, writing from Berwick to his cousin Thomas Read, on 3 June 1639, says that the king's tent was shot through once, and Sir John Borough's twice (*Cal. State Papers*, Dom. Charles I [1639], 272).

Borough was an admirable note-taker, and rendered useful service by drawing up accounts of various conferences between the royalists and the parliamentarians. The curious notes of the interview between Charles and the covenanters in the earl marshal's tent near Berwick on 11 June 1639 were in all probability taken by him. When the great council met at York he was appointed its clerk, and in that capacity he took the full and admirable notes of its proceedings which constitute the only record we possess of what took place in that assembly. Again, when the sixteen commissioners went to Ripon, Borough accompanied them as their clerk, and took notes of the treaty there. Finally when the treaty was adjourned to London, Borough resumed his attendance upon the commissioners, and carried on his notes until the treaty was concluded.

While in the service of the court at Oxford that university conferred upon him the degree of D.C.L. on 5 Aug. 1643. He died about two months afterwards, on 21 Oct. 1643, at Oxford, and was buried the next day at the upper end of the divinity chapel adjoining, on the north side, the choir of Christ Church cathedral.

He married the daughter of —— Cassy, by whom he had two sons and two daughters. His eldest son, John, was knighted by Charles II, and had a considerable practice in the court of chancery until the Test Act passed.

He is the author of: 1. 'The Soveraignty of the British Seas. Proved by Records, History, and the Municipall Lawes of this Kingdome. Written in the yeare 1633,' London, 1651, 12mo [1729], 8vo. There are manuscript copies in the Harleian collection, 1323 ff. 95–137, the Lansdowne collection, 806 f. 40, the Sloane collection, 1696, art. 2, and in the State Papers, Dom. Charles I, vol. ccclxxvi. art. 68. The work is reprinted in Gerard Malynes's 'Consuetudo, vel Lex Mercatoria; or, the Antient Law-Merchant,' London, 1686, folio. 2. 'Journal of Events at the English Camp, extending from the 6th to the 24th of June 1639,' State Papers (Dom.), Charles I, vol. ccccxxiv. art. 63, 64. This journal, which comprises the history of the pacification with the Scottish covenanters, is printed in Rushworth's 'Collections,' iii. 938–946. 3. 'Notes of the Interview between

Charles I and the Covenanters in the Earl Marshal's Tent near Berwick, on 11 June 1639.' In Lord Hardwicke's State Papers, ii. 130. 4. 'Articles of the Treaty between the Commissioners of England and Scotland, 1640–41,' Harl. MS. 455. 5. 'Minutes of what passed in the Great Councell of the Peers at Yorke from 25 Sept. to 27 Oct. 1640,' Harl. MS. 456; printed in Lord Hardwicke's State Papers, ii. 208–298. 6. 'Notes of the Treaty carried on at Ripon, between King Charles I and the Covenanters of Scotland, A.D. 1640,' London, 1869, 4to, edited for the Camden Society by John Bruce, from the original manuscript in the possession of Lieutenant-colonel Carew. 7. 'Minutes of the Treaty between the English and Scots held at London; from 10 Nov. 1640 to 12 Aug. 1641,' Harl. MS. 457. 8. 'Burrhi Impetus Juveniles. Et quædam sedatioris aliquantulùm animi Epistolæ,' Oxford, 1643, 12mo; reprinted at the end of 'A. Gislenii Busbequii Omnia quæ extant,' Oxford, 1660, 16mo. Most of the letters are written to Philip Bacon, Sir Francis Bacon (Lord Verulam), Thomas Farnabie, Thomas Coppin, and Sir Henry Spelman. 9. T. C.

BOROUGH, STEPHEN (1525–1584), navigator, was born on an estate of the same name in the parish of Northam, Devonshire, on 25 Sept. 1525. His name is first met with as one of the twelve 'counsellors' appointed in the first voyage of the English to Russia in 1553. On the setting forth of the fleet of three ships Borough was appointed to serve under Richard Chancellor, pilot-general of the fleet, as master in the Edward Bonaventure of 160 tons, the largest ship of the fleet. The tragic end of Sir Hugh Willoughby and his crew of the Bona Esperanza is too well known to repeat here; the only ship that returned in safety was the one navigated by Borough, who in this voyage first observed and named the North Cape. As recorded upon his monument in Chatham Church, it may be fairly claimed for him, as for Chancellor, that 'he in his lifetime discouered Moscouia, by the Northerne sea passage to St. Nicholas, in the yeere 1553.' In Chancellor's second voyage to Russia in the same ship, along with the Phillip and Mary, in 1555, Borough's services were replaced by those of another sailing-master, while he himself found employment at home (Hamel, 117), probably in preparing for the expedition of the following year. Of this he has left us the following record: 'The Navigation and discourie toward the river of Ob (Obi), made by Master Steuen Burrough, Master of the Pinesse called the Serchthrift, with diuers things worth the noting, passed in the yere 1556.' To this is added 'Certaine notes imperfectly written by Richard Johnson, seruant to Master Richard Chancelour, which was in the discouerie of Vaigatz and Nova Zembla, with Steuen Burrowe in the Serchthrift.' The outcome of this most interesting voyage was the discovery of the entrance to the Kara Sea, the strait between Nova Zembla and the island of Waigats leading thereto still bearing the name Burrough. Adverse winds and the lateness of the year preventing Borough from reaching the Obi, he worked his way back to the White Sea and the Northern Dwina, arriving at Kholmogro on 11 Sept., where he wintered. In the following May he set out on 'The voyage of the foresaid M. Stephen Burrough [also in the Searchthrift], Anno 1557, from Cholmogro to Wardhouse, which was sent to seeke the Bona Esperanza, the Bona Confidentia, and the Phillip and Mary, which were not heard of the yeere before' (Hakluyt, i. 290–295). After a careful exploration of the coast of Lapland he reached Wardhouse (Vardhus) on 28 June. Failing to glean any tidings of the missing ships here after a stay of two days, he returned once more towards Kholmogro. On 30 June he arrived off Point Kegor (Kekourski), on what is now known as Ribachi, or Fisher Island, in Russian Finland. Here he anchored in Vaid Bay, where he found four or five Norwegian vessels, either manned or chartered by Dutchmen, whom he found trading, among other things, in strong beer with the Lapps for stock-fish. Of this Borough quaintly writes: 'The Dutchman bring hither mighty strong beere; I am certaine that our English double beere would not be liked of the Kerils and Lappians as long as that would last.' Here he learned the fate of two of the missing ships, hearing nothing of the Bona Esperanza until a later period. He was informed by the son of the burgomaster of Dronton (Throndhjem) that the Bona Confidentia was

lost and that he had purchased her sails, and that the Phillip and Mary had sailed from Dronton waters for England in the previous March, where, as we learn from another source (HAKLUYT, i. 285), she arrived in the Thames the following April. After what manner Borough terminated this voyage we have no information beyond the statement that he was unable to make his way back to Kholmogro on account of adverse winds. It is more than probable that after a short stay in Vado Bay for victualling he directed his course for England, where he arrived at the end of the summer of 1557. Borough's yearly voyages to the north were followed by a journey to the south, whether undertaken on his own behalf or that of the Merchant Adventurers we have no means of determining. Hakluyt writes: 'Master Steuen Borrows tolde me that newely after his returne from the discouerie of Moscouie by the North in Queen Maries daies, the Spaniards, having intelligence that he was master in that discouerie' (probably the one of 1553), 'tooke him into the cõtractation house [at Seville] at their admitting of masters and pilots, giuing him great honour, and presented him with a payre of perfumed gloues worth fiue or six Ducates' (*Divers Voyages*, preface). Hakluyt's reference to 'Queen Maries daies' limits our choice to one of two dates for this journey to Spain, either 1555 (see *ante*) or 1558. The most probable opinion seems to be in favour of 1558, as we have no record of Borough resuming his yearly voyages to St. Nicholas until two years later. In May 1560 Borough once more took charge of a fleet of three ships in what is known to students of Hakluyt as the seventh voyage of the Merchant Adventurers to Moscovy. Borough's ship, the Swallow, was freighted with broadcloths, kerseys, salt, sack, raisins, and prunes, which were to be exchanged for foxskins, furs, &c.; we are also informed that 'one of the pipes of secker [i.e. sherry] in the Swallow, which hath two round compasses upon the bung, is to be presented to the emperour (Ivan IV), for it is special good.' Borough also carried instructions to bring home Anthony Jenkinson, whom he must have found at St. Nicholas waiting to return with the fleet, after his famous journey across the Caspian into Central Asia (HAKLUYT, i. 309, 335). Although Borough's name is not mentioned, it may be fairly assumed that his last voyage to Russia was once more in command of the Swallow and two other vessels, which conveyed Jenkinson to St. Nicholas in May 1561, on his journey through Russia as ambassador to Persia. Borough's career may be conveniently divided into two portions, the first as servant to the merchant adventurers trading to Russia, the second as servant to the queen. His first had now terminated. The causes which led to his appointment under the crown may be traced in no very indirect way to his visit to Spain; this, as we have already suggested, may reasonably be assumed to have taken place shortly before the death of Queen Mary, which event took place on 17 Nov. 1558. One of the results of Borough's visit to Spain was the translation of the 'Breve compendio de la sphera y de la arte de navegar, por Martin Cortes,' Seville, 1551, undertaken by the scholarly Richard Eden, at the cost and charges of the merchant adventurers, and known in its English dress as 'The Arte of Navigation,' London, 1561, in the preface to which Eden writes: 'Steuen Borough was the fyrst that moued to haue this work translated into the Englyshe tongue.' Another result, and a most important one for Borough, was his appointment on 3 Jan. 1563 as chief pilot and one of the four masters of the queen's ships in the Medway. It hardly admits of doubt that the main factor in assisting the queen's advisers in their decision in making this dual appointment was the able document drawn up by Borough soon after his return from Spain, bearing the following title: 'Three especiall causes and considera-cons amongst others whether the office of Pilott maior ys allowed and estemed in Spayne, Portugale, and other places where navigacon flourisheth.' Drafts of Borough's appointment and the above document are preserved in the British Museum Library (*Lansd. MS.* 116, 10½ pp.) The objects in view in creating the office of chief pilot were the instruction and examination of seamen in the art of navigation; but as no machinery existed for carrying these out efficiently, as in the contractation house in Seville, the former appointment was allowed to lapse, Borough's attention in those stirring times being wholly directed to the surveying of ships in the Medway at Gillingham and Chatham. This employment, varied by sundry services at sea, of which we have no record, extended over a period of twenty years. Borough died in his sixtieth year, and was buried in Chatham Church, where a monumental brass to his memory is preserved in the chancel, bearing the following inscription: 'Here lieth buried the bodie of Steven Borough, who departed this life ye xij day of July in ye yere of our Lord 1584, and was borne at Northam in Devonshire ye xxvth of Septemb. 1525. He in his life time discouered Moscouia, by the Northerne sea passage to St. Nicholas, in the yere 1553. At his setting foorth of England he was accom-

panied with two other shippes, Sir Hugh Willobie being Admirell of the fleete, who, with all the company of ye said two shippes, were frozen to death in Lappia ye same winter. After his discouerie of Roosia, and ye Coastes thereto adioyninge—to wit, Lappia, Nova Zemla, and the Countrie of Samoyeda, etc.: he frequented ye trade to St. Nicholas yearlie, as chief pilot for ye voyage, until he was chosen of one of ye foure principall Masters in ordinarie of ye Queen's Maties royall Nauy, where in he continued in charge of sundrie sea services till time of his death.' [For a supposititious expedition by another Stephen Borough, or Burrogh, in 1585, see BOROUGH, WILLIAM.]

C. H. C.

BOROUGH, WILLIAM (1536–1599), navigator and author, born at Northam, Devonshire, in 1536, was the younger brother of Stephen Borough [q. v.], under whom he served as an ordinary seaman in the first voyage of the English to Russia. In his short autobiography preserved to us he writes: 'I was in the first voyage for discouerie of the partes of Russia, which begun in anno 1553 (being then sixteen yeeres of age), also in the yeere 1556, in the voyage when the coastes of Samoed and Nova Zembla, with the straightes of Vaigatz, were found out; and in the yeere 1557, when the coast of Lappia and the Bay of St. Nicholas were more perfectly discouered' (HAKLUYT, i. 417). His employment for the next ten years was that of 'continual practise in the voyages made to St. Nicholas.' In one of these homeward voyages we find him entrusted with a curious present from the traveller Anthony Jenkinson to Sir W. Cecil, afterwards Lord Burghley. The former writes: 'Yt may please you, I have sent by Wm. Aborough (*sic*), Mr of one of the Moscovy Companyes shippes, a strange beast called a Loysche, and bred in the country of Cazan in Tartaria' (*Cal. State Papers*, Foreign Series, 26 June 1566). According to the 'Cat. of Lansd. MSS.,' Brit. Mus. (p. 19), Borough made 'a voyage for discouery of the sea coast beyond Pechora to find an open passage to Cathay' in 1568. This is, however, not quite correct; a comparison of the manuscript referred to (*Lansd.* 1035) with Hakluyt (i. 382) serves to show that a commission was granted by the agent of the company to one James Bassendine, or Bassington, with two other English sailors, to find this passage in a Russian boat, with interpreters, for which 'necessary notes to be observed' in the discovery were drawn up by Borough, with a sketch map, at St. Nicholas in August, probably before his departure for his homeward voyage in that year (cf. *Cal. State Papers*, Foreign Series, 1568, No. 2415). After the first establishment of the trade of the merchant adventurers at Narva, in the Gulf of Finland, in the winter of 1569, it was found that the sea passage to this port was infested by pirates, in consequence of which we find Borough in 1570, as 'captaine generall' of a fleet of thirteen ships, well furnished with all 'necessaries for the warres,' in conflict with a fleet of six Danske freebooters off an island in the gulf, then known as Tuttee. Borough, after a sharp fight, dispersed the fleet, and took one of the captains, named Hans Snarke, prisoner (HAKLUYT, i. 401). His yearly voyages for the next four years were either to Narva or St. Nicholas, as the occasion required. In 1574–5 we find Borough employed as agent to the company 'in passing from St. Nicholas to Moscow and from Moscow to Narva, and thence back again to St. Nicholas by land, setting downe alwayes, with great care and diligence, true obseruations and exact notes and descriptions of the wayes, rivers, cities, townes, etc.' These, added to his notes on 'the islands, coastes of the sea, and other things requisite to the artes of nauigation and hydrographie,' acquired in his former voyages by sea, he turned to good account at a later period as an author and a chartographer. Like those of his brother Stephen, his services were destined to be transferred from the merchant adventurers to the queen. In what year this took place with William Borough we have no exact information. In January 1579 we find him residing at Limehouse, involved in a dispute with Michael Lok, master of the mint and treasurer of the Cathay Company, in reference to a ship (the Judith) bought by the latter for Frobisher's third voyage. There are several incidents in this affair which point to Borough being already in the service of the crown, particularly his relations with Walsingham, by whose assistance Borough seems to have thrown the unfortunate Lok into the Fleet Prison, on a suit for 200*l.* in connection with the ship (*Cal. State Papers*, Col. Ser., i. 47, and FOX BOURNE, i. 175). The next two years were evidently devoted to literary effort in preparing his well-known work, 'Discourse of the variation of the Compas,' which first saw the light in 1581 (see *infra*). We next

find him in the month of June 1583, as comptroller of the queen's navy, at sea in charge of two barques, 'both manned with 100 men, for apprehending of certaine outragious sea-rovers, who, it was confidently bruited, had vanquished the said two ships: but within few dayes after, beyond all expectation, the said Will. Borough and his company had discomforted and taken to the number of ten sayle (whereof three were prizes), and ten of the chief pirates on the 30th of August were hanged at Wapping-in-the-Wose, besides London; one of whom, named Thomas Walton, as he went towards the gallows, rent his venetian breeches of crimson toffata and distributed the same to such of his old acquaintance as stood about him' (Stow, 696). Perhaps the most noteworthy event in Borough's career was the part he played in the famous expedition to Cadiz in command of the Lion, under Sir Francis Drake, wherein they succeeded, on 19 April 1587, in destroying upwards of a hundred sail lying in the harbour, besides capturing many valuable prizes. Unfortunately for Borough's fame, he felt it his duty to differ with his high-handed chief as to the wisdom of a proposed land attack upon Lagos. Drake's reply to his vice-admiral's ill-guarded and hastily written remonstrance was to place Borough under arrest in his cabin for two days. The plan so nearly failed as to justify all Borough's objections, for the invaders had to retire after considerable injury, which was feebly atoned for by the distant bombardment of the town by the fleet, which did little or no damage (Fox Bourne, ii. 188). Borough's share in the affair terminated in the mutiny of his ship's crew while he was a prisoner and therefore helpless. His ship reached England in charge of another commander on 5 June, whence Borough wrote to Lord-admiral Howard, detailing his version of the affair. This was followed by a long contradiction of the charges brought against him by Drake, which so far succeeded in saving him from further punishment or disgrace (see Barrow, pp. 241-255; also Hakluyt, ii. 121). Borough's latest service at sea of any importance calling for notice was his command of a small ship named the Bonavolia in the Armada fight, 1588 (Lediard, p. 239). In a beautifully written autograph letter of Borough, dated Chatham, 28 Aug. 1589, he informs Mr. T. Randolph, residing at Maidstone, that he is 'letted' from seeing him by 'the great business for the dispatch of Sir Martin Frobisher's shippes to the sea,' that he is 'in comission for the late portugale voyage,' and that another matter that he has in 'handling' is 'getting a good wife' in the person of Lady Wentworth, which 'matter is in effect concluded' (*Harl. MS.* 6994 (104)). The latest notice of him with which we are acquainted is one, dated 31 Oct. 1590, of a person unnamed, who gives notice to Mr. Burrowes, of Limehouse, 'that his life is in danger from one who intends to shoot him' (*Lansd. MS.* 99 (94)). Borough somehow managed to survive another nine years; he died in 1599.

Borough wrote 'A discourse of the Variation of the Compas, or Magneticall Needle, made by W. B., and is to be annexed to the Newe Attraction by R[obert] N[orman],' London, 1581, 4to; other editions 1585, 1596, 1611, 1614. In this work he points out that nearly all the charts of the period were useless for the purposes of navigation from the non-observance of variation; he instances Mercator's famous map of 1569, wherein is to be observed 'Wardhouse' in Norway set down in two places 19 degrees apart; all west of this point being laid down from an earlier map by Olaus Magnus [of 1532, now lost]; all east of it from his own observations embodied in Anthony Jenkinson's map of Russia, 1562. Besides four other short pieces to be found in Hakluyt (i. 414 and 455) may be seen 'A dedicatory Epistle to the Queen annexed unto his exact map of Russia, briefly containing his travails in those N.E. partes,' and also his short autobiography before alluded to (Hakluyt, 417). We learn from his 'Discourse' that the map of Russia was presented to the queen in 1578. It is now lost. He also wrote 'Instructions for discouery of Cathay Eastwards for Pet & Jackman,' 1580 (Hakluyt, 435). The most interesting chart by William Borough known to us is one of Norway, Lapland, and the Bay of St. Nicholas, signed by him, and preserved in the British Museum (*O. R. MS.* 18 D. iii. 123). Three others, preserved at Hatfield, are: 1. 'Polar Seas to Lat. 20,' probably by him. 2. 'Frobisher's Navigation.' 3. 'The Thames to Gravesend, and part of the N. Sea.' The remaining manuscript pieces by Borough calling for notice are: 1. 'Tables of the prices of Masts,' n.d. (*Harl.* 306, 20). 2. 'Necessary notes to be obserued in the voyage for discouery,' 1568 (see *supra*). 3. 'Declaration concerning a proposal of Sir J. Hawkins and Peter Pett, with reference to the Navy,' February 1584 (*Lansd.* 43 (33)). 4. 'Articles objected, with the Answeres to the same, touching the voyage of the Lion,' with two letters giving an account of his misunderstanding with Sir Francis Drake, April–May 1587 (*Lansd.* 52, arts. 39, 41–2); see *supra*. 5. 'Discourse what course were best should be taken for the resistance

of ye Spanish Navy,' 26 Feb. 1589 (*Lansd.* 52 (40)). There are also letters from William Borough to the privy council, &c., preserved at Hatfield, 2 Oct. 1595, Oct. 1596, 9 June 1597, 4 July 1597 (see *Hist. MSS. Comm.* 5*th Rep.* pp. 277, 285, 287, 291).

It will be observed in the above sketch that there is a lacuna in the movements of William Borough between the years 1583 and 1587. In the 'Leicester Correspondence' (Camden Society, 1844) is printed a journal of the proceedings of the Earl of Leicester in the Low Countries, written by the admiral who conducted the fleet from Harwich to Flushing in December 1585. Down to a recent period it was held that the admiral was no other than the elder Borough, Stephen [q. v.] Mr. R. C. Cotton, however, in his able paper (*Dev. Assoc. Rep.* vol. xii.) shows that it was impossible to have been Stephen Borough, who died in July 1584, as is proved both by his monument and by the parish register in Chatham Church. This writer, however, suggests that there must have been a second Stephen Borough, also a seaman. This theory we are not prepared to accept. A reference to the original manuscript (*Harl.* 8225) serves to show that the original docketing (which we take to be W. Borough, badly written as to the first initial) has been cancelled and re-docketed in error by a later hand and assigned to Stephen. If the original docketing was understood to refer to Stephen, it remains for the objector to show cause why the correction was made at all. The acceptance of the greater probability, that the whole transaction is referable to William, not only goes a great way to settle the question of doubtful authorship, but it possesses the advantage of allowing the command of the fleet in 1585 to fall naturally into its place in a more ample sketch of the life of William Borough, which is yet a desideratum among the lives of our English worthies of the period of the Tudors.

[Barrow's Life, Voyages, &c., of Sir F. Drake, 1843; Fox Bourne's English Seamen under the Tudors, 1868; Camden Society's Leicester Correspondence, 1844; Devonshire Assoc. Reps. and Trans., Plymouth, 1880–1, vols. xii. and xiii.; Hakluyt's Navigations, Voyages, &c., 1599, vol. i.; Hutton's Phil. and Math. Dictionary, 1815; Lediard's Naval History, 1755; Stow's Annales, ed. Howes, 1615; Hist. MSS. Comm. 7th Rep. p. 192.] C. H. C.

BORRELL, H. P. (*d.* 1851), numismatist, after learning business in London, established himself as a trader at Smyrna, where he resided for thirty-three years. He devoted much of his attention to the discovery of inedited Greek coins, in which he was remarkably successful. The results of his discoveries were given in papers contributed to the 'Revue Numismatique,' the 'Numismatic Chronicle,' and various German periodicals devoted to numismatic science. In 1836 he published at Paris 'Notice sur quelques médailles grecques des rois de Chypre.' His collection of coins, antiquities, and gems was sold at London in 1851. He died at Smyrna 2 Oct. of the same year.

[Gent. Mag. (new ser.) xxxix. 324; Proceedings of the Numismatic Society for 24 June 1852, in vol. xv. of the Numismatic Chronicle.]

BORRER, WILLIAM (1781–1862), botanist, was born at Henfield, Sussex, on 13 June 1781, and died there on 10 Jan. 1862. He received his earlier education in private schools at Hurstpierpoint and Carshalton in Surrey. Although he left school at an early age, he continued his studies under tutors, and obtained a good knowledge of the classics and French. His father wished him to adopt agriculture as a pursuit, though his own proclivities were towards medicine; but, being possessed of an ample fortune, he devoted himself to the study of botany, especially of his own country. He made repeated journeys in all parts of Britain, and endeavoured to cultivate every critical British species and all the hardy exotic plants he could obtain, having at one time as many as 6,660 species. His knowledge of the difficult genera Salix, Rubus, and Rosa was great, and his help was eagerly sought and willingly rendered both by purse and time.

He published but little—a few pages in the 'Phytologist,' some descriptions in the supplement to 'English Botany,' and his share with Dawson Turner in the privately printed 'Lichenographia Britannica,' of which only a few sheets were printed and issued long after, in 1839. He wrote the descriptions of the species of Myosotis, Rosa, and nearly all of Rubus for Sir W. Hooker's 'British Flora' in 1830 and subsequent editions. He was a fellow of the Royal, Linnean, and Wernerian societies, and justice of the peace for Sussex. Several plants were named after him, and the genus Borreria of Acharius amongst lichens, but the genus Borreria of G. W. Meyer is now merged in Spermacoce. The following species were named after him: Rubus Borreri, Poa Borreri, Parmelia Borreri, Hypnum Borrerianum, Callithamnion Borreri. His rich and critical herbarium of British plants is kept at the Royal Gardens, Kew.

[Proc. Linn. Soc. (1862), pp. lxxxv–xc; Seemann's Journ. Bot. (1863), i. 31; Cat. Scientific Papers, i. 499.] B. D. J.

BORROW, GEORGE (1803-1881), author, was, according to his own account, of a Cornish family on his father's side, and of a Norman stock on the side of his mother, whose name was Parffrement, and who died at Oulton at the age of 87. He was born at East Dereham, Norfolk, in 1803, where only the first years of his life were passed. His father, some time a recruiting officer, was constantly shifting his residence, and his two sons, with the rest of the family, accompanied him from one quarter to another. They made a long stay in Edinburgh, where Borrow received no small share of his education at the high school. No further reminiscences of these days are at hand save those given by the author of 'Lavengro' in the first chapters of that strange romance. After a sojourn in Scotland, Ireland, and many parts of England, the family seems to have again settled near the author's birthplace, for at the age of seventeen Borrow was articled to a solicitor at Norwich. Some insight into his life at this time may be gathered from 'Wild Wales,' in which he describes the solicitor's office, and alludes to those studies in language already so fondly dwelt on in 'Lavengro.' The savant who encouraged and aided him in the pursuit of philology, and to whom he affectionately alludes, was the well-known William Taylor, the friend of Southey. Borrow must have gone far into these studies, for in 1826 a book containing some of the fruits of his industry appeared. It was entitled 'Romantic Ballads,' from the Danish. There can be no doubt that the companionship of William Taylor led Borrow's thoughts in the direction of literature as a profession. At any rate, on the death of his father he quitted Norwich for the metropolis, to seek his fortune among the publishers. Much that happened to him in London at this time is recorded in 'Lavengro,' though the sufferings he endured are never likely to be fully known. The humorous account of his dealings with the publishers is based on his experiences with Sir Richard Phillips, in whose employ he acted as compiler and hack. Whether such a book as the 'Life and Adventures of Joseph Sell' ever emanated from his pen is a question not worth asking; it was a fiction, and Mrs. Borrow used to laugh at the idea that bookworms had set up a search for the work; but it is certain that he had a hand in compiling the 'Newgate Calendar,' and that the work had no small influence in confirming the bent of his mind. But his spirit chafed under the confinement. Worn out and angry at the treatment he received, he set out on a tour through England. What adventures he had and how he managed to live during the year thus employed can best be gathered by a perusal of 'Lavengro' and the 'Romany Rye,' though they are rather an idealisation than a strict record of his doings. He had long yearned after travel and adventure. His excursion through England at an end, he next visited France, Germany, Russia, and the East. While on these travels he seems to have worked hard at the language of each country through which he passed, for in 1835 he published in St. Petersburg 'Targum,' a series of translations from thirty languages and dialects. While on his travels he acted as agent for the British and Foreign Bible Society, and was the first of the 'correspondents.' In the latter capacity he sent letters (1837-9) to the 'Morning Herald,' which are said to have often anticipated the government despatches.

In 1840 Borrow married Mary Clarke, the widow of a naval officer whom he met in Spain. With the proceeds from the sale of his works he completed the purchase of an estate on Oulton Broad, a share in which his wife had already inherited. Here he allowed the gipsies to pitch their tents, mingling with them as friends. Indeed he gave a welcome to all comers, and his hospitable and charitable deeds will long be remembered in the neighbourhood. It was here that he lived and wrote 'Lavengro,' 'The Romany Rye,' 'Wild Wales,' 'Romano Lavo-Lil,' and other works. He afterwards removed to Hereford Square, Brompton, where in 1869 Mrs. Borrow died.

It was by his publication of the 'Gipsies in Spain,' but more especially by the 'Bible in Spain,' that Borrow won a high place in literature. The romantic interest of these two works drew the public towards the man as much as towards the writer, and he was the wonder of a few years. But in the writings which followed he went too far. 'Lavengro,' which followed his first successes in 1850, and which, besides being a personal narrative, was a protest against the 'kid-glove' literature introduced by Bulwer and Disraeli, made him many enemies and lost him not a few friends. The book, which has been called an 'epic of ale,' glorified boxing, spoke up for an open-air life, and assailed the 'gentility nonsense of the time.' Such things were unpardonable, and Borrow, the hero of a season before, was tabooed as the high-priest of vulgar tastes. In the sequel to the book which had caused so much disfavour he chastised those who had dared to ridicule him and his work. But it was of no avail. He was passing into another age, and the critics could now afford to ignore his onslaught. 'Wild Wales,' published in

1862, though a desultory work, contained much of the old vigorous stuff which characterised his previous writings, but it attracted small attention, and 'Romano Lavo-Lil,' when it appeared in 1872, was known only to the specially interested and the curious. Still Borrow remained unchanged. His strong individuality asserted itself in his narrowed circle. His love for the roadside, the heath, the gipsies' dingle, was as true as in other days. He was the same lover of strange books, the same passionate wanderer among strange people, the same champion of English manliness, and the same hater of genteel humbug and philistinism. Few men have put forth so many high qualities and maintained them untarnished throughout so long a career as did this striking figure of the nineteenth century. He died at Oulton in August 1881.

Probably Borrow was not a scientific philologist in the modern sense of the term, but it cannot be disputed that he was a great linguist. His work 'Targum' affords a proof of this, and the assertion is further borne out by the fact that at this time he translated and printed the New Testament, as well as some of the Homilies of the church of England, into Manchu, the court language of China. Among other of his translations were the Gospel of St. Luke into the dialect of the Gitanos, a work which he presented to the British and Foreign Bible Society in 1871; 'The Sleeping Bard' from the Cambrian-British of Ellis Wynn into English, as well as many Russian tales; Ewald's mythological poem, 'The Death of Balder,' from the Danish; and 'Blue Beard' into Turkish.

The most authentic account of travel is that which he gives us in his 'Bible in Spain,' a country in which he passed through many notable adventures, and where he was imprisoned for sending home a too faithful account of General Quesada's exploits.

All Borrow's original writings have been frequently reissued since 1888. The first editions of his works are: 1. 'Faustus. . . . translated from the German of F. M. von Klinger, by G. B.,' 1825, 8vo. 2. 'Romantic Ballads' (translated from the Danish of A. G. Öhlenslager and from the Kiempé Viser) and Miscellaneous Pieces from the Danish of Ewald and others, Norwich, 1826, 8vo. 3. 'Targum; or Metrical Translations from Thirty Languages and Dialects. With the author's autograph presentation in Danish to S. Magnusson,' St. Petersburg, 1835, 8vo. 4. New Testament (Luke): 'Embéo e Majaró Lucas . . . El Evangelio segun S. Lucas traducido al Romani, by G. B.,' 1837, 16mo. 5. 'The Bible in Spain,' 3 vols. London, 1843, 12mo. 6. 'The Zincali; or an Account of the Gypsies in Spain,' 2 vols. London, 1841, 12mo. 7. 'Lavengro, the Scholar, the Gypsy, the Priest,' London, 1851, 12mo. 8. 'The Romany Rye, a sequel to Lavengro,' 2 vols. 1857, 12mo. 9. 'The Sleeping Bard, translated from the Cambrian-British by G. B.,' 1860, 12mo. 10. 'Wild Wales: its People, Language, and Scenery,' 3 vols. London, 1862, 8vo. 11. 'Romano Lavo-Lil, word-book of the Romany; or English Gipsy Language, &c.,' London, 1874, 8vo. In 1857 was advertised as ready for the press 'Penquite and Pentyre; or the Head of the Forest and the Headland. A book on Cornwall,' 2 vols.

[The information contained in this sketch is derived from personal knowledge of the author himself and of his life, and from information given to the writer by his father, Dr. Gordon Hake, Borrow's old friend, and by Borrow's step-daughter, Mrs. MacAubrey. William Ireland Knapp, who edited Lavengro and Romany Rye in 1900, issued in 1899 Life, Writings and Correspondence of Borrow (Boston, 2 vols. 8vo).] A. E. H.

BORSTALE, THOMAS (*d.* 1290 ?), scholastic theologian, was a native of Norfolk, and belonged to the convent of Augustinian friars (Friars Eremites) at Norwich. He lived for some time abroad, principally at Paris, where he acquired a great reputation as a theologian and disputant, and obtained the degree of doctor of divinity from the Sorbonne. The writings attributed to him are: 1. 'Super Magistrum Sententiarum' (four books). 2. 'Quodlibeta Scholastica' (one book). 3. 'Ordinariæ Disceptationes' (one book). He died at Norwich in or about the year 1290.

BORTHWICK, DAVID (*d.* 1581), of Lochill, lord advocate of Scotland in the reign of James VI, was educated at St. Leonard's College, St. Andrews, where his name occurs among the determinants in 1525. He was called to the bar in 1549. He is mentioned by Knox as at first in favour of the Congregation, but afterwards as one of the many whom the queen dowager 'abusit, and by quham sche corrupted the hartis of the sempill.' In 1552 he served on the commission appointed to treat with the English commission on border affairs (*Register of Privy Council of Scotland*, i. 150). For some time he acted as legal adviser to Bothwell, whose counsel he was both in reference to Queen Mary's abduction to Dunbar, and to the murder of Darnley. Along with Crichton

of Elliock, he was in 1573 appointed king's advocate, and, as was then customary, also took his seat as a lord of session. In 1574 he served on the commission for framing a constitution for the church of Scotland. He died in January 1581-2. According to Scot of Scotstarvet, he acquired 'many lands in Lothian and Fife, as Balnacrieff, Admiston, Balcarras, and others, but having infeft his son Sir James therein in his lifetime, he rested never till he had sold all.' Hearing on his death-bed that his son had just sold another estate, he, according to the same authority, exclaimed, 'What shall I say? I give him to the devil that gets a fool, and makes not a fool of him,' words which afterwards became proverbial as 'David Borthwick's Testament.'

[Sir John Scot's Staggering State of Scottish Statesmen, ed. 1872, p. 108; Works of Knox, ed. Laing, i. 106, 414, ii. 44, vi. 667; Register of Privy Council of Scotland; Haig and Brunton's Senators of the College of Justice, pp. 154-5; Omond's Lord Advocates of Scotland, i. 37.]

T. F. H.

BORTHWICK, PETER (1804-1852), editor of the 'Morning Post,' only son of Thomas Borthwick of Edinburgh, was born at Cornbank, in the parish of Borthwick, Midlothian, on 13 Sept. 1804, graduated at the university of Edinburgh, and was the private pupil of James Walker, bishop of Edinburgh and Glasgow, and afterwards primus of the episcopal church of Scotland. Notwithstanding his marriage, in 1827, to Margaret, daughter of John Colville of Ewart, Northumberland, he took up his residence at Jesus College, Cambridge; thence, by removal, he became a fellow-commoner of Downing College, and while there was the author of some theological works, having then an intention to take orders in the church of England.

Happening in 1832 to be present at a meeting called for the purpose of opposing the abolition of negro slavery, he made his first essay in public speaking by an address in which he took the side of the slave-owners. Immediately afterwards he was invited to deliver speeches at meetings convened for the object of upholding the existing state of affairs. These gratuitous labours produced an effect far beyond his expectations. Bath contributed a silver dinner service, Cheltenham a silver breakfast service, Dumfries a costly piece of plate, and the university of Edinburgh a cup bearing a flattering inscription expressive of a sense of the honour reflected by his talents upon the university of which he was a member. Borthwick's slavery meetings were not, however, always of an harmonious nature. In Gloucestershire he was opposed by 'the apostle of temperance and the bondsman's friend,' Samuel Bowley [q. v.], who followed him about from meeting to meeting, and finally beat him off the ground by his statements of facts. His reputation as a speaker being established, he in 1832 contested the representation of the borough of Evesham; but the whig interest was at that time in the ascendency. On 6 Jan. 1835 he was, however, returned in conjunction with Sir Charles Cockerell.

On 2 May 1837 he moved, in the House of Commons, 'that convocation might once more be authorised to exercise the rights of assembly and discussion of which the church had been so long deprived.' This motion was negatived by only a small majority. But the great measure with which his name is identified was the introduction into the poor law of that provision, 'the Borthwick clause.' Under this clause married couples over the age of sixty were not, as heretofore, separated when obliged to enter the doors of the poor-house. He lost his seat for Evesham on petition in 1838, but was re-elected in 1841 and sat until the dissolution, 23 July 1847, and then contested both St. Ives in Cornwall and Penryn and Falmouth, but was defeated at both places. On 28 April 1847 he was called to the bar at Gray's Inn.

In 1850 he became editor of the 'Morning Post,' but symptoms of decaying health soon began to exhibit themselves, and on Friday 17 Dec. 1852 he was suddenly attacked with acute inflammation assuming the form of pleurisy, from the effects of which he died the following evening at his residence, 11 Walton Villas, Brompton. During his long illness his mental capacity was never impaired, and on the very day before his death an article appeared in the 'Morning Post' written by him on the previous evening with clearness and vigour of intellect. Lord George Bentinck said of him: 'Borthwick is a very remarkable man. He can speak, and speak well, upon any subject at a moment's notice.' He was the author of: 1. 'A Brief Statement of Holy Scriptures concerning the Second Advent,' 1830. 2. 'The Substance of a Speech delivered in Manchester in reply to Mr. Bowley's Statements on British Colonial Slavery,' 1832. 3. 'Colonial Slavery: a Lecture delivered at Edinburgh,' 1833. 4. 'A Lecture on Slavery,' 1836.

[Gent. Mag. xxxix. 318-20 (1853); Illustrated London News, with portrait, ii. 8 (1843), xxi. 563 (1852), and xxii. 11 (1853); Times, 14 Oct. 1884, p. 7.]

G. C. B.

BORTHWICK, WILLIAM (*d.* 1542), fourth LORD BORTHWICK, was the eldest son of the third Lord Borthwick and Maryota de Hope Pringle. He succeeded to the title on the death of his father at the battle of Flodden on 9 Sept. 1513. Immediately afterwards the council of the kingdom ordered the castle of Stirling to be victualled and fortified to receive the young king, James V. Lord Borthwick was to be captain and the king's guardian (*Cal. State Papers, Henry VIII*, vol. i. (1509–14) 4556). He set his seal to a treaty with England on 7 Oct. 1517 (*Fœdera*, xiii. 600). After the coronation of James V in 1524 he swore to be true to the king and disavow the Duke of Albany. He died in 1542 By his marriage to Margaret, eldest daughter of John Lord Hay of Yester, he had two sons and two daughters.

[Douglas's Peerage of Scotland, ii. 654; Cal. State Papers, Henry VIII.] T. F. H.

BORTHWICK, WILLIAM (1760–1820), general, was the eldest son of Lieutenant-general William Borthwick, R.A., and entered the Royal Military Academy at Woolwich as a gentleman cadet in 1772. He became a second lieutenant R.A. in 1777, lieutenant in 1779, and captain-lieutenant in 1790, with which rank he served in Flanders. As brigadier-general he prepared the siege train with which Wellington bombarded Ciudad Rodrigo in January 1812, and was severely wounded during the siege. He also prepared the siege train for the last siege of Badajoz; but in April 1812 he was promoted major-general, and had to hand over his command to Colonel Framingham, because the number of artillerymen in the Peninsula was supposed not to justify the presence there of a general officer. After his return he received a gold medal for the capture of Ciudad Rodrigo, but was not even made a C.B. He died at Margate on 20 July 1820.

BORUWLASKI or BORUSLAWSKI, JOSEPH (1739–1837), dwarf, is chiefly known by the 'Memoirs of Count Boruwlaski, written by himself.' He had no legal right to the title of 'count,' being an untitled member of the Polish nobility. According to his own account, Boruwlaski was born in the environs of Halicz, Polish Galicia, in 1739. His parents had six children, three of whom were exceptionally short in stature, whilst the other three were above the middle height. The eldest brother was forty-one inches in height; the second, who was killed in battle at the age of twenty-six, was six feet four inches; and Joseph, who was the third, did not quite reach thirty-nine inches. His sister Anastasia, who died at the age of twenty, was but two feet four inches high. Joseph was neither delicate nor disproportionate. Brought up at first by a widow, the Starostin de Caorlix, he was, soon after her marriage with the Count de Tarnon, transferred to the Countess Humiecka, and travelled with her in France, Holland, Germany, &c. When at Vienna, Maria Theresa took him on her lap and presented him with a ring, which she took from the finger of the young princess Marie Antoinette. At the court of Stanislaus, the titular king of Poland, he met with Bébé (Nicolas Ferry), who was a little taller, and jealous of his rival, and with the Comte de Tressan, who mentions him in the 'Encyclopédie' as fully developed and healthy. At Paris he met Raynal and Voltaire, and one of the fermier-generals, Bouret, gave an entertainment in his honour, in which everything was proportioned to the size of the tiny guest. On his return to Poland Boruwlaski fell in love with Isalina Barboutan, a young girl whom his patroness had taken into her house. Efforts to break off the match were fruitless, and on his marriage Boruwlaski was discarded by the countess, but the king of Poland gave him a small pension, and, when he decided to travel, provided him with a suitable coach. He now began a wandering career. A comparison of measurements showed that between his visits to Vienna in 1761 and 1781 he had grown ten inches. By the advice of Sir Robert Murray Keith he decided to visit England; but previously he states that he passed through Presburg, Belgrade, Adrianople, and, after traversing the deserts, found himself dangerously ill at Damascus, where he was restored by the aid of a Jewish physician. He describes subsequent journeys to Astrakan, Kazan, Lapland, Finland, and Nova Zembla, and through Croatia, Dalmatia, and Germany. The 'count' lived meanwhile upon the proceeds of concerts and the gifts of his acquaintances. From the margrave of Anspach he obtained a letter of introduction to the dukes of Gloucester and Cumberland. After a stormy passage he reached England, and had an audience of George III, when 'the conversation was often interrupted by the witty sallies of H.R.H. the Prince of Wales.' He travelled in England. Occasional concerts were still the only source of his income. At Blenheim he saw the Duke of Marlborough, who added the dwarf's shoes to his cabinet of curiosities. An attempt to provide for the count by a subscription failed. He again

visited France, but at the beginning of the revolution he returned to England. He passed 'through the whole of Ireland, beginning with Cork.' At Ballinasloe his appearance in the street caused so great a commotion that the garrison was turned out. At Athlone his concert was ruined by the news of the landing of Hoche at Bantry Bay. He made a brief stay at Douglas, and passed to Whitehaven, Carlisle, Newcastle, and thence to Durham and Hull. On account of his failing means, he decided to go to America; but this design was abandoned, and about 1800 the prebendaries of Durham gave him a residence, the Bank's Cottage, near Durham, where the contributions of his friends enabled him to pass his latter years in peaceful retirement. He was a good linguist, his conversational powers were considerable, and his company was much courted in the city and neighbourhood. Catharine Hutton, who wrote a sketch of the dwarf, says: 'I never saw a more graceful man, or a more perfect gentleman, than Boruwlaski.' He had several children, who were of the ordinary size, but in his 'Memoirs' is almost silent as to his family affairs. His pride led him to keep up the fiction that he did not exhibit himself for hire—the people merely paid a shilling to his valet to open the door! He was terribly afraid lest George IV, to whom the last edition of his 'Memoirs' was dedicated, should offer him money in a direct fashion. The king, however, gave him a watch and chain, and thus spared his pride. Charles Mathews, who introduced him to George IV, and Patmore, who found him 'domesticated' with Mathews, speak of him as a fascinating companion, playful, accomplished, and sensible. In answer to Catharine Hutton's request for an autograph, he sent a letter with these rhymes:—

> Poland was my cradle,
> England is my nest;
> Durham is my quiet place,
> Where my weary bones shall rest.

He died at the great age of ninety-eight at Bank's Cottage on 5 Sept. 1837. His grave is near that of Stephen Kemble, in the Nine Altars of Durham Cathedral, and is marked only by the initials J. B., but there is a monument to his memory in the church of St. Mary, in the South Bailey, Durham.

The first edition of his 'Autobiography,' in both French and English, appeared at London in 1788, with a portrait by W. Hincks. The French part was the dwarf's own work, the English a translation by M. des Carrières. A German translation by Christian August Wichmann appeared at Leipzig in 1789. A second edition of the 'Memoirs' was printed at Birmingham in 1792. The final edition was printed at Durham in 1820, and has a portrait from a drawing by John Dowman, A.R.A. In Kay's 'Edinburgh Portraits' there is one of Boruwlaski taken from life. At the sale of Fillingham's collection, in 1862, were sold some scarce portraits of Boruwlaski, autograph letters, the handbill for his public breakfast, and the sale catalogue of his effects. One of his shoes, the sole of which is five inches and seven-eighths long, and a glove are now in the Bristol Philosophical Institution. In March 1786 Rowlandson published a caricature representation of Boruwlaski playing on the fiddle before the 'Grand Seigneur' and his wives. A full cast of Boruwlaski was taken by Joseph Bonomi shortly before the death of the dwarf.

BOSA (*d.* 705), bishop of York, was a monk of Hilda's monastery at Streoneshalch (Whitby). When in 678 King Ecgfrith and Archbishop Theodore divided the great northern diocese, presided over by Wilfrid, into three parts, Bosa was made bishop of the Deirans, the people of Yorkshire, and was consecrated by Theodore in the basilica of York. Wilfrid returned to Northumbria in 680, bringing with him a decree from Pope Agatho, commanding that he should be reinstated in his bishopric. Bosa attended the witenagemot that rejected this decree, and he, in common with the other intruding bishops, advised the king to imprison Wilfrid. He was expelled from his diocese in 686, and Wilfrid was reinstated by King Ealdfrith. He seems, however, to have regained his see in 691, when the king and Wilfrid quarrelled. At the council of Ouestrefeld, in 702, Wilfrid's chief enemies were the bishops of the north, and Bosa, we may be sure, was prominent among them. He and Wilfrid were reconciled at the council held on the banks of the Nidd in 705; but, though some of Wilfrid's claims were allowed by the council, he was not reinstated in the bishopric of York. Bosa, however, died about this time, and was succeeded at York by St. John of Beverley.

Bosa then, as became a disciple of the Abbess Hild, was a member of the national party. He was willing to admit the right of the king and witan to order ecclesiastical affairs, and was jealous of papal interference. His character is highly praised by both Bæda and Alcuin. Acca [q. v.], afterwards bishop of Hexham, was brought up in his household. Bosa appears in the calendar as bishop and confessor, his day being 13 Jan.

[Bædæ Hist. Eccl. iv. 12, 23, v. 3, 20; Eddius, Vita Wilfridi, 35, 50, 63, 65, 89, Rolls Ser.; Carmen de Pontiff. &c. Eccl. Ebor. 846; Historians of York, Rolls Ser.; Haddan and Stubbs's Eccl. Documents, iii. 125, 171; Fasti Eboracenses, ed. Raine, 83.] W. H.

BOSANQUET, CHARLES (1769–1850), governor of the South Sea Company, member of a Huguenot family of successful London merchants, was second son of Samuel Bosanquet, of Forest House and Dingestow Court, Monmouthshire. Born at Forest House on 23 July 1769, he successfully engaged in mercantile pursuits. He was sub-governor of the South Sea Company (1808–38), and governor (1838–1850). From 1823 to 1836 he was chairman of the exchequer bill office. He married on 1 June 1796 Charlotte Anne (*d.* 1839), daughter of Peter Holford, master in chancery; of seven children three survived the father. The London residence of Bosanquet was at the Firs, Hampstead, but his latter years were spent on his estate of Rock, Northumberland, which he obtained from his wife's brother, Robert Holford, who died unmarried in 1839. In 1828 he was high sheriff of Northumberland, and he was also J.P. and D.L. for that county. In 1819 he was appointed lieutenant-colonel of light horse volunteers, and he was afterwards colonel of that body. He died at Rock on 20 June 1850, and was buried in the church there. There are monuments to him at Rock and at Hampstead.

Bosanquet's works consist of a series of short treatises, which, as written by a professedly practical man, excited some attention and were not without influence. Their titles are: 1. 'Letter on the Proposition submitted to Government for taking the Duty on Muscavado Sugar *ad valorem*' (1806?). 2. 'A Letter to W. Manning, Esq., M.P., on the Depreciation of West India Property' (2nd edition, 1807?). This depreciation, he said, was caused by the manner in which colonial produce was taxed, the prohibition of its export otherwise than to the mother country, and the unwise restrictions laid on the home trade. He proposed that colonial sugar should be used in our breweries and distilleries, and that colonial rum should be used in our navy. 3. 'Thoughts on the Value to Great Britain of Commerce in general, and of the Colonial Trade in particular' (1807). This work insisted on the very great value of our West India trade. It was answered by William Spence in his 'Radical Cause of the Present Distresses of the West India Planters pointed out' (1807). 4. 'Practical Observations on the Report of the Bullion Committee' (2nd edition, with supplement, 1810). The Bullion Committee of 1810, of which Francis Horner was chairman, recommended that in two years the bank should resume cash payments. They also made a number of assertions as to the state of the currency, which Bosanquet attacked as mere theoretical speculation, and at variance with the teaching of experience. He took occasion to animadvert for the same reason on Ricardo's pamphlet of the preceding year on 'The High Price of Bullion a Proof of the Depreciation of Bank-notes.' This produced a brilliant and conclusive reply from Ricardo in what 'is perhaps the best controversial essay that has ever appeared on any disputed question of political economy.' Ricardo 'met Mr. Bosanquet on his own ground, and overthrew him with his own weapons,' clearly showing the truth of the chief statements in the report.

[Gent. Mag. for 1850, new series, xxxiv. 325; L. C. Meyer's Genealogy of the Family of Bosanquet, 1877; M'Culloch's Lit. Pol. Econ. 1845.] F. W-T.

BOSANQUET, JAMES WHATMAN (1804–1877), a partner in the banking-house of Bosanquet, Salt, & Co., and a writer on biblical and Assyrian chronology, was born 10 Jan. 1804, educated at Westminster, and at the age of eighteen entered the bank with which his family is connected. His earliest publications related to his business; they were a paper on 'Metallic, Paper, and Credit Currency,' 1842, and a 'Letter to the Right Hon. G. Cornewall Lewis on the Bank Charter Act of 1844,' 1857; but the rest of his literary work was mainly concerned with researches into the chronology of the Bible. In 1848 appeared his 'Chronology of the Times of Daniel, Ezra, and Nehemiah;' in 1853, the 'Fall of Nineveh and the Siege of Sennacherib, chronologically considered;' in 1866, 'Messiah the Prince, or the Inspiration of the Prophecies of Daniel' (2nd edition 1869); in 1867, 'Hebrew Chronology from Solomon to Christ;' in 1871, 'Chronological Remarks on Assurbanipal;' and in 1878 his treatise 'On the Date of Lachish,' &c. He was a generous contributor to the 'Transac-

tions of the Society of Biblical Archæology,' not merely in word but in deed, for besides writing papers, he paid nearly half the expenses of publication, and bore a considerable share in the cost of bringing out other works on Assyriology, insomuch that the president of the society, in pronouncing his éloge, described him as 'the Mæcenas of Assyriology.' He died 22 Dec. 1877.

[Proc. Society Bibl. Archæology, 1877–8; information received from his son, B. T. Bosanquet, esq.] S. L.-P.

BOSANQUET, SIR JOHN BERNARD (1773–1847), judge, was the youngest son of Samuel Bosanquet of Forest House, Waltham Forest, and Dingestow Court, Monmouthshire, governor of the Bank of England 1792, by his wife Eleanor, daughter of Henry Lannoy Hunter of Beechill, Berkshire. He was born at Forest House on 2 May 1773, and educated at Eton and Christ Church, Oxford, where he took the degree of B.A. 9 June 1795, and of M.A. 20 March 1800. He was admitted a student of Lincoln's Inn 22 Jan. 1794, and on being called to the bar, 9 May 1800, joined the home circuit. He also attended the Essex sessions, of which his father was chairman. Previously to his call he had, in conjunction with Mr. (afterwards Sir) Christopher Puller, commenced the 'Reports of Cases argued and determined in the Court of Common Pleas and Exchequer Chamber, and in the House of Lords.' Of these reports there are two series, the first in three volumes from 1796 to 1804, and the second in two volumes from 1804 to 1807. Owing to family influence his career at the bar was soon successful, and he was appointed standing counsel to the East India Company (1814) and to the Bank of England (1819). On 22 Nov. 1814 he was made a serjeant-at-law, and from that time came prominently before the public in the numerous bank prosecutions which he conducted with great discretion for thirteen years. In 1824 he declined the appointment of chief justice of Bengal, and in Easter term 1827 was made king's serjeant. On 16 May 1828 he was nominated one of the commissioners appointed to inquire into the practice of the common law courts. Over this commission he presided for three years. Upon the retirement of Sir James Burrough he was made a judge of the court of common pleas 1 Feb. 1830, and was knighted on the following day. On 4 Sept. 1833 he was sworn a member of the privy council, and thenceforth, until 1840, constantly formed one of the judicial committee of that body. Upon the resignation of Lord-chancellor Lyndhurst, Bosanquet, in conjunction with Sir Charles Pepys, the master of the rolls, and Sir Lancelot Shadwell, the vice-chancellor, was appointed a lord commissioner of the great seal. This commission lasted from 23 April 1835 to 16 Jan. 1836, when Pepys was made lord chancellor. After eleven years of judicial work he was compelled by his state of health to retire from the bench shortly before the beginning of Hilary term 1842. He died at the Firs, Hampstead Heath, on 25 Sept. 1847, aged 74, and was buried at Llantillio-Crossenny, Monmouthshire. A monument is erected to his memory in his parish church of Dingestow, and his portrait hangs in the hall of Eton College. He was a man of considerable learning, with a great taste for scientific inquiries. It is stated in Foss that he published anonymously a 'Letter of a Layman,' in which he showed the connection between the prophecies of Daniel and the Apocalypse. As a judge he was remarkable for his ability and impartiality. He married in 1804 Mary Anne, the eldest daughter of Richard Lewis of Llantillio-Crossenny, by whom he had an only son, who predeceased him.

[Foss (1864), ix. 149–51; Law Times, x. 122; Gent. Mag. 1847, new ser. xxviii. 537–8, 661; Notes and Queries, 6th ser. x. 147; Annual Register, 1847, App. p. 253.] G. F. R. B.

BOSANQUET, SAMUEL RICHARD (1800–1882), miscellaneous writer, was born 1 April 1800, of the family settled at Forest House, Essex, and Dingestow Court, Monmouthshire. Educated at Eton and Christ Church, Oxford, where he graduated with honours, a first class in mathematics and a second in classics, he took his B.A. degree in 1822, and proceeded M.A. in 1829. Called to the bar at the Inner Temple, he was one of the revising barristers appointed with the passing of the Reform Act of 1832, and he wrote many leading articles for the 'Times,' besides contributing frequently to the 'British Critic.' In 1837 he published an annotated edition of the Tithe Commutation Act, and another in 1839 of the Poor Law Amendment Act, in this case with the object of showing that the prevalent dislike of the measure was due to a misapprehension of its provisions conceived and acted on by the agents of the poor-law commissioners. In 1839, too, appeared his 'New System of Logic and Development of the Principles of Truth and Reasoning applicable to moral subjects and the conduct of human life,' a work of no philosophical value, in which he aimed at substituting for the Aristotelian logic one supplying a basis for a system of christian ethics. To the second edition, 1870, he added two books, 'carrying

on' his logic 'to religious use and application.' He had ceased to be an admirer of the new or of any poor law, when he expanded two articles contributed by him to the 'British Critic' into a volume entitled 'The Rights of the Poor and Christian Almsgiving vindicated, or the State and Character of the Poor and the Conduct and Duties of the Rich exhibited and illustrated,' 1841. The work breathed a strong spirit of sympathy with the poor, whose destitution, he maintained, was in a great multitude of cases not their own fault, and he illustrated this view by detailed statements, taken chiefly from the reports of the Mendicity Society, to show the inadequacy of the incomes of numbers of the wage-earning classes for the maintenance of themselves and their families. Following Dr. Chalmers, Bosanquet argued that individual charity, and not the state or a public legal provision, should supply whatever was deficient in the pecuniary circumstances of the poor. In 1843 appeared his 'Principia, a series of essays on the principles manifesting themselves in these last times in Religion, Philosophy, and Politics.' The work assailed modern liberalism and its results, intellectual and social, as interpreted by Bosanquet, who identified his age with those 'last times' of national degeneracy and apostasy which were to precede the second advent. His 'Letter to Lord John Russell on the Safety of the Nation,' 1848, was animated by the same spirit of hostility to modern liberalism, and by a desire to substitute a paternal despotism for parliamentary government. Bosanquet was a diligent student of theology. Among his writings are several dissertations on portions of the Bible, and for the better understanding of the Old Testament he is said to have begun to learn Hebrew when he was between sixty and seventy. His numerous writings display earnestness, piety, and benevolence, with considerable animation of style; but he is diffuse, often fanciful, and deficient in reasoning power. There is an ample list of them in the catalogue of the British Museum library. Besides those already referred to may be mentioned the 'Vestiges of the Natural History of Creation, its arguments examined and exposed,' or at least denounced, second edition 1845; his 'Eirenicon, Toleration, Intolerance, Christianity, the Church of England and Dissent,' 1867, in which, after discovering good and evil in all communions, he pronounced an outward union of churches to be impracticable, and if practicable to be undesirable; and, as illustrative of his peculiar views on theology and the typological exegesis of scripture, 'The Successive Visions of the Cherubim distinguished and newly interpreted, showing the progressive revelation through them of the Incarnation and of the Gospel of Redemption and Sanctification,' 1871. His latest publication was 'Hindoo Chronology and Antediluvian History,' an attempt to synchronise the two, and to establish a connection between Indian mythology and the earliest personages of the Bible. The volume was a reprint, with elucidations by Bosanquet, of the first part of a 'Key to Hindoo Chronology,' Cambridge, 1820, the authorship of which he ascribed to a certain Alexander Hamilton, slightly known as an orientalist.

In 1843 Bosanquet succeeded to the family estates. He was for thirty-five years chairman of the Monmouthshire quarter sessions. Beneficent to the poor, he promoted useful local institutions and enterprises. He died at his seat, Dingestow Court, 27 Dec. 1882.

BOSCAWEN, Family of.—According to Hals, one of the Cornish historians, the first Boscawen who settled in Cornwall was an Irishman whose name does not appear to be now known; but whatever it may have been, it was soon exchanged for that of the place (which still bears the same name) in the parish of St. Buryan, a few miles from the Land's End, where he took up his abode, viz. at Boscawen Ros—the valley of elder trees. Other branches of the Boscawens settled in later times at Tregameer, in St. Columb Major, and at Trevallock in Creed, or St. Stephen's. All traces of the marriages of the earliest Boscawens seem to be lost until we reach the reign of Edward I, when Henry de Boscawen (about 1292) took to wife Hawise Trewoof. In 1335 John de Boscawen, by marrying an heiress, Joan de Tregothnan, acquired the Tregothnan property on the banks of the river Fal, where the family seat still is; the present building, however, dating only from 1815. John's son likewise married an heiress, Joan de Albalanda, or Blanchland, whose lands were situated on the opposite side of the river to Tregothnan, in the parish of Kea; and other marriages between members of this family and Dangrous of Carclew, the Tolvernes, the Trewarthenicks, and the Tregarricks, extended and consolidated the interests of the Boscawens on and near the banks of the Fal. They also intermarried with other Cornish families, such as the Arundells, the Bassetts, the St. Aubyns, the Lowers, the Godolphins, the Carminows, the Trenowiths, and the Trevanions. At the coronation of Henry VII, Richard Boscawen paid

a fine of 5*l.* in order to escape the trouble and expense of going to court, and of being made a knight of the Bath; and his grandson, Hugh, did the same at the coronation of Queen Mary.

All the earlier Boscawens, though wealthy, were unambitious and undistinguished. The first who claims notice is HUGH, the great-grandson of the last-named Hugh Boscawen, who appears to have formed that intimate connection between Truro and his family which has so long subsisted. This Hugh was recorder of the borough, knight of the shire for Cornwall in 1626, and was 'Chief of the Coat Armour' at the herald's visitation of 1620. He married Margaret Rolle, and died in 1641. Of his sons, (1) Edward, a rich Turkey merchant, was M.P. for Truro in each of Charles II's parliaments; married Jael Godolphin, and their son Hugh [q. v.] became the first Viscount Falmouth. Another son, (2) Nicholas, a parliamentarian officer, died unmarried when only twenty-two years of age, and was buried in Westminster Abbey. At the Restoration his remains were flung into a common pit in St. Margaret's churchyard. Of his offspring the most noteworthy were Hugh, the second viscount, who died in 1782, a shrewd electioneerer, but otherwise of no particular ability; Nicholas, a doctor of divinity and dean of Buryan; John, a major-general in the army; George, who was at Dettingen and Fontenoy; and Edward, Pitt's 'Great Admiral' [q. v.] By his marriage with Anne Trevor, General George Boscawen had a son named William [q. v.], of some literary note. George Evelyn, third Viscount Falmouth, youngest son of the admiral (issue having failed through the admiral's two elder brothers), entered the army, was present at Lexington, and in 1787 distinguished himself at Truro by the admirable manner in which he succeeded in pacifying a large and riotous mob of angry miners. He died in 1808. Of his elder brothers, Edward Hugh, who was M.P. for Truro, died abroad in 1774; and William Glanville, an officer in the navy, was drowned at Port Royal, Jamaica, when only eighteen years of age, in 1769. The third viscount's sister, Frances, married the Hon. John Leveson Gower, secretary to the admiralty; her sister Elizabeth's husband was Henry, fifth duke of Beaufort. Edward Boscawen [q. v.], the son of the third viscount, became first earl of Falmouth. His son, George Henry, by his wife Anne Frances Bankes, was the fifth viscount and second (and last) earl. He was a man of considerable ability, taking in 1832 a double first-class at Oxford. He died unmarried in 1852. He was succeeded in the viscounty by his cousin Evelyn, grandson of the third viscount by his second son, John Evelyn, canon of Canterbury.

Brydges' Collins's Peerage, vol. vi.; Chester's Registers of Westminster Abbey; Vivian's Annotated Visitations of Cornwall, pt. ii. p. 46, &c.; Lysons's Magna Britannia (Cornwall); Lake's Parochial History of Cornwall; Tregellas's Cornish Worthies.] W. H. T.

BOSCAWEN, EDWARD (1711-1761) admiral, third son of Hugh, first Viscount Falmouth [q. v.], and of Charlotte, eldest daughter of Charles Godfrey, and his wife Arabella Churchill, sister of the Duke of Marlborough and mother of the Duke of Berwick, was born on 19 Aug. 1711. On 3 April 1726 he joined the Superbe, of 60 guns, one of the ships which sailed for the West Indies with Vice-admiral Hosier on 9 April [see HOSIER, FRANCIS]. In the Superbe he continued for nearly three years. For the next three years he was in the Canterbury, the Hector, and the Namur, bearing the flag of Sir Charles Wager, all on the home station or in the Mediterranean. On 8 May 1732 he passed his examination, and on 25 May was promoted to the rank of lieutenant. In August he was appointed to the Hector, on the Mediterranean station. On 16 Oct. 1735 he was discharged into the Grafton, and from her was, on 12 March 1736-7, promoted by Sir John Norris to command the Leopard. It was only for a couple of months, but the admiralty confirmed the commission, and in June 1738 he was appointed to the Shoreham of 20 guns. In June 1739 he was sent out to the West Indies, and was already there when the orders for reprisals against the Spaniards came out. In November, when Vernon sailed for his celebrated attack on Porto Bello, the Shoreham was refitting at Jamaica, and as she could not be got ready in time, Boscawen was permitted to serve on board the flagship as a volunteer; and after the capture was specially employed, under Captain Knowles, in demolishing the forts. He continued in the Shoreham under Vernon's command during 1740; and early in 1741 was attached to the expedition against Cartagena. In the naval operations such a ship as the Shoreham had little share; but on shore, whilst the soldiers were hesitating in front of the castle on the left side of the Boca Chica, Boscawen in command of five hundred men, seamen and marines, surprised by night, took and destroyed a formidable battery on the right or south side, 17–18 March 1740-1. On 23 March he was promoted to the command of the Prince Frederick, vacant by the

death of Lord Aubrey Beauclerk [q. v.]; and when the idea of success against Cartagena was given up, Boscawen was again told off to assist Captain Knowles in the laborious, if not brilliant, duty of demolishing such of the forts as had fallen into English hands. In May 1742 the Prince Frederick returned to England, and in the following month Boscawen was appointed to the Dreadnought of 60 guns. In this ship he was employed on the home station during 1743, and was with the main fleet when Sir John Norris permitted the French to escape off Dungeness, 24 Feb. 1743-4. A few weeks later, 28 April, whilst on an independent cruise in the Channel, he had the fortune to pick up the French frigate Médée, the first capture made in the war. This prize, though a fine ship, was found, on survey, of too weak scantling for the English navy; she was therefore put up for sale and bought by a company of merchants, in whose private service, bearing the name of Boscawen, she cruised with good success for the next eighteen months, at the end of which time she almost fell to pieces by the weight of her own guns and masts (*Voyages and Cruises of Commodore Walker*, 1762).

Towards the end of 1744, Boscawen was appointed to the Royal Sovereign guardship at the Nore, and commanded her, with the superintendence of all the hired vessels from the river, during the critical year 1745. In January 1745-6 he was appointed to his old ship, the Namur, now cut down from a 90-gun ship to a 74, and during 1746 was employed in the Channel under Vice-admiral Martin, and in command of a small squadron cruising on the Soundings. In the spring of 1747 the Namur formed part of the fleet under Anson, and had an important share in the overwhelming victory over the French squadron off Cape Finisterre on 3 May, when Boscawen was severely wounded in the shoulder by a musket-ball. In recognition of his services, the promotion of flag-officers on 15 July was extended so as to include him, and he was shortly afterwards appointed, by a very unusual commission, commander-in-chief by sea and land of his majesty's forces in the East Indies. With a squadron of six ships of the line, four smaller vessels, and a number of transports and Indiamen, he sailed from St. Helens on 4 Nov. 1747; waited at the Cape six weeks, 29 March to 8 May 1748, to allow some missing ships to come in, and to refresh the troops; and having failed in an attempt to carry Mauritius by surprise, 23-25 June, finally arrived at Fort St. David on 29 July. Boscawen's instructions pointed out the reduction of Pondicherry as the first object of the expedition: and the land force at his disposal, which, with soldiers, marines, small-arm men from the fleet, and eleven hundred sepoys, amounted to upwards of five thousand men, seemed to warrant a belief in speedy success. But, on the other hand, no secrecy had been preserved in England, and the twelve months which had elapsed since Boscawen's appointment was noised abroad had given ample time for information to be sent out from France, and for the adoption of every defensive measure which the skill and ingenuity of Dupleix could suggest. The garrison was thus nearly as strong in point of numbers as the assailants; and though a larger proportion were sepoys, there were at least eighteen hundred Europeans. A still more fatal error had been committed in giving Boscawen special instructions to be guided in the siege operations by the opinion of the engineers, a body of men whose pedantic ignorance of their profession, and whose utter want of practical training, had, but a few years before, brought ruin to the expedition against Cartagena. Boscawen, who had gone through that deadly experience, now again found himself hampered by the same clog, and under the same circumstances of a sickly and stormy season drawing on, and rendering the utmost despatch the first condition of success. He was thus compelled to waste eighteen most valuable days in the reduction of an utterly insignificant outlying fort; to pitch his camp in a remote and inconvenient situation; to land all the stores at such a distance that the transport proved a very serious difficulty; and to attack on a side where, by reason of inundations, the approaches could not be pushed within eight hundred yards; and all because the engineers knowing nothing beyond the teaching of the schools, and that very imperfectly, neither could nor would understand that the exceptional circumstances required, and the covering force of the ships' guns warranted, some departure from the narrow rules of abstract theory. The result was much the same as at Cartagena. The sickly season set in whilst prospect of success was as distant as ever; and after a thousand of the Europeans had died, the siege had to be raised, and the ships sent for the monsoon months to Acheen or Trincomalee, the admiral himself remaining with the army at Fort St. David. In November he received advice of the cessation of arms, with orders to remain till further instructed of the conclusion of the peace. He was still at St. David in the following April, when on the 12th a violent hurricane struck the coast. Most of the ships were happily at Trinco-

malee; those few that were with the admiral were lost; amongst these the flagship, the Namur, with upwards of six hundred men on board, went down with all hands; the admiral, with his immediate staff, and the sick in hospital, who had the fortune to be on shore, alone escaped. In October, having received definite intelligence of the peace, Boscawen sailed for England, where he arrived in the course of April 1750.

Since June 1742 Boscawen had nominally represented Truro in parliament. In June 1751 he was nominated by Anson as one of the lords commissioners of the admiralty; and through all the stormy changes of the following years he retained his seat on that board till his death. On 4 Feb. 1755 he was advanced to the rank of vice-admiral, and appointed to command a squadron ordered to North America as a check on the encroachments of the French, who had sent out large reinforcements covered by a squadron of ten effective ships. With eleven sail of the line Boscawen sailed on 27 April, with instructions to attack the French wherever he should find them; which instructions were duly communicated to the Duc de Mirepoix, the French minister in London. The duke had replied that they would consider the first gun fired at sea in a hostile manner as a declaration of war—a threat, however, upon which they were, just at that time, quite unprepared to act. On 10 June Boscawen fell in with three of the French ships—the Alcide, of 64 guns, the Lys, and Dauphin Royal, disarmed, and acting as transports. The two former were captured, but the Dauphin Royal escaped into the fog which shielded the rest of the French fleet, and enabled it to get safely into the river St. Lawrence. As nothing more could be done, Boscawen went to Halifax to refresh his men, amongst whom a virulent fever had broken out. This, however, continued to rage even in harbour; landing the men did not lessen the death-rate, and the admiral determined to take the squadron home without further delay; but before it could reach Spithead it had lost some two thousand men.

During the next succeeding years Boscawen at frequent intervals commanded a squadron in the Channel, off Brest, or in the Bay of Biscay; at other times he was sitting at the admiralty; and as one of the lords commissioners signed Admiral John Byng's instructions on 30 March 1756; signed the order for his court-martial on 14 Dec.; and as commander-in-chief at Portsmouth signed the immediate order for his execution on 14 March 1757 [see Byng, Hon. John]. Of the responsibility of this measure he has therefore a full share; he was, in an emphatic degree, a consenting party to the death of Byng; and there is no doubt whatever that to him, schooled by disasters arising out of criminal ignorance and negligence, death appeared the just reward of conduct such as that of which Byng had been found guilty; nor should it be forgotten that in his extreme youth, as a lad on board the Superbe in the West Indies, he must often have heard unfavourable criticisms on the conduct of Byng in leaving the ship, at his own request, just as she was ordered on a disagreeable and dangerous service.

In October 1757 Boscawen was appointed second in command of the main fleet under Hawke; and on 8 Feb. 1758, being advanced to the rank of admiral of the blue, he was appointed commander-in-chief of the fleet fitting out for the siege of Louisburg. The operations there were entirely military, the work of the fleet being merely that of a covering force, to guard against any possible attempt at relief. After the capitulation, the admiral, with the greater part of the fleet, returned to England, and on 6 Dec. received the thanks of the House of Commons for his services during the campaign. On 2 Feb. 1759 he was sworn a member of the privy council, and a few days later was appointed to the command of a squadron ordered to be got ready for the Mediterranean. He sailed from St. Helens on 14 April with fourteen ships of the line and two frigates, his flag being, as in the preceding year, on board the Namur, a new ship of 90 guns. At Toulon a French fleet, consisting of twelve ships of the line, commanded by M. de la Clue, was under orders to sail for Brest and join the fleet intended to cover the invasion of England; and as Hawke kept watch off Brest, Boscawen kept watch off Toulon, with the determination that neither the invasion of England nor the junction of the fleets should take place unopposed. It was, however, Boscawen's immediate object to tempt or goad De la Clue to come out, to try and break or force the blockade; and when lighter measures failed he sent in three ships to attack two which were lying further out than the rest. This attempt was repelled by the batteries; and the ships, having suffered a good deal of damage, were towed out. But it was necessary that they should go to Gibraltar to refit; and as the whole fleet was in want of water, Boscawen determined to proceed thither, taking measures to prevent the possibility of the enemy

slipping through the Straits unperceived. He anchored in Gibraltar Bay on 4 Aug., and was still there on the evening of the 17th, when the Gibraltar frigate came in about half-past seven, making the signal that the enemy was in sight. Many of the English ships were still refitting, with topmasts struck or sails unbent; but before ten o'clock they were all at sea in pursuit. In point of material strength the two fleets were very nearly equal, for the French ships were larger, carried heavier guns and more men; but, by some error or negligence, five of them parted company during the night, leaving the admiral with only seven. The English also, in the hurry of putting to sea, had got somewhat separated; but the two divisions were at no great distance from each other, and were together before they overtook M. de la Clue's squadron about half-past one on the afternoon of 18 Aug. The brunt of the battle fell on the French rearmost ship, the Centaure, of 74 guns, commanded by M. de Sabran. Her defence was obstinate in the extreme; it lasted for fully three hours, and ended only when the ship was a wreck, and the captain and nearly half the ship's company had been killed. This stubborn resistance gave the other ships a chance of escaping; two of them did escape, and got clear off; De la Clue, with the four others, ran by the next morning into neutral waters in Lagos Bay, and imagined himself safe; but the neutrality of Portugal, or of any state not in immediate position to enforce it, was then but lightly esteemed; and indeed the question had been raised (Bynkershoek, *Quæstionum Juris Publici Libri duo*, 1737, p. 63) whether an enemy chased into neutral waters might not lawfully be attacked. At any rate, Boscawen did not hesitate. De la Clue, who was mortally wounded, ran his ship on shore and set fire to her; another was burnt in the same way. The Modeste and the Téméraire endeavoured to defend themselves, but were at once overpowered and taken. The scattered remnants of the fleet were driven into Cadiz, and were there blockaded by a detached squadron under Vice-admiral Brodrick; whilst Boscawen, having finished the work to which he had been appointed, returned to England, and anchored at Spithead on 1 Sept. The glaring violation of Portuguese neutrality was, of course, the subject of loud complaints and of special diplomacy (Ld. Mahon, *Hist. of England*, vol. iv. Appendix, p. xxxv; Ortolan, *Règles Internationales et Diplomatie de la Mer*, ii. 316, 425); but as Boscawen's conduct was fully approved and accepted by the English government, the further question is indeed of national, but not of personal interest.

The eminent service which Boscawen had rendered in a time of great difficulty was rewarded by his appointment as general of marines, bringing with it a salary of 3,000*l.* a year, and he was also presented with the freedom of the city of Edinburgh. During a great part of the following year he commanded the fleet in Quiberon Bay, which by Hawke's victory, closely following on his own, had become, for the time and for the rest of the war, an anchorage for our fleet as commonplace as Spithead or Cawsand Bay. So secure indeed and undisturbed was it, that Boscawen took possession of a small island near the river Vannes, and had it cultivated as a vegetable garden for the use of the sick. It was the end of his service; after a short attack of bilious, or perhaps what is now called typhoid, fever, he died on 10 Jan. 1761, at Hatchlands Park, in Surrey, a seat which, in the words of his epitaph, 'he had just finished at the expense of the enemies of his country.' He was buried in the parish church of St. Michael Penkivel, in Cornwall, where there is a handsome monument to his memory, inscribed by 'his once happy wife, as an unequal testimony of his worth and of her affection.'

Boscawen's fame undoubtedly stood and stands higher than it otherwise would have done by reason of the opportune nature of his victory in Lagos Bay. Cold criticism is apt to say that there was nothing remarkable in fourteen ships winning a decisive victory over seven. But the enemy's fleet was in reality twelve; and that he had the good fortune to find it divided was apparently owing quite as much to Boscawen's prompt decision as to De la Clue's incapacity. And, in fact, it is his ready and decisive courage which has been handed down by tradition as the distinguishing feature of his character. He habitually carried his head cocked on one side, in consequence of which he was sometimes familiarly spoken of as 'Wry-necked Dick' (*Naval Chronicle*, xi. 100); but his true nickname, the name which the sailors who knew him and adored him delighted in, was 'Old Dreadnought.' There can be no question that this came directly from the ship which he commanded when a young captain, at the beginning of the French war, for it was and is the custom of seamen to give the name of the ship to the captain if the qualities agree. But the story told of Boscawen, possibly true, though unsupported by any evidence, is that whilst

in the Dreadnought the officer of the watch went into his cabin one night and, waking him, said, 'Sir, there are two large ships, which look like Frenchmen, bearing down on us; what are we to do?' 'Do?' answered Boscawen, turning out and going on deck in his nightshirt; 'do? damn 'em, fight 'em!' That there was no such fight is quite certain; but whether the story is true or not true, it illustrates the popular opinion of Boscawen's character, and is a lucid commentary on the prompt decision which overwhelmed De la Clue.

But besides this Boscawen has a special reputation for the persistent efforts which he made to improve the health and comfort of the seamen. In his boyhood at the Bastimentos, as afterwards at Cartagena, at Pondicherry, or at Halifax, he had had forced on him the disastrous effects of sickness, if merely from the point of view of efficiency; the study of his men's health thus became with him almost an instinct; and in an age when anything like hygiene was little attended to, he was one of the first who gave it a prominent consideration; and it was more particularly he who brought Sutton's ventilating apparatus into common use, by having it fitted on board the Namur when preparing for her voyage to the East Indies. There is no exaggeration in the statement on his monument that 'with the highest exertions of military greatness he united the gentlest offices of humanity; his concern for the interest, and unwearied attention to the health, of all under his command, softened the necessary exactions of duty and the rigours of discipline.' And yet his discipline was undeniably severe; nor would he allow any relaxations or comforts which seemed to him likely to render the ship less efficient as a man-of-war. This is well illustrated by a sentence from a letter to the admiralty, written only six months before his death (8 July 1760), respecting the accommodation of the Torbay, which had been reported as very cramped, though she had carried his flag in 1755 without any complaints. 'All the officers,' he wrote, 'swung in hanging cots, and were stowed with conveniency. After I left the ship, Captain Keppel permitted canvas cabins to be built, which I suppose remain, and prevent the stowing the officers so well as when there were none. . . . I never permit, nor have not for many years, nor ever will, in any ship that I go to sea in, standing cabins. In the Dreadnought, in 1744, cruising to the westward in thick weather, I fell in with thirteen sail of the enemy's ships; and in taking down the officers' cabins to clear ship and bring the stern chase to bear upon the enemy, I found much bottled liquor, which being directed to be thrown overboard, much of it was drunk by the seamen, that when I was engaged soon after were so drunk as not to be able to do their duty; and had the French done theirs, I must have inevitably been taken. This determined me against cabins, and I have never altered my resolution.'

He married, in 1742, Frances, daughter of William Evelyn Glanville, of St. Clair, Kent, and by her had three sons and two daughters. The two elder sons died unmarried; the third, George Evelyn, succeeded his uncle as third Viscount Falmouth. Of the daughters, one married Admiral Leveson-Gower; the other married Henry, fifth duke of Beaufort. His widow, who is spoken of as 'the accomplished Mrs. Boscawen,' resided for many years at Rosedale, Richmond, formerly the home of Thomson the poet (British Museum, *Add. MS.* 27578, ff. 120–7, where are some verses addressed to her by Pye), and died in 1805. A portrait of Boscawen, by Sir Joshua Reynolds, is in the National Portrait Gallery; a copy is in the Painted Hall at Greenwich, to which it was presented by Lord Falmouth.

J. K. L.

BOSCAWEN, EDWARD (1787–1841), first Earl of Falmouth, son of George Evelyn, third Viscount Falmouth, and Elizabeth Anne, only daughter of John Crewe, of Cheshire, was born on 10 May 1787, became an ensign in the Coldstream guards, and M.P. for Truro (1807), succeeded to his father's titles in 1808, and quitted the army. On the coronation of George IV he was created an earl, and throughout that reign was constant in his attendance at the House of Peers. He was often engaged in controversy with Lord Grey and the other whig leaders, and one of his speeches exposed him to the lash of Cobbett. Lord Falmouth dreaded the liberal policy of Canning, and acted as Lord Winchelsea's second in the duel with the Duke of Wellington (provoked by Winchelsea's intemperate letter on 21 March 1829). Full particulars of this event, and of the correspondence which preceded it, are in the 'Wellington Despatches,' v. 533–47, and the astonishment which it created in society is depicted in the 'Greville Memoirs,' i. 192–3. He died suddenly at Tregothnan on 29 Dec. 1841, and was buried at St. Michael Penkivel. His wife, Anne Frances, elder

daughter of Henry Bankes, of Kingston Lacy, Dorset, whom he married on 27 Aug. 1810, survived until 1 May 1864. Lord Falmouth was the author of a pamphlet on the Stannary Courts, and was the last recorder of Truro. He built the present Tregothnan House. He was succeeded by his son, George Henry [see BOSCAWEN, FAMILY OF, *ad fin.*]

W. P. C.

BOSCAWEN, HUGH (*d.* 1734), first VISCOUNT FALMOUTH, the leading Cornish politician of his time in the whig interest, was the eldest son of Edward Boscawen, by Jael, daughter of Sir Francis Godolphin. The parliamentary representation of the boroughs of Tregony and Truro was under his absolute control, and he exercised considerable influence on the elections for Penryn. He sat for Tregony from 1702 to 1705, for the county of Cornwall from 1705 to 1710, for Truro from 1710 to 1713, and for Penryn from 1713 until June 1720. In the latter year he was raised to the peerage as Baron Boscawen and Viscount Falmouth, having been for some time discontented at the delay in his advancement to that position. Both before and after the accession of George I he spent large sums of money in support of whig principles, and was rewarded on his party's triumph by many valuable offices. He was a groom of the bedchamber to Prince George of Denmark, steward of the duchy of Cornwall and lord warden of the Stannaries in 1708, comptroller of the household from 1714 to 1720, and joint vice-treasurer of Ireland from 1717 until a few months before his death. He died suddenly at Trefusis, in Cornwall, on 25 Oct. 1734, and was buried at St. Michael Penkivel. His wife, to whom he was married in Henry VII's Chapel, Westminster Abbey, on 23 April 1700, was the elder daughter and coheir of Colonel Charles Godfrey, master of the jewel office, by Arabella Churchill. She died on 22 March 1754, and was also buried at Penkivel. Lady Falmouth was very desirous of becoming a lady of the bedchamber to the wife of George II, and tried to bribe Lady Sundon into obtaining the post for her. Her letters on the subject will be found in Mrs. Thomson's 'Life of Lady Sundon,' ii. 316–19. Many satirical references to their son, the second Viscount Falmouth, will be found in the 'Catalogue of Satirical Prints at the British Museum,' iv. 685–6.

W. P. C.

BOSCAWEN, WILLIAM (1752–1811), author, younger son of General George Boscawen and Anne Trevor (vide pedigree in MRS. DELANY'S *Autobiography*), and nephew of the admiral, Edward Boscawen [q. v.], was born 28 Aug. 1752, and was educated at Eton, where he is said to have been a great favourite of Dr. Barnard. He became a gentleman-commoner of Exeter College, Oxford, and on settling in London studied law under a Cornish lawyer, Mr. Justice Buller, about 1770, and went the western circuit. Boscawen published two or three law treatises, and was appointed a commissioner in bankruptcy. In 1785 he was made a commissioner of the Victualling Office. He was much attached to literary pursuits, and translated first the Odes, Epodes, and Carmen Seculare of Horace; then the Satires, Epistles, and Art of Poetry. He was much indebted for his notes to Dr. Foster, of Eton College. In 1792 he published a 'Treatise on Convictions on Penal Statutes,' and in 1798, 1800, and 1801 some original poems and other works. He was also a contributor to the 'Gentleman's Magazine,' and to the 'British Critic.' He died of asthma, at Little Chelsea, on 8 May 1811. By his wife, Charlotte Ibbetson, daughter of the Rev. Dr. Ibbetson, he had five daughters. He was of an affectionate and benevolent disposition, and the Literary Fund he considered almost as his own child, writing the annual verses for it till within five years of his death.

W. H. T.

BOSGRAVE, JAMES (1547?–1623), Jesuit, was born at Godmanston, Dorsetshire, 'of a very worshipful house and parentage,' about 1547. He was probably a brother of Thomas Bosgrave, who suffered along with Father John Cornelius at Dorchester on 4 July 1594. He quitted England in his childhood; entered the novitiate of the Society of Jesus at Rome on 17 Nov. 1564; and was ordained priest at Olmütz in Moravia in 1572. For twelve years he taught Greek, Hebrew, and mathematics at Olmütz, whence he was sent to Poland and eventually to Vilna in Lithu-

ania. His health declining he was ordered by his superiors to return to England to try his native air. He was seized on landing at Dover in September 1580, was taken before the privy council, and was subsequently committed to the Marshalsea prison and cruelly tortured there. Afterwards he was removed to the Tower and was again put to the torture. Some time after his arrest Bosgrave consented to attend the services of the established church, and was thereupon set at liberty. His fellow catholics naturally held aloof from him as an apostate. He then addressed to the privy council a protest in which he declared that he had been deceived through his own ignorance and their fraud, and he likewise printed another protest for the catholics. He was at once re-arrested. On 14 Nov. 1581 he was arraigned in the king's bench, with Father Edmund Campion and others, and on the 20th of that month he received sentence of death, but at the request of Stephen (Battori), king of Poland, Queen Elizabeth consented to spare his life. He was reprieved and remanded back to the Tower. It was alleged by the government that he and Henry Orton, a lay gentleman, gave answers different from those made by the other priests to the questions put to them about the deposing power of the holy see. The government published these replies in 'A Particular Declaration or Testimony of the undutiful and traitorous affection borne against her Majestie by Edmund Campian, Jesuite, and other condemned priests,' 1582. It has been supposed that the answers of Bosgrave and Orton are not correctly given (Foley, *Records*, iii. 292, 772), but there can be no doubt that Bosgrave wished to be neutral between two extreme parties.

At length Queen Elizabeth was prevailed upon to restore him to liberty, and on 21 Jan. 1584–5 he was sent into exile with Father Jasper Haywood and others, twenty-one in all. He returned to Poland and died at Calizzi on 27 Oct. 1621, or, as another account sets forth, in 1623, 'septuagenario major.'

He is the author of 'The Satisfaction of M. Iames Bosgrave, the godly confessor of Christ, concerning his going to the Church of the Protestants at his first comming into England.' It is printed with 'A True Report of the late Apprehension and Imprisonnement of Iohn Nicols, Minister at Roan,' Rheims, 1583.

BOSO (*d.* 1181 ?), third English cardinal, is described by Cardella as Boso Breakspear, an Englishman by birth, the nephew of Pope Adrian IV (Nicholas Breakspear), and a monk of the order of St. Benedict. He was a member of the monastery of St. Albans, but went to Rome to follow the fortunes of his uncle. In 1155 (Ciaccone) he was created cardinal-deacon by the title of St. Como and St. Damian. He was sent by his uncle on a mission of uncertain date and purpose to Portugal. He was greatly beloved by Adrian, who gave him charge of the castle of St. Angelo. On the death of Adrian, Boso upheld the cause of Alexander III, who, according to Cardella, owed his election mainly to Boso's influence in the conclave. He was raised to the higher grade of cardinal-priest of St. Pudenziana by Alexander. Baronius mentions his name as one of the pope's companions on the celebrated journey to Venice in 1177. His name appears among the list of witnesses to a charter of privileges and immunities granted by Alexander III to the monastery of St. Maria in Organo of the order of St. Benedict. His signature is also attached to many bulls and other documents of the period of Adrian and Alexander (Cardella). He died at Rome in the autumn (Ciaccone), probably of the year 1181; for though Cardella states that his influence mainly secured the election of Lucius III (1181–82), yet his name does not appear in any of the documents of that pontificate.

Ciaccone says that he wrote several learned theological works referred to in the 'Catalogus Scriptorum Angliæ.' He certainly wrote nine poetical lives of female saints, which exist in the Cotton MSS. He was a poet of no inconsiderable merit for his time, and took care to hand down his name to posterity in his own rhymes.

C. S.

BOSSAM, HERBERT DE. [See Herbert.]

BOSSAM, JOHN (*fl.* 1550), painter, is mentioned by Nicholas Hilliard in a manuscript quoted by Vertue as 'that most rare English drawer of story works in black and white,' and as 'worthy to have been sergeant-painter to any king or emperor.' His poverty prevented him doing much in colours, and latterly he found painting so unremunerative that he gave it 'clean over.' On the accession of Elizabeth he became a reading minister. According to Walpole, Vertue never discovered any of his works.

[Walpole's Anecdotes of Painting (Dallaway), i. 136–7.]

BOSSEWELL, JOHN (*fl.* 1572), heraldic writer, was, according to his own statement, a northern man, and probably a member of the family of Bosvile, established for many generations in the neighbourhood of Doncaster. It has indeed been ingeniously suggested that he was son and heir of Thomas Bosvile of Stainton, who died in the fifth year of Edward VI (NICHOLS, *Herald and Genealogist*, ii. 113). He describes himself as 'gentleman,' and appears to have acted as a notary public, but by taste he was an antiquary and specially devoted to heraldic pursuits. In the latter he was a close follower of Gerard Legh, and the first part of his 'Workes of Armorie,' entitled 'Concordes,' is in fact a mere abridgement of Legh's 'Accedens.' Like his master, he delighted in symbolism and allegory, in conceits and legendary fables; nor can it be said that his writings are of much value, even from an heraldic point of view. The dates of his birth and death are alike unknown. The first edition of his 'Workes of Armorie' was published by Tottell in 1572, the second (a mere reprint) in 1597.

[Moule's Bibliotheca Heraldica, p. 21; Hunter's South Yorkshire, i. 32.] C. J. R.

BOSTE or BOAST, JOHN (1543?–1594), catholic priest, was born of a good family at Dufton, in Westmoreland, in or about 1543, and educated at Oxford, where he graduated M.A. On being converted to catholicism he quitted the university and repaired to the English college of Douay, then temporarily removed to Rheims, was ordained priest, and sent back on the mission in 1581. After many narrow escapes he was betrayed into the hands of the Earl of Huntington, lord president of the north, who sent him to London to be examined by the privy council. He was imprisoned in the Tower, where he was 'often most cruelly rack'd, insomuch that he was afterwards forced to go crooked upon a staff.' When he had so far recovered as to be fit to travel, he was sent back to the north, and was tried and condemned for high treason at Durham, on account of exercising his priestly functions in England. He was a man of undaunted courage and resolution, as was shown by his behaviour at the trial. George Swallowfield, formerly a minister of the established church, who was arraigned at the same time on a similar charge, showed signs of wavering, but Boste vehemently exhorted him to stand firm. Thereupon Swallowfield declared himself sincerely penitent, and Boste publicly gave him absolution in open court. Boste was executed with much barbarity on 19 or 24 July 1594.

BOSTOCK, JOHN (*d.* 1465), abbot of St. Albans. [See WHETHAMSTEDE.]

BOSTOCK, JOHN, the elder (1740–1774), physician, was born in England, but educated at the university of Edinburgh, where he graduated M.D. in 1769. His inaugural dissertation is his only published work. It is dedicated to Cullen, under whom he had studied, and for whom he expresses very warm admiration. This dissertation is on gout, and extends to forty-three octavo pages, of which four and a half are occupied by a quotation from Sydenham's famous treatise on the disease. Under the heading of diagnosis a lucid summary of the distinctions between gout and rheumatism is given, which is, however, much less complete than Heberden's well-known passage on the subject. The thesis contains nothing original, and the author in the last paragraph gracefully acknowledges that all his matter is drawn from Cullen. Bostock became an extra licentiate of the College of Physicians of London in 1770, and began practice immediately after at Liverpool. He was elected physician to the Royal Infirmary, married, and had a son, Dr. John Bostock [q.v.], but died when only thirty-four years old, 10 March 1774. Some of Bostock's books are preserved in the library of the Royal Medical and Chirurgical Society in London, and among them a copy of his 'Tentamen Medicum inaugurale de Arthritide,' Edinburgh, 1769.

[Munk's Coll. of Physicians (1878), vol. ii.; Bostock's Works.] N. M.

BOSTOCK, JOHN, the younger (1773–1846), physician, was son of Dr. John Bostock of Liverpool [q.v.], and was born in that city. He was educated at the university of Edin-

burgh, where he graduated M.D. in June 1798. His thesis was on secretion in general, and in particular on the formation of the bile. It shows that he was familiar with the recent writings of Fourcroy and with the investigations of Scheele, Priestley, and Lavoisier, and that he had himself made some original experiments in chemistry. This essay is dedicated to William Roscoe, who had been kind to the author. His connection with Roscoe deserves notice, as a certain resemblance of style may be traced between Bostock's compositions and those of the editor of Pope. Bostock arouses expectation and disappoints it, uses superficial knowledge as if it were profound learning, is never concise, and rarely clear; seldom full, but often prolix. He settled in Liverpool and soon became a well-known man. In 1810 he there published 'Remarks on the Nomenclature of the New London Pharmacopœia,' 8vo. The London College of Physicians had published a new edition of the 'Pharmacopœia,' and Dr. Powell, a physician of considerable learning and high character, had been one of the chief editors. This pamphlet attacks the college with bitterness, and treats Dr. Powell with a disrespect which must have done Bostock harm in his profession. Powell's terms have almost all come into general use, while Bostock's suggested improvements are forgotten. He advocated the use of long chemical and botanical terms instead of simple denominations. An aromatic oil then new to medicine was called in the 'Pharmacopœia' 'Cajuputi oleum,' for which simple term Bostock wanted the name 'Oleum essentiale melaleucæ cajeputi,' and all his alterations were of this pedantic kind. In 1817 Bostock moved to London. The year after his arrival he published 'An Account of the History and Present State of Galvinism (*sic*),' perhaps the only one of his books still worth reading. He gave up the practice of medicine and took to chemistry, physiology, and general science. He contributed several articles to Brewster's 'Encyclopædia,' and in 1824 published the first of three volumes called 'An Elementary System of Physiology,' a book which was a good deal read till the publication of Baly's translation of Müller's 'Physiology,' but is now merely an obsolete textbook. At the same period Bostock lectured on chemistry at Guy's Hospital. He was elected a fellow of the Royal Society, and in 1829 published a paper in the 'Philosophical Transactions' 'On the Purification of Thames Water.' In this he discusses with much ability the nature of the several impurities, and shows some capacity for experiment, with a knowledge of all the chemistry of that period. In 1835 he published as an octavo volume his 'Sketch of the History of Medicine from its Origin to the Commencement of the Nineteenth Century,' previously contributed to the 'Cyclopædia of Practical Medicine.' The work shows small acquaintance with medical books, and has no merit of originality. In 1836 he brought out a third edition of his 'Physiology,' and he wrote a great number of articles and papers, but few of permanent value. The activity of his mind and the range of his work are shown by the fact that in 1826 he was president of the Geological Society, in 1832 vice-president of the Royal Society, and for many years an active member of the Medico-Chirurgical Society. In its 'Transactions' (vols. x. and xii.) he has described his own case in a paper on hay fever. Heberden had given a brief account of the disorder, so brief as to be little more than a hint, and to Bostock belongs the credit of giving the first complete description of the disease. Bostock died of cholera in August 1846. His life was one of continued and useful industry, and though few of his writings deserve to be read now, his description of hay fever entitles him to a place in the history of medicine.

[Gent. Mag. (new ser.) vol. xxvi. (1846), pt. ii. 65; Lancet, Aug. 15, 1846; Bostock's Works.]

N. M.

BOSTON BURIENSIS (*fl.* 1410), or JOHN BOSTON OF BURY (as Fuller prefers to write the name), the author of the 'Catalogus Scriptorum Ecclesiæ' and the 'Speculum Cœnobitarum,' was an Augustinian monk belonging to the abbey at Bury St. Edmunds. His full name was probably John Boston, his surname being perhaps taken from the town of his birth or remoter origin. In this style—Johannes Boston Buriensis—he is quoted in the 'Catalogue of Authors' appended to Dr. J. Caius's 'Antiquities of Cambridge,' and, according to Tanner, he is so named in the 'Chronicon Litchfeld.' Of the life of this Boston of Bury nothing is known except that he diligently traversed the whole of England investigating the libraries of all the monasteries he came across in his travels, and noting down the titles of all the books he found there, with their authors' names and their opening words. These authors he arranged in alphabetical order, and, having assigned a fixed number to each monastic library, was enabled, by attaching the proper numbers to each work as he enumerated an author's writings, to show in what place it was to be found; thus, as Bale says, 'making one library out of many.' Besides this information, he gave, where possible, the date of each author's birth and death, and

rendered his catalogue still more complete by additions from Hugh of St. Victor, Cassiodorus, Burchard of Worms, and other authorities. This work, which was unknown to Leland and even to Bale when drawing up the first edition of his 'Scriptores Britanniæ' (Ipswich, 1548), appears to have been much used by the latter in the enlarged edition of his great work published some nine years later at Basle. Pits also declares that he had been unable to find this work. Tanner adduces arguments to show that there must have been two forms of Boston's 'Catalogue' —a longer one and a shorter. One of these appears to have been in the possession of Archbishop Ussher (*Hist. Dogmatica*, 124), from whose hands it passed into those of Thomas Gale. Fragments of the same work are to be found in the British Museum (*Addit. MS.* 4787, ff. 133–5), and extracts in the Lambeth Library (No. 594). The Catalogue itself has been printed, with some omissions, in Tanner's 'Bibliotheca' (ed. 1748), pp. xviii–xliii.

Besides the above-mentioned work, John Boston is credited with having written a book entitled 'Speculum Cœnobitarum,' being an account of the origin of the monastic life, with a long list of the great names that have illustrated the monastic annals and of the various works written by the fathers from Origen and earlier down to St. Bernard. This has been published by Anthony Hall at the end of his edition of Adam of Murimuth (Oxford, 1722).

The Catalogue is dedicated in six Latin verses to some English king, said by Fuller to have been Henry IV, in which statement he seems to be supported by Pits, who assigns our author to the year 1410.

[Tanner's Bibl. Brit.; Bale's Catalogue, 541; Pits, De illustribus Angliæ Scriptoribus, 52, 593; Fuller's Worthies, ii. 166 (ed. 1662); Todd's Catalogue of Lambeth MSS. 91; Caius, De Antiquitate Academiæ Oxoniensis (ed. Hearne, 1730), i. 257; Ussher's Historia Dogmatica (ed. Wharton, 1689), 124, 392.] T. A. A.

BOSTON, THOMAS, the elder (1677–1732), Scottish divine, was born at Dunse on 17 March, and baptised on 21 March, 1676–1677. He was the youngest of seven children of John Boston and Alison Trotter (*d.* 1 Feb. 1691, aged 56). His grandfather, Andrew Boston, came to Dunse from Ayr. His father was a presbyterian, but, after the murder of Archbishop Sharp in 1679, attended episcopal worship till 1687. He was at the grammar school under James Bullerwall from 1684 or 1685 till 1689, and then was employed for a short time in the office of Alexander Cockburn, a writer to the signet. He entered Edinburgh University 1 Dec. 1691, and took his M.A. degree 9 July 1694. He was a good scholar, and had a fine memory; he says himself that he remembered every material passage in the Roman historians. From 1690 to 1701 he studied theology under George Campbell, professor of divinity, a strong presbyterian. His whole expenses at college amounted to 10*l.* 14*s.* 7⅔*d.* sterling, in money; but we must remember that the Scottish student in those days received his regular supplies of simple food and clothing from home. Early in 1696 he became parish schoolmaster of Glencairn, boarding with Boyd, the minister; but he resigned this situation, after a month's trial, on 8 Feb. 1696. He then became successively tutor in the family of Andrew Fletcher of Aberlady, and chaplain to Colonel James Bruce of Kinnet. He was licensed by the Roxburgh presbytery on 15 June 1697, preached with acceptance in the counties of Stirling and Perth (where he found his wife), was called to the parish of Simprin, Berwickshire, 11 Aug. 1699, and ordained there on 21 Sept. 1699. In Oct. 1701 he became clerk of synod. On 24 Jan. 1707 he was called to the parish of Ettrick, in Selkirkshire, released from the charge of Simprin 6 March 1707, and admitted to that of Ettrick on 1 May 1707, the day of the legislative union between England and Scotland. In 1712 he refused the oath of abjuration. He received a call to the parish of Closeburn, but the commission of the general assembly refused on 15 Aug. 1717 to sanction his removal thither, and he remained minister of Ettrick to the end of his days. Boston was at variance with the majority of the assembly on doctrinal grounds. While visiting one of his Simprin flock, a Scottish soldier, Boston saw and borrowed a couple of pieces of English divinity which the man had brought home with him from the Commonwealth wars. One was a treatise by Saltmarsh, for which he did not care; the other was part first of 'The Marrow of Modern Divinity.' Touching both the Covenant of Works and the Covenant of Grace,' &c., by E. F., 1645. The work is a series of dialogues, and largely consists of excerpts from standard writers. The author was an English puritan, and has been described as 'an illiterate barber.' Tanner's edition of Wood's 'Athenæ' (1721) identifies him with Edward Fisher, M.A., son of Sir Edward Fisher, of Mickleton, Gloucestershire, and a gentleman commoner of Brasenose. Grub disputes the identification, on the ground that the Oxford Fisher was a royalist, who wrote 'A Christian Caveat to the old and new Sabbatarians, or a vindication of

our Gospel-Festivals,' 5th ed. 1653, 4to; and, according to the Bodleian catalogue, was author of a tract in favour of celebrating the feast of the Nativity. The book which thus accidentally came into his hands exercised a strong influence over Boston's mind, and was introduced by him to his friends. Thus began what is known as the Marrow controversy. The Auchterarder presbytery, jealous of the smallest inroads of Arminianism, had drawn up certain propositions, to which, in addition to the authorised standards of the kirk, they required all candidates for license to subscribe. Among these propositions was the following: 'I believe that it is not sound and orthodox to teach that we must forsake sin in order to our coming to Christ, and instating us in covenant with God.' A candidate who had refused his subscription to the 'Auchterarder creed,' as it was called, and had therefore not been licensed, appealed to the general assembly, which in 1717 condemned the above proposition as unsound, forbade the imposition of unauthorised subscriptions, and ordered the license to be given. Boston was one of a party who, in the pulpit and elsewhere, showed their dissatisfaction with the finding of the assembly. Hence the refusal to transport him to Closeburn. In 1718 the 'Marrow of Modern Divinity' was republished, with a preface (dated 3 Dec. 1717), by James Hog, minister at Carnock, near Dunfermline (*d.* 14 May 1734), whereupon the controversy waxed fiercer. In pursuance of instructions given by the assembly of 1719, the commission of assembly, early in 1720, appointed a committee for preserving purity of doctrine, which did its work by two sub-committees. One of these, which was headed by Principal James Hadow, of St. Andrews (*d.* 4 May 1747), extracted from the volume six so-called antinomian paradoxes on the subject of the sins of a believer. On 20 May 1720 an act of assembly was passed condemning the book, and enjoining ministers to warn their people not to read it. After a meeting in Edinburgh, attended by Ebenezer and Ralph Erskine, Boston with eleven others gave in a representation and petition against the act; hence they were called the 'twelve apostles,' and the 'Marrow-men.' The assembly, on 28 May 1722, passed (by a majority of 134 to 5) another act, somewhat modifying the previous censure of the book, but confirming the general effect of the preceding act, and directing that the ministers who had subscribed the representation against it should be rebuked by the moderator for the injurious reflections contained in their petition. Accordingly 'the twelve apostles' were rebuked, and a protest, drafted by Boston and offered by Kid, of Queensferry, in the name of the rest, was not received. It was, however, printed by the protesters. As might be expected, the prohibition of the reading of the 'Marrow' secured for it a wider and more eager perusal. To the popularity of its doctrines in a not inconsiderable section of the kirk Boston's own writings largely contributed. In 1729, in the case of Simson, divinity professor at Glasgow, who had received the comparatively light sentence of suspension for teaching anti-trinitarian doctrine, the matter was again brought up in the assembly, but the suspension was simply confirmed. On this occasion Boston stood alone in the assembly, being the only member who expressed his dissent from its judgment. Boston's deeply religious life and exemplary parochial labours did much to recommend his theology to the people of his nation. His communions gathered a wonderful assemblage of people from all parts. His own picture of himself, in his 'Memoirs,' is that of a genuine and self-denying man, devoted heart and soul to the cause of the gospel as he understood it. He found time for study, especially of the Hebrew Bible. His influence is not spent; his 'Fourfold State' is still a popular classic of the Calvinistic theology. He died at Ettrick on 20 May 1732. He had married, on 17 July 1700, Katherine, fifth daughter of Robert Brown, of Barhill, Culross, who survived him nearly five years. She bore him ten children, all of whom died young, except two sons and two daughters. His first publication seems to have been: 1. 'Sermon' (Hos. ii. 19, preached 24 Aug. 1714), 1715, reprinted 1732. He published also, 2. 'Reasons for refusing the Oath of Abjuration,' 1719. 3. 'Human Nature in its Fourfold Estate,' &c. Edinburgh, 1720, 8vo (often reprinted; transl. into Welsh 1767; into Gaelic 1837, reprinted 1845; edition revised by Rev. Michael Boston, the author's grandson, Falkirk, 1784, 8vo; abridged, with title 'Submission to the Righteousness of Christ,' Birmingham, 1809); 4. 'Queries to the Friendly Adviser, to which is prefixed a Letter to a Friend, concerning the affair of the Marrow,' &c., 1722, 8vo. 5. 'Notes to the Marrow of Modern Divinity,' 1726. 6. 'The Mystery of Christ in the form of a Servant,' &c. (sacrament sermon, Phil. ii. 7), Edinburgh, 1727, 8vo. Posthumous publications and editions are: 7. 'A View of the Covenant of Grace,' 1734, 8vo. 8. 'Thomæ Boston, ecclesiæ Atricensis apud Scotos pastoris, Tractatus Stigmologicus, Hebræo-Biblicus. Quo Accentuum Hebræorum doctrina traditur, variusque eorum, in explananda S. Scriptura, usus exponitur. Cum præfatione viri reverendi & clarissimi Davidis Millii,' Amstelæ-

dami, 1738, 4to (a handsome volume, with many copper-plates; dedicated by Boston's son, Thomas, to Sir Richard Ellys, bart.; Mill's preface is dated from Utrecht, 6 Feb. 1738; he does not endorse Boston's view that the Hebrew accents are of divine origin. Boston's work shows very thorough and wide scholarship; he was acquainted with French and Dutch, in addition to the tongues necessary for his purpose. He had prepared for the press 'An Essay on the first twenty-three chapters of the Book of Genesis; in a twofold version of the original text,' with notes, theological and philological; in this work he showed the utility of his theory of the Hebrew accents, and made use of the elaborate system of punctuation which he had framed to represent them in English). 9. BOSTON, THOMAS, the younger (1713–1767), Scottish relief minister, the youngest son of Thomas Boston (1677–1732) [q. v.], was born at Ettrick on 3 April 1713. After receiving the rudiments from his father and an elder brother, he went to the grammar school at Hawick, and thence to Edinburgh University. He was licensed on 1 Aug. 1732 by the Selkirk presbytery, presented to Ettrick in the room of his father in November 1732, and ordained there on 4 April 1733. On 25 Oct. 1748 he was released from the charge, having a call to Oxnam, Roxburghshire, and admitted there on 10 Aug. 1749. He inherited his father's theology, and created for himself a popularity which fully sustained the special repute of the family name. A vacancy having occurred in the parish church of the neighbouring town of Jedburgh, the inhabitants were very desirous of having him as their minister, but the presentation was given to another. Hereupon the elders of the church and most of the parishioners, including the town council, withdrew from the parish church and built a meeting-house, being determined to secure Boston's services at any cost. As a preliminary to accepting their call, he tendered his demission to the presbytery on 7 Dec. 1757. On 30 May 1758 the general assembly accepted his demission, and in doing so declared him henceforth incapable of receiving a presentation, and prohibited all ministers from employing him in any office. This did not prevent him from pursuing his ministry at Jedburgh in an independent capacity, and it was not long before he found coadjutors. The successor of his father's friend at Carnock was Thomas Gillespie, who in 1752 had been deposed by the general assembly. Gillespie continued to minister at Carnock, at first in the open fields, afterwards in a meeting-house erected by his people. In 1761 Boston and Gillespie joined in admitting a minister to a congregation at Colinsburgh, and the three constituted themselves into a new ecclesiastical body, under the name of the 'presbytery of relief.' Boston was the first moderator. The name selected for this new organisation explains why its founders did not cast in their lot with the seceders, who, having formed the 'associate presbytery' in 1733, had constituted it an 'associate synod' in 1744, and were now (since 1747) divided into two sections, known as the burgher and anti-burgher synods, one admitting, the other disallowing, the lawfulness of the burgess oath to defend 'the true religion presently pro-

fessed within this realm.' Boston and his friends were averse to assuming any attitude of antagonism to the church of their fathers; the one grievance which they hoped to do something to redress was the case of congregations wronged by intrusive patronage. For these they provided a refuge in the existing distress. As Grub says, they and their followers 'retained a strong feeling of attachment to the established church,' and regarded themselves 'rather as auxiliary to it than as arrayed in opposition against it.' In 1773, six years after Boston's death, the relief presbytery formed itself into a 'synod of relief,' consisting of two presbyteries. The burgher and anti-burgher synods, having each suffered from subordinate secessions, reunited on 8 Sept. 1820, and on 13 May 1847 joined with the relief synod to form the existing 'united presbyterian church.' Boston died at Jedburgh on 13 Feb. 1767. He had married on 26 April 1738 Elizabeth Anderson, who died at Dysart on 21 June 1787. His son Michael was minister of the relief congregation at Falkirk; his daughter Christiana married Dr. Tucker Harris, of Charlestown, South Carolina. Boston's publications consisted of four single sermons, of which the first was printed in 1745, the last in 1762. His 'Select Discourses on a variety of practical subjects,' Glasgow, 1768, 8vo, were issued posthumously. Some of these are contained in 'Select Sermons by... Boston... and James Baine, M.A., first Relief minister at Edinburgh; with introductory essay by N. McMichael, D.D.,' Edin. 1850, 8vo.

[Hew Scott's Fasti Eccl. Scot.; Grub's Eccl. Hist. of Scotland (1861), iv. 79, &c.] A. G.

BOSVILLE, WILLIAM (1745–1813), a celebrated *bon vivant*, was the eldest son of Godfrey Bosville of Gunthwaite, and Diana his wife, the eldest daughter of Sir William Wentworth, of West Bretton, bart. He was born on 21 July 1745. After being educated at Harrow he obtained a commission in the Coldstream guards on 24 Dec. 1761. He was raised to the rank of lieutenant on 11 Jan. 1769, and served with his regiment through part of the American war. He retired from the army in June 1777. Upon his return from America he travelled in France, Italy, and Morocco. He was an intimate friend of John Horne Tooke, to whose house at Wimbledon Bosville used to drive down in a coach and four to dinner every Sunday during the spring and autumn for a great number of years. Mention will be found of his name in the 'Diversions of Purley' (1805), pt. ii. p. 490. Possessed of a large fortune he was exceedingly generous with his money, and was unbounded in his hospitality. Every weekday he used to receive some of his friends at dinner at his house in Welbeck Street. The party never exceeded twelve in number, and the dinner hour was always five o'clock punctually. A slate was kept in the hall, on which any of his intimate friends might write his name as a guest for the day. Besides Horne Tooke, Sir Francis Burdett, Lords Hutchinson and Oxford, Parson Este, and others, often availed themselves of this privilege. The first stroke of five was the signal for going downstairs, and the host made a point of never waiting for any of his guests. In accordance with his favourite maxim, viz. 'Some say better late than never; I say better never than late,' an old friend who arrived one day four minutes late was refused admittance by the servant, who said that his master was 'busy dining.' Though his health declined and his convivial powers failed, he still continued his dinner parties to the last. Even when compelled to remain in his bedroom, the slate was hung in the hall as usual, and on the very morning of his death he gave his orders for the dinner at the usual hour. After he had settled down in England he hardly ever left London for more than a day, as he used to say that it was the best residence in winter and that he knew no place like it in summer. Once when in Yorkshire, it is said that he made a point of not visiting his property, which was of considerable extent in that county, lest he should be involved in the troubles of a landed proprietor. In politics he was an ardent whig. When his friend Cobbett was in Newgate, Bosville went in his coach and four to visit him, and afterwards gave him a cheque for 1,000*l.*, as a token of sympathy with him in his persecutions. In appearance he was almost as eccentric as in his manners. He used always to dress in the style of a courtier of George II, and wore a single-breasted coat, powdered hair and queue. Though he never attained any higher rank in the guards than that of lieutenant, he was generally known as Colonel Bosville. He died at his house in Welbeck Street on 16 Dec. 1813 in his sixty-ninth year, and was buried on the 24th of the same month in the chancel of St. Giles-in-the-Fields. He was the last known male descendant of Richard Bosville, on whom the manor of Gunthwaite was settled in the reign of Henry VI. Bosville never married, and by his will left nearly the whole of his fortune and estates to his nephew, the Hon. Godfrey Macdonald, afterwards third Baron Macdonald.

clair's Memoirs of the Right Hon. Sir John Sinclair, Bt. (1837), i. 183–8; Gent. Mag. (1813), lxxxiii. pt. ii. 630, 704; Ann. Reg. (1813), Chron. p. 123; European Mag. (1813), lxiv. 552–3; Scots Mag. (1814), p. 158; Hunter's South Yorkshire (1831), ii. 343–50; Chambers's Book of Days (1869), ii. 705–6.] G. F. R. B.

BOSWELL, ALEXANDER, Lord Auchinleck (1706–1782), Scotch judge, the eldest son of James Boswell of Auchinleck, advocate, and Lady Elizabeth Bruce, third daughter of Alexander, second earl of Kincardine, was born in 1706. After studying at Leyden University, where he graduated 29 Dec. 1727, he was admitted a member of the faculty of advocates 22 July 1727. In 1748 he was appointed sheriff-depute of Wigtownshire, which office he resigned in 1750. Upon the resignation of David Erskine, lord Dun, he was appointed an ordinary lord of session, and on 15 Feb. 1754 took his seat on the bench with the title of Lord Auchinleck. On 22 July in the following year he was also appointed a lord justiciary in the place of Hew Dalrymple, Lord Drummore. This last appointment he resigned in 1780 on account of his feeble state of health. He continued, however, to sit as an ordinary lord until his death, which happened at Edinburgh on 25 Aug. 1782, in the seventy-sixth year of his age. Lord Auchinleck was a sound scholar and a laborious judge. In religion he was a strict presbyterian, and in politics a strong whig. Dr. Johnson's visit to him at Auchinleck in November 1773 is amusingly recounted by his son James in the 'Journal of a Tour to the Hebrides.' Scott gave some additional anecdotes to Croker. It was Lord Auchinleck who is said to have designated Johnson as 'Ursa Major.' Lord Auchinleck married twice. His first wife was Euphemia Erskine, daughter of Colonel John Erskine and Euphemia his wife. By this marriage there were three sons: James, the biographer of Dr. Johnson; John, who entered the army and died unmarried; and David, who in early life went into business, but afterwards became head of the prize department in the navy office, bought Crawley Grange, Buckinghamshire, and died in 1826. Lord Auchinleck's second wife was his cousin Elizabeth, daughter of John Boswell of Balmuto, and sister of Claud Irvine Boswell [q. v.], afterwards Lord Balmuto. There was no issue of this marriage, which took place on the same day on which his son James was married, 25 Nov. 1769.

[Brunton and Haig's Senators of the College of Justice (1832), p. 518; Boswell's Johnson (Croker's edit. 1831), iii. passim; Dr. Rogers's Boswelliana (1874), passim; Gent. Mag. lii. 55.] G. F. R. B.

BOSWELL, Sir ALEXANDER (1775–1822), antiquary and poet, eldest son of James Boswell the biographer, was born on 9 Oct. 1775, at the family mansion at Auchinleck, Ayrshire, and named after his grandfather, the Scotch judge, then living there. Along with his brother James he was educated at Westminster and Oxford. At his father's death in 1795 he succeeded to Auchinleck, and in the same year commenced the tour of Europe. He wrote, at Leipzig, 'Taste Life's glad moments,' a translation of Usteri's poem 'Freu't euch des Lebens.' Being an enthusiastic lover of Burns's poetry, he composed in his native dialect several songs which were exceedingly popular, and in 1803 collected them into a volume, published anonymously, 'Songs chiefly in the Scottish Dialect,' Edin. 8vo. These are very graphic, full of Scotch humour, but coarse at times.

Having settled at Auchinleck, he studied the literature of his country, and imitated the ancient ballad style. In 1803 he published 'The Spirit of Tintoc, or Johnny Bell and the Kelpie,' Edin. 8vo. The same year he published an 'Epistle to the Edinburgh Reviewers,' in verse, by A. B., Edin. 4to. To George Thomson's 'Select Collection of Original Welsh Airs,' Edin. 1809, fol., he contributed five songs. His next book was anonymous, 'Edinburgh, or the Ancient Royalty; a sketch of Former Manners,' by Simon Gray, Edin. 1810, 12mo. In 1811, with his name affixed, appeared 'Clan Alpin's Vow,' a fragment, Edin. 8vo (second edition, London, 1817, 8vo). 'Sir Albyn,' a poem, burlesquing the style and rhythm of Scott, was published in 1812. Turning his attention to the literary heirlooms of Auchinleck, in 1811 he published from a manuscript 'A Breefe Memoriall of the Lyfe and Death of Dr. James Spottiswood, bishop of Clogher in Ireland, . . .' Edinb. 4to, and he reprinted from a unique copy of a black-letter work, originally published by Knox himself, the disputation between Quintine Kennedy, Commendatour of Crosraguell and John Knox, entitled 'Ane Oratioune . . . 1561,' Edin. 1812, 4to. To George Thomson's 'Select Collection of Original Irish Airs,' Edin. 1814, fol., he contributed seven songs, of which 'Paddy O'Rafferty' and 'The Pulse of an Irishman' are well known.

In 1815 he established a private press at Auchinleck. A gossiping letter, telling of his difficulties in the undertaking, addressed to Dibdin in 1817, is given in the 'Decameron' along with an engraving of the thatched cottage, his printing-office, 'Officina Typographica Straminea.' Here, as first fruits, appeared 'The Tyrant's Fall,' a poem

on Waterloo, by Alexander Boswell, Auchinl., printed by A. and J. Boswell, 1815, 8vo; 'Sheldon Haughs, or the Sow is flitted,' 1816, 8vo, a quaint rendering of an Ayrshire tradition; and 'The Woo'-creel, or the Bull o' Bashun,' 1816, a poem after the manner of Allan Ramsay. This year he contributed some lyrics to Campbell's 'Albyn's Anthology,' Edin. fol. We hear of him continually in the papers of this time. At the annual festival of the Harveian Society of Edinburgh he sang one of his topical songs on the Institution, its founder and members, 'Song . . . Harveian Anniversary,' Edin. 1816, 8vo. The society elected him poet laureate, as is shown by a poem published after his death. 'An Elegiac Ode to the memory of Dr. Harvey . . . by Sir Alex. Boswell, Poeta Laureatus, Sod. Fil. Æsculapii,' in 'Andrew Duncan's Tribute to Raeburn,' Edin. 1824, 8vo. The works issuing under his editorship from his private press were interesting additions to literature. About 1816 appeared 'Dialogus pius et festivus inter Deum (ut ferunt) et Evam,' then 'Dialogus inter Solomon et Marcolphum,' and afterwards the Roxburghe work, the 1598 edition of 'Poems by Richard Barnfield,' 1816, 4to, the gift of his brother James. The series of rare reprints for which the press is chiefly noted is that of several old poems issued at intervals in 4to, separate and unpaged, each with 'Finis,' but afterwards grouped in volumes (unnumbered) under the title of 'Frondes Caducæ,' of which a complete set is very scarce. We give abbreviated titles of the works issued:—[Vol. i.] 1816, with engraving of the printing-office. 'A Remembraunce of Sir Nicholas Bacon . . (by) George Whetstones.' 'A Remembrance of Judge Sir James Dier . . . (by) George Whetstons.' 'A Remembrance of . . . Lord Thomas, late Earle of Sussex,' 1583. [Vol. ii.] 1816, 'Sir Phillip Sidney, his honorable life . . . by G. W[hetstones].' 'The Mirror of Man, and the Manners of Men . . by Thomas Churchyard,' 1594. 'A Pleasant Discourse of Court and Wars, by Thomas Churchyard,' 1594. 'A Sad and Solemn Funerall . . . Francis Knowles, Knt., by Thomas Churchyard,' 1596. The latter is called 'Churchyard's Cherrishing.' [Vol. iii.] 1817 (with a neat engraving of Linnburn Bridge, by Grace Boswell) 'A Fig for Momus by T. L[odge],' 1595. [Vol. iv.] 1817, 'A Musicall Consort, called Churchyard's Charitie,' 1595. 'A Praise of Poetrie,' 1595. [Vol. v.] 1818, 'The Scottish Souldier, by [George] Lawder,' 1629. [Vol. vi.] 1818, 'Ane Tractat of a part of ye Yngliss Cronikle . . . from Asloan's Manuscript.' [Vol. vii. and last] 1818, 'The Buke of the Chess from a manuscript early in the 16th cent. by Jhois Sloane.' In 1817 Boswell contributed twelve songs to George Thomson's 'Select Collection of Original Scottish Airs,' London, fol., of which 'Good night, and joy be wi' ye a',' 'Jenny's Bawbee,' and 'Jenny dang the Weaver' are still favourites. In 1819 he succeeded the Rev. James William Dodd as a member of the Roxburghe Club, a well-deserved acknowledgment of his bibliographical reputation.

To Boswell's enthusiasm Scotland is indebted for the monument erected on the banks of the Doon to Robert Burns. With a friend he advertised a meeting at Ayr on a certain day to consider proposals for honouring the memory of the poet. No one came but themselves; they were not daunted, however, a chairman was elected, resolutions were carried *nem. con.*, thanks to the chair voted, and the meeting separated. The resolutions printed and circulated brought in a public subscription of 2,000*l.*, and he laid the foundation-stone of the memorial on Burns's birthday, 25 Jan. 1820. He was an active magistrate and deputy lieutenant of Argyleshire, and lieutenant-colonel of the Ayrshire cavalry. In 1816 and 1820 he was elected member for Plympton, in Devonshire, and entered on his duties on strict conservative principles, but accepted the Chiltern Hundreds in 1821. His song 'Long live George the Fourth,' written, composed, and sung by him at Ayr, on the celebration of his majesty's anniversary, 19 July 1821, was afterwards published, Edin. 1821, fol. In August 1821 he was created a baronet. He married a daughter of David Montgomery, of Lanishaw, a relative of his mother, by whom he had several children. In society he was a general favourite. Croker describes him as a high-spirited, clever, and amiable gentleman, of frank and social disposition. Lockhart says that among those who appeared at the 'dinners without the silver dishes (as Scott called them) was Boswell of Auchinleck, who had all his father Bozzy's cleverness, good humour, and joviality, without one touch of his meaner qualities.'

The 'Beacon' (not the 'Warder,' as Allibone, Dibdin, and others say) had been started as a tory paper at this time. Scott contributed without any share in directing it. He withdrew on account of its excesses, and after a short existence, Jan. to Aug. 1821, the committee ordered its extinction. It contained bitter pasquinades against James Stuart of Dunearn (of the house of Moray), a writer to the Signet. Another paper, the 'Glasgow Sentinel,' a continuation of the 'Clydesdale Journal,' took the place of the 'Beacon,' and

in its first number, 10 Oct. 1821, with equal rancour but less ability attacked Stuart. Squabbles arose between its proprietors, Robert Alexander and Wm. Murray Borthwick, eventuating in several crown prosecutions and appeals to the House of Commons. Stuart, under a judgment obtained by Alexander against Borthwick, got hold of the office papers, and found to his surprise that his enemy was his half-friend Boswell. Boswell had been to London to attend the funeral of his brother James, and returning to Edinburgh on Saturday night, 23 March 1822, found a card of Lord Rosslyn awaiting him. On the 25th came Stuart's challenge. Boswell would neither deny nor apologise, and on the 26th a duel was fought at the farm of Balbarton, near Kirkcaldy, the seconds being Lord Rosslyn for Stuart, and the Hon. John Douglas, afterwards Marquis of Queensberry, for Boswell. Stuart again endeavoured to effect a reconciliation, but Boswell was obstinate. The duel was with pistols fired at a signal, and Boswell was struck and his collarbone shattered. He died at Balmuto, the seat of his ancestors, the next day, 27 March 1822, in the presence of his wife and family, and was buried at Auchinleck.

In person Boswell was of a powerful, muscular figure; he was very fond of field sports from his youth. Lord Cockburn speaks of his jovial disposition, but censures his overbearing, boisterous love of ridiculing others. Lockhart gives an interesting account of his last evening at Scott's, a few hours before the fatal event. Several circumstances of his death are reproduced by Scott in the duel scene of 'St. Ronan's Well.' It is curious that his only piece of legislation was the taking charge of the act (59 Geo. III, c. 70) which abolished two old Scottish statutes against duelling. His daughter Janet Teresa, wife of Sir William Francis Eliott of Stobs, died 1836. His only son James, who succeeded him as second and last baronet, married Jessie Jane, daughter of Sir James Montgomery Cuninghame, and died 4 Nov. 1857, leaving two daughters, Julia and Emma, still living.

Stuart was tried for wilful murder at the high court of justiciary, Edinburgh, on 10 June 1822. On the trial Henry Cockburn opened and Francis Jeffrey followed. The jury, without retiring, acquitted the prisoner.

BOSWELL, CLAUD IRVINE, Lord Balmuto (1742–1824), Scotch judge, was born in 1742. His father, John Boswell of Balmuto, who was the younger brother of James Boswell of Auchinleck, and a writer of the signet in Edinburgh, died when Claud was an infant. At the early age of six he was sent to Mr. Barclay's school at Dalkeith. After finishing his education at Edinburgh University, he was admitted a member of the faculty of advocates on 2 Aug. 1766. On 25 March 1780 he was appointed sheriff depute of Fife and Kinross, and after serving this office for nineteen years was, upon the death of James Burnett, Lord Monboddo, appointed an ordinary lord of session, and took his seat upon the bench with the title of Lord Balmuto on 21 June 1799. After nearly twenty-three years of judicial work he resigned in January 1822, and was succeeded by William Erskine, Lord Kinedder. The death, under his own roof, of his kinsman, Sir Alexander Boswell, from the effects of a wound received by him in the duel with James Stuart of Dunearn, gave him a shock from which he never entirely recovered. He died at Balmuto on 22 July 1824, in his eighty-third year. He was a robust and athletic man, with black hair and beetling eyebrows. His manner was boisterous and his temper passionate. Though fond of joking, a habit he sometimes indulged in on the bench, he was not particularly keen in the perception of wit in others. In 1783 he married Anne Irvine, who, by the death of her brother and grandfather, became the heiress of Kingcussie, and by whom he left one son and two daughters. Two etchings of him will be found in Kay, Nos. 262 and 300.

[Kay's Original Portraits and Etchings (1877), i. 126, 298, ii. 277–8, 380, 384, 386; Brunton and Haig's Senators of the College of Justice (1832), p. 544; Personal Recollections of Mary Somerville (1873), pp. 55–6.] G. F. R. B.

BOSWELL, EDWARD (1760–1842), antiquary, was born at Piddletown, Dorsetshire, on 5 April 1760, and practised as a solicitor, first at Sherborne, and afterwards at Dorchester, where he died on 30 Oct. 1842. He published: 1. 'The Civil Division of the County of Dorset,' Sherborne, 1795, 8vo. 2. 'The Ecclesiastical Division of the

Diocese of Bristol,' Sherborne [1826?], 8vo.

[Gent. Mag. N. S. xix. 95; Cat. of Printed Books in Brit. Mus.; Biog. Dict. of Living Authors (1816), 34.] T. C.

BOSWELL, JAMES, the elder (1740–1795), biographer of Johnson, was the descendant of an old Scotch family. One of his ancestors, Thomas Boswell, killed at Flodden (1513), had obtained from James IV the estate of Auchinleck in Ayrshire. His father, Alexander Boswell (1706–1782), is noticed in a separate article. James was educated by a private tutor, John Dun (who became minister of Auchinleck on Lord Auchinleck's presentation in 1752), then at a school kept by James Mundell at Edinburgh, and afterwards at the Edinburgh High School. In childhood he professed to be a Jacobite, his father being a thorough whig, and prayed for King James till an uncle gave him a shilling to pray for King George (*Life of Johnson*, 14 July 1763). Boswell entered the university of Edinburgh, where he began a lifelong friendship with William Johnson Temple, afterwards rector of Mamhead, Devon, vicar of St. Gluvias, Cornwall, and a friend of Gray. Temple went to Trinity Hall, Cambridge, and Boswell, writing to him there in 1758, says that he has been introduced to David Hume, and describes his desperate love 'for Miss W—t.' The only other confidant of his passion is Mr. Love, an actor from Drury Lane, who taught elocution at Edinburgh. In 1758 Boswell also went the northern circuit with his father, travelling in the same post-chaise with Sir David Dalrymple, advocate-depute, afterwards Lord Hailes, and by Love's advice already keeping an 'exact journal.' He had also begun to publish trifles in the magazines. In November 1759 Boswell went to Glasgow as a student of civil law, and heard Adam Smith's lectures. He made the acquaintance of Francis Gentleman, then acting at the Glasgow theatre, who in 1760 dedicated to him an edition of Southern's 'Oroonoko.' Meeting some catholics in Glasgow he straightway resolved to become a Romish priest. The distress of his parents induced him to abandon this plan on condition of being allowed to exchange the law for the army. In March 1760 his father took him to London, and asked the Duke of Argyll to get him a commission in the guards. The duke replied, according to Boswell: 'I like your son; that boy must not be shot at for three-and-sixpence a day.' Boswell's military ardour meant a love of society. There was, he said long afterwards (to Temple, 4 Jan. 1780), 'an animation and relish of existence' amongst soldiers only to be found elsewhere amongst players, and he loved both varieties of life. He was eager (*Letters*, p. 14) to 'enjoy the happiness of the beau monde and the company of men of genius,' and he stayed in London for a year, where he never managed to see Dr. Jortin, who was to have removed his religious heresies, but did see Lord Eglinton, who took him to Newmarket and introduced him to the Duke of York. Boswell wrote a poem called 'The Cub of Newmarket,' with a dedicatory epistle to the duke, describing himself as a 'curious cub' from Scotland. Lord Eglinton grew tired of the vagaries of his young friend, who had to return to Edinburgh and law studies in April 1761.

Boswell groaned under the necessity of exchanging London gaieties for legal studies in the family of a strict father. He sought all the distractions possible in Edinburgh society. He wrote some notes on London life, which gained him the acquaintance of Lord Somerville. He was admitted to the society of Kames, Dalrymple, Hume, and Robertson. He became intimate with an actor, David Ross, who was now giving private entertainments in Edinburgh, and who afterwards (December 1767) obtained permission to open the first theatre there, on which occasion Boswell contributed a prologue. Meanwhile his chief associate was Andrew Erskine, captain in the 71st regiment, and son of the fifth Earl of Kellie, with whom he carried on a correspondence from August 1761 to November 1762. The young men did their best to be vivacious in prose and verse, and published their letters in 1763. Erskine had edited in 1760 the first volume of 'A Collection of Original Poems by the Rev. Mr. Blacklock and other Scotch gentlemen,' published by Donaldson, an Edinburgh bookseller; a second, partly edited by Boswell, followed in February 1762, but the reception was not such as to encourage an intended third. From one of the twenty-eight poems contributed by Boswell we learn that he was the founder of a 'jovial society called the Soaping Club,' from the proverbial phrase, 'Let every man soap his own beard.' Boswell gives one of his numerous self-portraitures, calls himself king of the soapers, boasts of his volatility, his comic singing, and conversational charms, and ends by declaring that 'there is no better fellow alive.' In December 1761 he published an anonymous 'Ode to Tragedy,' gravely dedicated to himself as to one who could 'relish the productions of a serious muse' in spite of his apparent volatility. These amusements had not extinguished his love of London, for which he has 'as violent an affection as the most romantic lover ever

had for his mistress' (*Letters to Erskine*, p. 101), and he had persuaded his father to let him return thither, still with a view to a commission in the guards. He reached it in November 1762, and immediately plunged into the pleasures of the town.

Lord Hailes had impressed upon Boswell a veneration for Johnson. Gentleman had mimicked 'Dictionary Johnson' in Glasgow. Boswell had made acquaintance on his first visit to London with Derrick, afterwards Nash's successor at Bath, who promised an introduction, but did not find an opportunity. In 1761 the elder Sheridan had lectured in Edinburgh and made the same offer. When Boswell reached London, Derrick was at Bath, and a coolness had separated Sheridan from Johnson. Boswell, however, made the acquaintance of Davies, the actor, who now kept a bookseller's shop at 8 Russell Street, Covent Garden. And here, 16 May 1763, the famous introduction of his future biographer to Johnson took place. The friendship rapidly ripened. Boswell had evenings alone with Johnson at the Mitre, was taken to see his library by Levett, saw him in company with Goldsmith, introduced his friend Temple and another friend, Dempster, whose free-thinking principles were sternly rebuked by Johnson (*Letters to Temple*, p. 33); made notes of the great man's conversation from the first interview, and received from him much good advice. Johnson encouraged Boswell to keep a full journal, and said that he would some day go with his new friend to the Hebrides.

Lord Auchinleck was meanwhile threatening to disinherit his son (Rogers, *Boswell*, p. 35), and in June Boswell had agreed to pacify his father by going to study civil law at Utrecht. Johnson exhorted Boswell to be steady, and accompanied him to Harwich in the stage-coach, leaving London 5 Aug. 1763. Boswell started with an allowance of 240*l.* a year from his father (*Letters to Temple*, p. 37), with plenty of letters of recommendation, and with a resolution to study the civil law and to transcribe Erskine's 'Institutes.' He studied through the winter, and became intimate with Trotz, a distinguished professor of civil law, and with William Brown, pastor of the English congregation, and afterwards professor at St. Andrews; but he could not stay out the intended two years. In July 1764 he was at Berlin, whither he probably travelled in company with the Earl Marischal, who was at the same time returning to Berlin from a visit to Scotland (Streckeisen-Moulton, *Rousseau*, i. 103–11). Boswell attached himself to the British ambassador Mitchell. He wrote to his father, asking for supplies for a voyage to Italy. The reply ordered a return to Utrecht, though it permitted a visit to Paris. Boswell complained to Mitchell in a long letter full of sage reflections upon his own character. Mitchell advised implicit compliance with paternal authority. Boswell meanwhile had gone to Geneva, where he visited Voltaire at Ferney, and went to Rousseau at Motiers, with an introduction from the Earl Marischal, who, as governor of Neufchatel, had protected Rousseau (Bisset, *Memoirs of Mitchell*, ii. 381).

Marischal tells Rousseau that Boswell is a hypochondriac visionary who often sees spirits. On 26 Dec. 1764 Boswell (writing from Geneva) triumphantly tells Mitchell that his father has now consented to let him travel in Italy. He sneers at the ambassador's previous counsels of submission, and in the same breath proposes to him a little job. By getting a place in the customs for the now bankrupt father of Temple and doing something for Temple's younger brother, 'you will oblige a worthy fellow, for such I am' (Bisset, *Memoirs of Sir A. Mitchell*, ii. 351–358). In Italy Boswell added Wilkes to his list of friends. He wrote from Rome in April to remind Rousseau—just now expecting to be the Solon of Corsica—of a promised introduction to Paoli (*Tour in Corsica*, p. 264). If it did not come, said Boswell, he should still go, and probably be hanged as a spy. The letter reached Boswell, however, at Florence in August. He crossed from Leghorn to Corsica; saw the great Paoli; talked politics to him and declared himself a kind of Hamlet, a man given to melancholy, bewildered by fruitless metaphysical wanderings, and 'for ever incapable of taking a part in active life.' He also took the liberty of asking Paoli 'a thousand questions with regard to the most minute and private circumstances of his life.' He rode out on Paoli's own horse, with 'furniture of crimson velvet' and 'broad gold lace;' he exulted in being taken for an English ambassador; he played Scotch airs and sang 'Hearts of Oak' to the Corsican peasantry; quoted Johnson's best sayings to the cultivated; and announces, in a letter to Rousseau, 'Ce voyage m'a fait un bien merveilleux. Il m'a rendu comme si toutes les vies de Plutarque fussent fondues dans mon esprit' (Musset-Pathay, *Œuvres inédites de Rousseau*, i. 410). Rousseau, meanwhile, was on his way to England. Hume announces (12 Jan. 1766) that Thérèse Levasseur, Rousseau's mistress, is to be escorted to England 'by a friend of mine—very good-humoured, very agreeable, and very mad.' This was Boswell, who reached England in February 1766, and, after a short stay in

London and some interviews with Johnson, proceeded to Scotland, where his mother was just dead. He was admitted advocate 26 July 1766, and resolved to set to work seriously. His head, indeed, was full of Corsica, and, though Johnson advised him not to write a history, he resolved to turn his experience to account. His father's position brought him, it seems (*Letters to Temple*, p. 95), some legal business, and in March 1767 he announces that he has made eighty guineas. He tried to attract notice by publishing in November 1767 a pamphlet on the famous Douglas case. Boswell considered that he had rendered a service to the claimant, Archibald Douglas; explained upon that ground the coolness with which he was treated by the Duchess of Argyll on his visit to Inverary with Johnson; and seems to have appeared as counsel in the last litigation before the House of Lords in 1778 (*Letter to Johnson*, 26 Feb. 1778). In 1767 he was also employed upon writing his 'Account of Corsica.' He sold it to Dilly for one hundred guineas (*Letters to Temple*, p. 103), and it appeared in the spring of 1768. The book consists of a commonplace historical account of Corsica, followed by a short and very lively description of his tour. A second edition followed in a few months, and a third in 1769. In the spring of 1769 he also published a volume of 'Essays in favour of the brave Corsicans.' The tour excited a good deal of not altogether flattering interest. Johnson, indeed, did not give his opinion till directly charged with unkindness for his silence by the author. He then said (9 Sept. 1769) that the history was 'like other histories,' but the journal 'in a very high degree delightful and curious.' Walpole (who says that Boswell 'forced himself upon me in spite of my teeth') and Gray laughed over it, Gray saying that the journal was 'a dialogue between a green goose and a hero.' Boswell asked Temple for an introduction to Gray, but the poet apparently escaped. Already acquainted with Voltaire, Rousseau, Paoli, Johnson, Goldsmith, Hume, Wilkes, and other eminent men, Boswell had tried to make his Corsican experience a stepping-stone to acquaintance with English statesmen. He called upon Chatham in Corsican costume to plead the cause of Paoli ('Johnsoniana' in Croker's *Boswell*, No. 638); he was elated by a note from the statesman in February 1766; and some months later Chatham wrote him a letter of three pages applauding his generous warmth. On 8 April 1767 he tells Lord Chatham that he has communicated the contents of this letter to Paoli, and asks 'Could your lordship find time to honour me now and then with a letter? To correspond with a Paoli and with a Chatham is enough to keep a young man ever ardent in the pursuit of virtuous fame' (*Chatham Correspondence*, iii. 159, 244).

On the publication of his book Boswell went to London to enjoy his fame. 'I am really the great man now,' he exclaims to Temple (14 May 1768); he brags of his good dinners, of the great men who share them, and declares that he is about to set up his chariot. The pressure of such engagements probably explains the brevity of his account of Johnson in this visit. Boswell was indeed distracted by other interests. His appetite for enjoyment was excessive and not delicate. He lost money at play, though not, it would seem, to a serious extent (*Letters to Temple*, p. 153). He indulged in occasional drinking bouts, and in spite of vows, virtuous resolutions, and a promise made to Temple 'under a solemn yew tree' (*Letters to Temple*, pp. 199, 209), he never overcame the weakness. In 1776 he tells Temple that he was 'really growing a drunkard,' and that Paoli had made him promise total abstinence for a year (*Letters to Temple*, p. 233). At this period love was more potent than wine. In February 1767 he begins a letter to Temple, who had just taken orders, by some edifying reflections upon his friend's sacred profession and exhortations to marriage. He proceeds to explain that he cannot himself marry during his father's lifetime, and that he 'looks with horror on adultery.' He has, however, taken a house for a 'sweet little mistress,' who has been deserted by her husband and three children; who is 'ill-bred' and 'rompish,' and of doubtful fidelity, but handsome and lively. This entanglement lasted till the end of 1768 (*Letters to Temple*, p. 162). It is not surprising to find that Boswell was 'a good deal in debt' (*ib.*) Meanwhile the statement that he cannot marry is the prologue to an intricate history of half a dozen matrimonial speculations, which occupy all the energy not devoted to law, literature, or dissipation. There are references to an 'Italian angel,' apparently of Siena, who writes a letter which makes him cry (*Letters to Temple*, pp. 85, 95, 102). He has for a time thoughts of a Dutch lady called Zelide (probably the Mlle. de Zuyl of 'Boswelliana'), whom he had known at Utrecht. In March 1767 he is thinking of a Miss Bosville in Yorkshire. She, however, is supplanted by a Miss Blair, a 'neighbouring princess,' with a landed estate of 200*l.* or 300*l.* a year, and whose alliance is favoured by his father. Throughout 1767 this flirtation goes on, with quarrels and reconciliations. In June

he gets Temple (who happens to be in the north) to pay her a visit, and instructs his friend to speak to the lady of his good qualities, and also to mention his oddness, inconstancy, and impetuosity, and to ask her whether she does not think 'there is something of madness in that family' (*Letters to Temple*, p. 99). The effect of these remarkable instructions does not appear. In August all is well; but she tells him in December that she wishes that she liked him as well as Auchinleck. In February 1768 he is jealous of a Sir A. Gilmour, and amuses himself by getting his rival to frank a letter to her. Then he and a Mr. Fullerton agree to make her offers on the same morning, and are both refused in favour, as they suppose, of Gilmour. In April, after temporary thoughts of a 'fine, healthy, young, amiable Miss Dick,' he returns for a time to Zelide, and begs his father's leave to go to Utrecht, but is deterred by Temple's advice. In August he feels 'quite a Sicilian swain' under the influence of 'sixteen, innocence, and gaiety,' united in the person of Mary Anne, called also *la belle Irlandaise* (a Miss Montgomery, see *Notes and Queries*, 2nd series, iii. 381). Finding, however, that Miss Blair has broken with Sir A. Gilmour, his passion for her is awakened for a time; she is cold, and 'all the charms of sweet Mary Anne' revive. In May 1769 he visited Ireland in order to see this lady, who only laughed at him. He complained to his cousin, Margaret Montgomerie, who sympathised and consoled him by accepting his hand (Rogers, *Boswell*, p. 79). The marriage to a sensible and amiable woman took place 25 Nov. 1769. On the same day, to Boswell's great disgust, his father married his cousin, Elizabeth, daughter of Robert Boswell of Balmuto. Boswell's open expressions of dislike increased his domestic difficulties, but no family rupture resulted, and after his father's death he was 'on decent terms' with his stepmother, who was 'exceedingly good' to his daughter (*Letters to Temple*, p. 313). In August 1768 Boswell sent 700*l.* of ordnance, raised by private subscription, from Carron to Paoli. In June 1769 Paoli, overwhelmed by the French, had left Corsica and retired to London. Boswell came to town in the autumn to attend him. On his way he attended the Shakespeare jubilee at Stratford (August 1769), and appeared in a masquerade in the dress of an armed Corsican chief with 'Viva la Libertà' embroidered in gold letters on his hat. He contributed a minute account of his appearance and his dancing with a very pretty Irish lady to the 'London Magazine,' of which he 'was a proprietor' (see Nichols, *Illustrations*, vii. 365, and *Letters to Temple*, p. 184), of September 1769. His portrait in costume is given as an illustration. In London he saw Johnson and tried to extract advice upon marriage from his master. He renewed an acquaintance, formed in the previous year, with Mrs. Thrale, and brought about a meeting between Johnson and Paoli. In later visits to London Boswell stayed at Paoli's handsome house (*Life of Johnson*, 11 April 1776; *Letters*, p. 200), and the general tried to break him of his drinking habits.

After Boswell's marriage, a cessation of eighteen months took place in the correspondence between him and Johnson, and they did not again meet until Boswell's return to London in March 1772. The intercourse with Johnson, upon which Boswell's title to fame chiefly rests, was kept up during the remaining years of Johnson's life, who died 13 Dec. 1784. Boswell spent about a couple of months during the spring vacation of the Scotch courts (which at this period (1751–1790) lasted from 12 March to 12 June) in visits to Johnson, chiefly in London. He paid such visits in 1772, 1773, 1775, 1776, 1778, 1779, 1781, 1783, and 1784. Johnson's letters show that he was kept away by pecuniary difficulties in 1774, 1780, and 1782. In 1777 the death of a son seems to have prevented his annual journey (*Letter to Johnson*, 4 April 1777). Besides these visits, Boswell met Johnson at Ashbourne (Taylor's living) in September 1777, and saw him in October 1779 during a tour with Colonel James Stuart. The journey to the Hebrides took place in 1773, Johnson reaching Scotland 18 Aug. and leaving 22 Nov. According to Croker (preface to *Life of Johnson*, 1831), Boswell met Johnson on 180 days, or 276 including the Scotch tour. The details of the intercourse between the two men are set forth with incomparable skill in the most popular biography in the language. It is enough to mention here that Boswell was elected a member of the Literary Club 30 April 1773, owing, as it seems, to his own active canvassing as well as Johnson's influence, and against the wishes of several members. After his election they were reconciled, Burke saying that he had so much good humour naturally, that it was scarcely a virtue (*Tour to the Hebrides*, 21 Aug. 1773).

During this period Boswell was suffering various domestic troubles. Neither his wife nor his father sympathised with his enthusiasm for Johnson. The wife was a sensible woman, who, unlike her husband, preferred staying at home. When Johnson took Boswell on his tour, she remarked that though

she had seen many 'a bear led by a man, she had never before seen a man led by a bear.' Johnson perceived, and frequently notices, the dislike which she endeavoured to conceal by studious politeness (Letter to Boswell, 27 Nov. 1773, and note). His father 'harped' on his 'going over Scotland with a brute (think how shockingly erroneous!)' and wandering to London. As Scott tells us (note on *Tour to Hebrides*, 6 Nov. 1773), Lord Auchinleck pronounced Jamie to be 'clean gyte' for 'pinning himself to the tail of an auld Dominie.' Serious difficulties lay behind. Boswell seems in the main to have behaved well to his wife, though he maintained that he could 'unite little fondnesses [for other persons] with perfect conjugal love' (*Letters to Temple*, p. 197). But his relations to Lord Auchinleck were often strained, and Boswell complains that his father is cold to his wife, and is estranged by the stepmother's influence. His professional prospects did not improve, as Boswell was the last man to impress clients with his businesslike capacity. He tells Temple in 1775 that he had made 124*l.* in the last session, and he frequently consults Johnson upon legal cases in which he was concerned. But he finds the Scotch bar uncongenial (*Letters to Temple*, p. 198). He began in 1775 to keep terms at the Inner Temple (*ib.* p. 193), and in 1780 he complains that he cannot support his family (*ib.* p. 255). His father allowed him 300*l.* a year. In 1775 his father also paid off a debt of 1,000*l.* and threatened (though the threat was not carried out) to reduce the allowance to 200*l.* In 1780 Boswell had incurred another debt of 700*l.* or 800*l.* by advances to his wife's family, and was afraid to inform his father. He had by this time five children: Veronica, *b.* 1773; Euphemia, *b.* 1774; Alexander, *b.* 1775; James, *b.* 1778, and Elizabeth, *b.* 1780; besides two sons who died in infancy. With such demands and difficulties due to his occasional escapades, and loans to Temple, he had some grounds for the hypochondria of which—as of all his personal peculiarities—he was much given to boast. He endeavoured to be conciliatory to his father even at the cost of drinking 'a large quantity of strong beer to dull his faculties' (*Letters to Temple*, p. 216), but is vexed by the thought that he had given to his father 'a renunciation of his birthright,' and is thus entirely dependent on his pleasure. After a long discussion, however, in which Boswell consulted Johnson and Lord Hailes, Lord Auchinleck entailed his estate upon him, 7 Aug. 1776. (The preamble to the instrument is printed in Rogers's 'Boswell,' p. 207.) Boswell wished that heirs male should be preferred, however remote; though he graciously observes that he holds that daughters should always be treated with affection and tenderness (note upon letter from Johnson, 15 Feb. 1776). During his father's life his difficulties did not diminish, and Johnson had to protest against his borrowing money to visit London in the spring of 1782. In the autumn of the same year he came into an estate of 1,600*l.* a year by the death of his father, 30 Aug. 1782, and proposed to set up as a country gentleman. In December 1783 he writes to Johnson asking for advice about resisting the unconstitutional influence of Scotch peers, and the treatment of old horses, and expressing his exultation at having been twice elected *præses* at public meetings by the gentlemen of the county. He entertained some hopes of patronage from Pitt, now coming into power, and tried to bring himself into notice by a 'Letter to the People of Scotland on the Present State of the Nation.' He attacks Fox's India Bill and celebrates the virtue of Sir John, an ancestor of Lord Lowther (created Lord Lonsdale May 1784), from whom he had some hopes of support. He sends a copy to Johnson 8 Jan. 1784, and on 17 March put out an address to the freeholders of Ayrshire (printed in Rogers's 'Boswell,' p. 133). On his way to London he heard of the dissolution of parliament, and returned to contest the county, but retired on finding that the old member would stand again. On reaching London, Boswell found Johnson in precarious health, and took an eager part in trying to obtain such an addition to his friend's pension as would enable him to pass a winter in Italy. The last meeting of the two was at a dinner at Sir Joshua Reynolds's, where the plan was discussed. Boswell started next day for Scotland. Upon the death of Johnson, Boswell set about printing his 'Journal of the Tour to the Hebrides,' which had been frequently read by Johnson himself during their journey. Johnson had objected to the publication of this as an appendix to his own narrative, being, as Boswell thought, jealous of a partnership in fame (*Letters to Temple*, p. 192), or more probably fearing the ridicule which it was certain to provoke. Whilst it was going through the press, a sheet was seen by Malone, who thereupon asked for an introduction to the writer, and who revised it throughout, as he afterwards did the life of Johnson. It appeared in the spring of 1786 and reached a third edition in the same year, when Rowlandson published a series of caricatures, and Peter Pindar satirised him in caustic rhymes. A refer-

ence to the meanness of Sir A. Macdonald, who had entertained the travellers in Skye, was softened in the second edition. A 'contemptible scribbler' having 'impudently and falsely asserted' that the omission was compulsory, Boswell emphatically denied that he had ever received any application from Macdonald (*Gent. Mag.* for 1786, p. 285). The scandal is repeated by Peter Pindar and by Dr. Rogers, but apparently without foundation. Meanwhile he proceeded with his life of Johnson, which was announced as in preparation at the end of the first edition of the 'Tour.' Many distractions interfered with his labours. He issued in 1786 another letter to the people of Scotland, protesting against a bill for reconstructing the court of session. He boasts of his previous achievements, and calls upon Lord Lonsdale, 'to come over and help us.' With Lonsdale's help he hoped to represent Ayrshire; and, though he conceived himself still to have claims upon Pitt —whose 'utter folly' for not rewarding a 'man of my popular and pleasant talents' he denounces in 1789 (*Letters to Temple*, pp. 275, 289)—and upon Dundas, he looks to Lord Lonsdale as his patron. He still has hopes of getting in for Ayrshire by a compromise between the opposed parties. Boswell had been called to the English bar in Hilary term 1786, and in 1788 (Nichols, *Illustrations*, vii. 309) obtained through Lonsdale's influence the recordership of Carlisle. In 1788 he was in London with his wife; and in 1789 he took a house in Queen Anne Street West for 50*l.* a year, his wife remaining at Auchinleck in bad health. He is looking out for chambers in the Temple, but admits that he gets no practice. He resolves to 'keep hovering as an English lawyer,' but he speaks of the 'rough unpleasant company' on circuit, and complains of the 'roaring bantering' society. A legal tradition tells, not very credibly, how Boswell was found drunk one night on the street and instructed to move for a sham writ of '*quare adhæsit pavimento*' (Twiss, *Life of Eldon*, vol. i. c. 6). He was in fact treated as a butt for the horseplay of his companions. His wife's health was breaking. During his last visit to his home he got drunk and was injured by a fall from his horse. He was summoned next morning to Lord Lonsdale, and his wife encouraged him to leave her. He heard soon afterwards in London that her position was dangerous, and posted to Auchinleck with his boys in sixty-four hours and a quarter only to find her dead. He was somewhat comforted by the nineteen carriages which followed her hearse; but his grief was sincere and his position full of discomfort. His brother David advised him in vain to settle in Scotland. He resolved to stay in London, sending his son Alexander to Eton, James to a school in Soho, and afterwards Westminster, and boarding his three daughters in London, Edinburgh, and Ayr. His connection with Lord Lonsdale came to a bad end. On 23 Aug. 1789 he notices what seems to have been a practical joke at Lowther Castle, some one having stolen his wig. In June 1790 Lord Lonsdale insulted him grossly, in 'a most shocking conversation,' and Boswell resigned his recordership, and hoped to get rid of all communication with 'this brutal fellow.' His income of 1,600*l.* was reduced by various outgoings to 850*l.*, and allowing 500*l.* for his five children, he had only 350*l.* for himself, which was insufficient to keep him from difficulties. He took chambers in the Temple, went the home circuit, which was an improvement on the northern, though he did not get a single brief (*Letters to Temple*, p. 341), and cherished the illusion that some 'lucky chance' might bring him a prize from 'the great wheel of the metropolis' (*ib.* pp. 268, 279). At intervals matrimonial schemes amused him. But he was mainly 'kept up' by the 'Life of Johnson' (*ib.* p. 304), at which he was labouring whenever he could find time, with the help of Malone, and of which he announced in February 1788 that it would be 'more of a life than any work that has ever yet appeared.' Mrs. Piozzi's 'Anecdotes' appeared in 1785, and Hawkins's 'Life' in 1787. He was deeply injured, according to Miss Hawkins, by finding himself described in this as 'Mr. James Boswell' instead of 'The Boswell.' Boswell met Hawkins on friendly terms in 1788–9, but tells Temple (5 March 1789) that his rival is 'very malevolent. Observe how he talks of me as quite unknown.' In 1790 Boswell published two specimens of his work—Johnson's letter to Chesterfield and the conversation with George III—at half a guinea apiece, perhaps to secure the copyright. The trouble of writing made him, as he says, often think of giving it up. He had nearly finished the rough draft in January 1789, but the revision and printing proceeded slowly. Pecuniary difficulties, owing partly to a sanguine purchase of an estate for 2,500*l.*, made him think of selling the copyright for 1,000*l.*, and he tried to avoid this by borrowing the money from Malone and Reynolds. They declined; but he succeeded in raising the money elsewhere and retained the copyright of his book (Letters to Malone, published in Croker's *Johnsoniana*), and the *magnum opus* at last appeared in two

4to volumes for two guineas on 16 May 1791. The success was immediate. He tells Temple on 22 Aug. that 1,200 out of 1,700 copies were sold, and that the remainder might be gone before Christmas. The second edition, with eight sheets of additional matter, appeared in three 8vo volumes in July 1793. In July 1791 Boswell was elected secretary of foreign correspondence to the Royal Academy (Leslie and Taylor, *Reynolds*, ii. 640). The success of his book must have cheered Boswell, but he still complains, and not without cause, of great depression. His drinking habits seem to have grown upon him. After a melancholy visit to Auchinleck in the spring of 1793 he was knocked down and robbed of a small sum in June, when in a state of intoxication; and he says (for the last time) that he will be henceforth a sober, regular man. In the spring of 1795 he came home 'weak and languid' from a meeting of the Literary Club. His illness rapidly proved dangerous, and he died in his house at Great Portland Street on 19 May 1795. His will (dated 28 May 1785) is printed in Rogers's 'Boswell' (p. 183), and is remarkable for the care taken to secure kind treatment of his tenants. His manuscripts, it is said, were immediately destroyed. [For his sons Alexander and James see Boswell, Alexander and James.] His daughter Veronica died of consumption on 26 Sept. 1795. Euphemia showed her father's eccentricity in an exaggerated form. She left her family, proposed to support herself by writing operas, and made appeals for charity, being under the delusion that her relatives neglected her. She died at the age of about 60. Elizabeth married her cousin William Boswell in 1799, and died on 1 Jan. 1814. The entail, upon which Boswell had been so much interested, was upset by his grandson, Sir James, son of Sir Alexander, in 1850.

The unique character of Boswell is impressed upon all his works. The many foibles which ruined his career are conspicuous but never offensive; the vanity which makes him proud of his hypochondria and his supposed madness is redeemed by his touching confidence in the sympathy of his fellows; his absolute good-nature, his hearty appreciation of the excellence of his eminent contemporaries, though pushed to absurdity, is equalled by the real vivacity of his observations and the dramatic power of his narrative. Macaulay's graphic description of his absurdities, and Carlyle's more penetrating appreciation of his higher qualities, contain all that can be said.

The most vivid account of Boswell's manner when in company with Johnson is given in Mme. d'Arblay's 'Memoirs of Dr. Burney,' and there are some excellent descriptions in later years in her 'Diary' (v. 136, 260). In spite of her perception of his absurdities and her irritation at the indiscreet exposures in the 'Life,' Miss Burney confesses that his good-humour was irresistible. Burke and Reynolds retained their friendship for him through life. Reynolds wrote a curious paper in which he defended the taste for seeing executions, which he shared to some degree with Boswell. Boswell's presence at such scenes is noted in his 'Life of Johnson,' and an account from the 'St. James's Chronicle' (April 1779) of his riding in the cart to Tyburn with the murderer Hickman may be found in the third series of 'Notes and Queries' (iv. 232).

A full-length sketch by Langton, engraved in the 'Works,' gives a good idea of his appearance. There is also a pencil sketch by Sir T. Lawrence engraved in Croker (vol. iv.) A profile by Dance is engraved in Nichols's 'Illustrations' (vii. 300). A portrait of Kit-Kat size was painted by Reynolds in pursuance of a bargain proposed by Boswell (7 June 1785), who undertakes to pay for it from his first fees at the English bar. It has been engraved ten times, and was exhibited at the Grosvenor Gallery, 1884 (Leslie and Taylor, *Life and Times of Reynolds*, ii. 477; and Croker's *Preface*).

Boswell's works are as follows: 1. 'Ode to Tragedy,' 1761. 2. 'Elegy upon the Death of a Young Lady, with Commendatory Letters from A. E[rskine], G. D[empster], and J. B[oswell],' 1761. 3. Contributions to 'Collections of Original Poems by Mr. Blacklock and other Scotch Gentlemen,' vol. ii., 1762. 4. 'The Cub at Newmarket,' 1762. 5. 'Letters between the Honourable Andrew Erskine and James Boswell, Esq.,' 1763. 6. 'Critical Strictures on Mallet's "Elvira"' (by Erskine and Boswell). 7. 'An Account of Corsica; the Journal of a Tour to that Island; and Memoirs of Pascal Paoli,' by James Boswell, 1768. 8. Prologue to 'The Coquettes,' at the opening of the Edinburgh Theatre, December 1767. 9. 'British Essays in favour of the brave Corsicans, by several hands, collected and published by James Boswell,' 1769. 10. 'The Essence of the Douglas Cause,' 1767. 11. 'Contributions to the 'London Magazine,' including an account of the Shakespeare Jubilee, September 1769, 'Remarks on the Profession of a Player,' 1770 (reprinted in Nichols's 'Illustrations,' vii. 368), and 'The Hypochondriack,' a series of twenty-seven articles in the 'London Magazine' from October 1777 to December 1779. 12. 'Doraneto' (a story

founded on the Douglas cause), 1767. 13. 'Decision upon the Question of Literary Property in the Cause of Hunter *v.* Donaldson,' 1774. 14. 'A Letter to the People of Scotland on the Present State of the Nation,' 1783. 15. 'The Journal of a Tour to the Hebrides with Samuel Johnson, LL.D., by James Boswell, Esq., containing some Poetical Pieces by Dr. Johnson relative to the tour, and never before published: a series of his Conversations, Literary Anecdotes, and Opinions of Men and Books, with an authentick account of the Distresses and Escape of the Grandson of King James II in the year 1746' (three editions in 1786). 16. 'A Letter to the People of Scotland on the alarming Attempt to infringe the Articles of Union and introduce a most pernicious innovation by diminishing the number of the Lords of Session,' 1786. 17. 'The Celebrated Letter from Samuel Johnson, LL.D., to Philip Damer Stanhope, Earl of Chesterfield, now first published, with notes by James Boswell, Esq.;' and 'A Conversation between His Most Sacred Majesty George III and Samuel Johnson, LL.D., illustrated with observations by James Boswell, Esq.,' both in 1790. 18. 'The Life of Samuel Johnson, LL.D., comprehending an Account of his Studies and numerous Works, in chronological order; a series of his Epistolary Correspondence and Conversations with many Eminent Persons; and various original pieces of his composition never before published. The whole exhibiting a view of literature and literary men in Great Britain for more than half a century during which he flourished, in two volumes, by James Boswell,' 1791. The principal corrections and additions to the second edition were published separately in 1793.

He also mentions as published in 1791 (ROGERS's *Boswell*, 173; and *Letters to Temple*, p. 337) a poem upon the 'Slave Trade,' which has disappeared.

Boswell died while preparing a third edition of the life of Johnson; the revision of this edition was completed by Malone, who superintended also the next three editions, the last of which (the sixth of the work) appeared in 1811. He introduced various notes, distinguishing them from Boswell's own work, and revised the text. In 1831 Croker published the eleventh edition, in which many useful, together with many impertinent notes, were added, and a great deal of matter from Piozzi, Hawkins, and others interpolated in the text. The whole arrangement was severely criticised by Carlyle and Macaulay in well-known essays. The arrangement was altered in subsequent editions; in an edition published in 1835, revised and enlarged under Mr. Croker's direction by John Wright, the passages interpolated by Croker were removed to the ninth and tenth volumes (fcap. 8vo), with the exception of the 'Tour to the Hebrides,' which still remained in the body of the work. This edition and the reprints were, till lately, the most convenient form of the life. In 1874 Mr. Percy Fitzgerald republished the original text of the first edition (without the division into chapters afterwards introduced), with an indication of the various changes made by Boswell in the second edition. The 'Tour to the Hebrides' forms the last part of the third (and concluding) volume. In 1884 an edition edited by the Rev. Alexander Napier was published by Bell in five volumes, the fourth containing the 'Tour to the Hebrides;' the fifth, the 'Collectanea Johnsoniana,' with the journal of Dr. Campbell, not previously published in England. An edition in four volumes, edited by Mr. Birkbeck Hill, is now (1885) advertised.

[A short memoir of Boswell by Malone is given in Nichols's Literary Anecdotes, ii. 400, reprinted in the later editions of Johnson. The fullest information about his life is given in his works as above, and in the following: Letters of James Boswell to the Rev. W. J. Temple, now first published from the original manuscripts, with an introduction and notes, Bentley, 1857. This consists of a series of letters, accidentally discovered in a parcel of waste paper at Boulogne. They had been in the possession of Temple's son-in-law, who had settled in France (Notes and Queries, 2nd ser. iii. 381), and are undoubtedly genuine; Boswelliana, the Commonplace Book of James Boswell, with a memoir and annotations by the Rev. Charles Rogers, LL.D., and introductory remarks by Lord Houghton, published for the Grampian Club. The Commonplace Book was sold with Boswell's library at London, and came into the possession of Lord Houghton. In the accompanying biography Dr. Rogers has made use of some unpublished materials. Part of the Boswelliana had been published in the second volume of the Miscellanies of the Philobiblon Society.] L. S.

BOSWELL, JAMES, the younger (1778–1822), barrister-at-law, second surviving son of the biographer of Johnson [see BOSWELL, JAMES], was born in 1778. He received his early education at an academy in Soho Square and at Westminster School, and is spoken of by the elder Boswell as 'an extraordinary boy, very much of his father,' who destined him for the bar. Entered at Brasenose College, Oxford, in 1797, he took his B.A. degree in 1801, proceeding M.A. in 1806, and was elected a fellow on the Vinerian foundation. While a student at Brasenose he contributed notes

signed 'J. B. O.' to the third edition of his father's life of Johnson, and afterwards carefully revised and corrected the text for the sixth edition (see MALONE'S *Prefaces*). Called to the bar of the Inner Temple, 24 May 1805, he was afterwards appointed a commissioner of bankrupts. He was intimate from an early age with his father's friend Malone [see MALONE, EDMUND], whom he assisted in collecting and arranging the materials for a second edition of his Shakespeare, and was requested by him in his last illness to complete it, a task which he duly performed. He contributed to the 'Gentleman's Magazine' for June 1813 a memoir of Malone, which in 1814 he reprinted for private circulation. One of the earliest members of the Roxburghe Club, he presented to it in 1816 a facsimile reprint of the poems of Richard Barnfield, and in 1817 'A Roxburgh Garland,' which consists of a few bacchanalian songs by seventeenth-century poets, and of which 'L'Envoi,' a convivial lyric in honour of the club, was composed by himself. In 1821 appeared under his editorship what is known as the third variorum Shakespeare, 'The Plays and Poems of William Shakespeare, with the corrections and illustrations of various commentators, comprehending a life of the poet and an enlarged history of the stage, by the late Edmund Malone, with a new glossarial index,' 21 vols. Boswell contributed a long preliminary 'advertisement,' various readings and notes of no great importance, with the completion of Malone's 'Essay on the Phraseology and Metre of Shakespeare' and the Glossarial Index. The collection of old English literature which Malone left him to be used in the preparation of this edition was presented to the Bodleian by Malone's brother after Boswell's death. He died suddenly at his chambers in the Temple, unmarried and apparently in embarrassed circumstances, on 24 Feb. 1822, a few weeks before the death, in a duel, of his brother Sir Alexander [q. v.], who in a poetical tribute to his memory said of him that he had 'never lost one friend or found one foe.' Lockhart in his 'Life of Scott' (edition of 1845, p. 477, note) describes Boswell as 'a man of considerable learning, and of admirable social qualities,' to whom, as to his brother Sir Alexander, Scott was 'warmly attached.' He belonged to the Albemarle Street circle of John Murray the publisher, who thought Boswell's favourable opinion of the first series of 'Tales of my Landlord' worth quoting to Scott, with those of Hallam and Hookham Frere (LOCKHART'S *Scott*, p. 338).

[Gent. Mag. for March 1822; Letters of James Boswell addressed to the Rev. W. J. Temple, 1857; Boswelliana, the Commonplace Book of James Boswell, 1871; Catalogue of Oxford Graduates; Catalogue of Early English Poets, collected by E. Malone and now preserved in the Bodleian Library, 1836; MS. Registers of Inner Temple.] F. E.

BOSWELL, JOHN (1698–1757), author, was descended from a Gloucestershire family, and was born at Dorchester 23 Jan. 1698. After attending the school at Abbey Milton in Dorsetshire, under the Rev. George Marsh, he proceeded to Balliol College, Oxford, as a commoner. Before taking his bachelor's degree in 1720 he acted as tutor to Lord Kinnaird. He subsequently went to Cambridge and took his degree of M.A. at St. John's College. He was ordained deacon at Oxford and priest at Wells, and in 1727 was presented to the vicarage of St. Mary Magdalene, Taunton. He was also, from 1736, prebendary of Wells Cathedral. He died in June 1757, aged 58. There is a Latin inscription to his memory in Taunton church.

He published the following works: 1. 'A Sermon on Psalm xvi. 7, preached on the anniversary of the Restoration,' 1730. 2. 'A Method of Study, or an Useful Library, in two parts; part i. containing short directions and a catalogue of books for the study of several valuable parts of learning, viz. geography, chronology, history, classical learning, natural philosophy, &c.; part ii. containing some directions for the study of divinity, and prescribing proper books for that purpose,' vol. i. 1738, vol. ii. 1743, 8vo. The author professed that his object in this work was to assist the poor clergyman in his studies, and to induce the young gentleman to look into books. 3. 'Remarks on the Free and Candid Disquisitions,' two pamphlets published in 1750 and 1751. 4. 'The Case of the Royal Martyr considered with Candour, or an Answer to some Libels lately published in prejudice to the memory of that Unfortunate Prince,' 1758, 8vo, two vols. The author's name is not attached to this work. The authority for ascribing it to the vicar of Taunton is John Nichols (*Literary Anecdotes*). It is a reply to two books published in 1746 and 1747: the first is a tract issued anonymously, but written by G. Coade, jun., woolstapler of Exeter, entitled 'A Letter to a Clergyman relating to his Sermon on 30 Jan.,' and the second, Thomas Birch's 'Enquiry' into the Earl of Glamorgan's negotiations with the Irish catholics. It was written and designed for the press in 1748, and announced for publication in 1754, but delayed apparently for an extension, which, as stated on p. 220, vol. ii., was left unfinished in consequence of the author's death.

[Some Account of the Church of St. Mary Magdalene, Taunton, 1845, pp. 43, 49; Nichols's Literary Anecdotes, ii. 507; Le Neve's Fasti, i. 208.] C. W. S.

BOSWELL, ROBERT (1746–1804), psalmist, was a descendant of the Auchinleck family in Ayrshire, and a writer to the signet in Edinburgh. Born in 1746, he received a classical education, and having early in life attached himself to the religious opinions of the 'Glassites,' or 'Sandemanians,' he was chosen by the church in Edinburgh to be one of their teaching elders. He was on a visit to his friends in London, and preached in their chapel there on Sunday, 1 April 1804. His text was 'All flesh is as grass.' In the middle of the sermon he was seized with illness and died in a few minutes.

He was the author of a volume entitled 'The Book of Psalms in Metre from the Original, compared with many Versions in different Languages,' London (J. Johnson), 1784; second edition, 1786. In his 'Prefatory Notes' the author tells us he has adhered chiefly to the version used by the church of Scotland, and that he has compared 233 manuscript and 93 printed editions of the Book of Psalms. The only Sandemanian chapel mentioned in the census of 1851 was near Barbican, with an attendance of 200 worshippers. It was here that Boswell died, and Faraday officiated as elder.

[Holland's Records of Psalmists, 1843; Lowndes's Bibliographer's Manual, 1857.] J. H. T.

BOSWELL, SIR WILLIAM (*d.* 1649), diplomatist, a native of Suffolk, was educated at Jesus College, Cambridge, of which he was elected fellow in 1606. He was M.P. for Boston in 1624 and 1625. He had already entered the diplomatic service. He was secretary to Lord Herbert of Cherbury, ambassador at Paris in 1620 (cf. HERBERT OF CHERBURY'S *Autobiography*, ed. Lee, 1906, p. 106), and afterwards to Sir Dudley Carleton, ambassador at the Hague, to whose post he succeeded in 1633. He was knighted the same year. A tract entitled 'A True Narrative of the Popish Plot against King Charles I and the Protestant Religion,' describes a scheme of the jesuits to raise up Scotland and overthrow Charles I which was discovered to Sir William Boswell by one Andreas ab Habernfeld, and communicated by the former to Archbishop Laud, who immediately took steps to thwart the conspiracy. Boswell's promptitude was commended by the king.

A large share of Sir William's attention while ambassador at the Hague was taken up with the religious controversy at that time raging between the Gomarists and the 'remonstrants.' In this matter, for political reasons, he adopted the policy of Sir Dudley Carleton, and supported Prince Maurice and the Gomarists against Barneveldt and the 'remonstrants,' who advocated the more liberal doctrines of Arminius. When the civil war broke out, Sir William's efforts were directed towards preserving the neutrality of Holland, whose leanings were in favour of the parliamentary party, and despite the efforts of Walter Strickland, who was sent over by Cromwell to counteract his influence, was not altogether unsuccessful in his mission.

Besides being a successful diplomatist, Sir William was a man of letters and a scholar, as is shown by his correspondence with John de Laet, which touches upon subjects ranging from Oriental literature and the compilation of an Arab dictionary to Edward VI's treatise 'De Primatu Papæ' and Sir Simon d'Ewes's Saxon vocabulary.

In the Additional MSS. in the British Museum there are two large volumes of letters addressed to Sir William Boswell and a few written by him. The first volume is mainly taken up with matters relating to the state and condition of the English church in the Netherlands, and includes many letters from Stephen Goffe; the second volume contains the correspondence of John de Laet, and comprises letters on theology and literature, as well as on social and political affairs. Sir William Boswell died in 1649.

[Tableau de l'Histoire générale des Provinces-Unies, 1777; Letters from and to Sir D. Carleton, 1775; Grattan's History of the Netherlands, 1830; Add. MSS. 6394, 6395.] N. G.

BOSWORTH, JOSEPH, D.D. (1789–1876), Anglo-Saxon scholar, was born in Derbyshire in the early part of 1789. He was educated at Repton grammar school, and thence proceeded to the university of Aberdeen, where at an early age he took the degree of M.A., and subsequently that of LL.D. He afterwards became a member of Trinity College, Cambridge. He was ordained deacon in 1814, and priest in 1815. After having served as curate of Bunny in Nottinghamshire, he was in 1817 presented to the vicarage of Little Horwood, in Buckinghamshire, a preferment which he held for twelve years.

In 1821 Bosworth published two educational works entitled respectively: 'Latin Construing, or Lessons from Classical Authors,' and 'An Introduction to Latin Construing,' the former of which went through six and the latter through five editions. In 1823 ap-

peared his 'Elements of Anglo-Saxon Grammar,' which was the earliest work of its kind in the English language. Although this grammar showed no more scientific knowledge of the structure of the language than did the works of Hickes and Lye, from which it was compiled, it rendered important service in awakening amongst Englishmen an interest in the earliest form of their native tongue. In 1826 Bosworth published 'A Compendious Grammar of the primitive English or Anglo-Saxon Language,' which is an abridgment of the former work, with some improvements. The author having become acquainted with the epoch-making grammar of Rask, he was able to correct several of the most important errors of the original 'Elements,' though he seems very imperfectly to have apprehended the philological discoveries of the Danish scholar.

During his residence at Little Horwood, Bosworth took great interest in the measures then proposed for the diminution of pauperism, and published several pamphlets on this subject. In 1829 he became chaplain in Holland, first at Amsterdam, and afterwards at Rotterdam. In 1831 the degree of Ph.D. was conferred on him by the university of Leyden. He continued to reside in Holland until 1840, making occasional visits to England. In 1834 he took at Cambridge the degree of B.D., and in 1839 that of D.D. While in Holland Bosworth was engaged in the preparation of his principal work, the 'Anglo-Saxon Dictionary,' which was published in 1838. Prefixed to this dictionary are 'An Essay on the Origin of the English, German, and Scandinavian Languages and Nations' (reprinted separately in 1848), and a sketch of Anglo-Saxon grammar. The latter, which is condensed from Rask and Grimm, is well arranged, and in general accurate; but the dictionary itself shows that the author had only a very superficial acquaintance with the new philology which had been founded by the eminent men just named. Notwithstanding, however, its extremely unscientific character, and its many errors of detail (no doubt due in part to the author's not having had access to English public libraries), the work was a great advance on any dictionary previously existing. Amongst the other works which Bosworth published during his residence in Holland may be mentioned 'The Origin of the Dutch, with a Sketch of their Language and Literature' (1836); 'Scandinavian Literature' (1839), and a translation of the Book of Common Prayer into Dutch, the copyright of which he made over to the Society for Promoting Christian Knowledge.

In 1840 Bosworth became vicar of Waith in Lincolnshire, and in 1848 he published, under the title of 'A Compendious Dictionary of Anglo-Saxon,' an abridgment of his larger work, omitting the references, but furnishing many additional words and corrections. This smaller dictionary has been several times reprinted: in 1852, 1855, 1859, and 1882. In 1855 he published an English translation of King Ælfred's Anglo-Saxon version of 'Orosius,' and also a facsimile of a portion of the two manuscripts of this work, with a literal English translation and notes. In 1857 he was presented to the rectory of Water Shelford, in Buckinghamshire, and was incorporated a member of Christ Church, Oxford. In 1858 he was appointed Rawlinson Professor of Anglo-Saxon at Oxford, and in the following year he issued an edition of the Anglo-Saxon text of Ælfred's 'Orosius.' His only subsequent publication of importance was an edition in parallel columns of the Gothic and Anglo-Saxon Gospels, and the versions of Wycliffe and Tyndale.

Bosworth's works realised for him (according to his own statement quoted in the 'Academy,' 10 June 1876) the sum of 18,000*l.* In 1867 he gave to the university of Cambridge 10,000*l.* to establish a professorship of Anglo-Saxon.

After being appointed professor, Bosworth resided either at Oxford or at his rectory of Water Shelford. Until a few days before his death, which occurred on 27 May 1876, he was accustomed to work from nine in the morning till six in the evening, his principal task being the preparation of the new edition of his larger dictionary, the publication of which had been undertaken by the Clarendon Press. He also left behind him a large mass of annotations on the Anglo-Saxon charters, which still remain unpublished. Bosworth was a fellow of the Royal Society, and a member of many learned societies both at home and abroad. He was three times married, but left no children.

After Bosworth's death the Anglo-Saxon dictionary was committed by the delegates of the Clarendon Press to the editorship of Professor Toller, of Manchester, and the first and second instalments of the new edition appeared in 1882. Unfortunately the matter, as prepared by the author, a considerable portion of which had already been printed, was very far behind the advanced philological knowledge of the time, and the work was received with general dissatisfaction, especially as the long-standing announcement of its appearance had prevented the preparation of any rival dictionary.

[Athenæum, 3 June 1876; Academy, 3 June and 10 June 1876; information from Prof. Earle; T. O. Cockayne in The Shrine, 1864; Crockford's Clerical Directory, 1875.] H. B.

BOSWORTH, WILLIAM (1607–1650?), poetical writer, belonged to a family (whose name is sometimes spelt Boxworth) of Boxworth, near Harrington, Cambridgeshire. He wrote much poetry in his youth, but published nothing himself. He died about 1650, and in the following year an admiring friend (R. C.) issued, with a dedication to John Finch, Bosworth's essays in poetry. The volume bears the title, 'The Chast and Lost Lovers Lively shadowed in the persons of *Arcadius* and *Septa*. . . . To this is added the Contestation betwixt *Bacchus* and *Diana*, and certain Sonnets of the Author to Avrora. Digested into three Poems by *Will. Bosworth*, Gent.,' London, 1651. In the preface R. C. states that the author studied to imitate 'Ovid's Metamorphosis,' 'Mr. Marlow in his Hero and Leander,' Sir Philip Sidney, and 'Mr. Edmund Spe[n]cer.' Five copies of verses signed respectively L. B., F[rancis] L[ovelace], E[dmund] G[ayton], S. P., and L. C., lament Bosworth's death. The chief poem of the volume (the 'Historie of Arcadius and Septa,' in two books) is followed by 'Hinc Lachrimæ, or the Avthor to Avrora' —an appeal to Azile, a disdainful mistress, verses 'to the immortall memory of the fairest and most vertuous Lady, the Lady ——,' and 'to his dear Friend, Mr. *John Emely*, upon his Travells.' The first poem is a very promising performance for a youth of nineteen, Bosworth's age at the date of its composition. A portrait of Bosworth, 'æt. 30, 1637' (engraved by G. Glover), is prefixed to the volume.

[Corser's Collect. Anglo-Poetica, ii. 318–23; Ritson's Bibl. Anglo-Poet.; Gent. Mag. lxxxi. pt. ii. 124; Phillips's Theatrum Poetarum; Hunter's MS. Chorus Vatum in Brit. Mus.] S. L.

BOTELER. [See Butler.]

BOTELER, EDWARD (*d.* 1670), divine, was a fellow of Magdalene College, Cambridge. On 8 April 1644 he was ejected from his fellowship by the Earl of Manchester. Before 1658 he became rector of Wintringham, Lincolnshire. He was a strong, though not an active, royalist. On the return of Charles II he preached a rejoicing sermon in Lincoln cathedral, and a similar one at Hull, on occasion of the coronation. He was made one of the king's chaplains. On 29 Sept. 1665 he was installed in the prebend of Southscarle, in Lincoln cathedral; this he exchanged on 12 Oct. 1668 for the prebend of Leicester St. Margaret's in the same. He died in 1670. He published several sermons. The earliest seems to have been 'The Worthy of Ephratah: represented in a sermon at the funerals of Edmund, Earl of Mulgrave, 21 Sept. 1658,' &c., 1659, 8vo (text, Ruth iv. 11). Six others are enumerated by Watt.

[Walker's Sufferings of the Clergy, ii. 151; Willis's Survey of Cathedrals, 1742, iii. 203, 237; Cole's MS. Athenæ Cantab. B. p. 70; several of Boteler's sermons.] A. G.

BOTELER, NATHANIEL (*fl.* 1625–1627), captain in the royal navy, is named in different lists of this date as 'an able and experienced sea-captain' (*State Papers*, Charles I, Dom. xxxii. 75, lxv. 70). He took part in the expeditions to Cadiz (Glanville, *Journal of the Voyage to Cadiz*, Camden Society, 1883) and the Isle of Ré; and at some later period claimed to have 'been a commander in all our late actions abroad.' As he at the same time maintained that 'all such as are to command as captains in any man-of-war serving in his majesty's pay ought to be of noble birth and education,' it must be presumed that he, in his own person, fulfilled these conditions, though his relationship to Lord Boteler cannot now be traced. At the present day, however, his best claim to distinction is his having been the author of 'Six Dialogues about Sea Services between an High Admiral and a Captain at Sea' (1685, fcp. 8vo). This book contains a quaint and interesting account of naval rules, customs, and discipline existing in the time of Charles I, and has a very real value to the student of naval archæology. The exact date to which it refers does not appear, but lies probably between 1630–40; the publisher, Moses Pitt, gives no further account of it than, 'Meeting with this book in manuscript, and liking well the contents thereof, I was encouraged to undertake the printing of it.'

[Authorities cited above.] J. K. L.

BOTELER, WILLIAM FULLER (1777–1845), commissioner of bankruptcy, was the only son of William Boteler, F.S.A., of Brook Street, Eastry, Kent, by his first wife Sarah, daughter of Thomas Fuller, of Statenborough, Kent. He was born on 5 Jan. 1777, and was educated, under Dr. Raine, at Charterhouse, and afterwards at St. John's College, Cambridge. He was senior wrangler and first Smith's prizeman for 1799, and in the same year graduated B.A., and was elected a fellow of St. Peter's College. He proceeded M.A. in 1802, and having been admitted a student of Lincoln's Inn on 19 Nov. 1801,

was called to the bar on 23 Nov. 1804. He joined the home circuit, and also practised as an equity draftsman and conveyancer. Though his advancement at the equity bar was slow, he became eventually the leading tithe lawyer of the day. In 1807 he became recorder of Canterbury, and was subsequently appointed recorder of Sandwich, Hythe, New Romney, and Deal, also high steward of Fordwich. He was made a king's counsel in Trinity term 1831, bencher of his inn on 27 May, treasurer during 1843–4. On 16 Dec. 1844 he was appointed senior commissioner of the district court of bankruptcy at Leeds. He died on 29 Oct. 1845 from the effects of a railway accident at Masborough. He married, on 29 Nov. 1808, Charlotte, daughter of James Leigh Joynes, of Mount Pleasant, near Gravesend, by whom he had three sons and six daughters.

[Law Review (1845–6), iii. 327–34; Gent. Mag. new ser. xxiv. 641–2; Annual Register (1845), pp. 161–2, 307–8.] G. F. R. B.

BOTEVILLE, FRANCIS (1545?–1608), Lancaster herald. [See THYNNE.]

BOTEVILLE, WILLIAM (*d.* 1546), editor of Chaucer's works. [See THYNNE.]

BOTFIELD, BERIAH (1807–1863), bibliographer, son of Beriah Botfield, of Norton Hall, Northamptonshire, and Charlotte, daughter of William Withering [q.v.], an eminent botanist, was born at Earl's Ditton, Shropshire, on 5 March 1807. Botfield was educated first at Harrow, where he subsequently established a medal for the encouragement of the study of foreign languages, and was finally prepared for the university at Bitton, in Gloucestershire, by the Rev. H. T. Ellacombe. He matriculated at Christ Church, Oxford, in 1824, and took the degree of B.A. in 1828. In 1831 he was pricked as sheriff of Northamptonshire, a circumstance which led to his publishing the poll-books for the county from 1708 to 1831. He entered upon parliamentary life as member for Ludlow on 23 May 1840, and retained his seat until the dissolution of 1847, when he was defeated. In 1857 he was again returned for that borough, and sat until his death, which occurred at his house in Grosvenor Square, London, on 7 Aug. 1863. He married at Alberbury, in Shropshire, on 21 Oct. 1858, Isabella, the second daughter of Sir Baldwin Leighton.

In early life Botfield studied botany and geology, but he afterwards gave himself up entirely to the charms of bibliography. He was a member of a large number of literary and scientific societies. For a gift of British minerals to the royal collection at Dresden he was created a chevalier of the order of Albert the Brave of Saxony. He gave a collection of British birds to the Natural History Museum at Brussels, and was made a knight of the order of Leopold of Belgium. For the Roxburghe Club he edited (1841) the 'Manners and Household Expenses of England in the Thirteenth and Fifteenth Centuries;' for the Maitland Club (1842) John Row's 'History of the Kirk of Scotland, 1558–1637;' for the Abbotsford Club (1847) 'Buke of order of Knyghthood, translated from the French of Sir Gilbert Hay;' for the Bannatyne Club a volume (1851) of 'Original Letters on Ecclesiastical Affairs of Scotland, chiefly written by or addressed to James VI, 1603–25;' and for the Surtees Society (1840) the 'Catalogues of the Library of Durham Cathedral.' To the 'Gentleman's Magazine,' 1834, pt. i. 236–246, he contributed an account of the books in the library presented by George IV to the British Museum; to the 'Philobiblon Miscellany' a catalogue of the minister's library in the Collegiate Church at Tong, some account of the first English Bible, remarks on the prefaces to the first editions of the classics, on early English books on vellum, and on libraries and notices of libraries—most of which papers were afterwards issued separately; and to the 'Archæologia' a description of the Roman villa on Borough Hill, near Norton. He set up a private printing-press at Norton Hall, and among the works which he printed there was an anonymous 'Journal of a Tour through the Highlands of Scotland' (1830). Thirty-five copies were struck off in 1843 for private circulation of his 'Stemmata Botevilliana.' This was much enlarged and presented to the general public in 1858 as an account of the family of Boteville or Botfield, and of every one connected with them. The issue of 'Bibliotheca Hearneiana—excerpts from the Catalogue of the Library of Thomas Hearne' (1848) was at first limited to twenty-five copies for private distribution. It was afterwards reprinted in the 'Reliquiæ Hearnianæ' (1869 ed.), 272–318. Botfield's address, at Shrewsbury on 6 Aug. 1860, as president of the British Archæological Association, was published, with many plates, under the title of 'Shropshire, its History and Antiquities.' The best-known of all his works is the 'Notes on Cathedral Libraries of England,' 1849. It contains much information on these little-known book-collections. His collection of pictures is described in a catalogue printed in 1848. His library was rich in first editions of the classics.

[Morris's Thynne or Botfield Family, 23; Stemmata Botevilliana, 84–7, 156, App. 33, 479–496; Gent. Mag. (1863), pt. ii. 645–7; Men of the Time, 1862 ed.] W. P. C.

BOTHWELL, EARLS OF. [See HEPBURN, PATRICK, third EARL, 1512?–1556; HEPBURN, JAMES, fourth EARL, 1536?–1578; HEPBURN, FRANCIS STEWART, fifth EARL, *d.* 1624.]

BOTHWELL, ADAM (1527?–1593), bishop of Orkney, was second son of Francis Bothwell, lord of session, by his wife Janet, daughter and coheiress of Patrick Richardson, of Meldrumsheugh, burgess of Edinburgh. He was born about 1527; his epitaph states that he died 'anno ætatis suæ 67.' He is said to have been versed both in canon and in civil law. The see of Orkney became vacant by the death of Robert Reid at Dieppe, 6 Sept. 1558, on his way home after attending, as a commissioner, the marriage of Mary with Francis the Dauphin. On 11 (GRUB) or 14 (HEW SCOTT) Oct. 1559, Bothwell was put in possession of the temporalities of the vacant see. He placed himself a few years later on the side of the protestant party; but there is no reason to suppose that he had much interest in the reforming movement as such, or in the ministry for its own sake. His career is essentially that of one who trimmed his sails to suit the winds of fortune. He was not, however, a merely 'tulchan bishop.' He was duly elected by the new chapter of Orkney, constituted by charter on 28 Oct. 1544 (confirmed 30 June 1545) through the wise exertions of his predecessor. Mary confirmed his appointment to the see on 8 Oct. 1562. This of itself may be taken as proof that he was in Roman orders. He was probably consecrated, as he says (CALDERWOOD, ii. 531) that he was 'according to the order then observed, provided to the bishoprick of Orkney;' 1558, the date he gives, is possibly that of his election by the chapter. More to his taste, probably, was his next preferment. On 14 Jan. 1563 he was made an extraordinary lord of session; as he puts it, he was required by the queen to accept the office; the instrument of his appointment contains, for the first time, the clause 'provided always ye find him able and qualified for administration of justice, conform to the acts and statutes of the college of justice.' He began, however, to take part in ecclesiastical affairs. We find him at both the half-yearly meetings of the general assembly in 1563 (opened 25 June at Perth, and Christmas day at Edinburgh). At Perth he received a commission, for a year only, to plant within the bounds of his diocese kirks, &c. At the Edinburgh meeting, memorable for the first communication (on a case of restitution of conjugal rights) addressed by the assembly to the English archbishops, Bothwell was made one of the commissioners for revising the Book of Discipline. He was not present at the meetings of assembly in 1564; at the December meeting (at which the use of the Book of Common Order was enjoined upon all ministers) 'it was demanded by some brethrein' whether the commissioner of Orkney (so he is called) 'might both duelie exerce the office of a superintendent and office of a Lord of the Colledge of Justice.' The decision was referred to 'the superintendent of the bounds where the questioun ariseth [i.e. the superintendent of Lothian], and a certane number of ministers within his bounds, as he sall choose to assist him.' Apparently the decision was given in the affirmative, for on 13 Nov. 1565 Bothwell was promoted to be an ordinary lord of session. At the June assembly in 1565, Bothwell was one of a committee to decide certain ecclesiastical questions. They decided *inter alia* that no minister should be a pluralist unless able personally to discharge the accumulated duties, and 'providing he be sufficientlie answered of one stipend,' a rather ambiguous loophole. The same committee declined to order parish ministers to keep registers of deaths, on the ground that 'none or few of the ministrie had manses or gleebes for residence.' At the December meeting Bothwell was not present. He attended both meetings of assembly in 1566; at the December meeting, which approved the Helvetic Confession, Bothwell was on a committee which decided that protestant communicants who should become witnesses at the private celebration of baptism by a 'papisticall preest' should lie under church censure. He was also one of those appointed to revise the answer to Bullinger, 'tuiching the apparell of preachers in England.' This appears to be Bothwell's last attendance as a member of the assembly. We next meet him on the occasion which alone is enough to make him a conspicuous person in history. On 15 May 1567 Mary was married to James Hepburn, earl of Bothwell, who on 12 May had been created duke of Orkney. The banns had been proclaimed, much against his will, by John Craig, minister of Edinburgh. The marriage was celebrated, after the protestant form, by the Bishop of Orkney, in the council chamber at Holyrood House. Calderwood says that 'the Bishop of Orkney, at the mariage, made a declaratioun of the Erle of Bothwell his repentance for his former offen-

sive life; how he had joined himself to the Kirk, and embraced the reformed religioun;' he adds, 'but they were maried the same day, in the morning, with a masse, as was reported by men of credite.' The authorities for this statement are Birrell's diary, which says that the marriage was performed by the Bishop of Orkney in the Chapel Royal; Murray's diary, which affirms that it was celebrated 'efter baith the sortis of the kirkis, reformit and unreformit;' and the representation of the confederate barons that it was 'accomplished in baith the fashions.' Malcolm Laing, who discusses the point, considers that 'the reformed bishop was not so scrupulous as to refuse to officiate privately in his former capacity,' and argues that 'the improbability that Mary would acquiesce in a protestant marriage is alone sufficient to refute the assertion' in the diary of Melville (who witnessed the protestant marriage) that the ceremony was not performed in the chapel at the mass, as was the king's marriage. Burton, who speaks of the Bishop of Orkney as 'a convert or an apostate, according to the estimate people formed of his sincerity,' says nothing of a double marriage, rejects the account which places the ceremony in the Chapel Royal, and thinks 'the probability lies with the other authorities' who describe it as taking place in the council chamber, 'strictly in the protestant form.' Mary's abdication soon followed, on 24 July; and on the 29th, at Stirling, her son (born 19 June 1566, baptised 'Charles James' 17 Dec., according to the Roman rite) was crowned and anointed by the Bishop of Orkney. 'Mr. Knox and other preachers,' says Calderwood, 'repyned at the ceremonie of anointing, yitt was he anointed.' On 25 Dec. the general assembly delated in his absence 'Adam, called bishop of Orkney,' on four charges. He had not lately visited 'the kirks of his countrie;' he 'occupyed the rowme of a Judge in the Sessioun;' he 'reteaned in his companie Francis Bothwell, a Papist, upon whom he had bestowed benefices;' and he had 'solemnized the mariage betwixt the queene and the Erle of Bothwell.' He appeared on the 30th; excused himself from residence in Orkney on account of the climate and his health; and denied that he knew F. Bothwell was a papist. For solemnising the royal marriage, 'contrarie an act made against the mariage of the divorced adulterer,' the assembly deprived him of all function in the ministry till such time as he should satisfy the assembly 'for the slaunders committed by him.' However, on 10 July 1568, the assembly restored him to the ministry, did not renew his commission to superintend the diocese of Orkney; but ordered him, as soon as his health permitted, to preach in the Chapel Royal ('kirk of Halyrudhous'), and after sermon confess his offence in the matter of the ill-fated marriage. He had probably had enough of his Orkney diocese, which he only visited twice; on the second occasion he was wrecked on a sandbank. In 1570 he exchanged the greater part of the temporalities of the see with Robert Stewart, natural brother to Queen Mary, for the abbacy of Holyrood House. His own account of the matter, in his defence to the assembly in March 1570, is that 'Lord Robert violentlie intruded himself on his whole living, with bloodshed, and hurt of his servants; and after he had craved justice, his and his servants' lives were sought in the verie eyes of justice in Edinburgh, and then was constrained, of meere necessitie, to tak the abbacie of Halyrudhous, by advice of sundrie godlie men.' He still retained the title of the bishop of Orkney, and added to it that of abbot of Holyrood House. He was present at the election of John, earl of Mar, as regent, by the parliament at Stirling, on 5 Sept. 1571; and he was one of the commissioners appointed by the regent and privy council at the Leith convention, on 16 Jan. 1572, to frame a revised ecclesiastical settlement. The result of their labours 'is remarkable,' says Grub, 'for its general resemblance to the external polity of the Church, as it existed before the Reformation in Scotland, and as it was at that time sanctioned by law in England.' In accordance with the new policy Bothwell was appointed on 3 Nov. 1572 one of the consecrators of James Boyd as archbishop of Glasgow. In 1578, shortly before the fall of Morton (12 March), Bothwell was imprisoned in Stirling Castle, for protesting against that regent's measures. He was quickly liberated, and became one of the council of twelve who formed the provisional government, overthrown on 10 June. Four years passed, and in October 1582 the general assembly appointed Andrew Melville and Thomas Smeaton to confer with the bishop of Orkney on his having ceased from the exercise of the ministry. He pleaded age (he was about fifty-five), weakness of memory, and continual sickness; and alleged that his preferment was scarce worth 500 merks (under 28*l.* sterling) at his entry. The assembly evidently had their doubts about the case, for they directed the Edinburgh presbytery to try his ability, to appoint him to a particular flock, if he were fit for it, and 'to tak order with anie other complaints that sould be givin in against him' before the next assembly. The next assembly appointed a fresh commission upon him; but, after the

king's escape from the restraint which followed the raid of Ruthven, the power of the assembly was abated, and the king protected the bishops. Bothwell was one of the lords of the articles at the parliament in May 1584, the reactionary parliament which re-established episcopal rights 'flatt contrare the determinatioun of the kirk.' His later years seem to have been spent in quiet and comfort. By royal charter he received the baronies of Whitekirk (11 March 1587) and Brighouse (3 Aug. 1592). He died 23 Aug. 1593, and was buried near the high altar of the Chapel Royal at Holyrood House. Appended to his epitaph, on a tablet fixed to the third south pillar from the east end, are some fulsome elegiacs, subscribed M. H. R. (Master Hercules Rollock). He married Margaret, daughter of John Murray of Touchadam, by whom he had (1) John, lord of session, commendator of Holyrood, advanced to the peerage of Scotland, 20 Dec. 1607, as Baron Holyroodhouse, the district belonging to the abbey being erected into a temporal lordship in his favour; (2) Francis, of Stewarton, Peeblesshire; (3) William; (4) Jean, married Sir William Sandilands, of St. Monans.

BOTOLPH or BOTULF (*d.* 680), saint, according to a life found by Mabillon, and attributed by him to Folcard, abbot of Thorney soon after the Conquest, was born of noble parents early in the seventh century, and brought up as a Christian. He was sent with his brother Adulf to Germany to be more fully instructed in religion, where they became monks of the order of St. Benedict. Adulf or St. Adolph is said to have become bishop of Utrecht, although no such name occurs in the succession of the diocese. Botulf returned to England, and having been recommended to the favour of Æthelmund, an unknown king of the South Angles, by two sisters of that prince, who were receiving instruction in religious discipline in the monastery of which Botulf was an inmate, he obtained from Æthelmund a site on which to erect a monastery. This he began to build in 654 (*Anglo-Saxon Chronicle*) at Ikanho. The situation of this monastery is now uncertain. It is generally supposed to have been on the river Witham, on which stands the town of Boston, the church of which is dedicated to St. Botolph, and whose name is an abbreviated form of Botolph's town. He is said to have died in 680, and was commemorated on 17 June. His relics were distributed by Æthelwold, bishop of Winchester, 963–84, amongst the monasteries of Ely, Westminster, and Thorney. Ten churches in Norfolk, and more than fifty in England, are dedicated to him.

Benedicti, 1734 (iii. 1–7); Leland's Itinerary, and De Rebus Britannicis Collectanea; Willis's History of the Mitred Parliamentary Abbeys, &c., London, 1718; Sir T. D. Hardy's Descriptive Catalogue, i. 373–5.] A. H. G.

BOTONER, WILLIAM (1415–1482?). [See WORCESTER.]

BOTT, THOMAS (1688–1754), divine, was born at Derby in 1688. His father was a mercer; his grandfather had been a parliamentary major. He was brought up for the dissenting ministry, but after some experience of preaching went to London to study medicine, and then took orders, and obtained the rectory of Whinburgh, in Norfolk, through Lord Macclesfield's interest. In 1724 he published a discourse to prove that 'peace and happiness in this world' was 'the immediate design of Christianity.' A defence of this followed in 1730. In 1725 he attacked Wollaston's peculiar mode of deducing morality from truth, and in 1730 published a sermon called 'Morality founded in the Reason of Things.' In 1734 Mr. Longe gave him the rectory of Spixworth, which he held, with the neighbouring parish of Croftwick, till his death. In 1738 he preached a sermon, on 30 Jan., upon the duty of doing as we would be done by, observing only, by way of application, that if both parties had fulfilled this duty Charles would not have lost his head. In the same year he attacked Butler's

'Analogy' [see BUTLER, JOSEPH]. In 1739 he married Rebecca, daughter of Edmund Britiffe, of Hunworth. In 1743 he published his chief work, 'An Answer to the Rev. Mr. Warburton's Divine Legation,' &c., in which he censures Warburton for making morality dependent upon the command of a superior being. In 1747 he was presented to the living of Edgefield, Norfolk. His whole ecclesiastical income was 200*l.* a year. His health broke in 1750, and he died 19 Sept. 1754 at Norwich. He was a follower of Hoadly, a friend of Clarke, and a thorough whig. A son, Edmund, was fellow of Trinity College, Cambridge.

[Life in Biog. Brit. by Kippis, who married his niece.] L. S.

BOTT, THOMAS (1829–1870), china painter, was born near Kidderminster, and brought up to his father's business of making spade handles. His next employment was in a glass factory. From Birmingham, where he subsisted for some three years as a portrait painter, he went in 1852 to Worcester, and became a principal artist of the Royal Porcelain Works. 'In that year Mr. Binns introduced what is known as the Worcester enamel. Mr. Bott made the first trials, and ultimately succeeded in giving the enamel the very important character it has since assumed' (*Worcester Journal*, 17 Dec. 1870). Mr. Jewitt speaks of his work in highest terms. A pair of his vases was valued at 1,500*l.* For his work in this 'Worcester enamel' Bott obtained distinction at Paris in 1855, and in London in 1862. Paralysed in 1869, he died 13 Dec. 1870.

[Redgrave's Artists of the Eng. School; Jewitt's Hist. of the Ceramic Art in Great Britain, 1883.] E. R.

BOTTETOURT, JOHN DE (*d.* 1324), baron and admiral, was governor of St. Briavel's Castle and warden of the Forest of Dene. In 1294 he commanded the fleet supplied by Yarmouth and the neighbouring coast, and the next year burnt Cherbourg. He served in the expeditions of Edward I to Gascony and Scotland. Having married Maud, sister and heiress of Otto, the son and heir of Beatrice Beauchamp, widow of William of Munchensi, lord of Edwardston, he came into the estates of his mother-in-law. In 1304 he received a commission under the great seal to hear and determine the causes of a violent quarrel between the mayor and burgesses of Bristol and Lord Thomas of Berkeley and his son Maurice. He was summoned to parliament from 1305 to 1324. He joined Guy Beauchamp, earl of Warwick, in carrying off Piers Gaveston from the custody of the Earl of Pembroke, and with his companions made peace with the king in 1313. The next year he commanded the fleet employed in the expedition against Scotland. When a new permanent council was appointed in 1318, his name was added in parliament to those already agreed upon. He died in 1324, leaving his grandson John his heir.

BOTTISHAM or BOTTLESHAM, WILLIAM OF (*d.* 1400), bishop of Rochester, was a Dominican, D.D., and fellow of Pembroke College, Cambridge, and, it would seem, a preacher of high repute with King Richard II. In 1382 he was present at the council of Blackfriars in London, under the ambiguous style of 'episcopus Nanaten[sis],' Wilkins (*Concilia Magnæ Britanniæ*, iii. 158) proposed 'Landaven[sis],' which is impossible for chronological reasons. There is confusion about the bishops of Nantes at this time (see BALUZE, *Vitæ Paparum Avenion.* i. 943, Paris, 1693); and there is an interval between 1382 and 1384 during which Bottisham may have been bishop; but Dr. Stubbs (*Registrum sacrum Anglicanum*, p. 144), following Strype (*Memorials of Cranmer*, p. 36, ed. 1694), reads the title as 'Navatensis,' which he translates 'Pavada.' Bottisham is next mentioned in 1385 with the title of bishop of Bethlehem; his name does not appear in the regular series printed in 'Gallia Christiana,' xii. 636 et seqq. But as bishop of Bethlehem he was translated in 1386 to the see of Llandaff; whence finally, in 1389, he was translated to Rochester. Both these latter appointments were made by papal provision, and the last expressly in consideration of his fidelity to Urban VI during his troubles at Nocera in 1385. The bishop died in February 1399–1400, and was succeeded by John of Bottisham. Between these two prelates a natural confusion has arisen. Walsingham and Bale call both 'John,' and it is probably to some such cause that we are to attribute the notice cited by Tanner (*Biblioth. Brit.-Hib.* s. v.), which makes William a Carmelite instead of a Dominican. A Nicholas Bottisham died prior of the Carmelite house at Cambridge in 1435. William's works consist of sermons and scholastic compilations.

Fasti Eccl. Anglic. ii. 247, 565, ed. Hardy; Echard, Scriptores Ordinis Prædicatorum, i. 717; Le Keux's Memorials of Cambridge, i. 56, ed. Cooper, 1856.] R. L. P.

BOTTOMLEY, JOSEPH (*fl.* 1820), musician, born at Halifax in 1786, played a violin concerto in public when only seven years old. After studying at Manchester, Leeds, and London, he was organist from 1807 of Bradford parish church, and of Sheffield parish church from 1820. Bottomley published original works, including 'Six Exercises for Pianoforte,' twelve valses, and a small dictionary of music, London, 1816, 8vo.

[Grove's Dictionary of Music and Musicians; Watt's Bibl. Brit. pt. i. 138 *a*.] R. H.

BOUCH, SIR THOMAS (1822–1880), civil engineer, the third son of William Bouch, a captain in the mercantile marine, was born at Thursby, Cumberland, on 22 Feb. 1822. From 1839 to 1844 he worked under Mr. Larmer, civil engineer, who was constructing the Lancaster and Carlisle railway. After a short employment at Leeds he was (1844–8) a resident engineer on the Stockton and Darlington railway, and from 1849 manager and engineer of the Edinburgh and Northern railway. This engagement first brought to his notice the inconvenient breaks in railway communication caused by the wide estuaries of the Forth and the Tay. He carried into effect plans for a 'floating railway'—a system for shipping goods trains which has ever since been in operation. Quitting the Northern railway he engaged in general engineering business, designing nearly three hundred miles of railways in the north of England and Scotland, including the South Durham and Lancashire Union, fifty miles long, and the Peebles, ten miles long. On the introduction of the tramway system he laid out lines in London, Edinburgh, Glasgow, and Dundee. He constructed many bridges, chiefly in connection with railways. At Newcastle-on-Tyne he designed the Redheugh viaduct, a compound or stiffened-suspension bridge of four spans, two of 260 feet and two of 240 feet each. In his principal railway bridges, independent of the Tay bridge, e.g. the Deepdale and Beelah viaduct on the South Durham and Lancashire railway, the lattice girder was used, because of its simplicity and its slight resistance to the wind at high elevations.

In 1863 the first proposals for a Tay bridge were made public, but the act of parliament was not obtained until 1870. The Tay bridge, which crossed the estuary from Newport in Fife to the town of Dundee, was within a few yards of two miles long. It consisted of eighty-five spans—seventy-two in the shallow water, and thirteen over the fairway channel, two of these being 227 feet, and eleven 245 feet wide. The system of wrought-iron lattice girders was adopted throughout. The line was completed from shore to shore on 22 Sept. 1877, and was inspected by Major-general Coote Synge Hutchinson, R.E., for the board of trade. On 31 May 1878 the bridge was opened. The engineer was given the freedom of Dundee, and on 26 June 1879 he was knighted. The traffic was uninterrupted till the evening of Sunday, 28 Dec. 1879, when during a violent hurricane the central portion of the bridge fell into the river Tay, carrying with it an entire train with about seventy passengers, all of whom perished. Under the shock Bouch's health gave way, and he died at Moffat on 30 Oct. 1880. The rebuilding of the Forth bridge was begun in 1882, and it was opened for traffic in 1887. Bouch married, July 1853, Miss Margaret Ada Nelson, who survived him with one son and two daughters.

[Minutes of Proceedings of the Institution of Civil Engineers, lxiii. 301–8 (1881); Illustrated London News, with portrait, lxxvii. 468 (1880); Times, 29, 30, and 31 Dec. 1879; Report of the Court of Inquiry and Report of Mr. Rothery upon the Fall of a portion of the Tay Bridge, in Parliamentary Papers (1880), C 2616 and C 2616-i.] G. C. B.

BOUCHER, JOHN (1777–1818), divine, born in 1777, graduated B.A. at St. John's, Oxford, 23 May 1799; was elected fellow of Magdalen at the same time; took holy orders in 1801, and proceeded M.A. on 29 April 1802, when he became rector of Shaftesbury. From 1804 he was vicar of Kirk Newton, near Wooler, Northumberland, where he died on 12 Nov. 1818 (WILSON, *Churches of Lindisfarne*, p. 73). A posthumous volume of 'Sermons' was dedicated to Shute Barrington, bishop of Durham (2nd ed. 1821).

[Preface to Sermons.] J. H.

BOUCHER, JOHN (1819–1878), divine, born in 1819, was the son of a tenant-farmer in Moneyrea, North Ireland. Intended for the unitarian ministry, he was in 1837 sent to the Belfast Academy, and in 1842 became minister at Southport; next at Glasgow; and finally in 1848 at the New Gravel Pit Chapel, Hackney, where for five years his fervour and eloquence drew great congregations. He resigned his pulpit in 1853, owing to rationalistic doubts, but soon entered St. John's, Cambridge, to read for Anglican orders. He proceeded B.A. in 1857, when his health broke, and he died, an invalid,

at Chesterton 12 March 1878, aged 59. His wife, Louise, daughter of Ebenezer Johnston, of Stamford Hill, London, survived him a year. He left a son and daughter.

[The Inquirer, 23 March 1878, p. 190; Luard's Grad. Cant. p. 46; private information.]

J. H.

BOUCHER, JONATHAN (1738–1804), divine and philologer, the son of a Cumberland 'statesman,' was born at Blencogo, a small hamlet in the parish of Bromfield, between Wigton and Allonby, on 12 March 1738, and was educated at Wigton grammar school. When about sixteen years old he went to America to act as private tutor in a Virginian family, and remained engaged in tuition for some years, the stepson of George Washington being numbered among his pupils. Having resolved upon taking orders he returned to England, and was ordained by the Bishop of London in 1762. For many years he had charge, in turn, of several ecclesiastical parishes in America. He was rector of Hanover, in King George's County, in 1762; then of St. Mary's, in Carolina; and lastly, in 1770, of St. Anne's, in Annapolis. Whilst resident in the new country he lived in intimate friendship with Washington. They often dined together, and spent many hours in talk; but the time soon came when they 'stood apart.' Boucher's loyalty was uncompromising, and when the American war broke out he denounced from the pulpit the doctrines which were popular in the colonies. 'His last sermon, preached with pistols on his pulpit-cushion, concluded with the following words: "As long as I live, yea, while I have my being, will I proclaim God save the king."' Washington shared in the denunciations of Boucher; but when the loyal divine published the discourses which he had preached in North America between 1763 and 1775 he dedicated the collection to the great American general, as 'a tender of renewed amity.' Some time in the autumn of 1775 he returned to England, and soon after his struggles in opposition to the advancement of the cause of the colonies were rewarded by a government pension. In January 1785 he was instituted to the vicarage of Epsom, on the presentation of the Rev. John Parkhurst, the editor of the Greek and Hebrew lexicons. This living he retained until his death, which happened on 27 April 1804. Boucher was considered one of the best preachers of his time, and was a member of the distinguished clerical club, still in existence (1886), under the fantastic title of 'Nobody's Club.' He was thrice married. His first wife, whom he married in June 1772, was of the same family as Joseph Addison; the second, Mary Elizabeth, daughter of Charles Foreman, was married on 15 Jan. 1787, and died on 14 Sept. 1788; by his third wife, widow of the Rev. Mr. James, rector of Arthuret, and married to Boucher at Carlisle in October 1789, he left eight children [see BOUCHIER, BARTON]. Some portions of Boucher's autobiography were printed in 'Notes and Queries,' 5th ser. i. 103–4, v. 501–3, vi. 21, 81, 141, 161.

Boucher was a man of widespread tastes and of intense affection for his native county of Cumberland. His anonymous tract, containing proposals for its material advancement, including the establishment of a county bank, was signed 'A Cumberland Man, Whitehaven, Dec. 1792,' and was reprinted in Sir F. M. Eden's 'State of the Poor,' iii. App. 387–401. To William Hutchinson's 'Cumberland' he contributed the accounts of the parishes of Bromfield, Caldbeck, and Sebergham, and the lives included in the section entitled 'Biographia Cumbrensis.' The edition of Relph's poetical works which appeared in 1797 was dedicated to Boucher, and among the 'Original Poems' of Sanderson (1800) is an epistle to Boucher on his return from America. He published several single sermons and addresses to his parishioners, and issued in 1797, under the title of 'A View of the Causes and Consequences of the American Revolution,' thirteen of his discourses, 1763–1775. His 'Glossary of Archaic and Provincial Words,' intended as a supplement to Johnson's Dictionary, to which he devoted fourteen years, was left uncompleted. Proposals for publication under the direction of Sir F. M. Eden were issued shortly before his death, and the part including letter A was published in 1807, but did not obtain sufficient encouragement to justify the continuance of the work. A second attempt at publication was made in 1832, when the Rev. Joseph Hunter and Joseph Stevenson brought out the Introduction to the whole work and the Glossary as far as Blade. The attempt was again unsuccessful; and it is understood that most of the materials passed into the hands of the proprietors of Dr. Webster's English Dictionary. A certain J. Odell, M.A., an Epsom schoolmaster, published in 1806 an 'Essay on the Elements of the English Language,' which was intended as an introduction to Boucher's work.

W. P. C.

BOUCHERY, WEYMAN (1683–1712), Latin poet, son of Arnold Bouchery, one of the ministers of the Walloon congregation at Canterbury, was born in that city in 1683, and educated in the King's School there and at Jesus College, Cambridge (B.A. 1702, M.A. 1706). It is said that at the time he graduated M.A. he had migrated to Emmanuel College, but the circumstance is not recorded in the 'Cantabrigienses Graduati.' He became rector of Little Blakenham in Suffolk in 1709, and died at Ipswich on 24 March 1712. A mural tablet to his memory was erected in the church of St. George, Canterbury, by his son, Gilbert Bouchery, vicar of Swaffham, Norfolk. He published an elegant Latin poem—'Hymnus Sacer: sive Paraphrasis in Deboræ et Baraci Canticum, Alcaico carmine expressa, e libri Judicum cap. v.,' Cambridge, *typis academicis*, 1706, 4to.

[Addit. MS. 5864, f. 9*b*, 19084, ff. 113, 114*b*; Cantabrigienses Graduati (1787), 46; Hasted's Kent, iv. 469 *n*.] T. C.

BOUCHIER, BARTON (1794–1865), religious writer, born in 1794, was a younger son of the vicar of Epsom, Surrey, the Rev. Jonathan Boucher [q. v.] Barton changed his name from Boucher to Bouchier after 1822. He was educated at Balliol College, Oxford. In 1816 he married Mary, daughter of the Rev. Nathaniel Thornbury, of Avening, Gloucestershire (*Gent. Mag.* 1866, pp. 431–2). He proceeded B.A. in 1822, and M.A. in 1827. Bouchier at first read for the bar. But he afterwards took holy orders and became curate at Monmouth. A sermon preached by him at Usk in 1822 for the Christian Knowledge Society was published by request. Bouchier held curacies later at Old, Northamptonshire (*Gent. Mag.* supra), and (before 1834) at Cheam, Surrey, from which place he issued an edition of Bishop Andrewes's 'Prayers.' In 1836 he published 'Prophecy and Fulfilment,' a little book of corresponding texts; and in 1845 'Thomas Bradley,' a story of a poor parishioner, and the first of a series of similar pamphlets describing clerical experiences, collected and published in various editions as 'My Parish,' and 'The Country Pastor,' from 1855 to 1860.

In 1852 Bouchier commenced the publication of his 'Manna in the House,' being expositions of the gospels and the Acts, lasting, with intervals, down to 1858; in 1854 he wrote his 'The Ark in the House,' being family prayers for a month; and in 1855 he wrote his 'Manna in the Heart,' being comments on the Psalms. In 1853 he wrote a 'Letter' to the prime minister (Lord Aberdeen) against opening the Crystal Palace on Sundays, following up this appeal in 1854 by 'The Poor Man's Palace,' &c., a pamphlet addressed to the Crystal Palace directors. In 1856 he published 'Solace in Sickness,' a collection of hymns, and in the same year was made rector of Fonthill Bishop, Wiltshire. He published his 'Farewell Sermon' to his Cheam flock, having preached it on 28 Sept. In 1864 he published 'The History of Isaac.' He died at the rectory 20 Dec. 1865, aged 71. The editorship of 'The Vision,' a humorous illustrated poem on Jonathan Boucher's philological studies, written by Sir F. M. Eden, bart., and published in 1820, has been wrongly attributed to Bouchier.

[Gent. Mag. 4th ser. 1866, i. 431–2; Brit. Mus. Cat.] J. H.

BOUCHIER or BOURCHIER, GEORGE (*d.* 1643), royalist, was a wealthy merchant of Bristol. He entered into a plot with Robert Yeamans, who had been one of the sheriffs of Bristol, and several others, to deliver that city, on 7 March 1642–3, to Prince Rupert, for the service of King Charles I; but the scheme being discovered and frustrated, he was, with Yeamans, after eleven weeks' imprisonment, brought to trial before a council of war. They were both found guilty and hanged in Wine Street, Bristol, on 30 May 1643. In his speech to the populace at the place of execution Bouchier exhorted all those who had set their hands to the plough (meaning the defence of the royal cause) not to be terrified by his and his fellow-prisoner's sufferings into withdrawing their exertions in the king's service. There is a small portrait of Bouchier in the preface to Winstanley's 'Loyall Martyrology,' 1665.

[Clarendon's Hist. of the Rebellion (1843), 389; Lloyd's Memoires (1677), 565; Winstanley's Loyall Martyrology, 5; Granger's Biog. Hist. of England (1824), iii. 110; Barrett's Hist. of Bristol, 227, 228.] T. C.

BOUGH, SAMUEL (1822–1878), landscape painter, third child of a shoemaker, originally from Somersetshire, was born at Carlisle on 8 Jan. 1822, and when a boy assisted at his father's craft. Later he was for a short time engaged in the office of the town clerk of Carlisle; but, while still young, abandoned the prospects of a law career, and

wandered about the country, making sketches in water colour, and associating with gipsies. In the course of his wanderings he visited London several times; first in 1838, when he made some copies in the National Gallery. He was never at any school of art. In 1845 he obtained employment as a scene-painter at Manchester, and was thence taken by the manager, Glover, to Glasgow, where he married Isabella Taylor, a singer at the theatre.

His abilities were recognised by Sir D. Macnee, P.R.S.A., who persuaded him to give up his work at the theatre for landscape painting. He began in 1849 a more earnest study of nature, working at Hamilton, in the neighbouring Cadzow Forest, and at Port Glasgow, where he painted his 'Shipbuilding at Dumbarton.' Among his principal works may be mentioned: 'Canty Bay,' 'The Rocket Cart,' 'St. Monan's,' 'London from Shooter's Hill,' 'Kirkwall,' 'Borrowdale' (engraved in 'Art Journal,' 1871), 'March of the Avenging Army,' 'Bannockburn and the Carse of Stirling,' 'Guildford Bridge.' He supplied landscape illustrations for books published by Messrs. Blackie & Co. and by other publishers; produced a few etchings of no great merit; painted several panoramas; and never entirely gave up the practice of scene-painting.

In 1856 he became an associate of the Royal Scottish Academy, and on 10 Feb. 1875 a full member. For the last twenty years of his life his abode was fixed at Edinburgh, where he died 19 Nov. 1878.

Although Bough at times painted in oil, the majority of his works, and among them his best, are in water colour. His style was much influenced by his practice as a scene-painter, and is characterised by great breadth, freedom, and boldness of execution, with power over atmospheric effects, but with at times some deficiency in the quality of colour. A thorough Bohemian, he concealed under a rough exterior, and an abrupt and sometimes sarcastic manner, a warm heart and a mind cultivated by loving knowledge of some branches of older English literature. He was a great amateur of music, a fair violinist, and the possessor of a fine bass voice. A collection of his works was exhibited at the Glasgow Institute in 1880, and another at Edinburgh in 1884.

[Edinburgh Courant, November 1878; Scotsman, November 1878; Mr. R. L. Stevenson in Academy, 30 Nov. 1878; Academy, 5 July 1884; Art Journal, January 1879.] W. H-H.

BOUGHEN, EDWARD, D.D. (1587-1660?), royalist divine, was a native of Buckinghamshire, and received his education at Westminster School, whence he was elected to a scholarship at Christ Church, Oxford (B.A. 1609, M.A. 1612). He was appointed chaplain to Dr. Howson, bishop of Oxford; he afterwards held a cure at Bray in Berkshire; and on 13 April 1633 was collated to the rectory of Woodchurch in Kent. The presbyterian inhabitants of Woodchurch petitioned against him in 1640 for having acted as a justice of the peace, and he was ejected from both his livings. Thereupon he retired to Oxford, where he was created D.D. on 1 July 1646, shortly before the surrender of the garrison to the parliamentary forces; he afterwards resided at Chartham in Kent. Wood says: 'This Dr. Boughen, as I have been informed, lived to see his majesty restored, and what before he had lost, he did obtain;' and Baker also states that 'Boughen died soon after the Restoration, aged 74, plus minus.' It is not improbable that he is identical with the Edward Boughen, prebendary of Marden in the church of Chichester, whose death occurred between 29 May and 11 Aug. 1660 (Walker, *Sufferings of the Clergy*, ed. 1714, ii. 13).

Boughen was a learned man and a staunch defender of the church of England. He published: 1. Several sermons, including 'Unanimity in Judgment and Affection, necessary to Unity of Doctrine and Uniformity in Discipline. A Sermon preached at Canterbury at the Visitation of the Lord Archbishop's Peculiars. In St. Margaret's Church, April 14, 1635,' Lond. 1635, 8vo; reprinted in 1714, 'with a preface by Tho. Brett, LL.D., rector of Betteshanger in Kent. Giving some account of the author, also vindicating him and the preachers, who flourished under King James I and King Charles I, from the reflections cast upon them in a late preface before a sermon of Abp. Whitgift's.' 2. 'An Account of the Church Catholick: where it was before the Reformation, and whether Rome were or bee the Church Catholick. In answer to two letters' signed T. B., Lond. 1653, 4to. A reply by R. T., printed, it is said, at Paris, appeared in 1654. 'By which R. T. is meant, as I have been informed by some Rom. Catholics, Thomas Read, LL.D., sometimes fellow of New Coll. in Oxon.' (Wood, *Athenæ Oxon.* ed. Bliss, iii. 390). 3. 'Observations upon the Ordinance of the Lords and Commons at Westminster. After Advice had with their Assembly of Divines, for the Ordination of Ministers pro Tempore, according to their Directory for Ordination, and Rules for Examination therein expressed,' Oxford, 1645. 4. 'Principles of Religion; or, a short Exposition of the Catechism of the Church of England,' Oxford, 1646; London, 1663, 1668,

1671. The later editions bear this title: 'A short Exposition of the Catechism of the Church of England, with the Church Catechism it self, and Order of Confirmation, in English and Latin for the use of Scholars,' Lond. 1671, 12mo. Some of the prayers annexed are very singular. That for the king implores 'that our sovereign King Charles may be strengthened with the faith of Abraham, endued with the mildness of Moses, armed with the magnanimity of Joshua, exalted with the humility of David, beautified with the wisdom of Solomon;' for the queen: 'That our most gracious queen Catharine may be holy and devout as Hesther, loving to the king as Rachel, fruitful as Leah, wise as Rebecca, faithful and obedient as Sarah,' &c. 5. 'Mr. Geree's Case of Conscience sifted; wherein is enquired whether the king (considering his oath at coronation to protect the clergy and their priviledges) can with a safe Conscience consent to the Abrogation of Episcopacy,' Lond. 1648, 1650, 4to. Geree published a reply under the title of *Σιτορραγία*, the Sifter's Sieve broken.' 6. Poems in the university collections on King James's visit to Christ Church in 1605, and on the marriage of the Princess Elizabeth in 1613.

[Wood's Athenæ Oxon. (Bliss), iii. 388–90, Fasti, i. 333, 347, ii. 100; Addit. MS. 5863, f. 215 *b*; Hasted's Kent, iii. 111; Kennett's Register and Chronicle, 597, 842, 843, 861; Welch's Alumni Westmon. (Phillimore), 73.]

T. C.

BOUGHTON, JOAN (*d.* 1494), martyr, was an old widow of eighty years or more, who held certain of Wycliffe's opinions. She was said to be the mother of a lady named Young, who was suspected of the like doctrines. She was burnt at Smithfield 28 April 1494.

[Fabyan, p. 685, ed. Ellis; Foxe's Acts and Monuments, iii. 704, iv. 7, ed. 1846.] W. H.

BOULT, SWINTON (1809–1876), secretary and director of the Liverpool, London, and Globe Insurance Company, commenced life in Liverpool as local agent for insurance offices. In 1836 he founded the Liverpool Fire Office, which, after struggling with many difficulties, became, through Boult's energy, the largest fire insurance office in the world. After the great fires in Liverpool of 1842–3 Boult offered to the merchants of Liverpool opportunities of insuring their merchandise against fire in the various parts of the world where it was lying awaiting transshipment. Agencies, which proved very successful, were gradually opened in various parts of America and Canada, in the Baltic, in the Mediterranean, and afterwards in the East generally, and in Australia. About 1848 the company, on account of the number of its London clients, became known as the Liverpool and London; afterwards, on absorbing the business of the Globe Insurance Company, under the authority of parliament the present title of Liverpool, London, and Globe was assumed. The company now transacts a large business in all the leading mercantile countries of the world, its premiums from fire insurance alone considerably exceeding one million per annum.

Boult was the principal means of introducing 'tariff rating' as applied to cotton mills, whereby real improvements in construction are taken into account in determining the premiums; he originated the Liverpool Salvage Committee, did much to secure the passing of the Liverpool Fire Prevention Act, and devised a uniform policy for the tariff fire offices. He made the circuit of the globe in order to render himself familiar with the real nature of the fire risks which his company, in common with other fire offices, was called upon to accept; became managing director of his company, and gave evidence before various parliamentary committees on points affecting the practice of fire insurance, especially before that on fire protection which sat in 1867. He died in 1876, aged 67.

[Walford's Insurance Cyclopædia.] C. W.

BOULTBEE, THOMAS POWNALL, LL.D. (1818–1884), divine, the eldest son of Thomas Boultbee, for forty-seven years vicar of Bidford, Warwickshire, was born on 7 Aug. 1818. He was sent to Uppingham school in 1833, which he left with an exhibition to St. John's College, Cambridge. He took the degree of B.A. in 1841, as fifth wrangler. In March 1842 he was elected fellow of his college, and proceeded M.A. in 1844. He took orders immediately; and after holding one or two curacies, and taking pupils, he became curate to the Rev. Francis Close, of Cheltenham, afterwards dean of Carlisle. From 1852 to 1863 he was theological tutor and chaplain of Cheltenham College. In 1863 he assumed the principalship of the newly instituted London College of Divinity, at first located in a private house at Kilburn, where the principal entered upon his task with a single student. Two years afterwards it was moved to St. John's Hall, Highbury, and the number of pupils rose to fifty or sixty. In 1884 the number of students in residence was sixty-eight. Boultbee took the degree of LL.D. in 1872, and in October 1883 received from the Bishop of London, Dr. Jackson, the prebendal stall of Eadland in St. Paul's Cathedral. Dr. Boultbee died at Bournemouth on 30 Jan.

1884, and was buried at Chesham, Buckinghamshire, of which his youngest son was vicar.

Besides a few sermons and occasional papers, Dr. Boultbee published: 1. 'The Alleged Moral Difficulties of the Old Testament, a Lecture delivered in connection with the Christian Evidence Society,' 28 June 1872; 8vo, London, 1872. 2. 'The Annual Address of the Victoria Institute, or Philosophical Society of Great Britain,' 8vo, London, 1873. 3. 'A Commentary on the Thirty-nine Articles, forming an Introduction to the Theology of the Church of England,' 8vo, London, 1871, and other editions. 4. 'A History of the Church of England Pre-Reformation Period,' 8vo, London, 1879.

[Graduati Cantabrigienses, 1873; Crockford's Clerical Directory; Times, 1 Feb. 1884; Rev. C. H. Waller, St. John's Hall, Highbury, in the Rock, 8 Feb. 1884; Record, 1, 8, and 15 Feb. 1884, where appear a funeral sermon by Bishop Ryle, and communications from G. C., A. P., and the Rev. Thomas Lewthwaite, Newsome Vicarage, Huddersfield.] A. H. G.

BOULTER, HUGH (1672–1742), archbishop of Armagh, born in London 4 Jan. 1671–2, was descended from a 'reputable and estated family.' His father was John Boulter of St. Katharine Cree. He entered Merchant Taylors' School 11 Sept. 1685, matriculated at Christ Church, Oxford, 1686–7. He was an associate of Addison, and was subsequently made fellow of Magdalen College (B.A. 1690, M.A. 1693, D.D. 1708). In 1700 he received the appointment of chaplain to Sir Charles Hedges, secretary of state, and afterwards acted in the same capacity to Archbishop Tenison. Through the patronage of Charles Spencer, earl of Sunderland, Boulter was appointed to St. Olave's, Southwark (1708), and archdeacon of Surrey (1715–16). With Ambrose Philips, Zachary Pearce, bishop of Rochester, and others, Boulter contributed to a periodical established in 1718, and entitled 'The Free Thinker.' In 1719 Boulter attended George I as chaplain to Hanover, and was employed to instruct Prince Frederick in the English language. The king in the same year appointed him bishop of Bristol and dean of Christ Church, Oxford. Five years subsequently George nominated Boulter to the primacy of the protestant church in Ireland, then vacant, which he for a time hesitated to accept. The king's letter for his translation from the see of Bristol to that of Armagh was dated 31 Aug. 1724. In November of that year he arrived in Ireland, and Ambrose Philips accompanied him as his secretary. As a member of the privy council and lord justice in Ireland Boulter devoted himself with much assiduity to governmental business, as well as to the affairs of the protestant church. He approved of the withdrawal of Wood's patent for copper coinage. On other points he differed both with William King, archbishop of Dublin, and with Swift. One of Swift's last public acts was his condemnation of the measure promoted by Boulter for diminishing the value of gold coin and increasing the quantity of silver currency, which it was apprehended would, by causing an advance in the rent of land, increase the absentee drain from Ireland. Swift, in some satirical verses, ridiculed Boulter's abilities. Through Sir Robert Walpole and his connections in England Boulter acquired a predominating influence in administration and in the parliament at Dublin, where he considered himself to be the head of the 'English interest.' Boulter's state policy, to secure what he styled 'a good footing' for the 'English interest' in Ireland, was to confer important posts in church and state there on his own countrymen, to repress efforts of the protestants in Ireland towards constitutional independence, and to leave the Roman catholics subjected to penal legislation. By a statute enacted through Boulter's influence the Roman catholics were excluded from the legal profession, and disqualified from holding offices connected with the administration of law. Under another act passed through Boulter's exertions they were deprived of the right of voting at elections for members of parliament or magistrates—the sole constitutional right which they had been allowed to exercise. Boulter forwarded with great energy the scheme for protestant charter schools, with a view to strengthen the 'English interest,' by bringing over the Irish to the church of England. He gave many liberal contributions to protestant churches, and for the relief of the poor in periods of distress in Ireland. As a memorial of his charity, in 1741 a full-length portrait of him by Francis Bindon was placed in the hall of the poor house, Dublin. Boulter repeatedly held office as lord justice in Ireland during the absence of the viceroy, Carteret, and his successors, the Dukes of Dorset and Devonshire. The death of Boulter occurred at London on 27 Sept. 1742. He was interred in the north transept of Westminster Abbey, where a marble monument and bust were placed over his remains. 'Sermons,' and 'A Charge at his Primary Visitation in Ireland in 1725,' are his only published productions, with the exception of a portion of his correspondence. A selection of his letters was printed in two volumes at Oxford in 1769, under the superintendence of Ambrose Philips, who had acted

as his secretary in Ireland. This series consists of letters from November 1724 to December 1738, to state officials and eminent churchmen in England. They were republished at Dublin in 1770 by George Faulkner, who, in his introduction to them, observed that Boulter, with all his virtues, 'was too partially favourable to the people of England and too much prejudiced against the natives of Ireland.' In 1745 Dr. Samuel Madden published at London 'Boulter's Monument, a panegyrical poem.' This production, dedicated to Frederick, prince of Wales, was revised by Samuel Johnson, and quoted by him in his dictionary. A full-length portrait of Boulter is preserved in Magdalen College, and a bust of him is in the library of Christ Church, Oxford.

[Letters of Hugh Boulter, D.D., 1769-70; Biographia Britannica, 1780; O'Conor's Hist. of Irish Catholics, 1813; Stuart's Hist. Memoirs of Armagh, 1819; Works of Swift, ed. Sir W. Scott, 1824; Works of Samuel Johnson, 1825; Mant's Hist. of Church of Ireland, 1840; Boswell's Life of Johnson, ed. Napier, 1884; C. J. Robinson's Registers of Merchant Taylors' School, i. 315.]

J. T. G.

BOULTON, MATTHEW (1728-1809), engineer, was born in Birmingham 3 Sept. 1728, where his father, Matthew Boulton the elder, had long been carrying on the trade, according to Dr. Smiles, of a silver stamper and piercer. The Boultons were a Northamptonshire family, but John, the grandfather of the younger Matthew, settled in Lichfield, and Matthew the elder was sent to Birmingham to enter into business, in consequence of the reduced fortunes of the family. The younger Boulton entered his father's business early, and soon set himself to extend it. This he had succeeded in doing to a considerable extent, when in 1759 his father died. In the following year he married Anne Robinson of Lichfield, with whom he received a considerable dower. Being thus able to command additional capital, he determined to enlarge his operations still further, and with this view he founded the famous Soho works. About the same time he also entered into partnership with Mr. Fothergill. The works were opened in 1762, and soon obtained a reputation for work of a higher character than it was then usual to associate with the name of Birmingham. Boulton laid himself out to improve not only the workmanship, but the artistic merit of his wares, and for this purpose employed agents to procure for him the finest examples of art-work not only in metal, but in pottery and other materials, which he employed as models for his own productions.

The growth of the factory, and the consequent increased need for motive power more abundant than the water-power with which Soho was but scantily furnished, led Boulton to direct his thoughts to the steam engine, then only used for pumping. He himself made experiments, and constructed a model of an improved engine, but nothing came of it. Watt was then in partnership with Roebuck, endeavouring unsuccessfully to perfect his engine. Roebuck was a friend of Boulton, and told him of Watt and his experiments. Two visits paid by Watt to Soho in 1767 and 1768 made him anxious to secure the help of Boulton and to avail himself of the resources in Soho in perfecting the engine, while Boulton was on his side desirous of getting Watt's aid in the construction of an engine for the works. For some time negotiations as to a partnership between the two went on, but they came to nothing until Roebuck's failure in 1772. As a set-off against a claim of 1,200*l.*, Boulton then accepted Roebuck's share in the engine patent, and entered into partnership with Watt. In consequence of Boulton's advice the act of parliament was procured by which the patent rights were extended for a period of twenty-four years (with the six expired years of the original patent, thirty years in all). The history of the difficulties which were vanquished by the mechanical skill of one partner and by the energy of the other will more fitly be related in the account of Watt [see WATT, JAMES], but it may be said here that if the completion of the steam engine was due to Watt, its introduction at that time was due to Boulton. He devoted to the enterprise not only all the capital he possessed, but all he could raise from any source whatever, and indeed he brought himself to the verge of bankruptcy before the work was completed and the engine a commercial success. He kept up the drooping spirits of his partner, and would never allow him to despond, when he was almost inclined to despair of his own invention. Of course at last he had his reward, but it was not until after six or seven years' labour and anxiety, and when he had passed his sixtieth year. Dr. Smiles gives 1787 as the year when Watt began to realise a profit from the engine, but the greater outlay for which Boulton had been responsible made it some time later before he got clear from his liabilities and began to make a profit.

The reform of the copper coinage was another important movement with which

Boulton was connected in the latter part of his life. In 1788 he set up several coining presses at Soho to be worked by steam (he patented his press in 1790), and after making large quantities of coins for the East India Company, for foreign governments, and for some of the colonies, he in 1797 undertook the production of a new copper coinage for Great Britain. He also supplied machinery to the new mint on Tower Hill, commenced in 1805, and it was not until the reorganisation of the mint machinery in 1882 that Boulton's press was finally abandoned.

In the scientific society of his time Boulton held a prominent place. Among his intimates were Franklin, Priestley, Darwin, Wedgwood, and Edgeworth; he was a fellow of the Royal Society and a member of the Lunar Society, a provincial scientific society of note. His house at Soho was the meeting-place for all scientific men, both English and foreign. He died there 18 Aug. 1809. His grandson and only surviving male representative, Matthew Piers Watt Boulton, of Great Tew, Oxfordshire, died on 30 June 1894 (*Times*, 4 July 1894).

[Smiles's Lives of Boulton and Watt, 1865; Muirhead's Life of Watt, London, 1858; Gent. Mag. 1809, 780, 883, 979.] H. T. W.

BOULTON, RICHARD (*fl.* 1697–1724), physician, educated at Brasenose College, Oxford, and for some time settled at Chester, was the author of a number of works on the medical and kindred sciences, including: 1. 'Reason of Muscular Motion,' 1697. 2. 'Treatise concerning the Heat of the Blood,' 1698. 3. 'An Examination of Mr. John Colbatche's Books,' 1699. 4. 'Letter to Dr. Goodal occasioned by his Letter to Dr. Leigh,' 1699. 5. 'System of Rational and Practical Chirurgery,' 1699; 2nd edition, 1713. 6. 'The Works of the Hon. Robert Boyle epitomised,' 3 vols. 1699–1700. 7. 'Physico-Chirurgical Treatises of the Gout, the King's Evil, and the Lues Venerea,' 1714. 8. 'Essay on External Remedies,' 1715. 9. 'Essay on the Plague,' 1721. 10. 'Vindication of the Compleat History of Magic,' 1722. 11. 'Thoughts concerning the Unusual Qualities of the Air,' 1724. Though apparently learned in the science of his profession, he was seemingly not successful in his practice, for in a letter to Sir Hans Sloane he states that he undertook to write an abridgment of Mr. Boyle's works on account of 'misfortunes still attending him;' and in another letter he mentions that successive misfortunes had made him the object of his compassion, and begs him to effect something towards putting him in a way to live. In the preface to the 'Vindication of the History of Magic' he states that he had been for some time out of England.

BOUND, NICHOLAS (*d.* 1613). [See BOWNDE.]

BOUQUET, HENRY (1719–1765), general, born at Rolle, in the canton of Berne, Switzerland, was in 1736 received as a cadet in the regiment of Constant in the service of the States-General of Holland, and in 1738 was made ensign in the same regiment. Thence he passed into the service of the king of Sardinia, and distinguished himself in the wars against France and Spain. The accounts he sent to Holland of these campaigns having attracted the attention of the Prince of Orange, he was engaged by him in the service of the republic. As captain-commandant, with the rank of lieutenant-colonel in the regiment of Swiss guards newly formed in the Hague in 1748, he was sent to the Low Countries to receive from the French the places they were about to evacuate. A few months afterwards he accompanied Lord Middleton in his travels in France and Italy. On the outbreak of the war between the French and English settlers in America in 1754 he was appointed lieutenant-colonel of the Royal American regiment which was then raised in three battalions, and by his integrity and capacity gained great credit, especially in Pennsylvania and Virginia. In 1763 he was sent by General Amherst from Canada with military stores and provisions for the relief of Fort Pitt, and on 5 Aug. was attacked by a powerful body of the Indians near the defile of Turtle Creek, but so completely defeated them that they gave up their designs against Fort Pitt and retreated to their remote settlements. In the following year he was sent from Canada against the Ohio Indians, and succeeded in reducing a body of Shawanese, Delaware, and other tribes to make terms of peace. At the conclusion of the peace with the Indians he was made brigadier-general and commandant of all troops in the southern colonies of British America. He died in the autumn of 1765 at Pensacola, from an epidemic then prevalent among the troops.

[The account of General Bouquet's Expedition against the Ohio Indians in 1764 was published at Philadelphia in 1765 and reprinted in London in the following year. The work has been ascribed to Thomas Hutchins, geographer of the United States, who supplied the map, but properly belongs to Dr. William Smith, provost of the College of Philadelphia. An edition in French by C. G. F. Dumas, with an historical sketch of General Bouquet, was issued at

Amsterdam in 1769. An English translation of this life is added to an edition of the work published at Cincinnati in 1868, and forming vol. i. of the Ohio Historical Series. The letters and documents formerly belonging to Bouquet, and relating to military events in America, 1757–1765, occupy thirty volumes of manuscripts in the British Museum, Add. MSS. 21631–21660. In Add. MS. 21660 there is a copy of the inventory of his property and of his will.]

T. F. H.

BOUQUETT, PHILIP, D.D. (1669–1748), Hebrew professor, was educated at Westminster School, whence he was elected in 1689 to a scholarship at Trinity College, Cambridge. He became B.A. 1692, M.A. 1696, B.D. 1706, D.D. 1711. When a vacancy occurred in the professorship of Hebrew in 1704, which it was thought desirable to confer on Sike, Bouquett was temporarily appointed to it in the absence of Sike, the famous oriental scholar, for whom the post was reserved. Sike was definitely elected in August 1705, but on the professorship falling vacant again seven years later, Bouquett was elected to fill it permanently. He died senior fellow of Trinity on 12 Feb. 1747–8, aged 79. Cole describes him as 'born in France, an old miserly refugee, who died rich in college, and left his money among the French refugees. He was a meagre, thin man, bent partly double, and for his oddities and way of living was much ridiculed.' He refused to sign the petition against Dr. Bentley. Bouquett contributed a copy of elegiacs to the university collection of poems on the death of George I and accession of George II in 1727.

[Welch's Al. West. 214; Gent. Mag. xviii. 92; Cole's MSS. xxxiii. 274, xlv. 244, 334; Monk's Life of Bentley, i. 186, 329–30.] J. M.

BOURCHIER, GEORGE. [See BOUCHIER.]

BOURCHIER, HENRY, EARL OF ESSEX (*d.* 1483), was the son of Sir William Bourchier, earl of Ewe or Eu, and of Anne, daughter of Thomas of Woodstock, duke of Gloucester, and widow of Edmund, earl of Stafford. He was therefore great-grandson of Robert Bourchier [q. v.], chancellor to Edward III, brother of Thomas [q.v.], archbishop of Canterbury, and of Anne, wife of John, duke of Norfolk, and half-brother of Humfrey, duke of Buckingham. Early in the reign of Henry VI he served in the French war, going to Calais in 1430 with the king and the Duke of York. He succeeded his father as earl of Ewe, and was once summoned to parliament by that title. In 1435 he succeeded to the barony of Bourchier. He served in France under the Duke of York, was appointed lieutenant-general in 1440, and in 1448 was captain of Crotoy in Picardy. He was summoned to parliament as Viscount Bourchier in 1446. He married Isabel, daughter of Richard, earl of Cambridge, and aunt of Edward IV. In 1451 he served on the commission of oyer and terminer for Kent and Sussex. The battle of St. Albans made the Duke of York and his party the masters of the king, and on 29 May 1455 Henry appointed Bourchier, the duke's brother-in-law, treasurer of the kingdom. Bourchier held office until 5 Oct. 1456, and was then succeeded by the Earl of Shrewsbury —a change that 'perhaps indicates that the mediating policy of the Duke of Buckingham was exchanged for a more determined one' (STUBBS, *Const. Hist.* iii. 176); for up to this time the Bourchiers, in spite of their close connection with the house of York, held a kind of middle place between the two parties, and, though the queen's party came into power in February, continued to hold office in what may be called the Lancastrian government. His and his brother's sudden discharge from office was put down to the queen's influence (*Paston Letters*, i. 408). In 1460 Bourchier was with the Earls of March and Warwick at the battle of Northampton, and was therefore by that time a declared partisan of the duke. On the accession of his nephew, Edward IV, he was created earl of Essex (30 June 1461); he was made treasurer for the second time, and held office for a year. He received from the king the castle of Werk and the honour of Tindall, in Northumberland, together with many other estates in different counties. In 1471 the earl was again made treasurer, and retained his office during the rest of his life. When, on 28 May 1473, John de Vere, earl of Oxford, landed at St. Osyth's, Essex and others rode against him and compelled him to re-embark (*Paston Letters*, iii. 92). In this year also he was for about a month keeper of the great seal during the vacancy of the chancellorship. Essex died 4 April 1483, and was buried at Bylegh. He had a large family. His eldest son, William, who married Anne Woodville, died during his lifetime, and he was therefore succeeded by his grandson, Henry [q. v.] His second son, Sir Henry Bourchier, married the daughter and heiress of Lord Scales; the third son, Humfrey, Lord Cromwell, died in the battle of Barnet; the fourth son, Sir John, married the niece and heiress of Lord Ferrers of Groby. He had four other children.

[Polydore Vergil's Hist. Angl. 1299, ed. 1603; Paston Letters, ed. Gairdner; Will. Worcester; Dugdale's Baronage, ii. 129; Stubbs's Constitutional History, iii. 176; Foss's Judges of England, iv. 423.] W. H.

BOURCHIER, HENRY, second EARL OF ESSEX (*d.* 1539), was the son of William Bourchier and the grandson of Henry Bourchier, first earl [q. v.] His mother was Anne Woodville, sister of the queen of Edward IV. He succeeded his grandfather in 1483. He was a member of the privy council of Henry VII. In 1492 he was present at the siege of Boulogne. At the knighthood of Henry, duke of York (Henry VIII), the earl took a prominent part in the ceremonies, and was one of the challengers at the jousts held in honour of the event. In 1497 he commanded a detachment against the rebels at Blackheath. He accompanied the king and queen when they crossed to Calais in 1500, to hold an interview with the Duke of Burgundy. The next year he was one of those appointed to meet Catherine of Arragon. On the accession of Henry VIII he was made captain of the new bodyguard. During the early years of the king's reign he took a prominent part in the revels in which Henry delighted. Constant references may be found in the State Papers to the earl's share in these entertainments. For example, in 1510 he and others, the king among the number, dressed themselves as Robin Hood's men in a revel given for the queen's delectation. He was also constantly employed in state ceremonies, such as meeting papal envoys, as in 1514, when the pope sent Henry a cap and sword; in 1515, when he met the prothonotary who brought over the cardinal's hat for Wolsey; and in 1524, when Dr. Hanyball came over with the golden rose for the king. These and such like engagements necessarily put him to great expense. He received some grants from Henry, and appears both as a pensioner and a debtor of the crown. On one occasion his tailor seems to have had some difficulty in getting his bill settled. He served at the sieges of Terouenne and Tournay as 'lieutenant-general of the spears' (HERBERT) in 1513, and the next year was made chief captain of the king's forces. When the king's sister Margaret, widow of James IV and wife of the Earl of Angus, sought refuge in England, the Earl of Essex, in company with the king, Suffolk, and Sir G. Carew, held the lists in the jousts given in her honour. In 1520 he attended the king at the celebrated meeting held at Guisnes. He sat as one of the judges of the Duke of Buckingham, and received the manor of Bedminster as his share of the duke's estates. In 1525, when engaged in raising money for the crown from the men of Essex, he wrote to Wolsey, pointing out the danger of an insurrection, and by the king's command took a company to the borders of Essex and Suffolk to overawe the malcontents. On a division being made of the council in 1526 for purposes of business, his name was placed with those who were to treat of matters of law. He joined in the letter sent by a number of English nobles to Clement VII in 1530, warning him that unless he hastened the king's divorce, his supremacy would be endangered. While riding a young horse, in 1539, he was thrown and broke his neck. As he had no male issue by his wife Mary, his earldom (of Essex) and viscounty (Bourchier) became extinct at his death. His barony descended to his daughter Anne, who married William Parr, afterwards Earl of Essex.

[Hall's Chron. (Hen. VIII), f. 6, 8, 26, 63, ed. 1548; Stow's Annals; Polydore Vergil's Historia Anglica, 1437, 1521, ed. 1603; Letters, Ric. III and Hen. VII, Rolls Series; Herbert's Life and Reign of Henry VIII, 34; Cal. of State Papers, Hen. VIII, ed. Brewer, passim; Dugdale's Baronage, ii. 130.] W. H.

BOURCHIER or BOUSSIER, JOHN DE (*d.* 1330?), judge, is first mentioned as deputed by Robert de Vere, earl of Oxford, to represent him in the parliament summoned in 1306 for the purpose of granting an aid on the occasion of the Prince of Wales receiving knighthood. In 1312 he was permitted to postpone the assumption of the same rank for three years in consideration of paying a fine of 100*s.* In 1314–15 he appears as one of the justices of assize for the counties of Kent, Surrey, and Sussex, and his name appears in various commissions for the years 1317, 1319, and 1320. In 1321 (15 May) he was summoned to parliament at Westminster, apparently for the first time, as a justice, and on the 31st of the same month was appointed a justice of the common bench. Next year he was engaged in trying certain persons charged with making forcible entry upon the manors of Hugh le Despenser, in Glamorganshire, Brecknock, and elsewhere, and in investigating a charge of malversation against certain commissioners of forfeited estates in Kent, Surrey, and Sussex, and trying cases of extortion by sheriffs, commissioners of array, and other officers in Essex, Hertford, and Middlesex. In the same year he sat on a special commission for the trial of persons accused of complicity in the fabrication of miracles in the neighbourhood of the gallows on which Henry de Montfort and Henry de Wylyngton had been hanged at Bristol. In February 1325–6 he was placed at the head of a commission to try a charge of poaching brought by the Bishop of London and the dean and chapter of St. Paul's against a

number of persons alleged to have taken a large fish, 'qui dicitur cete,' from the manor of Walton, in violation of a charter of Henry III, by which the chapter claimed the exclusive right to all large fish found on their estates, the tongue only being reserved to the king. In the same year he was engaged in trying cases of extortion by legal officials in Suffolk, Nottinghamshire, and Derbyshire, and persons indicted before the conservators of the peace in Lincolnshire. In December of this year he was summoned to parliament for the last time. He was reappointed justice of the common bench shortly after the accession of Edward III, the patent being dated 24 March 1326–7. The last fine was levied before him on Ascension day 1329. He died shortly afterwards, as we know from the fact that in the following year his heir, Robert, was put in possession of his estates by the king. By his marriage with Helen, daughter and heir of Walter of Colchester, he acquired the manor of Stanstead, in Halstead, Essex, adjoining an estate which he had purchased in 1312. He was buried in Stanstead Church.

R.

BOURCHIER, JOHN, second BARON BERNERS (1467–1533), statesman and author, was the son of Humphrey Bourchier, by Elizabeth, daughter of Sir Frederick Tilney, and widow of Sir Thomas Howard. His father was slain at the battle of Barnet (14 April 1471) fighting in behalf of Edward IV, and was buried in Westminster Abbey (WEEVER'S *Funerall Monuments*, 1632, p. 482). His grandfather, John, the youngest son of William Bourchier, earl of Ewe, was created Baron Berners in 1455, and died in 1474. Henry Bourchier [q. v.], the Earl of Ewe's eldest son and the second Lord Berners's granduncle, became Earl of Essex in 1461. Another granduncle, Thomas Bourchier [q. v.], was archbishop of Canterbury from 1454 to 1486.

In 1474 John Bourchier succeeded his grandfather as Baron Berners. He is believed to have studied for some years at Oxford, and Wood conjectures that he was of Balliol College. But little is known of his career till after the accession of Henry VII. In 1492 he entered into a contract 'to serue the king in his warres beyond see on hole yeere with two speres' (RYMER, *Fœdera*, xii. 479). In 1497 he helped to repress the Cornish rebellion in behalf of Perkin Warbeck. It is fairly certain that he and Henry VIII were acquainted as youths, and the latter showed Berners much favour in the opening years of his reign. In 1513 he travelled in the king's retinue to Calais, and was present at the capture of Terouenne. Later in the same year he was marshal of the Earl of Surrey's army in Scotland. When the Princess Mary married Louis XII (9 Oct. 1514), Berners was sent with her to France as her chamberlain. But he did not remain abroad. On 18 May 1514 he had been granted the reversion to the office of chancellor of the exchequer, and on 28 May 1516 he appears to have succeeded to the post. In 1518 Berners was sent with John Kite, archbishop of Armagh, on a special mission to Spain to form an alliance between Henry VIII and Charles of Spain. The letters of the envoys represent Berners as suffering from severe gout. He sent the king accounts of the bull-baiting and other sports that took place at the Spanish court. The negotiations dragged on from April to December, and the irregularity with which money was sent to the envoys from home caused them much embarrassment (cf. Berners to Wolsey, 26 July 1518, in BREWER'S *Letters &c. of Henry VIII*). Early in 1519 Berners was again in England, and he, with his wife, attended Henry VIII at the Field of the Cloth of Gold in the next year. The privy council thanked him (2 July 1520) for the account of the ceremonial which he forwarded to them. Throughout this period Berners, when in England, regularly attended parliament, and was in all the commissions of the peace issued for Hertfordshire and Surrey. But his pecuniary resources were failing him. He had entered upon several harassing lawsuits touching property in Staffordshire, Wiltshire, and elsewhere. As early as 1511 he had borrowed 350*l.* of the king, and the loan was frequently repeated. In December 1520 he left England to become deputy of Calais, during pleasure, with 100*l.* yearly as salary and 104*l.* as 'spyall money.' His letters to Wolsey and other officers of state prove him to have been busily engaged in succeeding years in strengthening the fortifications of Calais and in watching the armies of France and the Low Countries in the neighbourhood. In 1522 he received Charles V. In 1528 he obtained grants of manors in Surrey, Wiltshire, Hampshire, and Oxfordshire. In 1529 and 1531 he sent Henry VIII gifts of hawks (*Privy Purse Expenses*, pp. 54, 231). But his pecuniary troubles were increasing, and his debts to the crown remained

unpaid. Early in 1532–3, while Berners was very ill, Henry VIII directed his agents in Calais to watch over the deputy's personal effects in the interests of his creditors. On 16 March 1532–3 Berners died, and he was buried in the parish church of Calais by his special direction. All his goods were placed under arrest and an inventory taken, which is still at the Record Office, and proves Berners to have lived in no little state. Eighty books and four pictures are mentioned among his household furniture. By his will (3 March 1532–3) he left his chief property in Calais to Francis Hastings, his executor, who became earl of Huntingdon in 1544 (*Chronicle of Calais*, Camd. Soc. p. 164). Berners married Catherine, daughter of John Howard, duke of Norfolk, by whom he had a daughter, Joan or Jane, the wife of Edmund Knyvet of Ashwellthorp in Norfolk, who succeeded to her father's estates in England. Small legacies were also left to his illegitimate sons, Humphrey, James, and George.

The barony of Berners was long in abeyance. Lord Berners's daughter and heiress died in 1561, and her grandson, Sir Thomas Knyvett, petitioned the crown to grant him the barony, but died 9 Feb. 1616–7 before his claim was ratified. In 1720 Elizabeth, a great-granddaughter of Sir Thomas, was confirmed in the barony and bore the title of Baroness Berners, but she died without issue in 1743, and the barony fell again into abeyance. A cousin of this lady in the third degree married in 1720 Henry Wilson of Didlington, Norfolk, and their grandson, Robert Wilson, claimed and secured the barony in 1832. The barony is now held by a niece of Henry William Wilson (1797–1871), the third bearer of the restored title.

While at Calais Berners devoted all his leisure to literary pursuits. History, whether real or fictitious, always interested him, and in 1523 he published the first volume of his famous translation of (1) Froissart's *Chronicles*. The second volume followed in 1525. Richard Pynson was the printer. This work was undertaken at the suggestion of Henry VIII and was dedicated to him. Its style is remarkably vivid and clear, and although a few French words are introduced, Berners has adhered so closely to the English idiom as to give the book the character of an original English work. It inaugurated the taste for historical reading and composition by which the later literature of the century is characterised. Fabian, Hall, and Holinshed were all indebted to it. E. V. Utterson issued a reprint of Berners's translation in 1812, and although Col. Johnes's translation of Froissart (1803–5) has now very generally superseded that of Berners, the later version is wanting in the literary flavour which still gives Berners's book an important place in English literature. But chivalric romance had even a greater attraction for Berners than chivalric history, and four lengthy translations from the French or Spanish were completed by him. The first was doubtless (2) 'Huon of Burdeux,' translated from the great prose French Charlemagne romance, about 1530, but not apparently published till after Lord Berners's death. It is probable that Wynkyn de Worde printed it in 1534 under the direction of Lord George Hastings, earl of Huntingdon, who had urged Berners to undertake it. Lord Crawford has a unique copy of this book. A second edition, apparently issued by Robert Copland in 1570, is wholly lost. Two copies of a third revised edition, dated 1601, are extant, of which one is in the British Museum and the other in the Bodleian. The first edition was reprinted by the Early English Text Society 1883–5. (3) 'The Castell of Love' (by D. de San Pedro) was translated from the Spanish 'at the instaunce of Lady Elizabeth Carew, late wyfe to Syr Nicholas Carewe, knight.' The first edition was printed by Robert Wyer about 1540, and a second came from the press of John Kynge about the same time. (4) 'The golden boke of Marcus Aurelius, emperour and eloquent oratour,' was a translation of a French version of Guevara's 'El relox de Principes.' It was completed only six days before Berners's death, and was undertaken at the desire of his nephew, Sir Francis Bryan [q. v.] It was first published in 1534, and republished in 1539, 1542, 1553, 1557, and 1559. A very definite interest attaches to this book. It has been proved that English 'Euphuism' is an adaptation of the style of the Spanish Guevara. Lyly's 'Euphues' was mainly founded on Sir Thomas North's 'Dial of Princes' (1558 and 1567), and the 'Dial of Princes' is a translation of an enlarged edition of Guevara's 'El Redox,' which was first translated into English by Berners. The marked popularity of Berners's original translation clearly points to him as the founder of 'Guevarism' or so-called Euphuism in England (Landmann's *Euphuismus*, Giessen, 1881).

Berners also translated from the French (5) 'The History of the moost noble and valyaunt knight, Artheur of Lytell Brytaine.' The book was reprinted by Utterson in 1812. Wood, following Bale, attributes to Berners a Latin comedy, (6) 'Ite ad Vineam,' which he says was often acted after vespers at Calais, and a tract on (7) 'The Duties of the Inhabitants of Calais.' Nothing is known now of the former work; but the latter may

not improbably be identified with the elaborate 'Ordinances for watch and ward of Calais' in Cotton MS. (Faust. E. vii. 89–102 *b*). These ordinances were apparently drawn up before 1532, and have been printed at length in the 'Chronicle of Calais' published by the Camden Society, pp. 140–62. Warton states, on the authority of Oldys, that *Henry*, lord Berners, translated some of Petrarch's sonnets, but the statement is probably wholly erroneous (*Hist. Engl. Poet.* iii. 58).

Holbein painted a portrait of Berners in his robes as chancellor of the exchequer (WALPOLE, *Anecdotes of Painting*, ed. Wornum, i. 82). The picture is now at Keythorpe Hall, Leicestershire, in the possession of the Hon. H. Tyrwhitt Wilson. It was engraved for the Early English Text Society's reprint of 'Huon of Burdeux' (1884).

(Bliss), i. 72; Brewer's Letters and Papers of Henry VIII, 1509–1534; Utterson's Memoir of Berners in his reprint of the Froissart (1812); Walpole's Royal and Noble Authors, i. 239–45; Fuller's Worthies; Introduction to the Early English Text Society's reprint of Huon of Burdeux, ed. Lee.]

S. L.

BOURCHIER, SIR JOHN (*d.* 1660), regicide, grandson and heir of Sir Ralph Bourchier, of Benningborough, Yorkshire, appears in 1620 in the list of adventurers for Virginia as subscribing 37*l.* 10*s.* In the following year, having complained of the lord-keeper for giving judgment against him in a lawsuit, he was censured and obliged to make a humble submission (*Lords' Journals*, iii. 179–92). He suffered more severely in a contest with Strafford concerning the enclosure of certain lands in the forest of Galtre, near York. Sir John attempted to assert his claims by pulling down the fences, for which he was fined and imprisoned. Directly the Long parliament met he petitioned, and his treatment was one of the minor charges against Strafford (RUSHWORTH, *Strafford's Trial*, p. 146; see also *Straff. Corr.* i. 86–88, ii. 59). His name also appears among those who signed the different Yorkshire petitions in favour of the parliament, and a letter from him describing the presentation of the petition of 3 June 1642 on Heyworth Moor, and a quarrel between himself and Lord Savile on that occasion, was printed by order of the House of Commons (*Commons' Journals*, 6 June 1642). He entered the Long parliament amongst the 'recruiters' as member for Ripon (1647). In December 1648 he was appointed one of the king's judges, and signed the death-warrant. In February 1651, and again in November 1652, he was elected a member of the council of state, and finally succeeded in obtaining a grant of 6,000*l.* out of the estate of the Earl of Strafford, but it is not evident what satisfaction he actually obtained (*Commons' Journals*, 31 July 1651). At the Restoration he was, with the other regicides, summoned to give himself up, and the speaker acquainted the House of Commons with his surrender on 18 June 1660 (*Journals*). While the two houses were quarrelling over the exceptions to be made to the act of indemnity, Bourchier died, asserting to the last the justice of the king's condemnation. 'I tell you it was a just act; God and all good men will own it' (LUDLOW's *Memoirs*, ed. 1751, p. 358). Sir John's son, Barrington Bourchier, having aided in the Restoration, obtained a grant of his father's estate (*Cal. of State Papers*, Dom., 1661, p. 557).

[Noble's Regicides and House of Cromwell, ii. 36; the Fairfax Correspondence (Civil Wars), i. 338, contains a letter from Sir John Bourchier to Lord Fairfax on the want of ministers in Yorkshire.]

C. H. F.

BOURCHIER or BOUSSIER, ROBERT (*d.* 1349), chancellor, the eldest son of John Bourchier [q. v.], a judge of common pleas, began life in the profession of arms. He was returned as a member for the county of Essex in 1330, 1332, 1338, and 1339. In 1334 he was chief justice of the king's bench in Ireland. He was present at the battle of Cadsant in 1337. He sat in the parliament of 1340 (*Rolls of Parliament*, ii. 113). When on his return to England the king displaced his ministers, he committed the great seal, which had long been held by Archbishop Stratford and his brother, the Bishop of Chichester, alternately, to Bourchier, who thus became, on 14 Dec. 1340, the first lay chancellor. His salary was fixed at 500*l.*, besides the usual fees. In the struggle between the king and the archbishop, Bourchier withheld the writ of summons to the ex-chancellor, interrupted his address to the bishops in the Painted Chamber, and on 27 April 1341 urged him to submit to the king. When the parliament of 1341 extorted from the king his assent to their petitions that the account of the royal officers should be audited, and that the chancellor and other great officers should be nominated in parliament, and should swear to obey the laws, Bourchier declared that he had not assented to these articles, and would

not be bound by them, as they were contrary to his oath and to the laws of the realm. He nevertheless exemplified the statute, and delivered it to parliament. He resigned his office on 29 Oct. He was summoned to parliament as a peer in 16 Edward III. In 1346 he accompanied the king on his expedition to France. He was in command of a large body of troops, and fought at Crecy in the first division of the army. He married Margaret, daughter and heiress of Sir Thomas Preyers. He founded a college at Halstead for eight priests; but it probably never contained so many, as its revenues were very small. The king granted him the right of free warren, and license to crenellate his house. He died of the plague in 1349, and was buried at Halstead.

[Rolls of Parliament, ii. 113, 127, 131; Return of Members, i. 89–126; Murimuth, 111, Eng. Hist. Soc.; Froissart, i. 151, 163 (Johnes); Foss's Judges of England, iii. 399–402; Campbell's Lives of the Chancellors, i. 234–41; Stubbs's Constitutional History, ii. 387, 391; Dugdale's Baronage, ii. 126; Dugdale's Monasticon, vi. 1453.] W. H.

BOURCHIER, THOMAS (1404?–1486), cardinal, was the third son of William Bourchier, earl of Ewe, by the Lady Anne Plantagenet, second daughter of Thomas of Woodstock, duke of Gloucester, youngest son of Edward III. His father had won the title he bore by his achievements under Henry V in France, and transmitted it to his eldest son, Henry [q. v.], who afterwards was created earl of Essex. A second son, by right of his wife, was summoned to parliament as Lord Fitzwarren. The third, Thomas, the subject of this article, was born about 1404 or 1405, and was but a child at the death of his father. A fourth, John Bourchier, was ennobled as Lord Berners [see BOURCHIER, JOHN]. A daughter Eleanor married John Mowbray, third duke of Norfolk of that surname, and the fourth duke, his son, consequently speaks of the cardinal as his uncle (*Paston Letters*, ii. 382).

Thomas Bourchier was sent at an early age to Oxford, and took up his abode at Nevill's Inn, one of five halls or inns which occupied the site of what is now Corpus Christi College. In 1424 he obtained the prebend of Colwick, at Lichfield; before 1427 became dean of St. Martin's-le-Grand, London; received the prebend of West Thurrock, in the free chapel of Hastings, and in 1433 a prebend at Lincoln. In 1433, though not of full canonical age, he was recommended for the see of Worcester, then vacant by the death of Thomas Polton. But Polton had died at Basle while attending the general council, and the pope had already nominated as his successor Thomas Brouns, dean of Salisbury. On the other hand the commons in parliament addressed the king in favour of Bourchier, putting forward, according to the royal letters, the 'nighness of blood that our well-beloved master Thomas attaineth unto us and the cunning and virtues that rest in his person.' Accordingly Brouns was translated to Rochester, and the pope cancelled his previous nomination to Worcester by an antedated bull in favour of Bourchier, whose nomination therefore bears date 9 March 1434. The temporalities of the see were restored to him on 15 April 1435.

Meanwhile, in 1434, Bourchier was made chancellor of the university of Oxford, a position which he held for three years, and which implies at least that he took some interest in scholarship, though we have no evidence that he himself was a distinguished scholar. Wood says that he took part in a convocation of the university as early as 1428. But we may reasonably surmise that his subsequent promotions were as much owing to high birth as to great abilities. He had not remained long in the see of Worcester when, in 1435, the bishopric of Ely fell vacant. The chapter, at the instigation of John Tiptoft, the prior, agreed to postulate Bourchier, who sent messengers to Rome to procure bulls for his translation. The bulls came, but as the government refused to ratify his election, Bourchier feared to receive them. The king's ministers wished to reward Cardinal Louis de Luxembourg, archbishop of Rouen (chancellor of France under the English king) with the revenues of the bishopric of Ely. So by an arrangement with the pope, notwithstanding the opposition of Archbishop Chichele, the bishopric was not filled up, but the archbishop of Rouen was appointed administrator of the see. But when he died in 1443, there was no further difficulty in the way of Bourchier's promotion. He was nominated by the king, elected by the chapter, and having received a bull for his translation, dated 20 Dec. 1443, he was confirmed and had the temporalities restored to him on 27 Feb. 1444.

There is little known of his life at this time beyond the story of his promotions, and what we hear of his conduct as bishop is from a very adverse critic, the historian of the monastery of Ely, who says that he was severe and exacting towards the tenants, and that he would never celebrate mass in his own cathedral except on the day of his installation, which he put off till two years after his appointment. It appears that in 1438 there was an intention of sending Bourchier,

then bishop of Worcester, with others to the council of Basle; but it does not appear that he actually went (Nicolas, *Privy Council Proceedings*, v. 92, 99). That he was often called to the king's councils at Westminster there is ample evidence to show.

In March 1454 Kemp, the archbishop of Canterbury, died. A deputation of the lords rode to Windsor to convey the intelligence to the king, and to signify to him, if possible, that a new chancellor, a new primate, and a new council required to be appointed. But Henry's intellectual prostration was complete, and he gave no sign that he understood the simplest inquiry. The lords accordingly appointed the Duke of York protector, and on 30 March the council, in compliance with a petition from the commons, recommended the Bishop of Ely's promotion to the see of Canterbury 'for his great merits, virtues, and great blood that he is of' (*Rolls of Parl.* v. 450). Bourchier was translated on 22 April following; and we may presume that he owed his promotion to the Duke of York's influence. On 6 Sept. in the same year William Paston writes from London to this brother: 'My lord of Canterbury hath received his cross, and I was with him in the king's chamber when he made his homage' (*Paston Letters*, i. 303). Apparently he paid a conventional reverence to the poor unconscious king; he was enthroned on 24 Jan. following (*Sloane MS.* 1201, f. 4*b*).

On 7 March 1455 Bourchier was appointed lord chancellor, and received the seals at Greenwich from the king himself, who had recovered from his illness at the new year. His appointment, in fact, was one consequence of the king's recovery, as the Earl of Salisbury (the chancellor, and brother-in-law of the Duke of York) could not have been acceptable to the queen. Bourchier apparently had to some extent the good-will of both parties, and was expected to preserve the balance between them in peculiarly trying times. Little more than two months after his appointment, when the Duke of York and his friends took up arms and marched southwards, they addressed a letter to Bourchier as chancellor declaring that their intentions were peaceable and that they came to do the king service and to vindicate their loyalty. Bourchier sent a special messenger to the king at Kilburn, but the man was not allowed to come into the royal presence, and neither the letter to the archbishop nor an address sent by the lords actually reached the king (*Rolls of Parl.* v. 280–1). The result was the first battle of St. Albans, which was the commencement of the wars of the Roses.

A parliament was summoned for 9 July following, which Bourchier opened by a speech as chancellor. His brother Henry, viscount Bourchier, was at the same time appointed lord treasurer. The parliament was soon prorogued to November. Before it met again the king had fallen a second time into the same melancholy state of imbecility, and for a second time it was necessary to make York protector. The archbishop resigned the great seal in October 1456, when the queen had obtained a clear advantage over the Duke of York, and got the king, who had been long separated from her, down to Coventry, where a great council was held. These changes raised misgivings, even in some who were not of Yorkist leanings. The Duke of Buckingham, who was a son of the same mother as the two Bourchiers, was ill-pleased at seeing his brothers discharged from high offices of state, and it was said that he had interposed to protect the Duke of York himself from unfair treatment at the council (*Paston Letters*, i. 408). But the archbishop was a peacemaker; and the temporary reconciliation of parties in the spring of 1458 appears to have been greatly owing to him. He and Waynflete drew up the terms of the agreement between the lords on both sides, which was sealed on 24 March, the day before the general procession at St. Paul's.

Shortly before this, in the latter part of the year 1457, the archbishop had been called upon to deprive Pecock, bishop of Chichester, as a heretic. The case was a remarkable one, for Pecock was anything but a Lollard. He was first turned out of the king's council, the archbishop as the chief person there ordering his expulsion, and then required to appear before the archbishop at Lambeth. His writings were examined by three other bishops and condemned as unsound. Then the archbishop, as his judge, briefly pointed out to him that high authorities were against him in several points, and told him to choose between recantation and burning. The poor man's spirit was quite broken, and he preferred recantation. Nevertheless he was imprisoned by the archbishop for some time at Canterbury and Maidstone, and afterwards committed by him to the custody of the abbot of Thorney.

In April 1459 Bourchier brought before the council a request from Pius II that the king would send an ambassador to a council at Mantua, where measures were to be concerted for the union of Christendom against the Turks (Nicolas, *Privy Council Proceedings*, vi. 298). Coppini, the pope's nuncio, after remaining nearly a year and a half in England, gave up his mission as hopeless and recrossed the Channel. But at Calais the Earl of Warwick, who was governor there, won him over to the cause of the Duke of York.

He recrossed the Channel with the Earls of Warwick, March, and Salisbury, giving their enterprise the sanction of the church. Bourchier met them at Sandwich with his cross borne before them. A statement of the Yorkist grievances had been forwarded to him by the earls before their coming, and apparently he had done his best to publish it. Accompanied by a great multitude, the earls, the legate, and the archbishop passed on to London, which opened its gates to them on 2 July 1460. Next day there was a convocation of the clergy at St. Paul's, at which the earls presented themselves before the archbishop, declared their grievances, and swore upon the cross of St. Thomas of Canterbury that they had no designs against the king. The political situation was discussed by the bishops and clergy, and it was resolved that the archbishop and five of his suffragans should go with the earls to the king at Northampton and use their efforts for a peaceful settlement. Eight days later was fought the battle of Northampton, at which Henry was taken prisoner. The archbishop, as agreed upon in convocation, accompanied the earls upon their march from London, and sent a bishop to the king to explain their attitude; but the bishop (of whose name we are not informed) acted in a totally different spirit and encouraged the king's party to fight.

When the Duke of York came over from Ireland later in the year and challenged the crown in parliament, the archbishop came up to him and asked if he would not first come and pay his respects to the king. 'I do not remember,' he replied, 'that there is any one in this kingdom who ought not rather to come and pay his respects to me.' Bourchier immediately withdrew to report this answer to Henry. When, after the second battle of St. Albans, the queen was threatening London, the archbishop had betaken himself to Canterbury, awaiting better news with the young Bishop of Exeter, George Nevill, whom the Yorkists had appointed lord chancellor. Bourchier, though he had shown in the house of peers that he did not favour York's repudiation of allegiance, could not possibly sympathise with the disturbance of a parliamentary settlement and the renewal of strife and tumult. From this time, at all events, he was a decided Yorkist; and when the Duke of York's eldest son came up to London and called a council at his residence of Baynard's Castle on 3 March, he was among the lords who attended and agreed that Edward was now rightful king. On 28 June he set the crown upon Edward's head. Four years later, on Sunday after Ascension day (26 May) 1465, he also crowned his queen, Elizabeth Woodville.

For some years nothing more is known of the archbishop's life except that Edward IV petitioned Pope Paul II to make him a cardinal in 1465, and it appears that he was actually named by that pope accordingly on Friday, 18 Sept. 1467. But some years elapsed before the red hat was sent and his title of cardinal was acknowledged in England. In 1469 the pope wrote to the king promising that it should be sent very shortly; but the unsettled state of the country, and the new revolution which for half a year restored Henry VI as king in 1470, no doubt delayed its transmission still further, and it was only sent by the succeeding pope, Sixtus IV, in 1473. It arrived at Lambeth on 31 May.

By this time the archbishop had given further proofs of his devotion to Edward. He and his brother, whom the king had created earl of Essex after his coronation, not only raised troops for his restoration in 1471, but were mediators with the Duke of Clarence before his arrival in England, and succeeded in winning him over again to his brother's cause. After the king was again peacefully settled on his throne he went on pilgrimage to Canterbury at Michaelmas, apparently to attend the jubilee of St. Thomas à Becket, which, but for the state of the country, would have been held in the preceding year. Edward had visited Canterbury before, soon after the coronation of his queen, and bestowed on the cathedral a window representing Becket's martyrdom, of which, notwithstanding its destruction in the days of Henry VIII, some fragments are still visible.

Bourchier was hospitable after the fashion of his time. In 1468 he entertained at Canterbury an eastern patriarch, who is believed to have been Peter II of Antioch. In 1455—the year after he became archbishop—he had purchased of Lord Saye and Sele the manor of Knowle, in Sevenoaks, which he converted into a castellated mansion and bequeathed to the see of Canterbury. It remained as a residence for future archbishops till Cranmer gave it up to Henry VIII. Here Bourchier entertained much company, among whom men of letters like Botoner and patrons of learning like Tiptoft, earl of Worcester, were not unfrequent; also musicians like Hambois, Taverner, and others. That he was a promoter of the introduction of printing into England, even before the date of Caxton's first work, rests only on the evidence of a literary forgery published in the seventeenth century.

In 1475 Bourchier was one of the four arbitrators to whom the differences between England and France were referred by the

peace of Amiens (Rymer, xii. 16). In 1480, feeling the effects of age, he appointed as his suffragan William Westkarre, titular bishop of Sidon. In 1483, after the death of Edward IV, he was again called on to take part in public affairs in a way that must have been much to his own discomfort. He went at the head of a deputation from the council to the queen-dowager in sanctuary at Westminster, and persuaded her to deliver up her second son Richard, duke of York, to the keeping of his uncle, the protector, to keep company with his brother, Edward V, then holding state as sovereign in the Tower. The cardinal pledged his own honour so strongly for the young duke's security that the queen at last consented. Within three weeks of the time that he thus pledged himself for the good faith of the protector he was called on to officiate at the coronation of Richard III!

That he should have thus lent himself as an instrument to the usurper must appear all the more melancholy when we consider that in 1471 he had taken the lead among the peers of England (as being the first subject in the realm) in swearing allegiance to Edward, prince of Wales, as heir to the throne (*Parl. Rolls*, vi. 234). But perhaps we may overestimate the weakness involved in such conduct, not considering the specious plea on which young Edward's title was set aside, and the winning acts and plausible manners which for the moment had made Richard highly popular. The murder of the princes had not yet taken place, and the attendance of noblemen at Richard's coronation was as full as it ever had been on any similar occasion. After the murder a very different state of feeling arose in the nation, and the cardinal, who had pledged his word for the safety of the princes, could not but have shared that feeling strongly. How far he entered into the conspiracies against Richard III we do not know, but doubtless he was one of those who rejoiced most sincerely in the triumph of Henry VII at Bosworth. Within little more than two months of that victory he crowned the new king at Westminster.

One further act of great solemnity it was left for him to accomplish, and it formed the fitting close to the career of a great peacemaker. On 18 Jan. 1486 he married Henry VII to Elizabeth of York, thus joining the red rose and the white and taking away all occasion for a renewal of civil war. He died at Knowle on 30 March following, and was buried in his own cathedral.

A valuable modern life of Bourchier will be found in Hook's Lives of the Archbishops of Canterbury, vol. v.] J. G.

BOURCHIER, THOMAS (*d.* 1586?), was a friar of the Observant order of the Franciscans. He was probably educated at Magdalen Hall, Oxford, but there is no record of his having graduated in that university. When Queen Mary attempted to re-establish the friars in England, Bourchier became a member of the new convent at Greenwich; but at that queen's death he left the country. After spending some years in Paris, where the theological faculty of the Sorbonne conferred on him the degree of doctor, he travelled to Rome. He at first joined the convent of the Reformed Franciscans at the church of S. Maria di Ara Cœli, and subsequently became penitentiary in the church of S. Giovanni in Laterano, where John Pits, his biographer, speaks of having sometimes seen him.

He wrote several books, but the only one that survives is the 'Historia Ecclesiastica de Martyrio Fratrum Ordinis Divi Francisci dictorum de Observantia, qui partim in Anglia sub Henrico octavo Rege, partim in Belgio sub Principe Auriaco, partim et in Hybernia tempore Elizabethæ regnantis Reginæ, idque ab anno 1536 usque ad hunc nostrum præsentem annum 1582, passi sunt.' The preface is dated from Paris, 'ex conventu nostro,' 1 Jan. 1582. The book was very popular among catholics, and other editions were brought out at Ingolstadt in 1583 and 1584, Paris in 1586, and at Cologne in 1628. Another of his works was a treatise entitled 'Oratio doctissima et efficacissima ad Franciscum Gonzagam totius ordinis ministrum generalem pro pace et disciplina regulari Magni Conventus Parisiensis instituenda,' Paris, 1582. This was published under the name of Thomas Lancton, or Lacton, which appears to have been an alias of Bourchier.

Wadding, the historian of the Franciscans, calls him, in his supplementary volume, 'Thomas Bourchier Gallice, Lacton vero Anglice, et Latinis Lanius, vel Lanio, Italis autem Beccaro' (an alternative form of

Beccajo), and elsewhere expresses himself convinced of the identity of Lancton and Bourchier. It is but fair to say that Francis a S. Clara and Parkinson, the author of 'Collectanea Anglo-Minoritica,' consider them two distinct persons, who both took their degree of D.D. at Paris about 1580. These writers are, however, of no better authority than Wadding. Another treatise by Bourchier, 'De judicio religiosorum, in quo demonstratur quod a sæcularibus judicari non debeant,' is mentioned by Wadding as in his possession, but only in manuscript; this was written at Paris in 1582. In 1584 he edited and annotated the 'Censura Orientalis Ecclesiæ de præcipuis Hæreticorum dogmatibus,' which was published by Stanislaus Scoluvi. Bourchier died, according to Pits, at Rome about 1586.

BOURDIEU, ISAAC DU. [See DU BOURDIEU.]

BOURDIEU, JEAN DU. [See DU BOURDIEU.]

BOURDILLON, JAMES DEWAR (1811–1883), Madras civil servant, was the second son of the Rev. Thomas Bourdillon, vicar of Fenstanton and Hilton, Huntingdonshire. He was educated partly by his father, and partly at a school at Ramsgate; having been nominated to an Indian writership, he proceeded to Haileybury College in 1828, and in the following year to Madras. After serving in various subordinate appointments in the provinces, he was appointed secretary to the board of revenue, and eventually in 1854 secretary to government in the departments of revenue and public works. Bourdillon had previously been employed upon an important commission appointed under instructions of the late court of directors to report upon the system of public works in the Madras presidency, his colleagues being Major (now Major-general) F. C. Cotton, C.S.I., of the Madras engineers, and Major (now Lieutenant-general) Sir George Balfour, K.C.B., of the Madras artillery. The report of the commission, which was written by Bourdillon, enforces in clear and vigorous language the enormous importance of works of irrigation, and of improved communications for the prevention of famines and the development of the country. The writer's accurate knowledge of details and breadth of view render the report one of the most valuable state papers ever issued by an Indian government.

Bourdillon was also the author of a treatise on the ryotwár system of land revenue, which exposed a considerable amount of prevalent misapprehension as to the principles and practical working of that system. Working in concert with his friend and colleague, Sir Thomas Pycroft, he was instrumental in effecting reforms in the transaction of public business, both in the provinces and at the presidency. He especially helped to improve the method of reporting the proceedings of the local government to the government of India and to the secretary of state, which for some years put Madras at the head of all the Indian governments in respect of the thoroughness with which its business was conducted and placed before the higher authorities.

Bourdillon's health failed in 1861, and he was compelled to leave India, and to retire from the public service at a time when the reputation which he had achieved would in all probability have secured his advancement to one of the highest posts in the Indian service. To the last he devoted much time and attention to Indian questions, occasionally contributing to the 'Calcutta Review,' and interesting himself among other matters in the questions of provincial finance and of the Indian currency. He revised for the late Colonel J. T. Smith, R.E., all his later pamphlets on a gold currency for India. He died suddenly at Tunbridge Wells on 21 May 1883.

[Madras Civil List; Report of the Madras Public Works Commissioners, Madras Church of Scotland Mission Press, 1856; family papers and personal knowledge.] A. J. A.

BOURGEOIS, SIR PETER FRANCIS (1756–1811), painter, is said to have been descended from a family of some importance in Switzerland. His father was a watchmaker, residing in London at the time of his birth. He was intended for the army, and Lord Heathfield offered to procure him a commission, but he preferred to be an artist, and was encouraged in his choice of profession by Reynolds and Gainsborough. De Loutherbourg was his master, and he early acquired a reputation as a landscape-painter. In 1776 he set out on a tour through France, Holland, and Italy. Between 1779 and 1810, the year before his death, he exhibited 105 pictures at the Royal Academy and five at the British Institution. In 1787 he was elected an associate, and in 1793 a full member of the Royal Academy. In the following year he was appointed landscape-painter to George III.

Bourgeois owed his knighthood to Stanislaus, king of Poland, who in 1791 appointed him his painter and conferred on him the honour of a knight of the order of Merit, and his title was confirmed by George III. Although he appears to have been successful as a painter, he owed much of his good fortune to Joseph Desenfans, a picture-dealer, who was employed by Stanislaus to collect works of art, which ultimately remained on his hands. Bourgeois, who lived with Desenfans, assisted him in his purchases, and at his death inherited what, with some pictures added by himself, is now known as the Dulwich Gallery. He died from a fall from his horse on 8 Jan. 1811, and was buried in the chapel of Dulwich College. He bequeathed 371 pictures to Dulwich College, with 10,000*l.* to provide for the maintenance of the collection, and 2,000*l.* to repair and beautify the west wing and gallery of the college. The members of the college, however, determined to erect a new gallery, and they and Mrs. Desenfans contributed 6,000*l.* apiece for this purpose, and employed Mr. (afterwards Sir) John Soane as the architect of the present buildings, which were commenced in the year of the death of Bourgeois, and include a mausoleum for his remains and those of Mr. and Mrs. Desenfans.

Although Bourgeois generally painted landscapes, he attempted history and portrait. Amongst his pictures were 'Hunting a Tiger,' Mr. Kemble as 'Coriolanus,' and 'A Detachment of Horse, costume of Charles I.' Twenty-two of his own works were included in his bequest to Dulwich College, where, besides landscapes, may now be seen 'A Friar kneeling before a Cross,' 'Tobit and the Angel,' and a portrait of himself. Though an artist of taste and versatility, his works fail to sustain the reputation which they earned for him when alive.

[Redgrave's Dict. of Artists, 1878; Bryan's Dict. (Graves); Annals of the Fine Arts, 1818; Warner's Cat. Dulwich Coll. MSS.] C. M.

BOURKE, Sir RICHARD (1777–1855), colonial governor, was the only son of John Bourke of Dromsally, a relation of Edmund Burke, and was born in Dublin on 4 May 1777. He was originally educated for the bar, and was more than twenty-one when he was gazetted an ensign in the 1st or Grenadier guards on 22 Nov. 1798. He served in the expedition to the Helder, when he was shot through the jaws at the battle of Bergen, and was promoted lieutenant and captain on 25 Nov. 1799. As quartermaster-general he served with Auchmuty's force at Monte Video, and on the conclusion of the campaign was put on half-pay. In 1808 he was posted to the staff of the army in Portugal as assistant quartermaster-general, and on account of his knowledge of Spanish was sent by Sir Arthur Wellesley to the headquarters of Don Gregorio Cuesta, the commander-in-chief of the Spanish army. From 30 May to 28 June 1809 he fulfilled his difficult mission to Wellesley's entire satisfaction, and then for some unexplained reason resigned his post on the staff and returned to England. He was again sent, on account of his knowledge of Spanish, on a detached mission to Galicia in 1812. He was gazetted an assistant quartermaster-general, and stationed at Corunna, whence he sent up provisions and ammunition to the front, and acted in general as military resident in Galicia. At the conclusion of the war he was promoted colonel and made a C.B. He was promoted major-general in 1821, and was lieutenant-governor of the eastern district of the Cape of Good Hope from 1825 to 1828, when he returned to England. In 1829 he edited, with Lord Fitzwilliam, the 'Correspondence' of Edmund Burke, whom he had often visited at Beaconsfield in his own younger days. In 1831 he was appointed governor of New South Wales in succession to General Darling.

When Bourke arrived he found the colony divided into two parties. The emancipists, or freed convicts, had been encouraged by General Macquarie to believe that the colony existed for them alone; while, on the other hand, Brisbane and Darling had been entirely governed by the wealthy emigrants and poor adventurers, and given all power to the party of the exclusivists or pure merinos. General Darling had behaved injudiciously, and had got into much trouble. Bourke at once took up a position of absolute impartiality to both parties. He freed the press at once from all restrictions; and though himself foully abused, he would not use his position to interfere. Still more important was his encouragement of emigration. Under his influence a regular scheme of emigration was established, evidence was taken in Australia and issued in England by the first Emigration Society, which was established in London in 1833, and means were provided for bringing over emigrants by selling the land in the colony at a minimum price. He succeeded in carrying what is known as Sir Richard Bourke's Church Act. Bourke's impartiality made him popular, and he became still more so by his travels throughout the inhabited part of his vice-kingdom. He was made a K.C.B. in 1835. He resigned his governorship on 6 Dec. 1837, after six years of office, on being reprimanded

by the secretary of state on account of his dismissal of a Mr. Riddell from the executive council. The sorrow at his departure was genuine, and money was at once raised to erect a statue to him. 'He was the most popular governor who ever presided over the colonial affairs' (Braim, *History of New South Wales*, i. 275).

On returning home to Ireland Bourke spent nearly twenty years at his country seat, Thornfield, near Limerick. He was promoted lieutenant-general, and appointed colonel of the 64th regiment in 1837, served the office of high sheriff of the county of Limerick in 1839, and was promoted general in 1851. He died suddenly, at the age of seventy-eight, at Thornfield, on 13 Aug. 1855.

M. S.

BOURKE, RICHARD SOUTHWELL, sixth Earl of Mayo (1822–1872), viceroy and governor-general of India, was the eldest son of Robert Bourke, fifth earl of Mayo, who succeeded his uncle, the fourth earl, in 1849. The earls of Mayo, like the earls and marquises of Clanricarde, are said to have descended from William Fitzadelm de Borgo, who succeeded Strongbow in the government of Ireland in 1066. Richard, the eldest of ten brothers and sisters, was born in Dublin on 21 Feb. 1822, and spent his earlier years at Hayes, a country house belonging to the family in the county of Meath. He was educated at home, and in 1841 entered Trinity College, Dublin, where, without going into residence, he took an ordinary degree. His father was a strong evangelical. His mother, Anne Jocelyn, a granddaughter of the first Earl of Roden, was a woman of considerable culture, of deep religious feelings, and of strong common sense. Brought up amidst the sports of country life he became a clever shot, an accomplished rider, and a good swimmer. While an undergraduate he spent much of his time at Palmerstown and in London with his granduncle, the fourth Earl of Mayo, whom Praed described as

> A courtier of the nobler sort,
> A christian of the purer school,
> Tory when whigs are great at court,
> And protestant when papists rule.

In 1845 he made a tour in Russia, and after his return to England published an account of it ('St. Petersburg and Moscow: A Visit to the Court of the Czar, by Richard Southwell Bourke, Esq.,' 2 vols., Henry Colburn, 1846), which gave evidence of acute observation, and met with considerable success. In 1847 he took an active part in the relief of the sufferers from the Irish famine. At the general election in the same year he was elected to parliament as one of the members for the county of Kildare. In the following year he married Miss Blanche Wyndham, daughter of the first Lord Leconfield. In 1849 his granduncle died, and his father succeeding to the earldom, he assumed the courtesy title of Lord Naas. In 1852 he was appointed chief secretary for Ireland in Lord Derby's administration, and held the same office during the subsequent conservative administrations which came into power in 1858 and 1866, retaining it on the last occasion until his appointment as viceroy and governor-general of India shortly before the fall of Mr. Disraeli's government. He succeeded to the Irish earldom on the death of his father in 1867.

During all these years Lord Mayo had a seat in the House of Commons, serving as member for Kildare county from 1847 to 1852, for the Irish borough of Coleraine from 1852 to 1857, and for the English borough of Cockermouth from 1857 till the dissolution of 1868. His politics were those of a moderate conservative. His policy was eminently conciliatory, combined with unflinching firmness in repressing sedition and crime. While opposed to any measure for disestablishing the protestant church in Ireland, he was in favour of granting public money to other institutions, whether catholic or protestant, without respect of creed, 'established for the education, relief, or succour of his fellow-countrymen.' His view was that no school, hospital, or asylum should languish because of the religious teaching it afforded, or because of the religion of those who supported it. His opinions on these questions and on the land question were very fully stated in a speech made by him in the House of Commons on 10 March 1868, in which he propounded a policy which has been often described as the 'levelling-up policy,' involving the establishment of a Roman catholic university, and such changes in ecclesiastical matters as would meet the just claims of the Roman catholic portion of the community. He was in favour of securing for tenants compensation for improvements effected by themselves, of providing for increased powers of improvement by limited owners, and of written contracts in supersession of the system of parole tenancies.

Lord Mayo's views on all these matters met

with full support from his political chief, Mr. Disraeli, who, when announcing to the Buckinghamshire electors the appointment of his friend to the office of viceroy and governor-general of India, declared that 'a state of affairs so dangerous was never encountered with greater firmness, but at the same time with greater magnanimity.' 'Upon that nobleman, for his sagacity, for his judgment, fine temper, and knowledge of men, her majesty has been pleased to confer the office of viceroy of India, and as viceroy of India I believe he will earn a reputation that his country will honour.' The resignation of the ministry had actually taken place before the governor-generalship became vacant; but the appointment was not interfered with by Mr. Gladstone's government, and Lord Mayo was sworn in as governor-general at Calcutta on 12 Jan. 1869.

Under Sir John Lawrence the attention of the government of India and of the subordinate governments had been mainly devoted to internal administrative improvements, and to the development of the resources of the country. With the exception of the Orissa famine no serious crisis had taxed the energies or the resources of the state, and Lord Mayo received the government in a condition of admirable efficiency, with no arrears of current work (Sir John Strachey's *Minute on the Administration of the Earl of Mayo*, 30 April 1872). But clear as the official file was, and tranquil as was the condition of the empire, several questions of first-rate importance speedily engaged the consideration of the new viceroy. Of these the most important were the relations of the government of India with the foreign states on its borders, and especially with Afghanistan, and the condition of the finances, which, notwithstanding the vigilant supervision of the late viceroy, was not altogether satisfactory.

The condition of Afghanistan from the time of the death of the amír, Dost Muhammad Khán, in 1863, up to a few months before Lord Mayo's accession to office, had been one of constant intestine war, three of the sons of the late amír disputing the succession in a series of sanguinary struggles which had lasted for five years. Sir John Lawrence had from the first declined to aid any one of the combatants in this internecine strife, adhering to the policy of recognising the *de facto* ruler, and at one time two *de facto* rulers, when one of the brothers had made himself master of Cabul and Candahar, and the other held Herat. At length, in the autumn of 1868, Shír Ali Khán having succeeded in establishing his supremacy, was officially recognised by the governor-general as sovereign of the whole of Afghanistan, and was presented with a gift of 20,000*l.*, accompanied by a promise of 100,000*l.* more. It was also arranged that the amír should visit India, and should be received by the viceroy with the honours due to the ruler of Afghanistan. This position of affairs had been brought to the notice of Lord Mayo before his departure from England. While fully realising the difficulties by which the whole question was encompassed, he appears to have entertained some doubts as to the policy which so long had tolerated anarchy in Afghanistan, but cordially approving of the final decision to aid the re-establishment of settled government in that country, he lost no time on his arrival in giving effect to the promises of his predecessor. A meeting with the amír took place at Amballa in March 1869. The amír had come to India bent upon obtaining a fixed annual subsidy, a treaty laying upon the British government an obligation to support the Afghan government in any emergency, and the recognition by the government of India of his younger son, Abdulla Ján, as his successor, to the exclusion of his eldest son, Yakub Khán. None of these requests were complied with. But the amír received from Lord Mayo emphatic assurances of the desire of the government of India for the speedy consolidation of his power, and of its determination to respect the independence of Afghanistan. He was encouraged to communicate frequently and fully with the government of India and its officers. Public opinion differed as to the success of the meeting. The intimation that the government of India would treat with displeasure any attempt of the amír's rivals to rekindle civil war was by some regarded as going too far, and by others as not going far enough; but the prevalent view was that good had been done, and that Shír Ali had returned to Cabul well satisfied with the result of his visit.

On the general question of the attitude of the British government towards the adjoining foreign states, Lord Mayo held that while British interests and influence in Asia were best secured by a policy of non-interference in the affairs of such states, we could not safely maintain 'a Thibetian policy' in the East, but must endeavour to exercise over our neighbours 'that moral influence which is inseparable from the true interests of the strongest power in Asia.' Regarding Russia, he considered that she was not 'sufficiently aware of our power; that we are established, compact, and strong, whilst she is exactly the reverse, and that it is the very feeling of our enormous power that justifies us in assuming

that passive policy which, though it may be carried occasionally too far, is perhaps right in principle.' But while entertaining these views, he by no means agreed with the extreme supporters of the 'masterly inactivity' policy. Writing on this subject little more than a month before his death, he said: 'I have frequently laid down what I believe to be the cardinal points of Anglo-Indian policy. They may be summed up in a few words. We should establish with our frontier states of Khelat, Afghanistan, Yárkand, Nipál, and Burma, intimate relations of friendship; we should make them feel that though we are all-powerful, we desire to support their nationality; that when necessity arises, we might assist them with money, arms, and even perhaps, in certain eventualities, with men. We could thus create in them outworks of our empire, and, assuring them that the days of annexation are past, make them know that they have everything to gain and nothing to lose by endeavouring to deserve our favour and support. Further, we should strenuously oppose any attempt to neutralise those territories in the European sense, or to sanction or invite the interference of any European power in their affairs.'

Another point upon which Lord Mayo felt very strongly was the necessity of checking the tendency to aggression on the part of the Persian government. He considered that 'the establishment by Persia of a frontier conterminous with that of the British empire in India would be an event most deeply to be deplored,' and, with a view to the more effectual prevention of any such designs, he urged in a despatch to the secretary of state, which was drafted just before his death, that the British mission at Teherán should be transferred to the control of the secretary of state for India. It may here be mentioned that the appointment, with the consent of the governments of Persia and Afghanistan, of a commission to delimitate the boundary between Persia and the Afghan province of Seistan, which prevented war between the two countries, was one of the latest of Lord Mayo's acts.

Another question which engaged much of the viceroy's attention was that of punitory expeditions against the savage tribes inhabiting various tracts on the frontier. To such expeditions Lord Mayo was extremely averse, except under circumstances of absolute necessity. The Lushai expedition, which took place in the last year of his government, was rendered necessary by the repeated inroads of the tribe of that name upon the Cachar tea plantations.

With the feudatory states within the borders of India Lord Mayo's relations were of the happiest kind. Scrupulously abstaining from needless interference, but never tolerating oppression or misgovernment, he laboured to convince the princes of India that it was the sincere desire of the British government to enable them to govern their states in such a manner as to secure the prosperity of their people and to maintain their own just rights. With this view he encouraged the establishment of colleges for the education of the sons of the chiefs and nobles in the native states. The Mayo College at Ajmír and the Rájkumár College in Káthiáwár were the result of his efforts. Another measure which he contemplated was the amalgamation, many years before advocated by Sir John Malcolm, of the Central India and Rájputána agencies under a high officer of the crown, with the status of a lieutenant-governor.

When Lord Mayo took charge of the government of India, the condition of the finances was not satisfactory. Lord Mayo dealt vigorously with the situation. By reductions of expenditure on public works and other branches of the civil administration, by increasing the salt duties in Madras and Bombay, and by raising the income-tax in the middle of the financial year, he converted the anticipated deficit into a small surplus, and by other measures he so improved the position, that the three following years presented an aggregate surplus of nearly six millions. Among the measures last referred to were the reduction of the military expenditure by nearly half a million without any diminution in the numerical strength of the army, and the transfer to the local governments of financial responsibility for certain civil departments, with a slightly reduced allotment from imperial funds, and with power to transfer certain items of charge to local taxation. For many years over-centralisation had been one of the difficulties of Indian administration. The relations of the supreme government and some of the local governments were altogether inharmonious, and there was no stimulus to avoid waste or to develope the public revenues in order to increase the local means of improvement. This policy, commonly described as the 'decentralisation policy,' has been thoroughly successful, and has since been extended by Lord Mayo's successors.

Another financial reform suggested by Lawrence, and carried into effect by Mayo, was that of constructing extensions of the railway system by means of funds borrowed by the government, in supersession of the plan of entrusting such works to private

companies with interest guaranteed by the state. A further economy under this head, for which Mayo's government was solely responsible, was effected by adopting a narrow gauge of three feet three inches for the new state railways. To public works generally Mayo devoted a considerable portion of his time. He took charge personally of the public works department of the government in addition to the foreign department. He effected large savings in the construction of barracks, and endeavoured to economise the expenditure on irrigation by enforcing provincial and local responsibility. The question of providing adequate defences for the principal Indian ports engaged his early and anxious attention. He took great interest in agricultural reform, constituting a new department of the secretariat for agriculture, revenue, and commerce. He passed a land-improvement act, and an act to facilitate by means of government loans works of public utility in towns. The decision that the permanent settlement of the land revenue upon the system established by Lord Cornwallis in Bengal should not be extended to other provinces was mainly due to him. While not opposed to a permanent settlement of the land revenue, he considered that it should be upon the basis, not of a fixed money payment, but of an assessment fixed with reference to the produce of the land. Although under the stress of financial difficulties he temporarily raised the income-tax in his first year of office, the result of his inquiries was that he discarded it as a tax unsuited to India. The equalisation of the salt duties throughout India, and the abolition of the inland preventive line, were measures which he had much at heart. He advocated the development of primary education, and suggested special measures for promoting the education of the Muhammadan population. During the three years of his viceroyalty he saw more of the territory under his rule than had been seen by any of his predecessors. The distances which he travelled over in his official capacity during this period exceeded 20,000 miles.

In the midst of these useful and devoted labours Lord Mayo was suddenly struck down by the hand of an assassin on the occasion of a visit of official inspection to the penal settlement of Port Blair on 8 Feb. 1872. The intelligence of his death was received with the deepest sorrow by all classes throughout India and in England. The queen bore testimony in language of touching sympathy to the extent of the calamity which had 'so suddenly deprived all classes of her subjects in India of the able, vigilant, and impartial rule of one who so faithfully represented her as viceroy of her Eastern empire.' The secretary of state, in an official despatch addressed to the government of India, described the late governor-general as a statesman whose exertions 'to promote the interests of her majesty's Indian subjects,' and to 'conduct with justice and consideration the relations of the queen's government with the native princes and states,' had been 'marked with great success,' and had not been surpassed by the most zealous labours of any of his most distinguished predecessors at the head of the government of India.' Lord Mayo had nearly completed his fiftieth year at the time of his death. He left a widow, four sons, and two daughters.

[Hunter's Life of the Earl of Mayo, London, 1875; a Minute by Sir John Strachey on the administration of the Earl of Mayo as Viceroy and Governor-general of India, dated 30 April 1872; Records of the India Office; The Finances and Public Works of India, 1869–81, by Sir J. Strachey, G.C.S.I., and Lieutenant-general R. Strachey, F.R.S., London, 1882; private papers; personal recollections.] A. J. A.

BOURMAN, ROBERT. [See BORE-MAN.]

BOURN, NICHOLAS. [See BURNE.]

BOURN, SAMUEL, the elder (1648–1719), dissenting minister, was born in 1648 at Derby, where his father and grandfather, who were clothiers, had shown some public spirit in providing the town with a water supply. His mother's brother was Robert Seddon, who, having received presbyterian ordination on 14 June 1654, became minister at Gorton, Lancashire, and then at Langley, Derbyshire, where he was silenced in 1662. Seddon sent Bourn to Emmanuel College, which he left in 1672. His tutor was Samuel Richardson, who taught him that there is no distinction between grace and moral righteousness, and that salvation is dependent upon the moral state. It does not appear that he accepted this view; his theology was always Calvinistic, and he lamented the deflections from that system in his time, though he was no heresy-hunter. Leaving Cambridge without a degree, being unwilling to subscribe, Bourn taught in a school at Derby. He then became chaplain to Lady Hatton. Going to live with an aunt Bourn in London, he was ordained there. In 1679 Dr. Samuel Annesley's influence gained him the pastoral charge of the presbyterian congregation at Calne, Wiltshire, which he held for sixteen years, declining overtures from Bath, Durham, and Lincoln. Seddon, who, after 1688, preached at Bolton, Lanca-

shire, on his death-bed in 1695 recommended Bourn as his successor there. Bourn removed thither in 1695, and though at first not well received by the whole congregation, he declined the inducement of a larger salary offered by the Calne people to tempt him back, and gradually won the love of all his Bolton flock. For him the new meeting-house (licensed 30 Sept. 1696) was built on the ground given by his uncle. He originated, and after a time entirely supported, a charity school for twenty poor children. His stipend was very meagre, though when pleading for the wants of others he was known as 'the best beggar in Bolton.' By will he left 20*l.* as an additional endowment to the Monday lecture. His constitution broke some time before his death, which occurred on 4 March 1719. On his deathbed, in answer to his friend Jeremiah Aldred (*d.* 1729), minister of Manton, he emphatically expressed his satisfaction with the nonconformist position he had adopted. His funeral sermon was preached (from 2 Kings ii. 3) by his son Samuel [see below], who had already been appointed to preach a funeral sermon for a member of his father's flock, and discharged the double duty. Brown married the daughter of George Scortwreth, ejected from St. Peter's, Lincoln, and had seven children. His eldest son Joseph died on 17 June 1701 in his twenty-first year; his youngest sons, Daniel and Abraham, had died in infancy in April 1701; his widow survived him several years. Bourn printed nothing, but his son Samuel published: 'Several Sermons preached by the late Rev. Mr. Samuel Bourn of Bolton, Lanc.,' 1722, 8vo (two sets of sermons from 1 John iii. 2, 3, on 'The transforming vision of Christ in the future state,' &c.), adding the funeral sermon, and a brief memoir by William Tong (*b.* 1662, *d.* 21 March 1727), and dedicating the volume to a relative, Madam Hacker of Duffield. He speaks of his father as a great preacher, a good pastor, a good scholar, and an honest, upright man. A portrait prefixed to the volume shows a strong countenance; Bourn wears gown and bands, and his flowing hair is confined by a skull-cap.

[Palmer's Nonconf. Memorial (1802), i. 411; Toulmin's Mem. of Rev. Samuel Bourn, 1808 (an oddly arranged storehouse of dissenting biography); Murch's Hist. Presbyt. and Gen. Bapt. Churches in West of Engl. (1835), pp. 56, 60; Baker's Nonconformity in Bolton, 1854.]

A. G.

BOURN, SAMUEL, the younger (1689–1754), dissenting minister, second son of Samuel Bourn the elder [q. v.], was born in 1689 at Calne, Wiltshire. He was taught classics at Bolton, and trained for the ministry in the Manchester academy of John Chorlton and James Coningham, M.A. His first settlement was at Crook, near Kendal, in 1711, where he gave himself to study. He carried with him his father's theology, but seems to have attained at Manchester the latest development of the nonsubscribing idea, for at his ordination he declined subscription, not from particular scruples, but on general principles; hence many of the neighbouring ministers refused to concur in ordaining him. Toulmin says 'the received standard of orthodoxy' which was proffered to him was the assembly's catechism. In 1719, when the Salters' Hall conference had made the Trinitarian controversy a burning question among dissenters, Bourn, hitherto 'a professed Athanasian,' addressed himself to the perusal of Clarke and Waterland, and accepted the Clarkean scheme. While at Crook, Bourn dedicated a child (probably of baptist parentage) without baptism, according to a form given by Toulmin. In 1720 Bourn succeeded Henry Winder (*d.* 9 Aug. 1752) at Tunley, near Wigan. He declined in 1725 a call to the neighbouring congregation of Park Lane, but accepted a call (dated 29 Dec. 1727) to the 'new chapel at Chorley.' On 7 May 1731 Bourn was chosen one of the Monday lecturers at Bolton, a post which he held along with his Chorley pastorate. On 19 April 1732 Bourn preached the opening sermon at the New Meeting, which replaced the Lower Meeting, Birmingham, and on 21 and 23 April he was called to be colleague with Thomas Pickard in the joint charge of this congregation and a larger one at Coseley, where he was to reside. He began this ministry on 25 June. He was harassed by John Ward, J.P., of Sedgley Park (M.P. for Newcastle-under-Lyme, afterwards sixth Baron Ward, and first Viscount Dudley and Ward), who sought to compel him to take and maintain a parish apprentice. Bourn twice appealed to the quarter sessions, and pleaded his own cause successfully. Subsequently, on 15 Dec. 1738, Ward and another justice tried to remove him from Sedgley parish to his last legal settlement, on the pretext that he was likely to become chargeable. Toulmin prints his very spirited reply. After Pickard's death, his colleague was Samuel Blyth, M.D. Bourn had a warm temper, and was not averse to controversy; was in his element in repelling a field-preacher, or attacking quakers in their own meeting-house, and with difficulty was held back by his friend Orton from replying on the spot to the doctrinal confession of a young independent minister, who was being ordained at the New

Meeting, lent for the occasion. He engaged in correspondence on the 'Logos' (1740–2) with Doddridge (printed in *Theol. Repos.* vol. i.); on subscription (1743) with the Kidderminster dissenters; on dissent (1746) with Groome, vicar of Sedgley. In his catechetical instructions, founded on the assembly's catechism, he used that manual rather as a point of departure than as a model of doctrine. Although he had a great name for heterodoxy, his preaching was seldom polemical, but full of unction, as were his prayers. In 1751 Bourn declined a call to succeed John Buck (*d.* 8 July 1750) in his father's congregation at Bolton. He died at Coseley of paralysis on 22 March 1754. His person was small, slight, and active; his glance keen; in dress he was somewhat negligent. He married while at Crook (about 1712) Hannah Harrison (*d.* 1768), of a good family near Kendal. She bore him nine children: 1. Joseph, born 1713; educated at Glasgow; minister first at Congleton, then at Hindley (1746); married (1748) Miss Farnworth (*d.* 1785); died 17 Feb. 1765; his eldest daughter Margaret married Samuel Jones (*d.* 17 March 1819), the Manchester banker, uncle of the first Lord Overstone. 2. Samuel [see below]. 3. Abraham, surgeon at Market Harborough, Leicester, and Liverpool; author of pamphlets ('Free and Candid Considerations,' &c., 1755, and 'A Review of the Argument,' &c., 1756) in reply to Peter Whitfield, a learned Liverpool printer and sugar-refiner, who left the dissenters and vigorously attacked their orthodoxy. 4. Benjamin, a London bookseller, author of 'A Sure Guide to Hell' (anon.), 1750, and supplement; he published some of his father's pieces. 5. Daniel, who built at Leominster what is said to have been the first cotton mill erected in England, an enterprise wrecked by a fire. 6. Miles, a mercer at Dudley. 7. John; died under age. Two others died young. Bourn's publications were: 1. 'The Young Christian's Prayer Book,' &c., 1733; 2nd ed. Dublin, with preface by John Leland, D.D.; 3rd ed. enlarged, 1742; 4th and best edition, 1748. 2. 'An Introduction to the History of the Inquisition,' &c. (anon.), 1735. 3. 'Popery a Craft, and Popish Priests the chief Craftsmen,' 1735, 8vo (a Fifth of November sermon on Acts xix. 25, reprinted in 'A Cordial for Low Spirits,' edited by Thomas Gordon, 2nd ed. 1763, edited by Rev. Richard Baron. 4. 'An Address to Protestant Dissenters; or an Inquiry into the grounds of their attachment to the Assembly's Catechism ... being a calm examination of the sixth answer ... by a Prot. Dissenter' (anon.), 1736. 5. 'A Dialogue betw. a Baptist and a Churchman; occasioned by the Baptists opening a new Meeting-House for reviving old Calvinistical doctrines and spreading Antinomian and other errors, at Birmingham,' &c. Part I. by 'a consistent Protestant' (anon.), 1737; Part II. by 'a consistent Christian' (anon.), 1739. 6. 'The Christian Family Prayer Book,' &c., with a recommendation by Isaac Watts, D.D., 1738 (frequently reprinted with additions. A prefixed 'Address to Heads of Families on Family Religion' was reprinted by Rev. John Kentish, 1803). 7. 'Address to the Congregation of Prot. Dissenters ... at the Castle Gate in Nottingham,' &c., by a Prot. Dissenter (anon.), 1738 (in vindication of No. 4, which had been attacked by Rev. James Sloss, of Nottingham). 8. 'Lectures to Children and Young People ... consisting of Three Catechisms ... with a preface,' &c., 1738 (prefixed is a recommendation by Revs. John Mottershead, Josiah Rogerson, Henry Grove, Thomas Amory, D.D. [q. v.], Samuel Chandler, D.D., and George Benson, D.D. [q. v.], whom Bourn describes as his intimate friend; appended is the revision of the assembly's catechism, by James Strong, minister at Ilminster; 2nd ed. 1739; 3rd ed. 1748 (with title, 'Religious Education,' &c.); the third catechism of the set was re-edited by Job Orton as 'A Summary of Doctrinal and Practical Religion.' 9. 'The True Christian Way of Striving for the Faith of the Gospel,' 1738, 8vo (sermon, on Phil. i. 27, 28, at the Dudley double lecture, 23 May). 10. 'Remarks on a pretended Answer' to the last piece (anon.), 1739. 11. 'The Christian Catechism,' &c. (anon.), 1744 (intended as a preservative against Deism). 12. 'Address' in services at ordination of Job Orton on 18 Sept. 1745 at Shrewsbury (a charge, from 1 Thess. ii. 10). 13. 'The Protestant Catechism,' &c. (anon.), 1746. 14. 'The Protestant Dissenters' Catechism ... by a lover of truth and liberty' (anon.), 1747. 15. 'An Answer to the Remarks of an unknown Clergyman' on the foregoing (anon.), 1748 (annexed is a letter from a London dissenter on kneeling at the Lord's Supper). 16. 'A new Call to the Unconverted' (anon.) 1754, 8vo (four sermons on Ezek. xxxiii. 2). 17. (posthumous) 'Twenty Sermons on the most serious and practical subjects of the Christian Religion,' 1755, 8vo; 2nd ed. 1757. Toulmin prints selections from his catechetical lectures on scripture history, and describes the manuscript of a projected work on 'The Scriptures of the O.T. digested under proper heads ... according to the method of Dr. Gastrell, bishop of Chester,' &c.

1843; Twamley's Hist. of Dudley Castle (1867), p. 53; Pickard's Brief Hist. of Congleton Unitarian Chapel, 1883; Baker's Memorials of a Dissenting Chapel (Cross Street, Manchester), 1884.] A. G.

BOURN, SAMUEL (1714–1796), dissenting minister, second son of Samuel Bourn the younger [q. v.], was born in 1714 at Crook near Kendal, and educated at Stand grammar school and Glasgow University, where he studied under Hutcheson and Simson. In 1742 he settled in the ministry at Rivington, Lancashire, where he enjoyed the friendship of Hugh, fifteenth Lord Willoughby of Parham, who lived at Shaw Place, near Rivington, and was the representative of the last of the presbyterian noble families. Bourn was not ordained till some years after his settlement. He then made a lengthy declaration (printed by Toulmin) dealing with the duties of the ministry and allowing no doctrine or duty except those taught in the New Testament. Bourn lived partly at Leicester Mills, a wooded vale near Rivington, and partly at Bolton. He does not seem to have taken very kindly to Rivington at the outset, for his father writes to his son Abraham at Chowbent on 13 Feb. 1742–43, 'I am afraid your brother Samuel is too impatient under his lot, and would have advancement before God sees he is fit for it, or it for him.' In 1752 the publication of his first sermon led to overtures from the presbyterian congregation at Norwich, and in 1754, apparently after the death of the senior minister, Peter Finch (1661–1754), Bourn became the colleague of John Taylor. The Norwich presbyterians had laid the first stone of a new meeting-house on 25 Feb. 1754. When Bourn came to them they were worshipping in Little St. Mary's, an ancient edifice, then and still held by trustees for the Walloon or French protestants. On 12 May 1756 was opened the new building, the Octagon Chapel, described in the following year by John Wesley (*Journals*, iii. 315). Not long after Bourn lost 1,000*l.*, which he had risked in his brother Daniel's cotton mill, and in 1758 he travelled about to obtain subscriptions for two volumes of sermons. He placed the manuscript in the hands of Samuel Chandler, D.D., of the Old Jewry. In one of these sermons Bourn had espoused the doctrine of the annihilation of the wicked, but being in London in 1759, he heard Chandler characterise in a sermon the annihilation doctrine as 'utterly inconsistent with the christian scheme.' Deeming this a personal attack, he vainly sought to draw Chandler into a controversy by a published letter. His sermons, when published, produced a controversy with John Mason (1706–1763). The point in discussion was the resurrection of the flesh. Mason's (affirmative) part in the controversy will be found in his 'Christian Morals,' 2 vols. 1761. Bourn's opposite view is defended in an appendix to his sermons on the Parables. Bourn's reputation as a preacher was due to the force, and sometimes the solemn pathos, of his written style, and to the strength of his argumentative matter. Among those brought up under his ministry was Sir James Edward Smith, founder of the Linnean Society. Like his father, Bourn rested in the Christology of Dr. Clarke. He was no optimist; he devoted a powerful discourse to the theme that no great improvement in the moral state of mankind is practicable by any means whatsoever (vol. i. 1760, No. 14). When, in 1757, Dr. Taylor left Norwich to fill the divinity chair in Warrington Academy, Bourn obtained as colleagues first John Hoyle, and afterwards Robert Alderson, subsequently a lawyer, and father of Sir E. H. Alderson [q. v.], who, when Bourn became incapable of work, had to discharge the whole duty, and was accordingly ordained on 13 Sept. 1775. Bourn was a favourite with the local clergy of the establishment. Samuel Parr took him to Cambridge, and speaks of him as 'a masterly writer, a profound thinker, and the intimate friend of Dr. Parr at Norwich' (*Bibl. Parr.* p. 704). When his health failed, and he was retiring to Thorpe on a property of 60*l.* a year, it is said by Toulmin (and repeated by Field) that Dr. Mann, bishop of Cork, who was visiting Norwich, offered him a sinecure preferment of 300*l.* a year if he chose to conform. He declined, to the admiration of Parr, who did his best privately to assist his 'noncon. friend.' Bourn died in Norwich on 24 Sept. 1796, and was buried (27 Sept.) in the graveyard of the Octagon Chapel. Late in life he married, but left no family. He published: 1. 'The Rise, Progress, Corruption, and Declension of the Christian Religion,' &c. (anon.), 1752, 4to (sermon from Mark iv. 30, before the Lancashire provincial assembly at Manchester, 12 May 1752). 2. 'A Letter to the Rev. Samuel Chandler, D.D., concerning the Christian Doctrine of Future Punishment,' 1759, 8vo (afterwards added to the second edition of his sermons, and reprinted by Richard Baron [q. v.] in 'The Pillars of Priestcraft and Orthodoxy shaken,' 1768, vol. iii.) 3. 'A Series of Discourses on the Principles and Evidences of Natural Religion and the Christian Revelation,' &c. 1760, 2 vols. 8vo (the 2nd vol. has a different title-page).

4. 'Discourses on the Parables of our Saviour,' 1764, 2 vols. 8vo. 5. 'Fifty Sermons on various Subjects, Critical, Philosophical, and Moral,' Norwich, 1777, 2 vols. 8vo. Toulmin mentions a manuscript 'History of the Hebrews,' which Bourn had partly prepared for the press.

[Toulmin's Mem. of Rev. Samuel Bourn, 1808; Field's Mem. of Parr, 1828, i. 139–141; Taylor's Hist. of Octagon Chapel, Norwich, 1848; tombstone at Norwich.] A. G.

BOURN, THOMAS (1771–1832), compiler, was born in Hackney on 19 April 1771, and in conjunction with his father-in-law, Mr. William Butler, the author of various works for the instruction of the young, he became a teacher of writing and geography in ladies' schools. His death occurred at his house in Mare Street, Hackney, on 20 Aug. 1832. He published 'A Concise Gazetteer of the most Remarkable Places in the World; with references to the principal historical events and most celebrated persons connected with them,' London, 1807, 8vo, 3rd edit. 1822.

BOURN, WILLIAM (*fl.* 1562–1582). [See BOURNE.]

BOURNE, GILBERT (*d.* 1569), bishop of Bath and Wells, the son of Philip Bourne of Worcestershire, entered the university of Oxford in 1524, and was a fellow of All Souls' College in 1531, 'and in the year after he proceeded in arts, being then esteemed a good orator and disputant' (WOOD's *Athenæ Oxon.* (Bliss), ii. 805). In 1541 he was made one of the prebendaries of the king's new foundation at Worcester; in 1545 he received a prebend (Wildland) at St. Paul's and took another (Brownswood) in its place in 1548; in 1547 he was proctor for the clergy of the diocese of London; and in 1549 he became rector of High Ongar in Essex, and archdeacon of Bedford. He is described, probably in error, by Foxe and Wood as archdeacon of Essex and Middlesex, and by Godwin as archdeacon of London. He became chaplain to Bishop Bonner in the reign of Henry VIII, and preached against heretics (WOOD and FOXE). His preferments prove that he must have complied with the religious changes of the reign of Edward VI. In spite, however, of this compliance, he did not desert his patron, for he stood by Bonner during the hearing of his appeal in 1549. On the accession of Mary he acted as one of the delegates for Bonner's restitution, and on 13 Aug. of the same year (1553) preached a sermon at Paul's Cross justifying the conduct of the bishop, and enlarging on his sufferings in the Marshalsea. His hearers, enraged at the tone of his discourse, raised a hubbub, and a dagger was thrown at the preacher. The weapon missed its aim, and Bradford and Rogers, who were popular with the Londoners, led him out of the tumult, and put him in safety within the door of the grammar school. Three days after this Bradford was arrested. On being brought to trial the next year, Bradford was accused of having excited the people to make this disturbance. He pleaded the help he had given to Bourne, but that was not allowed to profit him (FOXE, *Acts, &c.*; HEYLIN, *Hist. Reform.*; BURNET, *Hist. Reform.*) As Bourne's uncle, Sir John Bourne, was principal secretary of state, his advancement in the church was certain. Accordingly he was elected bishop of Bath and Wells on 28 March 1554 in the place of Barlow, who was deprived of his office. He was consecrated on 1 April along with five others, and received the temporalities of his see on 20 April. He received from the queen the office of warden of the Welsh marches. As bishop he was zealous in restoring the old order of the church. Immediately after his consecration he commissioned Cottrel, his vicar-general, to deprive and punish 'all in holy orders keeping in adulterous embraces women upon show of feigned and pretensed matrimony;' and 'married laics who in pretence and under colour of priestly orders had rashly and unlawfully mingled themselves in ecclesiastical rights, and had obtained *de facto* parish churches, to deprive and remove from the said churches and dignities, and those so convicted to separate and divorce from their women or their wives, or rather concubines, and to enjoin salutary and worthy penances, as well to the same clerks as to the women for such crimes' (STRYPE, *Eccl. Mem.* III. i.) Accordingly no less than eighty-two cases of deprivation, and an unusually large number of resignations, appear in the Register of this bishop. Bourne was much employed in the proceedings taken against heretics. In April 1554 he took part in the disputation held with Cranmer, Latimer, and Ridley at Oxford, and at different dates acted on commissions for the trial of Bishop Hooper, Dr. Taylor, Tomkins, and Philpot. In these proceedings, however, he always did what he could for the prisoners, checking Bonner's violence, and earnestly exhorting them to save themselves by recantation. Proofs of this unwillingness to allow men to suffer may be found in Foxe, who records the repeated endeavours

he made to induce Mantel (1554) to save himself, the appeal he made to Tomkins (1555), and the interruption he made when Bonner was about to pass sentence on Philpot somewhat eagerly (1555). In his own diocese it does not appear that any one was put to death for religious opinions. The imprisonment of two clerks is noticed in his Register under 11 April 1554, and in 1556 a certain Richard Lush was condemned and sentenced to be committed to the sheriffs. A certificate of this condemnation was sent by the bishop to the king and queen, but as not even Foxe has been able to find any record of Lush's martyrdom (*Acts and Mon.* viii. 378), it may be taken for granted that he was not put to death. Zealous then as he was for his own religion, Bourne saved Somerset from any share in the Marian persecution. He did all that lay in his power to regain some of the possessions of which his church had been robbed in the late reign, and recovered what had fallen to the crown. Banwell was regained for the bishopric, and Long Sutton and Dulverton for the chapter of Wells. He sent his proxy to the first parliament of Elizabeth in 1558, in which year he was lord-president of Wales. Next year he and other disaffected bishops were summoned before the queen, possibly in convocation, and were bidden to drive all Romish worship out of their dioceses. He was one of the bishops appointed by the queen for the consecration of Matthew Parker; but the commission failed, probably through the unwillingness of those nominated to carry it out. Bourne refused to take the oaths of supremacy and allegiance, and with six other bishops was committed to the Tower. The recusant bishops were treated with indulgence, and allowed to eat together at two tables. When the plague visited London in 1562, they were removed from the Tower for fear of infection. Bourne was committed to the keeping of Bullingham, bishop of Lincoln, and dwelt with him as a kind of involuntary guest. He was an inmate of his household in 1565, and in that year seems to have stayed for a while in London. He was also kept by Dean Carey of Exeter. He died at Silverton in Devonshire on 10 Sept. 1569, and was buried there on the south side of the altar. Such property as he had he left to his brother, Richard Bourne of Wiveliscombe. 'He was,' Fuller says, 'a zealous papist, yet of a good nature, well deserving of his cathedral.'

BOURNE, HENRY (1696–1733), antiquary, was born at Newcastle-upon-Tyne in 1696. He was the son of Thomas Bourne, a tailor, and was intended for the calling of a glazier. His talents, however, attracted the attention of some friends, through whose offices he was released from his apprenticeship and sent to resume his education at the Newcastle grammar school. He was admitted a sizar of Christ College, Cambridge, in 1717, under the tuition of the Rev. Thomas Atherton, a fellow-townsman. He graduated B.A. in 1720 and M.A. in 1724, and received the appointment of curate of All Hallows Church, Newcastle, where he remained until his death on 16 Feb. 1733.

In 1725 he published 'Antiquitates Vulgares, or the Antiquities of the Common People, giving an account of their opinions and ceremonies.' This was republished, with additions by Brand, in 1777 in his 'Popular Antiquities,' and forms the groundwork of the later labours of Sir Henry Ellis and W. C. Hazlitt. In 1727 he issued 'The Harmony and Agreement of the Collects, Epistles, and Gospels, as they stand in the Book of Common Prayer for the Sundays throughout the Year.' He also wrote a history of his native town, which was left in an unfinished state at his death, but was afterwards published by his widow and children in a folio volume in 1736, under the title of 'The History of Newcastle-upon-Tyne, or the Ancient and Present State of that Town.'

[Adamson's Scholæ Novocastrensis Alumni, p. 13; Brand's Hist. of Newcastle, 1789, preface; Allibone's Dictionary.] C. W. S.

BOURNE, HUGH (1772–1852), founder of the primitive methodists, son of Joseph Bourne, farmer and wheelwright, by his wife Ellen, daughter of Mr. Steele, was born at Fordhays Farm, in the parish of Stoke-upon-Trent, 3 April 1772, and, after some education at Werrington and Bucknall, worked with his father in his business. The family removed to Bemersley, in the parish of Norton-in-the-Moors, in 1788, and Bourne then took employment under his uncle, William Sharratt, a millwright and engineer at Milton. He had so far been carefully brought up by a pious mother, and in June 1799 joined the

Wesleyan methodists, soon after became a local preacher, and in 1802 built, chiefly at his own expense, a chapel at Harrisehead. In imitation of the camp meetings for preaching and fellowship, which had been the means of reviving religion in America, Bourne, in company with his brother James, William Clowes [q. v.], and others, held a camp meeting on the mountain at Mowcop, near Harrisehead, on Sunday, 31 May 1807. The meeting commenced at six in the morning, and prayer, praise, and preaching were continued until eight at night. This successful revival was the first of many held in that part of the country. The Wesleyan methodist conference at the meeting at Liverpool on 27 July 1807 passed a resolution protesting against such gatherings. The camp meetings were, however, continued, and on 27 June 1808 Bourne was, in what seems to have been an illegal manner, expelled from the Wesleyan Methodist Society by the Burslem circuit's quarterly meeting; but he still continued to raise societies here and there, recommending them to join the Wesleyan circuits, and as yet entertained no idea of organising a separate community. But the Wesleyan authorities remained hostile, and a disruption was the consequence. On 14 March 1810 the first class of the new community was formed at Standley, near Bemersley. Quarterly tickets were introduced in the following year, and the first general meeting of the society was held at Tunstall on 26 July 1811. The name Primitive Methodist, implying a desire to restore methodism to its primitive simplicity, was finally adopted on 13 Feb. 1812, but the opponents of the movement often called the people by the name of ranters. The first annual conference was held at Hull in May 1820, and a deed poll of the primitive methodists was enrolled in the court of chancery on 10 Feb. 1830. Bourne and his brother purchased land and built the first chapel of the new connexion at Tunstall in 1811. After the foundation and settlement of the society Bourne made many journeys to Scotland and Ireland, for the purpose of enrolling recruits in the new sect. During 1844–6 he travelled in the United States of America, where he obtained large congregations. He lived to see primitive methodism with 1,400 Sunday schools, 5,300 chapels, and 110,000 enrolled members, and died from a mortification of his foot at Bemersley, Staffordshire, on 11 Oct. 1852, aged 80 years and six months, and was buried at Englesea Brook, Cheshire. He was, in common with many preachers and members of the primitive methodist church, a rigid abstainer. For the greater part of his life he worked as a carpenter and builder, so as not to become chargeable to the denomination, and it was not until he had reached his seventieth year that he was placed on the superannuation fund. He was the author of: 1. 'Observations on Camp Meetings, with an Account of a Camp Meeting held at Mow, near Harrisehead,' 1807. 2. 'The Great Scripture Catechism, compiled for Norton and Harrisehead Sunday Schools,' 1807. 3. 'Remarks on the Ministry of Women,' 1808. 4. 'A General Collection of Hymns and Spiritual Songs for Camp Meetings and Revivals,' 1809. 5. 'History of the Primitive Methodist,' 1823. 6. 'A Treatise on Baptism,' 1823. 7. 'Large Hymn Book for the use of the Primitive Methodists,' 1825. 8. 'The Primitive Methodist Magazine,' 1824, which he edited for about twenty years.

[Walford's Memoirs of H. Bourne, 1855, with portrait; Petty's Primitive Methodist Connexion, 1864, with portrait; Antliff's Funeral Sermon on H. Bourne, 1852; Simpson's Recollections of H. Bourne, 1859.] G. C. B.

BOURNE, IMMANUEL (1590–1679), divine, born on 27 Dec. 1590, was the eldest son of the Rev. Henry Bourne, who was vicar of East Haddon, Northamptonshire, from 1595 till his death in 1649 (Bridges's *Northamptonshire*, i. 506). He was educated at Christ Church, Oxford, and proceeded B.A. 29 Jan. 1611–12 and M.A. 12 June 1616. Soon afterwards he was appointed preacher at St. Christopher's Church, London, by the rector, Dr. William Piers, a canon of Christ Church. Bourne found a patron in Sir Samuel Tryon, an inhabitant of the parish of St. Christopher, and he dates one of his sermons—'The True Way of a Christian'—'from my study at Sir Samuel Tryon's in the parish of St. Christopher's, April 1622.' In 1622 he received the living of Ashhover, Derbyshire, where he exhibited strong sympathy with the puritans. In 1642, on the outbreak of the civil war, his open partisanship with the presbyterians compelled him to leave Ashhover for London. There he was appointed preacher at St. Sepulchre's Church, and about 1656 he became rector of Waltham-on-the-Wolds, Leicestershire, where he engaged in controversy with the quakers and anabaptists. He conformed at the Restoration, and on 12 March 1669–70 was nominated to the rectory of Aylestone, Leicestershire, where he died on 27 Dec. 1679. He was buried in the chancel of the church.

Bourne's works were: 1. 'The Rainbow, Sermon at St. Paul's Cross, 10 June 1617, on Gen. ix. 13,' London, 1617; dedicated to

Robert, first Baron Spencer of Wormleighton. 2. 'The Godly Man's Guide, on James iv. 13,' London, 1620. 3. 'The True Way of a Christian to the New Jerusalem . . . on 2 Cor. v. 17,' London, 1622. 4. 'Anatomy of Conscience,' Assize Sermon at Derby, on Rev. xx. 11, London, 1623. 5. 'A Light from Christ leading unto Christ, by the Star of His Word; or, a Divine Directory for Self-examination and Preparation for the Lord's Supper,' London, 1645, 8vo. An edition, with a slightly altered title-page, appeared in 1646. 6. 'Defence of Scriptures,' to which was added a 'Vindication of the Honour due to the Magistrates, Ministers, and others,' London, 1656. This work describes a disputation between clergymen and James Nayler, the quaker. Bourne's argument against the quaker was answered by George Fox in 'The Great Mystery of the Great Whore unfolded,' 1659. 7. 'Defence and Justification of Ministers' Maintenance by Tithes, and of Infant Baptism, Humane Learning, and the Sword of the Magistrate, in a reply to a paper by some Anabaptists sent to Im. Bourne,' to which was added 'Animadversions upon Anth. Peirsons [Parsons] great case of tithes,' London, 1659. 8. 'A Gold Chain of Directions with 20 Gold Links of Love to preserve Love firm between Husband and Wife,' London, 1669. Only the works marked 1, 3, and 4 in this list are in the British Museum Library.

S. L.

BOURNE, NEHEMIAH (*fl.* 1649-1662), admiral, in his earlier days apparently a merchant and shipowner, served in the parliamentary army during the civil war, and on the remodelling of the fleet after Batten's secession, having then the rank of major, was appointed to the command of the Speaker, a ship of the second rate. As captain of the Speaker he was for two years commander-in-chief on the coast of Scotland, and in September 1651 carried the Scottish records, regalia, and insignia taken in Stirling Castle to London, for which services he afterwards received a gold medal of the value of 60*l.* In 1652 he was captain of the Andrew, and in May was senior officer in the Downs, wearing a flag by special authority from Blake, when, on the 18th, the Dutch fleet under Tromp anchored off Dover. It was thus Bourne who sent, both to the council of state and to Blake, the intimation of Tromp's presence on the coast, and who commanded that division of the fleet which had so important a share in the action of 19 May [see BLAKE, ROBERT]. Without knowledge of the battle, the council had already on the 19th appointed Bourne rear-admiral of the fleet, a rank which he held during the whole of that year, and commanded in the third post in the battle near the Kentish Knock on 28 Sept. But after the rude check sustained by Blake off Dungeness on 30 Nov., it was found necessary to have some well-skilled and trustworthy man as commissioner on shore to superintend and push forward the equipment and manning of the fleets. To this office Bourne was appointed, and he continued to hold and exercise it not only during the rest of the Dutch war, but to the end of the protectorate. In this work he was indefatigable, and in a memorial to the admiralty, 18 Sept. 1653, claimed, by his special knowledge, to have saved hundreds of pounds in buying masts and deals; from which we may perhaps assume that he had formerly been engaged in the Baltic trade. Nor was he backward in representing his merits to the admiralty; and although he wrote on 13 Oct. 1653, that his modesty did not suit the present age, it did not prevent him from quaintly urging his claims both to pecuniary reward and to honourable distinction. This last, he says, 13 April 1653, 'would give some countenance and quicken the work. I ask for the sake of the service, for I am past such toys as to be tickled with a feather.'

After the Restoration, being unwilling to accept the new order of things, he emigrated to America; the last that is known of him is the pass permitting him 'to transport himself and family into any of the plantations' (May 1662). On 3 April 1689 the secretary of the admiralty wrote to a Major Bourne in Abchurch Lane, desiring him to attend the board, who wished 'to discourse him about some business relating to their majesties' service;' and on 28 June 1690 a Nehemiah Bourne was appointed captain of the Monmouth (*Admiralty Minutes*). If this was the old puritan, he must have been of a very advanced age; it may more probably have been a son. In either case he apparently refused to take up the appointment, for on 9 July another captain was appointed in his stead.

[Calendars of State Papers, Dom. 1651-62.]

J. K. L.

BOURNE, REUBEN (*fl.* 1692), dramatist, belonged to the Middle Temple, and left behind him a solitary and feeble comedy which has never been acted. The title of this is 'The Contented Cuckold, or Woman's Advocate,' 4to, 1692. Its scene is Edmonton, and the principal character, Sir Peter Lovejoy,

contends that a cuckold is one of the scarcest of created beings.

[Genest's History of the Stage; Baker, Reed, and Jones's Biographia Dramatica.] J. K.

BOURNE, ROBERT, M.D. (1761–1829), professor of medicine, was born at Shrawley, Worcestershire, and educated at Bromsgrove, whence he was elected scholar of Worcester College, Oxford, and became a fellow of that society. He proceeded B.A. in 1781, M.A. in 1784, M.B. in 1786, and in 1787 took the degree of M.D. and was elected physician to the Radcliffe Infirmary at Oxford. In 1790 he became a fellow of the Royal College of Physicians. In 1794 he was appointed reader of chemistry at Oxford, in 1803 professor of physic, and in 1824 of clinical medicine. He died at Oxford on 23 Dec. 1829. A monument was erected to him in the chapel of his college. His published works are: 1. 'An Introductory Lecture to a Course of Chemistry,' 1797. 2. 'Cases of Pulmonary Consumption treated with Uva ursi,' 1805.

[Munk's Coll. of Phys. (1878), ii. 401.]

BOURNE, VINCENT (1695–1747), Latin poet, son of Andrew Bourne, was born in 1695, and admitted on the foundation of Westminster School in 1710. He was elected to a scholarship at Trinity College, Cambridge, on 27 May 1714, proceeded B.A. in 1717, became a fellow of his college in 1720, and commenced M.A. in 1721. On Addison's recovery in 1717 from an attack of illness, Bourne addressed to him a copy of congratulatory Latin verses. In 1721 he edited a collection of 'Carmina Comitialia,' which contains, among the 'Miscellanea' at the end, some verses of his own. On leaving Cambridge he became a master at Westminster School, and continued to hold this appointment until his death. In 1734 he published his 'Poemata, Latine partim reddita, partim scripta,' with a dedication to the Duke of Newcastle, and in November of the same year he was appointed housekeeper and deputy sergeant-at-arms to the House of Commons. A second edition of his poems appeared in 1735, and a third edition, with an appendix of 112 pages, in 1743. Cowper, who was a pupil of Bourne's at Westminster, and who translated several of his pieces into English verse, says (in a letter to the Rev. John Newton dated 10 May 1781): 'I love the memory of Vinny Bourne. I think him a better Latin poet than Tibullus, Propertius, Ausonius, or any of the writers in his way except Ovid, and not at all inferior to him.' Landor remarks on this judgment of Cowper's: 'Mirum ut perperam, ne dicam stolide, judicaverit poeta pæne inter summos nominandus' (*Poemata et Inscriptiones*, ed. 1847, p. 300). Charles Lamb was a warm admirer of Bourne. In his 'Complaint of the Decay of Beggars' he inserted a translation of the 'Epitaphium in Canem,' together with the Latin original; and in one of his letters to Wordsworth, written in 1815, there is a charming criticism of Bourne's poems, which he had then been reading for the first time: 'What a sweet, unpretending, pretty-manner'd, *matterful* creature! Sucking from every flower, making a flower of everything! His diction all Latin, and his thoughts all English!' A special favourite with Lamb was 'Cantatrices,' a copy of verses on the ballad-singers of the Seven Dials. Among Lamb's miscellaneous poems are nine translations from the Latin of Vincent Bourne. The charm of Bourne's poems lies not so much in the elegance of his Latinity (though that is considerable) as in his genial optimism and homely touches of quiet pathos. He had quick sympathy for his fellow-men, and loving tenderness towards all domestic animals. His epitaphs, particularly the 'Epitaphium in septem annorum puellulam,' are models of simplicity and grace. Bourne's little volume of Latin verses will keep his memory fragrant and his fame secure when many whose claims were more pretentious are forgotten. He was a man of peaceful temperament, content to pass his life in indolent repose. As a teacher he wanted energy, and he was a very lax disciplinarian. Cowper, in one of his letters to Rose (dated 30 Nov. 1788), says that he was so inattentive to his pupils, and so indifferent whether they brought him good or bad exercises, that 'he seemed determined, as he was the best, so to be the last, Latin poet of the Westminster line.' In another letter Cowper writes: 'I lost more than I got by him; for he made me as idle as himself.' He was particularly noted for the slovenliness of his attire. Cowper relates that he remembered seeing the Duke of Richmond 'set fire to his greasy locks, and box his ears to put it out again.' It is said that the Duke of Newcastle offered him valuable ecclesiastical preferment, and that he declined the offer from conscientious motives. In a letter to his wife, written shortly before his death, he says: 'I own and declare that the importance of so great charge [i.e. entering into holy orders], joined with a mistrust of my own sufficiency, made me fearful of undertaking it: if I have not in that capacity assisted in the salvation of souls, I have not been the means of losing any; if I have not brought reputation to the function by any

merit of mine, I have the comfort of this reflection—I have given no scandal to it by my meanness and unworthiness.' Bourne died on 2 Dec. 1747, and was buried at Fulham. He had written his own epitaph: 'Pietatis sinceræ summæque humilitatis, nec Dei usquam immemor nec sui, in silentium quod amavit descendit V. B.' From his will we learn that he had a son who was a lieutenant in the marines. A careful edition of Bourne's poems, with a memoir by the Rev. John Mitford, was published in 1840.

[Southey's Life and Works of Cowper, iii. 226, iv. 97–8, vi. 201; Welch's Alumni Westmonasterienses, ed. 1852, pp. 252, 264; Nichols's Literary Anecdotes, viii. 428 *n.*; Nichols's Literary Illustrations, vii. 656–7; Aikin's Life of Addison, ii. 214; Bourne's Poemata, ed. Mitford, 1840.] A. H. B.

BOURNE or BOURN, WILLIAM (*d.* 1583), mathematician, was the son of William Bourne of Gravesend, who died 1560. The earliest mention of the mathematician is in the first charter of incorporation of Gravesend, granted 22 July 1562, where he appears on the list of jurats of the town. His name is also repeated in the same capacity in the second charter, granted 5 June 1568. It is worthy of remark that the only records of the measures taken for the regulation of the traders of the town under the authority of the second charter are in the handwriting of Bourne. In one of the presentments of a jury, touching the office of clerk of the market, drawn up by him in a tabular form, 15 March 1571, he records his own name as Mr. Bourne, portreve, one of fourteen of the 'Innholders and Tiplers that were amerced for selling Beer and Ale in Pots of Stone and Cans not being quarts full measure' (Cruden, p. 208). The fine inflicted upon Bourne was 'vi^{d}.' This serves to show that, according to the practice of the period, he engaged in business as an innkeeper. In 'A note of all the inhabitants, reseant [i.e. resident] and dwelling in the parishes of Gravesend and Milton the 20th Sept. 1572-3,' his name appears once more as one of the jurats, and as having paid for his freedom of the Mercers' Company (Cruden, 197). In the dedication of his 'Treasure for Traveilers' to Sir William Winter, he writes: 'I have most largely tasted of your benevolence towards me being as a *poore gunner* serving under your worthiness.' In book iii. cap. 9 of the same work he describes himself as being 'neither Naupeger or Shipcarpenter, neither usuall Seaman.' From these passages it is clear that he was not a seaman by profession; as the offices of his patron were of a general nature, not to be discharged at sea, it may be that Bourne served under him on shore, perhaps as one of the gunners of Gravesend bulwark, which he has delineated and referred to in more than one of his works. These, from internal evidence, appear to have been written at Gravesend, his native town. He wrote: 1. 'An Almanacke and prognostication for iii yeres, with serten Rules of navigation,' 1567 (Arber, i. 336). 2. 'An Almanacke and prognostication for iii years . . . now newly added vnto my late *rules of navigation* that was printed iiii years past. Practised at Gravesend, for the meridian of London by William Bourne, student of the mathematical sciences,' T. Purfoot, imp. 1571 (Ames, 996). 3. 'An Almanacke for ten yeares beginning at the yeare 1581, with certaine necessarie Rules,' R. Watkins with J. Roberts, imp. 1580 (Ames, 1025). 4. 'A Regiment of the Sea: conteyning . . . Rules, Mathematical experiences, and perfect Knowledge of Navigation for all Coastes and Countreys: most needfull and necessarie for all Seafaring Men and Travellers, as Pilots, Mariners, Merchants, &c.,' T. Dawson and T. Gardyner for Iohn Wight, imp. [1573]. It is dedicated to the Earl of Lincoln, lord high admiral, whose arms are given in his flag flying at the maintop of a large ship-of-war on the title-page. This work, by which Bourne is best known, passed through several editions, viz., 1580, posthumous 1584, 1587, 1592 (corrected by T. Hood), 1596, and 1643. 5. 'A booke called the Treasure for Traveilers, divided into five Bookes or partes, conteynyng very necessary matters, for all sortes of Travailers, eyther by Sea or Laude,' Thomas Woodcocke, imp. 1578. It is dedicated to 'Syr William Winter, knight, Maister of the Queenes Maiesties Ordinaunce by Sea, Survaior of her highnesse marine causes,' whose arms and crest are given on verso of the title-page. 6. Another edition, under the title of 'A Mate for Mariners,' 1641 (Cruden, p. 209). 7. 'The Arte of Shooting in great Ordnance, conteyning very necessary matters for all sortes of Servitoures, eyther by Sea or by Laude,' Thos. Woodcocke, imp. 1587. It is dedicated to 'Lord Ambrose Dudley, Earle of Warwick . . . Generall of the Queen's Maiesties Ordnance within her highnesse Realme and Dominions.' Other editions, 1596 (Cruden) and 1643. That 1587 is not the date of its composition is certain, as the license for printing was granted to H. Bynnemann 22 July 1578 (Ames, 992; Arber, 2, 150); moreover it is referred to in Bourne's next work: 8. 'Inventions or Devises; Very necessary for all Generalles and Captaines, or Leaders of men, as wel by Sea as by Land,' Thos. Woodcocke,

imp. 1578. This is dedicated to 'Lorde Charles Howard of Effingham.' Some of these devises are of peculiar interest, as they anticipated by more than eighty years the 'Century of Inventions' by the Marquis of Worcester. No. 21 is supposed to be the earliest mention in our language of a ship's log and line, the deviser of which was Humprey Cole, of the Mint in the Tower. No. 75 is a night signal or telegraph, afterwards used by Captain John Smith, and for which he obtained such renown. No. 110 seems to be a curious anticipation of the telescope, apparently borrowed from the Pantometria by Digges (1571), while some have been brought forward as new discoveries at Gravesend within the present century.

Of Bourne's manuscripts three are extant: 1. 'The Property or Qualytyes of Glaces [glasses], Acordyng vnto ye severall mackyng pollychynge & gryndyng of them' (Brit. Mus. 'Lansd.,' 121 (13), printed by Halliwell-Phillipps). 2. 'A dyscourse as tochying ye Q. maejisties Shypes.' Brit Mus. 'Lansd.,'29 (20). All doubt as to the authorship is obviated by a reference to his 'Inventions and devises' to be found in it. 3. A manuscript in three parts (1) 'Of Certayne principall matters belonging vnto great Ordnance;' (2) 'Certayne conclusions of the skale of the backside of the Astrolabe;' (3) 'A litle briefe note howe for to measure plattformes and bodyes and so foorth' (Brit. Mus. 'Sloane,'3651). Dedicated to Lord Burleigh. The substance of this manuscript is to be found in 'Shooting in Great Ordnance' and 'Treasure for Traveilers;' it, however, contains two unpublished drafts in Bourne's hand: a small one of the Thames and Medway, and another on a larger scale of the Thames near Gravesend, with 'plattformes' for the defence of the river. A short study of his writings serves to show that Bourne was a self-taught genius, who, although he had mastered mathematics as then understood in all its branches, did not always succeed in setting forth his acquired knowledge in fairly good English. His sentiments, as expressed in his several addresses to 'ye gentell reader,' are as pious as they are patriotic, the little incident of the fine notwithstanding, which arose doubtless from the negligence of his servants or from preoccupation. He died 22 March 1582–3, leaving a widow and four sons.

[Tanner's Bibl. Brit., 1748; Ames's Typogr. Antiq., 1785; Hutton, Math. and Philos. Dict., 1815, i. 244; Halliwell-Phillipps's Rara Mathematica, 1839, p. 32; Cruden's Hist. of Gravesend, 1843, pp. 207–12; Arber's Register of Company of Stationers, 1875, 4to.] C. H. C.

BOURNE, WILLIAM STURGES- (1769–1845), politician, the only son of the Rev. John Sturges, D.D., chancellor of the diocese of Winchester, by Judith, daughter of Richard Bourne, of Acton Hall, Worcester, was born on 7 Nov. 1769. After having been at a private school near Winchester, where he made the acquaintance of Canning, he entered the college where he remained as a commoner until 1786. In the Michaelmas term of that year he matriculated at Christ Church, Oxford; and as Canning was at the same house, their friendship was renewed and never interrupted. His degrees were B.A. 26 June 1790, M.A. 28 June 1793, and D.C.L. 15 June 1831. He was called to the bar at Lincoln's Inn on 23 Nov. 1793, and entered into public life as member for Hastings on 3 July 1798. During his parliamentary career he represented many constituencies in turn: Christchurch from 1802 to 1812 and from 1818 to 1826, Bandon 1815–18, Ashburton 1826–30, and Milburne Port 1830–1. On the death in 1803 of his uncle, Francis Bourne, who had assumed the name of Page, the bulk of his wealth came to Sturges, coupled with the condition that he should assume the name of Bourne. He refused the post of under-secretary of the home department in 1801, but acted as joint-secretary of the treasury from 1804 to 1806, and as a lord of the treasury from 1807 to 1809, when he resigned with Canning. In 1814 he was created an unpaid commissioner for Indian affairs, was raised to the privy council, and from 1818 to 1822 served as a salaried commissioner. Sturges-Bourne had more than once refused higher office in the state; but on the formation, in April 1827, of Canning's administration he consented to hold the seals of the home department. He only retained this place until July in the same year. When he resigned the home department in favour of Lord Lansdowne, he accepted the post of commissioner of woods and forests, and retained his seat in the cabinet. In January 1828 he resigned all his offices with the exception of the post of lord warden of the New Forest, and in February 1831 he retired from parliament. His name is commemorated by an act for the regulation of vestries passed in 1818 (58 Geo. III, c. 69), which is still in force, and is usually called after him Sturges-Bourne's Act. He died at Testwood House, near Southampton, on 1 Feb. 1845, and was buried at Winchester Cathedral. He married, on 2 Feb. 1808, Anne, third daughter of Oldfield Bowles of North Aston, Oxford. His manner was not impressive, and his speech was ineffective; but he had much knowledge of public affairs, and his

opinions were highly valued in the House of Commons.

[Gent. Mag. (1808), 169, (1845) pt. i. 433–4, 661; Stapleton's Canning, iii. 343, 426; Return of Members of Parliament.] W. P. C.

BOUTEL, Mrs. (*fl.* 1663–1696), actress, joined, soon after its formation, the company at the Theatre Royal, subsequently Drury Lane, and was accordingly one of the first women to appear on the stage. Her earliest recorded appearance took place presumably in 1663 or 1664, as Estifania in 'Rule a Wife and Have a Wife.' She remained on the stage until 1696, 'creating,' among other characters, Melantha in 'Marriage à la Mode,' Mrs. Pinchwife in Wycherley's 'Country Wife,' Fidelia in 'The Plain Dealer,' Statira in Lee's 'Rival Queens,' Cleopatra in Dryden's 'All for Love,' and Mrs. Termagant in Shadwell's 'Squire of Alsatia.' Cibber somewhat curiously omits from his 'Apology' all mention of her name. In the 'History of the Stage' which bears the name of Betterton, Mrs. Boutel is described as a 'very considerable actress,' low of stature, with very agreeable features, a good complexion, a childish look, and a voice which, though weak, was very mellow. 'She generally acted,' says the same authority, 'the young innocent lady whom all the heroes are mad in love with,' and was a great favourite with the town. A well-known story concerning her is that, having in the character of Statira obtained from the property-man a veil to which Mrs. Barry, the representative of Roxana, thought herself entitled, much heat of passion was engendered between the two actresses, and Mrs. Barry dealt so forcible a blow with a dagger as to pierce through Mrs. Boutel's stays, and inflict a wound a quarter of an inch in length. Davies, in his 'Dramatic Miscellanies,' vol. ii. p. 404, speaks of Mrs. Boutel as 'celebrated for the gentler parts in tragedy such as Aspatia in the "Maid's Tragedy."' After the union of the companies, 1682, her recorded appearances are few. The last took place in 1696, as Thomyris in 'Cyrus the Great.' She appears to have lived in comfort for some years subsequently.

[Genest's History of the Stage; Downe's Roscius Anglicanus; Davies's Dramatic Miscellanies; Betterton's History of the English Stage (ed. Curll), 1741.] J. K.

BOUTELL, CHARLES (1812–1877), archæologist, born at St. Mary Pulham, Norfolk, on 1 Aug. 1812, was the son of the Rev. Charles Boutell, afterwards rector of Litcham and East Lexham. He was B.A. of St. John's, Cambridge, 1834; incorporated at Trinity College, Oxford, and M.A., 1836; took priest's orders, 1839; and was afterwards curate of Hemsby, Norfolk; Sandridge, Hertfordshire; Hampton, Middlesex; and Litcham, Norfolk; rector of Downham Market and vicar of St. Mary Magdalen, Wiggenshall, Norfolk; and rector of Norwood, Surrey. His works on archæology and mediæval heraldry are numerous. He was secretary of the St. Albans Architectural Society, and one of the founders, in 1855, of the London and Middlesex Archæological Society, of which he was honorary secretary for a few months in 1857, but was dismissed under very painful circumstances (*London and Middlesex Arch. Soc. Trans.* i. 209, 316). His life was one of continuous trouble, and at length, after two years of declining health, he died of a ruptured heart on 11 Aug. 1877.

His antiquarian works are: 1. Descriptive and Historical Notices to 'Illustrations of the Early Domestic Architecture of England,' drawn and arranged by John Britton, F.S.A., &c., London, 1846. This book is a small octavo, with a folding plate nine times its size. 2. 'Monumental Brasses and Slabs . . . of the Middle Ages, with numerous illustrations,' London, 1847, 8vo, pp. 236. Consisting of papers read to the St. Albans Architectural Society, with illustrations. 3. 'Monumental Brasses of England,' descriptive notices illustrative of a series of wood engravings by R. B. Utting, London, 1849, 8vo. 4. 'Christian Monuments in England and Wales from the Era of the Norman Conquest,' with numerous illustrations, London, 1849. 5. 'A Manual of British Archæology,' illustrated by Orlando Jewitt, London, 1858, 4to, pp. 384. 6. 'A Manual of Heraldry, Historical and Popular,' with 700 illustrations, London, 1863, 8vo. A second edition was called for in two months, and published as: 7. 'Heraldry, Historical and Popular,' with 850 illustrations, London, 1863. 8. The third edition, revised and enlarged, same title, 975 illustrations, London, 1864. 9. 'The Enamelled Heraldic Shield of Wm. de Valence, Earl of Pembroke, 1296, from . . . Westminster Abbey, drawn by Luke Berrington, with descriptive notice by Charles Boutell, M.A.,' London, 1864, large folio. 10. 'English Heraldry,' illustrated, London, 1867, 8vo. This is a cheaper arrangement of his larger work, for the use of architects, sculptors, painters, and engravers; a fourth edition of it appeared in 1879. 11. 'Arms and Armour in Antiquity and the Middle Ages. Also a descriptive notice of Modern Weapons. Translated from the

French of M. P. Lacombe,' illustrated, London, 1874, 8vo—preface, notes, and a chapter on English Arms and Armour by Boutell. 12. 'Arts and the Artistic Manufactures of Denmark,' illustrated, London, 1874, large 4to. 13. 'Gold-working' in 'British Manufacturing Industries,' edited by G. P. Bevan, F.G.S., London, 1876, 8vo. Besides these antiquarian works he published 'The Hero and his Example,' a sermon on the Duke of Wellington's death, preached at Litcham when curate under his father, London, 1852, 8vo; 'An Address to District Visitors,' &c., London, 1854, 8vo; 'A Bible Dictionary . . . Holy Scriptures and Apocrypha,' London, 1871, thick 8vo; since republished as 'Haydn's Bible Dictionary,' London, 1879. A work written by his daughter, Mary E. C. Boutell, 'Picture Natural History, including Zoology, Fossils, and Botany,' with upwards of 600 illustrations, London [1869], 4to, has a preface and introduction by him. In the 'Gentleman's Magazine,' 1866, he wrote a series of articles on 'Our Early National Portraits,' and many papers of his on church monuments, heraldry, &c., will be found in the journals of the Archæological Institute and Association.

J. W.-G.

BOUTFLOWER, HENRY CREWE (1796–1863), Hulsean essayist, was the son of John Boutflower, surgeon, of Salford, and was born 25 Oct. 1796. He was educated at the Manchester grammar school, and in 1815 entered St. John's College, Cambridge. In 1816 he gained the Hulsean theological prize. The degrees of B.A. and M.A. were conferred on him in 1819 and 1822, and he was ordained in 1821, when he became curate at Elmdon near Birmingham, having previously acted as assistant-master at the Manchester grammar school. In 1823 he was elected to the headmastership of the Bury school, Lancashire, and in 1832 was presented to the perpetual curacy of St. John's Church in that town. He was highly respected there as an able and conscientious clergyman and a good preacher. The rectory of Elmdon, where he first exercised his ministry, was offered to and accepted by him in 1857, and he held it until his death, which took place 4 June 1863, while on a visit at West Felton vicarage, Salop. He was buried at Elmdon. He collected materials for a history of Bury, which he left in manuscript. His Hulsean prize essay, which was published in 1817 at Cambridge, was entitled 'The Doctrine of the Atonement agreeable to Reason.' He also published a sermon on the death of William IV, 1837, and other sermons.

[Manchester School Register, published by the Chetham Society, iii. 13–15.] W. C. S.

BOUVERIE, EDWARD PLEYDELL- (1818–1889). [See PLEYDELL.]

BOUVERIE, SIR HENRY FREDERICK (1783–1852), general, born on 11 July 1783, was third son of Edward Bouverie, M.P., of Delapré Abbey, near Northampton, who was the second son of Sir Jacob Bouverie, first Viscount Folkestone. Henry was gazetted an ensign in the 2nd or Coldstream guards on 23 Oct. 1799, and served with the brigade of guards under Sir Ralph Abercromby in Egypt. In 1807 he acted as aide-de-camp to the Earl of Rosslyn at Copenhagen, and in 1809 accompanied Sir Arthur Wellesley to Portugal in the same capacity, and was present at the Douro and at Talavera. He acted for a short time as military secretary, but on being promoted captain and lieutenant-colonel in June 1810 he gave up his post on Lord Wellington's personal staff, and was appointed to the staff of the army as assistant adjutant-general to the fourth division. He was present at the battles of Salamanca, Vittoria, the Nive, and Orthes, and at the storming of San Sebastian, and was particularly mentioned in both Sir Rowland Hill's and the Marquis of Wellington's despatches for his services at the battle of the Nive. On the conclusion of the war he was made an extra aide-de-camp to the king and a colonel in the army in June 1814, and a K.C.B. in January 1815. He was promoted major-general in 1825, and was appointed governor and commander-in-chief of the island of Malta on 1 Oct. 1836. His governorship, which he retained till June 1843, was uneventful, and at its close he was made a G.C.M.G. He had been promoted lieutenant-general in 1838, appointed colonel of the 97th regiment in 1843, and made a G.C.B. on 6 April 1852. Just as he was preparing to leave his country seat, Woolbeding House, near Midhurst in Sussex, to attend the funeral of his old commander-in-chief, the Duke of Wellington, apparently in his usual health, he suddenly fell ill from excitement and sorrow, and died on 14 Nov. 1852.

[Royal Military Calendar; Times, Obituary Notice, 17 Nov. 1852.] H. M. S.

BOUVERIE, WILLIAM PLEYDELL- (1779–1869), third EARL RADNOR, a distinguished whig politician, was born in London on 11 May 1779, descended from a Huguenot family which settled in Canterbury in the six-

teenth century. He was partly educated in France. When quite a boy he was presented to Louis XVI and Queen Marie Antoinette, and he subsequently witnessed the early scenes of the French revolution. He returned to England a staunch advocate of popular rights, and entered parliament in 1801 as representative for the family borough of Downton, and boldly ventured into the front ranks of opposition. In 1802 he was returned for Salisbury, and sat for that borough as Viscount Folkestone until he succeeded to the title of Radnor in the year 1828. During this long period he uniformly advocated advanced liberal principles. He took a leading part in the impeachment of Lord Melville, the proposed inquiry into Wellesley's alleged abuse of power in India, and Wardle's charges against the Duke of York; he was an active assailant of corporal punishment in the army, excessive use of *ex-officio* information against the press, attempts to exclude strangers from the House of Commons, endeavours to coerce the people in times of distress, and any process which aimed at limiting public freedom. He opposed the treaty of Amiens, and the proposal to pay Mr. Pitt's debts. He warmly resisted the imposition of the corn laws in 1815, and in 1819 the arbitrary coercive measures of Lord Castlereagh. Upon his removal to the upper house, Radnor continued his active support of all measures bearing on social amelioration. He made two vigorous but unsuccessful endeavours to promote university reform, the first in 1835, by the introduction of a bill for abolishing subscription to the Thirty-nine Articles; secondly, two years later, with a measure for revising the statutes of Oxford and Cambridge universities. One of his later parliamentary efforts (1845) was to enter a lords' protest against an Allotment Bill, which he maintained would strike at the independence of the agricultural labourer and have a tendency to lower wages. Radnor offered the borough of Downton to Robert Southey in 1826, and subsequently to Mr. Shaw-Lefevre, stipulating on each occasion that the member should vote for its disfranchisement. He never held office.

Radnor gradually withdrew from the scene of his political career, and devoted himself to agricultural pursuits and to the duties of a country gentleman. He was long associated, both in political views and on terms of private friendship, with William Cobbett. It has been said that he was the only man with whom Cobbett never quarrelled. He did not pretend to be an orator, but he was always attentively listened to. Some of his speeches may still be read in 'Hansard' with considerable interest, notably that of March 1835 in support of his proposal to abolish subscription. He died 9 April 1869, at the age of ninety, leaving behind him a name distinguished by unwearied generosity and devotion to the welfare of his countrymen.

Radnor married in 1800 Lady Catherine Pelham Clinton, who died in 1804; and secondly, in 1814, Judith, daughter of Sir Henry Mildmay.

S.

BOUYER, REYNOLD GIDEON (*d.* 1826), archdeacon of Northumberland, was educated at Jesus College, Cambridge (LL.B. 1769); collated to the prebend of Preston in the church of Sarum, 1785; obtained the rectory of Howick and the vicarage of North Allerton, with the chapelries of Brompton and Dighton, all in the diocese of Durham; was collated to the archdeaconry of Northumberland, 9 May 1812; and died, 20 Jan. 1826. He published two occasional discourses, but is remembered for the parochial libraries which he established at his own expense in every parish in Northumberland. They contained upwards of 30,000 volumes, which cost him about 1,400*l.*, although he was supplied with them by the Society for the Promotion of Christian Knowledge at 40 per cent. under prime cost. These useful libraries were placed under the care of the parochial ministers, and the books were lent gratuitously to the parishioners.

[Funeral Sermon by W. N. Darnell, B.D., Durham, 1826; Richardson's Local Historian's Table Book (Hist. Div.), iii. 323; Graduati Cantab. (1856), 43; Le Neve's Fasti (Hardy), ii. 678, iii. 308.] T. C.

BOVEY or BOEVEY, CATHARINA (1669-1726), charitable lady, was born in London in 1669, her father being John Riches, a very wealthy merchant there (WILFORD, *Memorials of Eminent Persons*, p. 746, Epitaph), originally of Amsterdam, and her mother being a daughter of Sir Bernard de Gomme, also of Holland, surveyor of ordnance to Charles II, and delineator of the maps of Naseby, &c. (*Notes and Queries*, 2nd ser. ix. 221-2). Catharina was a great beauty. In 'The New Atlantis' of 1736 (iii. 208 et seq.), where she is called Portia, she is described as

'one of those lofty, black, and lasting beauties that strike with reverence and yet delight,' and in 1684 she was married to William Bovey or Boevey, of Flaxley Hall, Gloucestershire. He was given to 'excesses, both in debauch and ill-humour,' bringing much suffering to his wife; she never complained, however, but supported it all 'like a martyr, cheerful under her very sufferings' (*ib.*). In 1691, when Mrs. Bovey was only twenty-two, Mr. Bovey died, leaving her mistress of his estate of Flaxley (*Magna Britannia*, 1720, ii. 834); and as she was also the sole heiress to her wealthy father (BALLARD, *British Ladies*, p. 439), she was at once the centre of a crowd of wooers. Mrs. Bovey would listen to none. About 1686 she had formed a strong friendship with a Mrs. Mary Pope; and seeing ample scope for a life of active benefactions, she associated Mrs. Pope with her in her good works. She distributed to the poor, relieved prisoners, and taught the children of her neighbours. Her gifts, which included the purchase of an estate to augment the income of Flaxley Church (FOSBROKE, *Gloucestershire*, ii. 177 et seq.), a legacy to Bermuda, and bequests to two schools at Westminster, are duly enumerated in her epitaph at Flaxley. Particulars of her habits, and of how she dispensed her charities, appear in H. G. Nicholls's 'Forest of Dean,' pp. 185 et seq.

In 1702 Dr. Hickes, in the preface (p. xlvii) to 'Linguarum Septentrionalium Thesaurus,' calls Mrs. Bovey 'Angliæ nostræ Hypatia Christiana.' In 1714, Steele prefixed an 'Epistle Dedicatory' to her to the second volume of the 'Ladies' Library.' 'Do not believe that I have many such as Portia to speak of,' said the writer of 'The New Atlantis' (p. 212); and the repute of her happy ways and generous deeds had not died out in 1807, when Fosbroke (*Gloucestershire*, p. 179) wrote of her as 'a very learned, most exemplary, and excellent woman.' She died at Flaxley Hall on Saturday, 18 Jan. 1726, and was buried 'in a most private manner,' according to her own directions (*Gent. Mag.* lxii. pt. ii. 703).

A monument was erected to Mrs. Bovey in Westminster Abbey, by her friend Mrs. Pope, shortly after her death; and it was there certainly as late as 1750. Ballard, who calls it 'a beautiful honorary marble monument,' writes to a friend asking him to copy the inscription for him, telling him it is on the north side (NICHOLS, *Lit. Illustr.* iv. 223). It is copied in Ballard's 'Ladies' and in Wilford's 'Memorials;' there is no mention of Mrs. Bovey or the monument, however, either in Walcott's 'Memorials of Westminster,' 1851, or in Stanley's 'Westminster Abbey,' fifth edition, 1882. Mrs. Bovey was by some thought to be the widow who was inexorable to Sir Roger de Coverley in 'The Spectator' (*Gent. Mag.* lxii. pt. ii. 703).

[Wilford's Memorials of Eminent Persons, pp. 745, 746; Notes and Queries, 2nd ser. ix. 221-2; Nicholls's Forest of Dean, pp. 185 et seq.; The New Atlantis, ed. 1736, iii. 208 et seq.; Fosbroke's Gloucestershire, 1807, ii. 177 et seq.; Ballard's British Ladies, 437 et seq.; Steele's Ladies' Library, Preface, 1714; Gent. Mag. 1792, lxii. pt. ii. 703.] J. H.

BOVILL, SIR WILLIAM (1814-1873), judge, was a younger son of Mr. Benjamin Bovill of Durnford Lodge, Wimbledon, and was born at Allhallows, Barking, on 26 May 1814. He was not a member of any university, but began his legal career by accepting articles with a firm of solicitors in the city of London. 'At an early age,' says a fellow pupil, 'he was remarkable for the zeal with which he pursued his legal studies.' For a short time he practised as a special pleader below the bar. He became a member of the Middle Temple, and was called to the bar in 1841. He joined the home circuit, and at a peculiarly favourable time. The leader, (Sir) Thomas Joshua Platt, was raised to the bench in 1845, and Serjeants Bramwell and Channell, Platt's successors, became judges in 1856 and 1857 respectively. Bovill owed something to his early connection with solicitors. He was also connected with a firm of manufacturers in the east end of London, and so became familiar with the details of engineering. Hence he in time acquired a considerable, though far from an exclusive, patent practice, and was largely engaged in commercial cases. Still it was somewhat remarkable that, almost alone among large city firms, Messrs. Hollams, one of the largest, never were clients of his. He became a Q.C. in 1855, and, being very popular in his circuit towns, was elected M.P. for Guildford in 1857. In politics he was a conservative, but did not take any leading part in the House of Commons for some years. He was, however, zealous in legal reforms, and two useful acts, the Petition of Right Act, 23 & 24 Vict., and the Partnership Law Amendment Act, 28 & 29 Vict., bear his name. In 1865, too, he urged the concentration of all the law courts into one building, and in 1866 pressed for more convenient and suitable provision for the library of the Patent Office. On 6 July 1866 Bovill was appointed solicitor-general in Lord Derby's last administration; but he held office only for five months, and in November of the same year succeeded Sir William Erle as chief justice of the common pleas, Sir John Karslake becoming solicitor-general in his stead.

A few months previously he had been elected treasurer of the Middle Temple, but on being raised to the bench he resigned that office. In 1870 he was made honorary D.C.L. of Oxford, and he was also F.R.S. He became most familiar to the public during the first Tichborne trial, which took place before him. At its conclusion he ordered the plaintiff to be indicted for perjury, admitting him to bail in 5,000*l.* for himself and two sureties of 2,500*l.* each. In January 1873 he was appointed a member of the judicature commission; but going the midland circuit in March he did not long act upon it. For some weeks before his death he was in ill-health, but was thought to be recovering when, on 1 Nov., he died at noon at his residence, Coombe House, Kingston, Surrey, for which county he was many years a magistrate. He was of the best type of the non-university judge; very few were more learned, though some might be more eloquent; but in advocacy no one at the common law bar surpassed him. At nisi prius he displayed great force and energy, a great grasp of facts, and a very acute perception of the true point of a case. In argument before a court in banc he was logical, skilful, and authoritative. His memory and industry were alike great, and he was scrupulous in attending to all cases that he undertook, often returning briefs in preference to neglecting them. If not one of the great judges whose tradition is handed down for generations, he was unsurpassed in his practical mastery of commercial law. His successor, the attorney-general, Sir John Coleridge, said of him: 'Not a single day passes that I do not long for some portion of his great and vigorous capacity, and for his remarkable command of the whole field of our great profession.' His defect as a judge was a too great confidence that he had apprehended the point and the merits of a case at nisi prius before hearing the evidence out, but with time he got rid of it. Always patient, courteous, and genial, and very kind to junior counsel, he was much lamented by the profession. He married in 1844 Maria, eldest daughter of Mr. John Henry Bolton, of Lee Park, Blackheath, by whom he had a large family. One of his sons he appointed in 1868 clerk of assize of the western circuit.

BOVILLUS. [See BULLOCK, HENRY.]

BOWACK, JOHN (*fl.* 1737), topographer, was for many years a writing-master at Westminster School. In 1705–6, when living in Church Lane, Chelsea, he began to publish, in folio numbers, 'The Antiquities of Middlesex, being a collection of the several church monuments in that county; also an historical account of each church and parish, with the seats, villages, and names of the most eminent inhabitants.' Of this work two parts appeared, comprising the parishes of Chelsea, Kensington, Fulham, Hammersmith, Chiswick, and Acton. A third part was promised, which would have extended through Ealing, New Brentford, Isleworth, and Hanwell; but from want of encouragement Bowack proceeded no further. A beautiful specimen of his skill in ornamental handwriting is to be seen in Harleian MS. 1809, a thin vellum book, containing two neat drawings in Indian ink, and various kinds of English text and print hands, which was sent to Lord Oxford in December 1712, with a letter, wherein the author expresses the hope that his little work may find a place in his lordship's library. Bowack was appointed in July 1732 clerk to the commissioners of the turnpike roads, and in 1737 assistant-secretary to the Westminster Bridge commissioners, with a salary of 100*l.* a year. The date of his death appears to be unknown.

[Gough's Brit. Topography, i. 537–8; Faulkner's Chelsea, i. 161; Gent. Mag. ii. 877, vii. 515.] G. G.

BOWATER, SIR EDWARD (1787–1861), general and colonel 49th foot from 1846, was descended from a respectable Coventry family, members of which were established in London and at Woolwich during the last century. From one of the latter, a landowner of considerable wealth, the government purchased most of the freehold sites since occupied by the artillery and other barracks, the military repository grounds, &c., at Woolwich. Sir Edward was the only son of Admiral Edward Bowater, of Hampton Court, by his wife Louisa, daughter of Thomas Lane and widow of G. E. Hawkins, sergeant-surgeon to King George III. He was born in St. James's Palace on 13 July 1787, educated at Harrow, and entered the army in 1804 as ensign in the 3rd foot guards, with which he served in the Peninsula from December 1808 to November 1809, in the Peninsula and south of France from December 1811 to the end of the war, and in the Waterloo campaign. He was present at the passage of the Douro, the capture of Oporto, the battles of Talavera, Salamanca, and Vittoria, the sieges of Burgos and San Sebastian, the passage of the Bidassoa, and the battles of Quatre Bras and Waterloo, and was wounded

at Talavera and at Waterloo. In 1837 he left the Scots Fusilier guards, after thirty-three years' service therein, on promotion to the rank of major-general. In 1839 he married Mary, daughter of the late M. Barne, sometime M.P. for the since disfranchised borough of Dunwich. Soon after the arrival of the prince consort, Bowater was appointed his equerry, and in 1846 he became lieutenant-general and groom in waiting in ordinary to Queen Victoria, and in 1854 was promoted full general. In 1861 the queen's youngest son, Prince Leopold, afterwards Duke of Albany, then a child eight years old, accompanied Sir Edward and Lady Bowater and their daughter to the south of France. While there Bowater, whose health had been failing, died at Cannes, aged 73, on 14 Dec. 1861, the day of the prince consort's death.

[Miscel. Gen. et Heral., new series, ii. 177–9 (pedigree); Hart's Army Lists; Ann. Reg. 1862; Gent. Mag. 1862, i. 109; Martin's Life of Prince Consort, v. 405, 417.] H. M. C.

BOWDEN, JOHN (*d.* 1750), presbyterian minister, is identified, in Walter Wilson's manuscript list of dissenting academies, with the Bowden who studied under Henry Grove at Taunton; but this is apparently an error. Bowden was settled at Frome, Somersetshire, before 1700, as assistant to Humphrey Phillips, M.A. (silenced at Sherborne, Dorsetshire, 1662, died 27 March 1707). He became sole minister on Phillips's death, and the present meeting-house in Rook Lane was built for him in 1707. According to Dr. Evans's list he had a thousand hearers in 1717. Among them was Elizabeth Rowe, the dissenting poetess and friend of Bishop Ken, whose funeral sermon Bowden preached in 1737. During the last nine years of his long ministry Bowden was assisted successively by Alexander Houston (1741), Samuel Blyth (1742, removed to Birmingham 1746; see BOURN, SAMUEL, 1689–1754), Samuel Perrott, and Josiah Corrie (1750), who became his successor. There is a tablet to Bowden's memory outside the front of his meeting-house, which says that he died in 1750, and that he was 'a learned man, an eloquent preacher, and a considerable poet.' Four lines which follow, beginning—

> Though storms about the good man rise,
> Yet injured virtue mounts the skies,

are thought by Walter Wilson to indicate that he was not comfortable in his later years. Perhaps, since Bowden is classed with the liberal dissenters of the day, the allusion may be explained by T. S. James's reference to a trinitarian secession from his ministry.

A writer in 'Notes and Queries' (3rd ser. iv. 431) speaks of having in his possession a letter from Anne Yerbury, of Bradford, to Bowden's widow, dated January 1749, and forwarding 'An Essay towards ye character of my greatly esteemed Friend, the Rev. Mr. Bowden,' which contains some rather fulsome verses in reference to his poetical powers. This is reconcilable with the date on the memorial tablet, if we assume the letter-writer to have retained the old style. Samuel Bowden, M.D., known as 'the poet of Frome,' was probably his brother. John Bowden does not seem to have published any separate volume of poetry. He is the author of a 'Hymn to the Redeemer of the World' (34 stanzas), and a 'Dialogue between a Good Spirit and the Angels' (11 pages), contained in 'Divine Hymns and Poems on several Occasions, &c., by Philomela and several other ingenious persons,' 1704, 8vo. (The volume is dedicated to Sir Richard Blackmore, and the preface, which is unsigned, is probably by Bowden. 'Philomela' is Elizabeth Rowe; she had already published under this *nom de plume* in 1696.) He is the author also of a few sermons: 1. 'Sermon (1 Tim. iv. 16) at Taunton before an Assembly of Ministers,' 1714, 8vo. 2. 'Sermon (Eccl. x. 16, 17) at Frome, on 20 Jan. 1714-5,' 1715, 8vo (thanksgiving sermon for accession of George I). 3. 'Exhortation,' 1717, 8vo, 3rd ed. 1719, 8vo (i.e. charge at the ordination of Thomas Morgan at Frome, 6 Sept. 1716, published with the ordination sermon, 'The Conduct of Ministers, &c.,' by Nicholas Billingsley, minister at Ashwick from 1710 to 1740. Morgan, who was independent minister at Bruton, Somersetshire, and afterwards at Marlborough (1715–26), became M.D., and was the author of 'The Moral Philosopher,' 1738. The fact that Morgan, an independent at Marlborough, went to Frome for presbyterian ordination, is curious, and has been treated as an early indication of the theological divergences of the two bodies, but Morgan's 'Confession of Faith' on the occasion shows no doctrinal laxity; it is strongly trinitarian and Calvinistic). 4. 'The Vanity of all Human Dependance, Sermon (Ps. cxlvi. 3, 4) at Frome, 18 June, on the death of George I,' &c., 1727, 8vo (dedicated to Benjamin Avery, LL.D., to whom Bowden was under 'particular obligations'). Bowden was perhaps the grandfather of Joseph Bowden, 'born at or near Bristol,' entered Daventry academy under Ashworth in 1769, minister at Call Lane, Leeds, for over forty years, from about 1778, and author of (1) 'Sermons delivered to the Protestant Dissenters at Leeds,' 1804, 8vo; (2) 'Prayers and Discourses for

the use of Families, in two parts,' 1816, 8vo.

[Wilson's MSS. in Dr. Williams's Library; Christian's Magazine, 1763, p. 531 sq.; James's Presb. Chapels and Charities, 1867, pp. 676, 693, 695; Mon. Rep. 1822, p. 196; Wicksteed's Memory of the Just, 2nd ed. 1849, p. 115; Notes and Queries, 3rd ser. iv. 431, 504; information from Rev. J. E. Kelly, Frome.] A. G.

BOWDEN, JOHN WILLIAM (1798–1844), ecclesiastical writer, was born in London on 21 Feb. 1798. He was the eldest son of John Bowden, of Fulham and Grosvenor Place. In 1812 he went to Harrow, and in 1817 was entered as a commoner at Trinity College, Oxford, simultaneously with the dearest of his friends, John Henry Newman. In 1820 Bowden obtained mathematical honours, and on 24 Nov. took his degree of B.A. In collaboration with Newman, in the following year, he wrote a fiery poem in two cantos on 'St. Bartholomew's Eve.' On 4 June 1823 Bowden took his degree of M.A. Three years later, in the autumn of 1826, he was appointed a commissioner of stamps. That office he held for fourteen years, resigning it only on account of ill-health in 1840. Nearly two years after its acceptance he was married, on 6 June 1828, to Elizabeth, youngest daughter of Sir John Edward Swinburne. From 1833 he zealously took part in the tractarian movement. To Hugh Rose's 'British Magazine' he contributed six of the 178 hymns afterwards, in 1836, collected into a volume as the 'Lyra Apostolica.' His contributions are signed *a*. Cardinal Newman said Bowden 'was one of the earliest assistants and supports of a friend' (meaning himself) 'who at that time commenced the "Tracts for the Times."' For the 'British Critic' Bowden supplied four important contributions. These were: July 1836, 'Rise of the Papal Power;' April 1837, 'On Gothic Architecture;' January 1839, 'On British Association;' July 1841, 'On the Church in the Mediterranean.' The last two were published under Newman's editorship. In the spring of 1839 Bowden was first attacked by the malady which five years afterwards proved fatal. In the autumn of 1839 he went abroad with his family. The winter of that year he passed in Malta. In the spring of 1840 he published his 'Life of Gregory the Seventh.' This work had been first suggested to him, at the instance of Hurrell Froude, by Newman. For some years it had been gradually growing under his hands. Cardinal Newman commends the 'power and liveliness of Bowden's narrative.' He proposed to write, but never produced, a 'Life of St. Boniface,' which in 1843 was announced as in preparation. Bowden's only publication in 1843 was 'A few Remarks on Pews.' How completely at one Newman and Bowden were throughout the whole of the Oxford movement is clearly shown in almost every page of Newman's 'Apologia.' During the summer of 1843 Bowden's complaint returned with increased severity, and he died at his father's house in Grosvenor Place, on 15 Sept. 1844. Cardinal Newman attests emphatically that he passed away 'in undoubting communion with the church of Andrewes and Laud,' adding, with reference to his interment at Fulham, 'he still lives here, the light and comfort of many hearts, who ask no happier, holier end than his.' A posthumous work from Bowden's hand was published in 1845, 'Thoughts on the Work of the Six Days of Creation.' The key to his argument was the motto on the title-page, 'Novum Testamentum in Veteri velabatur, Vetus Testamentum in Novo revelatur.'

[Preface by J. H. N. (Cardinal Newman) to Bowden's Thoughts on the Work of the Six Days of Creation, 1845, pp. v–viii; Newman's Apologia, passim; Mozley's Reminiscences, 1882, ii. 4.] C. K.

BOWDEN, SAMUEL (*fl.* 1732–1761), a physician at Frome, Somersetshire (*Sloane MS.* 4034, f. 239), was author of two volumes of poems published 1733–5. Neither the date of his birth nor that of his death has been ascertained, though it appears from the 'Gentleman's Magazine,' to which he was an occasional contributor, that he was living in 1761, while a passing mention of him in 1778 is in the past tense. The writer adds that he was a friend of Mrs. Rowe [see ROWE, ELIZABETH, poetess], and belonged to the same communion. Bowden was therefore a nonconformist, and not improbably a relative of the Rev. John Bowden [see BOWDEN, JOHN] who preached Mrs. Rowe's funeral sermon.

[Gent. Mag. xxxi. 424, xlviii. 485; Life of Mrs. Rowe prefixed to her works, 1739.] J. M. S.

BOWDICH, THOMAS EDWARD (1791–1824), African traveller, was born at Bristol 20 June 1791. His father, Thomas Bowdich, was a hat manufacturer and merchant there, and his mother was one of the Vaughans of Payne's Castle, Wales. He was educated at the Bristol grammar school, and when nine years old removed to a well-known school at Corsham, Wiltshire, where, being fond of classics, he soon became head boy, but what he knew of mathematics he

was 'flogged through.' In his youth he was noted for his clever jeux-d'esprit in magazines, and his skill as a rider. Originally intended for the bar, it was much against his wishes that his father put him to his own trade, and for one year, 1813, he was partner in the firm of Bowdich, Son, & Luce. The same year he married a lady (Sarah, daughter of Mr. John Eglington Wallis, of Colchester) nearly of his own age, and entered himself at Oxford, but never matriculated. His uncle, Mr. Hope Smith, governor-in-chief of the settlements belonging to the African Company, obtained for him a writership in the service, and he proceeded to Cape Coast Castle in 1814; his wife, whose name is thenceforward so closely linked with his, following him, but on her arrival she found he had returned to England for a time. In 1815 the African Company planned a mission to Ashantee, and appointed Bowdich the conductor. On reaching Cape Coast Castle the second time, the council, considering him too young, appointed Mr. James (governor of Fort Accra) principal. Events at Coomassie, however, soon compelled Bowdich to supersede his chief (a bold step afterwards sanctioned by the authorities), and by diplomatic skill and intrepidity, when the fate of himself and comrades hung on a thread, he succeeded in a most difficult negotiation, and formed a treaty with the king of Ashantee, which promised peace to the British settlements on the Gold Coast. He was therefore the first whose labours accomplished the object of penetrating to the interior of Africa. In 1818 he returned home with impaired health, and in 1819 published the interesting and valuable details of his expedition, 'A Mission from Cape Coast Castle to Ashantee,' &c., London, 4to. This work, the most important after Bruce's, excited great interest, as an almost incredible story (recalling 'The Arabian Nights') of a land and people of warlike and barbaric splendour hitherto unknown. Bowdich presented to the British Museum his African collection of works of art and manufacture, and specimens of reptiles and insects. The independent spirit of the young traveller soon came into collision with the African Company. His writings and letters continually speak of unmerited disappointment; the net reward for his great mission amounted to only 200*l.*, and it cost him a moiety of this to return home; while another gentleman, Mr. Dupuis, was appointed consul at Coomassie with 600*l.* a year. In the same year he published 'The African Committee, by T. E. Bowdich, conductor of the Mission to Ashantee,' in which he attacked the African Company, and made such an exposure of the management of their possessions that the government was compelled to take them into its own hands. Feeling deficient in several of the requisites of a scientific traveller, he proceeded to Paris to perfect himself in mathematics, physical science, and natural history, and such was his progress that he soon after gained the Cambridge prize of 1,000*l.* for a discovery which was dependent on mathematics. Humboldt, Cuvier, Denon, Biot, and other savants, gave the famous traveller a generous reception in Paris, and a public *éloge* was pronounced upon him at the Institute. Not only was 'the brilliant society of the Hôtel Cuvier' open to him and his accomplished wife, but for three years the extensive library and splendid collections of that great scholar were to them as their own. The French government made him an advantageous offer of an appointment, which an honourable feeling towards his own country compelled him to decline. Early in 1820 he wrote 'A Reply to the Quarterly Review,' Paris, 8vo, in which he successfully answered the article on his Ashantee mission. His next work, published anonymously, was a translation of a French book, 'Taxidermy, &c.,' with plates, London, 1820, 12mo, followed by a translation of 'Travels in the Interior of Africa to the Sources of the Senegal and Gambia, by G. Mollien,' with full page illustrations, London, 1820, 4to, and an appendix (separately issued) 'British and Foreign Expeditions to Teembo, with remarks on Civilization,' &c., London, 1820. In 1821 appeared an 'Essay on the Geography of North-Western Africa,' accompanied by a large lithographed map, compiled from his own discoveries, and an 'Essay on the Superstitions, Customs, and Arts common to the Ancient Egyptians, Abyssinians, and Ashantees,' with plates, Paris, 4to. His next publications were three works, in 8vo, illustrated by numerous lithographed figures done by his wife, 'Mammalia,' &c., Paris, 1821; 'Ornithology,' &c., Paris, 1821; 'Conchology, &c., including the Fossil Genera,' Paris, 1822. About this time he issued in lithograph 'The Contradictions in Park's Last Journal explained.' He was also the author of 'A Mathematical Investigation with Original Formulæ for ascertaining the Longitude of the Sea by Eclipses of the Moon.' The funds realised by their joint labours enabled Bowdich and his wife to start upon a second African expedition, and in August 1822 they sailed from Havre to Lisbon. Here, from various manuscripts, he collected a complete history of all the Portuguese discoveries in South Africa, afterwards published as 'An Account of the Discoveries of the Portuguese

in Angola and Mozambique,' London, 1824, 8vo. Proceeding to Madeira, where they were detained for some months, he wrote a geological description of the island of Porto Santo, the trigonometrical measurement of the peaks, a flora, &c., which was published in 1825, after his death. They next reached the Cape de Verde Islands and the mouth of the Gambia, and, while waiting at Bathurst for a means of transit to Sierra Leone, he began a trigonometrical survey of the river. Unfortunately, while taking astronomical observations at night, he caught cold, which was followed by fever, to which, after several partial recoveries, he succumbed at the early age of thirty-three, on 10 Jan. 1824. The last chapter of his life's story was published by Mrs. Bowdich, in a work entitled 'A Description of the Island of Madeira, by the late Thomas Edward Bowdich . . . A Narrative of his last Voyage to Africa . . . Remarks on the Cape de Verde Islands, and a Description of the English Settlements in the River Gambia,' with plates coloured and plain, London, 1825, 4to. Under dates from 1819 to 1825 there are also five scientific papers by Bowdich in 'Tilloch's Philosophical Magazine,' 'Edinburgh Philosophical Journal,' and the 'Zoological Journal.'

In figure Bowdich was slightly but well formed, and he possessed great activity of body and mind. He was an excellent linguist, a most pleasing and graphic writer, and his conversational powers made him a very agreeable companion. His enthusiastic devotion to science cost him his life. He left a widow and three children, one of them named after the two companions of his Ashantee mission. Mrs. Tedlie Hutchison Hale (wife of Dr. Douglas Hale) republished her father's early work, with an introductory preface, 'The Mission from Cape Coast Castle to Ashantee, &c.,' London, 1873, 8vo, inscribing the volume to her father's old friend, Mr. David R. Morier.

Mrs. Bowdich afterwards married Mr. R. Lee, and under the name of 'Mrs. R. Lee' became a popular writer and illustrator of scientific works for the young up to her death in 1865.

[Bowdich's Works; Mrs. Bowdich's Works; Mrs. Hale's Mission, 1873; Dupuis's Ashantee, 1824; Bristol Directory, 1812–15; Lit. Gazette, 1824; Gent. Mag. 1824, pt. i. 279–80; Royal Society's Cat. of Scientific Papers; Quarterly Rev. xxii.] J. W.-G.

BOWDLER, HENRIETTA MARIA (1754–1830), commonly called Mrs. Harriet Bowdler, author, daughter of Thomas and Elizabeth Stuart Bowdler, and sister of John Bowdler the elder [q.v.] and Thomas Bowdler the elder [q. v.], was the author of a series of religious 'Poems and Essays,' 2 vols. (Bath. 1786), which passed through a large number of editions. Her 'Sermons on the Doctrines and Duties of Christianity' (n. d.) appeared anonymously, and passed through nearly fifty editions. Beilby Porteus, bishop of London, believed them to be from the pen of a clergyman, and is said to have offered their author, through the publishers, a living in his diocese. In 1810 Miss Bowdler edited 'Fragments in Prose and Verse by the late Miss Elizabeth Smith,' which was very popular in religious circles. A novel by Miss Bowdler entitled 'Pen Tamar, or the History of an Old Maid,' was issued shortly after her death. Miss Bowdler died at Bath on 25 Feb. 1830.

[Gent. Mag. 1830, pt. i. 567, pt. ii. 649; Brit. Mus. Cat.] S. L.

BOWDLER, JANE (1743–1784), author, born 14 Feb. 1743 at Ashley, near Bath, was the eldest daughter of Thomas and Elizabeth Stuart Bowdler, and thus sister of John the elder [q.v.], and of Thomas the elder, the editor of Shakespeare [q. v.] Throughout her life she suffered from ill-health. In 1759 she had a severe attack of small-pox, and from 1771 till her death was a confirmed invalid. She died in the spring of 1784. In her later years she wrote many poems and essays, and a selection was published at Bath for the benefit of the local hospital in 1786 under the title of 'Poems and Essays by a Lady, lately deceased.' This volume became extraordinarily popular. The verse is very poor, and the prose treats, without any striking originality, such subjects as sensibility, politeness, candour, and the pleasures of religion. Nevertheless, sixteen editions (with the author's name on the title-page) were published at Bath in rapid succession between 1787 and 1830. Other editions appeared at Dublin, in London, and in New York, where the first American edition (from the tenth Bath edition) appeared in 1811. A few of Miss Bowdler's pieces, not previously printed, appear in Thomas Bowdler's 'Memoir of John Bowdler,' 1824.

[T. Bowdler's Memoir of John Bowdler the elder, 1824, 93–104.] S. L.

BOWDLER, JOHN, the elder (1746–1823), author, born at Bath on 18 March 1746, was descended from a Shropshire family originally settled at Hope Bowdler. His great-grandfather, John Bowdler (1627–1661), held high office in the Irish civil service during the Commonwealth, and was

intimate with Archbishop Ussher. This John Bowdler's son, Thomas, was a fellow-officer at the admiralty with Samuel Pepys, became a conscientious Jacobite, was the intimate friend of Dr. Hickes, and died in Queen Square in July 1738, at the age of 77. His elder son, Thomas, married in 1742 Elizabeth Stuart, second daughter and coheiress of Sir John Cotton, a direct descendant from the famous Sir Robert Cotton, and died in May 1785. John Bowdler the elder was the eldest son of this marriage. His mother, the authoress of 'Practical Observations on the Revelations of St. John' (Bath, 1800), written in the year 1775, was noted for her piety and general culture, and gave all her children a strict religious training. After attending several private schools, Bowdler was placed, in November 1765, in the office of Mr. Barsham, a special pleader, and practised as a chamber conveyancer between 1770 and 1780. In January 1778 he married Harrietta, eldest daughter of John Hanbury, vice-consul of the English factory at Hamburg. In November 1779 he attended Robert Gordon, the last of the nonjuring bishops, through a fatal illness. His father's death in 1785 put Bowdler in possession of a small fortune; he then finally retired from his profession. In 1795 he wrote a long letter to Lord Auckland about the high prices of the time, in which he fiercely attacked the clergy and the legislators for neglecting morality and religion. In 1796 he addressed letters on similar subjects to the Archbishop of Canterbury and Bishops Porteus and Horsley. He published in 1797 a strongly worded pamphlet entitled 'Reform or Ruin,' in which he sought again to expose the immorality and irreligion of the nation. The pamphlet had a very wide sale, and reached an eighth edition within a year of its first publication. He disapproved of Sir Richard Hill's 'Apology for Brotherly Love,' a partial justification of the prevailing dissent, and issued pamphlets in support of the opposite views expounded in Daubeney's 'Guide to the Church.' In 1815 he formed a committee to memorialise the government to erect additional churches in the populous parts of England out of the public funds. In 1816 he petitioned Lord Sidmouth to abolish lotteries. He died at Eltham on 29 June 1823. Bowdler was one of the founders of the Church Building Society. He had ten children, six of whom survived infancy. His sons John and Thomas are separately noticed. His daughter Elizabeth died on 4 Dec. 1810.

[Memoir of Life of John Bowdler, Esq., written for private circulation by his son Thomas in 1824 and published for sale in 1825.] S. L.

BOWDLER, JOHN, the younger (1783–1815), author, younger son of John Bowdler the elder [q. v.], was born in London on 2 Feb. 1783. He was educated at Winchester, and in 1798 was placed in a London solicitor's office. He was called to the bar at Lincoln's Inn in 1807, made some progress in his profession, and attracted the notice of Lord-chancellor Eldon. But in 1810 signs of consumption appeared, and he spent the two following years in the south of Europe. In May 1812 he returned to England and lived with an aunt near Portsmouth. But his health was not restored, and he died 1 Feb. 1815. According to the testimonies of his father and brother Charles, John was in every way an exemplary character. He engaged in literary pursuits during his illness, and his father published in 1816 his 'Select Pieces in Prose and Verse' (2 vols.) The book contained a full memoir and the journal kept by Bowdler during his foreign tour of 1810–1812. Wide reading in current English philosophy is exhibited in a long sympathetic exposition of Dugald Stewart's philosophical theories, but the other essays and the poems are religious rhapsodies of no literary merit. The book was reprinted in 1817, 1818, 1819, and 1820. Selections from the religious portions of it appeared in 1821 and 1823, and in 1857 the author's brother Charles reissued a part of it under the title of 'The Religion of the Heart, as exemplified in the Life and Writings of John Bowdler.' This edition includes a new biographical preface and much hitherto unpublished correspondence.

[The editions of Bowdler's works of 1816 and 1857.] S. L.

BOWDLER, THOMAS (1754–1825), editor of the 'Family Shakespeare,' the younger son of Thomas and Elizabeth Stuart Bowdler, was born at Ashley, near Bath, on 11 July 1754. His father, a gentleman of independent means, belonged to an ancient family originally settled at Hope Bowdler, Shropshire. His mother, the second daughter of Sir John Cotton of Conington, Huntingdonshire, fifth baronet in direct descent from the well-known Sir Robert Cotton, was a highly accomplished woman and author of 'Practical Observations on the Book of Revelation,' Bath, 1800 (*Life of J. Bowdler*, pp. 109–23). Thomas suffered much through life from a serious accident sustained when he was nine years old. About 1765 he went to Mr. Graves's school at Claverton, near Bath, where his intimate friend in after life, William Anne Villettes, a military officer of repute, was a fellow-pupil. In 1770 he

proceeded to St. Andrews University to study medicine. He subsequently removed to Edinburgh, where he graduated M.D. in 1776 and published a thesis, 'Tentamen ... de Febrium Intermittentium Natura et Indole.' He spent the next four years in travel, and visited Germany, Hungary, Italy, and Sicily. In 1781 he caught a fever from a young friend whom he attended, on a journey to Lisbon, through a fatal illness. He returned to England in broken health, and with a strong aversion to his profession. In the same year he was elected a fellow of the Royal Society and a licentiate of the College of Physicians (9 April). Soon afterwards he permanently settled in London, and obtained an introduction to Mrs. Montagu's coterie, where he became intimate with Bishops Hinchcliffe and Porteus, Mrs. Carter, Mrs. Chapone, and Mrs. Hannah More. He was elected a fellow of the Society of Antiquaries in 1784. He devoted himself to charitable work, and acted for many years as chairman of St. George's vestry, Hanover Square, as a committee-man of the Magdalen Hospital, and as a commissioner (with Sir Gilbert Elliott and Sir Charles Bunbury) to inquire into the state of the penitentiaries (1781). After the death of John Howard, the prison reformer, in 1790, he inspected the prisons throughout the country, with a view to continuing Howard's work. In 1787 Bowdler visited the Low Countries when the struggle between the patriotic party and the stadtholder (the Prince of Orange), supported by a Prussian army, was at its height, and he wrote a detailed account of the revolution in 'Letters written in Holland in the months of September and October, 1787' (London, 1788); an appendix collects a large number of proclamations and other official documents. During 1788 Bowdler travelled in France. From 1800 to 1810 he resided at St. Boniface, Isle of Wight, and after 1810 until his death at Rhyddings, near Swansea. In 1814 he visited Geneva to settle the affairs of his old friend, Lieutenant-general Villettes, who had died in Jamaica in 1807, and in the following year he published a 'Life of Villettes' (Bath, 1815), with an appendix of 'Letters during a Journey from Calais to Geneva and St. Bernard in 1814,' and a short biography (including seven letters) of 'The late Madame Elizabeth.' With later copies of the book was bound up a postscript, entitled 'Observations on Emigration to France, with an account of Health, Economy, and the Education of Children,' also published separately in 1815. Bowdler here warned Englishmen against France, and English invalids especially against French watering-places, and recommended Malta, which he had visited with a nephew in 1810, as a sanitary resort.

In 1818 Bowdler published his edition of 'Shakespeare,' the work by which he is best known. Its title ran: 'The Family Shakespeare in ten volumes; in which nothing is added to the original text; but those words and expressions are omitted which cannot with propriety be read aloud in a family.' In the preface he writes of Shakespeare's language: 'Many words and expressions occur which are of so indecent a nature as to render it highly desirable that they should be erased.' He also complains of the unnecessary and frivolous allusions to Scripture, which 'call imperiously for their erasement.' Bowdler's prudery makes sad havoc with Shakespeare's text, and, although his 'Shakespeare' had a very large sale, it was deservedly attacked in the 'British Critic' for April 1822. To this review Bowdler published a long reply, in which he stated his principle to be: 'If any word or expression is of such a nature that the first impression it excites is an impression of obscenity, that word ought not to be spoken nor written or printed; and, if printed, it ought to be erased.' He illustrates his method from his revisions of 'Henry IV,' 'Hamlet,' and 'Macbeth.' Bowdler's 'Shakespeare' has been very frequently reissued. Four editions were published before 1824, and others have appeared in 1831, 1853, and 1861.

During the last years of his life Bowdler was engaged in purifying Gibbon's 'History.' The work was completed just before his death in 1825, and published in six volumes by his nephew Thomas [q. v.] in 1826. The full title runs: 'Gibbon's History of the Decline and Fall of the Roman Empire, for the use of Families and Young Persons, reprinted from the original text with the careful omissions of all passages of an irreligious or immoral tendency.' In the preface Bowdler is self-confident enough to assert a belief that Gibbon himself would have approved his plan, and that his version would be adopted by all future publishers of the book. Bowdler's nephew adds in a note that 'it was the peculiar happiness of the writer' to have so purified Shakespeare and Gibbon that they could no longer 'raise a blush on the cheek of modest innocence nor plant a pang in the heart of the devout christian.'

Bowdler died at Rhyddings on 24 Feb. 1825, and was buried at Oystermouth, near Swansea. Besides the works already mentioned, he published 'A short Introduction to a selection of Chapters from the Old Testament, intended for the use of the Church of England Sunday School Society in Swansea,'

Swansea, 1822; it was reprinted in 1823 as 'Select Chapters from the Old Testament ... with Short Introductions.' Bowdler was an active promoter of the Proclamation Society, formed in 1787 to enforce a royal proclamation against impiety and vice—a society which was afterwards replaced by the Society for the Suppression of Vice.

The verb to 'bowdlerise' is of course a derivative from Bowdler's name. It was apparently first used in print by General Perronet Thompson in 1836 in his 'Letters of a Representative to his Constituents during the session of 1836' (London), reprinted in Thompson's 'Exercises,' 1842, iv. 124. Thompson writes that there are certain classical names in the writings of the apostles which modern ultra-christians 'would probably have *Bowdler*-ized' (information kindly supplied by Dr. J. A. H. Murray of Oxford).

[Some account of Thomas Bowdler, F.R.S. and F.S.A., is appended to the Life of John Bowdler by his son Thomas Bowdler, 1825, pp. 298–331. This notice was reprinted in the Annual Biography and Obituary (1826), x. 191–218. See also Nichols's Lit. Anecdotes, ix. 37; preface to Bowdler's Shakespeare (4th ed.); Munk's College of Physicians, ii. 324; Nichols's Illustrations, v. 641.] S. L.

BOWDLER, THOMAS, the younger (1782–1856), divine, the eldest son of John Bowdler the elder [q. v.], born 13 March 1782, was educated at a private school, and at St. John's College, Cambridge, where he proceeded B.A. in 1803, and M.A. in 1806. He was appointed curate of Leyton, Essex, in 1803, and after holding the livings of Ash and Ridley, and of Addington, Kent, became incumbent of the church at Sydenham in 1834. He took an active part in opposing the tractarian movement of 1840. In 1846 he became secretary of the Church Building Society, which his father had been instrumental in founding. On 7 Dec. 1849 he received a prebend in St. Paul's Cathedral. He died on 12 Nov. 1856. He married about 1804 Phœbe, the daughter of Joseph Cotton, who died in December 1854. Of nine children, four died in infancy, and three in succession between 1833 and 1839. Bowdler was the author of a large number of published sermons. Collected editions were issued in 1820, 1834, and 1846 respectively. He wrote a memoir of his father in 1824, and edited with Launcelot Sharpe the Greek version of Bishop Andrewes's 'Devotions.' He was the editor of the edition of Gibbon prepared by his uncle, Thomas Bowdler the elder [q. v.]

[Gent. Mag. 1857, pt. i. 241–2; Brit. Mus. Cat.] S. L.

BOWEN, JAMES (*d.* 1774), painter and topographer, son of John Bowen of Shrewsbury, died there in 1774 (LEIGHTON, *Guide through Shrewsbury*, p. 182). He made a copious collection for a history of Shropshire, having taken church notes, sketches of monuments, transcripts of records, &c., when he was accompanying Mr. Mytton through the county (GOUGH'S *Topography*, ii. 176). One of Bowen's works is a view of the church of Mary in the Battlefield, Shrewsbury (*ib.* p. 184), and he produced also some useful maps (*ib.* p. 185). Gough bought all the genealogical and topographical materials which Bowen had amassed, and they form part of the manuscripts and similar relics which Gough bequeathed to the Bodleian Library.

[Leighton's Guide through Shrewsbury, p. 182; Gent. Mag. vol. cii. pt. ii. p. 185; Gough's Topography, ii. 176.] J. H.

BOWEN, JAMES (1751–1835), rear-admiral, was born at Ilfracombe. He first went to sea in the merchant service, and in 1776 commanded a ship in the African and West India trade; but shortly after entered the navy as a master, and served in that capacity on board the Artois with Captain Macbride during 1781–2, being present in the battle on the Doggerbank on 5 Aug. 1781, and on many other occasions. He continued with Captain Macbride in different ships till 1789, when he was appointed inspecting agent of transports in the Thames. When the revolutionary war broke out, Bowen quitted this employment at the request of Lord Howe to go with him as master of his flagship, the Queen Charlotte, and he had thus the glorious duty of piloting her into the battle of 1 June. It is told by ancient tradition that on the admiral giving the order 'Starboard!' Bowen ventured to say, 'My lord, you'll be foul of the French ship if you don't take care.' 'What is that to you, sir?' replied Howe sharply; 'starboard!' 'Starboard!' cried Bowen, muttering by no means inaudibly, 'Damned if I care, if you don't. I'll take you near enough to singe your black whiskers.' He did almost literally fulfil this promise, passing so close under the stern of the Montagne, that the French ensign brushed the main and mizen shrouds of the Queen Charlotte as she poured her broadside into the French ship's starboard quarter. For his conduct on this day Bowen was made a lieutenant on 23 June 1794; after the action off L'Orient on 23 June 1795, in which he was first lieutenant of the Queen Charlotte, he was made commander; and on 2 Sept. of the same year was advanced to the rank of captain. During

the two following years he commanded the Thunderer in the West Indies. In 1798 he commanded the Argo of 44 guns in the Mediterranean, took part in the reduction of Minorca by Commodore Duckworth, and on 6 Feb. 1799, after a brilliant chase of two Spanish frigates of nearly equal force, succeeded in capturing one of them, the Santa Teresa of 42 guns. For the next three years Bowen was employed in convoy service, in the course of which he was officially thanked by the court of directors of the East India Company, and presented with a piece of plate value 400*l.* for his 'care and attention' in convoying one of their fleets from England to St. Helena. In 1803 he was appointed to command the Dreadnought of 98 guns, but was shortly afterwards nominated a commissioner of the transport board. In 1805 he had the charge of laying down moorings for the fleet in Falmouth harbour; in 1806 he was for some time captain of the fleet to Lord St. Vincent off Brest; and in January 1809 superintended the re-embarkation of the army at Corunna, for which important service he received the thanks of both houses of parliament. In 1816 he was appointed one of the commissioners of the navy, and continued in that office till July 1825, when he was retired with the rank of rear-admiral. He died on 27 April 1835.

Bowen was not the only one of his family who rendered the name illustrious in our naval annals. His brother Richard, captain of the Terpsichore in 1797, fell in the attack on Santa Cruz on 24 July, 'than whom,' wrote Nelson, 'a more enterprising, able, and gallant officer does not grace his majesty's naval service' (*Nelson Despatches*, ii. 423). Another brother George, also a captain in the navy, died at Torquay in October 1817. His eldest son James died captain of the Phœnix frigate, on the East India station, in 1812; and another son John, also a captain, after serving in that rank through the later years of the war, died in 1828. His youngest son St. Vincent was a clergyman. He had also a daughter Teresa, who died in 1876, bequeathing to the Painted Hall at Greenwich a very pleasing portrait of her father.

[Marshall's Roy. Nav. Biog. iii. (vol. ii.) 94.]
J. K. L.

BOWEN, JOHN (1756–1832), painter and genealogist, was the eldest son of James Bowen, painter and topographer, of Shrewsbury [q.v.], and was born in that city in 1756. Bowen studied the local antiquities under his father; traced out the pedigrees of Shropshire families, and became especially skilful in deciphering and copying ancient manuscripts. In 1795 he sent a drawing of the Droitwich town seal to the 'Gentleman's Magazine' (vol. lxv. pt. i. p. 13), signing himself 'Antiquarius;' and in 1802 (vol. lxxii. pt. i. p. 210) he followed this up with another communication, to which he put his initials. He drew four views of Shrewsbury, which were engraved by Vandergucht (Gough, *Topography*, ii. 177), and in the 'Philosophical Transactions' (xlix. 196) is a plate of some Roman inscriptions from his hand. He died on 19 June 1832, aged 76.

[Gent. Mag. vol. cii. pt. ii. p. 185; Gough's Topography, ii. 177; Leighton's Guide through Shrewsbury, p. 182.] J. H.

BOWEN, JOHN, LL.D. (1815–1859), bishop of Sierra Leone, son of Thomas Bowen, captain in the 85th regiment, by his third wife, Mary, daughter of the Rev. John Evans, chaplain to the garrison at Placentia, Newfoundland, was born at Court, near Fishguard, Pembrokeshire, on 21 Nov. 1815. At twelve years of age he was sent to school at Merlin's Vale, near Haverfordwest, and in 1830 continued his studies at the same place under the care of the Rev. David Adams. He emigrated to Canada in April 1835, and took a farm at Dunville, on the shores of Lake Erie, where, during the rebellion of 1837–8, he served in the militia. On Sunday, 6 March 1842, he heard a sermon in the Lake Shore church, which made a great impression on his mind, and ultimately led to a desire to prepare himself for the ministerial office. A favourable opportunity having occurred for disposing of his farm advantageously, he returned home, and in January 1843 entered himself at Trinity College, Dublin, where he graduated B.A. in 1847, and became LL.B. and LL.D. ten years later. His first appointment was to the assistant-curacy of Knaresborough, Yorkshire, in 1848. While residing here he asked the Church Missionary Society to allow him to visit their numerous foreign stations. The society suggested that he should proceed to Jerusalem, there to confer with Bishop Gobat, and then to visit the missionary stations at Syra, Smyrna, and Cairo; afterwards to journey to Mount Lebanon, Nablous, and other places in Syria, and thence to proceed to Mosul by Constantinople and Trebizond, returning by Bagdad and Damascus to Jerusalem. All this he accomplished, going through many hardships and dangers, and returning to England in December 1851. In 1853 he was named, by the Marquis of Huntly, rector of Orton-Longueville with Botolph Bridge in Huntingdonshire. Having obtained permission from his bishop, he again left England

in September 1854, and was absent in the East until July 1856. He had by this time made such good use of his opportunities for the study of Arabic, that he was able to preach with fluency in that difficult language. On 10 Aug. 1857 he was consecrated bishop of Sierra Leone by the Archbishop of Canterbury and the Bishops of Peterborough and Victoria, and sailed for his diocese on 26 Nov. following. The bishop recovered from several attacks of yellow fever. Malignant fever, however, broke out in the colony, and he died of it on 2 June 1859, when he had occupied the see two years and five months. He married, on 24 Nov. 1857, Catharine Butler, second daughter of Dr. George Butler, dean of Peterborough. She died at Freetown, after giving birth to a stillborn son, on 4 Aug. 1858.

[Memorials of John Bowen, LL.D., Bishop of Sierra Leone, by his Sister, 1862; Gent. Mag. vii. 187–8 (1859).] G. C. B.

BOWEN, THOMAS (*d.* 1790), engraver of charts, was the son of EMANUEL BOWEN, map engraver to George II and Louis XV, who published a 'Complete Atlas of Geography,' with good maps, 1744–7; an 'English Atlas, with a new set of maps,' 1745 (?); a 'Complete Atlas ... in sixty-eight Maps,' 1752; 'Atlas Minimus; or a new set of Pocket Maps,' 1758, 24mo; and a series of separate maps of the English counties, of Germany, Asia Minor, and Persia, between 1736 and 1776, of which Gough speaks with little approval. Thomas Bowen engraved the maps and charts of the West Indies, published by the direction of the government from the surveys of Captain James Speer; maps of the country twenty miles round London and of the road between London and St. David's, about 1750; a 'New Projection of the Eastern and Western Hemispheres of the Earth,' 1776; and an 'Accurate Map of the Russian Empire in Europe and Asia,' 1778. He contributed to Taylor and Skinner's 'Survey and Maps of the Roads of North Britain' in 1776. He died at an advanced age in Clerkenwell workhouse early in 1790.

[Gent. Mag. lx. pt. i. p. 374; Redgrave's Dict. of English Artists; Gough's British Topography, vols. i. ii.; Watt's Bibl. Brit.; Brit. Mus. Map Cat.] S. L.

BOWER, ALEXANDER (*fl.* 1804–1830), biographer, was originally a teacher in Edinburgh, and afterwards acted as assistant-librarian in the university of Edinburgh. He died suddenly about 1830–1. He published several works between 1804 and 1830, the titles of them being: 1. 'An Account of the Life of James Beattie, LL.D.,' in which are occasionally given characters of the principal literary men, and a sketch of the state of literature in Scotland during the last century, 1804, 8vo. 2. 'The Life of Luther, with an account of the early progress of the Reformation,' 1813, 8vo. 3. 'The History of the University of Edinburgh, chiefly compiled from original Papers and Records never before published,' vols. i. ii., 1817, vol. iii. 1830, 8vo. This work is strong in biographical details of the professors and others, but in other points the history is now of little value. 4. 'The Edinburgh Students' Guide, or an Account of the Classes of the University,' 1822.

[Watt's Bibl. Brit.; Cat. of the Advocates' Library; Grant's Edin. University, 1884, i. p. ix.] C. W. S.

BOWER, ARCHIBALD (1686–1766), author of the 'History of the Popes,' was born on 17 Jan. 1685–6 at or near Dundee; according to his own account, he was descended from an ancient family which had been for several hundred years possessed of an estate in the county of Angus in Scotland. In 1702 he was sent to the Scotch college at Douay; afterwards proceeded to Rome, and was there admitted into the Society of Jesus on 9 Dec. 1706. His own statement that he was admitted into the order in November 1705 is evidently untrue, as is shown by the entry in the register of the Roman province of the society. After a novitiate of two years he went in 1712 to Fano, where he taught classics till 1714, when he removed to Fermo. In 1717 he was recalled to Rome to study divinity in the Roman college, and in 1721 he was transferred to the college of Arezzo, where he remained till 1723, and became reader of philosophy and consultor to the rector of the college. He was next sent to Florence, and in the same year removed to Macerata, at which place he continued till 1726. Before the latter date he was probably professed of the four vows, his own account fixing that event in March 1722 at Florence (*Full Confutation*, p. 54), though, as he certainly was resident at Arezzo in that year, his profession was most likely made a year later. All his statements concerning himself must be received with extreme caution.

The turning-point in Bower's career was his removal from Macerata to Perugia, and his flight from the latter city to England in 1726. His enemies said that this step was taken in consequence of his having been detected in an amour with a nun, but he himself ascribes it to the 'hellish proceedings'

of the court of the inquisition at Macerata, in which he says that he was counsellor or judge. He was greatly impressed with the horrible cruelties committed in the torture-chamber, particularly on two gentlemen, whose stories, as well as his own escape, he related in detail in an 'Answer to a Scurrilous Pamphlet' (1757). Another account had been previously published by Richard Baron [q. v.] in 1750, professing to contain the substance of the relation which Bower gave of his escape to Dr. Hill, chaplain to the archbishop of Canterbury (*Six Letters from Bower to Father Sheldon*, p. 3 *n*). The title of Baron's pamphlet is: 'A faithful Account of Mr. Archibald Bower's Motives for leaving his Office of Secretary to the Court of Inquisition; including also a relation of the horrid treatment of an innocent gentleman, who was driven mad by his sufferings, in this bloody Court; and of a Nobleman who expired under his tortures. To both which inhuman and shocking scenes the author was an eye-witness.' A third account of these occurrences is printed at the end of 'Bower and Tillemont compared' (1757). The narrative published by Bower thirty-one years after the date of his alleged 'escape' conflicts with the versions previously given by him orally, and is of doubtful veracity.

On his arrival in England in June or July 1726 he became acquainted with Dr. Edward Aspinwall, formerly a jesuit, who received him kindly and introduced him to Dr. Clarke. After several conferences with these gentlemen, and some with Berkeley, dean of Londonderry (afterwards bishop of Cloyne), he withdrew himself from the communion of the Roman catholic church, took leave of the provincial, and quitted the Society of Jesus. He says that he formed a system of religion for himself and was for six years a protestant of no particular denomination, but at last he conformed to the church of England.

Through the kindness of Dr. Goodman (physician to George I) Bower obtained a recommendation to Lord Aylmer, who wanted a person to assist him in reading the classics. With Aylmer he continued for several years on terms of the greatest intimacy, and was introduced to all his patron's connections, one of whom—George (afterwards Lord) Lyttelton—remained his steady friend when he was deserted by almost every other person. While he resided with Lord Aylmer he wrote the 'Historia Literaria,' a monthly review, begun in 1730 and discontinued in 1734. During the following nine years (1735–1744) he was employed by the proprietors of the 'Universal History,' to which work he contributed the history of Rome. He also undertook the education of the son of Mr. Thompson, of Cooley, Berkshire, but ill-health did not allow him to continue more than a twelvemonth in that family, and upon his recovery Lord Aylmer secured his services as tutor to two of his children.

In 1740 he invested his savings (1,100*l.*) in the Old South Sea annuities, and with this sum he resolved to purchase an annuity. In the disposition of this money he engaged in a negotiation which afterwards proved fatal to his reputation. Bower's own account of the transaction is that as none of his protestant friends cared to burden their estates with a life-rent, he left his money in the funds till August 1741, when being informed that an act of parliament had passed for rebuilding a church in the city of London upon life-annuities, at seven per cent., he went into the city, intending to dispose of his money in that way, but he found the subscription was closed. This disappointment he mentioned to a friend, Mr. Hill, whom he accidentally met in Will's coffee-house, and upon Hill's offering the same interest that was given by the trustees of the above-mentioned church the sum of 1,100*l.* was transferred to Mr. Wright, Mr. Hill's banker. Mr. Hill, Bower adds, was a jesuit, but transacted money matters as an attorney. Some time after Bower added 250*l.* to the sum already in Hill's hands, and received for the whole 94*l.* 10*s.* a year. He afterwards resolved to marry, and it was chiefly upon that consideration that he applied to Hill to know upon what terms he would return the capital. Hill agreed at once to repay it, only deducting what Bower had received over and above the common interest of four per cent. during the time it had been in his hands, and this was done. 'Thus,' Bower asserts, 'did this money transaction begin with Mr. Hill, was carried on by Mr. Hill, and with Mr. Hill did it end.'

By his opponents it is alleged with more probability that after a time he wished to return to the church he had renounced, and therefore, in order to recommend himself to his superiors, he desired effectually to prove his sincerity towards them. He proposed to Father Shireburne, then provincial in England, to give up to him, as representative of the Society of Jesus, the money he then possessed, on condition of being paid during his life an annuity at the rate of seven per cent. This offer was accepted, and on 21 Aug. 1741 he paid to Father Shireburne 1,100*l.*, and on 27 Feb. 1741–2 he paid to the same person 150*l.* more upon the same conditions. Nor did his confidence rest here, for on 6 Aug. 1743 he added another 100*l.* to the above

sums, now augmented to 1,350*l.*, when the several annuities were reduced into one, amounting to 94*l.* 10*s.*, for which a bond was given. This negotiation had the desired effect, and Bower was readmitted in a formal manner into the order of Jesus by Father Carteret at London some time before the battle of Fontenoy (30 April 1745).

Bower soon again grew dissatisfied with his situation. It has been suggested that he took offence because his superiors insisted on his going abroad, or that he had a prospect of advancing his interest more surely as an avowed protestant than as an emissary of the pope. Whatever motive may have impelled him, it seems certain that when he began his correspondence with Father Sheldon, the successor of Father Shireburne in the office of provincial, he had finally resolved to make a second breach of his vows. To accomplish that object he wrote the famous letters which occasioned a lively controversy. The correspondence answered his purpose, and he received his money back from the borrowers on 20 June 1747.

He received 300*l.* for revising and correcting the second edition of the 'Universal History,' but he performed the task in a slovenly and careless manner. On 25 March 1747 he issued the 'proposals' for printing by subscription his 'History of the Popes,' describing himself as 'Archibald Bower, esq., heretofore public professor of rhetoric, history, and philosophy in the universities of Rome, Fermo, and Macerata, and, in the latter place, counsellor of the inquisition.' He announced that he had begun the work at Rome some years previously, his original design being to vindicate the doctrine of the pope's supremacy, and that while prosecuting his researches he became a proselyte to the opinion which he had proposed to confute. He presented the first volume to the king 13 May 1748, and on the death of Mr. Say, keeper of Queen Caroline's library (10 Sept.), he obtained that place through the interest of his friend Lyttelton with the prime minister, Pelham. The next year (4 Aug. 1749) he married a niece of Bishop Nicolson and daughter of a clergyman of the church of England. This lady had a fortune of 4,000*l.* and a child by a former husband. He had been engaged in a treaty of marriage, which did not take effect, in 1745.

The second volume of the 'History of the Popes' appeared in 1751, and in the same year Bower published, by way of supplement to this volume, seventeen sheets, which were delivered to his subscribers gratis. Towards the end of 1753 he produced a third volume, which brought down his history to the death of Pope Stephen in 757. In April 1754 his constant friend Lyttelton appointed him clerk of the buck-warrants. It was in this year that the first serious attack was made upon him on account of his 'History of the Popes' in a pamphlet by the Rev. Alban Butler, published anonymously at Douay under the title of 'Remarks on the two first volumes of the late Lives of the Popes; in letters from a Gentleman to a Friend in the Country.' Meanwhile the letters addressed by Bower to the provincial of the Jesuits had fallen into the hands of Sir Henry Bedingfield, a Roman catholic baronet, who made no secret of their contents. He asserted that the letters clearly demonstrated that while their writer was pretending to have the liveliest zeal for the protestant faith, he was in fact a member of the Roman church, and in confidential correspondence with the head of that body. Bower maintained that these letters were infamous forgeries, designed to ruin his credit with his protestant friends, and brought forward by the Jesuits in revenge for his exposure of the frauds of the priesthood. At this juncture the Rev. John Douglas (afterwards bishop of Salisbury), who had already detected the frauds of Lauder in regard to Milton, determined to expose the duplicity of Bower's conduct, and published in 1756 a pamphlet entitled 'Six Letters from A——d B——r to Father Sheldon, provincial of the Jesuits in England; illustrated with several remarkable facts, tending to ascertain the authenticity of the said letters, and the true character of the writer.' In this tract Douglas proved the genuineness of the letters; showed that want of veracity was not the only defect in Bower's character, but that he was as little remarkable for his chastity as for his love of truth; and brought forward the attestation of Mrs. Hoyles. Bower had converted this lady to Roman catholicism, and her statement leaves no cause to doubt the historian's zeal to support in secret the church which, for self-interested ends, he was publicly disowning. Douglas's pamphlet elicited a reply from Bower, or one of his friends, under the character of a 'Country Neighbour.' Douglas then published his second tract, 'Bower and Tillemont compared' (1757), in which he demonstrates that the 'History of the Popes,' especially the first volume, is merely a translation of the work of the French historian. In 1757 Bower brought out three large pamphlets, in which he laboured to refute the charges made against his moral, religious, and literary character. Douglas followed with 'A Full Confutation of all the Facts advanced in Mr. Bower's Three Defences' (1757), and 'A Complete and Final Detection of A——d B——r'

(1758). To the last two pamphlets were attached certificates and other documents obtained from Italy, clearly establishing Bower's guilt and imposture. In the course of this embittered controversy, Garrick, who had formerly been his friend, threatened to write a farce in which Bower was to be introduced on the stage as a mock convert and to be shown in various situations, so that the profligacy of his character might be exposed (Davies, *Memoirs of Garrick*, ed. 1808, i. 306). From this period Bower's whole time was spent in making ineffectual attacks upon his enemies, and equally vain efforts to recover the reputation of himself and his 'History of the Popes.' Before the controversy had ended he published his fourth volume, and in 1757 an abridgment of the first four volumes of his work was published in French at Amsterdam. In 1761 he seems to have assisted the author of 'Authentic Memoirs concerning the Portuguese Inquisition, in a series of letters to a friend;' and about the same time he produced the fifth volume of his 'History of the Popes.' To this volume he annexed a summary view of the controversy between himself and the Roman catholics. The remainder of his history did not appear till just before the author's death, when the sixth and seventh volumes were published together, but in so hasty and slovenly a manner that the whole period from 1600 to 1758 was comprehended in twenty-six pages. The 'History of the Popes' has been reprinted with a continuation by Dr. Samuel Hanson Cox, in 3 vols., Philadelphia, 1844–5, 8vo.

Bower died on 3 Sept. 1766, and was buried in Marylebone churchyard. The epitaph on his tomb describes him as 'a man exemplary for every social virtue, justly esteemed by all who knew him for his strict honesty and integrity, a faithful friend, and a sincere christian.' He bequeathed all his property to his wife, who, some time after his death, attested that he died in the protestant faith (*London Chronicle*, 11 Oct. 1766).

His portrait has been engraved by J. M'Ardell and T. Holloway from a painting by G. Knapton; and by J. Faber from a painting by Reynolds.

[The principal authorities are the twenty-two pamphlets published during the Bower controversy, and a series of articles, probably by Bishop Douglas, in the European Magazine for 1794, xxv. 3, 133, 209, 261, xxvi. 32. These articles were reprinted without acknowledgment in the General Biog. Dict. (1798), ii. 528, and thence transferred by Alexander Chalmers (but with the omission of the references) to his edition of that work. Consult also Birch MS. in Addit. MS. Brit. Mus. 4234; Gent. Mag. lx. 1187, lxi. 118, lxxi. 509; Nichols's Illustr. of Lit. ii. 134; Nichols's Lit. Butler's Life of Alban Butler (1800), 9.] T. C.

BOWER or BOWERS, GEORGE (*fl.* 1681), medallist, worked principally in the reigns of Charles II and James II, and for a short time under William III. In January 1664 he was appointed 'embosser in ordinary' (engraver) to the Mint, an office which he continued to hold till his death in the early part of 1689–90. He executed numerous medals for the royal family as well as for private persons, and his work displays considerable skill, though it is inferior in finish and execution to that of the Roettiers, the well-known medallists of the same period. The most interesting of all his medals is, perhaps, the specimen struck to commemorate the acquittal of the Earl of Shaftesbury on the charge of high treason, showing on the obverse the bust of the earl, and on the reverse the legend 'Lætamur, 24 Nov. 1681,' and a view of London with the sun bursting from behind a cloud. It was the production of this specimen which gave rise to Dryden's satire on Shaftesbury entitled 'The Medal:'

> Five days he sate for every cast and look,
> Four more than God to finish Adam took;
> But who can tell what essence angels are,
> Or how long Heaven was making Lucifer?

Bower also executed in the reign of Charles II the Restoration medal (1660: reverse, Jupiter destroying prostrate giants, signed 'G. Bower'), the marriage medal (1662: signed 'G. B.'), and medals relating to the popish and Rye House plots. Of the medals made by him under James II, we may mention a piece commemorating the defeat of Monmouth (signed 'G. Bowers'), and specimens referring to the trial of the seven bishops. He further produced a medal celebrating the landing of William (III) at Torbay, 1688, and the coronation medal of William and Mary, 1689.

matic Chronicle, 1841, iii. p. 177; Calendar of Treasury Papers, 1556–7–1696, pp. 53, 106, 110.]
W. W.

BOWER or BOWMAKER, WALTER (*d.* 1449), abbot of Inchcolm, is the reputed continuator of Fordun's 'Chronica Gentis Scotorum,' as it appears in the volume generally known as the 'Scotichronicon.' The latter book at least twice mentions the name of Walter Bower (ed. GOODALL, ii. 458 and iii. 482), but it includes no passage ascribing its compilation to the abbot of Inchcolm, who is credited with the work by his contemporary the anonymous abbreviator of the 'Scotichronicon' in the Carthusian monastery at Perth—a theory which is also supported by the heading of the 'Black Book of Paisley.' The abbot of Inchcolm is also cited in 1526 by Boethius as one of the chief authorities for his 'Historiæ Scotorum' (præf. iii, 2nd ed., Paris, 1526). Other evidence points in the same direction, and the identity of the author of the 'Scotichronicon' with the abbot of Inchcolm may be considered as fairly certain. According to his own testimony (xiv. 50), the writer of the 'Scotichronicon' was born in the year when Richard II burnt Dryburgh and Edinburgh, i.e. in 1385. To this the Book of Cupar adds that his birthplace was Haddington, where we find that a certain John Bower or Bowmaker was deputy-custumar from 1395 to 1398 (*Exchequer Rolls of Scotland*, iii. 364, 433). This officer Mr. Tytler considers to have been the abbot's father (*Lives of Scottish Worthies*, ii. 199; with which cf. *Exch. Rolls*, iv. pref. 88). Goodall makes Walter Bower become a monk at eighteen, after which, according to the same authority, he completed his philosophical and theological studies in Scotland, and was ordained priest before taking up his abode in Paris for the sake of perfecting himself in the law. But there seem to be no satisfactory proofs for these statements, and we are without any positive information as to Bower's life until in his thirty-third year he was consecrated abbot of Inchcolm on 17 April 1418 (*Scotichronicon*, xv. 30). It seems, however, very clear that the author of the 'Scotichronicon' had been a member of the Augustinian priory of St. Andrews and well acquainted with at least two of its priors—James Biset (1393–1416) and James Haldenden (1418–1443). Under the former he appears to have received his education, and he may from his own words be inferred to have been a licentiate or bachelor in canon law, though perhaps not a master in theology (*ib.* vi. 55–7). There is, however, nothing to show with any certainty whether he took his degree at Paris or in the new university of St. Andrews, of which his patron James Biset was so prominent a founder (1410).

Very shortly after Biset's death at least six of his pupils were appointed to high church dignities, and amongst them, on 17 April 1418, Walter was consecrated abbot of Inchcolm, a small island in the Firth of Forth. Every summer he had to leave his house for the mainland to avoid the attacks of the English pirates, though before his death he fortified Inchcolm. Besides attending to the affairs of his abbey—whose documents he copied with his own hands—the new abbot was a prominent figure in politics. When James I returned from captivity, Bower was one of the two commissioners appointed to collect that king's ransom-money in 1423 and 1424. Nine years later (1433), on the betrothal of James's daughter to the dauphin, the same two commissioners were again entrusted with the collecting of the tax for her dowry, but were soon bidden by the king himself to desist from exacting the imposition (*ib.* xvi. 9). A few years previously (December 1430), on the submission of Alexander of the Isles, this nobleman's mother, the Countess of Ross, was confined in Inchcolm—probably under the charge of Abbot Walter—till her release in February 1432 (*ib.* xvi. 16, 20). In October of the same year the abbot was present at the council held at Perth for the consideration of the English propositions for peace. On this occasion, in company with his old friend the abbot of Scone, he made a strenuous opposition to the English offers, on the ground that James had sworn to make no peace with the English except with the consent of the French. The prudence of the two abbots was confirmed by the discovery that the whole affair was an artifice on the part of the English. It was not till about the year 1440 that Bower commenced to write the 'Scotichronicon,' at the request of Sir David Stewart of Rossyth, who, according to Mr. Skene, died in 1444. This work seems to have occupied several years, and was not completed till 1447 (cf. the dates given in *Scotichronicon*, lib. i. 8, vi. 57, xvi. 8, 26). Shortly before his death, which took place in 1449, according to the statement of the Carthusian abbreviator (SKENE, *John of Fordun*, lii), Bower seems to have condensed his larger work and divided it into forty books.

The 'Scotichronicon' in its original form was divided into sixteen books, of which the first five and chapters 9–23 of the sixth are mainly the work of John Fordun, who also collected certain materials for continuing the history down to the year 1385. To the earlier books of Fordun Bower made large

additions, carefully distinguishing them from the work of his predecessor (whom he speaks of as the *author*) by prefixing the word 'Scriptor' to his own insertions. The last eleven Bower claims as practically his own: 'Quinque libros Fordun, undenos scriptor arabat;' though even here he has made use of Fordun's 'Gesta Annalia,' down to the middle of David II's reign, and, to a very slight extent, beyond this date (*Scotichronicon*, prologue, pp. ii and iii, also i. 7 and 9, vi. 23). With the reign of Robert I, towards the end of the fourteenth book, Bower becomes a contemporary writer, and continues his narrative till the death of James I. Soon after the completion of the 'Scotichronicon' its immense length and verbosity induced its author shortly before his death to write the abridgment, generally known as the Book of Cupar, which still exists in the Advocates' Library, Edinburgh (MS. 35, 1, 7); it has not yet been printed, though an edition has long been promised in the 'Historians of Scotland.' A year or so later (c. 1451) the 'Scotichronicon' was condensed once more for the newly founded Carthusian monastery at Perth, probably by the Patrick Russell spoken of below (MS. Adv. Lib. 35, 6, 7). Another abridgment of the 'Scotichronicon' (*ib.* 35, 5, 2) was drawn up in 1461 by a writer who had been in France in attendance on the Princess Margaret (SKENE, preface, liv). This work, which, according to Mr. Skene, after the twenty-third chapter of book vi. differs greatly from the original 'Scotichronicon,' was copied several times, notably about the year 1489, by a writer who tells us that he had himself seen Joan of Arc (SKENE, preface, liv; *MS. Marchmont*).

Besides these abbreviations the 'Scotichronicon' itself was copied several times during the fifteenth century, notably by one Master Magnus Makculloch in 1483–4 for the archbishop of Glasgow (*Harl. MS.* 712), and in the large volume in the royal library at the British Museum, known as the Black Book of Paisley (13 E. x.) Another transcript (Donibristle MS.) assigns the work to one Patrick Russell, a Carthusian of Perth. Each of these last transcribers has sometimes been considered as the author of the larger work; but, after careful consideration, Mr. Skene has rejected both their claims in favour of Walter Bower. Many other manuscripts of the original work (*a*) and the abbreviations (*b*) exist: notably of (*a*) in the Edinburgh College Library (from which Goodall's edition is published); in the British Museum Royal Library (the Black Book of Paisley); and at Corpus Christi, Cambridge.

The only complete printed edition of the 'Scotichronicon' as it left the hands of Walter Bower is that printed from the Edinburgh College Library MS. by Walter Goodall in the middle of the last century (Edinburgh, 1759). The edition of Fordun published by Hearne in 1722 (Oxford, 5 vols.), though apparently containing a good deal of Bower's work, notably the history of St. Andrews, appears to be mainly Fordun's production. The exact relationship, however, of this manuscript to Fordun and Bower has yet to be worked out. Some thirty years earlier (1691) Thomas Gale had printed a portion of the same manuscript belonging to Trinity College, Cambridge (GALE, i. 6, ix. 9) in the third volume of his 'Rerum Anglicarum Scriptores.'

[Scotichronicon (ed. Goodall), Edinburgh, 1759; John of Fordun, ed. Skene, ap. Historians of Scotland, preface and introductions); Tytler's Lives of Scottish Worthies, ii. 198–202; Exchequer Rolls of Scotland, ed. George Burnett, iii. and iv.] T. A. A.

BOWERBANK, JAMES SCOTT (1797–1877), geologist, was born in Bishopsgate, London, in 1797. We have no reliable information as to his early education; but he certainly exhibited in his youth a strong attachment to natural history, and in his boyhood he was especially fond of collecting plants, and of studying books on botany. Bowerbank was most happily placed in this world; as the son of a highly respectable city merchant and a distiller he enjoyed all that wealth could afford him. He succeeded with his brother, on the death of his father, to the well-established distillery of Bowerbank & Co., in which firm he remained an active partner until 1847. His energy and industry secured for him amongst the most intelligent of his city friends the character of a careful and attentive man of business. He, however, found sufficient leisure to pursue his scientific studies, and early in life he obtained much exact knowledge, as is proved by his having published papers on the *Insecta* and their anatomy at an age which is generally considered as immature. Bowerbank also, in the years 1822–3–4, lectured on botany, and in 1831 we find him conducting a class on human osteology, and studying the works of Haller, Alexander Monro, and other osteologists. When of age he joined the Mathematical Society of Spitalfields, and remained a member until its incorporation with the Astronomical Society in 1845. In 1836, Bowerbank, associating himself with several geological friends, originated 'The London Clay Club,' the members of which devoted

themselves to the task of examining the fossils of this tertiary formation, and making a complete list of the species found in it. Bowerbank's anatomical studies, which were pursued with considerable attention, prepared his mind by a stern discipline for the study of the sponges, to which he subsequently devoted himself for many years. At the same time he occupied his leisure by examining the moss agates, and the minute structure of shells and corals.

In 1840 he published a volume on the 'Fossil Fruits of the London Clay,' which remains a standard work; indeed, the only one in which these very interesting remains are thoroughly described and accurately figured. In 1842 Bowerbank was elected a fellow of the Royal Society. In 1847, after the reading of a paper by Professor Prestwich at the rooms of the Geological Society, Bowerbank invited the leading geologists to meet him in the tea-room. He then proposed the establishment of a society for the publication of undescribed British fossils. He was supported in this by Buckland, De la Beche, Fitton, and others, and thus was founded the Palæontographical Society. From 1844 to 1864 Bowerbank was in the habit of receiving at his residence, once a week, professed geologists and young amateurs who showed a real fondness for this science, which was still struggling against the prejudices which dogmatic teaching had fostered. Every young and earnest geologist found in him a sincere friend and always a willing instructor. Bowerbank's classification of the spongidæ, his observations on their spiculate elements, and his papers on the vital powers of the sponges, remain splendid examples of unwearying industry and careful observation. On his retirement from the active labours of life, his fervent desire was to finish his great work on the sponges, and unremittingly he gave all the energies of his well-trained mind to this object, until the failure of brain-power compelled intervals of entire repose. Happily he reached the last plate of his great work. When half of it was drawn his powers began to fail him, and he became sadly depressed. The finishing tasks were postponed from day to day, then resumed for a few hours, to be again deferred, until 8 March 1877, when death closed for ever the labours of a well-spent life.

Bowerbank was always a most indefatigable collector, and in 1864 his collection had arrived at a state which truly merited the name of magnificent. It was purchased by the British Museum, and forms a well-known and most important division of the natural history section of this national establishment. The catalogue of scientific papers published by the Royal Society credits Bowerbank with forty-five papers. These appeared in the 'Journal of the Microscopic Society,' 'The Annals and Magazine of Natural History,' the 'Journal of the Geological Society,' the 'Reports of the British Association,' and the publications of the Zoological and Linnean Societies. 'The Pterodactyles of the Chalk,' published in the 'Proceedings of the Zoological Society,' was one of Bowerbank's most important memoirs. He paid great attention to the question of silicification, and some admirable papers on this interesting subject are scattered through the journals named. His 'Contributions to a General History of the Spongidæ,' which is in the 'Proceedings of the Zoological Society,' deserves especial attention. Bowerbank's first published paper was 'Observations on the Circulation of the Blood in Insects,' which appeared in 1833. His last was a 'Report on a Collection of Sponges found at Ceylon by E. W. H. Holdsworth,' printed in 1873.

R. H-T.

BOWERS, GEORGE HULL, D.D. (1794–1872), dean of Manchester, born in Staffordshire in 1794, was the son of Mr. Francis Bowers. He was sent to the Pembroke grammar school, and thence proceeded to Clare College, Cambridge. After a successful university career he was appointed perpetual curate of Elstow, Bedfordshire. He graduated B.A. in 1819, proceeding B.D. in 1829, and D.D. in 1849. He was select preacher of his university in 1830. In 1832 he became rector of St. Paul's, Covent Garden. On the death of Dean Herbert in 1847 he was nominated by Lord John Russell to the deanery of Manchester, an office which he held until 26 Sept. 1871. He was not a frequent preacher in Manchester, but his pulpit discourses were at once simple and scholarly, and his delivery effective.

His chief writings are: 1. 'Sermons preached before the University of Cambridge.' 2. 'A Letter to the Archbishop of Canterbury on a Proposed School for Sons of Clergymen,' London, 1842. 3. 'A Scheme for the Foundation of Schools for the Sons of Clergymen and others,' London, 1842; this led to the establishment of Marlborough School, of which, conjointly with the Rev. C. E. Plater, he was founder. Similarly Rossall and Haileybury owed their origin to Bowers's suggestion, and the latter gained much on its establishment from Bowers's personal help and expe-

rience. 4. 'Sermons preached in the Parish Church of St. Paul, Covent Garden,' London, 1849. 5. 'Open Churches with Endowments preferable to Pew Rents, a Sermon,' Manchester, 1855. 6. 'Pew Rents injurious to the Church, an Address,' Oxford, 1865. He was a warm advocate of the 'free and open church movement.' He was for this reason instrumental in the erection of St. Alban's, Cheetwood, and various addresses which he delivered there have been printed. On his resignation of the office of dean of Manchester he retired to Leamington, where he died Friday, 27 Dec. 1872. He was twice married. He bequeathed 300*l.* for the support of the special Sunday evening services at the Manchester Cathedral, where a window and a brass were placed by his widow to his memory. A portrait by Charles Mercier is at Rossall School. One of his daughters, Georgiana Bowers, has distinguished herself by successful pictures of hunting and country life in 'Punch.' Some of these have been issued in book form.

[Manchester Guardian, 30 Dec. 1872; Parkinson's Old Church Clock, ed. Evans; private information.] W. E. A. A.

BOWES, ELIZABETH (1502?–1568), disciple of John Knox, was the daughter of Roger Aske, of Aske, Yorkshire. Her father died when she was a child, and she and her sister Anne were coheiresses of their father and grandfather. Their wardship was sold in 1510 to Sir Ralph Bowes of Dalden, Streatlam, and South Cowton. In 1521 Elizabeth Aske was betrothed to Richard Bowes, youngest son of Sir Ralph, and the king granted to him special livery of half the lands of William Aske, which he was to receive on his marriage. Richard Bowes, like the rest of his family, was engaged in border business, but seems to have lived chiefly at Aske, where his wife bore him five sons and ten daughters. Two of the sons, George (*b.* 1527) and Robert (*b.* 1535), are noticed below. In 1548 Richard Bowes was made captain of Norham. His wife and family followed him northwards and lived in Berwick. Mrs. Bowes was deeply religious and had been much affected by the theological movements of the Reformation period. At Berwick she met John Knox, who took up his abode there in 1549. She fell at once under his influence, and Knox gained the affections of her daughter Marjory. Her husband's family pride was hurt by Knox's proposal to marry his daughter, and he refused his consent. Knox, however, who was about the same age as Mrs. Bowes, contracted himself to Marjory, and adopted Mrs. Bowes as a relative. He wrote to Marjory as 'sister,' and to Mrs. Bowes as 'mother.' In July 1553 he married Marjory Bowes in spite of the opposition of her father and the rest of his family. At this time Knox's fortunes were at a low ebb, as Mary had just ascended the throne. His letters to Mrs. Bowes were intercepted by spies, and in January 1554 he judged it prudent to leave England. His letters to Mrs. Bowes are the chief source of information concerning his doings at this time. In June 1556 Mrs. Bowes and her daughter joined Knox at Geneva, where two sons were born to him. It would seem that the breach in the Bowes family owing to Marjory's marriage was never healed, and that Mrs. Bowes found Knox's counsels so necessary to her spiritual comfort that she left her husband and her other children and followed Marjory's fortunes. In 1558 her husband died, and in 1559 Knox left Geneva for Scotland. He was soon followed by his wife, and Mrs. Bowes after a short stay in England made her way to her son-in-law, who wrote for the queen's permission for her journey (*Sadler Papers*, i. 456, 479, 509). In 1560 Mrs. Knox died, but her mother still stayed near her son-in-law. She left her own family and adhered to Knox. She died in 1568, and immediately after her death Knox thought it desirable to give some account of this strange intimacy. In the Advertisement to his 'Answer to a Letter of a Jesuit named Tyrie' (1572) he published a letter to Mrs. Bowes, 'to declare to the world what was the cause of our great familiarity, which was neither flesh nor blood, but a troubled conscience on her part which never suffered her to rest but when she was in the company of the faithful. Her company to me was comfortable, but yet it was not without some cross; for besides trouble and fasherie of body sustained for her, my mind was seldom quiet for doing somewhat for the comfort of her troubled conscience.'

[Sharp's Memorials of the Rebellion, 371–2; Surtees's Durham, iv. 114; Knox's letters to Mrs. Bowes are largely quoted in M'Crie's Life of John Knox, and are published in full in Knox's Works (Wodrow Soc. 1854), iii. 337.] M. C.

BOWES, Sir GEORGE (1517–1556), commander in border warfare, was a posthumous son of Sir Ralph Bowes of Dalden, Streatlam, and South Cowton, and Elizabeth, daughter of Henry, lord Clifford. Cardinal Wolsey, then bishop of Durham, sold his 'ward, custody, and marriage' for 800*l.* to Sir William Bulmer in 1524. Sir William in turn sold it to Lord Eure, whose daughter

Muriel was married to George Bowes. He had livery as heir to his father in 1535. He early took part in border warfare. He went with the Earl of Hertford on his devastating raid in 1544, and was knighted at Leith on 11 May. So highly were his services esteemed that the privy council announced to the Earl of Shrewsbury, lieutenant-general in the north, that it was the king's intention to confer on him a barony (*Talbot Papers*, in *Illustrations of the Reign of Queen Mary*, Maitland Club, p. 171). This intention, however, was not carried into effect. Bowes returned from Scotland and died in 1556, leaving no male heir.

[Surtees's Durham, iv. 112; Sharp's Memorials of the Rebellion of 1569, 370.] M. C.

BOWES, SIR GEORGE (1527–1580), military commander, was the son of Richard Bowes and Elizabeth Aske [see BOWES, ELIZABETH]. At the age of fourteen he was married to Dorothy, daughter of Sir William Mallory of Studley Royal. He early went to the Scottish war, and in 1549 is mentioned as being in command of one hundred cavalry at Douglas. In 1558 he was made marshal of Berwick. Being at this time a widower, he strengthened his position by an alliance with the powerful house of Shrewsbury. He married Jane, daughter of Sir John Talbot of Albrighton. His opinion was often asked by the government about border affairs, and in 1560 he was knighted at Berwick by the Duke of Norfolk. Soon afterwards he resigned the onerous post of marshal of Berwick and retired to his house at Streatlam. In 1567 the privy council gave him a curious commission to get quicksets for hedges to enclose parts of the frontier (*Cal. State Papers*, For. 1566-8, p. 412). In 1568 he was employed to escort Mary queen of Scots from Carlisle to Bolton Castle. He displayed such courtesy in the discharge of this duty that Mary in later years had a grateful remembrance of his kindness, and wrote to him as to a friend (*Memorials of the Rebellion*, p. 379). Next year the rebellion of the northern earls threatened Elizabeth's throne, and it was chiefly owing to the steadfastness of Bowes that the rebellion did not become more serious. He remained at Streatlam, in the centre of a disaffected neighbourhood, and faced the unpopularity which his notorious loyalty drew upon his head. Already, on 7 March 1569, Lord Hundson wrote, 'The country is in great hatred of Sir George Bowes so as he dare scant remain there' (*Cal. State Papers*, For. 1569–71, p. 199). Streatlam was not far from Brancepeth, the seat of the Earl of Westmorland, who was the centre of the disaffected party. Bowes kept a sharp watch on all that was passing, and sent information to the Earl of Sussex, lord president of the north, who was stationed at York. Sussex for some time did not believe that the earls would proceed to any open action. At length their proceedings were so threatening that Bowes thought it safer, on 12 Nov., to leave Streatlam, and shut himself up in the strong castle of Barnard Castle, which belonged to the crown and of which he was steward. He was empowered to levy forces for the queen, and the well-affected gentlemen of the neighbourhood gathered round him. He wished to use his small force for the purpose of cutting off the rebels who were gathering at Brancepeth; but Sussex hesitated to give permission, and things were allowed to take their course. At last, on 14 Nov., the rebel earls entered Durham, and advanced southwards for the purpose of releasing Queen Mary from her prison at Tutbury. They were not, however, agreed amongst themselves. They changed their plan suddenly and retreated northwards. The sole point in which they were agreed was hatred of Bowes. His house at Streatlam was destroyed, and Barnard Castle was besieged. It was ill supplied with provisions, and the hasty levies which formed its garrison were not adapted to endure hardships. Many of the garrison leapt from the wall and joined the enemy. Bowes held out bravely for eleven days, but dreaded treachery within. He thought it better to surrender while honourable terms were possible. He was permitted to march out with four hundred men. He joined the Earl of Sussex and was appointed provost marshal of the army.

By this time the royal army had marched northwards. The rebels, discouraged by the indecision of their leaders, retreated and gradually dispersed. The rebellion was at an end, but Elizabeth had been thoroughly frightened and gave orders that severe punishment should be inflicted on the ringleaders. The executions were carried out by Bowes, as provost marshal, though the lists of those to be executed were drawn out by the Earl of Sussex. Bowes had been the principal sufferer, but he does not appear to have shown any personal vindictiveness. The Earl of Sussex warmly commended him to the gratitude of the queen, both on account of the losses which he had sustained and for his eminent services. But Bowes appealed in vain to Elizabeth's generosity. Not till 1572 did he receive some grants of forfeited lands, which appear to have been of small value. In 1571 he was elected M.P. for Knares-

borough, and in 1572 for Morpeth. In 1576 he was made high sheriff of the county palatine. In 1579 he relieved his brother Robert [see BOWES, ROBERT, 1535?–1597], who wished for a short leave of absence from the post of marshal of Berwick. His residence in Berwick was both costly and cumbersome, and after staying there for nearly a year he begged to be relieved. Soon after his return to Streatlam he died, in 1580. The general testimony to his character is given in a contemporary letter to Burghley: 'He was the surest pyllore the queen's majesty had in these parts.'

[The letters of Sir George Bowes dealing with the rebellion are given in Sharp's Memorials of the Rebellion of 1569 (1840), where is also the fullest account of the life of Sir George Bowes drawn from manuscripts at Streatlam, p. 373, &c. See also Cal. State Papers, Dom., Addenda, 1566–79.] M. C.

BOWES, SIR JEROME (*d.* 1616), ambassador, was of a Durham family, 'sprung from John Bowes, who married Anne, daughter of Gunville of Gorleston in Suffolk, who bore the same arms as those of Gonville and Caius College, Cambridge' (*Notes and Queries*, 1st series, xii. 230). His name occurs in the list of those gentlemen who followed Clinton, earl of Lincoln, to France, in his expedition to revenge the fall of Calais in the spring of 1558 (*Calendar of Hatfield MSS.* p. 146). It has been inferred from a casual mention of him by Stowe (p. 669, ed. 1631) that he was a client of the Earl of Leicester in 1571; but he was certainly banished from court six years later for 'slanderous speech' against the favourite (*Cal. State Papers*, Dom., Addenda, 8 Aug. 1577). In his retirement he had leisure to translate from the French an 'Apology for the Christians of France . . . of the reformed religion' (1579), 'whereby the pureness of that religion . . . is plainly shewed, not only by the holy scriptures and by reason, but also by the pope's own canons.' He was restored to favour, and in 1583 was appointed ambassador to Russia. His claim to remembrance mainly rests on his conduct in that capacity. Eighty years later the officers of the customs, fellow-guests with Pepys, 'grave, fine gentlemen,' held discourse with him of Bowes, who, 'because some of the noblemen there would go upstairs to the emperor before him, would not go up till the emperor had ordered those two men to be dragged downstairs, with their heads knocking upon every stair till they were killed.' On demand being made of his sword before entering the presence, he had his boots pulled off and made the emperor wait till he could go in his nightgown, nightcap, and slippers, 'since he might not go as a soldier.' The emperor having ordered a man to leap from a window to certain death, and having been obeyed, Bowes scornfully observed that 'his mistress did set more by, and make better use of, the necks of her subjects.' He then showed what her subjects would do for her sake by flinging down his gauntlet before the emperor, and challenging all the nobility to take it up, in defence of the emperor against his queen, 'for which at this very day the name of Sir Jerome Bowes is famous and honoured there' (*Diary*, 5 Sept. 1662). Milton, in his 'Brief History of Moscovia,' gives an account of this embassy, taken from Hakluyt. He does not mention the foregoing anecdotes, nor those recorded in Dr. Collins's 'Present State of Russia,' 1671 (quoted in *Notes and Queries*, 1st series, x. 210). The czar (Ivan-vasilovitch) is there said to have nailed the French ambassador's hat to his head. Bowes at his next audience put on his hat, and the czar threatened him with the like punishment. Bowes replied that he did not represent the cowardly king of France, but the invincible queen of England, 'who does not vail her bonnet nor bare her head to any prince living.' The czar commended his bravery and took him into favour. Bowes also tamed a wild horse—a task assigned him at the instance of envious courtiers—so effectually that the beast fell dead under him.

Milton's account fully bears out the character assigned to Bowes by Pepys and Collins. He describes the pomp of the reception and the failure of its intended effect on the ambassador, who would not submit to the etiquette prescribing the delivery of his letters into the hands of the chancellor, but insisted upon his right to give them to the emperor himself. The czar, irritated by the assertion of Elizabeth's equality with the French and Spanish kings, lost all patience when Bowes, to his question 'What of the emperor?' replied that her father had the emperor in his pay. He hinted that Bowes might be thrown out of the window, and received for answer that the queen would know how to revenge any injury done to her ambassador. Ivan's anger gave place to admiration, and he renewed his proposal of an alliance with one of the queen's kinsfolk. But he died soon after, and the Dutch anti-English faction came into power. M. Rambaud, in his 'History of Russia,' has blamed Bowes for clumsiness and want of tact; but his diplomacy seems to have been suited to the barbaric court, and his misfortunes are

more justly attributed to the death of the czar. He was imprisoned, threatened, and at last dismissed in a fashion strongly contrasting with the splendour of his reception. When ready to embark he sent back the new emperor's letters and 'paltry present' by 'some of his valiantest and discreetest men,' who safely fulfilled their dangerous mission.

The subsequent life of Bowes has left few traces. In a report by the lord chief baron of the exchequer he appears in a discreditable light, as having fraudulently dealt with a will under which he claimed (the record is undated, but assigned to 1587 in the *Cal. State Papers*, Domestic). On 5 Feb. 1592 a special license is granted him to make drinking-glasses in England and Ireland for twelve years, and in 1597 'the inhabitants of St. Ann, Blackfriars, built a fair warehouse under the isle' for his use, and also gave him 133*l.* (*Notes and Queries*, 1st series, x. 349). He was M.P. for Lancaster 1601 and for Reading 1604. In 1607 he was living at Charing Cross, as appears from a tract: 'A true report of the horrible murder . . . in the house of Sir Jerome Bowes on 22 Feb. 1606' (London, 1607); this tells the story in detail, with many invectives against Brownists, to which sect one of the murderers belonged. The culprits were apprehended on suspicion at Chester, and the lords of the council gave directions for the restitution of their plunder to Bowes (*Hist. MSS. Comm.* 8th Rep. 381).

Bowes was buried on 28 March 1616 in Hackney Church. A portrait of him, painted in the year of his embassy, is in the possession of the Earl of Suffolk at Charlton, and was in the National Portrait Exhibition of 1866 (No. 400 in Cat.)

[Authorities as above.] R. C. B.

BOWES, JOHN (1690–1767), lord chancellor of Ireland, born in 1690, studied law at London with Philip Yorke, subsequently Lord Hardwicke. Bowes was called to the bar in England in 1718, and in Ireland in 1725. He was appointed third serjeant-at-law there in 1727, solicitor-general in 1730, and through government influence became, in 1731, member of parliament for the borough of Taghmon, in the county of Wexford. He was appointed attorney-general for Ireland in 1739, and before a court of high commission at Dublin in that year displayed great eloquence and legal acquirements at the trial of Lord Santry for murder. In 1741 Bowes was appointed chief baron of the exchequer in Ireland. He presided at the remarkable trial at bar between James Annesley and Richard, earl of Anglesey, which continued from 11 Nov. 1743 to the 25th of the same month [see ANNESLEY, JAMES]. A mezzotinto portrait of Bowes as chief baron was executed by John Brooks. Through the influence of Lord Hardwicke, Bowes was promoted to the chancellorship of Ireland in 1757, and took his seat as chairman of the House of Lords in October in that year. In 1758 the title of Baron Bowes of Clonlyon, county Meath, was conferred upon him. Mrs. Delany, who met Bowes in May 1759, wrote that he was at that time 'in a miserable state of health, with legs bigger considerably at the ankle than at the calf.' In the same year, during the riot at Dublin against the proposed union of Ireland with England, Bowes was taken out of his coach by the populace at the entrance to the parliament house, and compelled to swear that he would oppose the measure. Bowes was averse to relaxation of penal laws against Irish catholics. He continued in office as chancellor on the accession of George III. Bowes promoted the publication of an edition of the 'Statutes of Ireland,' which was printed by the government in 1762 under the superintendence of Francis Vesey. According to Vesey, in his dedication of this work to Bowes, the latter had made the high court of chancery 'a terror to fraud, and a protection and comfort to every honest man.' Bowes acted as a lord justice in Ireland in 1765 and 1766. The House of Lords in 1766 passed a resolution to present an address to the crown for a grant of one thousand pounds to Chancellor Bowes, in addition to his customary allowance, in consideration of his 'particular merit and faithful services' during that session of parliament. The faculties of Bowes are stated to have been unimpaired when he died in office as lord justice in July 1767. He was interred in Christ Church, Dublin, where a marble monument, including a bas-relief of his bust, was erected to him in that cathedral by his brother, Rumsey Bowes of Binfield, Berkshire.

MSS. Commission, 1881–84.] J. T. G.

BOWES, JOHN (1804–1874), preacher, was born at Swineside, Coverdale, in Coverham parish, Yorkshire, on 12 June 1804, the son of parents in very humble circumstances. While still in his teens he began preaching,

first among the Wesleyans, then as a primitive methodist minister. About 1830 he separated himself from that body, and, renouncing all party appellations, started a mission at Dundee, where he was joined by Mr. (afterwards Dr.) Jabez Burns. Bowes subsequently left Dundee and went from town to town, preaching in the open air or wherever he could gather a congregation, but he always declined to take part in a service at which money was taken, as he could not think of 'saddling the gospel with a collection.' He was several times prosecuted for street preaching, and often suffered privations in his journeyings. He was an earnest and vigorous platform speaker, ever ready to combat with socialists, freethinkers, or Roman catholics. With like ardour he entered into the advocacy of temperance and of peace, and in 1848 was one of the representatives of England at the Brussels Peace congress. During the greater portion of his life he refused to accept a salary for his ministrations, and he seems to have supported himself and family chiefly by the sale of his own tracts and books. He died at Dundee on 23 Sept. 1874, aged 70.

His publications consist of some 220 tracts; two series of magazines—the 'Christian Magazine' and the 'Truth Promoter'—issued between 1842 and 1874; pamphlets on 'The Errors of the Church of Rome,' 'Mormonism exposed,' 'Second Coming of Christ,' 'The Ministry,' &c.; discussions with Lloyd Jones, G. J. Holyoake, Joseph Barker, C. Southwell, W. Woodman, and T. H. Milner; a volume on 'Christian Union' (1835, 310 pages); a translation by himself of the New Testament (1870); and his 'Autobiography' (1872). His son, Robert Aitken Bowes, was editor of the 'Bolton Guardian,' and died on 7 Nov. 1879, aged 42.

[Autobiography or History of the Life of John Bowes, 1872; Alliance News, 10 Oct. 1874; G. J. Holyoake's History of Co-operation, i. 326; Old South-East Lancashire, 1880, p. 40.] C. W. S.

BOWES, MARMADUKE (*d.* 1585), catholic martyr, is described as a substantial Yorkshire yeoman, of Angram Grange, near Appleton, in Cleveland. He was much divided on religious questions, but refused to declare himself a catholic, although he sympathised strongly with the catholic cause. According to the recollections of Grace, wife of Sir Ralph Babthorpe of Babthorpe, Yorkshire, Bowes was a married man, and 'kept a schoolmaster to teach his children.' The tutor, himself a catholic, was arrested and apostatised. The fellow thereupon reported to the council at York that Bowes, who, according to catholic testimony, was 'no catholic, but a poor schismatic,' was in the habit of entertaining catholic priests. Bowes was summoned to answer this complaint, and was ordered to appear at the August assizes of 1585. There he was indicted, condemned, and hanged, 'and, as it was reported, in his boots and spurs as he came to the town. He died very willingly and professed his faith [i.e. was openly converted to catholicism], with great repentance that he had lived in schism.' He suffered on 17 Nov. 1585 under the recent statute (27 Eliz.) against harbouring priests. Hugh Taylor, a seminary priest, who had stayed with him some time previously, was hanged about the same time.

[Morris's Troubles of our Catholic Forefathers, i. 244, iii. passim; Dodd's Church History, ii. 154; Challoner's Missionary Priests, i. 85.] S. L.

BOWES, SIR MARTIN (1500?–1566), lord mayor of London and sub-treasurer of the Mint, was son and heir of Thomas Bowes of York. Early in life he became a well-known jeweller and goldsmith in London, and had large transactions with the Mint. In 1530 he acted as deputy for Robert Amadas, deputy of Lord Mountjoy, 'keeper of the exchange,' and in April 1533 received a grant of the office of master and worker of the king's moneys, and keeper of the change in the Tower of London with his friend Ralph Rowlet 'in survivorship.' Strype states that in January 1550–1 he surrendered the post of sub-treasurer of the Mint, and was found to be 10,000*l.* in debt to the king. But the government were well enough satisfied with 'his honest and faithful managery of his place' to grant him an annuity of 200 marks in addition to the pension of 66*l.* 13*s.* 4*d.* already granted him by Henry VIII. He was an alderman from 1536, and was elected sheriff of London in 1540 and lord mayor in 1545. In June 1546 he examined the reputed heretic Anne Askew [q. v.] in the Guildhall, and committed her to the Counter (*Narratives of the Reformation*, Camd. Soc. pp. 40–1). He was six times M.P. for London (1547–56), was president of Christ's Hospital (1556), a liveryman of the Goldsmiths' Company, and a generous benefactor to that company, to whom he bequeathed the houses in Lombard Street where Messrs. Glyn's banking-house now stands.

Bowes died on 4 Sept. 1566, and was buried in the church of St. Mary Woolnoth, Lombard Street, beneath 'a goodly marble close tombe under the communion table.' By his will dated 20 Sept. 1562 he left lands to discharge the ward of Langbourne 'of all fiftenes to bee granted to the king by parliament,'

and founded almshouses at Woolwich, where he had a house and lands. He established a yearly sermon on St. Martin's day at the church of St. Mary Woolnoth. A broadsheet entitled 'The epethaphe of syr Marten Bowes' was licensed for the press soon after his death, but no copy is known (ARBER'S *Transcript*, i.)

Bowes was thrice married: (1) to Cicely Elyot; (2) to one Anne , who, dying on 19 Oct. 1553, was buried with heraldic ceremony (22 Oct.) at St. Mary Woolnoth, Lombard Street (*Harl. MS.* 897 f. 13 *b*; *Machyn's Diary*, Camd. Soc. pp. 46, 335); and (3) to Elizabeth Harlow. By his first wife Bowes had two sons, Thomas and Martin. Joanna, a daughter of Bowes, married George Heton of Heton, Lancashire, and was mother of Martin Heton, bishop of Ely (STRYPE, *Annals*, 8vo, iv. 490).

A contemporary portrait of Bowes ('a° 1566 æt. suæ 66') still hangs in the committee-room of Goldsmiths' Hall, and a cup presented by him to the same company is still extant, and has been engraved in H. Shaw's 'Decorative Arts.'

S. Crofts.] S. L.

BOWES, MARY ELEANOR, COUNTESS OF STRATHMORE (1749–1800), was the daughter and sole heiress of George Bowes, M.P., of Streatlam and Gibside in the county of Durham, the head of a family well known in border warfare [see BOWES, SIR WILLIAM]. After some flirtations with the brother of the Duke of Buccleuch, she was married on 24 Feb. 1767 to John Lyon, ninth earl of Strathmore. He was born at Houghton-le-Spring on 16 Aug. 1737, and after his marriage obtained an act of parliament which enabled him to take his wife's surname. In the same year he was elected a representative peer of Scotland. Three sons and two daughters were the fruits of this union. Lord Strathmore died on 7 March 1776, whilst on a voyage to Lisbon. After his death the widow had several suitors, and the Hon. George Grey was thought to be the favoured man. His 'Turkish Tale' is said to have been written for her entertainment. Her conduct was not very discreet, and some paragraphs reflecting on her character appeared in the 'Morning Post,' then controlled by 'Parson Bate' (the Rev. Sir Henry Bate Dudley), who went through a sham duel with another suitor, Andrew Robinson Stoney. This adventurer induced her to marry him on 17 Jan. 1777. Stoney was a bankrupt lieutenant on half-pay, who had wasted the fortune acquired with a previous wife, Hannah Newton of Newcastle. In the following month he assumed his wife's surname of Bowes, and found that when engaged to Mr. Grey the countess had executed a deed securing her estates to herself. This she had made known to Grey, who supped with her the night before her marriage, but not to her husband, who by cruelty induced her to make a deed of revocation. John Hunter was a witness to this document, which was executed at the dinner-table. Two children were born of this marriage, one of whom, William Johnstone Bowes, lieutenant in the royal navy, was lost with Sir Thomas Troubridge in the Blenheim in 1807. Lady Strathmore's influence secured her husband's election as M.P. for Newcastle in 1780. He was nominated in 1777, and petitioned against Sir John Trevelyan, but lost the election. He was also sheriff of Newcastle. Bowes treated his wife with barbarity and was unfaithful to her. She instituted proceedings in the ecclesiastical courts for a divorce, and escaped from her husband, against whom she exhibited articles of the peace in the court of king's bench on 7 Feb. 1785. On 10 Nov. 1786 she left her house in Bloomsbury Square to call on business at a Mr. Foster's in Oxford Street, when she was abducted by a gang of men in the pay of her husband. At Highgate Bowes made his appearance. Lady Strathmore was hurried off to Straithland Castle. After much brutal ill-treatment she was rescued by some husbandmen and taken back to London by her deliverers. Bowes and his colleagues were convicted of conspiracy and sentenced on 26 June 1787 to a fine of 300*l.*, imprisonment of three years, and to find securities for good behaviour for fourteen years. The deed by which she had placed her estates under the control of Bowes was invalidated on the ground of duress on 19 May 1788. The court of delegates made a decree of divorce on 2 March 1789 against A. R. Bowes. On the following day the lord chancellor pronounced in favour of the validity of the deed executed before marriage by Lady Strathmore, who was thus restored to the control of her own fortune. Bowes became in 1790 an inmate of the king's bench prison, but in the following year behaved creditably during a riot in the prison, and his imprisonment was relaxed. Lady Strathmore died at Christchurch, Hampshire, on 28 April 1800, and

was buried in Westminster Abbey, arrayed in 'a superb bridal dress.' Her persecutor survived her until 16 Jan. 1810. There are engraved portraits of both husband and wife. Lady Strathmore wrote: 1. 'The Siege of Jerusalem,' 1774. A few copies only were printed to be given away. 2. 'The Confessions of the Countess of Strathmore: written by herself. Carefully copied from the originals lodged in Doctors' Commons,' London, 1793. This appears to have been extorted by her husband.

A. A.

BOWES, PAUL (*d.* 1702), editor of D'Ewes's 'Journals,' was the second son of Sir Thomas Bowes, knight, of Great Bromley, Essex, the notorious witch-persecutor, by Mary, third daughter of Paul D'Ewes, one of the six clerks in chancery. He was born at Great Bromley, and after being educated in the school at Moulton, Norfolk, was admitted a pensioner of St. John's College, Cambridge, 21 Dec. 1650. He took no degree; indeed, he does not appear to have matriculated. Having fixed on the law for his future profession, he was on 12 May 1654 entered of the Middle Temple, and being called to the bar by that society 10 May 1661, became a bencher on 24 Oct. 1679. In addition to his professional acquirements, he possessed a taste for history and antiquities, and he edited the manuscript work of his celebrated uncle, Sir Simonds D'Ewes, entitled 'The Journals of all the Parliaments during the Reign of Queen Elizabeth, both of the House of Lords and House of Commons,' folio, London, 1682. Other editions appeared in 1693 and 1708. Bowes was elected a fellow of the Royal Society 30 Nov. 1699, and, dying in June 1702, was buried 3 July at St. Dunstan's-in-the-West, Fleet Street. By his wife Bridget, daughter of Thomas Sturges of the Middle Temple, he left issue three sons and two daughters. His will, dated 5 Aug. 1699 (with two codicils dated 17 April and 12 Aug. 1701), was proved by his widow and sole executrix, 16 July 1702. Besides property in Lincolnshire, Suffolk, and Essex, he was possessed, in 1700, of the manor of Rushton, Stokeford, and Binnegar in East Stoke, Dorsetshire. Mrs. Bowes died in 1706. The eldest son, Martin, born in London, was also a pensioner of St. John's College, Cambridge, where he was admitted 16 April 1686, at the age of sixteen, but left without taking a degree. He married Elizabeth, eldest daughter of Edward Thurland of Reigate, Surrey, and afterwards settled at Bury St. Edmund's, Suffolk, where he died in 1726. His second daughter, Ann, became, in 1732, the wife of Philip Broke of Nacton.

[Autobiography and Correspondence of Sir Simonds D'Ewes, ii. 17–18; Admissions to the College of St. John the Evangelist, ed. J. E. B. Mayor, p. 98; Admission Book of Middle Temple; Notes and Queries, 1st ser. ii. 70, vii. 547, 3rd ser. v. 247, 330; St. Dunstan's Register; Hutchins's Dorsetshire, 3rd ed. i. 421; Morant's Essex, i. 250, 442, ii. 36; Wills reg. in P. C. C. 91 Bath, 140 Eedes, 177 Plymouth; Harl. MSS. 374, ff. 315, 316, 1542, f. 148; Page's Supplement to Suffolk Traveller, p. 61; Gent. Mag. iii. 45.] G. G.

BOWES, SIR ROBERT (1495?–1554), military commander and lawyer, son of Sir Ralph Bowes and Marjory Conyers of South Cowton, Yorkshire, studied law in his early years, but his ancestral connection with the borders marked him out for employment in border affairs, where he did active service. In 1536 he was in the royal army against the Pilgrimage of Grace, and carried to the king the petition of the rebels. In 1541 he was specially summoned to London to advise the privy council about Scottish business. In 1542 he accompanied the Duke of Norfolk on his plundering raid into Scotland, and was sent with 3,000 men to harry Jedburgh. He was attacked on his way and was made prisoner, but soon released. In 1550 he was made warden of the east and middle marches, and in this office left a valuable record of his administrative capacity. At the request of the warden general, Henry, marquis of Dorset, he drew up 'A Book of the State of the Frontiers and Marches betwixt England and Scotland.' This record is the chief authority for the state of the border country in the sixteenth century. It describes the nature of the land, its military organisation, the condition of the fortresses, the number of the garrisons, and besides gives much information about the character of the borderers. As Bowes was a lawyer as well as a soldier, he added to his survey of the country a legal treatise on the administration of the complicated system of international law by which disputes between the borderers of England and Scotland were settled. His treatise of 'The Forme and Order of a Day of Truce' explains the

formalities to be used in the execution of justice in the combined court of the wardens of England and Scotland. We are not surprised that a man of such powers of administration was needed for weighty matters. In June 1551 he was one of the commissioners appointed to make a convention with Scotland. In the following September he was made a member of the privy council, and next year he was appointed master of the rolls. His signature is affixed as one of the witnesses of Edward VI's will, and he was a member of the short-lived council of the Lady Jane Grey. The council soon found its position to be impossible. On 19 July 1553 Bowes signed a letter to Lord Rich on Jane's behalf. On 20 July he signed an order to the Duke of Northumberland bidding him disarm (*Queen Jane and Queen Mary*, Camd. Soc. 1851, p. 109). After the accession of Queen Mary Bowes held office as master of the rolls for two months, and then resigned of his own accord. He had been M.P. for Yorkshire 1542, for Newcastle-on-Tyne 1545, and for Middlesex in 1547 and 1553. In 1554 the privy council sent him to Berwick to assist Lord Conyers in organising the defences, and he received a grant of 100*l.* Soon after his return he died. He married Alice, daughter of Sir James Metcalfe of Nappa, near Richmond, but left no surviving children.

Bowes's 'Survey of the Border' is printed in Hodgson's 'Northumberland,' ii. pt. v. 171, &c., where, besides the survey of 1551, there is given in the note an earlier one of 1542 made by Bowes and Sir Ralph Elleker. The latter one is more detailed and is more full of interest. It is also printed in 'Reprints of Rare Tracts,' vol. iv. Newcastle, 1849, and in a private issue of the Border Club, 1838. The 'Form of Holding a Day of Truce' is partially printed in the same issue of the Border Club, and extracts are given in Raine's 'North Durham,' xxii. There are three manuscripts, one in the Record Office (State Papers Edward VI, iv. No. 30), and two in the British Museum (Caligula B. viii. f. 106, and Titus F. xiii. f. 160). The last is most perfect.

[Foss's Judges of England, v. 354; Sharp's Memorials of the Rebellion, 370; Surtees's Durham, iv. 112.] M. C.

BOWES, ROBERT (1535?–1597), English ambassador to Scotland, fifth son of Richard Bowes and Elizabeth Aske [see BOWES, ELIZABETH], married first Anne, daughter of Sir George Bowes of Dalden, and in 1566 Eleanor, daughter of Sir Richard Musgrave of Eden Hall. He served under his father in the defence of the borders. In 1569 he was sheriff of the county palatine of Durham, and helped his brother, Sir George Bowes [q. v.], to hold Barnard Castle against the rebel earls. Afterwards he was sent with a troop of horse to protect the west marches. He was M.P. for Knaresborough 1562–7, for Appleby 1572, and Cumberland 1584–5, 1586–7, and 1588–9. In 1575 he became treasurer of Berwick, and had dealings with the Scottish court. In 1577 he was appointed ambassador in Scotland, where he had a difficult task to perform. His object was to counteract the influence of France, retain a hold on James VI, keep together a party favourable to England, and promote disunion among the Scottish nobles. His letters to Burghley, Walsingham, and Leicester are of the greatest importance for a knowledge of Scottish affairs between 1577 and 1583. In 1578 he managed by his tact to compose a quarrel between Morton and the privy council which threatened to plunge Scotland into civil war (BOWES's *Correspondence*, 6, 11). In 1581 he was busily employed in endeavouring to counteract the growing influence of Esme Stewart, lord of Aubigné, over James VI. He witnessed the events which led to the raid of Ruthven and D'Aubigné's fall. He tried hard to gain possession of the casket letters, which after Morton's death were said to have come into the hands of the Earl of Gowrie, but his attempts failed. He was weary of his arduous task in Scotland, and managed to procure his recall in 1583. But he still held the post of treasurer of Berwick, and was often employed on diplomatic missions in Scotland, though the affairs were not afterwards of so much importance. Like his brother, Sir George, he worked for the penurious Elizabeth at his own cost, and was rewarded by no substantial tokens of the royal gratitude. He wrote in 1596: 'I shall either purchase my liberty, or at least lycence to come to my house for a tyme to put in order my broken estate before the end of my dayes.' This satisfaction was, however, denied him. Elizabeth held him at his post, and he died in Berwick in 1597.

[The letters of Robert Bowes are published by Stevenson, 'The Correspondence of Robert Bowes, of Aske, Esquire' (Surtees Soc. 1842). For his life see Stevenson's Preface, and Sharp's Memorials of the Rebellion, p. 30.] M. C.

BOWES, THOMAS (*fl.* 1586), translated into English the first and second parts of the 'French Academy,' a moral and philosophical treatise written by Peter of Primaudaye, a French writer of the latter half of the sixteenth century. The translation of the first

part was published in 1586, and seems to have met with immediate popularity, for a fifth edition was issued in 1614. Along with the third edition in 1594 was published the translation of the second part. To both parts Bowes prefixes a letter to the reader, and in the longer of the two, prefixed to the second part, J. Payne Collier detects allusions to Marlowe, Greene, and Nash. The allusion to Marlowe can scarcely be maintained if the second part appeared for the first time in the 1594 edition; for Marlowe, who, if indeed he is meant, is alluded to as living, died in 1593. Bowes is denouncing the prevalence of atheistic and licentious literature, and after giving as an instance Ligneroles, a French atheist, goes on to quote from English imitators, but gives no names. He ends by denouncing lying romances about Arthur and Huon of Bordeaux. J. Payne Collier, in the 'Poetical Decameron,' discusses the whole passage. There is an edition of the third part of the 'Academy,' englished by R. Dolman, published in 1601. Strype mentions a certain Thomas Bowes, M.A., of Queens' College, Cambridge, whom some have identified with the translator.

[Brit. Mus. Catalogue; Collier's Poetical Decameron, ii. 271; Collier's Extracts from Registers of Stationers' Company, ii. 198; Strype's Annales Reform. iii. 1, 645, Oxford, 1824; Nouvelle Biographie Générale, xxix. n. article 'La Primaudaye.'] R. B.

BOWES, Sir WILLIAM (1389-1460?), military commander, was the founder of the political importance of his family. He was the son of Sir Robert Bowes, and of Maude, lady of Dalden. He married Jane, daughter of Ralph, lord Greystoke. His wife died in the first year of her marriage, whereon 'he toke much thoght and passed into France' about the year 1415. He showed much gallantry in the French war, and so commended himself to John, duke of Bedford, whom he served as chamberlain. He fought at the battle of Verneuil, where he was knighted. While in France he was impressed with the architecture of the country, and sent home plans for rebuilding his manor house at Streatlam, near Barnard Castle. He returned from France after seventeen years' service and superintended his buildings at Streatlam, which unfortunately have been entirely destroyed. After his return he took part in the government of the borders, as warden of the middle marches and governor of Berwick. He died at a good old age, and is known in the family records as 'Old Sir William.'

[Surtees's Durham, iv. 102; Leland's Itinerary (ed. 1744), iv. 9.] M. C.

BOWET, HENRY, LL.D. (*d.* 1423), bishop of Bath and Wells, and subsequently archbishop of York, was apparently a member of a knightly family that, about his time, migrated from the north to the eastern counties (Blomefield, *Hist. of Norfolk*, x. 434-5; cf. *Harleian MS.* 6164, 92 *b*). His father was buried at Penrith, his mother in Lincolnshire. His kinsfolk mostly lived in Westmoreland (*Testamenta Eboracensia*, i. 398). The date and place of his birth, the university in which he studied civil and canon law, and of which he became a doctor, are, with the time of his ordination, equally unknown. He seems to have practised law in the ecclesiastical courts (Adam of Usk, p. 63), and to have become clerk to the warlike Bishop Spencer of Norwich, whom he accompanied on his unlucky crusade to Flanders. On the bishop's impeachment in 1383, after his return, Bowet gave evidence before parliament that tended to clear his patron of the charge of receiving bribes from the French (*Rot. Parl.* iii. 152 *a*). A few years later he appears at Rome as a chaplain of Urban VI and auditor of causes in the court of the apostolic chamber (Rymer, vii. 569). In 1385 he was the only Englishman at the papal court who had courage to remain with Urban after the riots at Luceria, in which an Englishman named Alleyn was slain (Walsingham, ii. 124). Early in February 1388 he acted as Richard II's agent in an important negotiation with the pope, but had not sufficient powers from his master to complete the affair. He must then have returned to England, where already in 1386 he had been appointed archdeacon and prebendary of Lincoln. (A namesake was archdeacon of Richmond in the year 1418; *Test. Ebor.* i. 390.) That he was high in the confidence of Richard II is shown by his being excepted in 1388 by the Merciless Parliament from the pardon which they issued at the end of their work of proscribing the king's friends (*Rot. Parl.* iii. 249 *b*). It is not easy to understand Bowet's subsequent movements. He seems to have been primarily anxious for advancement, and with that object to have transferred his services to the house of Lancaster. In 1393 he was, with others, appointed to negotiate with the king of Castile, still on bad terms with England (Rymer, vii. 743, mispaged 739). On 19 July 1397 Bowet was made chief justice of the superior court of Aquitaine (*ib.* viii. 7), and on 23 July 1398 constable of Bordeaux (*ib.* viii. 43). In the latter year, Henry of Bolingbroke, Bowet's patron, was banished from England, but obtained permission to appoint a proxy to receive his inheritance in the event of the death of his

father, Lancaster. Bowet seems to have assisted Henry in obtaining this. When Lancaster died, however, in January 1399, Richard revoked his grant, and procured Bowet's condemnation in the committee of parliament at Shrewsbury. As the counsellor and abettor of Bolingbroke, Bowet was declared a traitor, and sentenced to execution; this sentence, however, was commuted into perpetual banishment in consideration of his clergy (*Rot. Parl.* iii. 385). His archdeaconry was taken away from him and conferred on another. After the accession of Henry IV, Bowet was rewarded for his fidelity by restoration to his old preferment at Lincoln, along with the profits accruing during his deprivation; by a prebend at London (1399) and another at York (1400); by grants of land, houses, rents, and tolls in Aquitaine; and by his appointment in May 1400 as one of the four regents to whom the new king entrusted the government of his possessions in southern France (RYMER, viii. 141). His presence being required in England, where he became, says Dr. Stubbs, Henry's confidential agent, he was allowed to appoint a deputy to discharge his duties in Aquitaine. In 1400 a majority of the chapters of Bath and Wells elected him at the royal request as their bishop, but Boniface IX provided another minister of Henry's, Richard Clifford, keeper of the privy seal, for the vacant see. A difficulty arose, although Clifford, at the king's command, declined to accept the illegal preferment. At last matters were settled by the death of the bishop of Worcester. Clifford was transferred to that see, and the pope now issued a provision appointing Bowet to Wells (19 Aug. 1401). He was consecrated at St. Paul's on 20 Nov. (ADAM OF USK, p. 63; WALSINGHAM, ii. 247; *Annales Ric. II et Hen. IV*, 334; *Anglia Sacra*, i. 571).

The appointment of a suffragan perhaps showed that Bowet was still mainly devoted to cares of state. On 27 Feb. 1402 he became treasurer, though he did not hold that post very long. He was constantly employed, however, by Henry in various capacities. In 1403, on a special embassy, he concluded a truce with France (TROKELOWE, *Annales Hen. IV*, p. 372). In 1403, 1404, 1406, and 1407, he was a trier of petitions (*Rot. Parl.* iii.) In 1404 he was one of the king's council nominated in parliament. In 1406 he swore to observe Henry's settlement of the succession. His name appears constantly in the proceedings of the privy council. In 1406 he accompanied the court to Lynn, and was thence despatched on an important mission to Denmark, to escort Philippa, the king's daughter, to the home of her intended husband Eric, the heir of the famous Margaret, who had united the three Scandinavian kingdoms. His report of the young king's character and the condition of his country is full of interest (*Annales Hen. IV*, p. 420).

Bowet had scarcely returned from his Danish embassy when he was translated to York by papal provision, after the archbishopric, vacant since the execution of Scrope, had been unoccupied for two years and a half. He was enthroned on 9 Dec. 1407. With increasing age and with important duties in the north Bowet seems henceforth to have had less to do with the court. He was still often in parliament, where in 1413, 1414, 1415, and 1416 he was again trier of petitions, but he was employed on no more embassies, and his name appears less often in the proceedings of the council. It is remarkable that the registers of the archbishopric, till then full of documents of public interest, assume a new aspect under Bowet, and henceforth contain little but the ordinary proceedings of the diocese (RAINE, *Northern Registers*, p. xiv, Rolls Ser.) The inventory of his property (printed in 'Testamenta Eboracensia,' iii. 69) shows him to have been possessed of very considerable wealth. He acquired a great reputation for a hospitality and sumptuous housekeeping that consumed eighty tuns of claret yearly. He built the great hall at Cawood and a new kitchen at Ottley, and was a liberal benefactor to his cathedral (GODWIN, *De Præsulibus*; RAINE, *Fabric Rolls of York Minster*). In 1411 he had a suit against the archbishop of Canterbury with respect to the right of visitation of Queen's College, Oxford, which seems to have resulted in a compromise (*Rot. Parl.* iii. 652 *b*).

In 1410 he showed his zeal against Lollardy by acting as one of Arundel's assistants at the trial of Badby (FOXE, iii. 235), and in 1421 he wrote a strong letter to the king against another heretic named John Tailor or Bilton (*MS. Harl.* 421). It was not until 1414 that he saw the last of a troublesome suit with Sir W. Farenden, which had originated when he was regent of Guienne. He was one of Henry IV's executors, and sat on a commission appointed to pay that monarch's debts. He had himself lent Henry various sums of money, sometimes at least on good security. In 1417 the Scots profited by Henry V's absence in Normandy to invade the borders. Bowet, though advanced in years and so infirm that he could only be carried in a litter, resolved to accompany the army of defence with his clergy. His bravery, patriotism, and loyalty largely encouraged

the English to victory. He died on 20 Oct. 1423, and was buried at the east end of York minster, opposite the tomb of his ill-fated predecessor.

[Anglia Sacra; Walsingham; Rymer; Rolls of Parliament; Proceedings of Privy Council; Annales Ric. II et Hen. IV, ed. Riley; Adam of Usk, ed. Thompson; Memorials of Henry V, ed. Cole; Gesta Henrici V, ed. Williams; Hingeston's Royal and Historical Letters under 'Henry IV;' Torr's MS. collections at York are often referred to as a great source of information; there are original brief lives of Bowet by a Canon of Wells (Anglia Sacra, i. 571), and by the continuator of Thomas Stubbs; short modern lives are to be found in Godwin's De Præsulibus and Cassan's Bishops of Bath and Wells; Le Neve's Fasti Ecclesiæ Anglicanæ; Drake's Eboracum. Bowet's will is printed in Raine's Testamenta Eboracensia (Surtees Soc.), i. 398–402.] T. F. T.

BOWIE, JAMES (*d.* 1853), botanist, was born in London, and entered the service of the Royal Gardens, Kew, in 1810. In 1814 he was appointed botanical collector to the gardens in conjunction with Allan Cunningham. They went to Brazil, where they remained two years, making collections of plants and seeds. In 1817 Bowie was ordered to proceed to the Cape; here he worked with much energy, taking journeys into the interior, and sending home large collections of living and dried plants, as well as of drawings; the last are in the Kew herbarium, the dried specimens for the most part in the British Museum. A vote of the House of Commons having reduced the sum granted for botanical collectors, Bowie was recalled in 1823, taking up his residence at Kew. After four years of inactivity he set out again for the Cape, where he was for some years gardener to Baron Ludwig of Ludwigsberg. He became a correspondent of Dr. Harvey, who, in dedicating to him the genus *Bowiea*, says 'by many years of patient labour in the interior of South Africa he enriched the gardens of Europe with a greater variety of succulent plants than had ever been detected by any traveller.' He left his employment in or before 1841, and made journeys into the interior to collect plants for sale; his habits, however, were such as to interfere with his prospects, and he died in poverty in 1853.

[Gardeners' Chronicle, new ser. xvi. 568 (1881).] J. B.

BOWLBY, THOMAS WILLIAM (1817–1860), 'Times' correspondent, son of Thomas Bowlby, a captain in the royal artillery, by his wife, a daughter of General Balfour, was born at Gibraltar, and when very young was taken by his parents to Sunderland, where his father entered on the business of a timber merchant. Young Bowlby's education was entrusted to Dr. Cowan, a Scotch schoolmaster, who had settled in Sunderland. After leaving school he was articled to his cousin, Mr. Russell Bowlby, solicitor, Sunderland. On completion of his time he went to London and spent some years as a salaried clerk in the office of a large firm in the Temple. In 1846 he commenced practice in the city as junior partner in the firm of Lawrence, Crowdy, & Bowlby, solicitors, 25 Old Fish Street, Doctors' Commons, and for some years enjoyed a fair practice; but the profession of the law was not to his taste, and he made many literary acquaintances. Although remaining a member of the firm until the year 1854, he went to Berlin as special correspondent of the 'Times' in 1848. Bowlby married Miss Meine, the sister of his father's second wife, and on the death of her father Mrs. Bowlby became possessed of a considerable fortune. During the railway mania Bowlby got into pecuniary difficulties, which caused him to leave England for a short time, but he made arrangements for the whole of his future earnings to be applied in liquidation of his debts. On returning to England he was for some time associated with Jullien, the musical director and composer. He next repaired to Smyrna, where he was employed for a while in connection with the construction of a railway. In 1860 he was engaged to proceed to China as the special correspondent of the 'Times.' Lord Elgin and Baron Gros were fellow-passengers with him in the steamship Malabar, which was lost at Point de Galle on 22 May. His narrative of this shipwreck is an admirable piece of work. His various letters from China afforded much information and pleasure to the readers of the 'Times.' After the capture of Tien-tsin on 23 Aug. 1860, Bowlby accompanied Admiral Hope and four others to Tang-chow to arrange the preliminaries of peace; here they were treacherously captured and imprisoned by the Tartar general, San-ko-lin-sin. Bowlby died from the effects of the ill-treatment he received on 22 Sept. 1860; his body was afterwards given up by the Chinese, and buried in the Russian cemetery outside the An-tin gate of Pekin on 17 Oct. His age was about forty-three; he left a widow and five young children.

[Gent. Mag. 1861, pp. 225–6; Times, 26, 27, 30 Nov., 10, 11, 15, 17, 19, 25 Dec. 1860; Illustrated London News, with portrait, xxxvii. 615–616 (1860); Annual Register, 1860, pp. 265–71; Boulger's History of China (1884), iii. 499–521.] G. C. B.

BOWLE or **BOWLES, JOHN** (*d.* 1637), bishop of Rochester, a native of Lancashire, was educated at Trinity College, Cambridge, where he obtained a fellowship. He proceeded M.A. (1603), D.D. (1613), and was incorporated M.A. of Oxford on 9 July 1605, and D.D. on 11 July 1615. He was household chaplain to Sir Robert Cecil, first earl of Salisbury, and attended him through his last illness in 1612. After the earl's death Bowle addressed to Dr. Mountague, bishop of Bath and Wells, 'a plaine and true relation of those thinges I observed in my Lord's sickness since his goeing to Bath,' which is printed in Peck's 'Desiderata,' pp. 205–11. Bowle held at one time the living of Tilehurst, Berkshire. He became dean of Salisbury in July 1620, preached before the king and parliament on 3 Feb. 1620–1, and was elected bishop of Rochester on 14 Dec. 1629. He died 'at Mrs. Austen's house on the Banckside the 9th of October 1637, and his body was interred in St. Paul's ch., London, in the moneth following.' Archbishop Laud, in his account of his archiepiscopate addressed to Charles I for 1637, complained that Bowle had been ill for three years before his death, and had neglected his diocese. He was the author of a 'Sermon preached at Flitton in the countie of Bedford at the funerall of Henrie [Grey], Earle of Kent,' London, 1614, and of a 'Concio ad . . . Patres et Presbyteros totius Provinciæ Cantuar. in Synodo Londini congregatos, habita . . . 1620, Jan. 31,' London, 1621. Bowle married Bridget, a sister of Sir George Copping, 'of the crown office,' by whom he had a son (Richard) and a daughter (Mary).

[Wood's Fasti, ed. Bliss, pp. 308, 364; Le Neve's Fasti, ed. Hardy, ii. 517, 673; Cal. State Papers, Domestic, 1620–37; Nichols's Progresses of James I, ii. 448; Laud's Works, v. 349; Brit. Mus. Cat.] S. L.

BOWLE, JOHN (1725–1788), writer on Spanish literature, and called by his friends Don Bowle, was descended from Dr. John Bowle, bishop of Rochester [q. v.] He was born on 26 Oct. 1725. He was educated at Oriel College, Oxford, and became M.A. in 1750. He was elected F.S.A. in 1776. Having entered orders, he obtained the vicarage of Idmiston (spelt Idemeston in his 'Don Quixote,' Salisbury, 1781, 6 vols. 4to), in Wiltshire, where he died on 26 Oct. 1788, the day of his birth, aged 63.

Bowle was an ingenious scholar of great erudition and varied research in obscure and ancient literature. In addition to his knowledge of the classics, he was well acquainted with French, Spanish, and Italian, and had accumulated a large and valuable library, sold in 1790. He was a member of Dr. Johnson's Essex Head Club. He preceded Dr. Douglas in detecting Lauder's forgeries, and had, according to Douglas, the justest claim to be considered their original discoverer. He published in 1765 miscellaneous pieces of ancient English poetry, containing Shakespeare's 'King John,' and some of the satires of Marston. In 1777 he printed 'a letter to the Rev. Dr. Percy concerning a new and classical edition of "Historia del valoroso Cavallero Don Quixote de la Mancha," to be illustrated by annotations and extracts from the historians, poets, and romances of Spain and Italy, and other writers, ancient and modern, with a glossary and indexes in which are occasionally interspersed some reflections on the learning and genius of the author, with a map of Spain adapted to the history, and to every translation of it,' 4to. He gave also an outline of the life of Cervantes in the 'Gentleman's Magazine,' 1781, li. 22, and circulated proposals to print the work by subscription. It appeared in 1781, in six 4to vols., the first four containing the text, the fifth the notes, and the sixth the indexes. The whole work is written in Spanish. Its reception was unfavourable, except in Spain, where it called forth hearty approval from many of the best writers of the day, including Don Antonio Pellicer, the earliest and best commentator on 'Don Quixote.' In 1784 Bowle complained in the 'Gentleman's Magazine' of his critics, and in 1785 he published 'Remarks on the extraordinary conduct of the Knight of the Ten Stars and his Italian Squire, to the editor of Don Quixote. In a letter to J. S., D.D.,' 8vo. The pamphlet was directed against Joseph Baretti, who retorted in an anonymous pamphlet full of bitter personalities, entitled 'Tolondron, speeches to John Bowle about his edition of Don Quixote,' 8vo, 1786. Bowle wrote frequently under various signatures in the 'Gentleman's Magazine,' contributed to Granger's 'History,' Steevens's edition of 'Shakespeare,' 1778, and Warton's 'History of Poetry.' In 'Archæologia,' vi. 76, are his remarks on the ancient pronunciation of the French language; in vii. 114, on some musical instruments mentioned in 'Le Roman de la Rose;' in viii. 67, on parish registers; and in viii. 147, on playing cards.

[Nichols's Lit. Anecd. ii. 553, iii. 160, 670, vi. 182, viii. 660, 667; Watt's Bibl. Brit.; Gent. Mag. liv. lv. lviii. 1029; Brit. Mus. Cat.; Nichols's Lit. Illust. vi. 382, 402, 403, 411, vii. 592, viii. 165, 169, 193, 274; Granger's Letters, 1805, pp. 37–47; Nicolas's Life of Ritson, p. xxii; Epistolarium Bowleanum, manuscript in the possession of A. J. Duffield, Esq.] J. M.

BOWLER, THOMAS WILLIAM (*d.* 1869), landscape painter, was born in the Vale of Aylesbury. His general talent was noticed by Dr. Lee, F.R.S., who obtained for him the office of assistant-astronomer under Sir T. Maclear at the Cape. After four years, he resigned his post at the observatory, and established himself successfully in Cape Town as an artist and teacher of drawing. He painted a panorama of the district, and published, in 1844, 'Four Views of Cape Town;' in 1854, 'South African Sketches,' a series of ten lithographs of scenes at the Cape of Good Hope; and in 1865, 'The Kafir Wars,' a series of twenty views, with descriptive letterpress by W. R. Thomson. In 1857 he exhibited at the rooms of the Society of British Artists a drawing of the Royal Observatory, Cape Town; and in 1860, at the Royal Academy, two views of Cape scenery. In 1866 he visited Mauritius and made a number of drawings, but a fever there permanently weakened his health, and coming to England he died from an attack of bronchitis, 24 Oct. 1869.

His lithographs are somewhat in the style of Harding, and show facility in handling the chalk and some power of composition.

BOWLES, CAROLINE ANNE. [See SOUTHEY.]

BOWLES, EDWARD (1613-1662), presbyterian minister, was born in February 1613 at Sutton, Bedfordshire. His father, Oliver Bowles, B.D., minister of Sutton, was one of the oldest members of the Westminster Assembly, and author of: 1. 'Zeale for God's House quickned: a Fast Sermon before the Assembly of the Lords, Commons, and Divines,' 1643, 4to. 2. 'De Pastore Evangelico,' 1649, 4to; 1655 and 1659, 16mo (published by his son, and dedicated to the Earl of Manchester). Bowles was educated at Catherine Hall, Cambridge, under Sibbes and Brownrigge. He was chaplain to the second Earl of Manchester, and after the surrender of York, 15 July 1644, was appointed one of the four parliamentary ministers in that city, officiating alternately at the minster and Allhallows-on-the-Pavement. On 10 June 1645 the House of Commons voted him 100*l.* as one of the ministers in the army. His preaching is said to have been extremely popular, even with hearers not of his own party. Among the presbyterians of the city and district he was the recognised leader; nay, it is said that, without being a forward man, 'he ruled all York.' On 29 Dec. 1657 he wrote to Secretary Thurloe, urging the suppression of preachers who advocated the observance of Christmas. Matthew Pool, the commentator, thought more of his judgment than of any other man's. He was a man of some humour. In 1660 he was active in the restoration of the monarchy, accompanying Fairfax to Breda, and incurring some odium with his friends for over-zeal. He did not, however, flinch from his presbyterianism, though report said that the deanery of York was offered to him. Bradbury relates that Bowles, on leaving London after the Restoration, said to Albemarle, 'My lord, I have buried the good old cause, and I am now going to bury myself.' Excluded from the minster, he continued to preach at Allhallows, and subsequently at St. Martin's, besides conducting a Thursday lecture at St. Peter's. The parishioners of Leeds petitioned the king in April 1661 for his appointment to that vicarage, but it was given to John Lake (afterwards bishop of Chichester). Efforts were made (Calamy says by Tillotson and Stillingfleet) to induce him to conform; but when asked in his last illness what he disliked in conformity, he replied 'The whole.' Calamy reckons him among the silenced ministers, but he died just before the act came into force, and was buried on 23 Aug. 1662. His wife, who predeceased him, was a granddaughter of Matthew Hutton, archbishop of York, and widow of John Robynson of Dighton. Bowles's portrait (which has been photographed) was in 1869 the property of Leonard Hartley of Middleton Tyas, a collateral descendant. He published: 1. 'The Mystery of Iniquity yet working,' &c., 1643, 4to (he means popery). 2. 'Manifest Truth,' 1646, 4to (a narrative of the proceedings of the Scotch army, and vindication of the parliament, in reply to a tract called 'Truths Manifest'). 3. 'Good Counsell for Evil Times,' 1648, 4to (sermon [Eph. v. 15, 16] at St. Paul's, before the Lord Mayor of London). 4. 'The Dutie and Danger of Swearing,' 1655 (sermon at York). 5. 'A Plain and Short Catechism' (anon), 8th edit. 1676, 8vo (reprinted in Calamy's 'Continuation' and in James's 'History'). The will, dated 9 July 1707, codicil 21 Aug. 1710, of the presbyterian Dame Sarah Hewley (born 1627, died 23 Aug. 1710), widow of Sir John Hewley, knt. (died 1697), left a large estate to found several trusts for almshouses, preachers, and students; a condition of admission to the almshouses being the repeating of Mr. Edward Bowles's catechism. The trust having descended to anti-trinitarian hands, a suit was begun on 18 June 1830, which ended in the removal of the trustees by a judgment of the House of Lords given on 5 Aug. 1842.

Much use was made on both sides of the doctrinal statements and omissions in the catechism. This suit was the immediate occasion of the passing of the Dissenters' Chapels Act, 1844.

Chapel, York, 1869, pp. 6 sq.; James's Hist. of Presb. Chapels and Charities, 1867, pp. 227 seq., 733 seq.; Cole's MS. Athenæ Cantab.; extracts from Bowles's will, in the Prerogative Court, York.] A. G.

BOWLES, Sir GEORGE (1787–1876), general, colonel 1st West India Regiment (1855), and lieutenant of the Tower of London, was second son of W. Bowles of Heale House, Wiltshire, and was born in 1787. He entered the army as ensign in the Coldstream guards in 1804, and served with that corps in the north of Germany in 1805–6, at Copenhagen in 1807, in the Peninsula and south of France from 1809 to 1814, excepting the winters of 1810 and 1811, and in the Waterloo campaign, being present at the passage of the Douro, the battles of Talavera, Salamanca, and Vittoria, the capture of Madrid, the sieges of Ciudad Rodrigo, Badajos, Burgos, and San Sebastian, the passages of the Nive, Nivelle, and Adour, the investment of Bayonne, the battles of Quatre Bras and Waterloo, and the occupation of Paris. When a brevet-major he served as military secretary to the Duke of Richmond in Canada in 1818–20, and as deputy adjutant-general in the West Indies from 1820 to 1825. While with his battalion of the Coldstreams in Canada, as lieutenant-colonel and brevet-colonel, he commanded the troops in the Lower Province during the rebellion of 1838. He retired on half-pay in 1843. In 1845 Bowles, who while on half-pay had been comptroller of the viceregal household in Dublin, was appointed master of the queen's household, in succession to the Hon. C. A. Murray. A good deal of invidious feeling had arisen in connection with the duties of the office, and Bowles's appointment is said to have been recommended by the Duke of Wellington. He was promoted major-general in 1846, lieutenant-general 1854, and general 1862, and on resigning his appointment in the royal household, owing to ill-health, in 1851, was made K.C.B. and appointed lieutenant of the Tower of London. He became G.C.B. 1873. Bowles died unmarried at his residence in Berkeley Street, Berkeley Square, London, on 21 May 1876, in the ninetieth year of his age.

BOWLES, JOHN (*d.* 1637). [See Bowle.]

BOWLES, PHINEAS (*d.* 1722), major-general, is first mentioned in the 'Military Entry Books' in January 1692, when he was appointed captain-lieutenant in the regiment of Colonel W. Selwyn, since the 2nd Queen's, then just arrived in Holland from Ireland (*Home Off. Mil. Entry Books*, vol. iii.) In July 1705 he succeeded Colonel Caulfield in command of a regiment of foot in Ireland, with which he went to Spain and served at the siege of Barcelona. According to memoranda of General Erle (*Treas. Papers*, vols. cvi. cxvi.), Bowles's was one of the regiments broken at the bloody battle of Almanza. It appears to have been reorganised in England, as Narcissus Luttrell mentions Bowles's arrival in England on parole, and afterwards that he was at Portsmouth with his regiment, awaiting embarkation with some troops supposed to be destined for Newfoundland. Instead, he again proceeded with his regiment to Spain, where it was distinguished at the battle of Saragossa in 1710, and was one of the regiments surrounded in the mountains of Castile, and made prisoners after a gallant resistance, in December of the same year. After this Bowles's regiment disappeared from the rolls, and its colonel remained unemployed until 1715, when, as a brigadier-general, he was commissioned to raise a corps of dragoons, of six troops, in Berkshire, Hampshire, and Buckinghamshire, to rendezvous at Reading. This corps is now the 12th lancers. In 1719 Bowles was transferred to the colonelcy of the 8th dragoons. He died in 1722.

Phineas Bowles, lieutenant-general, son of the above, served long as an officer in the 3rd foot guards, in which he became captain and lieutenant-colonel in 1712 (*Home Off. Mil. Entry Books*, vol. viii.) He made the campaigns of 1710–11 under the Duke of Marlborough, and was employed in Scotland in 1715 during the suppression of the Earl of Mar's rebellion. In 1719, being then lieutenant-colonel, 12th dragoons, he succeeded his father as colonel, and commanded the regiment in Ireland until 1740. He became a brigadier-general in 1735, major-general in 1739, and a lieutenant-general 27 May 1745. He was also governor of Londonderry (Chamberlayne, *Magn. Brit. Not.* 1745),

and colonel of the 7th horse, now the 6th dragoon guards or carabineers. He died on 12 Dec. 1746. He was whig member of parliament for Bewdley in February 1735-41.

[Luttrell's Relation of State Affairs, 1857, vi. 213, 427; Home Office Mil. Entry Books, vols. iii. and viii.; Treasury Papers, cvi. 57, cxvi. 32; Cannon's Hist. Records, 6th Dragoon Guards, 8th Hussars, 12th Lancers.] H. M. C.

BOWLES, WILLIAM (1705-1780), naturalist, was born near Cork. He gave up the legal profession, for which he was destined, and in 1740 went to Paris, where he studied natural history, chemistry, and metallurgy. He subsequently travelled through France, investigating its natural history and mineral and other productions. In 1752, having become acquainted with Don Antonio de Ulloa, afterwards admiral of the Spanish fleet, Bowles was induced to enter the Spanish service, being appointed to superintend the state mines and to form a collection of natural history and fit up a chemical laboratory. He first visited the quicksilver mines of Almaden, which had been seriously damaged by fire, and the plans he suggested were successfully adopted for their resuscitation. He afterwards travelled through Spain, investigating its minerals and natural history, living chiefly at Madrid and Bilbao. He married a German lady, Anna Rustein, who was pensioned by the king of Spain after her husband's death. Bowles is described as tall and fine-looking, generous, honourable, active, ingenious, and well informed. His society was much valued in the best Spanish circles. He died at Madrid 25 Aug. 1780.

Bowles's principal work was 'An Introduction to the Natural History and Physical Geography of Spain,' published in Spanish at Madrid 1775. It is not systematically arranged, but has very considerable value as being the first work of its kind. The second edition (1782) was edited by Don J. N. de Azara, who rendered considerable assistance to the author in preparing the first edition. It was translated into French by Vicomte de Flavigny (Paris, 1776). An Italian edition, much enlarged by Azara, then Spanish ambassador at Rome, was published at Parma in 1784. Bowles was also the author of 'A Brief Account of the Spanish and German Mines' (*Phil. Trans.* lvi.); of 'A Letter on the Merino Sheep,' &c. (*Gent. Mag.* May and June 1764); and of 'An Account of the Spanish Locusts' (Madrid, 1781). Sir J. T. Dillon's 'Travels through Spain' (London, 1781) is very largely an adaptation of Bowles.

[Preface to English translation of Bowles's Treatise on Merino Sheep, London, 1811.] G. T. B.

BOWLES, WILLIAM LISLE (1762-1850), divine, poet, and antiquary, was born on 24 Sept. 1762 at King's Sutton, Northamptonshire, of which his father was the vicar. Both his father and mother, as he tells us in his autobiographical preface to 'Scenes and Shadows of Days Departed,' were descended from old and much-respected families. In 1776 he was placed at Winchester School, under Dr. Joseph Warton, who, discerning his taste for poetry and general literature, did his best to foster it by encouragement and training. On the death of his old master, Bowles wrote a monody which expresses his regard for his character. On leaving Winchester he was elected in 1781 a scholar of Trinity College, Oxford, of which Joseph Warton's brother, Thomas Warton—professor of poetry at Oxford and eventually poet laureate—was the senior fellow. In 1783 the young student, by his poem entitled 'Calpe Obsessa, or the Siege of Gibraltar,' carried off the chancellor's prize for Latin verse. Here, however, any signal distinctions at the university seem to have ended. It was not until 1792 that he obtained his degree. Having entered holy orders he first officiated as curate of Donhead St. Andrew in Wiltshire. In 1792 he was appointed to the rectory of Chicklade in Wiltshire, which he resigned in 1797, on being presented to the rectory of Dumbleton in Gloucestershire. In the same year he was married to Magdalene, daughter of Dr. Wake, prebendary of Westminster, whom he survived. In 1804 he became vicar of Bremhill, Wiltshire, where, greatly beloved by his parishioners, he thenceforth generally resided till near his death. In 1804 he was prebendary of Stratford in Salisbury Cathedral and from 1805 till death of Major Pars Altaris. In 1828 he became canon residentiary. Ten years earlier he had been appointed chaplain to the prince regent.

About 1787, the year of his leaving college, Bowles fell in love with Miss Romilly, niece of Sir Samuel Romilly; but his suit, probably for want of sufficient means on his part, was rejected. After a while he formed a second attachment, but the hopes to which it gave rise were unhappily cut short by the lady's death. Bowles then turned for consolation to poetry. During a tour through the north of England, Scotland, and some parts of the continent, he composed the sonnets which first brought him before the public. The little volume was published at Bath in 1789, under the title of 'Fourteen Sonnets written chiefly on Picturesque Spots during a Journey.' Their success was extraordinary, the first small edition being

speedily exhausted, while Coleridge, then in his seventeenth year, expressed his delight at the restoration of a natural school of poetry, a tribute which he confirmed later by celebrating the praise of Bowles in a fine sonnet. The simplicity and earnestness of Bowles had all the charm of novelty and contrast. His pensive tenderness, delicate fancy, refined taste, and, above all, his power to harmonise the moods of nature with those of the mind, were his chief merits. He was a true though not a great poet, having neither depth of thought nor vigour of imagination. The qualities of his early sonnets are common to all his poetry, though in his longer works they frequently sink into a graceful feebleness. His 'Verses to John Howard' appeared in 1789, and were reprinted in 1790. In 1805 this collection had passed into an illustrated ninth edition. 'Coombe Ellen' and 'St. Michael's Mount' were published in 1798; 'The Battle of the Nile' appeared in 1799; 'The Sorrows of Switzerland' in 1801; 'The Picture' in 1803; 'The Spirit of Discovery,' his longest poem, in 1804; 'Bowden Hill' in 1806; 'The Missionary of the Andes' in 1815; 'The Grave of the last Saxon' in 1822; 'Ellen Gray' in 1823; 'Days Departed' in 1828; 'St. John in Patmos' in 1833; 'Scenes and Shadows of Days Departed,' with an autobiographical introduction, in 1837; and 'The Village Verse-Book,' a series of hymns composed by himself for the use of children, in the same year. In 1806, not in 1807 (as is erroneously stated by Gilfillan and others), Bowles issued in ten volumes his memorable edition of Pope, with a sketch of his life and strictures on his poetry. His comments on Pope's life are undoubtedly written in a severe, if not a hostile spirit. It has been justly urged, that while he omitted no detail that could harm Pope's memory, he either left out or mentioned coldly such facts as did him honour. These errors drew upon the biographer stinging assaults from Byron both in verse and prose. Bowles's estimate of Pope as a poet gave rise to a long controversy, in which much bitterness was displayed. Bowles's proposition that 'images drawn from what is beautiful or sublime in nature are more sublime and beautiful than images drawn from art, and that they are therefore *per se* more poetical, and that passions are more adapted to poetry than manners,' is by no means refuted by Campbell's assertion that 'the exquisite description of artificial objects and manners is no less characteristic of genius than the description of physical appearances.' Bowles never denied that many artificial objects are beautiful. Byron's instances, in opposition to Bowles, go chiefly to show that certain natural objects are less interesting than certain artificial ones, and that by laws of association the latter at times, especially when unfamiliar, strike us more than the former, though intrinsically superior, when custom has lessened their effect. The doctrine of Bowles is not shaken by either of his principal antagonists. If it exclude Pope from the small band of the very highest poets, his critic nevertheless declares that in the second rank none were superior to him. Besides his poetical claims, those of Bowles as an antiquary are by no means inconsiderable. Of his labours in this capacity his 'Hermes Britannicus,' published in 1828, is perhaps the most important. He wrote largely also upon ecclesiastical matters. Upon crime, education, and the condition of the poor he addressed a letter to Sir James Mackintosh. His sermons, though scarcely eloquent, have a rare union of dignity with simplicity of style. He was an active but lenient magistrate. In character he seems to have been ardent and impulsive, but genial and humane. Moore, the poet, in his journal, gives some interesting particulars of him, illustrating his keen susceptibility to impressions, his high-church principles, his love of simple language in the pulpit, together with certain eccentricities, such as his constant refusal to be measured by a tailor. His health had failed some time before his death, which took place when he was eighty-eight at the Close, Salisbury, 7 April 1850. Of his works, in addition to his poems, the following, besides those already named, may be cited as representative: 1. 'The Parochial History of Bremhill,' 1828. 2. 'Life of Bishop Ken,' 1830. 3. 'Annals and Antiquities of Lacock Abbey,' 1835. 4. 'A few Words to Lord Chancellor Brougham on the Misrepresentation concerning the Property and Character of the Cathedral Clergy of England,' Salisbury, 1831. 5. 'The Cartoons of Raphael.' 6. 'Sermons preached at Bowood,' 1834.

M.

BOWLEY, ROBERT KANZOW (1813–1870), amateur musician, was born 13 May 1813. His father was a bootmaker at Charing Cross, and Bowley was brought up to the same business. His first taste for music was acquired by associating with the choristers of Westminster Abbey, and at an early age he became a member, and subsequently conductor, of the Benevolent Society of Musical Amateurs. He was a member of the committee of the amateur musical festival held at Exeter Hall in 1834, and about the same date was appointed organist of an independent chapel near Leicester Square. Bowley joined the Sacred Harmonic Society in 1834, and all his life contributed much to its success, being librarian from 1837 to 1854, and treasurer from 1854 to the year of his death. It was Bowley who, in 1856, originated the plan of the gigantic Handel festivals, which have been held every three years at the Crystal Palace since 1857. His connection with these performances led to his appointment (in 1858) as general manager of the building at Sydenham, a post he continued to hold until his death, which took place 25 Aug. 1870.

[Mr. W. H. Husk in Grove's Dict. of Music, i. 266 *b*, 658.] W. B. S.

BOWLY, SAMUEL (1802–1884), slavery abolitionist and temperance advocate, son of Mr. Bowly, miller at Bibury, Gloucestershire, was born in Cirencester on 23 March 1802. During his youth he had a sound business training under his father. In 1829 he removed from Bibury to Gloucester, and commenced business as a cheese factor. He became chairman of many local banking, gas, railway, and other companies, and for the last twenty years of his life he was looked upon as a leader in commercial circles and affairs. In the agitation against the corn laws he took a prominent part, and loyally supported Messrs. Cobden and Bright. It was one of his endeavours to give the people cheap and universal education, and he was not only one of the founders of the British and ragged schools in Gloucester, but a consistent advocate of a national system. Like his father, he belonged to the Society of Friends; he was a faithful though courteous and fair supporter of disestablishment.

Bowly took an active part in the anti-slavery agitation, and by his powerful appeals completely beat Peter Borthwick [q. v.], the pro-slavery lecturer, off the ground. He was one of the deputation, 14 Nov. 1837, which went to Downing Street to have an interview with Lord Melbourne about the cruelties exercised towards the slaves under the seven years' apprenticeship system, and in the following year took an active part in the formation of the Central Negro Emancipation Committee, which was ultimately instrumental in causing the abolition of the objectionable regulations. But his advocacy of temperance made him best known. It was on 30 Dec. 1835 that he signed the pledge of total abstinence, and formed a teetotal society in his own city. One of his earliest missions was to the members of his own religious society, undertaken in company with Edward Smith of Sheffield, throughout Great Britain and Ireland. During his later years he held frequent drawing-room meetings. As president of the National Temperance League, as president of the Temperance Hospital from its foundation, and as a director of the United Kingdom Temperance and General Provident Institution, he was able to draw the attention of scientific men to the injurious effects of alcohol on the human system. On behalf of the National Temperance League he attended and addressed 107 meetings during the last year of his life, travelling many hundreds of miles.

The eightieth anniversary of his birth was celebrated in Gloucester in 1882, and he died in that city on Sunday, 23 March 1884, the eighty-second anniversary of his birthday. He was buried in the cemetery on 27 March, when an immense concourse of people, both rich and poor, attended the funeral.

He married, first, Miss Shipley, daughter of Mr. John Shipley of Shaftesbury. His second wife was the widow of Jacob Henry Cottrell of Bath, especially known for his connection with the Rechabite Friendly Society. Bowly published: 1. 'A Speech delivered 1 Oct. 1830 at a meeting to petition Parliament for the Abolition of Negro Slavery,' 1830. 2. 'Speech upon the present condition of the Negro Apprentices,' 1838. 3. 'A Letter to J. Sturge on the Temperance Society and Church Rates, by L. Rugg, with a reply by S. Bowly,' 1841. 4. 'An Address to Christian Professors,' 1850. 5. 'Total Abstinence and its proper Place,' 1863.

[Sessions's Life of Samuel Bowly, 1884, with portrait.] G. C. B.

BOWMAN, EDDOWES (1810–1869), dissenting tutor, eldest son of John Eddowes Bowman the elder [q. v.] and Elizabeth, his cousin, was born at Nantwich on 12 Nov. 1810. He was educated chiefly at Hazelwood, near Birmingham, by Thomas Wright Hill, father of Sir Rowland Hill. The future postal reformer was his teacher in mathematics. From school he passed to the Eagle foundry, Birmingham, where he improved himself in mechanical engineering. He became, about

1835, sub-manager of the Varteg ironworks, near Pontypool. On the closing of the Varteg works in 1840 Bowman betook himself to study, graduated M.A. at Glasgow, and attended lectures at Berlin, acquiring several modern languages and mastering various branches of physical science. In 1846 Francis W. Newman resigned the classical chair in the Manchester New College, having been elected to the chair of Latin in University College, London. Bowman was immediately appointed his successor at Manchester as professor of classical literature and history, and he held that post till the removal of the college to Gordon Square, London, as a purely theological institution, in 1853. To this removal he was strongly opposed. Remaining in Manchester, though possessed of a sufficient independence, he gratified his natural taste for teaching by engaging in the education of girls. For the study of astronomy he had built himself an excellent observatory. On optics and acoustics he delivered several courses of lectures at the Manchester Royal Institution and elsewhere. From 1865, when the Owens scholarship was founded in connection with the Unitarian Home Missionary Board, he was one of the examiners. He was a man of undemonstrative disposition, of wise kindness, and of cultured philanthropy. He died, unmarried, at Victoria Park, Manchester, on 10 July 1869. Among his publications are: 1. 'Arguments against the Divine Authority of the Sabbath . . . considered, and shown to be inconclusive,' 1842, 8vo. 2. 'Some Remarks on the proposed Removal of Manchester New College, and its Connection with University College, London,' 1848, 8vo. 3. 'Replies to Articles relating to Manchester New College and University College,' 1848, 8vo. 4. 'On the Roman Governors of Syria at the time of the Birth of Christ' (anonymous, but signed B.), 1855, 8vo (an able and learned monograph, reprinted from the 'Christian Reformer,' October 1855, a magazine to which he was a frequent contributor).

[W. H. H. (Rev. William Henry Herford) in Inquirer, 10 July 1869; Unitarian Herald, 16 July 1869; Roll of Students at Manchester New College, 1868; Hall's Hist. of Nantwich, 1883, p. 605 sq.] A. G.

BOWMAN, HENRY (*fl.* 1677), was a musician, of whose life little is recorded. He was probably a connection of that Franc. Bowman mentioned by Anthony à Wood as a bookseller of St. Mary's parish, Oxford, with whom lodged Thomas Wren, the bishop of Ely's son, an amateur musician of repute in Oxford (Wood, *Athenæ Oxon.* (Bliss), i. xxv). Henry was organist of Trinity College, Cambridge, and published in 1677 at Oxford a thin folio volume of 'Songs for one, two, and three Voices to Thorow Bass; with some short Simphonies collected out of some of the Select Poems of the incomparable Mr. Cowley and others, and composed by H. B., Philo Musicus.' A second edition was brought out at Oxford in 1679. The Oxford Music School Collection contains some English songs and a set of 'Fifteen Ayres,' which were 'first performed in the schooles 5 Feb. 1673–4.' In the same collection are some Latin motets by Bowman, and the Christ Church Collection contains a manuscript Miserere by him.

[Euing Musical Library Catalogue, 1878, p. 148; North's Memoirs of Musick; Catalogues of Royal College of Music Library, Christ Church Collection and Music School Collection; Grove's Dictionary of Music.] R. H.

BOWMAN, JOHN EDDOWES, the elder (1785–1841), banker and naturalist, was born 30 Oct. 1785 at Nantwich, where his father, Eddowes Bowman (1758–1844), was a tobacconist. His education was only that of a grammar school, but he was a bookish boy, and got from his father a taste for botany, and from his friend Joseph Hunter (1783–1861), then a lad at Sheffield, a fondness for genealogy. He was at first in his father's shop, and became manager of the manufacturing department, and traveller. He wished to enter the ministry of the unitarian body to which his family belonged, but his father dissuaded him. In 1813 he joined, as junior partner, a banking business on which his father entered. Its failure in 1816 left him penniless, and he became manager at Welshpool of a branch of the bank of Beck & Co. of Shrewsbury. In 1824 he became managing partner of a bank at Wrexham, and was able to retire from business in 1830. From 1837 he resided in Manchester, where he pursued many branches of physical science. He was a fellow of the Linnean and Geological Societies, and one of the founders of the Manchester Geological Society. His discoveries were chiefly in relation to mosses, fungi, and parasitical plants. A minute fossil, which he detected in Derbyshire, is named from him the 'Endothyra Bowmanni.' In the last years of his life he devoted himself almost entirely to geology. He died on 4 Dec. 1841. He married, 6 July 1809, his cousin, Elizabeth (1788–1859), daughter of W. Eddowes of Shrewsbury. A daughter, married to George S. Kenrick, died in November 1838. Four sons survived him: 1. Eddowes [q. v.] 2. Henry [see below]. 3. Sir William, born 20 July 1816, the distinguished oculist.

4. John Eddowes, professor of chemistry [q. v.] J. E. Bowman, senior, contributed various papers to the Transactions of the Linnean and other learned societies, and also to Loudon's 'Magazine of Natural History.'

HENRY BOWMAN (1814–1883), second son of J. E. Bowman, an architect in Manchester, was joint author with James Hadfield of 'Ecclesiastical Architecture of Great Britain, from the Conquest to the Reformation,' 1845, 4to; and with his partner, J. S. Crowther, of 'The Churches of the Middle Ages,' 1857, fol. He died at Brockham Green, near Reigate, on 14 May 1883.

[Tayler's Sketch of the Life and Character of J. E. Bowman, in Memoirs of the Manch. Lit. and Phil. Soc., 2nd ser. vol. vii. pt. i. p. 45 (read 4 Oct. 1842); Hall's Hist. Nantwich, 1883, p. 505 sq.; Lyell's Student's Elem. of Geology, 1871, p. 382; Cooper's Men of the Time, 1884, p. 155; Catalogues of Advocates' Library, Edin.; Surgeon-General's Library, Washington, U.S.; information from C. W. Sutton, Manchester.]

A. G.

BOWMAN, JOHN EDDOWES, the younger (1819–1854), chemist, son of John Eddowes Bowman the elder [q. v.], and brother of Sir William Bowman, physiologist and oculist, was born at Welchpool on 7 July 1819. He was a pupil of Professor Daniell at King's College, London, and in 1845 succeeded W. A. Miller as demonstrator of chemistry at that college, becoming subsequently, in 1851, the first professor of practical chemistry there. He was one of the founders of the Chemical Society of London. He died on 10 Feb. 1854. Besides contributions to scientific journals, he published 'A Lecture on Steam Boiler Explosions,' 1845; 'An Introduction to Practical Chemistry' (London, 1848; subsequent editions in 1854, 1858, 1861, 1866, and 1871); and 'A Practical Handbook of Medical Chemistry' (London, 1850, 1852, 1855, and 1862). The later editions of these works are edited by C. L. Bloxam.

[Chem. Soc. Journ. ix. 159, and private information.]

H. F. M.

BOWMAN, WALTER (*d.* 1782), antiquary, was a native of Scotland, and owned an estate at Logie in Fifeshire. He had been travelling tutor to the eldest son of the first Marquis of Hertford, and was rewarded with the place of comptroller of the port of Bristol. For many years he resided at East Molesey, Surrey, but latterly on his property at Egham, in the same county. A zealous traveller and collector, he had some celebrity in his day as a virtuoso and man of science, which gained him admission in 1735 to the Society of Antiquaries, and in 1742 to the Royal Society. To the former he contributed several papers, chiefly on classical antiquities, three of which were printed in vol. i. of the 'Archæologia,' pp. 100, 109, 112. His only published communication to the Royal Society was an eccentric letter addressed to Dr. Stephen Hales, on an earthquake felt at East Molesey 14 March 1749–50, which appeared in the 'Philosophical Transactions,' xlvi. 684. Bowman had withdrawn from both societies several years before his death, in February 1782. In his will (proved 16 March of that year) he left singularly minute and whimsical directions regarding the arrangement and preservation of his fine library at Logie, where the family still continues to flourish.

G. G.

BOWNAS, SAMUEL (1676–1753), quaker minister and writer, was born at Shap, Westmoreland, on 20 Nov. 1676. His father, a shoemaker, died within a month of Samuel's birth, leaving his mother a house to live in and a yearly income of about 4*l.* 10*s.*; there was another son about seven years old. Hence Bownas got little education; in fact, he could just read and write. At the age of thirteen he was apprenticed to his uncle, a blacksmith, who used him harshly; afterwards to Samuel Parat, a quaker, near Sedbergh, Yorkshire. Bownas's father had been a persecuted quaker, who held meetings in his house; his mother brought him up with a deep regard for his father's memory, and took him as a child to visit quaker prisoners in Appleby gaol. But the lad was fonder of fun than of meetings, and grew up, as he says, 'a witty sensible young man.' The preaching of a young quakeress, named Anne Wilson, roused him from the state of 'a traditional quaker,' and he very shortly after opened his mouth in meeting, 'on that called Christmas day,' about 1696. He had still some three years of his apprenticeship to serve; on its expiry he got a certificate from Brigflats monthly meeting to visit Scotland on a religious mission. His heart failed him while on the way, and the work fell to a companion, but he made missionary visits to many parts of England and Wales, supporting himself by harvest work. At Sherborne, in Dorsetshire, he met with his future wife. He started for Scotland in good earnest on 11 Aug. 1701. Of this journey he gives a graphic account, telling

how he was put into the Jedburgh tolbooth as a precautionary measure, the officer remarking, 'I ken very weel that you'll preach, by your looks.' In March 1702 he sailed for America, arriving in Potuxant river, Maryland, at the end of May. Preaching here, he soon received a written challenge from George Keith, who had left the quakers in 1692. After leading a sect of his own, Keith had received Anglican orders in May 1700, and was now an ardent (and not unsuccessful) advocate of episcopacy. Bownas wrote declining 'to take any notice of one that hath been so very mutable in his pretences to religion;' but he distributed a tract (whether original or not does not appear) in answer to one by Keith. Keith got him prosecuted for his preaching, and on 30 Sept. 1702 he was put into the county gaol of Queen's County, Long Island, as he would not give bail, 'if as small a sum as three-halfpence would do.' On 28 Dec. the grand jury threw out the indictment, but Bownas was held in prison, where he learned to make shoes, and had a visit from an 'Indian king, as he styled himself,' who discoursed with him about the good Monettay, or God, and the bad Monettay, or Devil. A seventh-day baptist, John Rogers, also came to confer with him. On 3 Sept. 1703 he was set at liberty. After further travels in America he returned home, reaching Portsmouth in October 1706. He was married in the spring of 1707; his wife's name is not given; she died in September 1719. He visited Ireland in 1708, and was put into Bristol gaol for tithes by the Rev. William Ray, of Lymington, in 1712, but was soon let out; after all, the parson outwitted Mrs. Bownas, and got 10*l.* for tithe, a sore subject with the poor woman on her death-bed.

In February 1722 Bownas married his second wife, a widow named Nichols, of Bridport, where he henceforth resided, though he still travelled much. Visiting America again in 1726, he met Elizabeth Hanson, of 'Knoxmarsh, in Kecheachy, in Dover township,' New England, from whom he obtained particulars of her captivity (with her children) among the Indians in 1724. The substance of the story was afterwards printed. The London reprint of this 'Account of the Captivity, &c.,' 1760, 8vo (2nd edition, same year; 3rd edition, 1782; 4th edition, 1787), purports to be 'by Samuel Bownas,' but it is a mere reissue, with a new title, of an American publication, 'God's mercy surmounting Man's Cruelty, &c.,' which Bownas expressly says that he first saw in Dublin. He got home again on 2 Aug. 1728, travelled in the north and in Ireland; lost his second wife on 6 March 1746; and continued to travel at intervals till within a few years of his death, which took place at Bridport on 2 April 1753. He was a tall man, with a great voice, ready in retort, more given to scriptural argument than some of the earlier Friends. He wrote: 1. Preface (dated Lymington, 2 June 1715) prefixed to Daniel Taylor's 'Remains,' 1715, 8vo (edited by Bownas). 2. 'Considerations on a Pamphlet entituled, The Duty of Consulting a Spiritual Guide, &c.,' 1724, 8vo (in reply to a Lincolnshire clergyman named Bowyer). 3. 'A Description of the Qualifications necessary to a Gospel Minister, &c.,' 1750, 8vo; 2nd edition, 1767, 8vo (with appendix); 3rd edition, 1853, 16mo (with new appendix). 4. 'Account of the Life, Travels, . . . of Samuel Bownas,' 1756, 8vo (this is an autobiography to 2 Sept. 1749, with preface by Joseph Besse, and testimony of the Bridport monthly meeting), reprinted 1761, 8vo; 1795, 12mo; Stamford, 1805, 12mo; 1836, 16mo; Philadelphia, 1839; 1846, 8vo.

[Life, ed. of 1846; Smith's Cat. of Friends' Books, 1867, i. 308, 912, ii. 703; Smith's Bibliotheca Anti-Quak. 1872, p. 82.] A. G.

BOWNDE or BOUND, NICHOLAS, D.D. (*d.* 1613), divine, was son of Richard Bound, M.D., physician to the Duke of Norfolk. He received his academical education at Peterhouse, Cambridge, of which college he was elected a fellow in 1570 (*Addit. MS.* 5843, f. 41 *b*). He graduated B.A. in 1571 and M.A. in 1575. On 19 July 1577 he was incorporated in the latter degree at Oxford, and on 3 Sept. 1585 he was instituted to the rectory of Norton in Suffolk, a living in the gift of his college. He was created D.D. at Cambridge in 1594.

In 1595 Bownde published the first edition of his famous treatise on the Sabbath. In it he maintained that the seventh part of our time ought to be devoted to the service of God; that Christians are bound to rest on the seventh day of the week as much as the Jews were on the Mosaical sabbath. He contended that the 'sabbath' was profaned by interludes, May-games, morris dances, shooting, bowling, and similar sports; and he would not allow any feasting on that day, though an exception was made in favour of 'noblemen and great personages' (*Sabbathvm veteris et novi Testamenti*, 211). The observance of the Lord's day immediately became a question between the high-church party and the puritans, and it is worthy of notice that this was the first disagreement between them upon any point of doctrine. The sabbatarian question, as it was henceforth called, soon became the sign by which, above all

others, the two parties were distinguished. The new doctrine made a deep impression on men's minds. The prelates took official cognisance of it, and cited several ministers before the ecclesiastical courts for preaching it. But these extreme measures were unavailing to prevent the rapid spread of the strict sabbatarian doctrine.

In 1611 Bownde became minister of the church of St. Andrew the Apostle at Norwich, and he was buried there on 26 Dec. 1613. He married the widow of John More, the 'apostle of Norwich.' His sister Anne married John Dod (Clarke, *Lives*, ed. 1677, p. 169); and his mother married as her second husband Richard Greenham (*ib.* 13, 169).

Subjoined is a list of his works: 1. 'Three godly and fruitfull Sermons, declaring how we may be saved in the day of Judgement. . . . Preached and written by M. John More, late Preacher in the Citie of Norwitch. And now first published by M. Nicholas Bound, whereto he hath adjoined of his owne, A Sermon of Comfort for the Afflicted; and a short treatise of a contented mind,' Cambridge, 1594, 4to. 2. 'The Doctrine of the Sabbath, plainely layde forth, and soundly proued by testimonies both of holy Scripture, and also of olde and new ecclesiastical writers. . . . Together with the sundry abuses of our time in both these kindes, and how they ought to bee reformed,' London, 1595, 4to. Dedicated to Robert Devereux, earl of Essex. Reprinted, with additions, under the title of 'Sabbathvm veteris et novi Testamenti: or the true doctrine of the Sabbath . . .,' London, 1606, 4to. 3. 'Medicines for the Plagve: that is, Godly and fruitfull Sermons vpon part of the twentieth Psalme . . . more particularly applied to this late visitation of the Plague,' London, 1604, 4to. 4. 'The Holy Exercise of Fasting. Described largely and plainly out of the word of God. . . . In certaine Homilies or Sermons . . .,' Cambridge, 1604, 4to. Dedicated to Dr. Jegon, bishop of Norwich. 5. 'The Vnbeliefe of St. Thomas the Apostle, laid open for the comfort of all that desire to beleeue . . .,' London, 1608, 8vo; reprinted, London, 1817, 12mo. 6. 'A Treatise ful of Consolation for all that are afflicted in minde or bodie or otherwise . . .,' Cambridge, 1608, 8vo; reprinted, London, 1817, 12mo. The reprints of this and the preceding work were edited by G. W. Marriot. Bownde has a Latin ode before Peter Baro's 'Prælectiones in Ionam,' 1579; and he edited the Rev. Henry More's 'Table from the Beginning of the World to this Day. Wherein is declared in what yeere of the World everything was done,' Cambridge, 1593.

BOWNE, PETER (1575–1624?), physician, was a native of Bedfordshire; became at the age of fifteen a scholar of Corpus Christi College, Oxford, in April 1590; and was afterwards elected a fellow of that society. After taking degrees in arts he applied himself to medicine, and proceeded B.M. and D.M. at Oxford on 12 July 1614. He was admitted a candidate of the College of Physicians on 24 Jan. 1616–17, and fellow on 21 April 1620. On 3 March 1623–4 Richard Spicer was admitted a fellow in his place. According to Wood, Bowne practised medicine in London, 'and was much in esteem for it in the latter end of King Jam. I and beginning of Ch. I.' It is probable, nevertheless, that 1624 was the date of his death. He was the author of 'Pseudo-Medicorum Anatomia,' London, 1624, 4to, in which his name appears as Bounæus. A Laurentius Bounæus, probably a son of Peter Bowne, matriculated at Leyden University on 16 Nov. 1602, and is described in the register as 'Anglus-Londinensis' (Peacock's *Leyden Students* (Index Soc.), p. 12).

BOWNESS, WILLIAM (1809–1867), painter, was born at Kendal. He was self-taught, and after some practice in his native town he, soon after his twentieth year, came to London and achieved moderate success as a portrait and figure painter. In 1836 he exhibited his 'Keepsake' at the Royal Academy, and afterwards sent thither about one picture annually until his death. He also contributed to the exhibitions of the British Institution in Pall Mall, and, in great number, to those

of the Society of British Artists in Suffolk Street. His works are mostly portraits and figure-subjects of domestic character.

He periodically visited his native town, and is author of a number of poems in the Westmoreland dialect, and of some of sentimental strain in ordinary English. He died at his house in Charlotte Street, Fitzroy Square, London, 27 Dec. 1867.

His writings have been collected under the title 'Rustic Studies in the Westmoreland Dialect, with other scraps from the sketch-book of an artist,' London and Kendal, 1868. A pamphlet, 'Specimens of the Westmoreland Dialect,' by Rev. T. Clarke, William Bowness, &c., Kendal, 1872, contains one poem from the above-named collection.

BOWRING, Sir JOHN (1792–1872), linguist, writer, and traveller, was born at Exeter on 17 Oct. 1792. He was descended from an ancient Devonshire family, which gave its name to the estate of Bowringsleigh, in the parish of West Allington. For many generations the Bowrings had been engaged in the woollen trade of Devon, and in 1670 an ancestor coined tokens for the payment of his workmen bearing the inscription, with a wool-comb for a device, 'John Bowring of Chulmleigh, his half-penny.' Sir John was the eldest son of Mr. Charles Bowring, of Larkbeare. He was first placed under the care of the Rev. J. H. Bransby, of Moreton-hampstead, and subsequently under that of Dr. Lant Carpenter.

Bowring entered a merchant's house at Exeter on leaving school, and during the next four years laid the foundation of his linguistic attainments. According to the brief memoir written by his son, he learned French from a refugee priest, Italian from itinerant vendors of barometers and mathematical instruments, while he acquired Spanish and Portuguese, German and Dutch, through the aid of some of his mercantile friends. He afterwards acquired a sufficient acquaintance with Swedish, Danish, Russian, Servian, Polish, and Bohemian, to enable him to translate works in those languages. Magyar and Arabic he also studied with considerable success, and in later life, during his residence in the East, he made good progress in Chinese. In 1811 Bowring became a clerk in the London house of Milford & Co., by whom he was despatched to the Peninsula. He subsequently entered into business on his own account, and in 1819–20 travelled abroad for commercial purposes, visiting Spain, France, Belgium, Holland, Russia, and Sweden. In France he made the acquaintance of Cuvier, Humboldt, Thierry, and other distinguished men. On his return from Russia in 1820 he published his 'Specimens of the Russian Poets.'

In 1822 he was arrested at Calais, being the bearer of despatches to the Portuguese ministers announcing the intended invasion of the Peninsula by the Bourbon government of France. He was thrown into prison and passed a fortnight in solitary confinement. The real object of his imprisonment was to extort from him admissions which would enable the Bourbon government to prosecute the French liberals. Canning, then British foreign minister, insisted upon an indictment or a release. Bowring was eventually released without trial, but as he had been accused of complicity in the attempt to rescue the young sergeants of La Rochelle, who were executed for singing republican songs, he was condemned to perpetual exile from France. Lord Archibald Hamilton brought the illegality of the arrest before the House of Commons, but Canning explained that the proceedings, however despotic, were warranted by the then existing laws of France. Bowring published a pamphlet entitled 'Details of the Imprisonment and Liberation of an Englishman by the Bourbon Government of France,' 1823. In 1830, Bowring was the writer of an address from the citizens of London congratulating the French people on the revolution of July. He headed the deputation which bore the address to Paris, was welcomed at the hôtel de ville, and was the first Englishman received by Louis-Philippe after his recognition by the British government.

Bowring's intimate friend and adviser, Jeremy Bentham, founded, in 1824, the 'Westminster Review,' intended as a vehicle for the views of the philosophical radicals. The editorship was first offered to James Mill, but declined by him on the ground of the incompatibility of the post with his official work. Bowring and Southern eventually became the first editors of the 'Review,' the former taking the political and the latter the literary department; but subsequently the management passed into Bowring's hands alone. Bowring not only wrote many of the political articles, but also papers on the runes of Finland, the Frisian and Dutch tongues, Magyar poetry, and a variety of other literary subjects.

In 1824 Bowring issued his 'Batavian Anthology' and 'Ancient Poetry and Romances of Spain;' in 1827 appeared his 'Specimens of the Polish Poets,' and 'Servian

Popular Poetry;' in 1830 'Poetry of the Magyars;' and in 1832 'Cheskian Anthology.' He published Bentham's 'Deontology' (1834) in two volumes, and nine years subsequently he edited a collection of the works of Bentham, accompanied by a biography, the whole consisting of eleven volumes. The university of Groningen conferred upon him, in 1829, the degree of LL.D.

In 1828 Bowring was appointed a commissioner for reforming the system of keeping the public accounts, by Mr. Herries, then chancellor of the exchequer; but his appointment was cancelled at the instance of the Duke of Wellington, who objected to Bowring's radical opinions. He was, however, authorised to proceed to Holland, for the purpose of examining the method pursued by the financial department of that country. He prepared a report, the first of a long series on the public accounts of various European states. It was during this visit to the continent that he translated 'Peter Schlemihl' from the German at the suggestion of Adelung.

During a stay in Madrid Bowring had published in Spanish his 'Contestacion á las Observaciones de Don Juan B. Ogavan sobre la esclavitud de los Negros,' being an exposition of the arguments in favour of African slavery in Cuba. At a later period he translated into French the 'Opinions of the Early Christians on War,' by Thomas Clarkson. His 'Matins and Vespers' (1823) went into many editions, both in England and the United States, and his 'Minor Morals' (1834–9), recollections of travel for the use of young people, were likewise very popular. For his 'Russian Anthology' he received a diamond ring from Alexander I, and for his works on Holland, some of which were translated into Dutch, a gold medal from the king of the Netherlands.

In 1831 Bowring—who had sought official employment in consequence of commercial disasters—was associated with Sir H. Parnell in the duty of examining and reporting on the public accounts of France, 'a task which was so satisfactorily performed that he was appointed secretary to the commission for inspecting the accounts of the United Kingdom.' Bowring visited Paris, the Hague, and Brussels, and examined the finance departments of their various governments. The first report made by the commission led to a complete change in the English exchequer, and was the foundation of all the improvements which have since been made. The second report, dealing with the military accounts, was carried into immediate effect. Bowring and Mr. Villiers (afterwards Earl of Clarendon) were appointed, in 1831, commissioners to investigate the commercial relations between England and France, and presented two elaborate reports to parliament.

On the passing of the Reform Bill in 1832 Bowring appeared as a candidate for the representation of Blackburn, but, though popular with the mass of the people, he lost the election by thirteen votes. He now went over to France, where he made close investigation into the silk trade; and in 1833 he visited Belgium on a commercial mission for the government. His exertions in the south of France in the succeeding year led to a free-trade agitation in the wine districts. In 1835 he went through the manufacturing districts of Switzerland, and reporting to parliament on the trade of that country, he showed the great advantages that had been reaped from the system of free trade. He was in Italy in the autumn of 1836, when he reported to parliament on the state of our commercial relations with Tuscany, Lucca, the Lombardian and Pontifical states. Bowring had been returned to parliament for the Clyde burghs in 1835, but losing his seat at the general election of 1837, he now travelled in Egypt, Syria, and Turkey on another commercial mission for the government. During this tour Bowring visited every part of Egypt as far as Nubia in the south, traversed Syria from Aleppo to Acre, and returned by way of Constantinople and the Danube. Shortly after his arrival in England he accepted an invitation to a public dinner at Blackburn. This was in September 1838; and, halting at Manchester on his way to Blackburn, Bowring met Cobden and others at the York Hotel, the result of this meeting being the formation of the Anti-Corn Law League. In 1839 Bowring was deputed to proceed to Prussia with the object of inducing that country to modify her tariff on English manufactures. He was met by the objection that, 'so long as the English corn laws imposed a prohibitive tariff on foreign grain, it was useless to ask Germany to relax her heavy duties on English goods.' Bowring was the chief author of the important report to parliament on the import duties, which led to the proposed but unsuccessful measure for the relaxation of the English tariff by the whigs, and to Sir Robert Peel's great revised tariff scheme of 1842.

Convinced of the necessity for the abolition of the corn laws, Bowring again sought a seat in parliament for the purpose of advocating this measure. Defeated at Kirkcaldy, he was elected for Bolton in 1841. He was a frequent speaker on commercial and fiscal questions, on education, the factory acts, and similar subjects. He took an active

part on the committee of inquiry into the distress of the hand-loom weavers, on that in connection with Irish education, and on that on the state of the arts as applied to commerce and manufactures, and he was an eloquent advocate for the abolition of flogging in the army. Bowring received services of silver plate from the electors of Blackburn, Kirkcaldy, and Kilmarnock respectively; from the Manxmen for his valuable aid in obtaining an act of parliament for their emancipation from feudal tyranny; and from the Maltese in recognition of the success of his advocacy as their unofficial representative in the House of Commons. Supported by the prince consort, Bowring obtained, after a discussion in the House of Commons, the issue of the florin, intended as the first step towards the introduction of the decimal system into the English currency. He subsequently published a volume on 'The Decimal System in Numbers, Coins, and Accounts, especially with reference to the Decimalization of the Currency and Accountancy of the United Kingdom' (1854).

After his election for Bolton, Bowring embarked all his fortune in ironworks in Glamorganshire. In 1847 a period of severe depression set in, and as there was no prospect of the cloud lifting, Bowring became seriously alarmed at the aspect of his affairs. He consequently applied for the appointment of consul at Canton, and, obtaining it through the friendship of Lord Palmerston, resigned his seat in parliament. The general relations between England and China were even then in a somewhat critical condition. It was understood that the gates of Canton, hitherto closed against foreigners, were now to be opened, and Bowring hoped that the mandarins would at least receive him officially within the walls of the city, thus paving the way for the entrance eventually of all Europeans. But the Chinese treated him with the same contumely as they had done his predecessors, and the governor-general wrote him offensive letters. Yet the Cantonese, with whom Bowring mixed a great deal, received him with good feeling, thus proving that the mandarins were the sole ground of opposition.

From April 1852 to February 1853 Bowring had charge of the office of plenipotentiary in the absence of Sir George Bonham; but on the return of the latter Bowring applied for leave of absence for a year, visiting the island of Java on his way home. In 1854, when his leave was expiring, he was appointed plenipotentiary to China, and governor, commander-in-chief, and vice-admiral of Hong Kong and its dependencies, as well as chief superintendent of trade in China. He was also accredited to the courts of Japan, Siam, Cochin-China, and the Corea. On receiving these appointments he was knighted by the queen. The Taiping insurrection shortly afterwards broke out in China, trade was paralysed, smuggling was largely carried on at Shanghai, and the imperial dues could not be collected. Sir John Bowring resolutely endeavoured to put an end to the disorder.

Bowring has stated (*Autobiographical Recollections*) that one of the most interesting parts of his public life was his visit to Siam in 1855. He went upon a special mission, being authorised to conclude a treaty of commerce with the two kings of that country. There had already been many unsuccessful attempts on the part of the United States, of the governor-general of British India, and of the English government, to establish diplomatic and commercial relations with Siam. Sir John Bowring succeeded in concluding a treaty, which was carried out with promptitude and sagacity. In 1857 Bowring published an account of his travels and experiences in Siam under the title of 'The Kingdom and People of Siam.'

In October 1856 the outrage on the lorcha Arrow by the Canton authorities involved Sir John Bowring in hostilities with the Chinese government. It was admitted that the vessel had no right to carry the British flag, the term of registry having expired; but the English representative maintained that the expiry of the license did not warrant the violence perpetrated by the Canton authorities. He affirmed that the authorities did not know of its expiry; that it was their specific object to violate the privileges of the British flag; that the case of the Arrow was only one of a succession of outrages for which no redress had been given; and that the expiry of the license and the failure to renew it placed the ship under colonial jurisdiction. Votes of censure on the conduct of Sir John Bowring, and the British government in supporting him, were moved in both houses of parliament, and some of the former friends and colleagues of the British plenipotentiary took a strong part against him. The Earl of Derby moved the hostile resolution in the House of Lords, but after a long debate it was negatived by a majority of thirty-six. In the House of Commons Cobden proposed the vote of censure, and contended that Sir John Bowring had not only violated the principles of international law, but had acted contrary to his instructions, and even to express directions from his government. Lord Palmerston warmly defended Sir John Bowring and his action. Cobden's motion was carried against the government by a majority

of sixteen. Lord Palmerston appealed to the country, and in the elections that ensued the chief movers against Sir John Bowring lost their seats, while the ministry came back greatly strengthened. Lord Elgin, who succeeded Bowring as English plenipotentiary in China, endorsed and carried out his predecessor's policy.

During the hostilities with China the mandarins put a price on Sir John Bowring's head. He had a narrow escape of his life in January 1857, when the colony of Hong Kong was startled by a diabolical attempt to poison the residents by putting arsenic into their bread. The governor's family suffered severely, and the constitution of Lady Bowring was so undermined that in the ensuing year she was obliged to leave for England, where she died soon after her arrival.

Towards the close of 1858 Sir John Bowring proceeded to Manila, on a visit to the Philippine islands, chiefly with a view to the extension of the trade of the islands with Great Britain. Manila had been the only port accessible to foreigners, but the more liberal policy of the Spaniards had opened the harbours of Sual, Iloilo, and Zamboanga, which Bowring visited in H.M.S. Magicienne. As the representative of free trade he was everywhere welcomed, and on the completion of the tour he published his 'Visit to the Philippine Islands.' Sir John returned to China in January 1859, and in the following May resigned his office, after more than nine years of unusually harassing and active service. On leaving China he received from the Chinese people several characteristic marks of their appreciation of his government.

On the voyage home the Alma, in which he sailed, struck upon a sunken rock in the Red Sea. The passengers were compelled to remain for three days upon a coral reef, where they suffered greatly before relief arrived. The remainder of Bowring's life was passed in comparative quiet. In 1860 he was deputed by the English government to inquire into the state of our commercial relations with the newly formed kingdom of Italy. He had interviews with Count Cavour; but at Rome he was seized with illness, the attack being aggravated by the effects of the arsenical poisoning at Hong Kong three years before. He was not fully restored to health until 1862. In addition to Bowring's labours in connection with commercial treaties with various European and Asiatic powers, at home 'he was an active member of the British Association, the Social Science Association, the Devonshire Association, and other institutions, often contributing papers to their proceedings and taking a prominent part in their discussions.' He was a constant contributor to the leading reviews and magazines, and delivered many public lectures on oriental topics and the social questions of the day.

Bowring was the writer of many poems and hymns, one at least of which, 'In the cross of Christ I glory,' has acquired universal fame. Early in his career he conceived an extensive scheme in connection with the poetic literatures of the continent. Enjoying the advantage of personal acquaintance with most of the eminent authors and poets of his time, he secured their assistance in his purpose (never fully carried out) of writing the history and giving translated specimens of the popular poetry, not only of the western, but of the oriental world. He was promised the co-operation of Rask and Finn Magnusen (Icelandic), Oehlenschlager and Munter (Danish), Franzén (Swedish), in the Scandinavian field; of Karamsin and Kriulov (Russian), Niemcewicz and Mickiewicz (Polish), Wuk (Servian), Hanka and Celakowsky (Bohemian), Talvj (von Jakob), and many coadjutors in the Moravian, Illyrian, and other branches of the Slavonic stem; while in the Magyar, Toldy and Kertbeny lent him their aid; Fauriel in Romaic, and Tengstrom in Finnish. In the various kingdoms of southern Europe he gathered together extensive materials for a work which might well have occupied a lifetime. His scattered translations from the Chinese, Sanskrit, Cingalese, and other oriental languages, and his Spanish, Servian, Magyar, Cheskian, Russian, and other poetical selections, amply attest that he never relinquished his scheme, though the comprehensive and exhaustive plan he originally formed was found to be impossible of execution.

In the closing years of his life Bowring's mental and physical faculties were strong and apparently unimpaired. When verging upon eighty years of age he addressed an assemblage of three thousand persons at Plymouth with all the energy of youth. After a very brief illness he died at Exeter on 23 Nov. 1872, almost within a stone's-throw of the house where he was born.

Bowring was a fellow of the Royal Society, a knight commander of the Belgian order of Leopold, and a knight commander of the order of Christ of Portugal with the star; he had the grand cordon of the Spanish order of Isabella the Catholic, and of the order of Kamehameha I; he was a noble of the first class of Siam, with the insignia of the White Elephant, a knight commander with the star of the Austrian order of Francis Joseph, and of the Swedish order of the Northern Star,

and also of the Italian order of St. Michael and St. Lazarus; and he was an honorary member of many of the learned societies of Europe. He received no fewer than thirty diplomas and certificates from various academies and other learned bodies and societies.

Bowring was twice married: first, in 1816, to a daughter of Mr. Samuel Lewin, of Hackney, who died in 1858; secondly, to a daughter of Mr. Thomas Castle, of Bristol. His eldest son by the former marriage, Mr. J. C. Bowring, presented to the British Museum a fine collection of coleoptera, consisting of more than 84,000 specimens, known by the name of the Bowringian collection. His second son, Mr. Lewin Bowring, was Lord Canning's private secretary through the Indian mutiny of 1857, and held for some time the post of chief commissioner of Mysore and Coorg. A third son, Mr. E. A. Bowring, C.B., represented his native city of Exeter in parliament from 1868 to 1874, and was made companion of the Bath for his services in connection with the Great Exhibition of 1851. He is also known in literature for his translations of Goethe, Schiller, and Heine.

The following is a complete list of the works of Sir John Bowring: 1. 'Some Account of the State of the Prisons in Spain and Portugal,' published in the 'Pamphleteer,' 1813. 2. 'Observations on the State of Religion and Literature in Spain,' published in the series 'New Voyages and Travels,' 1820. 3. 'Contestacion á las Observaciones de Don Juan B. Ogavan sobre la Esclavitud de los Negros,' 1821. 4. 'Observations on the Restrictive and Prohibitory Commercial System from MSS. of Jeremy Bentham,' 1821. 5. 'Details of the Arrest, Imprisonment, and Liberation of an Englishman,' 1823. 6. 'Russian Anthology,' 1820–3. 7. 'Matins and Vespers,' 1823. 8. 'Batavian Anthology,' 1824. 9. 'Ancient Poetry and Romances of Spain,' 1824. 10. 'Peter Schlemihl' (translation from Chamisso), 1824. 11. 'Hymns,' 1825. 12. 'Servian Popular Poetry,' 1827. 13. 'Specimens of the Polish Poets,' 1827. 14. 'Sketch of the Language and Literature of Holland, being a Sequel to "Batavian Anthology,"' 1829. 15. 'Poetry of the Magyars,' 1830. 16. 'Cheskian Anthology,' 1832. 17. 'Deontology,' 1834. 18. 'Minor Morals,' 1834–9. 19. 'Observations on Oriental Plague and Quarantines,' 1838. 20. 'The Influence of Knowledge on Domestic and Social Happiness,' 1842. 21. 'Jeremy Bentham's Life and Works,' 1843. 22. 'Manuscript of the Queen's Court; a Collection of old Bohemian Lyrico-epic Songs, with other ancient Bohemian Poems,' 1843. 23. 'A Speech delivered on the occasion of the Opening of the Barker Steam Press,' 1846. 24. 'The Political and Commercial Importance of Peace,' 1846 (?). 25. 'The Decimal System in Numbers, Coins, and Accounts,' 1854. 26. 'The Kingdom and People of Siam,' 1857. 27. 'A Visit to the Philippine Isles,' 1859. 28. 'Ode to the Deity,' translated from the Russian, 1861. 29. 'On Remunerative Prison Labour as an Instrument for promoting the Reformation and diminishing the Cost of Offenders,' 1865. 30. 'Translations from Petöfi,' 1866. 31. 'On Religious Progress beyond the Christian Pale,' 1866. 32. 'Siam and the Siamese,' a discourse in connection with the Sunday Evenings for the People, 1867. 33. 'The Flowery Scroll,' translation of a Chinese novel, 1868. 34. 'The Oak,' original tales and sketches by Sir J. B., &c., 1869. 35. 'A Memorial Volume of Sacred Poetry,' to which is prefixed a memoir of the author by Lady B., 1873. 36. 'Autobiographical Recollections of Sir John Bowring,' 1877.

Moor, 1857; the various Works of Bowring; Annual Reg. 1857 and 1872; Times, 25 Nov. 1872; Autobiographical Recollections of Sir John Bowring, with a brief Memoir by Lewin Bowring, 1877; Western Times, Exeter, 26 Nov. 1872; Men of the Time, 8th ed. 1872.]

G. B. S.

BOWTELL, JOHN (1753–1813), topographer, born in the parish of Holy Trinity, Cambridge, in 1753, became a bookbinder and stationer there. He compiled a history of the town, keeping it by him unprinted; collected fossils, manuscripts, and other curiosities; and was a member of the London College Youths. He was also an enthusiastic bell-ringer, and in 1788, at Great St. Mary's, Cambridge, he rang on the 30-cwt. tenor bell as many as 6,609 harmonious changes 'in the method of *bob maximus*, generally termed "twelve-in."' Bowtell had no family, and dying on 1 Dec. 1813, aged 60, he made the following important bequests for the benefit of Cambridge: 7,000*l.* to enlarge Addenbrooke's Hospital; 1,000*l.* to repair Holy Trinity; 500*l.* to repair St. Michael's; 500*l.* to apprentice boys belonging to Hobson's workhouse; and his 'History of the Town' and other manuscripts, his books, his fossils, and curiosities, to Downing College. He was buried at St. Michael's, where the Addenbrooke's Hospital governors erected a tablet to his memory. The governors also placed a portrait of him in their court-room.

BOWYER, Sir GEORGE (1740?–1800), admiral, third son of Sir William Bowyer, bart., of Denham, Buckinghamshire, and, by right of his wife, of Radley, Berkshire, attained the rank of lieutenant in the navy on 13 Feb. 1758, commander 4 May 1761, and captain 28 Oct. 1762, from which time he commanded the Sheerness frigate till the peace. On the breaking out of the dispute with the colonies of North America he was appointed to the Burford of 70 guns, and early in 1778 was transferred to the Albion of 74 guns, one of the squadron which sailed for North America with Vice-admiral Byron, whom he accompanied to the West Indies, taking part in the battle of Grenada, 6 July 1779. He remained in the West Indies for two years longer, and was present in Sir George Rodney's three actions with the Count de Guichen on 17 April, 15 and 19 May, 1780, in which the Albion suffered severely in men, spars, and hull, and had to be sent to Jamaica for repairs. In 1783 he commissioned the Irresistible of 74 guns, as guardship in the Medway, and commanded there for the next two years, during which time he wore a commodore's broad pennant. In 1784 he was returned to parliament by the borough of Queenborough, and in 1785 was a member of a committee appointed to consider the defences of Portsmouth and Plymouth. On the occasion of the Spanish armament in 1790, he was appointed to the Boyne of 98 guns, a ship newly launched at Woolwich, which, however, was paid off towards the end of the year. On 1 Feb. 1793 he was advanced to the rank of rear-admiral, and shortly afterwards hoisted his flag in the Prince of 90 guns, in the Channel fleet, under the command of Lord Howe. On 1 June 1794 he took an important part in the engagement off Ushant, in which he sustained the loss of a leg. For this he received a pension of 1,000*l.* in addition to the chain and gold medal, and on 16 Aug. was created a baronet. His wound incapacitated him from further active service, though he was in due course advanced to the rank of vice-admiral, 4 July 1794, and of admiral, 14 Feb. 1799. By the death of his brother in April 1797 he succeeded to the older baronetcy, in which his newer title was merged. He died at Radley, 6 Dec. 1800. He was twice married: first to Lady Downing, widow of Sir Jacob Downing, bart., who died without issue; and second, to Henrietta, only daughter of Admiral Sir Peircy Brett, by whom he had three sons and two daughters.

[Ralfe's Nav. Biog. i. 374; Charnock's Biog. Nav. vi. 511.] J. K. L.

BOWYER, Sir GEORGE (1811–1883), seventh baronet, jurist, was born on 8 Oct. 1811, at Radley Park, near Abingdon, Berkshire. He was the eldest son of Sir George Bowyer, bart., of Denham Court, Buckinghamshire, by his wife, Anne Hammond, daughter of Captain Sir Andrew Snape Douglas, R.N. Admiral Sir George Bowyer [q.v.] was his grandfather. Sir William Bowyer, knt., teller of the exchequer in the reign of James I, originally purchased the family estate of Denham Court. His grandson, William Bowyer, M.P. for Buckinghamshire in the first two parliaments of Charles II, on 25 June 1660 was created a baronet.

Bowyer was for a short time a cadet of the Royal Military College at Woolwich. On 1 June 1836 he was admitted as a student of the Middle Temple. In 1838 he published 'A Dissertation on the Statutes of the Cities of Italy, and a Translation of the Pleading of Prospero Farinacio in Defence of Beatrice Cenci, with Notes.' On 7 June 1839 he was called to the bar of the Middle Temple, being immediately afterwards (12 June) created an honorary M.A. at Oxford. He then began practising as an equity draughtsman and conveyancer. In 1841 he brought out, in twenty-seven chapters with an appendix, pp. xiv, 712, 'The English Constitution: a Popular Commentary on the Constitutional Laws of England.' This was the first of a series of valuable text-books from his hand on constitutional jurisprudence. On 20 June 1844 he was made a D.C.L. at Oxford. In 1848 he published, in fifty-two chapters, pp. xx, 334, his 'Commentaries on the Civil Law,' inscribed to the Marquis of Lansdowne. In the same year he brought out, in an octavo pamphlet inscribed 'to Henry Lord Holland by his sincere friend,' a vindication of Charles Albert, under the title of 'Lombardy, the Pope, and Austria.' In the July of 1849 he stood unsuccessfully as a candidate for the representation of Reading. He was converted to catholicism in 1850, and issued in the same year a pamphlet entitled 'The Cardinal Archbishop of Westminster and the New Hierarchy,' 8vo, pp. 42, which was announced on its title-page as issued 'by authority,' and rapidly passed through four editions. Early in the same year he was appointed reader in law at the Middle Temple, and before its close published the first two of his readings, 'On the Uses of the Science of General Jurisprudence and the Classification of Laws,' and 'On the Uses of the Roman Law and its Relation to the Common Law.' In 1851 the whole course was published as 'Readings delivered before the Honourable Society of the Middle Temple,' inscribed to Lord Campbell. During

that year he issued from the press two supplementary papers on the catholic hierarchy, one of them entitled 'The Roman Documents relating to the New Hierarchy, with an Argument,' and the other (8vo, pp. 44), 'Observations on the Arguments of Dr. Twiss respecting the new Roman Catholic Hierarchy.' In the July of 1852 Bowyer entered parliament for the first time as M.P. for Dundalk, which borough he continued to represent in the House of Commons for sixteen years, down to December 1868. In 1854 he published, in twenty-eight chapters, 8vo, pp. xi, 387, his 'Commentaries on Universal Public Law,' and in 1856 two pamphlets—'Rome and Sardinia,' and 'The Differences between the Holy See and the Spanish Government'—in vindication of the holy see, reprinted from the 'Dublin Review,' September 1855, and March 1856. On 1 July 1860 Bowyer succeeded his father as baronet. In 1864 appeared, in quarto, 'Friends of Ireland in Council,' the interlocutors in which were Bowyer, William Henry Wilberforce, and John Pope Hennessy. In 1868 Bowyer, in the form of a letter written to Earl Stanhope, published, 8vo, pp. 19, 'The Private History of the Creation of the Roman Catholic Hierarchy in England.' In 1873 he brought out a reprint from the 'Times' of 'Four Letters on the Appellate Jurisdiction of the House of Lords and the New Court of Appeal.' Bowyer was defeated in his candidature at Dundalk in December 1868, but in December 1874 was returned in the home-rule interest for the county of Wexford, and retained that seat until March 1880. He published, in 1874, 8vo, pp. 72, his 'Introduction to the Study and Use of the Civil Law, and to Commentaries on the Modern Civil Law,' a work inscribed to Earl Cairns. During the last five years of his career in parliament he estranged himself from the liberal party, and was at last expelled, on 23 June 1876, from the Reform Club. Bowyer was conspicuous as a representative catholic. His numerous letters to the 'Times' mainly bore reference to questions of religious or constitutional law. He was a prominent member of the committee convened to further the agitation against the abolition of the legal duties of the House of Lords. Bowyer was found dead in his bed at his chambers in the Temple, 13 King's Bench Walk, on the morning of 7 June 1883. The funeral service was performed in his own church of St. John of Jerusalem, in Great Ormond Street, Bloomsbury, which had been entirely built by him. Bowyer was a knight of Malta and honorary president of the Maltese nobility. He was knight commander of the order of Pius IX, as well as a chamberlain to that pontiff, knight grand cross of the order of St. Gregory the Great, and grand collar of the Constantinian order of St. George of Naples. He was a magistrate and deputy-lieutenant of Berkshire.

C. K.

BOWYER, ROBERT (1758-1834), miniature painter, seems to have been at an early date known to Smart, the miniature painter, and is supposed by Redgrave to have been Smart's pupil. He exhibited miniatures and paintings at the Royal Academy occasionally between 1783 and 1828; was appointed painter in water-colours to the king, and miniature painter to the queen; and received much fashionable patronage. In 1792 he issued a prospectus giving details of a plan for an edition of Hume's 'History of England,' with continuation to date, to be 'superbly embellished.' West, Smirke, Loutherbourg, and other leading artists of the day furnished historical pictures specially to be engraved for this work, which contains besides a number of engravings of portraits, medals, and antiquities. It was issued in parts, and by 1806 five unwieldy folios were published, reaching to the year 1688; the continuation was never issued, as a loss of 30,000*l.* is asserted to have been already incurred. Bowyer also published 'An Impartial Narrative of Events from 1816 to 1823,' London, 1823. He died at his house at Byfleet, Surrey, 4 June 1834.

W. H–H.

BOWYER, WILLIAM, the elder (1663-1737), printer, son of John Bowyer, citizen and grocer of London, by Mary, daughter of William King, citizen and vintner of London, was born in 1663, apprenticed to Miles Flesher, printer, in 1679, and admitted to the freedom of the Company of Stationers 1686. By his first wife, who died early, he had no issue. By his second wife, Dorothy, daughter of Thomas Dawks (a printer who had been employed on Bishop Walton's Polyglot Bible) and widow of Benjamin Allport, bookseller, he was father of William Bowyer the younger, 'the learned printer' [q. v.], and a daughter Dorothy married to Peter Wallis, a London jeweller. In 1699, a few

months before the birth of his son, he began business as a printer at the White Horse in Little Britain, and here he produced his first book, a neat small 4to, of 96 pp., 'A Defence of the Vindication of King Charles the Martyr justifying his Majesty's title to Εἰκὼν Βασιλικὴ in answer to . . . . Amyntor [i.e. John Toland],' Lond. 1699, 4to. Immediately after he removed to Dogwell Court, Whitefriars. In 1700 he was made liveryman of the Stationers' Company, and was chosen one of the twenty printers allowed by the Star-chamber. On 29 Jan. 1712–13 a fire destroyed his printing-office and dwelling, and one member of the family was burnt to death. Plant and stock were consumed; Atkyn's 'Gloucestershire,' Bishop Bull's 'Primitive Christianity,' L'Estrange's 'Josephus,' part of Thoresby's 'Ducatus Leodiensis,' and many other works, with some valuable manuscripts, were lost. The estimated total loss was 5,146*l.*, but this was more than half replaced by the produce of a king's brief granted 6 March 1713 for a charitable collection, the contributions of friends and a subscription of his own fraternity amounting to 2,539*l.* In remembrance of this kindness he had several tail-pieces and devices engraved, representing a phœnix rising from the flames, with suitable mottoes used afterwards in some of his best books. Continuing his business at the houses of friends, he at length returned to Whitefriars, October 1713, where he became the foremost printer of his day, until the fame of his learned son overshadowed his. The latter was taken into partnership in 1722, and his duty thenceforward was to correct the press, while his father up to his death retained the executive, the imprint of their works continuing to be 'Printed by William Bowyer.' The list, with copious notes, of all the works published by him is given in Nichols's 'Literary Anecdotes,' from 1697 to 1722, 230 pages, and of the joint works, 1722 to 1737, 370 pages.

Bowyer died 27 Dec. 1737, having survived his wife ten years, and was buried in the church of Low Leyton, Essex, in the south-west corner of which is an inscription to the memory of the Bowyer family generally. There is a marble monument erected by his son to his memory in the same church. In the stock room at Stationers' Hall there is a brass tablet, also by his son, commemorative of his loss by fire in 1712–13, and of the donations of the Stationers' Company and friends. By the side of it hangs a half-length portrait of Bowyer, which has been well described as that of 'a pleasant round-faced man' and 'a jolly good-looking man in a flowing wig.' An engraving of it by Basire is the frontispiece of Nichols's first volume of 'Literary Anecdotes.'

In 1724 Bowyer was a nonjuror; we know nothing more of his religious views except a few traces, in his early life, recorded by Ord in the 'History of Cleveland,' where it is said that he had a controversy with a priest who defended the conduct of his sister, a professed nun of the order of Poor Clares, at Dunkirk. The letters commence October 1696, and end in June 1697, at the time when he was a journeyman printer at Daniel Sheldon's in Bartholomew Close. He seems to have been a very kind-hearted man, and ever ready to show kindness to others. He was the principal means of establishing the elder Caslon as a typefounder.

[Nichols's Lit. Anecd. i. 1–485, ii. 1–116, iii. 272; Gent. Mag. xlviii. 409, 449, 513, lii. 348, 554, 582, liv. 893; Ord's Cleveland, p. 340; Bigmore and Wyman's Bibliog. of Printing, p. 75; Hansard's Typographia, p. 324; Wright's Essex, i. 496.] J. W.-G.

BOWYER, WILLIAM, the younger (1699–1777), 'the learned printer,' only son of William Bowyer the elder [q.v.] and his second wife, Dorothy Dawks, was born at Dogwell Court, Whitefriars, London, on 19 Dec. 1699, a few months after his father had set up in business as a printer and issued his first book. Early in life he was placed under Ambrose Bonwicke the elder [q. v.], at Headley, near Leatherhead. Bowyer so won his master's affection, that when his father suffered in the great fire of 1712, he was gratuitously taught and boarded by Bonwicke for a year, without any intimation that it was the good divine's own deed. In June 1716 his father placed him as a sizar at St. John's, Cambridge, but seems to have dealt not very kindly in the matter of finances. Here he was under Dr. Christopher Anstey and Dr. Newcome, and in 1719 obtained Roper's exhibition, and wrote 'Epistola pro Sodalitio à rev. viro F. Roper mihi legato,' but did not take a B.A. degree. He was therefore not a candidate for a fellowship in 1719, as sometimes stated. In 1722 he was still at college without a degree, and about this time he began to help his father in correcting learned works for the press, Dr. Wilkins's great folio edition of Selden's works being the first, and for this he drew up an epitome—'De Synedriis veterum Ebræorum,' and memoranda of 'Privileges of the Baronage' and 'Judicature in Parliament.' His father took him into partnership towards the end of 1722, retaining the management of the business, and delegating the learned work to his son. In 1727 he wrote and published 'A View of a Book entitled Reliquiæ Baxterianæ' [see

Baxter, William, 1650–1723], which was received with high approbation from Dr. Wotton, Samuel Clarke, and other men of letters. On 9 Oct. 1728, shortly after his mother's death, he married Anne Prudom, his mother's niece, a ward of his father, acquiring with her freehold farms in Yorkshire and Essex. On 17 Oct. 1731 his wife died in her twenty-sixth year, leaving one child only, Thomas, born 1730, a previous son, William, having died in infancy. In 1729 he wrote the preface to Bonwicke's life of his son—'A Pattern for Young Students in the University,' &c., London, 12mo; and in the same year he was appointed, through Onslow, the speaker, to print the votes of the House of Commons, an office he held under three speakers, and for nearly fifty years, in spite of efforts to prejudice him as a nonjuror. In 1730 he edited Dr. Wotton's posthumous work, 'A Discourse concerning the Confusion of Languages at Babel,' London, 8vo. In 1731 he wrote 'Remarks on Mr. Bowman's Visitation Sermon on the Traditions of the Clergy,' exposing that gentleman's deficiency in Latin and Greek, as well as in ecclesiastical history. The 'Sermon' and these 'Remarks' made a great stir at the time. In 1732 Bowyer was involved in a literary dispute with Pope, which seems to have ended with the poet's expressing a good opinion of his critic. The same year he published 'The Beau and Academick,' a translation of Haseldine's 'Bellus Homo et Academicus,' recited in the Sheldonian theatre. In 1733 he wrote in the magazines many letters and papers on Stephen's 'Thesaurus.' In May 1736, at the recommendation of Drake, the antiquary, Bowyer was appointed printer to the Society of Antiquaries, of which he was elected a fellow the July following. He made several valuable contributions to the society, of which are noteworthy one on 'The Inscription on Vitellius at Bath,' and a 'Dissertation on the Gule or Yule of our Saxon Ancestors.' The same year, in conjunction with Dr. Birch, he formed the Society for the Encouragement of Learning, an institution which promised well, but had a very brief existence. In 1738 he became liveryman of the Stationers' Company, of which he was afterwards called on the court in 1763, and fined for the office of master in 1771. In 1741 he put into useful form two schoolbooks, 'Selectæ ex Profanis Scriptoribus Historiæ,' and 'Selectæ è Veteri Testamento Historiæ,' with his own prefaces. In 1742 he edited a translation of Trapp's 'Latin Lectures on Poetry,' with additional notes; and also the seventh volume of Dr. Swift's 'Miscellanies,' 8vo; and in 1744 he wrote a pamphlet on the 'Present State of Europe,' chiefly from Puffendorf, which is now exceedingly scarce.

In 1747 he married his housekeeper, a widow, Mrs. Elizabeth Bill, who had lived with him fourteen years. In 1750 he wrote a prefatory critical dissertation to Kuster's treatise, 'De vero usu Verborum Mediorum,' also a Latin preface to Leedes's 'Veteres Poetæ citati,' works, printed together, of which new editions with improvements were issued in 1773, 12mo, 1806, 8vo, 1822, 12mo. The valuable and extensive notes on Colonel Bladen's 'Translation of Cæsar's Commentaries' signed 'Typogr.' were by Bowyer, 1750. He also wrote the long preface to Montesquieu's 'Reflections on the Rise and Fall of the Roman Empire,' Lond. 1751, and translated the dialogue between Sylla and Eucrates. The same year he gave to the world the first translation of Rousseau's 'Paradoxical Oration on the Arts and Sciences,' which gained the Dijon prize in 1750, and wrote a preface to the work. Excepting a few brief periods of retirement to Knightsbridge, Bowyer clung to business very closely, and his great labours in producing an immense number of learned works at length told upon his constitution. He therefore entered into partnership in 1754 with Mr. James Emonson, a relative, and Mr. Spens, a corrector of the press, and afterwards editor of 'Lloyd's Evening Post,' and took another house in Kirby Street, Hatton Garden, to enjoy 'a freer and sweeter air' in the garden grounds attached. A separation of partnership took place in 1757, when Bowyer resumed the active duties of his profession. This year he took as his apprentice John Nichols, then thirteen years of age, who was soon entrusted with the management of the office. In 1761, through the interest of the Earl of Macclesfield, president of the Royal Society, Bowyer became printer for that institution, and held the same office under five presidents up to his death. The same year he published 'Verses on the Coronation of their late Majesties, King George II and Queen Caroline,' spoken by scholars of Westminster School, with translations of all the Latin copies. In this humorous pamphlet he had the assistance of Mr. Nichols. In 1762 he edited the thirteenth and fourteenth volumes of Swift's Works, 8vo, and in 1763 appeared his excellent edition of the Greek Testament in 2 vols. 12mo, pp. 488, to which he added 'Conjectural Emendations,' &c., paged separately, pp. 178. These critical notes, selected from the works of Bishop Barrington, Markland, Schultz, Michaelis, Owen, Woide, Gasset, and Stephen Weston, were considered of very great value. A second edition of the 'Conjectural Emen-

dations' appeared in 1772, 8vo; 3rd ed. 1782, 4to; 4th ed., much enlarged, 1812, 4to. In 1765 Bowyer had some intention of purchasing a lease of exclusive privilege of the university press, but the scheme fell through. Early in the next year he took into partnership the apprentice-manager of his business, and thenceforward the ever-increasing success of the business was insured. The typographical anecdotes of the Bowyer Press from 1722, when Bowyer became a partner with his father, to 1766, when he took John Nichols into partnership, extend in Nichols's 'Literary Anecdotes of the Eighteenth Century' to 703 closely printed 8vo pages, and from the latter date to his death in 1777 the joint productions of Bowyer and Nichols occupy in description and anecdotes 293 further pages of the same work. In 1766 Bowyer brought out with an excellent Latin preface —'Joannis Harduini Jesuitæ ad censuram Scriptorum Veterum Prolegomena.' In 1767 he was appointed to print the rules of parliament and the journal of the House of Lords through the influence of the Earl of Marchmont; and at this time, for want of room, the printing-office was removed from Whitefriars to Red Lion Passage, where he placed the sign of Cicero's head, and styled himself 'Architectus Verborum.' The anxiety consequent upon this removal from the place of his birth brought on a touch of paralysis, that affected him throughout his after life. In 1771 his second wife died, aged 70. She had assisted in correcting the press until young Nichols took her place. In the preface to the second edition of 'Conjectural Emendations,' 1772, Bowyer craves indulgence from his readers in consequence of suffering from palsy and affection of the stone and bilious colic, but still continued his literary labours. In 1773 he translated and published 'Select Discourses from Michaelis, on the Hebrew Months, Sabbatical Years,' &c. 12mo; in 1774 he published anonymously his well-known work, 'The Origin of Printing, in Two Essays, 8vo,' in which he was assisted by Dr. Owen and Mr. Missy. A second and enlarged edition appeared in 1776, 8vo, with a supplement in 1781, 8vo, by Mr. Nichols. In 1776 he was laid up for weeks with paralysis; still he managed to push forward his last editorial work, Dr. Bentley's 'Dissertation on the Epistles of Phalaris,' which was not published until 1782 (8vo), five years after his death.

In the last year of his life he published 'Rolls of Parliament' in six folio volumes, and thirty-one volumes of the 'Journal of the House of Lords,' and he had a multitude of works in the press—for instance, the two handsome folios of 'Domesday Book,' which were not completed until 1783. He died on 18 Nov. 1777, aged 77. Most of his learned pamphlets, essays, prefaces, corrections, and notes have been reprinted as 'Miscellaneous Tracts by the late William Bowyer . . . collected and illustrated with notes by John Nichols, F.S.L. Edin.,' London, 1785, 4to, pp. 712.

Bowyer was a man of very small stature, and in the *jeux d'esprit* of his day we find him called 'the little man,' 'a little man of great sufficiency.' In character he was very amiable, and his cheerful disposition and learned conversation cemented many a lifelong friendship. Every species of distress was relieved by him, and so privately that the knowledge of his kindness came only from letters found after his death. His will, made 30 July 1777, often reprinted, is full of an affectionate and grateful spirit to the institutions and families of persons who had helped his father in the trouble of the great fire. To his own profession this will shows him a great benefactor, and his bequests are now administered by the Stationers' Company. For religion he had a great regard, and his moral character was unimpeachable. In the church of Low Leyton, Essex, there is a white marble monument to the memory of his father and himself, with a Latin inscription by him. A bust of him is placed in Stationers' Hall, with his father's portrait, and the brass plate underneath has an inscription in English in reference to the fire of 1712. His portrait by Basire is the frontispiece to vol. ii. of Nichols's 'Literary Anecdotes,' 1812, 8vo. The 1812 edition of his 'Conjectural Emendations' has a fine quarto-sized portrait of him as 'Gulielmus Bowyer, Architectus Verborum, æt. lxxviii.,' with various emblems beneath, including the phœnix, symbolical of the rise of the new firm from the memorable fire. There are also inferior portraits in Hansard's 'Typographia' and Wyman's 'Bibliography of Printing.' Each representation reveals to us a severe face as of one of the old puritans, in remarkable contrast to the genial faces of his father and his successor. His son Thomas survived him. He was intended to be his father's successor in business, but seems to have been a very wayward youth, though it is clear from his father's gossiping letters on domestic matters that it was the stepmother's refusal to take proper care of 'Tom,' and her extraordinary affection for her young nephew, Emonson, that disgusted the lad and turned the current of his life. Ordained by Bishop Hoadly for the church, and for a time curate at Hillsdon, Middlesex, he then became a

military man, but changed once more to a quaker shortly before his father's death. He had several estates from his grandfather Prudom, and his father's will dealt very kindly with him. For some time he resided at a secluded village near Darlington, calling himself 'Mr. Thomas,' and died suddenly in 1783, aged 53.

J. W.-G.

BOXALL, JOHN, D.D. (*d.* 1571), Queen Mary's secretary of state, a native of Bramshoot in Hampshire, was, after a preliminary training in Winchester School, admitted a perpetual fellow of New College, Oxford, in 1542, where he took his degrees in arts, 'being then accounted one of the subtilest disputants in the university.' He took orders, but, being opposed to the reformation, he abstained from exercising his ministry while Edward VI reigned. On Queen Mary's accession he was appointed her majesty's secretary of state, archdeacon and prebendary of Ely, prebendary of Winchester and of St. Paul's, and warden of Winchester College (1554) in the place of Dr. John White, who had been promoted to the see of Lincoln. He was one of the divines who were chosen to preach at St. Paul's Cross in support of the catholic religion, and Pits relates that on one occasion, while thus engaged, a bystander hurled a dagger at him (*De illustr. Angliæ Scriptoribus*, 870). Other writers assert that this happened to Dr. Pendleton; but Stow (*Annales*, 1615, p. 614) correctly tells us that Gilbert Bourne [q. v.] occupied the pulpit on the occasion referred to. On 23 Sept. 1556 Boxall was sworn as a member of the privy council; also as one of the masters of requests and a councillor of that court (*Lansd. MS.* 981, f. 85). In July 1557 he was made dean of Peterborough; on 20 Dec. following he was installed dean of Norwich, and about the same time dean of Windsor. He was elected registrar of the order of the Garter on 6 Feb. 1557–8, and in 1558 was created D.D. and appointed prebendary of York and Salisbury. It should be mentioned that Queen Mary allowed him ten retainers (Strype, *Memorials*, iii. 480), and that he was one of the overseers of Cardinal Pole's will (*ib.* 468).

Boxall was removed from the office of secretary of state by Queen Elizabeth, on her accession, to make way for Cecil, and his behaviour on the occasion places his character in a favourable light; for, instead of opposing obstacles to his successor in office, it is clear from a few of his letters to Cecil, dated about this period, that he cherished no sentiment but that of anxiety to give him all the assistance in his power. Having been deprived of his ecclesiastical preferments, he was on 18 June 1560 committed to the Tower by Archbishop Parker and other members of the ecclesiastical commission (Strype, *Annals*, i. 142, 148, 167; Machyn, *Diary*, 238; *Lansd. MS.* 981, f. 85 *b*). Subsequently he was committed to 'free custody' in the primate's palace at Lambeth, with Thirleby, late bishop of Ely, Tunstall, late bishop of Durham, and other divines who adhered to the old doctrines. He was removed at different periods to Bromley and Beaksbourne, remaining still in the archbishop's charge. In the library of Corpus Christi College, Cambridge (*MSS.* No. 114, f. 286) is a letter from Boxall thanking Parker for his kindness to him when confined in his house and for the leave he had obtained of removing to Bromley. On 20 July 1569 Boxall, then in custody at Lambeth, wrote to Sir William Cecil requesting leave to visit his mother. In his letter, which is signed 'Jo. Boxoll,' he says: 'My poore mother beside the comen sicknes of age, beinge of 80 yeares at the lest, ys also dangerously diseased, desyrouse to see me & I likewyse desyrous to do my dewtye vnto her' (*Lansd. MS.* 12, f. 12). Eventually, being attacked by illness, Boxall was allowed to go to the house of a relative in London, where he died on 3 March 1570–1. His brothers Edmund and Richard were appointed administrators of his property.

He published a Latin sermon preached in a convocation of the clergy in 1555 and printed at London in octavo in the same year. He also wrote an 'Oration in the Praise of the Kinge of Spaine,' MS. Reg. 12 A. xlix. This discourse, which is in Latin, was probably composed in May or June 1555, on the report of the queen having been delivered of a prince.

It is recorded to his honour that he was 'a man who, though he were so great with Queen Mary, yet had the good principle to abstain from the cruel blood-shedding of the protestants, giving neither his hand nor his consent thereunto' (Strype, *Life of Parker*, i. 47). Lord Burghley (*Execution of Justice*, 1583, sheet B ii.) describes him as 'a person of great modestie and knowledge,' and Archbishop Parker says: 'Inerat enim ei tanquam à naturâ ingenita modestia comitasque summa, quâ quoscunque notos ad se diligendum astrinxit' (Parker, *Mattheus*, appended to some copies of *De Antiq. Brit. Eccl.*)

BOXALL, Sir WILLIAM (1800–1879), portrait-painter, the son of an Oxfordshire exciseman, was born on 29 June 1800. He was educated at the grammar school at Abingdon, and entered the schools of the Royal Academy in 1819. In 1827 he went to Italy, and resided there for about two years. He first exhibited at the Royal Academy in 1823 'Jupiter and Latona' and 'Portrait of Master Maberley,' and in the following year 'The Contention of Michael and Satan for the Body of Moses.' In 1831 appeared 'Lear and Cordelia,' which was engraved in Finden's 'Gallery.' Boxall painted the portraits of many literary and artistic celebrities, among them those of Allan Cunningham (1836), Walter Savage Landor (1851), David Cox (1857), and Copley Fielding; the last now hangs in the National Portrait Gallery. In 1859 he painted for Trinity House a portrait of the prince consort, wearing the robes of master of the corporation. He excelled in the portrayal of female beauty, and many of his works of that class were engraved in the publications of the day. He exhibited at the Royal Academy altogether eighty-six portraits. In 1851 he was elected an associate of the academy, and in 1863 a full academician. Two years afterwards, in 1865, he succeeded Sir Charles Eastlake in the directorship of the National Gallery, which post he held until 1874. On 24 March 1871 he was knighted, and became in 1877 a retired academician.

During Boxall's administration the picture by Rembrandt of 'Christ blessing Little Children,' known as the 'Suermondt Rembrandt,' was secured for the National Gallery; also 'The Entombment,' attributed to Michelangelo Buonarroti, the authenticity of which was the subject of some discussion in the 'Times' in September 1881. In 1874, when the Peel collection was offered to the nation, Boxall had already resigned his post in consequence of failing health, but his successor not having been appointed, Mr. Lowe (now Lord Sherbrooke), the chancellor of the exchequer, entrusted him with the negotiation, which he brought to a successful issue. He died on 6 Dec. 1879. One of his works, entitled 'Geraldine,' and representing a lady at her toilette, is in the National Gallery.

BOXER, EDWARD (1784–1855), rear-admiral, entered the navy in 1798, and after eight years' junior service, for the most part with Captain (afterwards Sir) Charles Brisbane, and for some short time in the Ocean, bearing Lord Collingwood's flag, was confirmed, 8 June 1807, as lieutenant of the Tigre with Captain Benjamin Hallowell (afterwards Carew), whom, on promotion to flag rank in October 1811, he followed to the Malta, and continued, with short intermissions, under Rear-admiral Hallowell's immediate command, until he was confirmed as commander on 1 March 1815. In 1822 he commanded the Sparrowhawk (18) on the Halifax station, and was posted out of her on 23 June 1823. From 1827 to 1830 he commanded the Hussar as flag-captain to Sir Charles Ogle at Halifax. In August 1837 he was appointed to the Pique, which he commanded on the North American and West Indian stations; and early in 1840 was sent to the Mediterranean, where he conducted the survey of the position afterwards occupied by the fleet off Acre, and took part in the bombardment and reduction of that place in November. For his services at that time he received the Turkish gold medal, and was made C.B. 18 Dec. 1840. In August 1843 he was appointed harbour-master at Quebec, and held that office till his promotion to flag-rank, 5 March 1853. In December 1854 he was appointed second in command in the Mediterranean, and undertook the special duties of superintendent at Balaklava, which the crowd of shipping, the narrow limits of the harbour, and the utter want of wharves or of roads had reduced to a state of disastrous confusion. This, and more especially the six-mile sea of mud between the harbour and the camp, gave rise to terrible suffering and loss, the blame for which was all laid on the head of the admiral-superintendent at Balaklava, so that even now Admiral Boxer's name is not uncommonly associated with the memory of that deadly Crimean winter. But in truth it ought to be remembered rather as that of the man who, at the cost of his life, remedied the evils which had given rise to such loss. He died of cholera on board the Jason, just outside the harbour, on 4 June 1855, and Lord Raglan in reporting his death

said: 'Since he undertook the appointment of admiral-superintendent of the harbour of Balaklava he has applied himself incessantly to the discharge of his arduous duties, exposing himself in all weathers; and he has rendered a most essential service to the army by improving the landing-places and establishing wharves on the west side of the port, whereby the disembarkation of stores and troops has been greatly accelerated, and communications with the shore have been rendered much easier.' He had been a widower for nearly thirty years, but left a numerous family.

[O'Byrne's Nav. Biog. Dict.; Gent. Mag. (1855), N.S. xliv. 95.] J. K. L.

BOYCE, SAMUEL (*d.* 1775), dramatist, was originally an engraver, and held subsequently a place in the South Sea House. He is the author of 'The Rover, or Happiness at Last,' a dramatic pastoral, 4to, 1752, which was never acted, and 'Poems on several Occasions,' Lond. 1757, 8vo, a large-paper copy of which was in the Garrick sale. He died 21 March 1775.

[Baker, Reed, and Jones's Biographia Dramatica; Lowndes's Bibliographer's Manual.] J. K.

BOYCE, THOMAS (*d.* 1793), dramatist, was rector of Worlingham, Suffolk, and chaplain to the Earl of Suffolk. He is the author of one tragedy, 'Harold,' Lond. 4to, 1786, which was never acted. In the preface to this he states that when he wrote it he was unaware that Cumberland's play on the same subject was in rehearsal at Drury Lane. It is a dull work, but the termination, judged by the standard of the day, is not ineffective. He died 4 Feb. 1793.

[Genest's History of the Stage; Baker, Reed, and Jones's Biographia Dramatica.] J. K.

BOYCE, WILLIAM (1710–1779), Mus. Doc., was born at Joiners' Hall, Upper Thames Street, in 1710. His father is variously stated to have been a 'housekeeper,' a joiner and cabinet maker, a man of considerable property, and the beadle of the Joiners' Company. Boyce was educated at St. Paul's School, and was a chorister of St. Paul's Cathedral under Charles King. When his voice broke he was apprenticed to Dr. Maurice Greene, with whom he always remained on close terms of friendship. In 1734 he competed for the post of organist at St. Michael's, Cornhill, the other candidates being Froud, Worgan, Young, and Kelway. The appointment was given to the last-named musician, and Boyce became organist of Oxford Chapel (now St. Peter's), Vere Street, where he succeeded Joseph Centlivre. At this time he studied theory under Dr. Pepusch, and was much in demand as a teacher of the harpsichord, particularly in ladies' schools. In 1736 Kelway left St. Michael's, and succeeded Weldon at St. Martin's-in-the-Fields; whereupon Boyce resigned his post at Oxford Chapel, and took Kelway's place in the city, which he continued to occupy until 5 April 1768. On 21 June of the same year he was sworn in as composer to the Chapel Royal, the post of organist at the same time being conferred upon Jonathan Martin, while Boyce undertook to fulfil the third part of the duty of organist, receiving in return one-third part of the money allotted to Martin as 'travelling expenses.' In 1734 Boyce's setting of 'Peleus and Thetis,' a masque, written by Lord Lansdowne, had been performed by the Philharmonic Society, and in 1736 the Apollo Society produced an oratorio by him, 'David's Lamentation over Saul and Jonathan,' the words of which were by John Lockman. In 1737 he was appointed conductor of the Three Choirs festivals, a post he held for many years. About the same time he became a member of the Royal Society of Musicians, and a little later he composed music to two odes for St. Cecilia's day, written respectively by Lockman and an under-master of Westminster School named Vidal. In 1740 he composed the Pythian Ode, 'Gentle lyre, begin the strain,' and in 1743 produced his best work, the serenata of 'Solomon,' the book of which was compiled from the Song of Solomon by Edward Moore, the author of 'Fables for the Female Sex.' Shortly afterwards he published a set of 'Twelve Sonatas for Two Violins, with a Bass for the Violoncello or Harpsichord,' which long remained very popular as chamber music; and in 1745 he began the publication of his miscellaneous songs and cantatas, which, under the name of 'Lyra Britannica,' ultimately extended to six volumes. The year 1749 saw Boyce at the height of his activity. On 2 Jan. the masque of 'Lethe' was revived at Drury Lane, with Beard as Mercury, for whom Boyce wrote new songs. On 1 July his setting of Mason's ode on the installation of the Duke of Newcastle as chancellor of the university of Cambridge was performed in the senate house, and on the following day an anthem by him, with orchestral accompaniments, was performed at Great St. Mary's as an exercise for the degree of Mus. Doc., which the university had conferred on him. On 2 Dec. 'The Chaplet,' an operetta by Moses Mendez, with music by Boyce, was produced at Drury Lane, the principal parts in which were filled by Beard, Mrs. Clive, and Master Mattocks, on which

occasion Mattocks made his first appearance on the stage. In the same year the parishioners of Allhallows the Great and Less, Thames Street, where Boyce was born, requested him to become organist of the parish church; he held this post until 18 May 1769, when he was dismissed, probably because his numerous occupations prevented him from attending properly to the duties of the post. In 1750 Garrick revived Dryden's 'Secular Masque' (30 Oct.), which had been originally produced with 'The Pilgrim' on 25 March 1700. For this Boyce had already written music, which had been performed at 'Hickford's Room, or the Castle Concert;' this was now heard at Drury Lane, with Beard as Momus. In the following year (19 Nov. 1751) another small work by Mendez and Boyce was brought out at Drury Lane; this was 'The Shepherd's Lottery,' in which Beard and Mrs. Clive sang the principal parts. About this time he moved from his father's house in the city to Quality Court, Chancery Lane, where he lived with his wife until his removal to Kensington in 1758. In 1755, on the death of Dr. Greene, Boyce was nominated by the Duke of Grafton to be master of the king's band of musicians. He was not sworn in until June 1757, but he fulfilled the duties of the post from the death of Greene. In this capacity he composed a large number of odes for the king's birthday and new year's day. A complete collection of these from the year 1755 to 1779 is preserved in the Music School Collection at Oxford, besides a queen's ode (performed 6 June 1763), and two settings of 'The king shall rejoice,' the earliest of which was performed at the wedding of George III (8 Sept. 1761), and the other at St. Paul's Cathedral (22 April 1766). As conductor of the festivals of the Sons of the Clergy, another post to which he succeeded on Greene's death, Boyce wrote additional accompaniments to Purcell's great Te Deum and Jubilate, besides composing specially for these occasions two of his finest anthems. In 1758 John Travers, the organist of the Chapel Royal, died, and on 23 June Boyce was admitted to this post. In the same year he wrote music for Home's tragedy of 'Agis,' which was produced at Drury Lane 21 Feb. Boyce also wrote at different times music for Shakespeare's 'Tempest,' 'Cymbeline,' and 'Winter's Tale,' and a dirge for 'Romeo and Juliet.' His last work for the theatre was the music to Garrick's pantomime, 'Harlequin's Invasion,' which was produced at Drury Lane 31 Dec. 1759. Boyce's most important contribution to this work was the fine song 'Hearts of Oak,' a composition which almost rivals 'Rule Britannia' in vigour and popularity. This song was originally sung by Champness; it was published in 'Thalia, a Collection of six favourite Songs (never before Publish'd) which have been occasionally Introduced in several Dramatic Performances at the Theatre Royal in Drury Lane; the words by David Garrick, Esq., and the musick compos'd by Dr. Boyce, Dr. Arne, Mr. Smith, Mr. M. Arne, Mr. Battishill, and Mr. Barthelemon.' During the whole of his life Boyce suffered much from deafness; even before his articles had expired this infirmity had made itself very apparent, and by the year 1758 it had increased to such an extent that he resolved to give up teaching and to retire to Kensington, and devote himself to editing the collection of church music which bears his name. The idea of publishing a work of this description occurred simultaneously to Dr. Alcock and Dr. Greene about the year 1735. The latter issued a prospectus on the subject, whereupon Dr. Alcock gave up the plan, and presented Greene with his collections; but he did not live to begin the work in earnest, which thus devolved, by Greene's wishes, upon Boyce. The 'Cathedral Music,' the first volume of which was published in 1760, has been often reprinted, and, although at the time of its publication it brought but little beyond honour to its editor, it still remains a most valuable and important work, and a monument of Boyce's erudition and good judgment. Besides the preparation of this great work, in his latter years Boyce revised most of his earlier compositions, and published a selection of the overtures to his new-year and birthday odes, under the title of 'Eight Symphonys.' Most of his anthems were not published until after his death, when two volumes were brought out by his widow and by Dr. Philip Hayes, besides a burial service and a collection of voluntaries for the organ or harpsichord. He died of gout at Kensington 7 Feb. 1779, and was buried under the dome of St. Paul's on the 16th of the same month. His will, dated 24 June 1775, proved by his wife and daughter 20 Feb. 1779, directs that he should not be buried until seven days and seven nights after his death. By his wife Hannah he had two children: (1) Elizabeth, who was born 29 April 1749; and (2) William, born 25 March 1764. The latter, after his father's death, entered at an Oxford college, but was sent down without taking a degree. He attained some distinction as a double-bass player, and died about 1823. Two oil paintings of Boyce are known to exist. One, a full length, is in the Music School Collection at Oxford; another, a small three-quarter length of him, seated, by Sir Joshua Reynolds, is

now (1886) in the possession of Mr. John Rendall. There is an engraved portrait of him, 'drawn from the life, and engraved by F. K. Sherwin,' prefixed to the second edition of the 'Cathedral Music' (1788). The same portrait was prefixed to the 'Collection of Anthems,' published by Mrs. Boyce in 1790. A vignette of him, by Drayton, after R. Smirke (together with Blow, Arne, Purcell, and Croft), was published in the 'Historic Gallery,' September 1801.

Personally, Boyce was a most amiable and estimable man. Burney, twenty-four years after his death, wrote of him as follows: 'There was no professor whom I was ever acquainted with that I loved, honoured, and respected more,' and he seems to have been a universal favourite with all with whom he came in contact. Musically, he occupies a distinct position amongst his contemporaries. Like all the English composers of his day, it was his ill fortune to be overshadowed by the giant form of Handel, and yet, in spite of this, he managed to preserve an individuality of his own. He may best be described as the Arne of English church music; for the same characteristics of grace and refinement are to be found in his music as in that of his contemporary, and, like Arne, he had a reserve of power which was all the more effective for not being too often brought into play.

W. Taphouse; manuscripts in the Music School Collection, Oxford; Appendix to Bemrose's Choir Chant Book; Cheque Book of the Chapel Royal.] W. B. S.

BOYD, ARCHIBALD (1803–1883), dean of Exeter, son of Archibald Boyd, treasurer of Derry, was born at Londonderry in 1803, and, after being educated at the diocesan college in that city, proceeded to Trinity College, Dublin, where he graduated B.A. 1823, proceeded M.A. 1834, and B.D. and D.D. long after, in 1868. He officiated as curate and preacher in the cathedral of Derry 1827–42, and here he first distinguished himself as an able and powerful preacher, as a controversialist, and as an author. At that time the controversy between the presbyterians and the episcopalians of the north of Ireland was at its height. Boyd came to the defence of the church and preached a series of discourses in reply to attacks. These discourses attracted great attention, and were afterwards printed. In 1842 he was appointed perpetual curate of Christ Church, Cheltenham. With Francis Close, his fellow-worker here, he joined in a scheme for establishing additional Sunday schools, infant schools, and bible classes. For eight years after 1859 he was entrusted with the care of Paddington. On 11 Nov. 1867 he accepted the deanery of Exeter, and resigned, with his vicarage, an honorary canonry in Gloucester Cathedral, which he had held since 1857. Like Dean Close, he was a preaching and a working dean. He was a firm but moderate evangelical, and was a voluminous writer on the ecclesiastical questions of the day. His name is connected with the well-known Exeter reredos case. The dean and chapter erected in the cathedral, 1872–3, a stone reredos, on which were sculptured representations in bas-relief of the Ascension, the Transfiguration, and the Descent of the Holy Ghost, with some figures of angels. In accordance with a petition presented by William John Phillpotts, chancellor of the diocese, the bishop (Dr. Temple) on 7 Jan. 1874 declared the reredos to be contrary to law and ordered its removal. After much litigation touching the bishop's jurisdiction in the matter, the structure was declared not illegal by the judicial committee of the privy council on 25 Feb. 1875 (*Law Reports*, BULWER'S *Admiralty and Ecclesiastical Reports*, iv. 297–379 (1875); COWELL'S *Privy Council Appeals*, vi. 435–67 (1875).

Whilst on the continent during the autumn of 1882 Dean Boyd met with an accident at Vienna, from the effects of which he never fully recovered. He died at the deanery, Exeter, on 11 July 1883, bequeathing nearly 40,000*l.* to various societies and institutions in the diocese of Exeter. He married Frances, daughter of Thomas Waller of Ospringe, and widow of the Rev. Robert Day Denny. She died on 6 Jan. 1877.

Boyd was the author of the following works: 1. 'Sermons on the Church, or the Episcopacy, Liturgy, and Ceremonies of the Church of England,' 1838. 2. 'Episcopacy, Ordination, Lay-eldership, and Liturgies,' 1839. 3. 'Episcopacy and Presbytery,' 1841. 4. 'England, Rome, and Oxford compared as to certain Doctrines,' 1846. 5. 'The History of the Book of Common Prayer,' 1850. 6. 'Turkey and the Turks,' 1853. 7. 'Baptism and Baptismal Regeneration,' 1865. 8. 'Confession, Absolution, and the Real Presence,' 1867. 9. 'The Book of Common Prayer,' 1869. He also printed many single sermons and minor publications.

[Times, 12 July 1883, p. 6; Devon Weekly Times, 13 and 20 July 1883; The Golden Decade of a Famous Town, i.e. Cheltenham, by Contem Ignotus (1884), pp. 70–102.] G. C. B.

BOYD, BENJAMIN (1796–1851), Australian squatter, second son of Edward Boyd of Merton Hall, Wigtonshire, by his wife, Jane, eldest daughter of Benjamin Yule of Wheatfield, Midlothian, and brother of Mark Boyd [q. v.], was born at Merton Hall about 1796, and, after being in business as a stockbroker in the city of London from 1824 to 1839, went out to Sydney in 1840–41 for the purpose of organising the various branches of the Royal Banking Company of Australia. Acting on behalf of this company, he purchased station property in the Monaro district, Riverina, Queensland, and elsewhere. At the first-named place he erected large stores and premises for boiling down his sheep into tallow. He at the same time speculated largely in whaling, and Twofold Bay became the rendezvous for his whaling ships. On the south head of the bay he put up a lighthouse for the purpose of directing vessels coming to his wharf. Another business which he carried on extensively was shipping cattle to Tasmania, New Zealand, and other markets. Boyd had also in view the making of Boyd Town, which he had founded, a place of commercial importance, by stealing a march on the government, who had made Eden the official township. He was the first, or amongst the first, to attempt to procure cheap labour in Australia by the employment of South Sea Islanders as shepherds, but the scheme proved abortive. Meantime the company grew dissatisfied with Boyd's management, and after a good deal of trouble Boyd agreed to retire and to resign all claims on the company on condition of receiving three of the whaling ships, his yacht, called the Wanderer, in which he had come from England, and two sections of land at Twofold Bay. His next enterprise was to embark with a digging party on board the Wanderer and to sail for California in 1850 at the time of the gold excitement there. He was unsuccessful in his search for gold, and was on his way back to Sydney in 1851 when his yacht touched at one of the islands in the Solomon group, known as Gandalcanar. There he went ashore with a black boy to have some shooting, and was never seen again. The affairs of the Royal Banking Company were ultimately wound up, when the shareholders had to make good a deficiency of 80,000*l.* Boyd also had large estates of his own, amounting to 381,000 acres, for which, in 1847, he paid an annual license of 80*l.* He was in his time the largest squatter in the Australian colonies. He never married.

[Heaton's Australian Dictionary of Dates (1879), pp. 23–24.] G. C. B.

BOYD, HENRY (*d.* 1832), translator of Dante, was a native of Ireland, and was most probably educated at Dublin University. He published a translation of Dante's 'Inferno' in English verse, the first of its kind, with a specimen of the 'Orlando Furioso' of Ariosto, 1785. It was printed by subscription, and dedicated to the Earl of Bristol, bishop of Derry. The dedication is dated from Killeigh, near Tullamore, of which place presumably Boyd was incumbent. In 1796 he published 'Poems chiefly Dramatic and Lyric.' As early as 1791 the 'ingenious and unfortunate author' was seeking subscriptions for his original poems (Nichols, *Lit. Illustrations*, vii. 717). In 1802 he issued three volumes of an English verse translation of the whole 'Divina Commedia' of Dante, with preliminary essays, notes, and illustrations, which was dedicated to Viscount Charleville, whose chaplain the author is described to be in the title-page. In the dedication Boyd states that the terrors of the Irish rebellion had driven him from the post of danger at Lord Charleville's side to seek a safe asylum in a 'remote angle of the province.' In 1805 he was seeking a publisher for his translation of the 'Araucana' of Ercilla, a long poem, which 'was too great an undertaking for Edinburgh publishers,' and for which he vainly sought a purchaser in London (*ibid.* 120, 149). In 1805 he published the 'Penance of Hugo, a Vision,' translated from the Italian of Vincenzo Monti, with two additional cantos; and the 'Woodman's Tale,' a poem after the manner and metre of Spenser's 'Faery Queen.' The latter poem formed really the first of a collection of poems and odes. These poems were to have been published at Edinburgh, and Boyd seems to have acted badly in making an engagement with a London house to publish them after they had been announced there (*ibid.* 157). In the title-pages to both these works the author is described as vicar of Drumgath in Ireland; but in all biographical notices and in the obituary record of the 'Gentleman's Magazine' for September 1832, the date of his death, he is invariably described simply as vicar of Rathfriland and chaplain to the Earl of Charleville. Anderson, writing to Bishop Percy in 1806, says that he had received some squibs written by Boyd against Mone, and that the humour was coarse and indelicate (*ibid.* 171). In 1807 he issued the 'Triumphs of Petrarch,' translated into

English verse, and in 1809 some notes of his on the Fallen Angels in 'Paradise Lost' were published, with other notes and essays on Milton, under the superintendence of the Rev. Henry Todd. He died at Ballintemple, near Newry, at an advanced age, 18 Sept. 1832.

[Nichols's Illustrations of Literature, vii. 120, 149, 157, 171, 717; Gent. Mag. vol. lv. pt. i., vol. cii. pt. ii.; Boyd's Dante, Dedication.] B. C. S.

BOYD, HUGH (1746–1794), essayist, was the second son of Alexander Macauley of county Antrim, Ireland, and Miss Boyd of Ballycastle in the same county. He was born at Ballycastle in October 1746, and showed precocious talents. He was sent to Dr. Ball's celebrated school at Dublin, and at the age of fourteen entered at Trinity College, Dublin. He became M.A. in 1765, and would have entered the army, but his father's somewhat sudden death left him unprovided for. He accordingly chose the law for a profession, and came to London. Here he became acquainted with Goldsmith and with Garrick. His wit and talents and his reputed skill at chess soon brought him into the best society. In 1767 he married Miss Frances Morphy, and on the death of his maternal grandfather he took the name of Boyd. After a visit to Ireland in 1768, during which he wrote some political letters in the Dublin journals, he resided at various places in and near London, his time and talents being devoted to literature, politics, and legal studies. During these years in London Boyd was a frequent contributor to the 'Public Advertiser' and other journals, and was in close intimacy with the circle of Burke and Reynolds. In 1774 he began to work harder at the law, and also attended the commons' debates, which he wrote down from memory with extraordinary accuracy. Another visit to Ireland took place in 1776, on the occasion of an election for Antrim, the candidate for which he supported by a series of able letters under the signature of 'A Freeholder.' Boyd was at length compelled by pecuniary pressure to seek a post of some emolument, and in 1781 he accepted the appointment of secretary to Lord Macartney, when that officer was nominated governor of Madras. Boyd now applied himself sedulously to the study of Indian affairs. Not long after his arrival at Madras he conducted a mission from the governor to the king of Candy in Ceylon, requiring that potentate's assistance against the Dutch. On his return the vessel in which he sailed was captured by the French, and he became a prisoner for some months at the isle of Bourbon. Returning at length to India he lived for some time at Calcutta, and eventually was appointed master-attendant at Madras. In 1792 Boyd conducted a paper called the 'Madras Courier,' and the following year projected the 'Indian Observer,' being papers on morals and literature; and started a weekly paper, 'Hircarrah' (i.e. messenger), as a vehicle for the essays. In 1794 he proposed to publish by subscription an account of his embassy to Candy, and had actually begun the work when he was carried off by an attack of fever. He died on 19 Oct. 1794.

Boyd is represented as possessed of very high social and intellectual qualities. His claims to a place in the history of English literature rest very much on the assumption —maintained by Almon and by George Chalmers—that he is the veritable 'Junius.' The argument in his favour is stated in the books mentioned below. Boyd's writings were collected and republished after his death by one of his Indian friends, under the title of 'The Miscellaneous Works of Hugh Boyd, the author of the Letters of Junius, with an Account of his Life and Writings, by Lawrence Dundas Campbell,' 2 vols. 8vo, London, 1800. They comprise the 'Freeholder Letters;' 'Democraticus,' a series of letters printed in the 'Public Advertiser,' 1779; 'The Whig,' a series of letters contributed to the 'London Courant,' 1779–80; 'Abstracts of Two Speeches of the Earl of Chatham;' 'Miscellaneous Poems;' 'Journal of Embassy to the King of Candy;' and the 'Indian Observer.'

[Almon's Biographical Anecdotes, i. 16; Almon's Letters of Junius, passim (2 vols. 12mo, 1806); Reasons for rejecting the presumptive Evidence of Mr. Almon that Mr. Hugh Boyd was the Writer of Junius (8vo, London, 1807); An Appendix to the Supplemental Apology for the Believers in the Supposititious Shakespeare Papers, being the documents for the opinion that Hugh M'Auley Boyd wrote Junius's Letters, by George Chalmers (8vo, London, 1800); The Author of Junius ascertained . . . by George Chalmers (8vo, London, 1819); Campbell's Miscellaneous Works of Boyd, with Life, &c. (2 vols. London, 1800); Gent. Mag. lxxxiv. 224; European Mag. xxxvii. 339, 433; Notes and Queries, 2nd ser., i. 43, ix. 261, xi. 8; Taylor's Records of my Life, i. 188, 190.] E. S.

BOYD, HUGH STUART (1781–1848), Greek scholar, was born at Edgware. Before his birth his father, Hugh McAuley, took the name of Boyd, borne by the family of his wife, the daughter of Hugh Boyd of Ballycastle, Ireland [q. v.], one of the supposed authors of the 'Letters of Junius.' His mother's maiden name was Murphy. Boyd

was admitted a pensioner of Pembroke Hall, Cambridge, on 24 July 1799, and matriculated on 17 Dec. of the following year. He left the university without taking a degree. He had a good memory, and once made a curious calculation that he could repeat 3,280 'lines' of Greek prose and 4,770 lines of Greek verse. In 1833 he appears to have resided some time at Bath. During the last twenty years of his life he was blind. He married a lady of Jewish family, and by her had one daughter, Henrietta, married to Mr. Henry Hayes. He lived chiefly at Hampstead, and died at Kentish Town on 10 May 1848. While blind he taught Greek to Elizabeth Barrett Browning, who was much attached to him. One of her poems, the 'Wine of Cyprus,' is dedicated to Boyd. She also wrote a sonnet on his blindness and another on his death. His published works are: 1. 'Luceria, a Tragedy,' 1806. 2. 'Select Passages from the Works of St. Chrysostom, St. Gregory Nazianzen, &c., translated,' 1810. 3. 'Select Poems of Synesius, translated,' with original poems, 1814. 4. 'Thoughts on the Atoning Sacrifice,' 1817. 5. 'Agamemnon of Æschylus,' translated, 1823. 6. 'An Essay on the Greek Article,' included in Clarke's 'Commentary on the Epistle to the Ephesians,' second edition, 1835. 7. 'The Catholic Faith,' a sermon of St. Basil, translated, 1825. 8. 'Thoughts on an illustrious Exile,' 1825. 9. 'Tributes to the Dead,' translation from St. Gregory Nazianzen, 1826. 10. 'A Malvern Tale, and other Poems,' 1827. 11. 'The Fathers not Papists, with Select Passages and Tributes to the Dead,' 1834.

BOYD, JAMES, LL.D. (1795–1856), schoolmaster and author, the son of a glover, was born at Paisley on 24 Dec. 1795. After receiving his early education partly in Paisley and partly in Glasgow, he entered Glasgow University, where he gained some of the highest honours in the humanity, Greek, and philosophical classes. After taking his degrees of B.A. and M.A., he devoted himself for two years to the study of medicine, but abandoned this pursuit; entered the divinity hall of the university of Glasgow, and was licensed to preach the gospel by the presbytery of Dumbarton in May 1822. Towards the close of that year he removed to Edinburgh, where for three years he maintained himself by private tuition. In 1825 he was unanimously chosen house governor in George Heriot's Hospital, Edinburgh. The university of Glasgow conferred on him the honorary degree of doctor of laws.

Boyd became classical master in the high school of Edinburgh 19 Aug. 1829. The largely attended classes which he always had decisively proved the public estimate of his merits. For many years before his death he held the office of secretary to the Edinburgh Society of Teachers. He died at his house, George Square, Edinburgh, on 18 Aug. 1856, having nearly completed an incumbency of twenty-seven years in the high school. He was interred at New Calton, Edinburgh, on 21 Aug. The affectionate respect which all his pupils entertained towards Boyd is evinced by the number of clubs formed in his honour by his classes. In the Crimea, during the Russian war, two 'Boyd clubs' were formed by British officers in acknowledgment of their common relation to him as their preceptor. Within two months after his death a medal, to be named the Boyd medal, and to be annually presented to the 'dux' of the class in the high school taught by Boyd's successor, was subscribed for at a meeting held in Edinburgh by his friends and pupils. He married on 24 Dec. 1829 Jane Reid, eldest daughter of John Easton, merchant, Edinburgh, by whom he was the father of nine children.

Boyd's literary talents were confined to the editing of classical and other school books. They include: 'Roman Antiquities,' by A. Adams, 1834, which was reprinted fifteen times during the editor's lifetime; 'Q. Horatii Flacci Poemata,' by C. Anthon, 1835, which passed through three editions; 'Archæologia Græca,' by J. Potter, Bishop of Oxford, 1837; 'Sallustii Opera,' by C. Anthon, 1839; 'Select Orations of Cicero,' by C. Anthon, 1842; 'A Greek Reader,' by C. Anthon, 1844; 'A Summary of the Principal Evidences of the Christian Religion,' by B. Porteus, Bishop of London, 1850; and 'The First Greek Reader,' by Frederic Jacobs, 1851.

BOYD, MARK (1805?–1879), author, born in Surrey near the Thames, was the younger son of Edward Boyd of Merton Hall, Newton Stuart, Wigtonshire, a merchant and brother of Benjamin Boyd [q. v.] He mainly spent his childhood on the Scotch estate, which was near the river Cree. He afterwards pursued in London an active

business career, and became London director of a Scotch insurance society, and a lively promoter of the colonisation of Australia and New Zealand, and of other useful public undertakings. He travelled much in Europe. He published an account in the 'London and Shetland Journal' of a journey in the Orkney Isles in 1839. On 23 Dec. 1848 he married Emma Anne, the widow of 'Romeo' Coates, who had been run over and killed in the previous February. In 1864 Boyd published a pamphlet on Australian matters; in 1871 his 'Reminiscences of Fifty Years,' and in 1875 his 'Social Gleanings,' dedicating the first to the Australian colonists, and the last (from Oatlands, Walton-on-Thames) to Dean Ramsay. He died in London on 12 Sept. 1879, aged 74.

[Boyd's Reminiscences of Fifty Years, Dedication, vi, vii, and pp. 102, 310, 333, 336, 368, 397, 464, 466; Annual Reg. 1848, p. 216, 1879, p. 222; Gent. Mag. N.S. xxx. 648.] J. H.

BOYD, MARK ALEXANDER (1563–1601), Latin scholar, born in Galloway on 13 Jan. 1563, was a son of Robert Boyd of Penkill Castle, Ayrshire. His father was the eldest son of Adam Boyd, brother of Robert, restored to the title of Lord Boyd in 1536. Boyd is said to have been baptised Mark, and to have himself added the name Alexander. He had a brother William. His education began under his uncle, James Boyd, of Trochrig, consecrated archbishop of Glasgow at the end of 1573. Proceeding to Glasgow College, of which Andrew Melville was principal, he proved insubordinate, and is said to have beaten the professors, burned his books, and forsworn all study. Going to court he fought a duel. He was advised to follow the profession of arms in the Low Countries, but instead of this he went to France in 1581. After losing his money at play, he resumed his studies at Paris under Jacques d'Amboise, Jean Passerat, famed for the beauty of his Latin and French verse, and Gilbert Génébrard. Génébrard was professor of Hebrew, but Boyd confesses his ignorance of that language. He then began to study civil law at Orleans, and pursued the same study at Bourges, under Jacques Cujas, with whom he ingratiated himself by some verses in the style of Ennius, a favourite with that great jurist. Driven from Bourges by the plague, he went to Lyons, and thence to Italy, where he found an admiring friend in Cornelius Varus, who calls himself a Milanese (Boyd in a manuscript poem calls him a Florentine). Returning to France in 1587, he joined a troop of horse from Auvergne, under a Greek leader, and drew his sword for Henri III. A shot in the ankle sent him back to law studies, this time at Toulouse, where he projected a system of international law. From Toulouse he visited Spain, but soon returned on account of his health. When Toulouse fell into the hands of the leaguers in 1588, Boyd, with a view to joining the king's party, betook himself to Dumaise, on the Garonne. Not liking the look of things here, he was for going on, but his boy warned him of a trap set for his life, into which a guide was to lead him. After hiding for two days among the bushes, he went back to the leaguers, and was imprisoned at Toulouse. As soon as he got his liberty he hastened by night to Bordeaux. His letters allow us to trace his wanderings to Fontenai, Bourges, Cahors, &c. He laments that he was no deep drinker, or he would have pushed on more confidently (*Epp.* p. 159). He went to Rochelle, being robbed and nearly murdered on the way. Rochelle not suiting him, he found for some time a country retreat on the borders of Poitou. From France he repaired to the Low Countries, printing his volume of poems and letters at Antwerp in 1592. From first to last there is a good deal of eccentricity about Boyd, but his accomplishments as a writer of Latin verse are undoubted, though it must be left for his friend Varus to set him above Buchanan. Another admirer calls him 'Naso redivivus.' His own verdict is that there were few good poets of old, and hardly any in his own time; the Greek poets rank first, in this order: Theocritus, Orpheus, Musæus, Homer; the Hebrew poets (judging from translations) fall decidedly below the Latin, of whom Virgil is chief. Boyd conversed in Greek, and is said to have made a translation of Cæsar in the style of Herodotus. On his way back to Scotland in 1595, after fourteen years' absence, he heard of the death of his brother William, who, as we learn from Boyd's verses, had been in Piedmont, and for whom he expresses a great affection. Having once more gone abroad as tutor to the Earl of Cassilis, he finished his career in his native land, dying of slow fever at Penkill on 10 April 1601. He was buried in the church of Dailly. His publication above referred to is 'M. Alexandri Bodii Epistolæ Heroides, et Hymni. Ad Iacobum sextum Regem. Addita est ejusdem Literularum prima curia,' Antv. 1592, small 8vo (there are fifteen 'epistolæ,' the first two of which are imitated in French by P. C. D. [Pietro Florio Dantoneto]; the 'hymni,' dedicated in Greek elegiacs to James VI, are sixteen Latin odes, nearly all on some special flower, and each connected with the name of a friend or patron; there is also a Greek

ode to Orpheus; a few epigrams in the author's honour are added; then come the prose letters. The poetical portion of the book is included in Arthur Johnston's 'Deliciæ Poetarum Scotorum,' Amst. 1637, 12mo. Johnston prints the title as 'Epistolæ Heroidum'). Boyd is said to have published also a defence of Cardinal Bembo and the ancient eloquence, addressed to Lipsius. He left prose and verse manuscripts, now in the Advocates' Library, Edinburgh; among them are, 'In Institutiones Imperatoris Commenta,' 1591; 'L'Estat du Royaume d'Escosse à present;' 'Politicus, ad Joannem Metellanum cancellarium Scotiæ' (Sir John Maitland, or Matlane, died 3 Oct. 1595).

BOYD, ROBERT, Lord (*d.* 1469?), Scotch statesman, eldest son of Sir Thomas Boyd of Kilmarnock, was created a peer of parliament by James II by the title of Lord Boyd, and took his seat on 18 July 1454. In 1460 he was appointed one of the regents during the minority of the young king, James III. In 1464 (11 April) he was joined with the Bishop of Glasgow, the Abbot of Holyrood, his brother, Sir Alexander Boyd of Duncole, and three others, in a commission to negotiate a truce with Edward IV. In 1466 he obtained the appointment of his brother, Sir Alexander, as instructor to the young king in knightly exercises, and conspired with him to obtain entire control of the affairs of the kingdom. To this end they, in defiance of the protests of Lord Kennedy, one of their co-regents, took possession of the person of the king, and carried him from Linlithgow to Edinburgh, where, in a parliament summoned (9 Oct.), a public expression of approval of their conduct was obtained from the king, and an act was passed constituting Boyd sole governor of the realm. He now governed autocratically, but he appears by no means to have abused his power. On the contrary, some of the measures which he introduced must have been eminently salutary. Commendams were abolished, and religious foundations which had deviated from their original purposes were reformed. He also passed enactments designed to promote the interests of the mercantile and shipping community, prohibiting the freighting of ships without a charter-party by subjects of the king, whether within the realm or without it, and also fostering the importation and discouraging the exportation of bullion. He negotiated a marriage between the king and Margaret, the only daughter of Christian, king of Norway, thereby obtaining the cession of Orkney (8 Sept. 1468) and the formal release of the annual tribute of 100 marks, which was still nominally payable to the king of Norway, in the church of St. Magnus, Kirkwall, though it had long ceased to be paid. In 1467 he obtained for himself the office of great chamberlain for life, while his eldest son, Thomas (by Mariota, daughter of Sir Robert Maxwell of Calderwood) was created Earl of Arran and Baron of Kilmarnock, and married to the king's elder sister, the Lady Mary. This last step was more than the jealousy of the Scotch nobles could endure, and they determined to strike a blow at the supremacy of the Boyds. Accordingly, in November 1469, Lord Robert and his brother were arraigned before the parliament on a charge of treason based on their conduct of three years previously in laying hands on the person of the king. They were found guilty and sentenced to death (22 Nov.) Boyd, however, anticipating the issue of the trial, fled to Alnwick in Northumberland, where he soon afterwards died. His brother was detained in Scotland by illness, and lost his head on the Castle Hill.

His eldest son, Thomas, Earl of Arran, was sent to Denmark to bring over the king's destined bride, returned while the trial was in progress, and, being warned by his wife of the condition of affairs, landed the princess, but did not himself set foot on shore. He is said by the older historians of Scotland to have sailed back to Denmark accompanied by his wife, and thence to have travelled by way of Germany into France, there to have sought service with the Duke of Burgundy, and dying prematurely at Antwerp to have been splendidly buried there by the duke. In an undated letter of John Paston to Sir John Paston he is referred to in terms of the highest eulogy as 'the most courteous, gentlest, wisest, kindest, most companionable, freest, largest, most bounteous knight,' and as 'one of the lightest, deliverst, best spoken, fairest archer, devoutest, most perfect, and truest to his lady of all the knights that ever' the writer 'was acquainted with.' Fenn conjectures that the letter was written either in 1470 or 1472; but the expression 'my lord the Earl of Arran which hath married the king's sister of Scotland,' coupled with the absence of any reference to the sudden precipitation of the family from supreme power

to a position of dependence, for the estates not only of Lord Robert and his brother, but of the Earl of Arran, were forfeited in 1469, would seem to argue an earlier date. Whatever the true date may be, he was then in London lodging at the George in Lombard Street, his wife apparently with him. The date of his death is uncertain. In 1474 his widow married James, lord Hamilton, whose son was in August 1503 created Earl of Arran. Lord Robert's second son, Alexander, was restored to a portion of the Kilmarnock estates in 1492, but without the title of Lord Boyd. Alexander's eldest son, Robert, created Lord Boyd in 1536, is called third lord.

Scot. ii. 660–5; Paston Letters (ed. Gairdner), iii. 47; Douglas's Peerage, ii. 32.] J. M. R.

BOYD, ROBERT, fourth Lord Boyd (*d.* 1590), son of Robert the third lord, is mentioned by Herries (*Hist. of the Reign of Mary Queen of Scots*, 10) as defeating the Earl of Glencairn at Glasgow in 1544, thereby rendering material aid to the regent, the Earl of Arran, in quelling the insurrection of Lennox. Two years later (19 Dec. 1546) we find him present at a meeting of the privy council at St. Andrews. On the outbreak of the civil war between the lords of the congregation and the queen regent he took part with the former, being present with them at Perth in May 1559. He signed the letter addressed by the lords to Sir William Cecil (19 July) explaining their policy, and another of the same date to Elizabeth asking for support. He also took part in the negotiations with the queen regent for a compromise, which were entirely without result. Apparently at this time Boyd's zeal in the cause of the congregation was growing lukewarm, for Balnaves, accounting to Sir James Crofts for the way in which he had applied the English subsidy, writes under date 4 Nov. 1559: 'And I delivered to the Earl of Glencairn and Lord Boyd 500 crowns, which was the best bestowed money that ever I bestowed, either of that or any other; the which if I had not done our whole enterprise it hath been stayed, both in joining with the duke (Chatelherault) and coming to Edinburgh, for certain particular causes that were betwixt the said lords and the duke, which were set down by that means by me so secret that it is not known to many.'

In February 1559–60 he was one of the signatories of the treaty of Berwick, by which Elizabeth engaged 'with all convenient speed to send into Scotland a convenient aid of men of warr,' for the purpose of driving out the French, and in the following April joined the English army at Prestonpans. On the 27th of that month he signed the contract in defence of the liberty of the 'evangel of Christ,' by which the lords of the congregation sought to encourage and confirm one another in the good work. He was present, on 7 May, at the unsuccessful attempt made by the English army to carry Leith by escalade, and on the 10th signed the document by which the treaty of Berwick was confirmed. On 27 Jan. 1560–1 he subscribed the 'Book of Discipline of the Kirk,' and at Ayr, on 3 Sept. 1562, he signed a bond to 'maintain and assist the preaching of the evangel.' Shortly after the marriage of Darnley (28 July 1564) the lords, despairing of prevailing on the queen to abolish 'the idolatrous mass,' and incensed by some acts of a rather high-handed character done by her, surprised Edinburgh during her temporary absence, but hastily abandoned the city on hearing that she was returning. Upon this Boyd, with Argyle, Murray, Glencairn, and others, was summoned to appear at the next meeting of parliament, which was fixed for 3 Feb. 1565, to answer for their conduct on pain of being denounced rebels and put to the horn. Parliament, however, did not meet in February, and before its next session, which began on 14 April 1567, Boyd's political attitude had undergone a complete change. If any credit is to be given to the so-called dying declaration of Bothwell, Boyd, according to that version of it which is found in Keith's 'History of Scotland' (App. 144), was privy to the murder of Darnley. His name, however, is not mentioned in the copy, or rather abstract, preserved in the Cottonian Library (Titus, c. vii. fol. 396), nor is the fragment Cal. D. ii. fol. 519 in the same collection; the original was in all probability a forgery. Though a member of the packed jury which acquitted Bothwell of the deed (April 1567), he, after Bothwell's marriage to Mary, joined a confederacy of nobles who bound themselves to protect the young prince against the sinister designs with which Bothwell was credited. Afterwards, however, he united himself with the faction which by a solemn 'league and covenant' engaged to take part with Bothwell 'against his privy or public calumniators,' 'with their bodies, heritage, and goods.'

Boyd was now made one of the permanent members of the privy council (17 May), and

soon became as decided and energetic a partisan of the queen as he had formerly been of the congregation. In June he attempted to hold Edinburgh for the queen, in conjunction with Huntly, the archbishop of St. Andrews, and the commendator of Kilwinning. The citizens, however, refused to defend the place, and it almost immediately fell into the hands of the other faction. In August we find him, with Argyll, Livingston, and the commendator of Kilwinning, in negotiation with Murray for the release of the queen from captivity. In 1568, after her escape from Lochleven (2 May), he joined her forces at Hamilton, and was present at the battle of Langside (13 May). After the battle he retired to his castle of Kilmarnock, which, however, he was soon compelled to surrender to the council. In September he was appointed one of the bishop of Ross's colleagues for the conference to be held at York. After the conclusion of the negotiations he accompanied the bishop to London, and was admitted to audience of the queen at Hampton Court (24 Oct.) On 6 Jan. 1568-9 Mary made him one of her council. He was employed by her in her intrigues with the Duke of Norfolk, and was entrusted by the latter with a diamond to deliver to the queen at Coventry as a pledge of his affection and fidelity. In a letter to the duke, apparently written in December 1569, she says: 'I took from my lord Boyd the diamond, which I shall keep unseen about my neck till I give it again to the owner of it and me both.' In June 1569 he was despatched to Scotland with authority from Mary to treat with the regent, and a written mandate to institute proceedings for a divorce from Bothwell. Chalmers (*Life of Mary*, p. 331, published in 1818) asserts that Bothwell's consent to the divorce had been obtained before the commencement of the correspondence with Norfolk, and that the document signifying it 'remained among the family papers of Lord Boyd to the present century.' The papers referred to are presumably identical with those which on the attainder of William Boyd (the fourth earl of Kilmarnock) [q. v.], were placed in the custody of the public officials of the town of Kilmarnock, where they remained until 1837, when a selection from them, comprising all such as were of any historical value, was edited for the Abbotsford Club, and constitutes the first portion of the 'Abbotsford Miscellany.' No such document, however, as Chalmers refers to is there to be found, though a draft of the formal authority to apply for the divorce is among the papers. Boyd had an interview with Murray in July at Elgin, and on the 30th the question of the divorce was submitted to the council at Perth, when it was decided by a large majority that nothing further should be done in the matter. After reporting the failure of his mission to the queen, Boyd appears to have remained in England for some months, during which the record of his life is very scanty. He seems to have stood very high in the estimation of his mistress. In one of her letters (5 Jan. 1568-9) she designates him 'our traist cousigne and counsallour,' and writing to Cecil, under date 11 Feb. 1569-70, she expresses a desire to retain him with the bishop of Ross permanently about her person. At this time, however, he was again in Scotland actively engaged in hatching a plot for a general rising, and much suspected of complicity in the murder of Murray (22 Jan. 1569-70). The following year he was commissioned by Mary to establish in that country 'a lieutenant, ane or twa,' in her name. In the brief insurrection of the summer he was taken prisoner by Lennox at Paisley, but escaped to Edinburgh, and thence went to Stirling in August, and on the 12th, with Argyll, Cassilis, and Eglinton, affixed his seal to a treaty of secession and amity executed on the part of the regent by Morton and Mar. This defection is ascribed by the unknown author of the 'History of King James the Sext' to the 'great promises' of Lennox, but the reason given by Mary is probably nearer the mark. She writes to De la Motte Fénelon, under date 28 June 1571, that she is advised that Argyll, Athole, and Boyd, 'comme désespérés d'aucune aide,' 'commencent à se retirer et regarder qui aura du meilleur.' On 5 Sept. we find Boyd mentioned as a consenting party to the election of Mar to the regency; on the 7th he was made a member of the privy council. He visited Knox on his deathbed (17 Nov.), but except that he said, 'I know, sir, I have offended in many things, and am indeed come to crave your pardon,' what passed on either side is unknown. He was included in the act of indemnity passed 26 Jan. 1571-2, and subscribed the articles of pacification drawn up at Perth on 23 Feb. 1572-3, by one of which he was appointed one of the judges for the trial of claims for restitution of goods arising out of acts of violence committed during the civil war. On 24 Oct. 1573 he was appointed extraordinary lord of session by Morton, of whom from this time forward he was a firm adherent. Relying on the favour of Morton, he signalised his elevation to the bench by ejecting (November 1573) Sir John Stewart from the office of baillie of the regality of Glasgow, held under a grant from the late king, and engrossing the

profits himself. About the same time he procured the appointment of his kinsman, James Boyd, to the archiepiscopal see of Glasgow. On Morton's resignation in February 1577–8, Boyd, according to Spottiswoode, 'did chide him bitterly,' pointing out that the king was a mere boy, and that by resigning Morton was in fact playing into the hands of his enemies, the Argyll-Athole faction. In consequence of Morton's eclipse, Boyd for a time lost his seat both at the council table and on the bench, but on the regent's return to power as prime minister in July 1578 he was again made a permanent member of the council, being at the same time appointed visitor of the university of Glasgow and commissioner for examining the book of the policy of the kirk and settling its jurisdiction. The same month (23rd) he was compelled to surrender the bailliary of the regality of Glasgow to the king as Earl of Lennox. On 15 Oct. his seat on the bench was restored to him. In the spring of the next year he was appointed one of the commission to pursue and arrest Lord John Hamilton and his brother, Lord Claud, who, however, made their escape to England. The commissioners received the thanks of the council for their services on 22 May. Boyd was a party to the conspiracy known as the Raid of Ruthven, by which the person of the king was seized as a pledge for the dismissal of the Duke of Lennox then in power, and in consequence was banished the realm in June 1583, James Stuart, earl of Arran, taking his place as extraordinary lord of session. He retired for a time to France, but in June 1586 we find him acting for the king in the negotiations which resulted in the treaty of alliance between the crowns of England and Scotland of that year, and while thus engaged induced the king to restore him to his former place on the bench, which, however, he resigned two years later (4 July 1588). In 1587–8 he was appointed commissioner to raise 100,000*l.* for the expenses connected with the king's marriage, and in 1589 was placed on a commission to enforce the statute against Jesuits (passed 14 Aug. 1587), and on the king's leaving for Norway (October) was constituted one of the wardens of the marches. He died on 3 Jan. 1589–90, in the seventy-second year of his age, being survived by his wife Margaret or Mariot, daughter of Sir John Colquhoun of Glins, and was succeeded by his second son Thomas.

BOYD, ROBERT, of Trochrig (1578–1627), theological writer, was the eldest son of James Boyd, archbishop of Glasgow, great-grandson of Robert Boyd (*d.* 1469) [q. v.], and owner of an estate in Ayrshire, which is variously spelled Trochrig, Trochridge, and Trochorege. He was connected by birth with the noble family of Cassilis, and enjoyed a good social position. He studied at the university of Edinburgh, taking his divinity course under Robert Rollok, first principal of the university, for whom he had an extraordinary reverence and affection. The profound religious impressions made on him under Rollok led him to associate himself with the earnest presbyterians of the day. In compliance with the custom of the times he went abroad to complete his studies, and in 1604 was chosen pastor of the church at Verteuil, and in 1606 professor in the university of Saumur, both in France. Along with the duties of the chair he discharged the office of a pastor in the town, and was afterwards called to the chair of divinity. While at Saumur he married a French young lady, though he had always the hope of returning to his native country. The university of Saumur had been founded some years before by the celebrated Philip de Mornay (Seigneur du Plessis-Mornay), with whom, as with many more of the eminent men whom the reformed church of France then possessed, he was on terms of intimacy.

The fame of Robert Boyd having reached the ears of King James, he offered him the principalship of the university of Glasgow,

In 1615 Boyd removed to Glasgow, to the great loss and sorrow of the people and professors of Saumur; in addition to the duties of principal he had to perform those of a teacher of theology, Hebrew, and Syriac, and those also of preacher to the people of Govan. 'His exemplary holiness,' says his earliest biographer, Dr. Rivet, 'singular learning, admirable eloquence; his gravity, humility, unaffected modesty, and extraordinary diligence, both in his ecclesiastical and scholastical employment, above the rate of ordinary pastors and professors, drew all to a reverence, love, and esteem for, and many even to an admiration of him.' Boyd delivered extemporaneous lectures in Latin with all the flow and elegance of a written discourse. His preaching at Saumur in French had been admired by the natives. In his lectures, all his quotations from the Greek fathers, which were very frequent and sometimes very long, were repeated by heart. He himself used to say that, if he were at liberty to select a language for his public discourses, he would choose Greek, as the most appropriate to express his thoughts.

As it was known to the bishops that Boyd was not in favour of the 'five articles of Perth,' he began to experience annoyance. The mind of the king was poisoned against him, and in 1621 he resigned the principalship and retired to the family house of Trochrig. But, being invited by the magistrates and people of Edinburgh in 1622 to be principal of the university there and one of the ministers of the city, he accepted the invitation. The king, on hearing this, reproved the magistrates for the appointment, and ordered them not only to deprive him of his office, but to expel him from the city unless he should conform absolutely to the articles of Perth. As Boyd refused to comply with this condition, he was deprived and expelled accordingly. Afterwards he had some hope of being restored to his office in Glasgow, and was induced to sign a qualified declaration of conformity. But, after all, the appointment was given to another. In 1626–7 he was called to be minister of Paisley, but owing to disturbances fomented by a bitter enemy, the Marchioness of Abercorn, who had recently gone over to the church of Rome, he was obliged to leave Paisley. In 1627, on a visit to Edinburgh, he was seized with his last illness, and died there, in much bodily pain but great mental serenity, in the forty-ninth year of his age.

Boyd's chief work was a large and very elaborate 'Commentary on the Epistle to the Ephesians,' published after his death. Dr. Walker thus describes it in his 'Theology and Theologians of Scotland:' 'A work it is of stupendous size and stupendous learning. Its *apparatus criticus* is something enormous. . . . Much more properly it might be called a theological *thesaurus*. You have a separate discussion of almost every important theological topic.'

Boyd excelled in Latin poetry, and his 'Hecatombe ad Christum Salvatorem' was included by Sir John Scot of Scotstarvet in his 'Deliciæ Poetarum Scotorum.' This was afterwards reprinted at Edinburgh by the well-known naturalist, Sir Robert Sibbald, M.D., nephew of Dr. George Sibbald, who married Boyd's widow.

[Life of Robert Boyd by Dr. Rivet, prefixed to Bodii Prælectiones in Epist. ad Ephes. 1652; Wodrow's Life of Mr. Robert Boyd of Trochrig (Maitland Club), 1848.] W. G. B.

BOYD, Sir ROBERT (1710–1794), general, colonel 39th foot, and governor of Gibraltar, is first noticed in official lists about 1740, when he appears as (civilian) storekeeper of ordnance at Port Mahon, Minorca, at a salary of 182*l.* 10*s.* per annum, in succession to Mr. Ninian Boyd, by whom the post had previously been held for a good many years. Robert Boyd was still storekeeper sixteen years later, in 1756, when the garrison, commanded by the aged general, afterwards Lord Blakeney, was besieged by the French and Spaniards. During this time, on 19 May 1756, he distinguished himself by a gallant but unsuccessful attempt to carry despatches in an open boat, in view of the enemy, from Governor Blakeney to Admiral Byng, whose long-expected fleet was in the offing, in consequence of which he was one of the first witnesses called by the crown at the subsequent trial of the unfortunate admiral. In recognition of his services at Minorca Boyd received a commission in the army as lieutenant-colonel unattached, bearing date 25 March 1758. On 13 Jan. 1760 he was brought into the 1st foot guards, then commanded by the Duke of Cumberland, as captain-lieutenant and lieutenant-colonel, and on 23 July following was promoted to captain and lieutenant-colonel in the regiment, being at the time in Germany on the personal staff of the Marquis of Granby, then in command of the British troops serving under Prince Ferdinand of Brunswick. A couple of letters from Colonel Boyd to Sir Andrew Mitchell, dated from Germany in January 1759 and December 1760, show that there was some intention of sending him to India in command of a regiment, but, the East India Company having applied for an officer who had served in India before, he

escaped what appears to have been an unwelcome duty (*Mitchell Papers, Add. MSS.* 6860, p. 86). On 18 Sept. 1765 he exchanged from the Guards to the 39th foot, and on 6 Aug. 1766 was promoted colonel of that regiment, in succession to Lieutenant-general Aldercron, deceased. On 25 May 1768 he was appointed lieutenant-governor of Gibraltar, whither his regiment had proceeded (*Home Off. Military Entry Books*, vol. xxvii.) Sundry references to Colonel Boyd will be found in the Calendars of Home Office Papers for 1760–70, and a number of letters written by him whilst acting governor of Gibraltar are in British Museum, Add. MSS. 24159 to 24163. He became a major-general in 1772, and lieutenant-general in 1777. He was second in command under Lord Heathfield during the famous defence of Gibraltar from 1779 to 1783, and it was at his suggestion that red-hot shot were first employed for the destruction of the enemy's floating batteries (Drinkwater, p. 129). For his distinguished services at this eventful period he was created K.B. In May 1790 he succeeded Lord Heathfield as governor. On 12 Oct. 1793 he attained the rank of general, and died on 13 May 1794. He was buried in a tomb constructed by his directions in the king's bastion on the sea-line of defences, in the salient angle of which is a marble tablet, the very existence of which is now unknown to many dwellers on the Rock, with the following inscription: 'Within the walls of this bastion are deposited the mortal remains of the late General Sir Robert Boyd, K.B., governor of this fortress, who died on 13 May 1794, aged 84 years. By him the first stone of the bastion was laid in 1773, and under his supervision it was completed, when, on that occasion, in his address to the troops, he expressed a wish to see it resist the combined efforts of France and Spain, which wish was accomplished on 13 Sept. 1782, when, by the fire of this bastion, the flotilla expressly designed for the capture of this fortress were utterly destroyed.'

A mural tablet in the King's Chapel, Gibraltar, also records the date of his death and the place of his burial.

BOYD, ROBERT (*d.* 1883), writer on diseases of the insane, became a member of the Royal College of Surgeons in 1830, and in the following year graduated M.D. in the university of Edinburgh. In 1836 he became a licentiate of the Royal College of Physicians, and in 1852 was elected to the fellowship of the college. For some time he was resident physician at the Marylebone workhouse infirmary, and afterwards physician and superintendent of the Somerset county lunatic asylum. He then became proprietor and manager of the Southall Park private asylum, which was destroyed on 14 Aug. 1883 by a fire in which he lost his life. In the various positions in which he was placed he utilised to the utmost his opportunities for original research. He published the annual 'Reports on the Pauper Lunatics' at the St. Marylebone infirmary and the Somerset county asylum, and contributed numerous independent papers to the literature of pathology and psychological medicine. He was the author of pathological contributions to the 'Royal Medical and Chirurgical Transactions,' vols. xxiv. and xxxii., and to the 'Edinburgh Medical Journal,' vols. lv. to lxxii.; of 'Tables of the Weights of the Human Body and Internal Organs,' in the 'Philosophical Transactions;' and of a paper, 'The Weight of the Brain at different Ages and in various Diseases.' To the 'Journal of Mental Science' he contributed no fewer than sixteen papers on 'Treatment of the Insane Poor,' 'Diseases of the Nervous System,' 'Statistics of Pauper Insanity,' and cognate subjects, the most important being that on 'General Paralysis of the Insane' in the 'Journal of Mental Science' for May and October 1871, the result of 155 post-mortem examinations of persons who had died from that disease in the Somerset county asylum. He was also the author of three papers on 'Vital Statistics,' 'Insanity,' and 'The Pauper Lunacy Laws,' published in the 'Lancet.'

[Lancet, 1883, ii. 352–3; Medical Times, 1883, ii. 249–50.]

BOYD, WALTER (1754 ?–1837), financier, was born about 1754. Before the outbreak of the French revolution he was engaged as a banker in Paris, but the progress of events soon caused him to flee for his life, whilst the property of the firm of Boyd, Ker, & Co., of which he was the chief member, was confiscated in October 1793. On 15 March 1793 the firm of Boyd, Benfield, & Co. was established in London. Boyd, as the principal partner, contributed 60,000*l.* to the common stock, and his 'name, connections,

and exertions' soon carried it to a great 'pitch of celebrity.' He was 'zealously attached to Mr. Pitt, and enjoyed his confidence for many years' (advertisement to 2nd edition of *Letter to Pitt*). He was employed in contracting to the amount of over thirty millions for large government loans, and for some time was very prosperous. He was also M.P. for Shaftesbury (1796–1802), which at the period of his election was a pocket borough of his partner Paul Benfield [q. v.], who was returned along with him (HUTCHINS, *History of County of Dorset*, iii. 19, 20, Westminster, 1868). After a few years the firm got into difficulties. It had at one time seemed likely that the property seized at Paris would be restored, but the revolution of 4 Sept. 1797 caused the overthrow of the government which had taken the preliminary steps towards this restitution, and the final confiscation of the property followed. In expectation of a different issue, Boyd, Benfield, & Co. had entered into various arrangements which soon resulted in disaster. They obtained private help, and even assistance from government, but in 1799 the affairs of the company were put into liquidation, and Boyd found himself ruined. He visited France in the brief interval of peace (March 1802–May 1803), was one of the detained, and was not released till the fall of Napoleon in 1814. On his return to England he was able to recover something of his former prosperity, and sat as M.P. for the borough of Lymington from April 1823 to 1830. Scott met him in April 1828, and gives an account, apparently not quite accurate, of his remarkable self-sacrifice on behalf of his creditors (LOCKHART'S *Life of Scott*, ch. lxxvi.) He died at Plaistow Lodge, Kent, on 16 Sept. 1837.

Boyd wrote several pamphlets on financial subjects, which were not without weight in themselves, and to which the author's position gave additional force. They were: 1. 'Letter to the Right Honourable William Pitt on the Influence of the Stoppage of Issues in Specie at the Bank of England on the Prices of Provisions and other Commodities' (London, 1801, 2nd ed. 1811). This was called forth by a pamphlet on the effects of the suspension of cash payments in 1797, and was intended to prove 'that the increase of bank-notes is the principal cause of the great rise in the price of commodities and every species of exchangeable value' (p. 7). These conclusions were attacked by Sir Francis Baring in his 'Observations' (1801) and a number of other writers (a list of some of these is given in general index to *Monthly Review*, London, 1818, i. 610). 2. 'Reflections on the Financial System of Great Britain, and particularly on the Sinking Fund' (1815, 2nd ed. 1828). This was written in captivity in France in 1812. It enlarges on the benefits of a sinking fund as a means of clearing off national debt, and explains various schemes for its application. 3. 'Observations on Lord Grenville's Essay on the Sinking Fund' (London, 1828), pursues the same line of argument, and is a reply to the treatise of that nobleman published the same year.

[Gent. Mag. for 1837, p. 548; Letter to the creditors of the house of Boyd, Benfield, & Co., by Walter Boyd, 1800; List of Members of Parliament; Commons Return, part ii. 1 March 1878.] F. W.

BOYD, WILLIAM, fourth EARL OF KILMARNOCK (1704–1746), belonged to a family which derives its descent from Simon, third son of Alan, lord high chancellor of Scotland, and brother of Walter, the first high steward of Scotland. Simon's grandson Robert was awarded a grant of lands in Cunninghame by Alexander III, as a reward for his bravery at the battle of Largs, 1263. From the earliest times the family was noted for its antagonism to the English, and it is recorded of Sir Robert Boyd that he was a staunch partisan of Sir William Wallace, and subsequently of Bruce, from whom he received a grant of the lands of Kilmarnock, Bondington, and Hertschaw (HERVEY, *Life of Bruce*).

William, ninth lord Boyd, descendant of Robert, first lord Boyd [q. v.], was created first earl of Kilmarnock by Charles II, by patent bearing date 7 Aug. 1661.

The third earl was an ardent supporter of the house of Hanover. Rae, in his 'History of the Rebellion,' says of him: 'It must not be forgot that the Earl of Kilmarnock appeared here at the head of above 500 of his own men well appointed . . . and that which added very much unto it was the early blossoms of the loyal principle and education of my Lord Boyd, who, though but eleven years of age, appeared in arms with the Earl his father.' This was in 1715, and the boy here mentioned succeeded his father as fourth earl of Kilmarnock in 1717. He was born in 1704, his mother being the Lady Euphane, eldest daughter of the eleventh Lord Ross. His character was generous, open, and affectionate, but he was pleasure-loving, vain, and inconstant. He was educated at Glasgow, and during the earlier part of his life he continued, in accordance with his father's principles, to support the house of Hanover; and we find that, on the death of George I, he sent an order calling on the authorities of Kilmarnock to hold 'the train bands in readiness for proclaiming the Prince of Wales.' It was not

indeed until quite the close of the rebellion of '45 that he proved false to the opinions which this act shows him to have held. Various reasons are assigned for his defection; by some it was attributed to the influence of his wife, Lady Anne Livingstone, who was a catholic, and whose father, fifth earl of Linlithgow, had been attainted for treason in 1715. Smollett, however, says: 'He engaged in the rebellion partly through the desperate situation of his fortune, and partly through resentment to the government on his being deprived of a pension which he had for some time enjoyed.' This opinion is supported by Horace Walpole, who mentions that the pension was obtained by his father (Sir Robert Walpole) and stopped by Lord Wilmington. In his confession to Mr. James Foster—a dissenting minister who attended him from the time sentence of death was passed on him to the day of his execution—the earl himself says: 'The true root of all was his careless and dissolute life, by which he had reduced himself to great and perplexing difficulties.' The persuasions of his wife, who was captivated by the affability of the young Pretender, no doubt influenced him in deserting the Hanoverian cause; but the hope of bettering his straitened fortunes by a change of dynasty must also be taken into account. His estates were much encumbered when he succeeded to them, and a long course of dissipation and extravagance had plunged him into such embarrassment that his wife writes to him: 'After plaguing the stewart for a fortnight I have only succeeded in obtaining three shillings from him.'

When he finally joined the rebels he was received by Prince Charles with great marks of distinction and esteem, and was made by him a privy councillor, colonel of the guards, and subsequently general. He took a leading part in the battle of Falkirk, 17 Jan. 1746. At the battle of Culloden he was taken prisoner in consequence of a mistake he made in supposing a troop of English to be a body of Fitz-James's horse. In his speech at the trial he pleaded as an extenuating circumstance that his surrender was voluntary, but afterwards admitted the truth, and requested Mr. Foster to publish his confession. On 29 May he, together with the Earl of Cromarty and Lord Balmerino, was lodged in the Tower. They were subsequently tried before the House of Lords, and convicted of high treason, notwithstanding an eloquent speech from Lord Kilmarnock. The court was presided over by Lord Hardwicke as lord high steward, and his conduct on this occasion seems to have been strangely wanting in judicial impartiality. Walpole, in a letter to Sir Horace Mann commenting on this, says: 'To the prisoners he was peevish, and instead of keeping up to the humane dignity of the law of England, whose character it is to point out favour to the criminal, he crossed them and almost scoffed at any offer they made towards defence.'

The sentence on Lord Cromarty was afterwards remitted, but no such grace was accorded to Lord Kilmarnock, principally on account of the erroneous belief held by the Duke of Cumberland that it was he who was responsible for the order that no quarter was to be given to the English at Culloden.

On 18 Aug. 1746 he was executed on Tower Hill in company with Lord Balmerino. He is described as being 'tall and slender, with an extreme fine person,' and his behaviour at the execution was held to be 'a most just mixture between dignity and submission.'

His lands were confiscated, but subsequently restored to his eldest son, and sold by him to the Earl of Glencairn. The title was merged in 1758 in that of Errol.

BOYD, WILLIAM (*d.* 1772), Irish presbyterian minister, was ordained minister of Macosquin, co. Derry, by the Coleraine presbytery, on 31 Jan. 1710. He is memorable as the bearer of a commission to Colonel Samuel Suitte, governor of New England, embodying a proposal for an extensive emigration from co. Derry to that colony. The commission is dated 26 March 1718, is signed by nine presbyterian ministers and 208 members of their flocks, who declare their 'sincere and hearty inclination to transport ourselves to that very excellent and renowned Plantation, upon our obtaining from His Excellency suitable encouragement.' Witherow reprints the document, with the signatures in full, from Edward Lutwyche Parker's 'History of Londonderry, New Hampshire,' Boston, 1851. Boyd fulfilled his mission in 1718. How he was received is not known; the intended emigration did not, however, take place. But in the same year, without awaiting the issue of Boyd's negotiation, James M'Gregor (minister of Aghadowey, co. Derry, from 1701 to 1718), who had not signed the document, emigrated to New Hampshire with some of his people, and there founded a town to which was given the name of Londonderry.

In the non-subscription controversy Boyd took a warm part. When the general synod of Ulster in 1721 permitted those of its members to subscribe the Westminster Confession who thought fit, Boyd was one of the signatories. He was on the committee of six appointed in 1724 to draw up articles against Thomas Nevin, M.A. (minister of Downpatrick from 1711 to 1744; accused of impugning the deity of Christ), and probably drafted the document. Next year Boyd moved from Macosquin to a congregation nearer Londonderry, anciently known as Taughboyne, subsequently as Monreagh, where he was installed by Derry presbytery on 25 April 1725. The stipend promised was 50*l.* The congregation had been vacant since the removal of William Gray to Usher's Quay, Dublin, in 1721. In 1727 Gray, without ecclesiastical sanction, came back to Taughboyne and set up an opposition meeting in a disused corn-kiln at St. Johnston, within the bounds of his old congregation. Hence arose defections, recriminations, and the diminution of Boyd's stipend to 40*l.* The general synod elected him moderator at Dungannon in 1730. The sermon with which he concluded his term of office in the following year at Antrim proves his orthodoxy as a subscriber to the Westminster Confession, and perhaps also proves that the influence of a non-subscribing publication, above ten years old, was by no means spent. It is directed specially against a famous discourse by the non-subscribing minister of the town in which it was delivered, John Abernethy, M.A., whose 'Religious Obedience founded on Personal Persuasion' was preached at Belfast on 9 Dec. 1719, and printed in 1720 [see ABERNETHY, JOHN, 1680–1740]. Boyd decides that 'conscience is not the supreme lawgiver,' and that it has no judicial authority except in so far as it administers 'the law of God,' an expression which with him is synonymous with the interpretation of Scripture accepted by his church. In 1734 Boyd was an unsuccessful candidate for the clerkship of the general synod. His zeal for the faith was again shown in 1739, when he took the lead against Richard Aprichard, a probationer of the Armagh presbytery, who had scruples about some points of the Confession, and ultimately withdrew from the synod's jurisdiction. He was one of the ten divines appointed by the synod at Magherafelt on 16 June 1747 to draw up a 'Serious Warning' to be read from the pulpits against dangerous errors 'creeping into our bounds.' These errors were in reference to such doctrines as original sin, the 'satisfaction of Christ,' the Trinity, and the authority of Scripture. The synod, in spite of its 'Serious Warning,' would not entertain a proposal to forbid the growing practice of intercommunion with the non-subscribers. We hear nothing more of Boyd till his death, which occurred at an advanced age on 2 May 1772. He published only 'A Good Conscience a Necessary Qualification of a Gospel Minister. A Sermon (Heb. xiii. 18) preached at Antrim June 15th 1731, at a General Synod of the Protestants of the Presbyterian Persuasion in the North of Ireland,' Derry, 1731, 18mo.

BOYD, ZACHARY (1585?–1653), was a descendant of the family of Boyd of Penkill in Ayrshire. He was born about 1585, and was first educated at Kilmarnock, whence he went to Glasgow University in 1601. He also attended the university of St. Andrews from 1603 to 1607, and graduated there as M.A. Subsequently he went over to the protestant college of Saumur, in France, and was offered, but declined, the principalship of that college. He resided in France for sixteen years, and seems to have left it on account of the religious troubles. In 1623 he returned to Scotland, and was appointed minister of the Barony parish in Glasgow. He died in 1653. The latter part of his life was spent in the management of his parish and of the affairs of the Glasgow University, in which he took a deep interest, and in literary pursuits. Only a part of his writings were printed; some still remain in manuscript in the possession of Glasgow University, to which he left them, along with a money bequest, which not only assisted in providing new buildings, but served to establish some bursaries. His bust, well known to many generations of students, stood in a niche of the quadrangle which was built with his bequest, until a few years ago the university deserted those buildings and moved to its present situation, where the bust is still preserved in the library. Boyd served the offices of dean of faculty, rector, and vice-chancellor in the university during several years. His printed prose works appeared between 1629 and 1650; the printed poetical works between 1640 and 1652. 'The Battell of the Soul in Death' (1629), dedicated to Charles I, and in French to Queen Henrietta Maria, while the second volume contains a dedicatory letter to Elizabeth, queen of Bohemia, on the death of her son Frederick, is a sort of prose manual for the sick. About 1640

he published a poem on General Lesly's victory at Newburn, which is marked by the utmost extravagance and absurdity of language and of metaphor. In 1640 he published 'Four Letters of Comforts for the deaths of Earle of Haddington and of Lord Boyd.' The 'Psalms of David in Meeter,' with metrical versions of the songs of the Old and New Testament, was published in 1648. The manuscript writings of Boyd, preserved in Glasgow University, are very voluminous, and some extracts have been published as curiosities. The chief portions are the 'Four Evangels' in verse, and a collection of poetical stories, taken chiefly from Bible history, which he calls 'Zion's Flowers,' and which, having been commonly called 'Boyd's Bible,' gave currency to the idea that he had translated the whole Bible. The stories are often absurd enough in style and treatment, but the general notion of their absurdities has been exaggerated from the fact that they were abundantly parodied by those whose object was to caricature the presbyterian style which Boyd represented. He seems to have been inclined to oppose the policy of the royalist party even in earlier days; for though he wrote a Latin ode on the coronation of Charles I at Holyrood in 1633, his dedication of the 'Battell of the Soul' to the king contained what must have been taken as a reflection on the want of strict sabbatarianism in the episcopal church. In later years he became a staunch covenanter, but did not relish the triumph of Cromwell. In 1650 he preached before Cromwell in the cathedral, and, as we are told, 'railed at him to his face.' Thurloe, Cromwell's secretary, would have called him to account, but Cromwell took means to pay him back more effectually in kind by inviting him to dine and then treating him to three hours of prayers. After that, we are told, Boyd found himself on better terms with the Protector. Reflecting many of the oddities and absurdities of style which were characteristic of his time, Boyd seems nevertheless to have been a man of considerable energy and shrewdness, and to have won a fair amount of contemporary popularity as an author.

[Four Letters of Comfort, 1640, reprinted Edin. 1878; Four Poems from Zion's Flowers, by Z. B., with introductory notice by G. Neil, Glasgow, 1855; The Last Battle of the Soul in Death, Edin. 1629.] H. C.

BOYDELL, JOHN (1719-1804), engraver, print publisher, and lord mayor, was born at Dorrington in Shropshire on 19 Jan. 1719. His father, Josiah, was a land surveyor, and his mother's maiden name was Milnes. His grandfather was the Rev. J. Boydell, D.D., vicar of Ashbourne and rector of Mapleton in Derbyshire. Boydell was brought up to his father's profession, but when about one-and-twenty he appears to have abandoned it in favour of art. He walked up to London, became a student in the St. Martin's Lane academy, and apprenticed himself to W. H. Toms, the engraver. The year of his apprenticeship is stated by himself to have been 1741, but in another place he says that he bound himself apprentice when 'within a few months of twenty-one years of age.' It is said that he was moved to do this by his admiration of a print by Toms, after Badeslade, of Hawarden Castle, but we have his own statement engraved upon his first print that he 'never saw an engraved copper-plate before he came on trial.' This first print, which was begun immediately on being bound apprentice, is a copy of an engraving by Le Bas after Teniers. He soon began to publish on his own account small landscapes, which he produced in sets of six and sold for sixpence. One of these was known as his 'Bridgebook' because there was a bridge in each view. As there were few print-shops at that time in London, he induced the sellers of toys to expose them in their windows, and his most successful shop was at the sign of the Cricket-bat in Duke's Court, St. Martin's Lane. Twelve of these small landscape plates are included in the collection of his engravings which he published in 1790, and the earliest date to be found on any of them is 1744. In the next year he appears to have commenced the publication, at the price of one shilling each, of larger views about London, Oxford, and other places in England and Wales, drawn and engraved by himself. This practice he continued with success for about ten years, by which time he had amassed a small capital. This was the foundation of his fortune. In the copy of the Collection of 1790 in the British Museum, which was presented by him to Miss Banks (daughter of the sculptor), is preserved an autograph note, in which he calls it 'The only book that had the honour of making a Lord Mayor of London.' In the 'advertisement' or preface to the volume he speaks of his master Toms as one 'who had himself never risen to any degree of perfection,' and adds, 'indeed at that period there was no engraver of any eminence in this country.' Of his own engravings he speaks with proper humility, for beyond a certain neatness of execution they have little merit. 'The engraver has now collected them,' he wrote, 'more to show the improvement of art in this country, since

the period of their publication, than from any idea of their own merits.'

Though not altogether relinquishing the burin till about 1767, he had long before this commenced his career as a printseller and a publisher of the works of other engravers. After serving six years with Toms, he purchased the remainder of his term of apprenticeship, and the success of his prints, especially of a volume of views in England and Wales, published in 1751, enabled him to set up in business on his own account. The first engraving of great importance produced under his encouragement was Woollett's plate after Wilson's 'Niobe,' published in 1761. This was also (with the exception of Hogarth's prints) the first important engraving by a British engraver after a British painter. J. T. Smith, in his account of Woollett appended to 'Nollekens and his Times,' recounts the history of this plate as told him by Boydell. 'When I got a little forward in the world,' said Boydell, 'I took a whole shop, for at my commencement I kept only half a one. In the course of one year I imported numerous impressions of Vernet's celebrated "Storm," so admirably engraved by Lerpinière; for which I was obliged to pay in hard cash, as the French took none of our prints in return. Upon Mr. Woollett's expressing himself highly delighted with this print of the "Storm," I was induced, knowing his ability as an engraver, to ask him if he thought he could produce a print of the same size, which I could send over, so that in future I could avoid payment in money, and prove to the French nation that an Englishman could produce a print of equal merit; upon which he immediately declared that he should much like to try.'

The result was the print of 'Niobe,' for which Boydell agreed to pay 100*l.*, 'an unheard of price, being considerably more than I had given for any copperplate.' He had, however, to advance the engraver more than this before the plate was finished. Very few proofs were struck off, and 5*s.* only was charged for the prints; but the work brought Boydell 2,000*l.* It was followed by the 'Phaeton,' also engraved by Woollett, after Wilson, and published by Boydell in 1763. These prints had a large sale on the continent, with which an enormous trade in English engravings was soon established. Boydell's enterprise increased with his capital, and he continued to employ the latter in encouraging English talent. In the list of engravers employed by him are the names of Woollett, M'Ardell, Hall, Earlom, Sharpe, Heath, J. Smith, Val. Green, and other Englishmen, and a large proportion of the prints he published were, from the first, after Wilson, West, Reynolds, and other English painters. His foreign trade spread the fame of English engravers and English painters abroad for the first time. The receipts from some of the plates, especially the engravings by Woollett after West's 'Death of General Wolfe,' and 'Battle of La Hogue,' were enormous. In 1790 he stated the receipts from the former amounted to 15,000*l.* Both were copied by the best engravers in Paris and Vienna.

In 1790 he was elected lord mayor of London, having been elected alderman for the ward of Cheap in 1782, and served sheriff in 1785. During his career as a print publisher the course of the foreign trade in prints was turned from an import to an export one. It was stated by the Earl of Suffolk in the House of Lords that the revenue coming into this country from this branch of art at one time exceeded 200,000*l.* per annum. Having amassed a large fortune, Boydell in 1786 embarked upon the most important enterprise of his life, viz. the publication, by subscription, of a series of prints illustrative of Shakespeare, after pictures painted expressly for the work by English artists. For this purpose he gave commissions to all the most celebrated painters of this country for pictures, and built a gallery in Pall Mall for their exhibition. The execution of this project extended over several years. In 1789 the Shakespeare Gallery contained thirty-four pictures, in 1791 sixty-five, in 1802 one hundred and sixty-two, of which eighty-four were of large size. The total number of works executed was 170, three of which were pieces of sculpture, and the artists employed were thirty-three painters and two sculptors, Thomas Banks and the Hon. Mrs. Damer. It appears from the preface to the catalogue of 1789, and from other recorded statements of Boydell, that he wished to do for English painting what he had done for English engraving, to make it respected by foreigners, and there is independent evidence of the generous spirit in which he conducted the enterprise. Northcote, in a letter addressed to Mrs. Carey, 3 Oct. 1821, says: 'My picture of "The Death of Wat Tyler" was painted in the year 1786 for my friend and patron Alderman Boydell, who did more for the advancement of the arts in England than the whole mass of nobility put together. He paid me more nobly than any other person has done; and his memory I shall ever hold in reverence.'

Boydell's 'Shakespeare' was published in 1802, but the French revolution had stopped his foreign trade, and placed him in such

serious financial difficulties that in 1804 he was obliged to apply to parliament for permission to dispose of his property by lottery. This property was very considerable. In the previous year Messrs. Boydell had published a catalogue of their stock in forty-eight volumes, which comprised no less than 4,432 plates, of which 2,293 were after English artists. In a letter read to the House of Commons Boydell wrote: 'I have laid out with my brethren, in promoting the commerce of the fine arts in this country, above 350,000*l.*' In his printed lottery scheme it is stated that it had been proved before both houses of parliament that the plates from which the prize prints were taken cost upwards of 300,000*l.*, his pictures and drawings 46,266*l.*, and the Shakespeare Gallery upwards of 30,000*l.* The lottery consisted of 22,000 tickets, all of which were sold. The sum received enabled Boydell to pay his debts, but he died at his house in Cheapside on 12 Dec. 1804, before the lottery was drawn.

This was done on 28 Jan. 1805, when the chief prize, which included the Shakespeare Gallery, pictures and estate, fell to Mr. Tassie, nephew of the celebrated imitator of cameos in glass, who sold the property by auction. The pictures and two bas-reliefs by the Hon. Mrs. Damer realised 6,181*l.* 18*s.* 6*d.* The gallery was purchased by the British Institution, and Banks's 'Apotheosis of Shakespeare' was reserved for a monument over the remains of Boydell. This piece of sculpture, however, after remaining for many years in its original position over the entrance to the gallery, has now been removed to Stratford-upon-Avon.

Although Boydell appears to have been responsible for an imposition on the public in regard to Woollett's print of 'The Death of General Wolfe,' the entire property of which fell into his hands after the engraver's death—the plate was repaired and unlettered proofs printed and sold—his career was one of well-won honour and success, until the French revolution marred his prosperity. His influence in encouraging native art in England was great and salutary, assuming proportions of national importance. It is true that the Boydell 'Shakespeare,' taken as a whole, seems now to shed little lustre on the English school, but this was not Boydell's fault; he employed the best artists he could get—Reynolds, Stothard, Smirke, Romney, Fuseli, Opie, Barry, West, Wright of Derby, Angelica Kauffman, Westall, Hamilton, and others. It must also be remembered that this was the first great effort of the kind ever made by English artists, and its influence cannot easily be overestimated. Boydell deserves great credit for his patriotism, generosity to artists, and public spirit. To the corporation of London he presented the frescoes by Rigaud on the cupola of the common-council chamber, and many other paintings, including Reynolds's 'Lord Heathfield;' to the Stationers' Company, West's 'Alfred the Great' and Graham's 'Escape of Mary Queen of Scots.' It was his intention, before the reverse of his fortunes, to bequeath the Shakespeare gallery of paintings to the nation. In 1748 he married Elizabeth Lloyd, second daughter of Edward Lloyd of the Fords, near Oswestry, in Shropshire, by whom he had no issue. He was buried at St. Olave's, Coleman Street.

BOYDELL, JOSIAH (1752–1817), painter and engraver, nephew of Alderman John Boydell [q. v.], was born at the Manor House, near Hawarden, Flintshire, on 18 Jan. 1752. Giving early proofs of his love for art and his capacity in design, he was sent to London and placed under the care and patronage of his uncle, whose partner and successor he eventually became. He drew from the antique, studied painting under Benjamin West, and acquired the art of mezzotinto engraving from Richard Earlom. When Alderman Boydell undertook the publication of the series of engravings from the famous Houghton collection previous to its removal to the Hermitage, St. Petersburg, he employed his nephew and Joseph Farington to make the necessary drawings from the pictures for the use of the engravers. Boydell painted several of the subjects for the Shakespeare Gallery, and exhibited portraits and historical subjects at the Royal Academy between 1772 and 1799. He resided for some time at Hampstead, and during the French war assisted in forming the corps known as the Loyal Hampstead Volunteers, of which he was lieutenant-colonel. He was master of the Stationers' Company, and succeeded his uncle as alderman of the ward of Cheap, but ill-health compelled him to resign this latter office within a few years. During the latter part of his life he resided at Halliford, Middle-

sex, and he died there on 27 March 1817. He was buried in Hampstead Church. Among his principal paintings may be mentioned: a portrait of Alderman John Boydell, exhibited at the Academy in 1772, and engraved by Valentine Green; a portrait of his wife, when Miss North, in the character of Juno, exhibited in 1773; and 'Coriolanus taking leave of his Family,' also exhibited in 1773. He engraved some excellent plates in mezzotinto: 'Hansloe and his Mother,' after Rembrandt; 'The Holy Family,' after Carlo Maratti; 'The Virgin and Child,' after Parmigiano; 'Charles I,' after A. van Dyck.

[Magazine of the Fine Arts, ii. 410; MS. notes in the British Museum.] L. F.

BOYER, ABEL (1667–1729), miscellaneous writer, was born on 24 June 1667, at Castres, in Upper Languedoc, where his father, who suffered for his protestant zeal, was one of the two consuls or chief magistrates. Boyer's education at the academy of Puylaurens was interrupted by the religious disturbances, and leaving France with an uncle, a noted Huguenot preacher, he finished his studies at Franeker in Friesland, after a brief episode, it is said, of military service in Holland. Proceeding to England in 1689 he fell into great poverty, and is represented as transcribing and preparing for the press Dr. Thomas Smith's edition of Camden's Latin correspondence (London, 1691). A good classical scholar, Boyer became in 1692 tutor to Allen Bathurst, afterwards first Earl Bathurst, whose father Sir Benjamin was treasurer of the household of the princess, afterwards Queen Anne. Probably through this connection he was appointed French teacher to her son William, duke of Gloucester, for whose use he prepared and to whom he dedicated 'The Complete French Master,' published in 1694. Disappointed of advancement on account of his zeal for whig principles, he abandoned tuition for authorship. In December 1699 he produced on the London stage, with indifferent success, a modified translation in blank verse of Racine's 'Iphigénie,' which was published in 1700 as 'Achilles or Iphigenia in Aulis, a tragedy written by Mr. Boyer.' A second edition of it appeared in 1714 as 'The Victim, or Achilles and Iphigenia in Aulis,' in an 'advertisement' prefixed to which Boyer stated that in its first form it had 'passed the correction and approbation' of Dryden. In 1702 appeared at the Hague the work which has made Boyer's a familiar name, his 'Dictionnaire Royal Français et Anglais, divisé en deux parties,' ostensibly composed for the use of the Duke of Gloucester, then dead. It was much superior to every previous work of the kind, and has been the basis of very many subsequent French-English dictionaries; the last English unabridged edition is that of 1816; the edition published at Paris in 1860 is stated to be the 41st. For the English-French section Boyer claimed the merit of containing a more complete English dictionary than any previous one, the English words and idioms in it being defined and explained as well as accompanied by their French equivalents. In the French preface to the whole work Boyer said that 1,000 English words not in any other English dictionary had been added to his by Richard Savage, whom he spoke of as his friend, and who assisted him in several of his French manuals and miscellaneous compilations and translations published subsequently. Among the English versions of French works executed in whole or in part by Boyer was a popular translation of Fénelon's 'Télémaque,' of which a twelfth edition appeared in 1728.

In 1702 Boyer published a 'History of William III,' which included one of James II, and in 1703 he began to issue 'The History of the Reign of Queen Anne digested into annals,' a yearly register of political and miscellaneous occurrences, containing several plans and maps illustrating the military operations of the war of the Spanish succession. Before the last volume, the eleventh, of this work appeared in 1713, he had commenced the publication of a monthly periodical of the same kind, 'The Political State of Great Britain, being an impartial account of the most material occurrences, ecclesiastical, civil, and military, in a monthly letter to a friend in Holland' (38 volumes, 1711–29). Its contents, which were those of a monthly newspaper, included abstracts of the chief political pamphlets published on both sides, and, like the 'Annals,' is, both from its form and matter, very useful for reference. 'The Political State' is, moreover, particularly noticeable as being the first periodical, issued at brief intervals, which contained a parliamentary chronicle, and in which parliamentary debates were reported with comparative regularity and with some approximation to accuracy. In the case of the House of Lords' reports various devices, such as giving only the initials of the names of the speakers, were resorted to in order to escape punishment, but in the case of the House of Commons the entire names were frequently given. According to Boyer's own account (preface to his folio *History of Queen Anne*, and to vol. xxxvii. of the *Political State*) he had been furnished by members of both houses of parliament (among whom he mentioned Lord Stanhope) with reports of their speeches, and he had even succeeded in becoming an occasional 'ear-witness' of the

debates themselves. When he was threatened at the beginning of 1729 with arrest by the printers of the votes, whose monopoly they accused him of infringing, he asserted that for thirty years in his 'History of King William,' his 'Annals,' and in his 'Political State,' he had given reports of parliamentary debates without being molested. The threat induced him to discontinue the publication of the debates. He intended to resume the work, but failed to carry out his intention (see *Gent. Mag.* for November 1856, Autobiography of Sylvanus Urban). He died on 16 Nov. 1729, in a house which he had built for himself at Chelsea.

Besides conducting the periodicals mentioned, Boyer began in 1705 to edit the 'Post-boy,' a thrice-a-week London news-sheet. His connection with it ended in August 1709, through a quarrel with the proprietor, when Boyer started on his own account a 'True Post-boy,' which seems to have been short-lived. A 'Case' which he printed in vindication of his right to use the name of 'Post-boy' for his new venture gives some curious particulars of the way in which the news-sheets of the time were manufactured. Boyer was also the author of pamphlets, in one of which, 'An Account of the State and Progress of the present Negotiations of Peace,' he attacked Swift, who writes in the 'Journal to Stella' (16 Oct. 1711), after dining with Bolingbroke: 'One Boyer, a French dog, has abused me in a pamphlet, and I have got him up in a messenger's hands. The secretary'—St. John—'promises me to swinge him. . . . I must make that rogue an example for warning to others.' Boyer was discharged from custody through the intervention, he says, of Harley, to whom he boasts of having rendered services (*Annals of Queen Anne*, vol. for 1711, pp. 264–5). Though he professed a strict political impartiality in the conduct of his principal periodicals, Boyer was a zealous whig. For this reason doubtless Pope gave him a niche in the 'Dunciad' (book ii. 413), where, under the soporific influence of Dulness, 'Boyer the state, and Law the stage gave o'er'—his crime, according to Pope's explanatory note, being that he was 'a voluminous compiler of annals, political collections, &c.'

Of Boyer's other writings—the list of those of them which are in the library of the British Museum occupies nearly four folio pages of print in its new catalogue—mention may be made of his folio 'History of Queen Anne' (1722, second edition 1735), with maps and plans illustrating Marlborough's campaigns, and 'a regular series of all the medals that were struck to commemorate the great events of this reign;' and the 'Memoirs of the Life and Negotiations of Sir William Temple, Bart., containing the most important occurrences and the most secret springs of affairs in Christendom from the year 1655 to the year 1681; with an account of Sir W. Temple's writings,' published anonymously in 1714, second edition 1715. Boyer's latest production—in composing which he seems to have been assisted by a 'Mr. J. Innes'—was 'Le Grand Théâtre de l'Honneur,' French and English, 1729, containing a dictionary of heraldic terms and a treatise on heraldry, with engravings of the arms of the sovereign princes and states of Europe. It was published by subscription and dedicated to Frederick, prince of Wales.

[Boyer's Works; obituary notice in vol. xxxviii. of Political State, of which the Memoir in Baker's Biographia Dramatica, 1812, is mainly a reproduction; Haag's La France Protestante, 2nd edition, 1881; Genest's Account of the English Stage, ii. 166–9; Catalogue of the British Museum Library.] F. E.

BOYES, JOHN FREDERICK (1811–1879), classical scholar, born 10 Feb. 1811, entered Merchant Taylors' School in the month of October 1819, his father, Benjamin Boyes (a Yorkshireman), being then resident in Charterhouse Square. After a very creditable school career extending over nearly ten years, he went in 1829 as Andrew's civil law exhibitioner to St. John's College, Oxford, having relinquished a scholarship which he had gained in the previous year at Lincoln College. He graduated B.A. in 1833, taking a second class in classics, his papers on history and poetry being of marked excellence. Soon afterwards he was appointed second master of the proprietary school, Walthamstow, and eventually succeeded to the head-mastership, which he filled for many years. He proceeded M.A. in due course. At school, at Oxford (whither he was summoned to act as examiner at responsions in 1842), and among a large circle of discriminating friends, he enjoyed a high reputation for culture and scholarship. 'There was not an English or Latin or Greek poet with whom he was not familiar, and from whom he could not make the most apposite quotations. With the best prose authors in our own and in French, and indeed other continental literature, he was thoroughly acquainted' (Archdeacon Hessey). The fruits of his extensive reading and literary taste are to be seen in his published works, which evince also considerable originality of thought, terseness of expression, and felicity of illustration. The closing years of his life were largely devoted

to practical benevolence, in the exercise of which he was as humble as he was liberal. He died at Maida Hill, London, 26 May 1879.

His writings comprise: 1. 'Illustrations of the Tragedies of Æschylus and Sophocles, from the Greek, Latin, and English Poets,' 1844. 2. 'English Repetitions, in Prose and Verse, with introductory remarks on the cultivation of taste in the young,' 1849. 3. 'Life and Books, a Record of Thought and Reading,' 1859. 4. 'Lacon in Council,' 1865. The two latter works remind one very much in their style and texture of 'Guesses at Truth,' by the brothers Hare.

[Robinson's Register of Merchant Taylors' School, ii. 211; Information from Archdeacon Hessey, Dr. Seth B. Watson, and other personal friends of Mr. Boyes; Preface and Appendix to Sermon by Rev. J. G. Tanner (E. Hale), 1879.]

C. J. R.

BOYLE, CHARLES, fourth EARL OF ORRERY in Ireland, and first **BARON BOYLE OF MARSTON**, of Marston, Somerset (1676–1731), grandson of Roger Boyle, first earl of Orrery [q. v.], was born at Chelsea in 1676, and succeeded his brother as Earl of Orrery in 1703. Educated at Christ Church, he joined the wits engaged in a struggle with Bentley, who represented the scholarship of the Cambridge whigs. Sir W. Temple had made some rash statements as to the antiquity of Phalaris in a treatise on ancient and modern learning, and this was the subject of attack by Wotton, a protégé of Bentley's, in his 'Reflections on Ancient and Modern Learning,' published in 1694. By way of covering Temple's defeat, the Christ Church scholars determined to publish a new edition of the epistles of Phalaris. This was entrusted to Boyle, who, without asserting the epistles to be genuine, as Temple had done, attacked Bentley for his rudeness in having withdrawn too abruptly a manuscript belonging to the King's Library, which Boyle had borrowed. Bentley now added to a new edition of Wotton's 'Reflections' a 'Dissertation' upon the epistles, from his own pen [see BENTLEY, RICHARD, 1662–1742]. Boyle was aided by Atterbury and Smalridge in preparing a defence, published in 1698, entitled 'Dr. Bentley's Dissertations . . . . examined.' Bentley returned to the charge and overwhelmed his opponents by the wealth of his scholarship. The dispute led to Swift's 'Battle of the Books.' Before succeeding to the peerage Boyle was M.P. for Charleville in the Irish House of Commons (1695–9) and M.P. for Huntingdon (1701–5); a dispute over his return for Huntingdon led to a duel with his colleague, Francis Wortley, in which he was wounded. He subsequently entered the army, and was present at the battle of Malplaquet, and in 1709 became major-general. In 1706 he had married Lady Elizabeth Cecil, daughter of the Earl of Exeter. We find him afterwards in London, as the centre of Christ Church men there, a strong adherent of the party of Harley, and a member of 'the club' established by Swift. As envoy in Flanders he took part in negotiations preceding the treaty of Utrecht, and was afterwards made a privy councillor and Baron Boyle of Marston. He became lord of the bedchamber on the accession of George I, and lord-lieutenant of Somerset, but resigned the former post on being deprived of the latter office in 1716. Swift, in the 'Four Last Years of the Queen,' adduces Orrery's support of the tory ministry as a proof that no Jacobite designs were entertained by them; but in 1721 Orrery was thrown into the Tower for six months as being implicated in Layer's plot, and was released on bail only in consequence of Dr. Mead's certifying that continued imprisonment was dangerous to his life. He was subsequently discharged, and died on 28 Aug. 1731. Besides the works above named, he wrote a comedy called 'As you find it.' The astronomical instrument, invented by Graham, received from his patronage of the inventor the name of an 'Orrery.'

H. C.

BOYLE, DAVID, LORD BOYLE (1772–1853), president of the Scottish court of session, fourth son of the Hon. Patrick Boyle of Shewalton, near Irvine, the third son of John, second Earl of Glasgow, was born at Irvine on 26 July 1772; was called to the Scottish bar on 14 Dec. 1793; was gazetted (9 May 1807), under the Duke of Portland's administration, solicitor-general for Scotland; and in the general election of the following month was returned to the House of Commons by Ayrshire, which he continued to represent until his appointment, on 23 Feb. 1811, as a lord of session and of justiciary. He was appointed lord justice clerk on 15 Oct. 1811. He was sworn on 11 April 1820 a member of the privy council of George IV, at whose coronation, on 19 July 1821, he is recorded by Sir Walter Scott to have shown to great advantage in his robes.

After acting as lord justice clerk for nearly thirty years, Boyle was appointed lord justice-general and president of the court of session, on the resignation of Charles Hope, lord Granton. Boyle resigned office in May 1852, declining the baronetcy which was offered to

him, and retired to his estate at Shewalton, to which he had succeeded on the death of a brother in 1837. He died on 4 Feb. 1853.

Boyle was always distinguished for his noble personal appearance. Sir J. W. Gordon painted full-length portraits of him for the Faculty of Advocates and for the Society of Writers to the Signet. Mr. Patrick Park also made a bust of him for the hall of the Society of Solicitors before the Supreme Courts in Edinburgh.

Boyle was twice married: first, on 24 Dec. 1804, to Elizabeth, eldest daughter of Alexander Montgomerie of Annick, brother of the twelfth Earl of Eglintoun, who died on 14 April 1822; he had nine children by her, the eldest of whom, Patrick Boyle, succeeded to his estates; and secondly, on 17 July 1827, to Camilla Catherine, eldest daughter of David Smythe of Methven, lord Methven, a lord of session and of justiciary, who died on 25 Dec. 1880, leaving four children.

Mag., passim; Brunton and Haig's Senators of the College of Justice, 1813; Caledonian Mercury and Glasgow Herald, 7 Feb. 1853; Edinburgh Evening Courant and Ayr Observer, 8 Feb. 1853; Times, 9 Feb. 1853; Illustrated London News, 29 Jan. and 12 Feb. 1853.]

A. H. G.

BOYLE, HENRY, Baron Carleton (*d.* 1725), politician, was the third and youngest son of Charles, lord Clifford, of Lanesborough, by Jane, youngest daughter of William, duke of Somerset, and grandson of Richard Boyle, second earl of Cork [q. v.] He sat in parliament for Tamworth from 1689 to 1690, for Cambridge University—after a contest in which Sir Isaac Newton supported his opponent—from 1692 to 1705, and for Westminster from 1705 to 1710. Although he was at the head of the poll at Cambridge in 1701, he did not venture to try his fortune in 1705. From 1699 to 1701 he was a lord of the treasury, and from 1701 to 1708 chancellor of the exchequer; from 1704 to 1715 he was lord treasurer of Ireland, and in 1708 secretary of state of the northern department in the room of Harley. Two years later he was displaced for St. John, one of those bold steps on the part of the tory ministry which 'almost shocked' Swift. From 1702 to 1715 he was lord-lieutenant of the West Riding of Yorkshire. Boyle is reputed to be the messenger who found Addison [q. v.] in his mean lodging, and by his blandishments, and a definite promise of preferment and the prospect of still greater advancement, secured the poet's pen to celebrate the victory of Blenheim and its hero. In return, it is said, for his good offices on this occasion, the third volume of the 'Spectator' was dedicated to Boyle, with the eulogy that among politicians no one had 'made himself more friends and fewer enemies.' Southerne, the dramatist, was another of the men of letters whom he befriended. Boyle was engaged as one of the managers of the trial of Sacheverell. On 20 Oct. 1714 he was raised to the peerage as Baron Carleton of Carleton, Yorkshire, and from 1721 to 1725 was lord president of the council in Walpole's administration. He died a bachelor at his house in Pall Mall on 14 March 1725. He left this house, known as Carlton House, to the Prince of Wales, and it was long notorious as the abode of the prince regent: the name is still perpetuated in Carlton House Terrace. The winning manners and the tact of Lord Carleton have been highly praised. He was never guilty, so it was said by his panegyrists, of an imprudent speech or of any acts to injure the success of the whig cause. Swift, however, accuses him of avarice.

[Budgell's Lives of Boyles, 149–55; Swift's Works; Chalmers; Cooper's Annals of Cambridge, iv. 19, 40, 47; Lodge's Peerage, i. 175.]

W. P. C.

BOYLE, HENRY, Earl of Shannon (1682–1764), born at Castlemartyr, co. Cork, in 1682, was second son of Lieutenant-colonel Henry Boyle, second son of Roger Boyle, first earl of Orrery [q. v.] Henry Boyle's mother was Lady Mary O'Brien, daughter of Murragh O'Brien, first earl of Inchiquin, and president of Munster. Henry Boyle's father died in Flanders in 1693, and his eldest son, Roger, dying in 1705, Henry Boyle, as second son, succeeded to the neglected family estates at Castlemartyr. He was M.P. for Middleton (1707–13) and for Kilmallock (1713–5). In 1715 he was elected for co. Cork and married Catherine, daughter of Chidley Coote. After her death he married, in 1726, Henrietta Boyle, youngest daughter of his relative, Charles, earl of Burlington and Cork. That nobleman entrusted the management of his estates in Ireland to Henry Boyle, who much enhanced their value, and carried out and promoted extensive improvements in his district. In 1729 Boyle distinguished himself in parliament at Dublin in resisting successfully the attempt of the government to obtain a vote for a continuation of supplies to the crown for twenty-one years. Sir Robert Walpole is stated to have entertained a high opinion of the penetration, sagacity, and energy of Boyle, and to have styled him 'the King of the Irish Commons.' Boyle, in 1733, was

made a member of the privy council, chancellor of the exchequer, and commissioner of revenue in Ireland. He was also in the same year elected speaker of the House of Commons there. Through his connections, Boyle exercised extensive political influence, and was parliamentary leader of the whig party in Ireland. In 1753 Boyle acquired high popularity by opposing the government proposal for appropriating a surplus in the Irish exchequer. In commemoration of the parliamentary movements in this affair, medals were struck containing portraits of Boyle as speaker of the House of Commons. For having opposed the government, Boyle and some of his associates were dismissed from offices which they held under the crown. After negotiations with government, Boyle, in 1756, resigned the speakership, and was granted an annual pension of two thousand pounds for thirty-one years, with the titles of Baron of Castlemartyr, Viscount Boyle of Bandon, and Earl of Shannon. He sat for many years in the House of Peers in Ireland, and frequently acted as lord justice of that kingdom. Boyle died at Dublin of gout in his head, on 27 Sept. 1764, in the 82nd year of his age. Portraits of Henry Boyle were engraved in mezzotinto by John Brooks.

[Account of Life of Henry Boyle, 1754; Journals of Lords and Commons of Ireland; Peerage of Ireland, 1789, ii. 364; Hardy's Life of Charlemont, 1810; Charlemont MSS.; Works of Henry Grattan, 1822; Hist. of City of Dublin, 1854–59.] J. T. G.

BOYLE, JOHN (1563?–1620), bishop of Roscarberry, Cork, and Cloyne, a native of Kent and elder brother of Richard, first earl of Cork [q. v.], was born about 1563. John Boyle obtained the degree of DD. at Oxford, and was collated prebendary of Lichfield on 5 Feb. 1610–11. Through the interest and pecuniary assistance of his brother, the Earl of Cork and other relatives, he was in 1617 appointed to the united sees of Roscarberry, Cork, and Cloyne. His consecration took place in 1618. He died at Cork on 10 July 1620, and was buried at Youghal.

[Ware's Bishops of Ireland, 1739; Fasti Ecclesiæ Hibernicæ, 1851; Brady's Records of Cork, Cloyne, and Ross, 1863.] J. T. G.

BOYLE, JOHN, fifth EARL OF CORK, fifth EARL OF ORRERY, and second BARON MARSTON (1707–1762), was born on 2 Jan. 1707, and was the only son of Charles Boyle, fourth earl of Orrery [q. v.], whom he succeeded as fifth earl in 1731. Like his father, he was educated at Christ Church. He took some part in parliamentary debates, chiefly in opposition to Walpole. On the death, in 1753, of his kinsman, Richard Boyle, the Earl of Cork and Burlington [q. v.], he succeeded him as fifth earl of Cork, thus uniting the Orrery peerage to the older Cork peerage. His father, from some grudge, left his library to Christ Church, specially assigning as his reason his son's want of taste for literature. According to Johnson, the real reason was that the son would not allow his wife to associate with the father's mistress. The passage in the will seems to have stimulated the son to endeavour to disprove the charge, and he has succeeded in making his name remembered as the friend first of Swift and Pope, and afterwards of Johnson. His 'Remarks on Swift,' published in November 1751, attracted much attention as the first attempt at an account of Swift, and 7,500 copies appear to have been sold within a month. But neither Lord Orrery's ability, nor his acquaintance with Swift, was such as to give much value to his 'Remarks.' The acquaintance had begun about 1731 (apparently from an application by Swift on behalf of Mrs. Barber for leave to dedicate her poems to Orrery, although Swift had previously seen a good deal of his father), when Swift was already sixty-four years old, and their meetings, during the few succeeding years before Swift became decrepit, were not very frequent. If we are to judge, however, from the expressions used by Swift, both in his letters to Orrery and in correspondence with others, the friendship seems to have been cordial so far as it went. In one of the earliest letters he hopes Orrery will be 'a great example, restorer, and patron of virtue, learning, and wit;' and he writes to Pope that, next to Pope himself, he loves 'no man so well.' Pope, too, writes of Orrery to Swift as one 'whose praises are that precious ointment Solomon speaks of.' A bond of sympathy existed between Swift and Orrery in a common hatred of Walpole's government. It was to Orrery's hand that Swift entrusted the manuscript of his 'Four Last Years of the Queen' for delivery to Dr. King of Oxford; and Orrery was the go-between employed by Pope to get his letters from Swift. In his will Swift leaves to Orrery a portrait and some silver plate. On the other hand, there are traditional stories of contemptuous expressions used by Swift of Orrery, and these, if repeated to him, may have inspired in Orrery that dislike which made his 'Remarks' so full of rancour and grudging criticism. The 'Remarks on the Life and Writings of Jonathan Swift,' published in 1751, are given in a series of letters to his son and successor, Hamilton Boyle (1730–1764), then an undergraduate

at Christ Church, and are written in a stilted and affected style. The malice which he showed made the book the subject of a bitter attack (1754) by Dr. Patrick Delany [q. v.], who did something to clear Swift from the aspersions cast on him by Orrery. But the grudging praise and feeble estimate of Swift's genius shown in the 'Remarks' are mainly due to the poverty of Orrery's own mind. He was filled with literary aspirations, and, as Berkeley said of him, 'would have been a man of genius had he known how to set about it.' But he had no real capacity for apprehending either the range of Swift's intellect or the meaning of his humour. Orrery was afterwards one of those who attempted to patronise Johnson, by whom he was regarded kindly and spoken of as one 'who would have been a liberal patron if he had been rich.'

Orrery married in 1728 Lady Harriet Hamilton, third daughter of the Earl of Orkney, and after her death he married, in 1738, Miss Hamilton, of Caledon, in Tyrone. He was made a D.C.L. of Oxford in 1743, and F.R.S. in 1750. He died on 16 Nov. 1762. He wrote some papers in the 'World,' and the 'Connoisseur,' and various prologues and fugitive verses. His other works are: 1. 'A Translation of the Letters of Pliny the Younger' (2 vols. 4to, 1751). 2. 'An Essay on the Life of Pliny.' 3. 'Memoirs of Robert Carey, Earl of Monmouth,' published from the original manuscript, with preface and notes. 4. 'Letters from Italy in 1754 and 1755,' published after his death (with a life) by the Rev. J. Duncombe in 1774.

[Duncombe's Life, as above; Swift's and Pope's Letters; Nichols's Lit. Illust. ii. 153, 232; Biog. Brit.] H. C.

BOYLE, MICHAEL, the elder (1580?–1635), bishop of Waterford and Lismore, born in London about 1580, was son of Michael Boyle, and brother of Richard Boyle, archbishop of Tuam [q. v.] Michael Boyle entered Merchant Taylors' School, London, in 1587, and proceeded to St. John's College, Oxford, in 1593. He took the degree of B.A. 5 Dec. 1597, of M.A. 25 June 1601, of B.D. 9 July 1607, and of D.D. 2 July 1611. He became a fellow of his college, and no high opinion was entertained there of his probity in matters affecting his own interests. Boyle was appointed vicar of Finden in Northamptonshire. Through his relative, the Earl of Cork, he became archdeacon of Cork (1613–4) and dean of Lismore in 1614, and bishop of Waterford and Lismore in 1619. He held till death the chancellorship of Lismore and Cashel and the treasurership of Waterford, and dying at Waterford on 27 Dec. 1635, was buried in the cathedral.

[Ware's Bishops of Ireland, 1739; Robinson's Register of Merchant Taylors' School, i. 30; Wood's Athenæ Oxonienses (Bliss), ii. 88; Wood's Fasti (Bliss), i. 275, 292, 321, 344; Elrington's Life of Ussher, 1848; Cotton's Fasti Ecclesiæ Hibernicæ, 1851; Brady's Records of Cork, Cloyne, and Ross, 1863]. J. T. G.

BOYLE, MICHAEL, the younger (1609?–1702), archbishop of Armagh, eldest son of Richard Boyle, archbishop of Tuam [q. v.], and nephew of the elder Michael [q. v.], was born about 1609. He was apparently educated at Trinity College, Dublin, where he proceeded M.A., and on 4 Nov. 1637 was incorporated M.A. of Oxford. In 1637 he obtained a rectory in the diocese of Cloyne, received the degree of D.D., became dean of Cloyne (1640), and during the war in Ireland was chaplain-general to the English army in Munster. In 1650 the protestant royalists in Ireland employed Boyle, in conjunction with Sir Robert Sterling and Colonel John Daniel, to negotiate on their behalf with Oliver Cromwell. Ormonde resented the conduct of Boyle in conveying Cromwell's passport to him, which he rejected. Letters of Boyle on these matters have been recently printed in the second volume of the 'Contemporary History of Affairs in Ireland, 1641–1652.' At the Restoration, Boyle became privy councillor in Ireland, and was appointed bishop of Cork, Cloyne, and Ross. In addition to the episcopal revenues, he continued to receive for a time the profits of six parishes in his diocese, on the ground of being unable to find clergymen for them. For Boyle's services in England in connection with the Act for the Settlement of Ireland, the House of Lords at Dublin ordered a special memorial of thanks to be entered in their journals in 1662. Boyle was translated to the see of Dublin in 1663, and appointed chancellor of Ireland in 1665. In the county of Wicklow he established a town, to which he gave the name of Blessington, and at his own expense erected there a church, which he supplied with plate and bells. In connection with this town he in 1673 obtained the title of Viscount Blessington for his eldest son, Murragh. In 1678 Boyle was promoted from the see of Dublin to that of Armagh. An autograph of Boyle at that time has been reproduced on plate lxxix of 'Facsimiles of National MSS. of Ireland,' part iv. p. 2. On the accession of James II, he was continued in office as lord chancellor, and appointed for the third time as lord justice in Ireland, in conjunction with the Earl of Granard, and held that post until Henry, earl of Clarendon, arrived as lord-lieutenant in December 1685. In Boyle's latter years his faculties are stated to have been much

impaired. He died in Dublin on 10 Dec. 1702, in his ninety-third year, and was interred in St. Patrick's Cathedral there. Little of the wealth accumulated by Boyle was devoted to religious or charitable uses. Letters and papers of Boyle are extant in the Ormonde archives at Kilkenny Castle and in the Bodleian Library. Portraits of Archbishop Boyle were engraved by Loggan and others. Boyle's son, Murragh, viscount Blessington, was author of a tragedy, entitled 'The Lost Princess.' Baker, the dramatic critic, characterised this production as 'truly contemptible,' and added that the 'genius and abilities of the writer did no credit to the name of Boyle.' Viscount Blessington died 25 Dec. 1712, and was succeeded by his son Charles (*d.* 10 Aug. 1718), at one time governor of Limerick, and lord justice of Ireland in 1696. The title became extinct on the death of the next heir in 1732.

[Carte's Life of Ormonde, 1736; Wood's Fasti (Bliss), i. 498; Ware's Works (Harris), i. 130; Journals of Lords and Commons of Ireland; Peerage of Ireland; Biographia Dramatica, 1812; Mant's Hist. of Church of Ireland, 1840; Granard Archives, Castle Forbes; Elrington's Life of Ussher, 1848; Cotton's Fasti Ecclesiæ Hibernicæ, 1851; Reports of Royal Commission on Hist. MSS.] J. T. G.

BOYLE, MURRAGH, Viscount Blessington. [See under Boyle, Michael, 1609?–1702.]

BOYLE, RICHARD, first Earl of Cork (1566–1643), an Irish statesman frequently referred to as the 'great earl,' was descended from an old Hereford family, the earliest of which there is mention being Humphry de Binvile, lord of the manor of Pixeley Court, near Ledbury, about the time of Edward the Confessor. He was the great-grandson of Ludovic Boyle of Bidney, Herefordshire, by a younger branch of the family, and the second son of Roger Boyle, who had removed to Faversham, Kent, and had married there Joan, daughter of Robert Naylor of Canterbury (pedigree in Robinson's *Mansions of Herefordshire*, pp. 94–5). In his 'True Remembrances' he says: 'I was born in the city of Canterbury, as I find it written by my own father's hand, the 13th Oct. 1566.' After private instruction in 'grammar learning' from a clergyman in Kent, he became 'a scholar in Bennet's (Corpus Christi) College, Cambridge,' into which he was admitted in 1583 (Masters, *Hist. Corpus Christi Coll.*, ed. 1831, p. 459). On leaving the university he entered the Middle Temple, but, finding himself without means to prosecute his studies, he became clerk to Sir Richard Manwood, chief baron of the exchequer. In this employment he discovered no prospect adequate to his ambition, and therefore resolved to try his fortunes in Ireland. Accordingly, on Midsummer's eve, 23 June 1588, he landed in Dublin, his whole property, as he tells us, amounting only to 27*l.* 3*s.* in money, a diamond ring and a bracelet, and his wearing apparel. With characteristic astuteness he secured introductions to persons of high influence, and he was even affirmed to have done so by means of counterfeited letters. At any rate, as early as 1590 his name appears as escheator to John Crofton, escheator general, a situation which he doubtless knew how to utilise to his special personal advantage. In 1595 he married, at Limerick, Joan, the daughter and coheiress of William Ansley, who died in 1599 in childbed, leaving him an estate of 500*l.* a year in lands, 'which,' he says, 'was the beginning of my fortune.' The last statement must, however, be compared with the fact that some time before this he had been the victim of prosecutions, instigated, according to his own account, by envy at his prosperity. About 1592 he was imprisoned by Sir William Fitzwilliam on the charge of having embezzled records, and subsequently he was several times apprehended at the instance of Sir Henry Wallop on a variety of charges, one of them being that of stealing a horse and jewel nine years before, of which he was acquitted by pardon (*Answers of Sir Richard Boyle to the Accusations against him*, 17 Feb. 1598, Add. MS. 19832, f. 12). Finding these prosecutions unsuccessful, Sir Henry Wallop and others, according to Boyle, 'all joined together by their lies complaining against me to Queen Elizabeth, expressing that I came over without any estate, and that I made so many purchases as it was not possible to do without some foreign prince's purse to supply me with money' (*True Remembrances*). To defeat these machinations Boyle resolved on the bold course of proceeding to England to justify himself to the queen, but the fulfilment of his purpose was frustrated by the outbreak of the rebellion in Munster. As the result of the rebellion was to leave him without 'a penny of certain revenue,' he ceased for the time to be in danger from the accusations of his enemies. Indeed, his fortunes in Ireland were now so desperate that he was compelled to leave the country and resume his legal studies in his old chambers in the Temple. Scarcely, however, had he entered upon them when the Earl of Essex offered him employment in connection with 'issuing out his patents and commissions for the government of Ireland.' This at once caused him again

to experience the attentions of Sir Henry Wallop, 'who,' says Boyle, 'being conscious in his own heart that I had sundry papers and collections of Michael Kittlewell, his late treasurer, which might discover a great deal of wrong and abuse done to the queen in his late accounts . . . he renewed his former complaints against me to the queen's majesty.' In consequence of this Boyle was conveyed a close prisoner to the Gatehouse, and at the end of two months underwent examination before the Star-chamber. Boyle does not state that the complaints were in any way modified or altered, but if they were not his account of them in his 'True Remembrances' is not only inadequate but misleading. His examination before the Star-chamber had no reference whatever to his being in the pay of the king of Spain or a pervert to catholicism—the accusations he specially instances as 'formerly' made against him by Sir Henry Wallop—but bore chiefly on the causes of his previous imprisonments, and on several asserted instances of trafficking in forfeited estates (see *Articles wherein Richard Boyle, prisoner, is to be examined*, Add. MS. 19832, f. 8, and *Articles to be proved against Richard Boyle*, Add. MS. 19832, f. 9). It can scarcely be affirmed that he came out of the ordeal of examination with a reputation utterly unsullied, but the unsatisfactory character of his explanations was condoned by the revelations he made regarding the malversations of his accuser as treasurer of Ireland, and according to his own account he had no sooner done speaking than the queen broke out 'By G—'s death, these are but inventions against the young man, and all his sufferings are but for being able to do us service.' Sir Henry Wallop was at once superseded in the treasurership by Sir George Carew [q. v.], and a few days afterwards Boyle received the office of clerk of the council of Munster. He was chosen by Sir George Carew, who was also lord president of Munster, to convey to Elizabeth tidings of the victory near Kinsale in December 1601, and after the final reduction of the province he was, on 15 Oct. 1602, sent over to England to give information in reference to the condition of the country. On the latter occasion he came provided by Sir George Carew with a letter of introduction to Sir Walter Raleigh, recommending him as a proper purchaser for all his lands in Ireland 'if he was disposed to part with them.' Through the mediation of Cecil, terms were speedily adjusted, and for the paltry sum of 1,000*l.* Boyle saw himself the possessor of 12,000 acres in Cork, Waterford, and Tipperary, exceptionally fertile, and presenting unusual natural advantages for the development of trade. All, it is true, depended on his own energy and skill in making proper use of his purchase. Raleigh had found it such a bad bargain that he was glad to be rid of it. In the disturbed condition of the country it was even possible that no amount of enterprise and skill might be rewarded with immediate success. Boyle, however, possessed the advantage of being always on the spot, and of dogged perseverance in the one aim of acquiring wealth and power. Before the purchase could be completed Raleigh was attainted of high treason, but in 1604 Boyle obtained a patent for the property from the crown, and paid the purchase-money to Raleigh. There can indeed be no doubt whatever as to the honourable character of his dealings with Raleigh, who throughout life remained on friendly terms with him. The attempt of Raleigh's widow and son to obtain possession of the property was even morally without justification. It had become to its possessor a source of immense wealth, but the change was the result solely of his marvellous energy and enterprise. Cromwell, when he afterwards beheld the prodigious improvements Boyle had effected, is said to have affirmed that, if there had been one like him in every province, it would have been impossible for the Irish to raise a rebellion (Cox, *Hist. Ireland*, vol. ii.) One of the chief causes of his success was the introduction of manufactures and mechanical arts by settlers from England. From his ironworks alone, according to Boate, he made a clear gain of 100,000*l.* (*Ireland's Nat. Hist.* (1652), p. 112). At enormous expense he built bridges, constructed harbours, and founded towns, prosperity springing up at his behest as if by a magician's wand. All mutinous manifestations among the native population were kept in check by the thirteen strong castles erected in different districts, and defended by well-armed bands of retainers. At the same time, for all willing to work, immunity from the worst evils of poverty was guaranteed. On his vast plantations he kept no fewer than 4,000 labourers maintained by his money. His administration was despotic, but enlightened and beneficent except as regarded the papists. For his zeal in putting into execution the laws against the papists he received from the government special commendation—a zeal which, if it arose from a mistaken sense of duty, would deserve at least no special blame; but probably self-interest rather than duty was what chiefly inspired it, for by the possession of popish houses he obtained a considerable addition to his wealth.

The services rendered by Boyle to the Eng-

lish rule in the south of Ireland and his paramount influence in Munster marked him out for promotion to various high dignities. On the occasion of his second marriage on 25 July 1603 to Catherine Fenton, daughter of Sir George Fenton, principal secretary of state, he received the honour of knighthood. On 12 March 1606 he was sworn a privy councillor for the province of Munster, and 12 Feb. 1612 a privy councillor of state for the kingdom of Ireland. On 29 Sept. 1616 he was created Lord Boyle, baron of Youghal, and on 6 Oct. 1620 Viscount Dungarvan and Earl of Cork. On 26 Oct. 1629 he was appointed one of the lords justices of Ireland, and on 9 Nov. 1631 he was constituted lord high treasurer. So greatly was he esteemed for his abilities and his knowledge of affairs that, 'though he was no peer of England, yet he was admitted to sit in the Lords House upon the woolsack *ut consularius*' (Borlase, *Reduction of Ireland*, 219). For his promotion and honours he was in a great degree indebted first to Sir George Carew, and afterwards to Lord-deputy Falkland. On the appointment of Wentworth, afterwards Earl of Strafford, as lord deputy in 1633, he, however, discovered not only that the fountain of royal favour was, so far as he was concerned, completely intercepted, but that all his astuteness would be required to enable him to hold his own against the overmastering will of Strafford. The action of Strafford in regard to the immense tomb of black marble which the earl had erected for his wife in the choir of St. Patrick's Cathedral, Dublin, was, though not unjustifiable, sufficiently indicative of the general character of his sentiments towards him. It was utterly impossible, indeed, that there could be harmonious action between men of such consuming ambition placed in circumstances where their vital interests so conflicted. At first Strafford had the advantage, but the Earl of Cork's patience and self-control, disciplined by a long course of trials and hardships, never for a moment failed him. In the management of intrigue he was much more than a match for Strafford, who found his purposes thwarted by causes in a great degree beyond his ken, and ultimately fell a victim to the hostility provoked by his rule of 'thorough.' One of the first intimations made to the council after Wentworth's arrival was the intention of the king to issue a commission for the remedying of defective titles to estates. The real design of the commission was to enable the king to obtain money by confiscating estates to which the title was doubtful. It was too probable that the Earl of Cork, if an inquiry of this kind were set on foot, would not escape scatheless. A charge was preferred against him in regard to his possession of the college and revenues of Youghal. Wentworth, after hearing the defence, adjourned the court, and sent word to the Earl of Cork that, if he consented to abide by his award, he would prove the best friend he ever had. The earl at once agreed, whereupon he intimated the decision 'that he should be fined fifteen thousand pounds for the rents and profits of the Youghal College property, and surrender all the advowsons and patronage—everything except the college house and a few fields near the town.' On learning the sentence Laud wrote to Wentworth in high glee: 'No physic is better than a vomit if it be given in time, and therefore you have taken a very judicious course to administer one so early to my lord of Cork' (Laud to Wentworth, 15 Nov. 1633, *Letters and Despatches of Thomas, Earl of Strafford*, i. 156). Deeply chagrined as the Earl of Cork no doubt was by this turn of affairs, he never permitted himself to indulge in expressions of anger or to show any direct hostility to Strafford. While undoubtedly working to undermine his authority, he even took pains to let it be known indirectly to Strafford how thoroughly he admired his rule. Laud, writing to Strafford 21 Nov. 1638, mentions that the Earl of Cork had spoken to him in high terms of his 'prudence, indefatigable industry, and most impartial justice' (*Letters of Strafford*, ii. 245), to which the unsuspecting Strafford replies: 'It must be confessed his lordship hath in a judicious way had more taken from him than any one, nay than any six in the kingdom besides; so in this proceeding with me I do acknowledge his ingenuity as well as his justice' (*Letters*, ii. 271). Possibly the Earl of Cork deemed it best, in the uncertain condition of the struggle at this time, to be secure against any result; but even to the last, when the fall of Strafford seemed inevitable, he avoided taking a prominent part against him. At the trial he bore witness with seeming reluctance. 'Though I was prejudiced,' he says, 'in no less than 40,000*l.* and 200 merks a year, I put off my examination for six weeks.' He also states that he was 'so reserved in his answers, that no matter of treason could by them be fixed upon the Earl of Strafford.' All the same, but for the Earl of Cork, Strafford's Irish policy would very likely not have been met with the skilful and persistent opposition which led to his impeachment; and in any case that the Earl of Cork's reluctance to bear witness against him was not inspired by affection or esteem is sufficiently shown from an entry in his diary on the day of Strafford's

execution: 'This day the Earl of Strafford was beheaded. No man died more universally hated, or less lamented by the people.'

Shortly after his return from England—whither he had gone as a witness at Strafford's trial—the rebellion of 1641 broke out in Ireland. Sudden as was the outbreak, the earl was not taken by surprise, for from the beginning he had carefully prepared against such a contingency. In Munster, therefore, the rebels, owing to the stand made by the Earl of Cork, found themselves completely checkmated. Repairing to Youghal he summoned all his tenants to take up arms, and placed his sons at their head without delay. In a letter to Speaker Lenthall, giving an account of his successes, he states that, his ready money being all spent in the payment of his troops, he had converted his plate into coin (*State Papers of the Earl of Orrery*, p. 7). At the battle of Liscarrol, 3 Sept. 1642, his four sons held prominent commands, and his eldest son was slain on the field. The Earl of Cork died on 15 Sept. 1643, and was buried at Youghal. He left a large family, many of whom were gifted with exceptional talents, and either by their achievements or influential alliances conferred additional lustre on his name. Of his seven sons, four were ennobled in their father's lifetime. Richard [q. v.] was first earl of Burlington; Roger [q. v.] was first earl of Orrery; Robert [q. v.], the youngest, by his scientific achievements, became the most illustrious of the Boyles; and of the eight daughters, seven were married to noblemen.

[Earl of Cork's True Remembrances, printed in Birch's edition of Robert Boyle's works; Budgell's Memoirs of the Boyles (1737), pp. 2–32; A Collection of Letters chiefly written by Richard Boyle, Earl of Corke, and several members of his family in the seventeenth century, the originals of which are in the library of the Royal Irish Academy, and a copy in the British Museum Harleian MS. 80; various papers regarding his examination before the Privy Council in 1598, Add. MS. 19832; copies of various of his letters from 1632 to 1639, Add. MS. 19832; copy of indenture providing for his children 1 March 1624, Add. MS. 18023; Earl of Strafford's Letters and Despatches; Cal. State Papers (Dom. series) reign of Charles I; State Papers of the Earl of Orrery; Cox's History of Ireland; Borlase's Reduction of Ireland; Biog. Brit. BOYLE, RICHARD (*d.* 1645), archbishop of Tuam, was the elder brother of Michael Boyle [q. v.], bishop of Waterford, and the second son of Michael Boyle, merchant, of London, and Jane, daughter and coheir to William Peacock. He became warden of Youghal on 24 Feb. 1602–3, dean of Waterford on 10 May 1603, dean of Tuam in May 1604, archdeacon of Limerick on 8 May 1605, and bishop of Cork, Cloyne, and Ross on 22 Aug. 1620, preferments obtained through his cousin, the first Earl of Cork. He was advanced to the see of Tuam on 30 May 1638. On the outbreak of the rebellion in 1641, he retired with Dr. John Maxwell, bishop of Killala, and others, to Galway for protection, where, when the town rose in arms against the garrison, his life was preserved through the influence of the Earl of Clanricarde. He died at Cork on 19 March 1644–5, and was buried in the cathedral of St. Finbar. He is said to have repaired more churches and consecrated more new ones than any other bishop of his time. By his marriage to Martha, daughter of Richard (or John) Wright, of Catherine Hill, Surrey, he left two sons and nine daughters.

T. F. H.

BOYLE, RICHARD, first Earl of Burlington and second Earl of Cork (1612–1697), was the second son of Richard Boyle [q. v.], first earl of Cork, by Catherine, daughter of Sir Geoffrey Fenton, and was born at the college of Youghal on 20 Oct. 1612 (Earl of Cork, *True Remembrances*). On 13 Aug. 1624 he was knighted at Youghal by Falkland, lord deputy of Ireland. In his twentieth year he was sent under a tutor to 'begin his travels into foreign kingdoms,' his father allowing him a grant of a thousand pounds a year (*ib.*) On the continent he spent over two years, visiting France, Flanders, and Italy. Shortly after his return he made the acquaintance of the Earl of Strafford, and commended himself so much to his good graces that he arranged a match between him and Elizabeth, daughter and sole heiress of Henry Lord Clifford, afterwards Earl of Cumberland. The marriage was solemnised in the chapel of Skipton Castle, Craven, on 5 July 1635. This was the Countess of Burlington referred to by Pepys as 'a very fine speaking lady and a good woman' (*Diary*, 28 Sept. 1668). Through the marriage he acquired an influential position at court, which he greatly improved by his devotion to the interests of the king. When Charles in 1639 resolved on an expedition to Scotland, he raised a troop of horse, at the head of which he proposed to serve under the Earl of Cum-

berland. On the outbreak of the rebellion in Ireland in 1642, he went to his father's assistance at Munster, distinguishing himself at the battle of Liscarrol. He was member for Appleby in the Long parliament, but was disabled in 1643 (list in CARLYLE's *Cromwell*). After the cessation of arms in September 1643 he joined the king at Oxford with his regiment. Some months previously he had succeeded his father as Earl of Cork, but the king as a special mark of favour raised him also to the dignity of Baron Clifford of Lanesborough, Yorkshire. Throughout the war he strenuously supported the cause of the king until that of the parliament was completely triumphant, after which he was forced to compound for his estate for 1,631*l.* (LLOYD, *Memoirs*, 678). During the protectorate he retired to his Irish estates, but in 1651 his affairs were in such a desperate condition that his countess was obliged to supplicate Cromwell for redress. Through the mediation of his brother Roger, lord Broghill [q. v.], he then obtained a certain amount of relief from his grievances. After this matters improved with him so considerably that at the Restoration he was able to assist Charles II with large sums of money, in consequence of which he was, in 1663, raised to the dignity of Earl Burlington or Bridlington in the county of York. Subsequently he was appointed lord-lieutenant of the West Riding of Yorkshire and custos rotulorum. These offices he retained under James II, until he could no longer support him in his unconstitutional designs. He was lord-treasurer of Ireland (1660 95). He unofficially took an active part in promoting the cause of William and Mary. It was the Earl of Burlington who was the first occupant of Burlington House, Piccadilly. He died 15 Jan. 1697-8. His son Charles, lord Clifford, was father of Charles, third earl of Cork, and of Henry, lord Carleton [q. v.]

[Budgell's Memoirs of the Family of the Boyles, pp. 32-3; Lodge's Irish Peerage, ed. 1789, i. 169-174; Biog. Brit. (Kippis), ii. 471-4.] T. F. H.

BOYLE, RICHARD, third EARL OF BURLINGTON and fourth EARL OF CORK (1695-1753), celebrated for his architectural tastes and his friendship with artists and men of letters, was the only son of Charles, third earl of Cork, and Juliana, daughter and heir to Henry Noel, Luffenham, Rutlandshire. He was born 25 April 1695, and succeeded to the title and estates of his father in 1704. On 9 Oct. 1714 he was sworn a member of the privy council. From May 1715 until 1721 he was lord-lieutenant of the East Riding of Yorkshire, and from June 1715 until 1733 he held the like office in the West Riding. In August 1715 he was furthermore made lord high treasurer of Ireland. In June 1730 he was installed one of the knights companions of the Garter, and in June of the following year constituted captain of the band of gentlemen pensioners. Having before he attained his majority spent several years in Italy, Lord Burlington became an enthusiastic admirer of the architectural genius of Palladio, and on his return to England not only continued his architectural studies, but spent large sums of money to gratify his tastes in this branch of art. His earliest project was about 1716, to alter and partly reconstruct Burlington House, Piccadilly, which had been built by his great grandfather, the first earl of Burlington. The professional artist engaged was Campbell, who in 'Vitruvius Britannicus,' published in 1725, during the earl's lifetime, takes credit for the whole design. Notwithstanding this, Walpole asserts that the famous colonnade within the court was the work of Burlington; and in any case it may be assumed that Campbell was in a great degree guided in his plans by his patron's suggestions. That Burlington was chiefly responsible for the character of the building is further supported by the fact that it formed a striking and solitary exception to the bastard and commonplace architecture of the period. It undoubtedly justified the eulogy of Gay:

> Beauty within; without, proportion reigns.
> (*Trivia*, book ii. line 494.)

But, as was the case in most of the designs of Burlington, the useful was sacrificed to the ornamental. The epigram regarding the building attributed to Lord Hervey—who, if he did make use of it, must have translated it from Martial, xii. 50—contained a spice of truth as well as malice. He says that it was

> Possessed of one great hall of state,
> Without a room to sleep or eat.

The building figures in a print of Hogarth's intended to satirise the earl and his friends, entitled 'Taste of the Town,' afterwards changed to 'Masquerades and Operas, Burlington Gate.' Hogarth also published another similar print entitled 'The Man of Taste,' in which Pope is represented as white-washing Burlington House and bespattering the Duke of Chandos, and Lord Burlington appears as a mason going up a ladder. Burlington House was taken down to make way for the new buildings devoted to science and art. In addition to his town house Burlington had a suburban residence at Chiswick. He pulled down old Chiswick House

and erected near it, in 1730–6, a villa built after the model of the celebrated villa of Palladio. This building also provoked the satire of Lord Hervey, who said of it that 'it was too small to live in and too large to hang to a watch.' The grounds were laid out in the Italian style, adorned with temples, obelisks, and statues, and in these 'sylvan scenes' it was the special delight of Burlington to entertain the literary and artistic celebrities whom he numbered among his friends. Here, relates Gay,

> Pope unloads the boughs within his reach,
> The purple vine, blue plum, and blushing peach.
> (*Epistle on a Journey to Exeter.*)

Pope addressed to Burlington the fourth epistle of his Moral Essays, 'Of the Use of Riches,' afterwards changed to 'On False Taste;' and Gay, whom he sent into Devonshire to regain his health, addressed to him his 'Epistle on a Journey to Exeter,' 1716. Both poets frequently refer in terms of warm eulogy to his disinterested devotion to literature and art; but Gay, though he was entertained by him for months, when he lost in the South Sea scheme the money obtained from the publication of his poems, expressed his disappointment that he had received from him so 'few real benefits' (COXE, *Life of Gay*, 24). This, however, was mere unreasonable peevishness, for undoubtedly Burlington erred rather on the side of generosity than otherwise. Walpole says of him 'he possessed every quality of a genius and artist except envy.' He was a director of the Royal Academy of Music for the performance of Handel's works, and about 1716 received Handel into his house (SCHOELCHER, *Life of Handel*, p. 44). At an early period he was a patron of Bishop Berkeley. The architect Kent, whose acquaintance he made in Italy, resided in his house till his death in 1748, and Burlington used every effort to secure him commissions and extend his fame. His enthusiastic admiration of Inigo Jones induced him to repair the church at Covent Garden. It was at his instance and by his help that Kent published the designs of Inigo Jones, and he also brought out a beautiful edition of Palladio's 'Fabbriche Antiche,' 1730.

Burlington supplied designs for various buildings, including the assembly rooms at York built at his own expense, Lord Harrington's house at Petersham, the dormitory at Westminster School, the Duke of Richmond's house at Whitehall, and General Wade's in Cork Street. The last two were pulled down many years ago. Of General Wade's house Walpole wrote, 'It is worse contrived in the inside than is conceivable, all to humour the beauty of front,' and Lord Chesterfield suggested that, 'as the general could not live in it to his ease, he had better take a house over against it and look at it.' Burlington 'spent,' says Walpole, 'large sums in contributing to public works, and was known to choose that the expense should fall on himself rather than that his country should be deprived of some beautiful edifices.' On this account he became so seriously involved in money difficulties that he was compelled to part with a portion of his Irish estates, as we learn from Swift: 'My Lord Burlington is now selling in one article 9,000*l.* a year in Ireland for 200,000*l.*, which won't pay his debts' (*Swift's Works*, ed. Scott, xix. 129). He died in December 1753. By his wife, Lady Dorothy Savile, daughter and coheiress of William, marquis of Halifax, he left three daughters, but no male heir. His wife was a great patroness of music. She also drew in crayons, and is said to have possessed a genius for caricature.

[Lodge's Irish Peerage, i. 177–8; Walpole's Anecdotes of Painting; Works of Pope, Gay, and Swift; Wheatley's Round about Piccadilly, 46–59.] T. F. H.

BOYLE, HON. ROBERT (1627–1691), natural philosopher and chemist, was the seventh son and fourteenth child of Richard Boyle, the 'great' Earl of Cork, by his second wife Catherine, daughter of Sir Geoffrey Fenton, principal secretary of state for Ireland, and was born at Lismore Castle, in the province of Munster, Ireland, on 25 Jan. 1627. He learned early to speak Latin and French, and won paternal predilection by his aptitude for study, strict veracity, and serious turn of mind. His mother died when he was three years old, and at the age of eight he was sent to Eton, the provost then being his father's friend, Sir Henry Wotton, described by Boyle as 'not only a fine gentleman himself, but very well skilled in the art of making others so.' Here an accidental perusal of Quintus Curtius 'conjured up in him' (he narrates in an autobiographical fragment) 'that unsatisfied appetite for knowledge that is yet as greedy as when it first was raised;' while 'Amadis de Gaule,' which fell into his hands during his recovery from a fit of tertian ague, produced an unsettling effect, counteracted by a severe discipline—self-imposed by a boy under ten—of mental arithmetic and algebra.

From Eton, after nearly four years, he was transferred to his father's recently purchased estate of Stalbridge, in Dorsetshire, and his education continued by the Rev. Mr. Douch,

and later by a French tutor named Marcombes. With him and his elder brother Francis he left England in October 1638, and, passing through Paris and Lyons, settled during twenty-one months at Geneva, where he acquired the gentlemanly accomplishments of fluent French, dancing, fencing, and tennis-playing. From this time, when he was about fourteen, he dated his 'conversion,' or that express dedication to religion from which he never afterwards varied. The immediate occasion of this momentous resolve was the awe inspired by a thunderstorm.

At Florence during the winter of 1641–2 he mastered Italian, and studied 'the new paradoxes of the great star-gazer Galileo,' whose death occurred during his stay (8 Jan. 1642). He chose in Rome to pass for a Frenchman, and with the arrival of the party at Marseilles, about May 1642, Boyle's record of his early years abruptly closes. A serious embarrassment here awaited them. A sum of 250*l.*, with difficulty raised by Lord Cork during the calamities of the Irish rebellion, was embezzled in course of transmission to his sons. Almost penniless, they made their way to Geneva, M. Marcombes' native place, and there lived on credit for two years. At length, by the sale of some jewels, they raised money to defray their expenses homewards, and reached England in the summer of 1644. They found their father dead, and the country in such confusion that it was nearly four months before Robert Boyle, who had inherited the manor of Stalbridge, could make his way thither.

But civil distractions were powerless to extinguish scientific zeal. From the meetings in London in 1645 of the 'Philosophical,' or (as he preferred to call it) the '*Invisible* College,' incorporated, after the Restoration, as the Royal Society, Boyle derived a definitive impulse towards experimental inquiries. He was then a lad of eighteen, but rose rapidly to be the acknowledged leader of the movement thus originated. Chemistry was from the first his favourite study. 'Vulcan has so transported and bewitched me,' he wrote from Stalbridge to his sister, Lady Ranelagh, 31 Aug. 1649, as to 'make me fancy my laboratory a kind of Elysium.' Compelled to visit his disordered Irish estates in 1652 and 1653, he described his native land as 'a barbarous country, where chemical spirits were so misunderstood, and chemical instruments so unprocurable, that it was hard to have any Hermetic thoughts in it.' Aided by Sir William Petty, he accordingly practised instead anatomical dissection, and satisfied himself experimentally as to the circulation of the blood. On his return to England in June 1654 he settled at Oxford in the society of some of his earlier philosophical associates, and others of the same stamp, including Wallis and Wren, Goddard, Wilkins, and Seth Ward. Meetings were alternately held in the rooms of the warden of Wadham (Wilkins) and at Boyle's lodgings, adjoining University College, and experiments were zealously made and freely communicated. Boyle erected a laboratory, kept a number of operators at work, and engaged Robert Hooke as his chemical assistant. Reading in 1657, in Schott's 'Mechanica hydraulico-pneumatica,' of Guericke's invention for exhausting the air in a closed vessel, he set Hooke to contrive a method less clumsy, and the result was the so-called 'machina Boyleana,' completed towards 1659, and presenting all the essential qualities of the modern air-pump. By a multitude of experiments performed with it, Boyle vividly illustrated the effects (at that time very imperfectly recognised) of the elasticity, compressibility, and weight of the air; investigated its function in respiration, combustion, and the conveyance of sound, and exploded the obscure notion of a *fuga vacui*. A first instalment of results was published at Oxford in 1660, with the title, 'New Experiments Physico-Mechanical touching the Spring of the Air and its Effects, made, for the most part, in a new Pneumatical Engine.' His 'Defence against Linus,' appended, with his answer to the objections of Hobbes, to the second edition (1662), contained experimental proof of the proportional relation between elasticity and pressure, still known as 'Boyle's Law' (*Works*, folio ed. 1744, i. 100). This approximately true principle, although but loosely demonstrated, was at once generalised and accepted, and was confirmed by Mariotte in 1676.

Boyle meanwhile bestowed upon theological subjects attention as earnest as if it had been undivided. At the age of twenty-one he had already written, besides a treatise on ethics, several moral and religious essays, afterwards published. His veneration for the Scriptures induced him, although by nature averse to linguistic studies, to learn Hebrew and Greek, Chaldee and Syriac enough to read them in the originals. At Oxford he made some further progress in this direction, with assistance from Hyde, Pococke, and Clarke; applied himself to divinity under Barlow (afterwards bishop of Lincoln); and encouraged the writings on casuistry of Dr. Robert Sanderson with a pension of 50*l.* a year. Throughout his life he was a munificent supporter of projects for the diffusion of the Scriptures. He bore wholly, or in

part, the expense of printing the Indian, Irish, and Welsh Bibles (1685–86); of the Turkish New Testament, and of the Malayan version of the Gospels and Acts (Oxford, 1677). As governor of the Corporation for the Spread of the Gospel in New England, and as director of the East India Company (the charter of which he was instrumental in procuring), he made strenuous efforts, and gave liberal pecuniary aid towards the spread of christianity in those regions. He contributed, moreover, largely to the publication of Burnet's 'History of the Reformation,' bestowed a splendid reward upon Pococke for his translation into Arabic of Grotius' 'De Veritate,' and during some time spent 1,000*l.* a year in private charity. Nor was science forgotten. Besides his heavy regular outlay, and help afforded to indigent *savants*, we hear in 1657, in a letter from Oldenburg, of a scheme for investing 12,000*l.* in forfeited Irish estates, the proceeds to be devoted to the advancement of learning; and a looked-for increase to his fortunes in 1662 should have been similarly applied, but that, being 'cast upon impropriations,' he felt bound to consecrate it to religious uses.

On the Restoration, he was solicited by the Earl of Clarendon to take orders; but excused himself, on the grounds of the absence of an inner call, and of his persuasion that arguments in favour of religion came with more force from one not professionally pledged to uphold it. This determination involved the refusal of the provostship of Eton, offered to him in 1665. He also repeatedly declined a peerage, and died the only untitled member of his large family.

In 1668 he left Oxford for London, and resided until his death in Lady Ranelagh's house in Pall Mall. The meetings of the Royal Society perhaps furnished in part the inducement to this move. Boyle might be called the representative member of this distinguished body. He had taken a leading part in its foundation; he sat on its first council; the description and display of his ingenious experiments gave interest to its proceedings; he was elected its president 30 Nov. 1680, but declined to act from a scruple about the oaths, and was replaced by Wren. His voluminous writings flowed from him in an unfailing stream from 1660 to 1691, and procured him an immense reputation, both at home and abroad. Most of them appeared in Latin, as well as in English, and were more than once separately reprinted. In the 'Sceptical Chymist' (Oxford, 1661) he virtually demolished, together with the peripatetic doctrine of the four elements, the Spagyristic doctrine of the *tria prima*, tentatively substituting the principles of a 'mechanical philosophy,' expounded in detail in his 'Origin of Forms and Qualities' (1666). Founded on the old atomic hypothesis, these accord, in the main, with the views of many recent physicists. They postulate one universal kind of matter, admit in the construction of the visible world only moving atoms, and derive diversity of substance from their various modes of grouping and manners of movement. Boyle added as a corollary the transmutability of differing forms of matter by the rearrangement of their particles effected through the agency of fire or otherwise; referred 'sensible qualities' to the action of variously constituted particles on the human frame, and declared, in the obscure phraseology of the time, that 'the grand efficient of forms is local motion' (*Works*, ii. 483). He acquiesced in, rather than accepted, the corpuscular theory of light, but clearly recognised in heat the results of a 'brisk' molecular agitation (*ibid.* i. 282).

In 'Experiments and Considerations touching Colours' (1663) he described for the first time the iridescence of metallic films and soap-bubbles; in 'Hydrostatical Paradoxes' (1666) he enforced, by numerous and striking experiments (presented to the Royal Society in May 1664), the laws of fluid equilibrium. His statement concerning the 'Incalescence of Quicksilver with Gold' (*Phil. Trans.* 21 Feb. 1676) drew the serious attention of Newton (see his letter to Oldenburg in Boyle's *Works*, v. 396), and a widespread sensation was created by his 'Historical Account of a Degradation of Gold' (1678), the interest of both these pseudo-observations being derived from their supposed connection with alchemistic transformations. Boyle's faith in their possibility was further evidenced by the repeal, procured through his influence in 1689, of the statute 5 Henry IV against 'multiplying gold.'

Amongst Boyle's numerous correspondents were Newton, Locke, Aubrey, Evelyn, Oldenburg, Wallis, Beale, and Hartlib. To him Evelyn unfolded, 3 Sept. 1659, his scheme for the foundation of a 'physico-mathematic college,' and Newton, 28 Feb. 1679, his ideas regarding the qualities of the æther. Nathaniel Highmore dedicated to him in 1651 his 'History of Generation;' Wallis in 1659 his essay on the 'Cycloid;' Sydenham in 1666 his 'Methodus curandi Febres,' intimating Boyle's frequent association with him in his visits to his patients; and Burnet addressed to him in 1686 the letters constituting his 'Travels.' Wholesale plagiarism and theft formed a vexatious, though no less flattering, tribute to his fame. Hence the 'Advertise-

ment about the loss of many of his Writings,' published in May 1688, in which he described the various mischances, both by fraud and accident, having befallen them, and declared his intention to write thenceforth on loose sheets, as offering less temptation to thieves than bulky packets, and to send to press without the dangerous delays of prolonged revision. In the same year he gave to the world 'A Disquisition concerning the Final Causes of Natural Things,' and in 1690 'Medicina Hydrostatica' and 'The Christian Virtuoso,' setting forth the mutual serviceableness of science and religion. The last work published by himself was entitled 'Experimenta et Observationes Physicæ,' part i. (1691); the second part never appeared.

In 1689 the failing state of his health compelled him to suspend communications to the Royal Society, and to resign his post, filled since 1661, as governor of the Corporation for the Spread of the Gospel in New England. About the same time he publicly notified his intention of excluding visitors on certain portions of four days in each week, thus reserving leisure to 'recruit' (as he said) 'his spirits, to range his papers, and to take some care of his affairs in Ireland, which are very much disordered, and have their face often changed by the public calamities there.' He was also desirous to complete a collection of elaborate chemical processes, which he is said to have entrusted to a friend as 'a kind of Hermetick legacy,' but which were never made known. Some secrets discovered by him, such as the preparation of subtle poisons and of a liquid for discharging writing, he concealed as mischievous.

From the age of twenty-one he had suffered from a torturing malady, of which he dreaded the aggravation, with the approach of death, beyond his powers of patient endurance. But his end was without pain, and almost without serious illness. His beloved sister, Catherine Lady Ranelagh, a conspicuous and noble personage, died 23 Dec. 1691. He survived her one week, expiring three-quarters of an hour after midnight, 30 Dec., aged nearly 65, and was buried 7 Jan. 1692 in St. Martin's-in-the-Fields, Westminster. Dr. Burnet preached his funeral sermon. By his will he founded and endowed with 50*l.* a year the 'Boyle Lectures,' for the defence of Christianity against unbelievers, of which the first set of eight discourses was preached by Bentley in 1692.

'Mr. Boyle,' Dr. Birch writes (*Life*, p. 80), 'was tall of stature, but slender, and his countenance pale and emaciated. His constitution was so tender and delicate that he had divers sorts of cloaks to put on when he went abroad, according to the temperature of the air, and in this he governed himself by his thermometer. He escaped, indeed, the small-pox during his life, but for almost forty years he laboured under such a feebleness of body and lowness of strength and spirits that it was astonishing how he could read, meditate, try experiments, and write as he did. He had likewise a weakness in his eyes, which made him very tender of them, and extremely apprehensive of such distempers as might affect them.' To these disabilities was added that of a memory so treacherous (by his own account) that he was often tempted to abandon study in despair. He spoke with a slight hesitation; nevertheless at times 'distinguished himself by so copious and lively a flow of wit that Mr. Cowley and Sir William Davenant both thought him equal in that respect to the most celebrated geniuses of that age.' He never married, but Evelyn was credibly informed that he had paid court in his youth to the Earl of Monmouth's beautiful daughter, and that his passion inspired the essay on 'Seraphic Love,' published in 1660. It was, however, already written in 1648, and Boyle himself assures us, 6 Aug. of that year, that he 'hath never yet been hurt by Cupid' (*Works*, i. 155). The story is thus certainly apocryphal.

The tenor of his life was in no way inconsistent with his professions of piety. It was simple and unpretending, stainless yet not austere, humble without affectation. His temper, naturally choleric, he gradually subdued to mildness; his religious principles were equally removed from laxity and intolerance, and he was a declared foe to persecution. He shared, indeed, in some degree the credulousness of his age. He publicly subscribed to the truth of the stories about the 'demon of Mascon,' and vouched for the spurious cures of Greatrakes the 'stroker.' Nor did he wholly escape the narrowness inseparable from the cultivation of a philosophy 'that valued no knowledge but as it had a tendency to use.' His view of astronomical studies is, in this respect, characteristic. If the planets have no physical influence on the earth, he admits his inability to propound any end for the pains bestowed upon them; 'we know them only to know them' (*ibid.* v. 124).

Yet his services to science were unique. The condition of his birth, the elevation of his character, the unflagging enthusiasm of his researches, combined to lend dignity and currency to their results. These were coextensive with the whole range, then accessible, of experimental investigation. He personified, it might be said, in a manner at once

impressive and conciliatory, the victorious revolt against scientific dogmatism then in progress. Hence his unrivalled popularity and privileged position, which even the most rancorous felt compelled to respect. No stranger of note visited England without seeking an interview, which he regarded it as an obligation of christian charity to grant. Three successive kings of England conversed familiarly with him, and he was considered to have inherited, nay outshone, the fame of the great Verulam. 'The excellent Mr. Boyle,' Hughes wrote in the 'Spectator' (No. 554), 'was the person who seems to have been designed by nature to succeed to the labours and inquiries of that extraordinary genius. By innumerable experiments he, in a great measure, filled up those plans and outlines of science which his predecessor had sketched out.' Addison styled him (No. 531) 'an honour to his country, and a more diligent as well as successful inquirer into the works of nature than any other one nation has ever produced.' 'To him,' Boerhaave wrote, 'we owe the secrets of fire, air, water, animals, vegetables, fossils; so that from his works may be deduced the whole system of natural knowledge' (*Methodus discendi Artem Medicam*, p. 152).

It must be admitted that Boyle's achievements are scarcely commensurate to praises of which these are but a sample. His name is identified with no great discovery; he pursued no subject far beyond the merely illustrative stage; his performance supplied a general introduction to modern science rather than entered into the body of the work. But such an introduction was indispensable, and was admirably executed. It implied an 'advance all along the line.' Subjects of inquiry were suggested, stripped of manifold obscurities, and set in approximately true mutual relations. Above all, the fruitfulness of the experimental method was vividly exhibited, and its use rendered easy and familiar. Boyle was the true precursor of the modern chemist. Besides clearing away a jungle of perplexed notions, he collected a number of highly suggestive facts and observations. He was the first to distinguish definitely a mixture from a compound; with him originated the definition of an 'element' as a hitherto undecomposed constituent of a compound; he introduced the use of vegetable colour-tests of acidity and alkalinity. From a bare hint as to the method of preparing phosphorus (discovered by Brandt in 1669) he arrived at it independently, communicated it 14 Oct. 1680 in a sealed packet to the Royal Society, and published it for the first time in 1682 (*Works* iv. 37). In a tract printed the same year he accurately described the qualities of the new substance under the title of the 'Icy Noctiluca.' He, moreover, actually prepared hydrogen, and collected it in a receiver placed over water, but failed to distinguish it from what he called 'air generated *de novo*' (*ibid.* i. 35).

In physics, besides the great merit of having rendered the air-pump available for experiment and discovered the law of gaseous elasticity, he invented a compressed-air pump, and directed the construction of the first hermetically sealed thermometers made in England. He sought to measure the expansive force of freezing water, first used freezing mixtures, observed the effects of atmospheric pressure on ebullition, added considerably to the store of facts collected about electricity and magnetism, determined the specific gravities and refractive powers of various substances, and made a notable attempt to *weigh light*. He further ascertained the unvarying high temperature of human blood, and performed a variety of curious experiments on respiration. He aimed at being the disciple only of nature. Down to 1657 he purposely refrained from 'seriously or orderly' reading the works of Gassendi, Descartes, or 'so much as Sir F. Bacon's "Novum Organum," in order not to be possessed with any theory or principles till he had found what things themselves should induce him to think' (*ibid.* 194). And, although he professed a special reverence for Descartes, as the true author of the 'tenets of mechanical philosophy' (*ibid.* iv. 521), we find, nine years later, that he had not yet carried out his intention of thoroughly studying his writings (*ibid.* ii. 458). Yet he was no true Cartesian; the whole course of his scientific efforts bore the broad Baconian stamp; nor was the general voice widely in error which declared him to have (at least in part) executed what Verulam designed.

The style of his writings, which had the character rather of occasional essays than of systematic treatises, is free from rhetorical affectations; it is lucid, fluent, but intolerably prolix, its not rare felicities of phrase being, as it were, smothered in verbosity. He endeavoured to remedy this defect by processes of compulsory concentration. Boulton's first epitome of his writings appeared in 1699–1700 (London, 3 vols. 8vo); a second, of his theological works, in 1715 (3 vols. 8vo); and Dr. Peter Shaw's abridgment of his philosophical works in 1725 (3 vols. 8vo). The first complete edition of his writings was published by Birch in 1744 in five folio volumes (2nd edition in 6 vols. 4to, London, 1772). It included his posthumous remains

and correspondence, with a life of the author founded on materials collected with abortive biographical designs by Burnet and Wotton, and embracing Boyle's unfinished narrative of his early years entitled 'An Account of Philaretus during his Minority.' More or less complete Latin editions of his works were issued at Geneva in 1677, 1680, and 1714; at Cologne in 1680–95; and at Venice in 1695. A French collection, with the title 'Recueil d'Expériences,' appeared at Paris in 1679. Of his separate treatises the following, besides those already mentioned, deserve to be particularised: 1. 'Some Considerations touching the Usefulness of Experimental Natural Philosophy' (Oxford, 1663, 2nd part 1671). 2. 'Some Considerations touching the Style of the Holy Scriptures' (1663), extracted from an 'Essay on Scripture,' begun 1652, and published, after the writer's death, by Sir Peter Pett. 3. 'Occasional Reflections upon several Subjects' (1664, reprinted 1808), an early production satirised by Butler in his 'Occasional Reflection on Dr. Charlton's feeling a Dog's Pulse at Gresham College,' and by Swift in his 'Meditation on a Broom Stick,' who nevertheless was probably indebted for the first idea of 'Gulliver's Travels' to one of the little pieces thus caricatured ('Upon the Eating of Oysters,' *Works*, ii. 219). 4. 'New Experiments and Observations touching Cold, or an Experimental History of Cold begun' (1665), containing a refutation of the vulgar doctrine of 'antiperistasis' (in full credit with Bacon) and of Hobbes's theory of cold. 5. 'A Continuation of New Experiments Physico-Mechanical touching the Spring and Weight of the Air and their Effects' (1669, a third series appeared in 1682). 6. 'Tracts about the Cosmical Qualities of Things' (1670). 7. 'An Essay about the Origin and Virtues of Gems' (1672). 8. 'The Excellency of Theology compared with Natural Philosophy' (1673). 9. 'Some Considerations about the Reconcilableness of Reason and Religion' (1675). 10. 'The Aerial Noctiluca' (1680). 11. 'Memoirs for the Natural History of Human Blood' (1684). 12. 'Of the High Veneration Man's Intellect owes to God' (1685). 13. 'A Free Enquiry into the vulgarly received Notion of Nature' (1686). 14. 'The General History of the Air designed and begun' (1692). 15. 'Medicinal Experiments' (1692, 3rd vol. 1698), both posthumous.

Catalogues of Boyle's works were published at London in 1688 and subsequent years. He bequeathed his mineralogical collections to the Royal Society, and his portrait by Kerseboom, the property of the same body, formed part of the National Portrait Exhibition in 1866.

Physik, p. 466; Libes's Hist. Phil. des Progrès de la Physique, ii. 134; A. Crum Brown's Development of the Idea of Chemical Composition, pp. 9–14.] A. M. C.

BOYLE, ROGER, Baron Broghill, and first Earl of Orrery (1621–1679), statesman, soldier, and dramatist, the third son of Richard Boyle, first earl of Cork, and Catherine, daughter of Sir Geoffrey Fenton, was born at Lismore 25 April 1621. In recognition of his father's services he was on 28 Feb. 1627 created Baron Broghill. At the age of fifteen he entered Trinity College, Dublin (Budgell, *Memoirs of the Boyles*, p. 34), and according to Wood (*Athenæ*, ed. Bliss, iii. 1200) he also 'received some of his academical education in Oxon.' After concluding his university career he spent some years on the continent, chiefly in France and Italy, under a governor, Mr. Markham. Soon after his return to England, he was entrusted by the Earl of Northumberland with the command of his troop in the Scotch expedition. On his marriage to Lady Margaret Howard, third daughter of the Earl of Suffolk, he set out for Ireland, arriving 23 Oct. 1641, on the very day that the great rebellion broke out. When the Earl of Cork summoned his retainers, Lord Broghill was appointed to a troop of horse, with which he joined the Lord President St. Leger. It was only Broghill's acuteness that prevented St. Leger from believing the representations of Lord Muskerry, the leader of the Irish rebels, that he was acting on the authority of a commission from the king. Under the Earl of Cork he took part in the defence of Lismore, and he held a command at the battle of Liscarrol, 3 Sept. 1642. When the Marquis of Ormonde resigned his authority to the parliamentary commissioners in 1647, Lord Broghill, though a zealous royalist, continued to serve under them until the execution of the king. Immediately on receipt of the news he went over to England, where he lived for some time in strict retirement at Marston, Somersetshire. At last, however, he determined to make a strenuous attempt to retrieve his own fortunes and the royal cause, and, on the pretence of visiting a German spa for the sake of his health, resolved to seek an interview with Charles II on the continent, with a view to concoct measures to aid in his restoration. With this purpose he arrived in London, having meanwhile made application to the Earl of

Warwick for a pass, only communicating his real design to certain royalists in whom he had perfect confidence. While waiting the result of his application, he was surprised by a message from Oliver Cromwell of his intention to call on him at his lodgings. Cromwell at once informed him that the council were completely cognisant of the real character of his designs, and that but for his interposition he would already have been 'clapped up in the Tower' (Morrice, *Memoirs of the Earl of Orrery*, p. 11). Broghill thanked Cromwell warmly for his kindness, and asked his advice as to what he should do, whereupon Cromwell offered him a general's command in the war against the Irish. No oaths or obligations were to be laid on him except a promise on his word of honour faithfully to assist to the best of his power in subduing Ireland. Broghill, according to his biographer, asked for time to consider 'this large offer,' but Cromwell brusquely answered that he must decide on the instant; and, finding that 'no subterfuges could any longer be made use of,' he gave his consent.

The extraordinary bargain is a striking proof both of Cromwell's knowledge of men and of his consciousness of the immense difficulty of the task he had in hand in Ireland. The trust placed by him in Broghill's steadfastness and abilities was fully justified by the result. By whatever motives he may have been actuated, there can be no doubt that Broghill strained every nerve to make the cause of the parliament in Ireland triumphant. Indeed but for his assistance Cromwell's enterprise might have been attended with almost fatal disasters. With the commission of master of ordnance, Broghill immediately proceeded to Bristol, where he embarked for Ireland. Such was his influence in Munster that he soon found himself at the head of a troop of horse manned by gentlemen of property, and 1,500 well-appointed infantry, many of whom had deserted from Lord Inchiquin. After joining Cromwell at Wexford, he was left by him 'at Mallow, with about six or seven hundred horse and four or five hundred foot,' to protect the interests of the parliament in Munster, and distinguished himself by the capture of two strong garrisons (Carlyle, *Cromwell*, Letter cxix.) This vigorous procedure greatly contributed to drive the enemy into Kilkenny, where they shortly afterwards surrendered. Cromwell then proceeded to Clonmel, and Broghill was ordered to attack a body of Irish under the titular bishop of Ross, who were marching to its relief. This force he met at Macroom 10 May 1650, and totally defeated, taking the bishop prisoner. While preparing to pursue the defeated enemy he received a message from Cromwell, whose troops had been decimated by sickness and the sallies of the enemy, to join him with the utmost haste; and on his arrival Clonmel was taken after a desperate struggle. Cromwell, whose presence in Scotland had been for some time urgently required, now left the task of completing the subjugation of Ireland in the hands of Ireton, whom Broghill joined at the siege of Limerick. News having reached the besiegers that preparations were being made for its relief, Broghill was sent with a strong detachment to disperse any bodies of troops that might be gathering for this purpose. By a rapid march he intercepted a strong force under Lord Muskerry, advancing to join the army raised by the pope's nuncio, and so completely routed them that all attempts to relieve Limerick were abandoned.

On the conclusion of the war Broghill remained in Munster to keep the province in subjection, with Youghal for his headquarters (Morrice, 19). While the war was proceeding he had been put in possession of as much of Lord Muskerry's estates as amounted to 1,000*l.* a year, until the country in which his estate was situated was freed from the enemy (*Cal. State Papers*, Dom. 1649-50, p. 473), and at its close Blarney Castle, with lands adjoining it to the annual value of 1,000*l.*, was bestowed upon him, the bill after long delay in parliament receiving the assent of Cromwell in 1657 (*Commons' Journal*). Ireton, who had been so suspicious of Broghill's intentions as to advise that he should 'be cut off,' died from exposure at Limerick, and Cromwell, who throughout the war had relied implicitly on Broghill's good faith, gradually received him into his special confidence. Broghill, on his part, realising that the royal cause was for the time hopeless, devoted all his energies to make the rule of Cromwell a success. Actuated at first by motives of self-interest, he latterly conceived for Cromwell strong admiration and esteem. In Cromwell's parliament which met in 1654 he sat as member for Cork, and on the list of the parliament of 1656 his name appears as member both for Cork and Edinburgh. His representation of the latter city is accounted for by the fact that this year he was sent as lord president of the council to Scotland. That he remained in Scotland only one year was due not to any failure to satisfy either the Scots or Cromwell, but simply to the condition he made on accepting office, that he should not be required to hold it for more than a year. According to Robert Baillie he 'gained more on the affections of the people than all the English that ever were

among us' (*Journals*, iii. 315). After his return to England he formed one of a special council whom the Protector was in the habit of consulting on matters of prime importance (WHITELOCKE, *Memorials*, 656). He was also a member of the House of Lords, nominated by Cromwell in December 1657 (*Parl. Hist.* iii. 1518). It was chiefly at his instance that the parliament resolved to recommend Cromwell to adopt the title of king (LUDLOW, *Memoirs*, 247), and he was one of the committee appointed to discuss the matter with Cromwell (*Monarchy asserted to be the best, most ancient, and legall form of government, in a conference held at Whitehall with Oliver Lord Cromwell and a Committee of Parliament*, 1660, reprinted in the *State Letters of the Earl of Orrery*, 1742). Probably it was after the failure of this negotiation that he brought before Cromwell the remarkable proposal for a marriage between Cromwell's daughter Frances and Charles II (MORRICE, *Memoirs of the Earl of Orrery*, 21). After the death of Oliver he did his utmost to consolidate the government of his son Richard, who consulted him in his chief difficulties, but failed to profit sufficiently by his advice. Convinced at last that the cause of Richard was hopeless, he passed over to Ireland, and obtaining from the commissioners the command in Munster, he, along with Sir Charles Coote, president of Connaught, secured Ireland for the king. His letter inviting Charles to land at Cork actually reached him before the first communication of Monk, but the steps taken by Monk in England rendered the landing of Charles in Ireland unnecessary. In the Convention parliament and in that of 1661 Broghill sat for Arundel; on 5 Sept. 1660 he was created Earl of Orrery. About the close of the year he was appointed one of the lord justices of Ireland, and it was he who drew up the act of settlement for that kingdom. On the retirement of Lord Clarendon, the lord high chancellor, he was offered the great seals, but, from considerations of health, declined them. He continued for the most part to reside in Ireland in discharge of his duties as lord president of Munster, and in this capacity was successful in defeating the attempt of the Duke of Beaufort, admiral of France, to land at Kinsale. The presidency of Munster he, however, resigned in 1668 on account of disagreements with the Duke of Ormonde, lord-lieutenant. Shortly afterwards he was on 25 Nov. impeached in the House of Commons for 'raising of moneys by his own authority upon his majesty's subjects; defrauding the king's subjects of their estates,' but the king by commission on 11 Dec. suddenly put a stop to the proceedings by proroguing both houses to 14 Feb. (Impeachment of the Earl of Orrery, *Parl. Hist.* iv. 434–40), and no further attempt was made against him. He died from an attack of gout 16 Oct. 1679. He was buried at Youghal. He left two sons and five daughters.

The Earl of Orrery was the reputed author of an anonymous pamphlet 'Irish Colours displayed, in a reply of an English Protestant to a letter of an Irish Roman Catholic,' 1662. The 'Irish Roman Catholic' was Father Peter Welsh, who replied to it by 'Irish Colours folded.' Both were addressed to the Duke of Ormonde. That Orrery was the author of the pamphlet is not impossible, but the statement is unsupported by proof. It is probable, therefore, that it has been confounded with another reply to the same letter professedly written by him and entitled 'An Answer to a scandalous letter lately printed and subscribed by Peter Welsh, Procurator to the Sec. and Reg. Popish Priests of Ireland.' This pamphlet has for sub-title 'A full Discovery of the Treachery of the Irish rebels and the beginning of the rebellion there. Necessary to be considered by all adventurers and other persons estated in that kingdom.' Both the letter of Welsh and this reply to it have been reprinted in the 'State Letters of Roger Boyle, Earl of Orrery,' 1742. In 1654 he published in six volumes the first part of a romance, 'Parthenissa,' a complete edition of which appeared in three volumes in 1665 and in 1677. The writer of the notice of Orrery in the 'Biographia Britannica' attributes the neglect of the romance to its remaining unfinished, but finished it certainly was, and if it had not been, its tediousness would not have been relieved by adding to its length. More substantial merit attaches to his 'Treatise of the Art of War,' 1677, dedicated to the king. He claims for it the distinction of being the first 'Entire Treatise on the Art of War written in our language,' and the quality of comprehensiveness cannot be denied to it, treating as it does of the 'choice and educating of the soldiery; the arming of the soldiery; the disciplining of the soldiery; the ordering of the garrisons; the marching of an army; the camping of an army within a line or intrenchment; and battles.' The treatise is of undoubted interest as indicating the condition of the art at the close of the Cromwellian wars, and, like his political pamphlet, is written in a terse and effective style.

Not content to excel as a statesman and a general, Orrery devoted some of his leisure to the cultivation of poetry; but if Dryden is to be believed, the hours he chose for the

recreation were not the most auspicious. 'The muses,' he says, 'have seldom employed your thoughts but when some violent fit of gout has snatched you from affairs of state, and, like the priestess of Apollo, you never come to deliver your oracles but unwillingly and in torment' (Dedication prefixed to *The Rivals*). Commenting on this, Walpole remarked that the gout was a 'very impotent muse.' Like his relative Richard, second earl of Burlington, Orrery was on terms of intimate friendship with many eminent men of letters—among others Davenant, Dryden, and Cowley. Besides several dramas he was the author of 'A Poem on his Majesty's happy Restoration,' which he presented to the king, but which was never printed; 'A Poem on the Death of Abraham Cowley,' 1677, printed in a 'Collection of Poems' by various authors, 1701, 3rd edition, 1716, republished in Budgell's 'Memoirs of the Family of the Boyles,' and prefixed by Dr. Sprat to his edition of Cowley's works; 'The Dream'—in which the genius of France is introduced endeavouring to persuade Charles II to become dependent on Louis XIV—presented to the king, but never printed, and now lost; and 'Poems on most of the Festivals of the Church,' 1681. Several of the tragedies of Orrery attained a certain success in their day. They are written in rhyme with an easy flowing diction, and, if somewhat bombastic and extravagant in sentiment, are not without effective situations, and manifest considerable command of pathos. The earliest of his plays performed was 'Henry V,' at Lincoln's Inn Fields, as is proved by the reference of Pepys, under date 13 Aug. 1664. He then saw it acted, and he makes a later reference, under date 28 Sept. of the same year, to 'The General' as 'Lord Broghill's second play.' Downes asserts that 'Henry V' was not brought out till 1667, when the theatre was reopened, but it was then only revived, and was performed ten nights successively. The play was published in 1668. It is doubtful if Orrery was the author of 'The General'—at least there is no proof of his having acknowledged it. 'Mustapha, the Son of Solyman the Magnificent,' was brought out at Lincoln's Inn Fields 3 April 1665, and played before their majesties at court 20 Oct. 1666 (Evelyn). 'The Black Prince,' published 1669, and played for the first time at the king's house 19 Oct. 1667 (Pepys), was not very successful, the reading of a letter actually causing the audience to hiss. 'Tryphon,' a tragedy, published in 1672, and acted at Lincoln's Inn Fields 8 Dec. 1668, met with some applause, but showed a lack of invention, resembling his other tragedies too closely in its construction. These four tragedies were published together in 1690, and now form vol. i. of his 'Dramatic Works.' Of Orrery's two comedies, 'Guzman' and 'Mr. Anthony,' 'the former,' according to Downes, 'took very well, the latter but indifferent.' Pepys, who pronounced 'Guzman' to be 'very ordinary,' mentions it as produced anonymously 16 April 1669. It was published posthumously in 1693. 'Mr. Anthony' was published in 1690, but is not included in the 'Dramatic Works.' Two tragedies of Orrery's were published posthumously, 'Herod the Great,' in 1694, along with his four early tragedies and the comedy 'Guzman;' and 'Altemira' in 1702, in which year it was put upon the stage by his grandson Charles Boyle. The 'Complete Dramatic Works of the Earl of Orrery,' including all his plays with the exception of 'Mr. Anthony,' appeared in 1743. The Earl of Orrery is the reputed author of 'English Adventures, by a Person of Honour,' 1676, entered in the catalogue of the Huth Library.

[State Letters of Roger Boyle, 1st Earl of Orrery, containing a series of correspondence between the Duke of Ormonde and his lordship, from the Restoration to the year 1668, together with some other letters and pieces of a different kind, particularly the Life of the Earl of Orrery by the Rev. Mr. Thomas Morrice, his lordship's chaplain, 1742; Budgell's Memoirs of the Boyles, 34–93; Earl of Orrery's Letter Book whilst Governor of Munster (1644–49), Add. MS. 25287; Letters to Sir John Malet, Add. State Papers (Dom.), especially during the Protectorate; Pepys's Diary; Evelyn's Diary; Ware's Writers of Ireland (Harris), iii. 177; Wood's Athenæ Oxon. (Bliss), iii. 1200–1; Walpole's Royal and Noble Authors (Park), v. 191–7; Genest's History of the Stage; Biog. Brit. (Kippis), ii. 479–92; Lodge's Irish Peerage (1789), i. 178–192.] T. F. H.

BOYLE, ROGER (1617?–1687), bishop of Clogher, was educated at Trinity College, Dublin, where he was elected a fellow. On the outbreak of the rebellion in 1641 he became tutor to Lord Paulet, in whose family he remained until the Restoration, when in 1660–1 he became rector of Carrigaline and of Ringrone in the diocese of Cork. In Oct. 1662 he was advanced to the deanery of Cork, and on 12 Sept. 1667 he was promoted to the see of Down and Connor. On 21 Sept. 1672 he was translated to the see of Clogher. He died at Clones on 26 Nov. 1687, in the seventieth year of his age, and was buried in the church

at Clones. He was the author of 'Inquisitio in fidem Christianorum hujus Sæculi,' Dublin, 1665, and 'Summa Theologiæ Christianæ,' Dublin, 1681. His commonplace book on various subjects, together with an abstract of Sir Kenelm Digby's 'Treatise of Bodies,' is in manuscript in Trinity College Library, Dublin.

[Cotton's Fasti Ecclesiæ Hibernicæ, iii. 80, 207–8; Ware's Works (Harris), i. 190, 213, ii. 203.] T. F. H.

BOYNE, first VISCOUNT (1639–1723). [See HAMILTON, GUSTAVUS.]

BOYNE, JOHN (*d.* 1810), water-colour painter, caricaturist, and engraver, was born in county Down, Ireland, between 1750 and 1759. His father was originally a joiner by trade, but afterwards held for many years an appointment at the victualling office at Deptford. Boyne was brought to England when about nine years of age, and subsequently articled to William Byrne, the landscape-engraver. His master dying just at the expiration of his apprenticeship, he made an attempt to carry on the business himself, but being idle and dissipated in his habits, he was unsuccessful. He then joined a company of strolling actors near Chelmsford, where he enacted some of Shakespeare's characters, and assisted in a farce called 'Christmas;' but soon wearying of this mode of life, he returned to London in 1781, and took to the business of pearl-setting, being employed by a Mr. Flower, of Chichester Rents, Chancery Lane. Later on we find him in the capacity of a master in a drawing school, first in Holborn, and afterwards in Gloucester Street, Queen Square, where Holmes and Heaphy were his pupils. Boyne died at his house in Pentonville on 22 June 1810. His most important artistic productions were heads from Shakespeare's plays, spiritedly drawn and tinted; also 'Assignation, a Sketch to the Memory of the Duke of Bedford;' 'The Muck Worm,' and 'The Glow Worm.' His 'Meeting of Connoisseurs,' now in the South Kensington Museum, was engraved in stipple by T. Williamson. He published 'A Letter to Richard Brinsley Sheridan, Esq., on his late proceedings as a Member of the Society of the Freedom of the Press.'

[Magazine of the Fine Arts, iii. 222; Redgrave's Dictionary of Artists of the English School, London, 1878, 8vo.] L. F.

BOYS or BOSCHUS, DAVID (*d.* 1451), Carmelite, was educated at Oxford, and lectured in theology at that university; he also visited for purposes of study the university of Cambridge and several foreign universities. He became head of the Carmelite community at Gloucester, and died there in the year 1451. The following are the titles of works written by Boys: 1. 'De duplici hominis immortalitate.' 2. 'Adversus Agarenos.' 3. 'Contra varios Gentilium Ritus.' 4. 'De Spiritus Doctrina.' 5. 'De vera Innocentia.'

[Leland's Comm. de Scriptoribus Britannicis, p. 454; Villiers de St. Etienne, Bibliotheca Carmelitana.] A. M.

BOYS, EDWARD (1599–1667), divine, a nephew of Dr. John Boys (1571–1625), dean of Canterbury [q. v.], and the son of Thomas Boys of Hoad Court, in the parish of Blean, Kent, by his first wife, Sarah, daughter of Richard Rogers, dean of Canterbury, and lord suffragan of Dover, was born in 1599 (W. BERRY, *County Genealogies, Kent*, p. 445). Educated at Eton, he was elected a scholar of Corpus Christi College, Cambridge, in May 1620, and as a member of that house graduated B.A. in 1623, M.A. in 1627, and obtained a fellowship in 1631. He proceeded B.D., was appointed one of the university preachers in 1634, and in 1639, on the presentation of William Paston, his friend and contemporary at college, became rector of the tiny village of Mautboy in Norfolk. He is said, but on doubtful authority, to have been one of the chaplains to Charles I (R. MASTERS, *Hist. Corpus Christi College*, pp. 242–3). After an incumbency of twenty-eight years Boys died at Mautboy on 10 March 1666–7, and was buried in the chancel (BLOMEFIELD, *Norfolk*, ed. Parkin, xi. 229–30). An admired scholar, of exceptional powers as a preacher, and in great favour with his bishop, Hall, Boys was deterred from seeking higher preferment by an exceeding modesty. After his death appeared his only known publication, a volume of 'Sixteen Sermons, preached upon several occasions,' 4to, London, 1672. The editor, Roger Flynt, a fellow-collegian, tells us in his preface that it was with difficulty he obtained leave of the dying author to make them public, and gained it only upon condition 'that he should say nothing of him.' From which he leaves the reader to judge 'how great this man was, that made so little of himself.' He speaks, nevertheless, of the great loss to the church 'that such a one should expire in a country village consisting onely of four farmers.' In 1640 Boys had married Mary Herne, who was descended from a family of that name long seated in Norfolk. His portrait by W. Faithorne, at the age of sixty-six, is prefixed to his sermons.

[Chalmers's Biog. Dict. vi. 374–5; Masters's Hist. Corpus Chr. Coll. (Lamb), p. 353; Granger's Biog. Hist. of England, 2nd ed. iii. 295–6; General Hist. of Norfolk, ed. J. Chambers, i. 249, ii. 1336.] G. G.

BOYS, EDWARD (1785–1866), captain, son of John Boys (1749–1824) [q. v.], entered the navy in 1796, and after serving in the North Sea, on the coast of Ireland, and in the Channel, was in June 1802 appointed to the Phœbe frigate. On 4 Aug. 1803, Boys, when in charge of a prize, was made prisoner by the French, and continued so for six years, when after many daring and ingenious attempts he succeeded in effecting his escape. On his return to England he was made lieutenant, and served mostly in the West Indies till the peace. On 8 July 1814 he became commander; but, consequent on the reduction of the navy from its war strength, had no further employment afloat, though from 1837 to 1841 he was superintendent of the dockyard at Deal. On 1 July 1851 he retired with the rank of captain, and died in London on 6 July 1866. Immediately after his escape, and whilst in the West Indies, he wrote for his family an account of his adventures in France; the risk of getting some of his French friends into trouble had, however, made him keep this account private, and though abstracts from it had found their way into the papers it was not till 1827 that he was persuaded to publish it, under the title of 'Narrative of a Captivity and Adventures in France and Flanders between the years 1803–9,' post 8vo. It is a book of surpassing interest, and the source from which the author of 'Peter Simple' drew much of his account of that hero's escape, more perhaps than from the previously published narrative of Mr. Ashworth's adventures [see ASHWORTH, HENRY]. Captain Boys also published in 1831 'Remarks on the Practicability and Advantages of a Sandwich or Downs Harbour.' One of his sons, the present (1886) Admiral Henry Boys, was captain of the Excellent and superintendent of the Royal Naval College at Portsmouth 1869–74, director of naval ordnance from 1874–8, and second in command of the Channel fleet in 1878–9.

[O'Byrne's Dict. of Nav. Biog.; Berry's Kentish Genealogies.] J. K. L.

BOYS, JOHN (1571–1625), dean of Canterbury, was descended from an old Kentish family who boasted that their ancestor came into England with the Conqueror, and who at the beginning of the seventeenth century had no less than eight branches, each with its capital mansion, in the county of Kent. The dean was the son of Thomas Boys of Eythorn, by Christian, daughter and coheiress of John Searles of Wye. He was born at Eythorn in 1571, and probably was educated at the King's School in Canterbury, for in 1585 he entered at Corpus Christi College, Cambridge, where Archbishop Parker had founded some scholarships appropriated to scholars of that school. He took his M.A. degree in the usual course, but migrated to Clare Hall in 1593, apparently on his failing to succeed to a Kentish fellowship vacated by the resignation of Mr. Coldwell, and which was filled up by the election of Dr. Willan, a Norfolk man. Boys was forthwith chosen fellow of Clare Hall. His first preferment was the small rectory of Betshanger in his native county, which he tells us was procured for him by his uncle Sir John Boys of Canterbury, whom he calls 'my best patron in Cambridge.' He appears to have resided upon this benefice and to have at once begun to cultivate the art of preaching. Archbishop Whitgift gave him the mastership of Eastbridge Hospital, and soon afterwards the vicarage of Tilmanstone, but the aggregate value of these preferments was quite inconsiderable, and when he married Angela Bargrave of Bridge, near Canterbury, in 1599, he must have had other means of subsistence than his clerical income. The dearth of competent preachers to supply the London pulpits appears to have been severely felt about this time, and in January 1593 Whitgift had written to the vice-chancellor and heads of the university of Cambridge complaining of the refusal of the Cambridge divines to take their part in this duty. The same year that the primate appointed Boys to Tilmanstone we find him preaching at St. Paul's Cross, though he was then only twenty-seven years of age. Two years after he was called upon to preach at the Cross again, and it was actually while he was in the pulpit that Robert, earl of Essex, made his mad attempt at rebellion (8 Feb. 1600–1). Next year we find him preaching at St. Mary's, Cambridge, possibly while keeping his *acts* for the B.D. degree, for he proceeded D.D. in the ordinary course in 1605; the Latin sermon he then delivered is among his printed works. Whitgift's death (February 1604) made little alteration in his circumstances; Archbishop Bancroft soon took him into his favour, and he preached at Ashford, on the occasion of the primate holding his primary visitation there on 11 Sept. 1607.

Two years after this Boys published his first work, 'The Minister's Invitatorie, being An Exposition of all the Principall Scriptures used in our English Liturgie: together with a reason why the Church did chuse

the same.' The work was dedicated to Bancroft, who had lately been made chancellor of the university of Oxford, and in the 'dedicatorie epistle' Boys speaks of his 'larger exposition of the Gospels and Epistles' as shortly about to appear. It appeared accordingly next year in 4to, under the title of 'An Exposition of the Dominical Epistles and Gospels used in our English Liturgie throughout the whole yeere,' and was dedicated to his 'very dear uncle,' Sir John Boys of Canterbury. In his dedication Boys takes the opportunity of mentioning his obligations to Sir John and to Archbishop Whitgift for having watered what 'that vertuous and worthy knight' had planted. The work supplied a great need and had a very large and rapid sale; new editions followed one another in quick succession, and it would be a difficult task to draw up an exhaustive bibliographical account of Boys's publications.

Archbishop Bancroft died in November 1610, and Abbot was promoted to the primacy in the spring of 1611. Boys dedicated to him his next work, 'An Exposition of the Festival Epistles and Gospels used in our English Liturgie,' which, like its predecessors, was published in 4to, the first part in 1614, the second in the following year. Hitherto he had received but scant recognition of his services to the church, but preferment now began to fall upon him liberally. Abbot presented him with the sinecure rectory of Hollingbourne, then with the rectory of Monaghan in 1618, and finally, on the death of Dr. Fotherby, he was promoted by the king, James I, to the deanery of Canterbury, and installed on 3 May 1619. Meanwhile in 1616 he had put forth his 'Exposition of the proper Psalms used in our English Liturgie,' and dedicated it to Sir Thomas Wotton, son and heir of Edward, lord Wotton of Marleigh. In 1620 he was made a member of the high commission court, and in 1622 he collected his works into a folio volume, adding to those previously published five miscellaneous sermons which he calls lectures, and which are by no means good specimens of his method or his style. These were dedicated to Sir Dudley Digges of Chilham Castle, and appear to have been added for no other reason than to give occasion for paying a compliment to a Kentish magnate.

On 12 June 1625 Henrietta Maria landed at Dover. Charles I saw her for the first time on the 13th, and next day the king attended service in Canterbury Cathedral, when Boys preached a sermon, which has been preserved. It is a poor performance, stilted and unreal as such sermons usually were; but it has the merit of being short.

Boys held the deanery of Canterbury for little more than six years, and died among his books, suddenly, in September 1625. There is a monument to him in the lady chapel of the cathedral. He left no children; his widow died during the rebellion.

Boys's works continued to be read and used very extensively till the troublous times set in; but the dean was far too uncompromising an Anglican, and too unsparing in his denunciation of those whom he calls the novelists, to be regarded with any favour or toleration by presbyterians, or independents, or indeed by any who sympathised with the puritan theology. When he began to be almost forgotten in England, his works were translated into German and published at Strasburg in 1683, and again in two vols. 4to in 1685. It may safely be affirmed that no writer of the seventeenth century quotes so widely and so frequently from contemporary literature as Boys, and that not only from polemical or exegetical theology, but from the whole range of popular writers of the day. Bacon's 'Essays' and 'The Advancement of Learning,' Sandys's 'Travels,' Owen's, More's, and Parkhurst's 'Epigrams,' 'The Vision of Piers Plowman,' and Verstegan's 'Restitution,' with Boys's favourite book, Sylvester's translation of Du Bartas's 'Divine Weeks,' must have been bought as soon as they were published. Indeed Boys must have been one of the great book collectors of his time. Boys's works are full to overflowing of homely proverbs, of allusions to the manners and customs of the time, of curious words and expressions.

[The works of John Boys, D.D., and Dean of Canterbury, folio, 1622, pp. 122, 491, 508, 530, 972, &c.; Remains of the Reverend and Famous Postiller, John Boys, Doctor in Divinitie, and late Dean of Canterburie .... 4to, 1631 (this contains 'A Briefe View of the Life and Vertues of the Authour,' by R. BOYS, JOHN (1561–1644). [See Bois.]

BOYS, JOHN (1614?–1661), translator of Virgil, was the son of John Boys (*b.* 1590) of Hoad Court, Blean, Kent, and nephew of Edward Boys, 1599–1677 [q. v.] His mother was Mary, daughter of Martin Fotherby, bishop of Salisbury. He was born about 1614. His grandfather, Thomas Boys (*d.*

1625), brother of the dean, John Boys [q. v.], inherited the estate of Hoad Court from his uncle, Sir John Boys, an eminent lawyer, who died without issue in 1612. On 24 Jan. 1659–1660 Boys presented to the mayor of Canterbury a declaration in favour of the assembly of a free parliament, drawn up by himself in behalf (as he asserted) 'of the nobility, gentry, ministry, and commonalty of the county of Kent.' But the declaration gave offence to the magistrates, and the author, as he explained in his 'Vindication of the Kentish Declaration,' only escaped imprisonment by retiring to a hiding-place. Several of his friends were less successful. In February 1659–60 he went to London with his kinsman, Sir John Boys [q. v.] of Bonnington, and presented to Monk, at Whitehall, a letter of thanks, drawn up by himself 'according to the order and advice of the gentlemen of East Kent.' He also prepared a speech for delivery to Charles II on his landing at Dover on 25 May 1660; but 'he was prevented therein by reason his majesty made no stay at all in that town,' and he therefore sent Charles a copy of it.

Boys chiefly prided himself on his classical attainments. In 1661 he published two translations from Virgil's 'Æneid.' The first is entitled, 'Æneas, his Descent into Hell: as it is inimitably described by the Prince of Poets in the Sixth of his Æneis,' London, 1661. The dedication is addressed to Sir Edward Hyde, and congratulates him on succeeding to the office of lord chancellor. His cousin, Charles Fotherby, and his friend, Thomas Philipott, contribute commendatory verses. The translation in heroic verse is of very mediocre character, and is followed by 181 pages of annotations. At their close Boys mentions that he has just heard of the death of Henry, duke of Gloucester (13 Sept. 1660), and proceeds to pen an elegy suggested by Virgil's lament for Marcellus. The volume concludes with 'certain pieces relating to the publick,' i.e. on the political matters referred to above, and with a congratulatory poem (dated Canterbury, 30 Sept. 1656) addressed to Boys's friend, William Somner, on the completion of his 'Dictionarium Saxonico-Latino-Anglicum.' Boys's second book is called 'Æneas, his Errours on his Voyage from Troy into Italy; an essay upon the Third Book of Virgil's "Æneis."' It is dedicated to Lord Cornbury, Clarendon's son. A translation of the third book of the 'Æneid' in heroic verse occupies fifty-one pages, and is followed by 'some few hasty reflections upon the precedent poem.' Boys's enthusiasm for Virgil is boundless, but his criticism is rather childish.

Boys married Anne, daughter of Dr. William Kingsley, archdeacon of Canterbury, by whom he had three sons—Thomas, who died without issue; John, a colonel in the army, who died 4 Sept. 1710; and Sir William Boys, M.D., who is stated to have died in 1744. Boys himself died in 1660–1, and was buried in the chancel of the church of Hoad.

[Hasted's Kent, i. 565; Corser's Anglo-Poet. Collect. ii. 323–5; Brit. Mus. Cat; Berry's Kentish Genealogies, p. 445.] S. L.

BOYS, Sir JOHN (1607–1664), royalist military commander, was the eldest son and heir of Edward Boys of Bonnington, Kent, by Jane, daughter of Edward Sanders of Northborne. He was baptised at Chillendon, Kent, on 5 April 1607. In the civil war he became a captain in the royal army and governor of Donnington Castle in Berkshire. This castle, which is within a mile of Newbury, was garrisoned in 1643 for King Charles I, and commanded the road from Oxford to Newbury and the great road from London to Bath and the west. Boys, by the bravery with which he defended the castle during a long siege, showed himself well worthy of the trust reposed in him. It was first attacked by the parliamentary army, consisting of 3,000 horse and foot, under the command of Major-general Middleton, who attempted to take the castle by assault, but was repulsed with considerable loss. Middleton lost at least 300 officers and men in this fruitless attempt. Not long afterwards, on 29 Sept. 1644, Colonel Horton began a blockade, having raised a battery at the foot of the hill near Newbury, from which he plied the castle so incessantly during a period of twelve days that he reduced it to a heap of ruins, having beaten down three of the towers and a part of the wall. Nearly 1,000 great shot are said to have been expended during this time. Horton having received reinforcements sent a summons to the governor, who refused to listen to any terms. Soon afterwards the Earl of Manchester came to the siege with his army, but their united attempts proved unavailing; and after two or three days more of ineffectual battering the whole army rose up from before the walls and marched in different directions. When the king came to Newbury (21 Oct. 1644) he knighted the governor for his good services, made him colonel of the regiment which he had before commanded as lieutenant-colonel to Earl Rivers, the nominal governor of Donnington, and to his coat armour gave the augmentation of a crown imperial or, on a canton azure. During the second battle of Newbury Boys secured the

king's artillery under the castle walls. After the battle, when the king had gone with his army to Oxford, the Earl of Essex with his whole force besieged Donnington Castle with no better success than the others had done. He abandoned the attempt before the king returned from Oxford for the purpose of relieving Donnington on 4 Nov. 1644. The place was then revictualled, and his majesty slept in the castle that night with his army around him. In August 1648 Boys made a fruitless attempt to raise the siege of Deal Castle. A resolution put in the House of Commons at the same time to banish him as one of the seven royalists who had been in arms against the parliament since 1 Jan. 1647-8 was negatived. In 1659 he was a prisoner in Dover Castle for petitioning for a free parliament, but was released on 23 Feb. 1659-60. He apparently received the office of receiver of customs at Dover from Charles II.

Sir John Boys died at his house at Bonnington on 8 Oct. 1664, and was buried in the parish church of Goodnestone-next-Wingham, Kent. The inscription describes his achievements in the wars. By his first wife, Lucy, he had five daughters. He had no children by his second marriage with Lady Elizabeth Finch, widow of Sir Nathaniel Finch, serjeant-at-law, and daughter of Sir John Fotherby of Barham, Kent.

There is a portrait of Boys engraved by Stow, and reproduced by Mr. Walter Money in his 'Battles of Newbury' (1884).

[Clarendon's Hist. of the Rebellion (1843), 429, 499; Heath's Chronicle of the Civil Wars, 62; Walter Money's Battles of Newbury (1884); Hasted's Kent, iii. 705; Lysons's Berkshire, 356, 357; Berry's Pedigrees of Families in Kent, 441; Granger's Biog. Hist. of England (1824), iii. 51, 52.] T. C.

BOYS, JOHN (1749-1824), agriculturist, only son of William Boys and Ann, daughter of William Cooper of Ripple, was born in November 1749. At Betshanger and afterwards at Each, Kent, he farmed with skill and success, and as a grazier was well known for his breed of South Down sheep. He was one of the commissioners of sewers for East Kent, and did much to promote the drainage of the Finglesham and Eastry Brooks. At the request of the board of agriculture he wrote 'A General View of the Agriculture of the County of Kent,' 1796, and an 'Essay on Paring and Burning,' 1805. He died on 16 Dec. 1824. By his wife Mary, daughter of the Rev. Richard Harvey, vicar of Eastry-cum-Word, he had thirteen children, eight sons and five daughters.

[Berry's Pedigrees of the County of Kent, p. 446; Gent. Mag. xcv. (pt. i.) 86-7.] T. F. H.

BOYS, THOMAS (1792-1880), theologian and antiquary, son of Rear-admiral Thomas Boys of Kent, was born at Sandwich, Kent, and educated at Tonbridge grammar school and Trinity College, Cambridge. The failure of his health from over-study prevented his taking more than the ordinary degrees (B.A. 1813, M.A. 1817), and, finding an active life necessary to him, he entered the army with a view to becoming a military chaplain, was attached to the military chest in the Peninsula under Wellington in 1813, and was wounded at the battle of Toulouse in three places, gaining the Peninsular medal. He was ordained deacon in 1816, and priest in 1822. While in the Peninsula he employed his leisure time in translating the Bible into Portuguese, a task he performed so well, that his version has been adopted both by catholics and protestants, and Don Pedro I of Portugal publicly thanked him for his gift to the nation. In 1848 he was appointed incumbent of Holy Trinity, Hoxton; but before that he had established his reputation as a Hebrew scholar, being teacher of Hebrew to Jews at the college, Hackney, from 1830 to 1832, and professor of Hebrew at the Missionary College, Islington, in 1836. While holding this last post, he revised Deodati's Italian Bible, and also the Arabic Bible. His pen was rarely idle. In 1825 he published a key to the Psalms, and in 1827 a 'Plain Exposition of the New Testament.' Already in 1821 he had issued a volume of sermons, and in 1824 a book entitled 'Tactica Sacra,' expounding a theory that in the arrangement of the New Testament writings a parallelism could be detected similar to that used in the writings of the Jewish prophets. In 1832 he published 'The Suppressed Evidence, or Proofs of the Miraculous Faith and Experience of the Church of Christ in all ages, from authentic records of the Fathers, Waldenses, Hussites . . . an historical sketch suggested by B. W. Noel's "Remarks on the Revival of Miraculous Powers in the Church."' The same year produced a plea for verbal inspiration under the title 'A Word for the Bible,' and 1834 'A Help to Hebrew.' He was also a frequent contributor to 'Blackwood' of sketches and papers, for the most part descriptive of his Peninsular experiences. The most important of these was 'My Peninsular Medal, which ran from November 1849 to July 1850. His acquaintance with the literature and antiquities of the Jews was very thorough, but perhaps the best proofs of his extensive learn-

ing are to be found in the numerous letters and papers, sometimes under his own name, and sometimes under the assumed name of 'Vedette,' contributed to the second series of 'Notes and Queries.' Of these the twelve papers on Chaucer difficulties are a most valuable contribution to the study of early English literature. He died 2 Sept. 1880, aged 88.

[Times, 14 Sept. 1880; Men of the Time, 1872; Brit. Mus. Cat.] R. B.

BOYS, THOMAS SHOTTER (1803–1874), water-colour painter and lithographer, was born at Pentonville on 2 Jan. 1803. He was articled to George Cooke, the engraver, with the view of following that profession, but when, on the expiration of his apprenticeship, he visited Paris, he was induced by Bonington, under whom he studied, to devote himself to painting. He exhibited at the Royal Academy for the first time in 1824, and in Paris in 1827. In 1830 he proceeded to Brussels, but on the outbreak of the revolution there returned to England. Paying another visit to Paris, he remained there until 1837, and then again came to England for the purpose of lithographing the works of David Roberts and Clarkson Stanfield. Boys's great work, 'Picturesque Architecture in Paris, Ghent, Antwerp, Rouen,' &c., appeared in 1839, and created much admiration. King Louis-Philippe sent the artist a ring in recognition of its merits. He also published 'Original Views of London as it is,' drawn and lithographed by himself, London, 1843. He drew the illustrations to Blackie's 'History of England,' and etched some plates for Ruskin's 'Stones of Venice.' Boys was a member of the Institute of Painters in Water Colours, and of several foreign artistic societies. He died in 1874. The British Museum possesses two fine views of Paris by him, drawn in water-colours, and another is in the South Kensington Museum.

[Ottley's Biographical and Critical Dictionary of Recent and Living Painters and Engravers, London, 1866, 8vo; MS. notes in the British Museum.] L. F.

BOYS, WILLIAM (1735–1803), surgeon and topographer, was born at Deal on 7 Sept. 1735. He was of an old Kent family (Hasted, *History of Kent*, iii. 109), being the eldest son of Commodore William Boys, R.N., lieutenant-governor of Greenwich Hospital, by his wife, Elizabeth Pearson of Deal (*Gent. Mag.* lxxiii. pt. i. 421–3). About 1755 he was a surgeon at Sandwich, where he was noted for his untiring explorations of Richborough Castle, for skill in deciphering ancient manuscripts and inscriptions, for his zeal in collecting antiquities connected with Sandwich, and for his studies in astronomy, natural history, and mathematics. In 1759 he married Elizabeth Wise, a daughter of Henry Wise, one of the Sandwich jurats (*ib.*), and by her he had two children. In 1761 he was elected jurat, acting with his wife's father. In the same year, 1761, she died, and in the next year, 1762, he married Jane Fuller, coheiress of her uncle, one John Paramor of Statenborough (*ib.*) In 1767 Boys was mayor of Sandwich. In 1774 his father died at Greenwich (Nichols, *Lit. Anecd.* ix. 24 *n.*) In 1775 appeared his first publication—a memorial to resist a scheme for draining a large tract of the neighbouring land, which it was thought would destroy Sandwich harbour. Boys drew it up as one of the commissioners of sewers, on behalf of the corporation, and it was published at Canterbury in 1775 anonymously (*Gent. Mag.* lxxiii. pt. i. 421–3). In 1776 Boys was elected F.S.A. In 1782 he again served as mayor. In 1783 his second wife died, having borne him eight or nine children (*ib.*, and Hasted, *Hist. of Kent*, iv. 222 *n.*) In the same year Boys furnished the Rev. John Duncombe with much matter relating to the Reculvers, printed in Duncombe's 'Antiquities of Reculver.' In 1784 was published 'Testacea Minuta Rariora,' 4to, being plates and description of the tiny shells found on the seashore near Sandwich, by Boys, 'that inquisitive naturalist' (Introd. p. i). The book was put together by George Walker, Boys himself being too much occupied by his profession. In 1786 Boys issued proposals for publishing his 'Collections for a History of Sandwich' at a price which should only cover its expenses, and placed his materials in the hands of the printers (Nichols, *Lit. Ill.* vi. 613). In 1787 Boys published an 'Account of the Loss of the Luxborough,' 4to (Nichols, *Lit. Anecd.* ix. 24), a case of cannibalism, in which his father (Commodore Boys) had been one of the men compelled to resort to this horrible means of preserving life. Boys had a series of pictures hung up in his parlour portraying the whole of the terrible circumstances (Pennant, in his *Journey from London to the Isle of Wight*, quoted in Nichols's *Lit. Anecd.* ix. 24 *n.*) Of this 'Account,' as a separate publication, there is now no trace; but it appears in full in the 'History of Greenwich Hospital,' by John Cooke and John Maule, 1789, pp. 110 et seq.; it is also stated there that six small paintings in the council room of the hospital (presumably replicas of those seen by Pennant in the possession of William Boys) represent this passage in the history of the late gallant

lieutenant-governor. In 1788 appeared the first part of 'Sandwich,' and in 1789 Boys was appointed surgeon to the sick and wounded seamen at Deal. Over the second part of 'Sandwich' there was considerable delay and anxiety (Letter from Denne, NICHOLS's *Lit. Ill.* vi. 613); but in 1792 the volume was issued at much pecuniary loss to Boys. In 1792 Boys also sent Dr. Simmons some 'Observations on Kit's Coity House,' which were read at the Society of Antiquaries, and appeared in vol. xi. of 'Archæologia.' In 1796 he gave up his Sandwich practice and went to reside at Walmer, but returned to Sandwich at the end of three years, in 1799. His health had now declined. He had apoplectic attacks in 1799, and died of apoplexy on 15 March 1803, aged 68.

Boys was buried in St. Clement's Church, Sandwich, where there is a Latin epitaph to his memory, a suggestion for a monument with some doggerel verses, from a correspondent to the 'Gentleman's Magazine' (lxxiii. pt. ii. 612), having fallen through. He was a member of the Linnean Society, and a contributor to the 'Gentleman's Magazine' (Index, vol. iii. preface, p. lxxiv). A new fern found by him at Sandwich was named Sterna Boysii, after him, by Latham in his 'Index Ornithologicus.'

[Watt's Bibl. Brit., where 'Sandwich' is said, wrongly, to have consisted of three parts, and to have been published in London; Gent. Mag. lxxiii. pt. i. 293, 421–3; Hasted's Kent, iii. 109, 557 *n.* u, iv. 222 *n.* i; Nichols's Lit. Ill. iv. 676, vi. 613, 653, 685, 687; Nichols's Lit. Anecd. ix. 24–27 *nn.*] J. H.

BOYSE, JOSEPH (1660-1728), presbyterian minister, born at Leeds on 14 Jan. 1660, was one of sixteen children of Matthew Boyse, a puritan, formerly elder of the church at Rowley, New England, and afterwards a resident for about eighteen years at Boston, Mass. He was admitted into the academy of Richard Frankland, M.A., at Natland, near Kendal, on 16 April 1675, and went thence in 1678 to the academy at Stepney under Edward Veal, B.D. (ejected from the senior fellowship at Trinity College, Dublin, in 1661; died 6 June 1708, aged 76). Boyse's first ministerial engagement was at Glassenbury, near Cranbrook, Kent, where he preached nearly a year (from the autumn of 1679). He was next domestic chaplain, during the latter half of 1681 and spring of 1682, to the Dowager Countess of Donegal (Letitia, daughter of Sir William Hickes) in Lincoln's Inn Fields. For six months in 1682 he ministered to the Brownist church at Amsterdam, in the absence of the regular minister, but he did not swerve from his presbyterianism. He would have settled in England but for the penal laws against dissent. On the death of his friend T. Haliday in 1683, he succeeded him at Dublin, and there pursued a popular ministry for forty-five years. His ordination sermon was preached by John Pinney, ejected from Broadwinsor, Dorsetshire. The presbyterianism of Dublin and the south of Ireland was of the English type; that of the north was chiefly Scottish in origin and discipline. But there was occasional co-operation, and there were from time to time congregations in Dublin adhering to the northern body. Boyse did his part in promoting a community of spirit between the northern and southern presbyterians of Ireland. Naturally he kept up a good deal of communication with English brethren. From May 1691 to June 1702 Boyse had Emlyn as his colleague at Wood Street. Meanwhile Boyse came forward as a controversialist on behalf of presbyterian dissent. In this capacity he proved himself cautious, candid, and powerful; 'vindication,' the leading word on many of his polemical title-pages, well describes his constant aim. First of his works is the 'Vindiciæ Calvinisticæ,' 1688, 4to, an able epistle (with the pseudo-signature W. B., D.D.), in reply to William King (1650-1712), then chancellor of St. Patrick's Cathedral, who had attacked the presbyterians in his 'Answer' to the 'Considerations' of Peter Manby (*d.* 1697), ex-dean of Derry, who had turned catholic. Again, when Governor Walker of Derry described Alexander Osborne (a presbyterian minister, originally from co. Tyrone, who had been called to Newmarket, Dublin, 6 Dec. 1687) as 'a spy of Tyrconnel,' Boyse put forth a 'Vindication,' 1690, 4to, a tract of historical value. He was a second time in the field against King, now bishop of Derry (who had fulminated against presbyterian forms of worship), in 'Remarks,' 1694, and 'Vindication of the Remarks,' 1695. Early in the latter year he had printed anonymously a folio tract, 'The Case of the Protestant Dissenters in Ireland in reference to a Bill of Indulgence,' &c., to which Tobias Pullen, bishop of Dromore, wrote an anonymous answer, and Anthony Dopping, bishop of Meath, another reply, likewise anonymous. Both prelates were against a legal toleration for Irish dissent. Boyse retorted on them in 'The Case . . . Vindicated,' 1695. But the day for a toleration was not yet come. The Irish parliament rejected bill after bill brought forward in the interest of dissenters. The harmony of Boyse's ministerial relations was broken in 1702 by the episode of his colleague's deposition, and subsequent trial, for a blasphemous libel on the ground

of an anti-trinitarian publication [see EMLYN, THOMAS]. Boyse (who had himself been under some suspicion of Pelagianism) moved in the matter with manifest reluctance, had no hand in the public prosecution, and made strenuous, and at length successful, efforts to free Emlyn from incarceration. Boyse drew up, with much moderation, 'The Difference between Mr. E. and the Dissenting Ministers of D. truly represented;' and published 'A Vindication of the True Deity of our Blessed Saviour,' 1703, 8vo (2nd ed. 1710, 8vo), in answer to Emlyn's 'Humble Inquiry.' Emlyn thinks that Boyse might have abstained from writing against him while the trial was pending; but it is probable that Boyse's able defence of the doctrine in dispute gave weight to his intercession. Boyse at this early date takes note that 'the unitarians are coming over to the deists in point of doctrine.' Emlyn's place as Boyse's colleague was supplied by Richard Choppin, a Dublin man (licensed 1702, ordained 1704, died 1741). In 1708 Boyse issued a volume of fifteen sermons, of which the last was an ordination discourse on 'The Office of a Scriptural Bishop,' with a polemical appendix. This received answers from Edward Drury and Matthew French, curates in Dublin, and the discourse itself was, without Boyse's consent, reprinted separately in 1709, 8vo. He had, however, the opportunity of adding a voluminous postscript, in which he replied to the above answers, and he continued the controversy in 'A Clear Account of the Ancient Episcopacy,' 1712. Meantime the reprint of his sermon, with postscript, was burned by the common hangman, by order of the Irish House of Lords, in November 1711. This was King's last argument against Boyse; now the archbishop of Dublin writes to Swift, 'we burned Mr. Boyse's book of a scriptural bishop.' Once more Boyse came forward in defence of dissent, in 'Remarks,' 1716, on a pamphlet by William Tisdall, D.D., vicar of Belfast, respecting the sacramental test. Boyse had been one of the *patroni* of the academy at Whitehaven (1708–19), under Thomas Dixon, M.D., and on its cessation he had to do with the settlement in Dublin of Francis Hutcheson, the ethical writer, as head (till 1729) of a somewhat similar institution, in which Boyse taught divinity. He soon became involved in the nonsubscription controversy. At the synod in Belfast, 1721, he was present as a commissioner from Dublin; protested with his colleague, in the name of the Dublin presbytery, against the vote allowing a voluntary subscription to the Westminster Confession; and succeeded in carrying a 'charitable declaration,' freeing nonsubscribers from censure and recommending mutual forbearance. The preface to Abernethy's 'Seasonable Advice,' 1722, and the postscript to his 'Defence' of the same, 1724, are included among Boyse's collected works, though signed also by his Dublin brethren, Nathaniel Weld and Choppin. In the same year he preached (24 June) at Londonderry during the sitting of the general synod of Ulster. His text was John viii. 34, 35, and the publication of the discourse, which strongly deprecated disunion, was urged by men of both parties. Next year, being unable through illness to offer peaceful counsels in person, he printed the sermon. Perhaps his pacific endeavours were discounted by the awkward circumstance that at this synod (1723) a letter was received from him announcing a proposed change in the management of the *regium donum*, viz. that it be distributed by a body of trustees in London, with the express view of checking the high-handed party in the synod. The rupture between the southern and northern presbyterians was completed by the installation of a nonsubscriber, Alexander Colville, M.D., on 25 Oct. 1725 at Dromore, co. Down, by the Dublin presbytery; Boyse was not one of the installers. He published in 1726 a lengthy letter to the presbyterian ministers of the north, in 'vindication' of a private communication on their disputes, which had been printed without his knowledge. Writing to the Rev. Thomas Steward of Bury St. Edmunds (*d.* 10 Sept. 1753, aged 84) on 1 Nov. 1726, Boyse speaks of the exclusion of the nonsubscribers as 'the late shameful rupture,' and gives an account of the new presbytery which the general synod, in pursuance of its separative policy, had erected for Dublin. Controversies crowded rather thickly on Boyse, considering the moderation of his views and temper. He always wrote like a gentleman. He published several sermons against Romanists, and a letter (with appendix) 'Concerning the Pretended Infallibility of the Romish Church,' addressed to a protestant divine who had written against Rome. His 'Some Queries offered to the Consideration of the People called Quakers, &c.,' called forth, shortly before Boyse's death, a reply by Samuel Fuller, a Dublin schoolmaster. It is possible that in polemics Boyse sought a relief from domestic sorrow, due to his son's career. He died in straitened circumstances on 22 Nov. 1728, leaving a son, Samuel [q. v.] (the biographers of this son have not usually mentioned that he was one of the deputation to present the address from the general synod of Ulster on the accession of George I), and a daughter, married to Mr. Waddington. He was succeeded in his ministry by Abernethy (in 1730). Boyse's works were collected by

himself in two huge folios, London, 1728 (usually bound in one; they are the earliest if not the only folios published by a presbyterian minister of Ireland). Prefixed is a recommendation (dated 23 April 1728) signed by Calamy and five other London ministers. The first volume contains seventy-one sermons (several being funeral, ordination, and anniversary discourses; many had already been collected in two volumes, 1708–10, 8vo), and several tracts on justification. Embedded among the sermons (at p. 326) is a very curious piece of puritan autobiography, 'Some Remarkable Passages in the Life and Death of Mr. Edmund Trench.' The second volume is wholly controversial. Not included in these volumes are: 1. 'Vindication of Osborne' (see above). 2. 'Sacramental Hymns collected (chiefly) out of such Passages of the New Testament as contain the most suitable matter of Divine Praises in the Celebration of the Lord's Supper, &c.,' Dublin, 1693, small 8vo, with another title-page, London, 1693. (This little book, overlooked by his biographers, is valuable as illustrating Boyse's theology: it nominally contains twenty-three hymns, but reckoning doublets in different metres there are forty-one pieces by Boyse, one from George Herbert, and two from Mr. Patrick, i.e. Simon Patrick, bishop of Ely. In a very curious preface Boyse disclaims the possession of any poetic genius; but his verses, published thirteen years before Isaac Watts came into the field, are not without merit. To the volume is prefixed the approval of six Dublin ministers, headed by 'Tho. Toy,' and including 'Tho. Emlin.') 3. 'Case of the Protestant Dissenters' (see above. The tract is so rare that Reid knows only of the copy at Trinity College, Dublin. The vindication of it is in the 'Works'). 4. 'Family Hymns for Morning and Evening Worship. With some for the Lord's Days. . . . All taken out of the Psalms of David,' Dublin, 1701, 16mo. (Unknown to bibliographers. Contains preface, recommendation by six Dublin ministers, and seventy-six hymns, in three parts, with music. Boyse admits 'borrowing a few expressions from some former versions.' The poetry is superior to his former effort. A copy, uncatalogued, is in the Antrim Presbytery Library at Queen's College, Belfast.) 5. 'The Difference between Mr. E. and the Dissenting Ministers of D., &c.' (see above. Emlyn reprints it in the appendix to his 'Narrative,' 1719, and says Boyse drew it up). Of his separate publications an incomplete list is furnished by Witherow. The bibliography of the earlier ones is better given in Reid. Boyse wrote the Latin inscription on the original pedestal (1701) of the equestrian statue of William III in College Green, Dublin.

BOYSE, SAMUEL (1708–1749), poet, was the son of Joseph Boyse [q. v.], a dissenting minister, and was born in Dublin in 1708. He was educated at a private school in Dublin and at the university of Glasgow. His studies were interrupted by his marriage when twenty with a Miss Atchenson. He returned to Dublin with his wife, and lived in his father's house without adopting any profession. His father died in 1728, and in 1730 Boyse went to Edinburgh. He had printed a letter on Liberty in the 'Dublin Journal,' No. xcvii., in 1726, but his regular commencement as an author dates from 1731, when he printed his first book, 'Translations and Poems,' in Edinburgh. He was patronised by the Scottish nobility, and in this volume and in some later poems wrote in praise of his patrons. An elegy on the death of Viscountess Stormont, called 'The Tears of the Muses,' 1736, procured for Boyse a valuable reward from her husband, and the Duchess of Gordon gave the poet an introduction for a post in the customs. The day on which he ought to have applied was stormy, and Boyse chose to lose the place rather than face the rain. Debts at length compelled him to fly from Edinburgh. His patrons gave him introductions to the chief poet of the day, Mr. Pope, to the lord chancellor, and to Mr. Murray, afterwards Lord Mansfield, and then solicitor-general. Boyse had, however, not sufficient steadiness to improve advantages, and wasted the opportunities which these introductions might have given him of procuring a start in the world of letters or a settlement in life. Pope happened to be from home, and Boyse never called again. The phrases of Johnson may be recognised in a description of him at

this time, which relates that 'he had no power of maintaining the dignity of wit, and though his understanding was very extensive, yet but a few could discover that he had any genius above the common rank. He had so strong a propension to groveling that his acquaintance were generally of such a cast as could be of no service to him' (CIBBER, *Lives of the Poets*, 1753, v. 167). In 1739 Boyse published 'The Deity: a Poem;' in 1742 'The Praise of Peace, a poem in three cantos from the Dutch of Mr. Van Haren.' He translated Fénelon on the demonstration of the existence of God, and modernised the 'Squire's Tale' and the 'Coke's Tale' from Chaucer. These, with several papers in the 'Gentleman's Magazine' signed Alcæus, were his chief publications in London. At Reading, in 1747, he published, in two volumes, 'An Historical Review of the Transactions of Europe, 1739–45.' When the payments of the booksellers did not satisfy his wants, Boyse begged from sectaries, to whom his father's theological reputation was known, and when their patience was exhausted from any one likely to give. Two of his begging letters are preserved in the British Museum (*Sloane MS.* 4038, ff. 340, 342; cf. *Stowe*, 709, i. 113, 114). A sentence in one of these shows how abject a beggar the poet had become. 'You were pleased,' he writes to Sir Hans Sloane, 'to give my wife the enclosed shilling last night. I doubt not but you thought it a good one, but as it happened otherwise you will forgive the trouble occasioned by the mistake.' The letter is dated 14 Feb. 1738–9. Two years later he was reduced to greater straits. 'It was about the year 1740 that Mr. Boyse, reduced to the last extremity of human wretchedness, had not a shirt, a coat, or any kind of apparel to put on; the sheets in which he lay were carried to the pawnbrokers, and he was obliged to be confined to bed with no other covering than a blanket. During this time he had some employment in writing verses for the magazines, and whoever had seen him in his study must have thought the object singular enough. He sat up in bed with a blanket wrapped about him, through which he had cut a hole large enough to admit his arm, and placing the paper upon his knee, scribbled, in the best manner he could, the verses he was obliged to make' (CIBBER, *Lives of the Poets*, v. 169). Boyse's indigence led him to the discovery of paper collars. 'Whenever his distresses so pressed as to induce him to dispose of his shirt, he fell upon an artificial method of supplying one. He cut some white paper in slips, which he tyed round his wrists, and in the same manner supplied his neck. In this plight he frequently appeared abroad, with the additional inconvenience of want of breeches' (CIBBER, v. 169). 'In the midst of this deserved squalor, and with vicious propensities and ridiculous affectations, Boyse had some knowledge of literature and some interesting, if untrustworthy, conversation. It was this and his miseries, and some traces which he now and then showed of a religious education, not quite obliterated by a neglect of all its precepts, which obtained for him the acquaintance of Johnson. Shiel's 'Life of Boyse' (CIBBER, v. 160) contains Johnson's recollections. Mrs. Boyse died in 1745 at Reading, where Boyse had gone to live. On his return to London two years later he married again. His second wife seems to have been an uneducated woman, but she induced him to live more regularly and to dress decently. His last illness had, however, begun, and after a lingering phthisis he died in lodgings near Shoe Lane in May 1749. Johnson could not collect money enough to pay for a funeral, but he obtained the distinction from other paupers for Boyse, that the service of the church was separately performed over his corpse.

Besides his literary attainments, Boyse is said to have had a taste for painting and for music, and an extensive knowledge of heraldry. 'The Deity, a Poem,' is the best known of his works. It appeared in 1739, went through two editions in the author's lifetime, and has been since printed in several collections of the English poets ('The British Poets,' Chiswick, 1822, vol. lix.; Park's 'British Poets,' London, 1808, vol. xxxiii.) Fielding quotes some lines from it on the theatre of time in the comparison between the world and the stage, which is the introduction to book vii. of 'Tom Jones.' He praises the lines, and says that the quotation 'is taken from a poem called the Deity, published about nine years ago, and long since buried in oblivion. A proof that good books no more than good men do always survive the bad.' It was perhaps a knowledge of Boyse's miseries which made Fielding praise him. The poem was obviously suggested by the 'Essay on Man,' and the arrangement of its parts is that common in theological treatises on the attributes of God. The edition of 1749 contains some alterations. These are unimportant, as 'celestial wisdom' (1739) altered to 'celestial spirit' (1749); 'doubtful gloom' (1739) to 'dubious gloom' (1749); while the few added lines can neither raise nor depress the quality of the poem. In some of Boyse's minor poems recollections of Spenser, of Milton, of Cowley, and of Prior may be traced. False rhymes are not uncommon in his verse, but the lines are usually tolerable. Some of his best are in a poem on

Loch Rian, in which Lord Stair's character is compared to the steadfast rock of Ailsa, with a coincident allusion to the Stair crest and the family motto 'Firm.' Four six-line verses entitled 'Stanzas to a Candle,' in which the author compares his fading career to the flickering and burning out of the candle on his table, are the most original of all Boyse's poems. They are free from affectation, and show Boyse for once in a true poetic mood, neither racking his brains for imagery nor using his memory to help out the verse; not writing at threepence a line for the bookseller, but recording a poetic association clearly derived from the object before him.

[Cibber's Lives of the Poets, 1753, vol. v.; Boswell's Life of Johnson, 1791; Sloane MS. 4033 B; Boyse's Works.] N. M.

BRABAZON, ROGER LE (*d.* 1317), judge, descended from an ancient family of Normandy, the founder of which, Jacques le Brabazon of Brabazon Castle, came over with William the Conqueror, his name occurring in the Roll of Battle Abbey. The name is variously spelt Brabaçon, Brabançon, and Brabanson, and was originally given to one of the roving bands of mercenaries common in the middle ages. His great-grandson Thomas acquired the estate of Moseley in Leicestershire, by marriage with Amicia, heiress of John de Moseley. Their son, Sir Roger, who further acquired Eastwill in the same county, married Beatrix, the eldest of the three sisters, and coheirs of Mansel de Bisset, and by her had two sons, of whom the elder was Roger, the judge. Roger was a lawyer of considerable learning, and practised before the great judge De Hengham. His first legal office was as justice itinerant of pleas of the forest in Lancashire, which he held in 1287. In 1289, when almost all the existing judges were removed for extortion and corrupt practices, Brabazon was made a justice of the king's bench, receiving a salary of 33*l.* 6*s.* 8*d.* per annum, being as much greater (viz. 6*l.* 13*s.* 4*d.*) than the salaries of the other puisne justices as it was less than the salary of the chief justice. When Edward I, though acting as arbitrator between the rival claimants to the crown of Scotland, resolved to claim the suzerainty for himself, Brabazon (though not then chief justiciary as one account has it, the office then no longer existing) was employed to search for some legal justification for the claim. By warping the facts he succeeded in making out some shadow of a title, and accordingly attended Edward and his parliament at Norham. The Scottish nobles and clergy assembled there on 10 May 1291, and Brabazon, speaking in French, the then court language of Scotland, announced the king's determination, and stated the grounds for it. A notary and witnesses were at hand, and he called on the nobles to do homage to Edward as lord paramount of Scotland. To this the Scotch demurred, and asked time for deliberation. Brabazon referred to the king, and appointed the day following for their decision; but the time was eventually extended to 1 June. Brabazon, however, did not remain in Scotland till then, but returned south to the business of his court, acting as justice itinerant in the west of England in this year. After the Scottish crown had been adjudged to Baliol, Brabazon continued to be employed upon a plan for the subjection of Scotland. He was one of a body of commissioners to whom Edward referred a complaint of Roger Bartholomew, a burgess of Berwick, that English judges were exercising jurisdiction north of the Tweed; and when the Scottish king presented a petition, alleging that Edward had promised to observe the Scottish law and customs, Brabazon rejected it, and held that if the king had made any promises, while the Scottish throne was vacant, in derogation of his just suzerainty, such promises were temporary only and not binding; and as to the conduct of the judges they were deputed by the king as superior and direct lord of Scotland, and represented his person. Encouraged by this decision, Mac-Duff, earl of Fife, appealed against the Scottish king to the English House of Lords, and on the advice of Brabazon and other judges it was held that the king must come as a vassal to the bar and plead, and upon his contumacy three of his castles were seized. He is found in 1293 sitting in Westchepe, and with other judges sentencing three men to mutilation by loss of the right hand. But, although sitting as a puisne judge, Brabazon, owing to the political events in which he was engaged, had completely overshadowed Gilbert de Thornton, the chief justice of his court. The time was now arrived to reward him. In 1295 Gilbert de Thornton was removed and Brabazon succeeded him, and being reappointed immediately upon the accession of Edward II, 6 Sept. 1307, continued in that office until his retirement in 1316. He had been a commissioner of array for the counties of Nottingham, Derby, Lancaster, Cumberland, Westmoreland, and York, in 1296, and was constantly summoned to the parliaments which met at Westminster, Salisbury, Lincoln, Carlisle, Northampton, Stamford, and York up to 1314. In 1297 Brabazon's position pointed to him naturally as a member of the council of Edward, the king's son, when left by his father in England as lieutenant of the kingdom. On 1 April 1300 he was appointed to

perambulate the royal forests in Salop, Staffordshire, and Derby, and call the officers to account. In 1305 he is named with John de Lisle as an additional justice in case of need in Sussex, Surrey, Kent, and Middlesex, pursuant to an ordinance of trailbaston, and although the writ is cancelled, he certainly acted, for he sat at Guildhall 'ad recipiendas billas super articulis de trailbaston.' In the same year, being present at the parliament held at Westminster, he was appointed and sworn in as a commissioner to treat with the Scotch representatives concerning the government of Scotland. On 29 Oct. 1307 he sat at the Tower of London on the trial of the Earl of Athole and convicted him. In 1308, having been appointed to try certain complaints against the bishop of Coventry and Lichfield, Brabazon was ordered (19 Feb.) to adjourn the hearing, in order to attend the coronation of Edward II. He was twice assigned to hold pleas at York in 1309 and 1312, was detained specially in London in the summer of 1313 to advise the king on matters of high importance, and was still invested with the office of commissioner of forests in Stafford, Huntingdon, Rutland, Salop, and Oxon, as late as 1316.

All these labours told severely on his health. Broken by age and infirmity he, on 23 Feb. 1316, asked leave to resign his office of chief justice. Leave was granted in a very laudatory patent of discharge; but he remained a member of the privy council, and was to attend in parliament whenever his health permitted. He was succeeded by William Inge, but did not long survive. He died on 13 June 1317, and his executor, John de Brabazon, had masses said for him at Dunstable Abbey. He was buried in St. Paul's Cathedral. He appears to have had a high character for learning. To his abilities his honours and offices bear testimony, whatever blame may attach to him for his course in politics. He was a landowner in several counties. In 1296 he is enrolled, pursuant to an ordinance for the defence of the sea-coast, as a knight holding lands in Essex, but non-resident, and in the year following he was summoned as a landowner in Nottinghamshire and Derbyshire to attend in person at the muster at Nottingham for military service in Scotland with arms and horses. In 1310 he had lands in Leicestershire, and in 1316 at Silbertoft and Sulby in Northamptonshire, at East Bridgeford and Hawkesworth in Nottinghamshire, and at Rollright in Oxfordshire. The property at East Bridgeford came to him through his wife Beatrix, daughter of Sir John de Sproxton, with the advowson of the church appurtenant to the manor. As to this he was long engaged in a dispute, for after he had presented a clerk to the living and the ordinary had instituted him, one Bonifacius de Saluce or Saluciis, claiming apparently through some right connected with the chapel of Trykehull, intruded upon the living and got possession, and though Brabazon petitioned for his removal as early as 1300, the intruding priest was still unousted in 1315. Brabazon left no issue, his one son having died young; he had a daughter, Albreda, who married William le Graunt; his property passed to his brother Matthew, from whom descend the present earls of Meath, barons Brabazon of Ardee, in Ireland.

I and II, i. 102, 137, 149, 280] J. A. H.

BRABAZON, SIR WILLIAM (*d.* 1552), vice-treasurer and lord justice of Ireland, was descended from the family of Roger le Brabazon [q. v.], and was the son of John Brabazon of Eastwell, Leicestershire, and a daughter of — Chaworth. After succeeding his father he was knighted on 20 Aug. 1534, and appointed vice-treasurer and general receiver of Ireland. In a letter from Chief-justice Aylmer to Lord Cromwell in August 1535 he is styled 'the man that prevented the total ruin and desolation of the kingdom.' In 1536 he prevented the ravages of O'Connor in Carberry by burning several villages in Offaly and carrying away great spoil. In the same year he made so effective a speech in support of establishing the king's authority in opposition to that of the pope that he persuaded the parliament to pass the bill for that purpose. As a result of this, many religious houses were in 1539 surrendered to the king. For these and other services he was, on 1 Oct. 1543, constituted lord justice of Ireland, and he was again appointed to the same office on 1 April 1546. In the same year he drove Patrick O'More and Brian O'Connor from Kildare. In April 1547 he was elected a member of the privy council of Ireland. In the spring of 1548 he assisted the lord deputy in subduing a sedition raised in Kildare by the sons of Viscount Baltinglass. He was a third time made lord justice on 2 Feb. 1549. In August 1550, with the aid of 8,000*l.* and 400 men from England, he subdued Charles

Mac-Art-Cavenagh, who, after making submission and renouncing his name, received pardon. Brabazon died on 9 July 1552 (as is proved by the inquisitions taken in the year of his death), not in 1548 as recorded on his tombstone. His heart was buried with his ancestors at Eastwell, and his body in the chancel of St. Catherine's Church, Dublin. By his wife Elizabeth, daughter and coheir to Nicholas Clifford of Holme, he left two sons and three daughters.

[Lodge's Peerage (Archdall), i. 265–70; Genealogical History of the Family of Brabazon; Cal. State Papers, Irish Series; Cal. State Papers, Dom. Series, Henry VIII; Cal. Carew MSS. vol. i.; Cox's History of Ireland; Bagwell's Ireland under the Tudors, vol. i.] T. F. H.

BRABOURNE, THEOPHILUS (*b.* 1590), writer on the Sabbath question, was a native of Norwich. The date of his birth is fixed by his own statement in 1654: 'I am 64 yeares of age' (*Answer to Cawdry*, p. 75). His father was a puritan hosier, who educated his son at the free school of Norwich till he was fifteen years of age, and designed him for the church. Incidentally he mentions some curious particulars of Sunday trading in Norwich during his schoolboy days, and says that the city waits played regularly at the market cross 'on the latter part of the Lord's day,' in the presence of thousands of people. When the lad should have gone to Cambridge, the silencing of many puritan ministers for non-compliance with the ceremonies induced the father to take him into his own business, and send him to London, as factor for selling stockings wholesale. He remained in London till his marriage to Abigail, daughter of Roger and Joane Galliard. He was thus brother-in-law of Benjamin Fairfax who married Sarah Galliard. After his marriage, Brabourne lived for two or three years at Norwich with his father, and resuming his intention of entering the ministry, he studied privately under 'three able divines.' He seems to have been episcopally ordained before 1628, and it is probable that he officiated (Collings says he got a curacy of 40*l.* a year) in Norwich; there is no indication of his having been connected with any other place after he left London, though Wood, probably by a clerical error, calls him a Suffolk minister. In 1628 appeared his 'Discourse upon the Sabbath Day,' in which he impugns the received doctrine of the sabbatical character of the Lord's day, and maintains that Saturday is still the sabbath. Hence Robert Cox regards him as 'the founder in England of the sect at first known as sabbatarians, but now calling themselves seventh-day baptists.' This is quite incorrect; Brabourne was no baptist, founded no sect, and, true to the original puritan standpoint [see BRADSHAW, WILLIAM], wrote vehemently against all separatists from the national church, and in favour of the supremacy of the civil power in matters ecclesiastical. His attention had been drawn to the Sabbath question ('Discourse,' p. 59) by a work published at Oxford in 1621 by Thomas Broad, a Gloucestershire clergyman, 'Three Questions concerning the obligations of the Fourth Commandment.' Broad rests the authority of the Lord's day on the custom of the early church and the constitution of the church of England. Brabourne leaves it to every man's conscience whether he will keep the sabbath or the Lord's day, but decides that those who prefer the former are on the safe side. He took stronger sabbatarian ground in his 'Defence . . . of the Sabbath Day,' 1632, a work which he had the boldness to dedicate to Charles I. Prior to this publication he appears to have held discussions on the subject with several puritan ministers in his neighbourhood, and claimed to have always come off victorious. He tells us that he held a conference, lasting 'many days, an houre or two in a day,' at Ely House, Holborn, with Francis White (bishop of Norwich 1629–31, of Ely 1631–8). This was the beginning of his troubles; in his own words, he was 'tossed in the high commission court near three years.' He lay in the Gatehouse at Westminster for nine weeks, and was then publicly examined before the high commission, 'near a hundred ministers present (besides hundreds of other people).' The king's advocate pleaded against him, and Bishop White 'read a discourse of near an hour long' on his errors. Sir H. Martin, one of the judges of the court, moved to sue the king to issue his writ *de hæretico comburendo*, but Laud interposed. Brabourne was censured, and sent to Newgate, where he remained eighteen months. When he had been a year in prison, he was again examined before Laud, who told him that if he had stopped with what he said of the Lord's day, namely that it is not a sabbath of divine institution, but a holy day of the church, 'we should not have troubled you.' Ultimately, he made his submission to the high commission court. The document is called a recantation, but when safe from the clutches of the court, Brabourne explained that all he had actually retracted was the word 'necessarily.' He had affirmed 'that Saturday ought necessarily to be our sabbath;' this he admitted to be a 'rash and

presumptuous error,' for his opinion, though true, was not 'a necessary truth.' Brabourne's book was one of the reasons which moved Charles I to reissue on 18 Oct. 1633 the declaration commonly known as the Book of Sports; it was by the king's command that Bishop White wrote his 'Treatise of the Sabbath Day,' 1635, 4to, in the dedication of which (to Laud) is a short account of Brabourne. Returning to Norwich in 1635, Brabourne probably resumed his ministry; but he got some property on the death of a brother, and thenceforth gave up preaching. In 1654 he writes in his reply to John Collings, formerly of St. Saviour's, then of St. Stephen's, Norwich, 'I have left the pulpit to you for many years past, and I think I may promise you never to come in it again.' Collings was a bitter antagonist of his non-presbyterian neighbours. Brabourne had written in 1653 'The Change of Church-Discipline,' a tract against sectaries of all sorts. This stirred Collings to attack him in 'Indoctus Doctor Edoctus,' &c. 1654, 4to. A second part of Brabourne's tract provoked 'A New Lesson for the Indoctus Doctor,' &c., 1654, 4to, to which Brabourne wrote a 'Second Vindication' in reply. This pamphlet war is marked by personalities, in which Collings excels. Collings tells us that Brabourne, after leaving the ministry, had tried several employments. He had been bolt-poake, weaver, hosier, maltster (in St. Augustine's parish), and was now 'a nonsensical scribbler,' who was forced to publish his books at his own expense. While this dispute with Collings was going on, Brabourne brought out an 'Answer' to the 'Sabbatum Redivivum,' &c., of Daniel Cawdrey, rector of Great Billing, Northamptonshire. Cawdrey was dissatisfied with White's treatment of the question in answer to Brabourne, and of course Brabourne was unconvinced by Cawdrey. Five years later he wrote on his favourite theme against Ives and Warren. Nothing further is heard of Brabourne till after the Restoration, when he put out pamphlets rejoicing in liberty of conscience, and defending the royal supremacy in ecclesiastical matters. In these pamphlets he spells his name Brabourn. The last of them was issued 18 March 1661. Nothing is known of Brabourne later.

He published: 1. 'A Discourse upon the Sabbath Day . . . Printed the 23th (*sic*) of Decemb. anno dom. 1628,' 16mo (Brabourne maintains that the duration of the sabbath is 'that space of time and light from day-peep or day-break in the morning, until day be quite off the sky at night). 2. 'A Defence of that most ancient and sacred Ordinance of God's, the Sabbath Day. . . . Undertaken against all Anti-Sabbatharians, both of Protestants, Papists, Antinomians, and Anabaptists; and by name and especially against these X Ministers, M. Greenwood, M. Hutchinson, M. Furnace, M. Benton, M. Gallard, M. Yates, M. Chappel, M. Stinnet, M. Johnson, and M. Wade. The second edition, corrected and amended; with a supply of many things formerly omitted. . . .' 1632, 4to (according to Watt, the first edition was in 1631, 4to, and there was another edition in 1660, 8vo. 'M. Stinnet' is Edward Stennet of Abingdon, the first English seventh-day baptist minister, who published 'The Royal Law contended for,' &c., 1658). 3. 'The Change of Church-Discipline,' 1653, 16mo (not seen). 4. 'The Second Part of the Change of Church-Discipline. . . . Also a Reply to Mr. Collins his answer made to Mr. Brabourne's first part of the Change of Church-Discipline . . .' 1654, 4to (the reply has a separate title-page and pagination, 'A Reply to the "Indoctus Doctor Edoctus,"' 1654, 4to). 5. 'The Second Vindication of my first Book of the Change of Discipline; being a Reply to Mr. Collings his second Answer to it. Also a Dispute between Mr. Collings and T. Brabourne touching the Sabbath Day,' 1654, 4to (not seen). 6. 'An Answer to M. Cawdry's two books of the Sabbath lately come forth,' &c, 1654, 12mo. 6. 'Answers to two books on the Sabbath: the one by Mr. Ives, entitled Saturday no Sabbath Day; the other by Mr. Warren, the Jews' Sabbath antiquated,' 1659, 8vo (not seen; Jeremy Ives's book was published 1659, 4to; Edmund Warren's (of Colchester) was also published 1659, 4to). 7. 'God save the King, and prosper him and his Parliament' . . . 1660, 4to (published 9 Aug.) 8. 'The Humble Petition of Theophilus Brabourn unto the hon. Parliament, that, as all magistrates in the Kingdome doe in their office, so Bishops may be required in their office to own the King's supremacy,' &c. 1661, 4to (published 5 March; there is 'A Postscript, (*sic*) 'Of many evils' (*sic*) which follow upon the King's grant to Bishops of a coercive power in their courts for ceremonies'). 9. 'Of the Lavvfulness (*sic*) of the Oath of allegiance to the King, and of the other oath to his supremacy. Written for the benefit of Quakers and others, who out of scruple of conscience, refuse the oath of allegiance and supremacy,' 1661, 4to (published 18 March, not included in Smith's 'Bibliotheca Anti-Quakeriana,' 1872).

BRACEGIRDLE, ANNE (1663?–1748), one of the most popular and brilliant of English actresses, was born about 1663, presumably in one of the midland counties. Curll (*History of the English Stage*) calls her the daughter of Justinian Bracegirdle, of Northamptonshire (? Northampton), esq., says 'she had the good fortune to be well placed when an infant under the care of Mr. Betterton and his wife,' and adds that 'she performed the page in "The Orphan," at the Duke's Theatre in Dorset Garden, before she was six years old.' 'The Orphan' was first played, at Dorset Garden, in 1680. With the addition of a decade to Mrs. Bracegirdle's age, which this date renders imperative, this story, though without authority and not undisputed, is reconcilable with facts. Downes (*Roscius Anglicanus*) first mentions Mrs. Bracegirdle in connection with the Theatre Royal in 1688, in which year she played Lucia in Shadwell's 'Squire of Alsatia.' Maria in Mountfort's 'Edward III,' Emmeline in Dryden's 'King Arthur,' Tamira in D'Urfey's alteration of Chapman's 'Bussy d'Ambois,' and other similar parts followed. In 1693 Mrs. Bracegirdle made, as Araminta in the 'Old Bachelor,' her first appearance in a comedy of Congreve, the man in whose works her chief triumphs were obtained, and whose name has subsequently, for good or ill, been most closely associated with her own. In the memorable opening, by Betterton, of the little theatre in Lincoln's Inn Fields, in 1695, with 'Love for Love,' Mrs. Bracegirdle played Angelica. Two years later she enacted Belinda in the 'Provoked Wife' of Vanbrugh, and Almeria in Congreve's 'Mourning Bride.' To these, which may rank as her principal 'creations,' may be added the heroines of some of Rowe's tragedies, Selina in 'Tamerlane,' Lavinia in the 'Fair Penitent,' and in such alterations of Shakespeare as were then customary; Isabella ('Measure for Measure'), Portia ('Merchant of Venice'), Desdemona, Ophelia, Cordelia, and Mrs. Ford, with other characters from plays of the epoch, showing that her range included both comedy and tragedy. In the season of 1706–7 Mrs. Bracegirdle at the Haymarket came first into competition with Mrs. Oldfield, before whose star, then rising, her own went down. According to an anonymous life of Mrs. Oldfield, published in 1730, the year of her death, and quoted by Genest (vol. ii. p. 375), the question whether Mrs. Oldfield or Mrs. Bracegirdle was the better actress in comedy was left to the town to settle. 'Mrs. Bracegirdle accordingly acted Mrs. Brittle' (in Betterton's 'Amorous Widow') 'on one night, and Mrs. Oldfield acted the same part on the next night; the preference was adjudged to Mrs. Oldfield, at which Mrs. Bracegirdle was very much disgusted, and Mrs. Oldfield's benefit, being allowed by Swiney to be in the season before Mrs. Bracegirdle's, added so much to the affront that she quitted the stage immediately.' That from this time (1707) she refused all offers to rejoin the stage is certain. Once again she appeared upon the scene of her past triumphs. This was on the occasion of the memorable benefit to Betterton, 7 and 13 April 1709, when, with her companion Mrs. Barry, she came from her retirement, and played in 'Love for Love' her favourite rôle of Angelica [see BETTERTON, THOMAS]. After this date no more is publicly heard of her until 18 Sept. 1748, when her body was removed from her house in Howard Street, Strand, and interred in the east cloisters of Westminster Abbey. Of her long life less than a third was directly connected with the stage. An amount of publicity unusual even in the case of women of her profession was thrust upon her during her early life. To this the murder of Mountfort by Captain Hill and Lord Mohun, due to the passion of the former for Mrs. Bracegirdle and his jealousy of his victim, contributed. An assumption of virtue, anything but common in those of her position in the days in which she lived, was, however, a principal cause. Into the inquiry how far the merit of 'not being unguarded in her private character,' which, without a hint of a sneer, is conceded her by Colley Cibber, is her due, it is useless now to inquire. Evidence will be judged differently by different minds. Macaulay, with characteristic confidence, declares 'She seems to have been a cold, vain, and interested coquette, who perfectly understood how much the influence of her charms was increased by the fame of a severity which cost her nothing, and who could venture to flirt with a succession of admirers in the just confidence that no flame which she might kindle in them would thaw her own ice' (*History of England*, iii. 380, ed. 1864). For this statement, to say the least rash, the authorities Macaulay quotes, unfriendly as they are, furnish no justification. Tom Brown, of infamous memory, utters sneers concerning her Abigail being 'brought to bed,' but imputes nothing directly to her; and Gildon, in that rare and curious though atrocious publication, 'A Comparison

between Two Stages,' expresses his want of faith in the story of her innocence, concerning which, without arraigning it, he says (p. 18), 'I believe no more on't than I believe of John Mandevil.' Wholly valueless is the evidence of these two indirect assailants against the general verdict of a time known to be censorious. Mrs. Bracegirdle may at least claim to have had the highest reputation for virtue of any woman of her age; and her benevolence to the unemployed poor of Clare Market and adjacent districts, 'so that she could not pass that neighbourhood without the thankful acclamations of people of all degrees, so that, if any one affronted her, they would have been in danger of being killed directly' (TONY ASTON), is a pleasing trait in her character. The story is worth repeating that 'Lord Halifax, overhearing the praise of Mrs. Bracegirdle's virtuous behaviour by the Dukes of Dorset and Devonshire and other nobles, said, "You all commend her virtue, &c., but why do we not present this incomparable woman with something worthy her acceptance?" His lordship deposited 200 guineas, which the rest made up to 800 and sent to her' (TONY ASTON). Whether, as is insinuated in some quarters, she yielded to the advances of Congreve, whose devotion to her, like the similar devotion of Rowe, seemed augmented by her success in his pieces, and whose testimony in his poems appears, like all other testimony, to establish her virtue, remains undetermined. In her own time she was suspected, though her biographers ignore the fact, of being married to Congreve. In a poem called 'The Benefits of a Theatre,' which appears in 'The State Poems,' vol. iv. p. 49, and is no more capable of being quoted than are the other contents of that valuable but unsavoury receptacle, Congreve and Mrs. Bracegirdle, unmistakably associated under the names of Valentine and Angelica, are distinctly, though doubtless wrongly, stated to be married. Congreve left her in his will a legacy of 200*l.* Garrick, who met Mrs. Bracegirdle after she had quitted the stage, and heard her repeat some lines from Shakespeare, is said to have expressed an opinion that her reputation was undeserved. Colley Cibber denied her any 'greater claim to beauty than what the most desirable brunette might pretend to,' but states that 'it was even a fashion among the gay and young to have a taste or *tendre* for Mrs. Bracegirdle.' She inspired the best authors to write for her, and two of them, Congreve and Rowe, 'when they gave her a lover, in her play, seemed palpably to plead their own passion, and made their private court to her in fictitious character.' Aston, bitter in tongue as he ordinarily is, shared his father's belief in her purity, and has left a sufficiently tempting picture of her. 'She was of a lovely height, with dark-brown hair and eyebrows, black sparkling eyes and a fresh blushy complexion, and, whenever she exerted herself, had an involuntary flushing in her breast, neck, and face, having continually a cheerful aspect, and a fine set of even white teeth, never making an exit but that she left the audience in an imitation of her pleasant countenance' (*Brief Supplement*, pp. 9-10).

BRACEGIRDLE, JOHN (*d.* 1613-14), poet, is supposed to have been a son of John Bracegirdle, who was vicar of Stratford-upon-Avon from 1560 to 1569. He was matriculated as a sizar of Queens' College, Cambridge, in December 1588, proceeded B.A. in 1591-1592, commenced M.A. in 1595, and proceeded B.D. in 1602. He was inducted to the vicarage of Rye in Sussex, on the presentation of Thomas Sackville, lord Buckhurst, 12 July 1602, and was buried there on 8 Feb. 1613-14.

He is author of 'Psychopharmacon, the Mindes Medicine; or the Phisicke of Philosophie, contained in five bookes, called the Consolation of Philosophie, compiled by Anicius Manlius Torquatus Severinus Boethius,' translated into English blank verse, except the metres, which are in many different kinds of rhyme, Addit. MS. 11401. It is dedicated to Thomas Sackville, earl of Dorset.

[Wheler's Stratford-upon-Avon, 31; Cooper's Athenæ Cantab. ii. 430; Sussex Archæological Collections, xiii. 274.] T. C.

BRACKEN, HENRY, M.D. (1697-1764), writer on farriery, was the son of Henry Bracken of Lancaster, and was baptised there 31 Oct. 1697. His early education was gained at Lancaster under Mr. Bordley and the Rev. Thomas Holmes, and he was afterwards apprenticed to Dr. Thomas Worthington, a physician in extensive practice at Wigan. At the expiration of his apprenticeship, about 1717, he went to London, and passed a few months as a pupil at St. Thomas's Hospital. Thence he went over to

Paris to attend the Hôtel-Dieu, and subsequently to Leyden, where he studied under Herman Boerhaave, and took his degree of M.D., but his name is omitted from the 'Album Studiosorum Academiæ Lugd. Bat.,' printed in 1875. On his return to London he attended the practice of Drs. Wadsworth and Plumtree, and soon began to practise on his own account at Lancaster, and before long became widely known as a surgeon and author. About 1746 he was charged with abetting the Jacobite rebels and thrown into prison, but was discharged without trial, there appearing to have been no ground for his arrest; indeed, he had previously rendered a service to the king by intercepting a messenger to the rebels, and sending the letters to the general of the king's forces, and for this act he had been obliged to keep out of the way of the Pretender's followers. He received much honour in his native town, and was twice elected mayor—in 1747–8 and 1757–8. In his method of practice as a medical man he was remarkably simple, discarding many of the usual nostrums. In private life he was liberal, generous, charitable, and popular; but his love of horse-racing, of conviviality, and of smuggling, which he called gambling with the king, prevented him from reaping or retaining the full fruits of his success. He published several books on horses, written in a rough, unpolished style, but abounding in such sterling sense as to cause him to be placed by John Lawrence at the head of all veterinary writers, ancient or modern. Their dates and titles are as follows: in 1735, an edition of Captain William Burdon's 'Gentleman's Pocket Farrier,' with notes; in 1738, 'Farriery Improved, or a Compleat Treatise upon the Art of Farriery,' 2 vols., which went through ten or more editions; in 1742, 'The Traveller's Pocket Farrier;' in 1751, 'A Treatise on the True Seat of Glanders in Horses, together with the Method of Cure, from the French of De la Fosse.' He wrote also 'The Midwife's Companion,' 1737, which he dedicated to Boerhaave (it was issued with a fresh title-page in 1751); 'Lithiasis Anglicana; or, a Philosophical Enquiry into the Nature and Origin of the Stone and Gravel in Human Bodies,' 1739; a translation from the French of Maitre-Jan on the eye; and some papers on small-pox, &c. On the establishment of the London Medical Society, Dr. Fothergill wrote to request the literary assistance of Bracken, 'for whose abilities,' he observed, 'I have long had a great esteem, and who has laboured more successfully for the improvement of medicine than most of his contemporaries.' Bracken died at Lancaster, 13 Nov. 1764.

[Prefaces to Bracken's writings; Letter to Dr. Preston Christopherson, printed in the Preston Guardian, 4 Sept. 1880; Georgian Era, ii. 561; John Lawrence's Treatise on Horses, 2nd ed. 1802, i. 29–32; information furnished by Alderman W. Roper of Lancaster.] C. W. S.

BRACKENBURY, Sir EDWARD (1785–1864), lieutenant-colonel, a direct descendant from Sir Robert Brackenbury, lieutenant of the Tower of London in the time of Richard III, was second son of Richard Brackenbury of Aswardby, Lincolnshire, by his wife Janetta, daughter of George Gunn of Edinburgh, and was born in 1785. Having entered the army as an ensign in the 61st regiment in 1803, and become a lieutenant on 8 Dec. in the same year, he served in Sicily, in Calabria, at Scylla Castle and at Gibraltar, 1807–8, and in the Peninsula from 1809 to the end of the war in 1814. At the battle of Salamanca he took a piece of artillery from the enemy, guarded by four soldiers, close to their retiring column, without any near or immediate support, and in many other important engagements conducted himself with distinguished valour. As a reward for his numerous services he received the war medal with nine clasps.

On 22 July 1812 he was promoted to a captaincy, and after the conclusion of the war was attached to the Portuguese and Spanish army from 25 Oct. 1814 to 25 Dec. 1816, when he was placed on half-pay. He served as a major in the 28th foot from 1 Nov. 1827 to 31 Jan. 1828, when he was again placed on half-pay. His foreign services were further recognised by his being made a knight of the Portuguese order of the Tower and Sword in 1824, a knight of the Spanish order of St. Ferdinand, and a commander of the Portuguese order of St. Bento d'Avis.

Brackenbury, who was knighted by the king at Windsor Castle on 26 Aug. 1836, was a magistrate and deputy-lieutenant for the county of Lincoln. He attained to the rank of lieutenant-colonel on 10 Jan. 1837, and ten years afterwards sold out of the army. He died at Skendleby Hall, Lincolnshire, on 1 June 1864.

He was twice married: first, on 9 June 1827, to Maria, daughter of the Rev. Edward Bromhead of Reepham near Lincoln, and, secondly, in March 1847, to Eleanor, daughter of Addison Fenwick of Bishopwearmouth, Durham, and widow of W. Brown Clark of Belford Hall, Northumberland. She died in 1862.

[Gent. Mag. 1864, part ii. 123; Cannon's The Sixty-first Regiment (1837), pp. 24, 31, 67.] G. C. B.

BRACKENBURY, JOSEPH (1788–1864), poet, was born in 1788 at Langton, probably Lincolnshire, where he spent his early years. On 28 Oct. 1808 he was a student at Corpus Christi College, Cambridge. In 1810 he published his 'Natale Solum and other Poetical Pieces' by subscription. In 1811 he proceeded B.A. (Romilly, *Grad. Cant.* p. 45); in 1812 he became chaplain to the Madras establishment, and returning after some years' service proceeded M.A. in 1819. From 1828 to 1856 he was chaplain and secretary to the Magdalen Hospital, Blackfriars Road, London. In 1862 he became rector of Quendon, Essex, and died there, of heart-disease, on 31 March 1864, aged 76.

[Brackenbury's Natale Solum, &c. pp. 2, 10, 28, 58, 120; Gent. Mag. 1864, p. 668; Brayley's Surrey, v. 321; private information.] J. H.

BRACKLEY, Viscounts. [See Egerton, Sir Thomas, first Viscount, 1540?–1617; Egerton, John, second Viscount, 1579–1649.]

BRACTON, BRATTON, or BRETTON, HENRY de (*d.* 1268), ecclesiastic and judge, was author of a comprehensive treatise on the law of England. Three places have been conjecturally assigned as the birthplace of this distinguished jurist, viz. Bratton Clovelly, near Okehampton in Devonshire, Bratton Fleming, near Barnstaple in the same county, and Bratton Court, near Minehead in Somersetshire. The pretensions of Bratton Clovelly seem to rest entirely upon the fact that anciently it was known as Bracton. Sir Travers Twiss, in his edition of Bracton, inclines in favour of Bratton Fleming on the ground that one Odo de Bratton was perpetual vicar of the church there in 1212 (*Rot. Lit. Pat.* i. 93 *b*), when the rectory was conferred on William de Ralegh, a justice itinerant, whose roll, with that of Martin de Pateshull, Bracton is known to have had in his possession almost certainly for the purposes of his work. Bracton cites Ralegh's decisions less frequently indeed than those of Pateshull, whom he sometimes refers to with a familiarity which seems to imply personal intimacy, as 'dominus Martinus,' or simply Martinus (lib. iv., tract i., cap. xxvii., fol. 205 *b*, xxviii. fol. 207 *b*), but more frequently than those of any other judge. Ralegh was treasurer of Exeter in 1237. From these data, which it must be owned are rather slight, Sir Travers Twiss infers that Bracton stood to both Pateshull and Ralegh in the relation of a pupil, and that it was while the latter was rector of Bratton Fleming that he came into connection with him. Collinson, the historian of Somersetshire, is mistaken in affirming that Bracton, or Bratton, succeeded one Robert de Bratton, mentioned in the Black Book of the Exchequer as holding lands at Bratton, near Minehead, under William de Mohun, 12 Henry II (1166), and that he lies buried in the church of St. Michael in Minehead under a monument representing him in his robes, since it has been established by Sir Travers Twiss that Bracton was buried in the nave of Exeter Cathedral before an altar dedicated to the Virgin a little to the south of the entrance to the choir, at which a daily mass was regularly said for the benefit of his soul for the space of three centuries after his decease. At the same time, if Bracton was really a landowner in the neighbourhood of Minehead, a monument may have been put up to his memory by his relatives in the parish church there. It seems impossible to decide upon the claims of the three competing villages. Some uncertainty also exists as to the orthography of the judge's name, of which four principal varieties—Bracton, Bratton, Bretton, and Bryckton—are found. Bryckton may be dismissed without hesitation as corrupt, and Bretton is almost certainly a dialectical variety either of Bracton or Bratton. Between Bracton and Bratton it is less easy to decide. The form Bracton is held by Nichols to be a mere clerical error for Bratton, arising from the similarity between the *tt* and the *ct* of the thirteenth and fourteenth century handwriting. The passage cited by Sir Travers Twiss (i. x–xi, iii. liv–v) as evidence that the judge himself considered Bracton to be the correct spelling of his name appears rather to militate against that view. The passage in question refers to the fatal effect of clerical errors in writs. According to the reading of a manuscript (*Rawlinson*, c. 160, in the Bodleian Library) which, in Sir Travers Twiss's opinion (i. xxi, lii), has been faithfully copied from a manuscript older than any now extant (Bracton, ed. Twiss, iii. 212), the writer says that if a person writes Broctone for Bractone, or Bractone for Brattone, the writ is equally void. If any inference can be drawn from the passage, it would seem to be that, in the author's opinion, Brattone, and not Bractone, was the true form of the name. That it was so in fact seems to be as nearly proved as such a thing can be by a series of entries on the Fine Rolls extending from 1250 to 1267, i.e. during nearly the whole of Bracton's official life, and numbering nearly a hundred in all. While Bratton and Bretton occur with about equal frequency, no single instance of Bracton is discoverable in these rolls. Further, of five entries in Bishop Branscombe's register cited

by Sir Travers Twiss, four have Bratton and one Bracton. The deed of 1272 endowing a chantry for the benefit of his soul speaks of Henry de Bratton, and so does the deed of 1276 with a like object. This chantry, which existed until the reign of Henry VIII, seems to have been always known as Bratton's chantry. The earliest extant biographical notice of Bracton occurs in Leland's 'Commentarii de Scriptoribus Britannicis' (i. cap. cclxxvi.) He says he took it 'ex inscriptione libri Branomensis bibliothecæ.' Bale, in his 'Illustrium Majoris Britanniæ Scriptorum Catalogus,' appropriates his account very much as it stands, adding only that Bracton was of good family, that his university was Oxford, and that he was one of the justices itinerant before he became chief justice. The reference to the 'Branomensis bibliotheca' he suppresses, probably because he could make nothing of it. Tanner, who also repeats Leland, tries to emend the text by inserting 'edidit' after 'librum,' and appends the following note: '"In Bravionensis seu Wigorniensis bibliothecæ serie quadam legi memoriaque retinui." Ita legit MS. Lel. Trin.' It is clear that in any case the passage is corrupt. The subsequent biographers of Bracton until Foss do little more than repeat Bale's statements, and these are only very partially confirmed by the records. Dugdale mentions him as a justice itinerant in Nottinghamshire and Derbyshire in 1245, and places him in the commission of the following year for Northumberland, Westmoreland, Cumberland, and Lancashire. As he is described as a justice in the record of a fine levied in this year, preserved in the Register of Waltham Abbey (*Harl. MS.* 391, fol. 71), in close connection with Henry de Bathonia and Jeremiah de Caxton, both justices of the Curia Regis, it is probable that he was then one of the regular justices. Against this, however, must be set the fact that the series of entries on the Fine Rolls to which reference has already been made does not begin until 1250. After 1246 Dugdale ignores him until 1260, from which date until 1267 he mentions him pretty frequently as a justice itinerant in the western counties. After 1267 all the records are silent as to his doings. During a portion of his career he seems to have stood well with the king; for in 1254 he had a grant by letters patent of the town house of the Earl of Derby, then recently deceased, during the minority of the heir, being therein designated 'dilecto clerico nostro.' In 1263–4 (21 Jan.) he was appointed archdeacon of Barnstaple, but resigned the post in the following May on being created chancellor of the cathedral of Exeter. He also held a prebend in the church of Exeter, and another in that of Bosham in Sussex, a peculiar of the bishops of Exeter, from some date prior to 1237 until his death, which occurred in 1268, and probably in the summer or early autumn of that year, as Oliver de Tracy succeeded him as chancellor of Exeter Cathedral on 3 Sept., and Edward Delacron, dean of Wells, and Richard de Esse in the prebends of Bosham and Exeter respectively in the following November. He is known to have left some manuscripts to the chapter of Exeter by his will, and it may have been one of these that Leland saw, supposing 'Exoniensis bibliothecæ' to be the true reading. For the statement that he discharged the duties of chief justice for twenty years no foundation is now discoverable. During the earlier portion of his official life (1246–58) the office was in abeyance, and if Bracton was ever chief justice, it must have been either before 1258 or after 1265. It is possible that, while the office was in abeyance, the king entrusted his 'dear clerk' with some of the duties incident to it. It is also possible, as Foss has conjectured, that Bracton held the office during the interval between the death of Hugh le Despenser and the appointment of Robert Bruce (8 March 1267–8); but it is very unlikely that, if he was ever regularly appointed, no record of the fact should have survived. Of his alleged connection with Oxford it is also impossible to discover any positive evidence. That he was an Oxford man is intrinsically probable from the character of his treatise, 'De Legibus et Consuetudinibus Angliæ.' It bears such evident traces throughout of the influence of the civil law as to leave no doubt that the author was familiar not merely with the Summa or manual of the civil law compiled by the celebrated glossator, Azo of Bologna, but with the Institutes and Digest of Justinian, and Oxford was at that time the seat of the study of the civil law in this country. Moreover, Bracton's first two books, 'De Rerum Divisione' and 'De acquirendo Rerum Dominio,' have a decidedly academic air, for they are carefully mapped out according to logical divisions such as a professor writing for a society of students would naturally affect; and though, from a reference to the candidature of Richard, earl of Cornwall, for the imperial crown in the latter book (ii. cap. xix. § 4, fol. 47), it is clear that that passage was written as late as 1257, it by no means follows that the book as a whole does not belong to a much earlier date. At the same time, it cannot be affirmed with any confidence that Bracton could not have acquired the accurate and

extensive knowledge of the Roman law which he undoubtedly did possess without residing in Oxford, and neither the title 'dominus' by which he is usually designated in ecclesiastical records, and which, as Sir Travers Twiss has pointed out, was the proper appellation of a professor of law at the university of Bologna under the privilege accorded by Frederic I at the diet of Roncaglia (1158), nor that of 'magister' given him by Gilbert Thornton (chief justice), who epitomised his work in 1292, can be relied on as necessarily importing an academical status. The date of the composition of his work is approximately fixed by a reference to the Statute of Merton (1235) on the one hand, and the absence of any notice of the changes in the law introduced by the Provisions of Westminster (1259) on the other. The work seems never to have received a final revision, and it is probable that the order of arrangement of the several treatises does not in all cases correspond with the order of composition. Bracton's relation to the civil and canon law has been ably discussed by Professor Güterbock of Königsberg, who agrees in the main with the view taken by Spence, that he did not so much romanise English law as systematise the results which a series of clerical judges, themselves familiar with the civil and canon codes, and using them to supplement the inadequacy of the common law, had already produced, a conclusion which is in accordance with the strictly practical purpose apparent throughout the treatise. This view is also adopted by Sir Travers Twiss. Bracton's position in the history of English law is unique. The treatise 'De Legibus et Consuetudinibus Angliæ' is the first attempt to treat the whole extent of the law in a manner at once systematic and practical. The subject-matter of the work is defined in the proem to be 'facta et casus, qui quotidie emergunt et eveniunt in regno Angliæ,' and to this he for the most part strictly limits himself, citing cases in support of the principles he enunciates in the most exemplary manner. Hence the influence of the work was both immediate and enduring. Besides the abridgment by Thornton, of which, though none is now known to exist, Selden had an imperfect copy, two other summaries of it were compiled during the reign of Edward I by two anonymous authors, one in Latin, of which the title 'Fleta' is thought to conceal some reference either to the Fleet Prison or to Fleet Street, the other in Norman-French known as Britton. Through Coke, who had a high respect for Bracton, and frequently cited him, both in his judgments and in his 'Commentary' on Littleton, his influence has been effective in moulding the existing common law of England. Some remarkable passages relating to the prerogative of the king (i. cap. viii. § 5, fol. 5; ii. cap. xvi. § 3, fol. 34; iii. tract i. cap. ix. fol. 107 *b*) were cited by Bradshaw in his judgment on Charles I, and by Milton in his 'Defence of the People of England,' as showing that the doctrine of passive obedience was repugnant to the ancient common law of this country. The bibliography of Bracton may be put into very small compass. A considerable portion of the treatise found its way into print in 1557, in the shape of quotations made by Sir William Staundeford in his 'Plees del Coron.' The first printed edition of the entire work was published by Richard Tottell in 1569 (fol.), with a preface by one T. N. (whose identity has never been determined), in which credit is taken for a careful recension of the text. The next edition (4to) appeared in 1640, being a mere reprint of that of 1569. In spite of the labours of T. N. the text remained in so unsatisfactory a condition that Selden never cited it without collation with manuscripts in his own possession. No other edition appeared until 1878, when Sir Travers Twiss issued the first volume of the recension and translation undertaken by him by the direction of the master of the rolls. The sixth and last volume appeared in 1883. For information concerning the apparatus criticus available for the establishment of the text reference may be made to vol. i. pp. xlix-lxvi of this edition, to the 'Law Magazine and Review,' N.S. i. 560-1, ii. 398, to the 'Athenæum' (19 July 1884), where Professor Vinogradoff, of Moscow, gives an interesting account of the discovery by him among the Additional MSS. in the British Museum (*Addit. MS.* 12269) of a collection of cases evidently compiled for Bracton's use, and actually used and annotated by him for the purpose of his work. This manuscript was first printed and edited by Prof. F. W. Maitland, 1887 (3 vols.) In the 'Law Quarterly Review' for April 1885, Prof. Vinogradoff also impugned the authority of Rawl. MS. c. 160, on which Sir Travers Twiss's recension of Bracton's treatise 'De Legibus' was based, and argued that the text as it stands is the result of the gradual incorporation with Bracton's manuscript of the glosses of successive commentaries (cf. 'Select passages from Bracton and Azo,' ed. Maitland, Selden Soc. 1895).

J. M. R.

BRADBERRY, sometimes called **BRADBURY, DAVID** (1736-1803), nonconformist minister, appears to have been resident in London in 1766, and for a time was minister of the congregation at Glovers' Hall, London, which then belonged to the baptists; but he went from Ramsgate to Manchester, where he succeeded the Rev. Timothy Priestley, brother of Joseph Priestley, 14 Aug. 1785, as the minister of a congregational church in Cannon Street. He was not very successful in his ministry, which was disturbed by controversy, especially with some Scotch members, who were anxious to import the fashion of 'ruling elders,' and who eventually seceded and erected in Mosley Street what was then the largest dissenting chapel in Lancashire (Halley). He resigned his position in 1794 and left the neighbourhood. He is buried in Bunhill Fields, where his gravestone states that he 'died 13 Jan. 1803, aged 67 years; having been a preacher of the gospel forty-two years.'

Bradberry was the author of: 1. 'A Challenge sent by the Lord of Hosts to the Chief of Sinners,' a sermon upon Amos iv. 12, London, printed for the author, 1766. 2. 'Letter relative to the Test Act,' 1789. 3. 'Tetelestai, the Final Close,' a poem, in six parts, Manchester, 1794. This poem describes the day of judgment from an 'evangelical' standpoint, and is remarkable for its unusual metre. The book is also a literary curiosity from its long and quaint dedication, addressed to the Deity, who is styled, among many other titles, 'His most sublime, most high and mighty, most puissant, most sacred, most faithful, most gracious, most catholic, most serene, most reverend,' and 'Governor-general of the World, Chief Shepherd or Archbishop of Souls, Chief Justice of Final Appeals, Judge of the Last Assize, Distributor of Rights and Finisher of Fates, Father of Mercies and Friend of Men' (cf. *Notes and Queries*, 2nd series, vols. ix. x. xi. xii.)

W. E. A. A.

BRADBRIDGE or **BRODEBRIDGE, WILLIAM** (1501–1578), bishop of Exeter, sprang from a Somersetshire family now extinct, but variously known as Bradbridge, Bredbridge, or Brodbridge. William Bradbridge was born in London in 1501. From the fact that he succeeded one Augustine Bradbridge as chancellor of Chichester, who was afterwards appointed treasurer and prebendary of Fordington, diocese of Sarum, in 1566, and who died the next year, it is possible the latter was a brother. One Nicholas Bradbridge was prebend of Lincoln in 1508, and a Jone and George Bradbridge were respectively martyred during the Marian persecution at Maidstone and Canterbury. William took his B.A. degree at Magdalen College, Oxford, on 15 July 1528, but whether as demy or non-foundationer does not appear. In 1529 he became a fellow of his college, M.A. on 6 June 1532, B.D. on 17 June 1539, 'being then arrived to some eminence in the theological faculty' (Wood). On 26 March 1565 he supplicated the university for a D.D. degree, but was not admitted. Yet Strype (*Parker*, book iv. 4) calls him D.D. He espoused the reformed religion, and had to flee with Barlow, Coverdale, and other fugitives in 1553. He is found, however, in England again in 1555, when, 17 May, on the presentation of Ralph Henslow, he was appointed prebendary of Lyme and Halstock, Sarum. He was also a canon of Chichester, and in 1561 a dispensation was granted him on account of this as regarded part of his term of residence at Salisbury. He subscribed the articles of 1562 as a member of the lower house of convocation, and when the puritanical six articles of the same year were debated in that assembly, in common with all those members who had been brought into friendly contact with the practice of foreign churches during the reign of Mary, he signed them, but was outvoted by a majority of one. He also subscribed the articles of 1571. Bradbridge was collated to be chancellor of Chichester on 28 April 1562, and was allowed to hold the chancellorship *in commendam* with his bishopric. On Low Sunday 1563 he preached the annual Spittal sermon, and on 23 June of the same year, showing himself conformable to the discipline which was then being established, was elected dean of Salisbury by letters from

Queen Elizabeth, in the place of the Italian, Peter Vannes. Here he was a contemporary of Foxe, the martyrologist, and Harding, the chief opponent of Jewell. On 26 Feb. 1570–1 the queen issued her significavit in his favour to the archbishop, and he was duly elected bishop of Exeter on 1 March. After a declaration of the queen's supremacy and doing homage, the temporalities of the see were restored to him on the 14th. He is still termed B.D. (*State Papers*, Domestic, Eliz. vol. lxxxii.) His election was confirmed the next day, and he was consecrated at Lambeth on the 18th by Archbishop Parker and Bishops Horne and Bullingham of Winchester and Worcester. Although Wood says 'he laudably governed the see for about eight years,' his administration was somewhat halting and void of vigour, the weakness of age probably colouring his judgment and prompting him to love retirement. He exerted himself, however, to collect 250*l.* among the ministers of Devon and Cornwall for the use of Exeter College, whence his name is inserted in its list of benefactors. Oliver believes that either by his predecessor, Bishop Alley, or by him, portions of the palace at Exeter were taken down as being superfluous and burdensome to the diminished resources of the see. The bishop still kept up his scholarship. In 1572 the Books of Moses were allotted to him to translate for the new edition of the Bishop's Bible, at least to one 'W. E.,' whom Strype takes for 'William Exon.' Hoker, however, says (*Antique Description of Exeter*): 'He was a professor of divinity, but not taken to be so well grounded as he persuaded himself. He was zealous in religion, but not so forwards as he was wished to be.' In 1576, when papists on one side and schismatics on the other were troubling the church, a glimpse is obtained of Bradbridge's administration. He tried to reason with some Cornish gentlemen who would not attend church, but could not induce them to conform. At length as he saw 'they craved ever respite of time and in time grew rather indurate than reformed,' in compliance with an order that such should be sent up to the privy council or the ecclesiastical commission held at Lambeth 'to be dealt withal in order to their reducement,' he wrote on the subject to the lord treasurer, and sent up three, Robert Beckote, Richard Tremaine, and Francis Ermyn. He begged the treasurer to prevail with the archbishop or bishop of London 'to take some pains with them,' adding that 'the whole country longed to hear of their godly determination, viz. what success they should have with these gentlemen.' In the same year another dangerous opinion in his diocese troubled him. A certain lay preacher, a schoolmaster at Liskeard, affirmed that an oath taken on one of the gospels 'was of no more value than if taken upon a rush or a fly.' All Cornwall was greatly excited at this, and on the bishop proceeding to Liskeard the man maintained his view in writing. As the town was in such confusion that no trial could be held with any prospect of justice, the bishop remanded the case to the assizes. In the meantime he sent for Dr. Tremayn, the archbishop's commissary, and other learned divines, and consulted on the point, saying 'that truly the Cornishmen were, many of them, subtle in taking an oath,' and that if the reverence due to scripture were abated it would let in many disorders to the state. Unluckily Strype does not give the conclusion of these trials.

About this time the bishop was very uneasy regarding an ecclesiastical commission which he heard would probably be granted to several in his diocese. Dr. Tremayn headed a party against him, but the bishop withstood him, and wrote to the treasurer that the commission was not required, adding that 'he spake somewhat of experience, that his diocese was great, and that the sectaries did daily increase. And he persuaded himself he should be able easier to rule those whom he partly knew already than those which by this means might get them new friends.' Indeed he found the cares of his position so heavy that he earnestly supplicated the treasurer (11 March 1576) that he might be suffered to resign the bishopric and return to his deanery of Sarum, urging 'the time serveth, the place is open.' In his latter years he delighted to dwell in the country, which proved very burdensome to all who had business with him. Newton Ferrers was his favourite residence, the benefice of which, together with that of Lezante in Cornwall, the queen had allowed him to hold *in commendam* in consequence of the impoverished state of the see, as had been the case with his predecessors. Benefices were given to his successor also. At the age of seventy he embarked largely in agricultural speculations, which eventually ruined him. 'Hitherto,' says Fuller, 'the English bishops had been vivacious almost to a wonder; only five died in the first twenty years of Elizabeth's reign. Now seven deceased within the compasse of two years.' Among them was Bradbridge, who died suddenly at noon 27 June 1578, aged 77, no one being with him, at Newton Ferrers. Izacke (*Memorials of Exeter*) sums up the prevailing opinion of him, 'a man only memorable for this, that nothing memorable is

recorded of him saving that he well governed this church about eight years.' When he died he was indebted to the queen 1,400*l.* for tenths and subsidies received in her behalf from the clergy, so that immediately after his death she seized upon all his goods. The patent book of the see records that he 'had not wherewith to bury him.' He was buried in his own cathedral, on the north side of the choir near the altar, under a plain altar tomb, and around him lie his brother prelates, Bishops Marshal, Stapledon, Lacy, and Woolton. A simple Latin inscription was put over him, now much defaced, recording that he was 'nuper Exon. Episcopus.' A shield containing his arms still remains, 'Azure, a pheon's head argent.' His will is in the Prerogative Office. No portrait of him is known to exist. His register concludes his acts with the old formula, 'Cujus animæ propitietur Deus. Amen.'

BRADBURN, SAMUEL (1751–1816), methodist preacher, was an associate of Wesley, and an intimate disciple of Fletcher of Madeley. He was the son of a private in the army, and was born at Gibraltar. On his father's return to England, when he was about twelve years old, he was apprenticed to a cobbler at Chester, and after a course of youthful profligacy became a methodist at the age of eighteen, entered the itinerant ministry about three years later, and continued in it more than forty years till his death. Bradburn was, according to the testimony of all who heard him, an extraordinary natural orator. He had a commanding figure, though he grew corpulent early in life, a remarkably easy carriage, and a voice and intonation of wonderful power and beauty. By assiduous study he became perhaps the greatest preacher of his day, and was able constantly to sway and fascinate vast masses of the people. His natural powers manifested themselves from the first time that he was called upon to speak in public. On that occasion he was suddenly impelled to take the place of an absent preacher, and spoke for an hour without hesitation, though for months previously he had been trembling at the thought of such an ordeal. In the evening of the same day a large concourse came together to hear him again, when he preached for three hours, and found, at the same moment in which he exercised the powers, that he had obtained the fame of an orator. He was president of the Wesleyan Conference in 1792. Bradburn was a man of great simplicity, generosity, and eccentricity. A posthumous volume of a few sermons has no particular merit.

[Bradburn's Life (written by his daughter in the same year that he died); a second biography (1871), by T. W. Blanshard, under the somewhat affected title of The Life of Samuel Bradburn, the Methodist Demosthenes.] R. W. D.

BRADBURY, GEORGE (*d.*1696), judge, was the eldest son of Henry Bradbury of St. Martin's Fields, Middlesex. Of his early years nothing is known. He was admitted a member of the Middle Temple on 28 June 1660, was created a master of arts by the university of Oxford 28 Sept. 1663, and was called to the bar on 17 May 1667. For some time his practice in court was inconsiderable. He first occurs as junior counsel against Lady Ivy in a suit in which she asserted her title to lands in Shadwell, 3 June 1684. The deeds upon which she relied were of doubtful authenticity, and Bradbury won commendation from Chief-justice Jeffreys, who was trying the case, for ingeniously pointing out that the date which the deeds bore described Philip and Mary, in whose reign they purported to have been executed, by a title which they did not assume till some years later. But the judge's temper was not to be relied upon. Bradbury repeating his comment, Jeffreys broke out upon him: 'Lord, sir! you must be cackling too; we told you your objection was very ingenious, but that must not make you troublesome. You cannot lay an egg but you must be cackling over it.' Bradbury's name next occurs in 1681, when he was one of two trustees of the marriage settlement of one of the Carys of Tor Abbey. His position in his profession must consequently have been considerable, and in December 1688, when the chiefs of the bar were summoned to consult with the peers upon the political crisis, Bradbury was among the number. In the July of the year following he was assigned by the House of Lords as counsel to defend Sir Adam Blair, Dr. Elliott, and others, who were impeached for dispersing proclamations of King James. The impeachment was, however, abandoned. On 9 July, upon the death of Baron Carr, he was appointed to the bench of the court of exchequer, and continued in office until his death, which took place 12 Feb. 1696. The last judicial act recorded of him is a letter preserved in the treasury in support of a petition of the Earl of Scarborough, 19 April 1695.

BRADBURY, HENRY (1831–1860), writer on printing, was the eldest son of William Bradbury, of the firm of Bradbury & Evans, proprietors of 'Punch,' founders of the 'Daily News,' the 'Field,' and other periodicals, and publishers for Dickens and Thackeray. In 1850 he entered as a pupil in the Imperial Printing Office at Vienna, where he became acquainted with the art of nature printing, a process whereby natural objects are impressed into plates, and afterwards printed from in the natural colours. In 1855 he produced in folio the fine 'nature-printed' plates to Moore and Lindley's 'Ferns of Great Britain and Ireland.' These were followed by 'British Sea Weeds,' in four volumes, royal octavo, and a reproduction of the 'Ferns,' also in octavo. In the same year, and again in 1860, he lectured at the Royal Institution of Great Britain on the subject of nature printing. He paid much attention to the production of bank notes and the security of paper money, on which he discoursed at the Royal Institution. This lecture was published in 1856, in quarto, with plates by John Leighton, F.S.A. In 1860 this subject was pursued by the publication of 'Specimens of Bank Note Engraving,' &c. Another address on 'Printing: its Dawn, Day, and Destiny,' was issued in 1858. He died by his own hand 2 Sept. 1860, aged 29, leaving a business he had founded in Fetter Lane, and afterwards moved to Farringdon Street, which was carried on under the name of Bradbury, Wilkinson & Co. At the time of his death he thought of producing a large work in folio on the graphic arts of the nineteenth century, but he never got beyond the proof of a prospectus that was ample enough to indicate the wide scale of his design.

[Information supplied by Mr. John Leighton, F.S.A.; Bigmore and Wyman's Bibliogr. of Printing, i. 23, 77–8; Proceedings of Royal Institution.] C. W. S.

BRADBURY, THOMAS (1677–1759), congregational minister, born in Yorkshire, was educated for the congregational ministry in an academy at Attercliffe. Of Bradbury as a student we have a glimpse (25 March 1695) in the diary of Oliver Heywood, who gave him books. He preached his first sermon on 14 June 1696, and went to reside as assistant and domestic tutor with Thomas Whitaker, minister of the independent congregation, Call Lane, Leeds. Bradbury speaks of Whitaker's 'noble latitude,' and commends him as being orthodox in opinion, yet no slave to 'the jingle of a party' ('*The Faithful Minister's Farewell*, two sermons [Acts xx. 32] on the death of Mr. T. Whitaker,' 1712, 8vo). From Leeds, in 1697, Bradbury went to Beverley, as a supply; and in 1699 to Newcastle-on-Tyne, first assisting Richard Gilpin, M.D. (ejected from Greystock, Cumberland), afterwards Bennet, Gilpin's successor, both presbyterians. It seems that Bradbury expected a co-pastorate, and judging from Turner's account (*Mon. Repos.* 1811, p. 514) of a manuscript 'Speech delivered at Madam Partis' in the year 1706, by Mr. Thos. Bradbury,' his after influence was not without its effect in causing a split in the congregation. It is significant that Bennet's 'Irenicum,' 1722, did more than any other publication to stay the divisive effects of Bradbury's action at Salters' Hall. Bradbury went to London in 1703 as assistant to Galpine, in the independent congregation at Stepney. On 18 Sept. 1704 he was invited to become colleague with Samuel Wright at Great Yarmouth, but declined. After the death of Benoni Rowe, Bradbury was appointed (16 March 1707) pastor of the independent congregation in New Street, by Fetter Lane. He was ordained 10 July 1707 by ministers of different denominations; his confession of faith on the occasion (which reached a fifth edition in 1729) is remarkable for its uncompromising Calvinism, but is expressed entirely in words of scripture. His brother Peter became his assistant. Bradbury took part in the various weekly dissenting lectureships, delivering a famous series at the Weighhouse on the duty of singing (1708, 8vo), and a sermon before the Societies for Reformation of Morals (1708, 8vo). His political sermons attracted much attention, from the freedom of their style and the quaintness of their titles. Among them were 'The Son of Tabeal [Is. vii. 5–7] on occasion of the French invasion in favour of the Pretender,' 1708, 8vo (four editions); 'The Divine Right of the Revolution' [1 Chron. xii. 23], 1709, 8vo; 'Theocracy; the Government of the Judges applied to the Revolution' [Jud. ii. 18], 1712, 8vo; 'Steadiness in Religion . . . the example of Daniel under the Decree of Darius,' 1712, 8vo; 'The Ass or the Serpent; Issachar and Dan compared in their regard for civil liberty' [Gen. xlix. 14–18], 1712, 8vo (a 5th of November sermon, it was reprinted at Boston, U.S., in 1768); 'The Lawfulness of resisting Tyrants, &c.' [1 Chron. xii. 16–18], 1714, 8vo (5 Nov. 1713, four editions); Εἰκὼν

Βασιλική; a sermon [Hos. vii. 7] preached 29 May, with Appendix of papers relating to the Restoration, 1660, and the present settlement,' 1715, 8vo; 'Non-resistance without Priestcraft' [Rom. xiii. 2], 1715, 8vo (5 Nov.); 'The Establishment of the Kingdom in the hand of Solomon, applied to the Revolution and the Reign of King George' [1 K. ii. 46], 1716, 8vo (5 Nov.); 'The Divine Right of Kings inquired into' [Prov. viii. 15], 1718, 8vo; 'The Primitive Tories; or . . . Persecution, Rebellion, and Priestcraft' [Jude 11], 1718, 8vo (four editions). Bradbury boasted of being the first to proclaim George I, which he did on Sunday, 1 Aug. 1714, being apprised, while in his pulpit, of the death of Anne by the concerted signal of a handkerchief. The report was current that he preached from 2 K. ix. 34, 'Go, see now this cursed woman and bury her, for she is a king's daughter;' but perhaps he only quoted the text in conversation. Another story is to the effect that when, on 24 Sept., the dissenting ministers went in their black gowns with an address to the new king, a courtier asked, 'Pray, sir, is this a funeral?' On which Bradbury replied, 'Yes, sir, it is the funeral of the Schism Act, and the resurrection of liberty.' Robert Winter, D.D., Bradbury's descendant, is responsible for the statement that there had been a plot to assassinate him, and that the spy who was sent to Fetter Lane was converted by Bradbury's preaching. On the other hand it is said that Harley had offered to stop his mouth with a bishopric. Bradbury's political harangues were sometimes too violent for men of his own party. Defoe wrote 'A Friendly Epistle by way of reproof from one of the people called Quakers, to T. B., a dealer in many words,' 1715, 8vo (two editions in same year). With the reference of the Exeter controversy to the judgment of the dissenting ministers of London, a large part of Bradbury's vehemence passed from the sphere of politics to that of theology. The origin of the dispute belongs to the life of James Peirce (1674–1726), the leader of dissent against Wells and Nicholls. Peirce, the minister of James's Meeting, Exeter, was accused, along with others, of favouring Arianism. The Western Assembly was disposed to salve the matter over by admitting the orthodoxy of the declarations of faith made by the parties in September 1718. But the body of thirteen trustees who held the property of the four Exeter meeting-houses appealed to London for further advice. After much negotiation the whole body of London dissenting ministers of the three denominations was convened at Salters' Hall to consider a draft letter of advice to Exeter. Bradbury put himself in the front of the conservative party; the real mover on the opposite side was the whig politician John Shute Barrington, viscount Barrington, a member of Bradbury's congregation, and afterwards the Papinian of Lardner's letter on the Logos. The conference met on Thursday, 19 Feb. 1719 (the day after the royal assent to the repeal of the Schism Act), when Bradbury proposed that, after days of fasting and prayer, a deputation should be sent to Exeter to offer advice on the spot; this was negatived. At the second meeting, Tuesday, 24 Feb., Bradbury moved a preamble to the letter of advice, embodying a declaration of the orthodoxy of the conference, in words taken from the Assembly's catechism. This was rejected by fifty-seven to fifty-three. Sir Joseph Jekyll, master of the rolls, who witnessed the scene, is author of the often-quoted saying, 'The Bible carried it by four.' At the third meeting, 3 March, the proposition was renewed, but the moderator, Joshua Oldfield, would not take a second vote. Over sixty ministers went up into the gallery and subscribed a declaration of adherence to the first Anglican article, and the fifth and sixth answers of the Assembly's catechism. They then left the place amid hisses, Bradbury characteristically exclaiming, 'Tis the voice of the serpent, and may be expected against a zeal for the seed of the woman.' Thus perished the good accord of English dissent. Principal Chalmers, of King's College, Old Aberdeen, who was present at the third meeting, and in strong sympathy with Bradbury's side, reported to Calamy that 'he never saw nor heard of such strange conduct and management before.' The nonsubscribing majority, to the number of seventy-three, met again at Salters' Hall on 10 March, and agreed upon their advice, which was sent to Exeter on 17 March. Bradbury and his subscribers (61, 63, or 69) met separately on 9 March, and sent off their advice on 7 April. The remarkable thing is that the two advices (bating the preamble) are in substance and almost in terms identical; and the letter accompanying the nonsubscribers' advice not only disowns Arianism, but declares their 'sincere belief in the doctrine of the blessed Trinity and the proper divinity of our Lord Jesus Christ, which they apprehend to be clearly revealed in the Holy Scriptures.' Both advices preach peace and charity, while owning the duty of congregations to withdraw from ministers who teach what they deem to be serious error. Neither was in time to do good or harm, for the Exeter trustees had taken the matter into their own hands by formally excluding Peirce and his colleague from all the meeting-houses. Brad-

bury had his share in the ensuing pamphlet war, which was political as well as religious, for a schism in dissent was deprecated as inimical to the whig interest. He printed 'An Answer to some Reproaches cast on those Dissenting Ministers who subscribed, &c.,' 1719, 8vo; a sermon on 'The Necessity of contending for Revealed Religion' [Jude 3], 1720, 8vo (appended is a letter from Cotton Mather on the late disputes); and 'A Letter to John Barrington Shute, Esq.,' 1720, 8vo. Barrington left Bradbury's congregation, and joined that of Jeremiah Hunt, D.D., independent minister and nonsubscriber, at Pinners' Hall. Bradbury was brought to book by 'a Dissenting Layman' in 'Christian Liberty asserted, in opposition to Protestant Popery,' 1719, 8vo, a letter addressed to him by name, and answered by 'a Gentleman of Exon,' in 'A Modest Apology for Mr. T. Bradbury,' 1719, 8vo. But most of the pamphleteers passed him by as 'an angry man, that makes some bustle among you' (*Letter of Advice to the Prot. Diss.*, 1720, 8vo) to aim at William Tong, Benjamin Robinson, Jeremiah Smith, and Thomas Reynolds, four presbyterian ministers who had issued a whip for the Salters' Hall conference in the subscribing interest, and who subsequently published a joint defence of the doctrine of the Trinity. In 1720 an attempt was made to oust Bradbury from the Pinners' Hall lectureship; in the same year he started an anti-Arian Wednesday lecture at Fetter Lane. This did not mend matters. There appeared 'An Appeal to the Dissenting Ministers, occasioned by the Behaviour of Mr. Thomas Bradbury,' 1722, 8vo; and Thomas Morgan (the 'Moral Philosopher,' 1737), who had made an unusually orthodox confession at his ordination [see BOWDEN, JOHN] in 1716, but was now on his way to 'Christian deism,' wrote his 'Absurdity of opposing Faith to Reason' in reply to Bradbury's 5th of November sermon, 1722, on 'The Nature of Faith.' He had previously attacked Bradbury in a postscript to his 'Nature and Consequences of Enthusiasm,' 1719, 8vo. Returning to a former topic, Bradbury published in 1724, 8vo, 'The Power of Christ over Plagues and Health,' prefixing an account of the anti-Arian lectureship. He published also 'The Mystery of Godliness considered,' 1726, 8vo, 2 vols. (sixty-one sermons, reprinted Edin. 1795). In 1728 his position at Fetter Lane became uncomfortable; he left, taking with him his brother Peter, now his colleague, and most of his flock. The presbyterian meeting-house in New Court, Carey Street, Lincoln's Inn Fields, was vacant through the removal of James Wood (a subscriber) to the Weighhouse in 1727; Bradbury was asked, 20 Oct. 1728, to New Court, and accepted on condition that the congregation would take in the Fetter Lane seceders and join the independents. This arrangement, which has helped to create the false impression that at Salters' Hall the presbyterians and independents took opposite sides as denominations, was made 27 Nov. 1728, Peter continuing as his brother's colleague (he probably died about 1730, as Jacob Fowler succeeded him in 1731). Bradbury now published 'Jesus Christ the Brightness of Glory,' 1729, 8vo (four sermons on Heb. i. 3); and a tract 'On the Repeal of the Test Acts,' 1732, 8vo. His last publication seems to have been 'Joy in Heaven and Justice on Earth,' 1747, 8vo (two sermons), unless his discourses on baptism, whence Caleb Fleming drew 'The Character of the Rev. Tho. Bradbury, taken from his own pen,' 1749, 8vo, are later. Doubtless he was a most effective as well as a most unconventional preacher; the lampoon (about 1730) in the Blackmore papers may be accepted as evidence of his 'melodious' voice, his 'head uplifted,' and his 'dancing hands.' The stout Yorkshireman reached a great age. He died on Sunday, 9 Sept. 1759, and was buried in Bunhill Fields. His wife's name was Richmond; he left two daughters, one married (1744) to John Winter, brother to Richard Winter, who succeeded Bradbury, and father to Robert Winter, D.D., who succeeded Richard; the other daughter married (1768) George Welch, a banker. Besides the publications noticed above, Bradbury printed several funeral and other sermons, including two on the death of Robert Bragge (died 1738; 'eternal Bragge' of Lime Street, who preached for four months on Joseph's coat). His 'Works,' 1762, 8vo, 3 vols. (second edition 1772), consist of fifty-four sermons, mainly political.

[Memoir by John Brown, Berwick, 1831; Palmer's Nonconf. Memorial, 1802, ii. 367, and index; Thompson's MS. BRADDOCK, EDWARD (1695–1755), major-general, was son of Major-general Edward Braddock, regimental lieutenant-colonel of the Coldstream guards in 1703. After serving with credit in Flanders and Spain the elder Braddock retired from the service in 1715, and died on 15 June 1725 at Bath, where he was buried in the Abbey Church. Braddock the younger entered the army as ensign in Colonel Cornelius Swann's company of his father's regiment on 29 Aug. 1710, and became a lieutenant in 1716. He is said to have fought a duel with swords and pistols with a Colonel Waller in Hyde Park on 26 May 1718. Both battalions of the Coldstreams were then encamped in the park. He became lieutenant of the grenadier company in 1727, and captain and lieutenant-colonel in the regiment in 1735. Walpole (*Letters*, ii. 460–2) has raked up some discreditable stories of him at this period of his life, which possibly need qualification; Walpole is, at any rate, distinctly wrong in stating that Braddock was subsequently 'governor' of Gibraltar. He became second major in the Coldstreams in 1743, first major in 1745, and lieutenant-colonel 21 Nov. of the same year. His first recorded war service is in September 1746, when the second battalion of his regiment, under his command, was sent to join, but did not actually take part in Admiral Lestock's descent on L'Orient, after which the battalion returned to London. He embarked in command of it again in May 1746, and proceeded to Holland, where he served under the Prince of Orange in the attempt to raise the siege of Bergen-op-Zoom, and was afterwards quartered at Breda and elsewhere until the battalion returned home in December 1748. On 17 Feb. 1753 Braddock was promoted from the Guards to the colonelcy of the 14th foot at Gibraltar, where he joined his regiment, as then was customary; but there is no record of his having exercised any higher command in that garrison. He became a major-general 29 March 1754, and soon after was appointed to the command in America, with a view to driving the French from their recent encroachments. The warrant of appointment, of which there is a copy in the archives at Philadelphia, appoints Braddock to be 'general and commander-in-chief of all our troops and forces y^{t} are in North America or y^{t} shall be sent or rais'd there to vindicate our just rights and possessions.' Braddock, who must have been then about sixty, was a favourite with William, duke of Cumberland, to whom he probably owed the appointment, although his detractors alleged that his sturdy begging for place under pressure of his gambling debts was the real cause. He arrived at his residence in Arlington Street from France on 6 Nov., and left for Cork, where his reinforcements were to rendezvous on the 30th. Before leaving he executed a will in favour of Mr. Calcraft, the army agent, and his reputed wife, better known as Mrs. George Anne Bellamy [q. v.] This lady, a natural daughter of an old brother officer, had been petted from her earliest years by Braddock, whom she calls her second father, and who, she admits, was misled as to her relations with Calcraft (Bellamy, *Apology*, iii. 206). Delays occurring at Cork, Braddock returned and sailed from the Downs with Commodore Keppel on 24 Dec. 1754, arriving in Hampton Roads, Virginia, 20 Feb. 1755. He found everything in the utmost confusion. The colonies were at variance; everywhere the pettiest jealousies were rife; no magazines had been collected; the promised provincial troops had not even been raised, and the few regulars already there were of the worst description. Braddock summoned a council of provincial governors to concert measures for carrying out his instructions. Eventually it was resolved to despatch four expeditions—three in the north against Niagara, Crown Point, and the French posts in Nova Scotia; one in the south against Fort Duquesne, on the present site of Pittsburg. The troops for the latter rendezvoused, under Braddock's command, at Fort Cumberland, a stockaded post on the Potomac, about halfway between the Virginian seaboard and Fort Duquesne, a distance of two hundred and twenty miles; and after delays caused by what George Washington, then a young officer of provincials and a volunteer with the expedition, termed the 'vile mismanagement' of the horse-transport, and the desertion of their Indian scouts, arrived at a spot known as Little Meadows on 18 June, where a camp was formed. Hence Braddock pushed on with twelve hundred chosen men, regulars and provincials, who reached the Monongahela river on 8 July, in excellent order and spirits, and crossed the next morning with colours flying and music playing. During the advance on the afternoon, 9 July 1755, when about seven miles from Fort Duquesne, the head of the column encountered an ambuscade of French and Indians concealed in the long grass and tangled undergrowth of the forest openings. Flank attacks by unseen Indians threw the advance into wild disorder, which communicated itself to the main body coming up in support, leading to terrible slaughter,

and ending, after (it is said) two hours' fighting, in a panic-stricken rout. Braddock, who strove bravely to re-form his men, after having several horses shot under him, was himself struck down by a bullet, which passed through his right arm and lodged in the body. His aide-de-camp Orme and some provincial officers with great difficulty had him carried off the field. He rallied sufficiently to give directions for succouring the wounded, but gradually sank and died at sundown on Sunday, 13 July 1755, at a halting-place called Great Meadows, between fifty and sixty miles from the battlefield. 'We shall know better how to deal with them next time' were his last words as he rallied momentarily before expiring. He was buried before dawn in the middle of the track, and the precaution was taken of passing the vehicles of the retreating force, now reduced to some degree of order, over the grave, to efface whatever might lead to desecration by the pursuers. Long after, in 1823, the grave was rifled by labourers employed in the construction of the national road hard by, and some of the bones, still distinguishable by military trappings, were carried off. Others were buried at the foot of a broad spreading oak, which marks or marked the locality, about a mile to the west of Fort Necessity.

No portrait of Braddock is known to exist, but he is described as rather short and stout in person in his later years. To failings common among military men of his day he added the unpopular defects of a hasty temper and a coarse, self-assertive manner, but his fidelity and honour as a public servant have never been questioned, even by those who have portrayed his character in darkest colours. He was a severe disciplinarian, but his severity, like his alleged incapacity as a general, has probably been exaggerated. The difficulties he appears to have encountered at every step have been forgotten, as well as the fact that the ponderous discipline in which he had been trained from his youth up, and which was still associated with the best traditions of the English foot, had never before been in serious collision with the tactics of the backwoods. Two shrewd observers among those who knew him personally judged him less harshly than have most later critics. Wolfe, on the first tidings of the disaster, wrote of Braddock as 'a man of courage and good sense, although not a master of the art of war,' and added emphatic testimony to the wretched discipline of most line regiments at the time (Wright, *Life of Wolfe*, p. 324). Benjamin Franklin said of him: 'He was, I think, a brave man, and might have made a good figure in some European war, but he had too much self-confidence, and had too high an idea of the validity of European troops, and too low a one of Americans and Indians' (Sparks, *Franklin*, i. 140). One of Braddock's order-books, said to have belonged to Washington, is preserved in the library of Congress, and a silken military sash, worked with the date 1707, and much stained as with blood, which is believed to have been Braddock's sash, is in possession of the family of Zachary Taylor, twelfth president of the United States, into whose hands it came during the Mexican war. In after years more than one individual sought a shameful notoriety by claiming to have traitorously given Braddock his death-wound during the fight. Mr. Winthrop Sargent has exposed the absurdity of these stories. One is reproduced in 'Notes and Queries,' 3rd ser. xii. 5. Braddock had two sisters, who received from their father a respectable fortune of 6,000*l.*, and both of whom predeceased their brother. The unhappy fate of Fanny Braddock, the surviving sister, who committed suicide at Bath in 1739, has been recorded by Goldsmith (*Miscellaneous Works*, Prior's ed. iii. 294). Descendants of a brother were stated in 'Notes and Queries' (1st ser. xi. 72) some time back to be living at Martham in Norfolk, in humble circumstances, and to believe themselves entitled to a considerable amount of money, the papers relating to which had been lost. No account has been found of moneys standing to the credit of Braddock or his representatives in any public securities.

The accounts of the Fort Duquesne expedition published at the time appear to have been mostly catchpenny productions; but two authentic narratives are in existence. Of these one is the manuscript journal of Braddock's favourite aide-de-camp, Captain Orme, Coldstream guards, who afterwards retired from the service and died in 1781. This is now No. 212 King's MSS. in British Museum. The other is the manuscript diary of a naval officer attached to Braddock's force, which is now in the possession of the Rev. F. O. Morris of Nunburnholme Rectory, Yorkshire, by whom it was published some years ago under the title, 'An Account of the Battle on the Monagahela River, from an original document by one of the survivors' (London, 1854, 8vo). Copies of these journals have been embodied with a mass of information from American and French sources by Mr. Winthrop Sargent, in an exhaustive monograph forming vol. v. of 'Memoirs of the Historical Society of Pennsylvania' (Philadelphia, 1856). A map of Braddock's route was prepared from traces found still extant in 1846, when a railway survey was in progress in the locality, and first appeared in a Pittsburg periodical, entitled 'Olden Time' (vol. ii.) An excel-

lent account of Braddock's expedition and of the events leading up to it is given in Parkman's 'Montcalm and Wolfe,' vol. i. Some brief military criticisms were contributed by Colonel Malleson to the 'Army and Navy Magazine,' March 1885, pp. 401, 404–5. The Home Office and War Office Warrant and Military Entry Books in the Record Office in London contain references to the expedition, but none of any special note.

[Mackinnon's Origin of Coldstream Guards (London, 1832), i. 388–9, vol. ii. Appendix; Home Office Military Entry Books, 10–27; Cannon's Hist. Record 14th (Buckinghamshire) Foot; Carter's Hist. BRADDOCKE, JOHN (1656–1719), divine, was a native of Shropshire, and received his education at St. Catharine's Hall, Cambridge, where he was elected to a fellowship (B.A. 1674, M.A. 1678). On leaving the university about 1689, he became chaplain to Sir James Oxenden, bart., of Dean, near Canterbury, and chaplain to Dr. John Battely, rector of the neighbouring parish of Adisham. In 1694 he was nominated by Archbishop Tenison to the perpetual curacy of Folkestone, and on 1 April 1698 he was presented to the vicarage of St. Stephen's, alias Hackington, near Canterbury. On the promotion of Dr. Offspring Blackall, his contemporary at college and intimate friend, to the see of Exeter in 1707, Braddocke was made the bishop's chaplain, though he got nothing by the appointment except the title. In 1709 he was collated by Archbishop Tenison to the mastership of Eastbridge hospital in Kent. He died in his vicarage house on 14 Aug. 1719, in his sixty-fourth year.

He wrote: 1. 'The Doctrine of the Fathers and Schools considered, concerning the Articles of a Trinity of Divine Persons and the Unity of God. In answer to the Animadversions on the Dean of St. Paul's Vindication of the Doctrine of the Holy and ever Blessed Trinity, in defence of those sacred Articles, against the objections of the Socinians, and the misrepresentations of the Animadverter.' Part I, 1695, 4to. 2. 'Deus unus et trinus,' 4to. This was entirely printed, except the title-page, but was suppressed, and never published, by the desire of Archbishop Tenison, who thought the controversy ought not to be continued.

[MS. Addit. 5863, f. 114 *b*; Cantabrigienses Graduati (1787), 49; Hasted's Kent, iii. 388, 601, iv. 628.] T. C.

BRADDON, LAURENCE (*d.* 1724), politician, the second son of William Braddon of Treworgy, in St. Genny's, Cornwall, was called to the bar at the Middle Temple, and for some time worked hard at his profession. When the Earl of Essex died in the Tower in 1683, Braddon adopted the belief that he had been murdered, and worked actively to collect sufficient evidence to prove the murder. He set on foot inquiries on the subject in London, and when a rumour reached him that the news of the earl's death was known at Marlborough on the very day of, if not before, the occurrence, he posted off thither. When his action became known at court, he was arrested and put under restraint. For a time he was let out on bail, but on 7 Feb. 1683–4 he was tried with Mr. Hugh Speke at the king's bench on the accusation of conspiring to spread the belief that the Earl of Essex was murdered by some persons about him, and of endeavouring to suborn witnesses to testify the same. Braddon was found guilty on all the counts, but Speke was acquitted of the latter charge. The one was fined 1,000*l.* and the other 2,000*l.*, with sureties for good behaviour during their lives. Braddon remained in prison until the landing of William III, when he was liberated. In February 1695 he was appointed solicitor to the wine licence office, a place valued at 100*l.* per annum. His death occurred on Sunday, 29 Nov. 1724.

Most of Braddon's works relate to the death of the Earl of Essex. The 'Enquiry into and Detection of the Barbarous Murther of the late Earl of Essex' (1689) was probably from his pen, and he was undoubtedly the author of 'Essex's Innocency and Honour vindicated' (1690), 'Murther will out' (1692), 'True and Impartial Narrative of the Murder of Arthur, Earl of Essex' (1729), as well as 'Bishop Burnet's late History charg'd with great Partiality and Misrepresentation' (1725) in the bishop's account of this mysterious affair. Braddon also published 'The Constitutions of the Company of Watermen and Lightermen,' and an 'Abstract of the Rules, Orders, and Constitutions' of the same company, both of them issued in 1708. 'The Miseries of the Poor are a National Sin, Shame, and Danger' was the title of a work (1717) in which he

argued for the establishment of guardians of the poor and inspectors for the encouragement of arts and manufactures. Five years later he brought out 'Particular Answers to the most material Objections made to the Proposals for relieving the Poor.' The report of his trial was printed in 1684, and reprinted in 'Cobbett's State Trials,' ix. 1127–1228, and his impeachment of Bishop Burnet's 'History' is reprinted in the same volume of Cobbett, pp. 1229–1332.

BRADE, JAMES. [See BRAID.]

BRADE, WILLIAM (*fl.* 1615), an English musician, was violist to the Duke of Holstein-Gottorp and to the town of Hamburg at the beginning of the seventeenth century. He was living at Hamburg on 19 Aug. 1609, when he dedicated a volume of his compositions to Johann Adolph, duke of Schleswig, and he probably remained at the same town until 14 Feb. 1619, when he was appointed capellmeister to Johann Sigismund, margrave of Brandenburg. His salary in this post was 500 thalers per annum, besides a thaler a week for 'kostgeld' when at court, and when following the margrave abroad, six dinners and all other meals weekly, with sufficient beer, a stoup of wine daily, free lodgings, and all disbursements. He also received two suits of clothes ('Ehrenkleid'), and his son, Christian Brade, had 300 thalers, with clothes, boots, shoes, and maintenance. Brade had full authority over the court band, but the care of the boys of the chapel was given to a vice-capellmeister. He does not seem to have remained long at Berlin, as a report on the margrave's band, drawn up in 1620, speaks of him as one of the past capellmeisters, and in the following year Jacob Schmidt is mentioned as occupying his post. Nothing more is known of him; but Dr. Rimbault (an untrustworthy guide) says (GROVE, *Dict. of Music*, i. 269 *a*) that he died at Frankfurt in 1647, the authority for which statement cannot be discovered.

The greatest confusion exists as to the bibliography of Brade's works, all of which are extremely rare. Fétis and Rimbault copy Gerber's 'Lexikon der Tonkünstler' (Leipzig, 1812), i. 493, with the exception that Rimbault prints Frankfurt a. d. Oder as Frankfort, which is additionally misleading. The list given by these authorities differs materially from the following, which is taken from Moller's 'Cimbria Literata,' 1744, ii. 103, and is reprinted in the 'Lexikon der hamburgischen Schriftsteller,' 1851, i. 364: 1. 'Musicalische Concerten,' Hamburg, 1609, 4to. 2. 'Newe ausserlesene Paduanen, Galliarden, Canzonen, Alamanden und Couranten, auf allerlei Instrumenten zu gebrauchen,' Hamburg, 1610, 4to. 3. 'Newe ausserlesene Paduanen und Galliarden, midt 6 Stimmen, auf allerhand Instrumenten, insonderheit Violen, zu gebrauchen,' Hamburg, 1614, 4to. 4. 'Newe ausserlesene liebliche Branden, Intraden, Masqueraden, Balletten, Alamanden, Couranten, Volten, Aufzüge und frembde Täntze, samt schönen lieblichen Frühlings- und Sommer-Blümlein, mit 5 Stimmen; auf allerlei Instrumenten, insonderheit Violen, zu gebrauchen,' Lübeck, 1617, 8vo. 5. 'Newe lustige Volten, Couranten, Balletten, Paduanen, Galliarden, Masqueraden, auch allerlei Arten newer französischer Täntze, mit 5 Stimmen, auf allerlei Instrumenten zu gebrauchen,' Berlin, 1621, 4to. Fétis omits 4 in his list, and gives the date of 2 as 1609, and the place of publication of 5 as Frankfurt a. d. Oder. Bohn's 'Bibliographie der Musik-Druckwerke bis 1700' (p. 74) describes a copy of 2, and quotes the title-page, by which it would seem that 1609 is the right date. A manuscript 'Fancy' by Brade is in the library of the Royal College of Music.

[The authorities quoted above; Fétis's Biographie des Musiciens (1837), ii. 293 *a*; Mendel's Musikalisches Lexicon, i. 162; Draud's Bibliotheca Librorum Germanicorum Classica (1611), 555; L. Schneider's Geschichte der Churfürstlich-Brandenburgischen und Königlich-Preussischen Capelle, pp. 29, 30, 31.] W. B. S.

BRADFIELD, HENRY JOSEPH STEELE (1805–1852), surgeon and author, was born on 18 May 1805 in Derby Street, Westminster, where his father, Thomas Bradfield, was a coal merchant. Whilst still under age he published in 1825 'Waterloo, or the British Minstrel, a poem.' He was bred to the art of surgery, and on 26 April 1826 left England in the schooner Unicorn in Lord Cochrane's expedition to Greece, during which he was present in several engagements by land and sea. After his return he published 'The Athenaid, or Modern Grecians, a poem,' 1830; 'Tales of the Cyclades, poems,' 1830; and in 1839 edited a work entitled 'A Russian's Reply to the Marquis de Custine's "Russia."' On 1 Sept. 1832 he received from the King of the Belgians a commission as sous-lieutenant in the Bataillon Etranger

of Belgium, and was appointed to the 1st regiment of lancers. At one time he held a commission in the Royal West Middlesex Militia. He was appointed on 31 Dec. 1835 stipendiary magistrate in Tobago, from which he was removed to Trinidad on 13 May 1836. He was reappointed to the southern or Cedros district on 13 April 1839, but soon returned to England, having been superseded in consequence of a quarrel with some other colonial officer. In 1841 he again went to the West Indies in the capacity of private secretary to Colonel Macdonald, lieutenant-governor of Dominica, and in 1842 he acted for some time as colonial secretary in Barbados. The charges which had occasioned his previous return were, however, renewed, and the government cancelled his appointment. From that period he lived very precariously. He turned his moderate literary talents to account, and among some communications he made to the 'Gentleman's Magazine' were articles on 'The Last of the Paleologi' in January 1843, and a 'Memoir of Major-general Thomas Dundas and the Expedition to Gaudaloupe' in August, September, and October in the same year. Latterly he practised all the arts of the professional mendicant. He committed suicide in a London hotel on 11 Oct. 1852.

[Cochrane's Wanderings in Greece (1837), p. 90; Gent. Mag. (1853), xxxix. 102; Morning Post, 13 Oct. 1852, p. 4, and 15 Oct. p. 6.]

BRADFORD, first EARL OF (1619–1708). [See NEWPORT, FRANCIS.]

BRADFORD, BARONS OF. [See NEWPORT, RICHARD, first BARON, 1587–1651; NEWPORT, FRANCIS, second BARON, 1619–1708.]

BRADFORD, JOHN (1510?–1555), protestant martyr, was born of gentle parents about 1510 in the parish of Manchester. A local tradition claims him as a native of the chapelry of Blackley. He was educated at the grammar school, Manchester. In his 'Meditations on the Commandments,' written during his imprisonment in the reign of Queen Mary, he speaks of the 'particular benefits' that he had received from his parents and tutors. Foxe records that Bradford entered the service of Sir John Harrington of Exton, Rutlandshire, who was treasurer at various times of the king's camps and buildings in Boulogne. At the siege of Montreuil in 1544 Bradford acted as deputy-paymaster under Sir John Harrington. On 8 April 1547 he entered the Inner Temple as a student of common law. Here, at the instance of a fellow-student, Thomas Sampson, afterwards dean of Christ Church, he turned his attention to the study of divinity. A marked change now came over his character. He sold his 'chains, rings, brooches, and jewels of gold,' and gave the money to the poor. Moved by a sermon of Latimer, he caused restitution to be made to the crown of a sum of money which he or Sir John Harrington had fraudulently appropriated. Sampson in his address 'To the Christian Reader,' prefixed to Bradford's 'Two Notable Sermons,' 1574, states that the fraud was committed by Bradford and without the knowledge of his master; but Bradford's own words, in his last examination before Bishop Gardiner, are: 'My lord, I set my foot to his foot, whosoever he be, that can come forth and justly vouch to my face that ever I deceived my master. And as you are chief justice by office in England, I desire justice upon them that so slander me, because they cannot prove it' (*Examination of Bradford*, London, 1561, sig. a vi.) In May 1548 he published translations from Artopœus and Chrysostom, and in or about the following August entered St. Catherine's Hall, Cambridge, where his 'diligence in study and profiting in knowledge and godly conversation' were such, that on 19 Oct. 1549 the university bestowed on him, by special grace, the degree of master of arts. The entry in the grace book describes him as a man of mature age and approved life, who had for eight years been diligently employed in the study of literature, the arts, and holy scriptures. He was shortly afterwards elected to a fellowship at Pembroke Hall. In a letter to Traves, written about November 1549, he says: 'My fellowship here is worth seven pound a year, for I have allowed me eighteenpence a week, and as good as thirty-three shillings fourpence a year in money, besides my chamber, launder, barber, &c.; and I am bound to nothing but once or twice a year to keep a problem. Thus you see what a good Lord God is unto me.' Among his pupils at Pembroke Hall was John Whitgift [q. v.] One of his intimate friends was Martin Bucer, whom he accompanied on a visit to Oxford in July 1550. On 10 Aug. of the same year he was ordained deacon by Bishop Ridley at Fulham, and received a license to preach. The bishop made him one of his chaplains, and held him in the highest esteem. 'I thank God heartily,' wrote Ridley to Bernhere [q. v.] after Bradford's martyrdom, 'that ever I was acquainted with our dear brother Bradford, and that ever I had such a one in my house.' On 24 Aug. 1551 Bradford received the prebend of Kentish Town, in the church of St. Paul. A

few months later he was appointed one of the king's six chaplains in ordinary. Two of the chaplains remained with the king, and four preached throughout the country. Bradford preached in many towns of Lancashire and Cheshire, also in London and Saffron Walden. Foxe says that 'sharply he opened and reproved sin; sweetly he preached Christ crucified; pithily he impugned heresies and errors; earnestly he persuaded to godly life.' John Knox, in his 'Godly Letter,' 1554, speaks with admiration of his intrepidity in the pulpit. Bradford's sermons ring with passionate earnestness. He takes the first words that come to hand, and makes no attempt to construct elaborate periods. 'Let us, even to the wearing of our tongue to the stumps, preach and pray,' he exclaims in the 'Sermon on Repentance;' and not for a moment did he slacken his energy. He spoke out boldly and never shrank from denouncing the vices of the great. In a sermon preached before Edward VI he rebuked the worldliness of the courtiers, declaring that God's vengeance would come upon the ungodly among them, and bidding them take example by the sudden fate that had befallen the late Duke of Somerset. At the close of his sermon, with weeping eyes and in a voice of lamentation, he cried out aloud: 'God punished him; and shall He spare you that be double more wicked? No, He shall not. Will ye or will ye not, ye shall drink the cup of the Lord's wrath. Judicium Domini, Judicium Domini! The judgment of the Lord, the judgment of the Lord!'

On 13 Aug. 1553, shortly after the accession of Queen Mary, a sermon in defence of Bonner and against Edward VI was preached at St. Paul's Cross by Gilbert Bourne [q. v.], rector of High Ongar in Essex, and afterwards bishop of Bath and Wells. The sermon gave great offence to the hearers, who would have pulled him out of the pulpit and torn him to pieces if Bradford and John Rogers, vicar of St. Sepulchre's, had not interposed. On the same day in the afternoon Bradford preached at Bow Church, Cheapside, and reproved the people for the violence that had been offered in the morning to Bourne. Within three days after this occurrence Bradford was summoned before the privy council on the charge of preaching seditious sermons, and was committed to the Tower, where he wrote his treatise on 'The Hurt of Hearing Mass.' At first he was permitted to see no man but his keeper; afterwards this severity was relaxed, and he was allowed the society of his fellow-prisoner, Dr. Sandys. On 6 Feb. 1553-4 Bradford and Sandys were separated; the latter was sent to the Marshalsea, and the former was lodged in the same room as Cranmer, Latimer, and Ridley, the Tower being then very full owing to the imprisonment of Wyatt and his followers. Latimer, in his protest addressed to the queen's commissioners at Oxford (*Works*, ii. 258-9, Parker Society), tells how he and his fellow-prisoners 'did together read over the New Testament with great deliberation and painful study.' On 24 March Bradford was transferred to the King's Bench prison. Here, probably by the favour of Sir William Fitzwilliam, the knight-marshal of the prison, he was occasionally allowed at large on his parole, and was suffered to receive visitors and administer the sacrament. Once a week he used to visit the criminals in the prison, distributing charity among them and exhorting them to amend their lives. On 22 Jan. 1554-5 he was brought up for examination before Bishops Gardiner, Bonner, and other prelates. There is an account (first published in 1561) in his own words of his three separate examinations before the commissioners on 22, 29, and 30 Jan. The commissioners questioned him closely on subtle points of doctrine, and endeavoured to convince him that his views were heretical; but he answered their arguments with imperturbable calmness, and refused to be convinced. Accordingly he was condemned as an obstinate heretic, and was committed to the Compter in the Poultry. It was at first determined to have him burned at his native town, Manchester; but, whether in the hope of making him recant or from fear of enraging the people of Manchester, the authorities finally kept him in London and waited some months before carrying out the sentence. At the Compter he was visited by several catholic divines, who endeavoured unsuccessfully to effect his conversion. Among these were Archbishop Heath, Bishop Day, Alphonsus a Castro, afterwards archbishop of Compostella, and Bartholomew Carranza, confessor to King Philip, and afterwards archbishop of Toledo. At length, as he refused to recant, a day was fixed for carrying out the sentence. On Sunday, 30 June 1555, he was taken late at night from the Compter to Newgate, all the prisoners in tears bidding him farewell. In spite of the lateness of the hour great crowds were abroad, and as he passed along Cheapside the people wept and prayed for him. A rumour spread that he was to be burned at four o'clock the next morning, and by that hour a great concourse of people had assembled; but it was not until nine o'clock that he was brought to the stake. 'Then,' says Foxe, 'was he led forth to Smithfield with a great company of weaponed men to conduct him thither, as the

like was not seen at no man's burning; for in every corner of Smithfield there were some, besides those who stood about the stake.' A young man named John Leaf was his fellow-martyr. After taking a faggot in his hand and kissing it, Bradford desired of the sheriffs that his servant might have his raiment. Consent being given, he put off his raiment and went to the stake. Then holding up his hands, and looking up to heaven, he cried: 'O England, England, repent thee of thy sins, repent thee of thy sins. Beware of idolatry, beware of false antichrists; take heed they do not deceive you.' As he was speaking the sheriff ordered his hands to be tied if he would not keep silence. 'O master sheriff,' said Bradford, 'I am quiet. God forgive you this, master sheriff.' Then having asked the people to pray for him he turned to John Leaf and said: 'Be of good comfort, brother, for we shall have a merry supper with the Lord this night.' His last words were: 'Strait is the way and narrow is the gate that leadeth to salvation, and few there be that find it.'

Bradford was a man of singularly gentle character. Parsons, the jesuit, allowed that he was 'of a more soft and mild nature than many of his fellows.' There is a tradition that on seeing some criminals going to execution he exclaimed: 'But for the grace of God there goes John Bradford.' Often when engaged in conversation he would suddenly fall into a deep reverie, during which his eyes would fill with tears or be radiant with smiles. In all companies he would reprove sin and misbehaviour in any person, 'especially swearers, filthy talkers, and popish praters;' but the manner of his reproof was at once so earnest and so kindly that none could take offence. His life was passed in prayer and study. He seldom slept more than four hours, and he ate only one meal a day. In person he was tall and slender, of a somewhat sanguine complexion, and with an auburn beard. A portrait of him (which is engraved in Baines's 'History of Lancashire,' ii. 243) is preserved in the Chetham Library at Manchester. A more modern portrait is in Pembroke Hall, Cambridge.

The following is a list of Bradford's writings: 1. 'The Divisyon of the Places of the Lawe and of the Gospell, gathered owt of the hooly scriptures by Petrum Artopœum . . . Translated into English,' London, 1548, 8vo. 2. 'A Godlye Treatise of Prayer [by Melanchthon], translated into English,' London, n. d. 8vo. 3. 'Two Notable Sermons, the one of Repentance, and the other of the Lorde's Supper,' London, 1574, 1581, 1599, 1617; the 'Sermon on Repentance' had been issued separately in 1553 and 1558. 4. 'Complaint of Veritye,' 1559; a short metrical piece printed in a collection issued by William Copland. 5. 'A Godlye Medytacyon,' London, 1559. 6. 'Godlie Meditations upon the Lordes Prayer, the Beleefe, and Ten Commandements . . . whereunto is annexed a defence of the doctrine of God's eternal election and predestination,' London, 1562, 1578, 1604, &c. 7. 'Meditations;' from his autograph in a copy of Tyndale's New Testament. 8. 'Meditations and Prayers from manuscripts in Emmanuel College, Cambridge, and elsewhere.' 9. 'All the Examinacions of the Constante Martir of God, M. John Bradforde, before the Lord Chancellour, B. of Winchester, the B. of London, and other cõmissioners; whereunto ar annexed his priuate talk and conflictes in prison after his condemnacion,' &c. 1561. 10. 'Hurte of hering Masse,' n. d. (printed by Copland), 1580, 1596. 11. 'A Fruitefull Treatise and full of heavenly consolation against the feare of death,' n. d. 12. Five treatises, namely (1) 'The Old Man and the New;' (2) 'The Flesh and the Spirit;' (3) 'Defence of Election;' (4) 'Against the Fear of Death;' (5) 'The Restoration of all Things.' 13. 'Ten Declarations and Addresses.' 14. 'An Exhortation to the Brethren in England, and four farewells to London, Cambridge, Lancashire, and Cheshire, and Saffron Walden;' from Coverdale's 'Letters of the Martyrs' and Foxe's 'Acts and Monuments.' 15. 'Sweet Meditations of the Kingdom of Christ,' n. d. 16. Letters from Foxe's 'Acts and Monuments,' 1563, 1570, and 1583; Coverdale's 'Letters of the Martyrs,' Strype's 'Ecclesiastical Memorials,' and manuscripts in Emmanuel College, Cambridge, and British Museum. It is probable that Bradford contributed to 'A Confutacion of Four Romish Doctrines,' a treatise entitled 'An Exhortacion to the Carienge of Chryste's crosse, with a true and briefe confutacion of false and papisticall doctryne,' n. d., printed abroad. A complete collection of Bradford's writings, very carefully edited by Rev. Aubrey Townsend, was published at Cambridge for the Parker Society, 2 vols. 8vo, 1848–53.

[Life by Rev. Aubrey Townsend; Foxe's Acts and Monuments; Strype; Hollingworth's Mancuniensis, ed. 1839, pp. 67–76; Baines's Lancashire, ii. 243–54; Fuller's Worthies; Tanner's Bibl. Brit.; Notes and Queries, 2nd ser. i. 125; Cooper's Athenæ Cantabrigienses.] A. H. B.

BRADFORD, JOHN (*d.* 1780), Welsh poet, was born early in the eighteenth cen-

tury. In 1730, while still a boy, he was admitted a 'disciple' of the bardic chair of Glamorgan, in which chair he himself presided in 1750. Some of his poems, 'moral pieces of great merit,' according to Dr. Owen Pughe, were printed in a contemporary Welsh periodical entitled the 'Eurgrawn.'

[Owen Pughe's Cambrian Biography.] A. M.

BRADFORD, JOHN (1750–1805), dissenting minister, was born at Hereford in 1750, the son of a clothier, educated at Hereford grammar school, and at Wadham College, Oxford, where he took the degree of B.A. On leaving college he accepted a curacy at Frelsham in Berkshire, where he married when twenty-eight years of age, and had a family of twelve children. About this time his religious opinions became decidedly Calvinistic, and he preached in several of Lady Huntingdon's chapels. On account of this irregularity the rector discharged him from his curacy. He then joined the Countess of Huntingdon's connection, and, after spending some time in South Wales, removed to Birmingham, and preached with great popularity in the old playhouse, which the countess had purchased and made into a chapel for him. Subsequently he left the connection of the countess for a new chapel in Bartholomew Street, supplementing his small income by making watch-chains. Not being successful, he removed to London in 1797, and preached till his death in the City Chapel, Grub Street. He died 16 July 1805, and was buried in Bunhill Fields. Some account of his life is given in an octavo volume, chiefly controversial, by his successor, William Wales Horne. Bradford published: 1. 'The Law of Faith opposed to the Law of Works,' Birmingham, 1787 (being an answer to the baptist circular letter signed Joshua Thomas). 2. 'An Address to the Inhabitants of New Brunswick, Nova Scotia, on the Mission of two Ministers sent by the Countess of Huntingdon,' 1788. 3. 'A Collection of Hymns' (some of them composed by himself), 1792. 4. 'The Difference between True and False Holiness.' 5. 'A Christian's Meetness for Glory.' 6. 'Comfort for the Feeble-minded.' 7. 'The Gospel spiritually discerned.' 8. 'One Baptism.' A fine octavo edition of 'Bunyan's Pilgrim's Progress, with Notes by John Bradford,' was published in 1792. Mr. Offor says, 'These notes are very valuable.'

[Bunyan's Works (ed. Offor), with notes to the Pilgrim by Bradford; Gadsby's Memoirs of Hymn Writers; Horne's Life of the Rev. John Bradford, 1806.] J. H. T.

BRADFORD, SAMUEL, D.D. (1652–1731), bishop successively of Carlisle and Rochester, was the son of William Bradford, a citizen of London, who distinguished himself as a parish officer at the time of the plague, and was born in St. Anne's, Blackfriars, on 20 Dec. 1652. He was educated at St. Paul's School; and when the school was closed, owing to the plague and the fire of London, he attended the Charterhouse. He was admitted to Corpus Christi, Cambridge, in 1669, but left without a degree in consequence of religious scruples. He devoted himself for a time to the study of medicine; but, his former scruples being removed, he was admitted in 1680, through the favour of Archbishop Sancroft, to the degree of M.A. by royal mandate, and was incorporated at Oxford on 13 July 1697. He shrank from taking orders until after the Revolution, and acted as private tutor in the families of several country gentlemen. Bradford was ordained deacon and priest in 1690, and in the spring of the following year was elected by the governors of St. Thomas's Hospital the minister of their church in Southwark. He soon received the lectureship of St. Mary-le-Bow, and was tutor to the two grandsons of Archbishop Tillotson, with whom he resided at Carlisle House, Lambeth. In November 1693 Dr. Tillotson collated Bradford to the rectory of St. Mary-le-Bow; he then resigned his minor ecclesiastical preferments, but soon after accepted the lectureship of All Hallows, in Bread Street.

Bradford was a frequent preacher before the corporation of London, and was a staunch whig and protestant. On 30 Jan. 1698 he preached before William III, who was so much pleased that in March following he appointed Bradford one of the royal chaplains in ordinary. The appointment was continued by Queen Anne, by whose command he was created D.D. on the occasion of her visit to the university of Cambridge, 16 April 1705; and on 23 Feb. 1708 was made a prebendary of Westminster.

In 1699 Bradford delivered the Boyle lecture in St. Paul's Cathedral, and preached eight sermons on 'The Credibility of the Christian Revelation, from its Intrinsick Evidence.' These, with a ninth sermon preached in his own church in January 1700, were issued with other Boyle lectures delivered between 1691 and 1732, in 'A Defence of Natural and Revealed Religion,' &c. 3 vols. fol., London, 1739.

Bradford was elected master of Corpus Christi College on 17 May 1716; and on 21 April 1718 was nominated to the bishopric of Carlisle, to which he was consecrated on 1 June following. In 1723 he was trans-

lated to the see of Rochester, and was also appointed to the deanery of Westminster, which he held *in commendam* with the bishopric of Rochester. In 1724 Bradford resigned the mastership of Corpus Christi, and in 1725 became the first dean of the revived order of the Bath. He died on 17 May 1731, at the deanery of Westminster, and was buried in the abbey.

Bradford's wife, who survived him, was a daughter of Captain Ellis of Medbourne in Leicestershire, and bore him one son and two daughters. One of the latter was married to Dr. Reuben Clarke, archdeacon of Essex, and the other to Dr. John Denne, archdeacon of Rochester. His son, the Rev. William Bradford, died on 15 July 1728, aged thirty-two, when he was archdeacon of Rochester and vicar of Newcastle-on-Tyne.

Bradford published more than a score of separate sermons. One of these—a 'Discourse concerning Baptismal and Spiritual Regeneration,' 2nd ed., 8vo, London, 1709—attained a singular popularity. A ninth edition was published in 1819 by the Society for Promoting Christian Knowledge.

[Graduati Cantab. 1787; Gent. Mag. May 1731; Chronological Diary, 1731; Birch's Life of Archbishop Tillotson, 1752; History and Antiquities of Rochester, &c., 1817; R. Masters's Hist. Corpus Christi Coll. (Lamb), 1831; Le Neve's Fasti, 1854.] A. H. G.

BRADFORD, Sir THOMAS (1777–1853), general, was the eldest son of Thomas Bradford of Woodlands, near Doncaster, and Ashdown Park in Sussex, and was born on 1 Dec. 1777. He entered the army as ensign in the 4th regiment on 20 Oct. 1793. He was promoted major into the Nottinghamshire Fencibles, then stationed in Ireland, in 1795. He gave proof of military ability during the Irish rebellion, and in 1801 was promoted brevet lieutenant-colonel, and appointed assistant adjutant-general in Scotland. He was again brought on to the strength of the army as major in 1805, and served with Auchmuty as deputy adjutant-general in 1806 in the expedition to South America. In June 1808 he accompanied the force under Sir Arthur Wellesley to Portugal, and was present at the battles of Vimeiro and Corunna. On his return to England he became assistant adjutant-general at Canterbury, and lieutenant-colonel in succession of the 34th and 82nd regiments in 1809. In 1810 he was promoted colonel, and took the command of a brigade in the Portuguese army. He proved himself one of the most successful Portuguese brigadiers, and at the attack on the Arapiles in the battle of Salamanca Bradford's brigade showed itself worthy of a place beside the British army. In 1813 he was promoted major-general, and made a mariscal de campo in the Portuguese service, receiving the command of a Portuguese division. He commanded this division at Vittoria, at the siege of San Sebastian, and in the battle of the Nive. At the battle before Bayonne he was so severely wounded that he had to return to England.

In 1814 he was placed on the staff of the northern district, and made K.C.B. and K.T.S.; but he missed the battle of Waterloo, at which his younger brother, Lieutenant-colonel Sir Henry Holles Bradford, K.C.B., who had also been a staff officer in the Peninsula, was killed. He commanded the seventh division of the army of occupation in France from 1815 to 1817, and the troops in Scotland from 1819 till he was promoted lieutenant-general in May 1825, and was then appointed commander-in-chief of the troops in the Bombay presidency. He held this command for four years. He was colonel 94th regiment 1823–9, and on his return to England in 1829 became colonel 30th regiment (till 1846). In 1831 he was made G.C.H., in 1838 G.C.B., in 1841 he was promoted general, and in 1846 exchanged the colonelcy of the 38th for that of the 4th regiment. He died in London on 28 Nov. 1853, aged 75.

[Royal Military Calendar; obituary notices in the Times, Gent. Mag., and Colburn's United Service Magazine.] H. M. S.

BRADFORD, WILLIAM (1590–1657), second governor of Plymouth, New England, and one of the founders of the colony, was born in a small village on the southern border of Yorkshire. The name of the village is in Mather's 'Magnalia,' the chief authority on his early life, wrongly printed Austerfield, and was first identified as Austerfield by Joseph Hunter (*Collections concerning the Early History of the Founders of New England*). William was the eldest son and third child of William Bradford and Alice, daughter of John Hanson, and according to the entry still to be found in the parish register was baptised 19 March 1589–90. The family held the rank of yeomen, and in 1575 his two grandfathers, William Bradford and John Hanson, were the only persons of property in the township. On the death of his father, on 15 July 1591, he was left, according to Mather, with 'a comfortable inheritance,' and 'was cast on the education, first of his grandparents and then of his uncles, who devoted him, like his ancestors, unto the affairs of husbandry.' He is said to have had serious impressions of religion at the age of twelve

or thirteen, and shortly afterwards began to attend the ministry of the Rev. Mr. Clifton, puritan rector of Babworth. Notwithstanding the strong opposition of his relations and the scoffs of his neighbours, he joined the company of puritan separatists, or Brownists, who first met at the house of William Brewster [q. v.] at Scrooby, Nottinghamshire, in 1606, and were presided over by Clifton. The community within a short period obtained considerable accessions, but, being threatened with persecution, resolved to remove to Holland. Bradford, along with the principal members of the party, entered into negotiations with a Dutch captain who agreed to embark them at Boston, but betrayed their intention to the magistrates, who sent some of them to prison, and compelled others to return to their homes. Bradford after several months' imprisonment succeeded, in the spring of the following year, in reaching Zealand, and joining his friends in Amsterdam, he became apprenticed to a French protestant who was engaged in the manufacture of silk. On coming of age he converted his estate in England into money, and entered into business on his own account, in which he is said to have been somewhat unsuccessful. About 1609 he removed with the community to Leyden, and when, actuated by a desire to live as Englishmen under English rule, they resolved to emigrate to some English colony, he was among the most zealous and active in the promotion of the enterprise. Their choice lay between Guinea and New England, and was finally decided in favour of the latter. By the assistance of Sir Edwin Sandys, treasurer, and afterwards governor of Virginia, a patent was granted them for a tract of country within that colony, and on 5 Sept. 1620 Bradford, with the first company of 'Pilgrim Fathers,' numbering in all a hundred men, women, and children, embarked for their destination in the Mayflower at Southampton. By stress of weather they were prevented landing within the territory of the Virginia Company, and finding themselves in a region beyond the patent, they drew up and signed a compact of government before landing at the harbour of Plymouth—already so named in Smith's map of 1616. Under this compact Carver was chosen the first governor, and on his death on 21 April 1621 the choice fell upon Bradford, who was elected every year continuously, with the exception of two intervals respectively of three years and two years at his own special request. This fact sufficiently indicates his paramount influence in the colony, an influence due both to the unselfishness and gentleness of his nature, and to his great practical abilities as a governor. Indeed, it was chiefly owing to his energy and forethought that the colony at the most critical period of its history was not visited by overwhelming disaster. Among the earliest acts of his administration was to send an embassy to confirm a league with the Indian sachem of Masassoit, who was revered by all the natives from Narragansett Bay to that of Massachusetts. Notwithstanding his friendship it was found necessary in 1622, on account of the threats of the sachem of Narragansett, to fortify the town, but no attack was made. Another plot entered into among certain chiefs to exterminate the English was, through the sachem of Masassoit, disclosed to Bradford, and on the advice of the sachem the ringleaders were seized and put to death. The friendship of the Indians, necessary as it was in itself, was also of the highest advantage on account of the threatened extinction of the colony by famine. The constant arrival of new colonists frequently reduced them almost to the starving point. The scarcity was increased by the early attempts at communism, and it was not till after an agreement that each family should plant for themselves on such ground as should be assigned them by lot, that they were relieved from the necessity of increasing their supplies of provisions by traffic with the Indians.

In 1629 a patent was obtained from the council of New England, vesting the colony in trust in William Bradford, his heirs, associates, and assigns, confirming their title to a certain tract of land, and conferring the power to frame a constitution and laws. In framing their laws, the model adopted by the colonists was primarily and principally the 'ancient platform of God's law,' and secondly the laws of England. At first the whole body of freemen assembled for legislative, executive, and judicial business, but in 1634 the governor and his assistants were constituted a judicial court, and afterwards the supreme judiciary. The first assembly of representatives met in 1639, and in the following year Governor Bradford, at their request, surrendered the patent into the hands of the general court, reserving to himself only his proportion as settler by previous agreement. He died on 9 May 1657. His first wife, Dorothy May, whom he married at Leyden on 20 Nov. 1613, was drowned at Cape Cod harbour on 7 Dec. 1620, and on 14 Aug. 1623 he married Alice Carpenter, widow of Edward Southworth, a lady with whom he had been previously acquainted in England, and who, at his request, had arrived in the colony with the view of being married to him. By his first marriage he had one son, and by his second two sons and a

daughter. His son William, by the second marriage (born on 17 June 1624, died on 20 Feb. 1703-4), was deputy-governor of the colony, and attained high distinction during the wars with the Indians.

Though not enjoying special educational advantages in early life, Bradford possessed more literary culture than was common among those of similar occupation to himself. He had some knowledge of Latin and Greek, and knew sufficient Hebrew to enable him to 'see with his own eyes the ancient oracles of God in their native beauty.' He was also well read in history and philosophy, and an adept in the theological discussion peculiar to the time. He employed much of his leisure in literary composition, but the only work of his which appeared in his lifetime was 'A Diary of Occurrences' during the first year of the colony, from their landing at Cape Cod on 9 Nov. 1620 to 18 Dec. 1621. This book, written in conjunction with Edward Winslow, was printed at London in 1622, with a preface signed by G. Mourt. The manuscripts he left behind him are thus referred to in a clause of his will: 'I commend unto your wisdom and discretion some small books written by my own hand, to be improved as you shall see meet. In special I commend to you a little book with a black cover, wherein there is a word to Plymouth, a word to Boston, and a word to New England.' These books are all written in verse, and in the Cabinet of the Historical Society of Massachusetts there is a transcript copy of these verses which bears date 1657. It contains (1) 'Some observations of God's merciful dealings with us in this wilderness,' published first in a fragmentary form in 1794 in vol. iii. 1st series, pp. 77–84, of the 'Collections of the Massachusetts Historical Society,' by Belknap, among whose papers the fragment of the original manuscript was found, and in 1858 presented to the society; published in complete form in the 'Proceedings' of the society, 1869–70, pp. 465–78; (2) 'A Word to Plymouth,' first published in 'Proceedings,' 1869–70, pp. 478–82; (3) and (4) 'Of Boston in New England,' and 'A Word to New England,' published in 1838 in vol. vii., 3rd series of the 'Collections;' (5) 'Epitaphium Meum,' published in Morton's 'Memorial,' pp. 264–5 of Davis's edition; and (6) a long piece in verse on the religious sects of New England, which has never been published. In 1841 Alexander Young published 'Chronicles of the Pilgrim Fathers of the Colony of Plymouth from 1602 to 1625,' containing, in addition to other tracts, the following writings belonging to Bradford: (1) A fragment of his 'History of the Plymouth Plantation,' including the history of the community before its removal to Holland down to 1620, when it set sail for America, printed from a manuscript in the records of the First Church, Plymouth, in the handwriting of Secretary Morton, with the inscription, 'This was originally penned by Mr. Wm. Bradford, governor of New Plymouth;' (2) the 'Diary of Occurrences' referred to above, first printed 1622, again in an abridged form by Purchas 1625, in the fourth volume of his 'Pilgrims,' thus reprinted 1802 in vol. viii. of the Massachusetts Historical Society 'Collections,' and the portions omitted in the abridgment reprinted with a number of errors in vol. xix. of the 'Collections,' from a manuscript copy of the original made at Philadelphia; (3) 'A Dialogue or the Sum of a Conference between some young men born in New England and sundry ancient men that came out of Holland and Old England,' 1648, printed from a complete copy in the records of the First Church, Plymouth, into which it was copied by Secretary Morton, but existing also in a fragmentary form in the handwriting of Bradford in the Cabinet of the Massachusetts Historical Society; (4) a 'Memoir of Elder Brewster,' also copied by Morton from the original manuscript into the church records; (5) a fragment of Bradford's letter-book, containing letters to him, rescued from a grocer's shop in Halifax, the earlier and more valuable part having been destroyed. Bradford was the author of two other dialogues or conferences, of which the second has apparently perished, but the third, 'concerning the church and government thereof,' having the date 1652, was found in 1826 among some old papers taken from the remains of Mr. Prince's collection, belonging to the old South Church of Boston, and published in the 'Proceedings' of the Massachusetts Historical Society, 1869–70, pp. 406–64. Copies of several of his letters were published in the 'Collections' of the Massachusetts Historical Society, vol. iii. 1st series, pp. 27–77, and his letters to John Winthrop in vol. vi. 4th series, pp. 156–61. The manuscripts of Bradford were made use of by Morton, Prince, and Hutchinson for their historical works, and are the principal authorities for the early history of the colony. Besides the manuscripts already mentioned, they had access to a connected 'History of the Plymouth Plantation,' by Bradford, which at one time existed in Bradford's own handwriting in the New England Library, but was supposed to have been lost during the war with England. In Anderson's 'History of the Colonial Church,' published in 1848, the manuscript was referred to as 'now in the

possession of the Bishop of London,' but the statement not having come under the notice of any one in New England interested in the matter, it was not till 1855 that certain paragraphs in a 'History of the Protestant Episcopal Church of America,' by Samuel Wilberforce, published in 1846, professedly quoted from a 'MS. History of Plymouth in the Fulham Library,' led to its identification. These paragraphs were shown by J. W. Thornton to the Rev. Mr. Barry, author of 'The History of Massachusetts,' who brought them under the notice of Sam. G. Drake, by whom they were at once identified with certain passages from Bradford's 'History,' quoted by the earlier historians. On inquiry in England the surmise was confirmed, and a copy having been made from the MS. in Bradford's handwriting in the Fulham Library, it was published in vol. iii. (1856) of the 4th series of the 'Collections' of the Mass. Hist. Soc. The MS. is supposed to have been taken to England in 1774 by Governor Hutchinson, who is the last person in America known to have possessed it. In 1897 the MS. was presented through the United States Government by the Bishop of London to the city of Boston. A photographic facsimile of the Fulham MS., with an introduction by J. A. Doyle, was issued in 1897.

BRADFORD, WILLIAM (1663–1752), the first printer in Pennsylvania, was the son of William and Anne Bradford of Leicestershire, where the family had held a good position for several generations. He is usually said to have been born in 1658, and on his tombstone the date is 1660, but both dates are contradicted by the 'American Almanac' for 1739, printed by himself, where, under the month of May, the following entry appears: 'The *printer* born the 20th, 1663.' He learned his art in the office of Andrew Sowles, Gracechurch Street, London. Sowles was an intimate friend of William Penn and George Fox, and his daughter Elizabeth married Bradford. It says much for the enlightened forethought of Penn that he induced Bradford to accompany him in his first voyage to Pennsylvania, on which he sailed 1 Sept. 1682. Bradford returned to London, but he set out again in 1685, hoping to embrace within his operations the whole of the middle colonies. In 1692 he was printing for Pennsylvania, New York, New Jersey, and Rhode Island, and in 1702 also for Maryland. The earliest issue from his press is an almanac for 1686 (printed in 1685), entitled 'America's Messenger,' of which there is a copy in the Quakers' Library, London. In 1686, along with some Germans of the name of Rittenhouse, he erected on the Wissahickon, near Philadelphia, the first paper-mill ever established in America. Apart from almanacs his first publication was in 1688, a volume entitled 'The Temple of Wisdom,' which included the essays and religious meditations of Francis Bacon. Of this book there is a copy in the Quakers' Library, London. The honour of being the first to propose the printing of the Bible in America is usually assigned to Cotton Mather, but in 1688, seven years before Mather, Bradford had entered upon the project of printing a copy of the Holy Scriptures with marginal notes, and with the Book of Common Prayer. In 1689 he was summoned before the governor and council of Pennsylvania for printing the charter. During the disputes in the colony caused by the proceedings of George Keith, Bradford, who sided with Keith, was arrested for publishing the writings of Keith and Budd, and his press, type, and instruments were seized. Not only, however, were they restored to him by Fletcher, governor of New York, during his temporary administration of Pennsylvania, but at the instance of Fletcher he went to New York, where, on 12 Oct. 1693, he was appointed royal printer at a salary of 40*l.*, which was raised in 1696 to 60*l.*, and in 1702 to 75*l.* In 1703 he was chosen deacon of Trinity Church, New York, from which he received 30*l.* on bond, to enable him to print the Common Prayer and version of the Psalms, and when the enterprise did not pay the bond was returned to him. In 1725 he began the publication of the 'New York Gazette,' the first newspaper published in New York, which he edited until his eightieth year. He was also appointed king's printer for New Jersey, as appears from the earliest copy of the laws of that state printed in 1717. He died on 22 May 1752 at the age of eighty-nine. He was buried in the grounds of Trinity Church, New York, where there is a monument to his memory. His character

is thus summed up in the 'New York Gazette' of 25 May 1752: 'He was a man of great sobriety and industry, a real friend to the poor and needy, and kind and affable to all. He was a true Englishman. His temperance was exceedingly conspicuous, and he was a stranger to sickness all his life.'

[New York Gazette, 25 May 1752; New York Historical Magazine, iii. 171–76 (containing catalogue of works printed by him), vii. 201–11; Simpson's Lives of Eminent Philadelphians, 1859, pp. 124–9; Penington's An Apostate exposed, or George Keith contradicting himself and his brother Bradford, 1695; the Tryals of Peter Boss, George Keith, Thomas Budd, and Wm. Bradford, Quakers, for several great misdemeanours (as was pretended by their adversaries) before a Court of Quakers, at the Session held at Philadelphia, in Pennsylvania, 9th, 10th, and 12th day of December 1692, printed first beyond the sea, and now reprinted in London for Rich. Baldwin, in Warwick Lane, 1693.]

T. F. H.

BRADICK, WALTER (1706-1794), a merchant at Lisbon, was ruined by the earthquake which destroyed that city in 1755. Returning to England he had the further misfortune to lose his eyesight, and in 1774, on the nomination of the queen, he was admitted to the Charterhouse, where he died on 19 Dec. 1794. He published, 1765, 'Choheleth, or the Royal Preacher,' a poem, and he was the author of 'several detached publications.' A contemporary record of his death affirms that 'Choheleth' 'will be a lasting testimony to his abilities,' but it may be doubted whether the work is now extant.

[Information from Master of Charterhouse; Gent. Mag. lxv. pt. i. 83.] J. M. S.

BRADLEY, CHARLES (1789–1871), eminent as a preacher and writer of sermons published between 1818 and 1853, belonged to the evangelical school of the church of England. He was born at Halstead, Essex, in February 1789. His parents, Thomas and Ann Bradley, were both of Yorkshire origin, but settled in Wallingford, where their son Charles, the elder of two sons, passed the greater part of the first twenty-five years of his life. He married, in 1810, Catherine Shepherd of Yattenden, took pupils and edited several school books, one or two of which are still in use. He was, for a time after his marriage, a member of St. Edmund Hall, Oxford, but was ordained on reaching the age of 23, without proceeding to a degree, and in 1812 became curate of High Wycombe. Here for many years he combined the work of a private tutor with the sole charge of a large parish. Among his pupils were the late Mr. Smith O'Brien, the leader for a short time of the so-called national party in Ireland; Mr. Bonamy Price, professor of political economy in the university of Oxford; and Archdeacon Jacob, well known for more than half a century in the diocese and city of Winchester. His powers as a preacher soon attracted attention. He formed the acquaintance of William Wilberforce, Thomas Scott, the commentator, Daniel Wilson, and others; and a volume of sermons, published in 1818 with a singularly felicitous dedication to Lord Liverpool, followed by a second edition in 1820, had a wide circulation. The sixth edition was published in 1824, the eleventh in 1854.

In the year 1825 he was presented by Bishop Ryder (then bishop of St. Davids, afterwards of Lichfield) to the vicarage of Glasbury in Brecknockshire. Here a volume of sermons was published in 1825, which reached a ninth edition in 1854. He retained the living of Glasbury till his death, but in the year 1829 became the first incumbent of St. James's Chapel at Clapham in Surrey, where he resided, with some periods of absence, till 1852.

By this time his reputation as a preacher was fully established. His striking face and figure and dignified and impressive delivery added to the effect produced by the substance and style of his sermons, which were prepared and written with unusual care and thought. A volume of sermons published in 1831, followed by two volumes of 'Practical Sermons' in 1836 and 1838, by 'Sacramental Sermons' in 1842, and 'Sermons on the Christian Life' in 1853, had for many years an exceedingly large circulation, and were widely preached in other pulpits than his own, not only in England and Wales, but in Scotland and America. Of late years their sale greatly declined, but the interest taken in them has revived, and a volume of selections was published in 1884.

Quite apart from the character of their contents, as enforcing the practical and speculative side of Christianity from the point of view of the earlier leaders of the evangelical party in the church of England, the literary merits of Bradley's sermons will probably give them a lasting place in literature of the kind. No one can read them without being struck by their singular simplicity and force, and at the same time by the sustained dignity and purity of the language.

Bradley was the father of a numerous family. By his first wife, who died in 1831, he had thirteen children, of whom twelve survived him. The eldest of six sons was

the Rev. C. Bradley of Southgate, well known in educational circles. The 4th, George Granville, was dean of Westminster 1881 to 1902, having been previously master of University College, Oxford, and head-master of Marlborough College. By his second marriage in 1840 with Emma, daughter of Mr. John Linton, he also left a large family, one of whom, Herbert Bradley, fellow of Merton College, Oxford, wrote on ethics and logic; another, Andrew Cecil, was fellow of Balliol, and professor of English literature at Liverpool and Glasgow successively. Bradley spent the last period of his life at Cheltenham, where he died Aug. 1871.

[Personal knowledge.] G. G. B.

BRADLEY, GEORGE (1816-1863), journalist, was born at Whitby in Yorkshire in 1816, and apprenticed to a firm of printers in his native town. After being for several years a reporter on the 'York Herald' he was appointed editor of the 'Sunderland and Durham County Herald,' and about 1848 he became editor and one of the proprietors of the 'Newcastle Guardian.' He resided at Newcastle until his death on 14 Oct. 1863, being greatly respected, and for a considerable period an influential member of the town council. Bradley published 'A Concise and Practical System of Short-hand Writing, with a brief History of the Progress of the Art. Illustrated by sixteen engraved lessons and exercises,' London, 1843, 12mo. The system is a variation of Dr. Mavor's.

[Whitby Times, 23 Oct. 1863; Rockwell's Teaching, Practice, and Literature of Shorthand, 70.] T. C.

BRADLEY, JAMES (1693-1762), astronomer-royal, was the third son of William Bradley, a descendant of a family seated at Bradley Castle, county Durham, from the fourteenth century, by his marriage, in 1678, with Jane Pound of Bishop's Canning in Wiltshire. He was born at Sherbourn in Gloucestershire, probably in the end of March 1693, but the date is not precisely ascertainable. He was educated at the Northleach grammar school, and was admitted as a commoner to Balliol College, Oxford, 15 March 1711, when in his eighteenth year, proceeding B.A. 15 Oct. 1714, and M.A. 21 June 1717. His university career had little share in moulding his genius. His uncle, the Rev. James Pound, rector of Wanstead in Essex, was at that time one of the best astronomical observers in England. A warm attachment sprang up between him and his nephew. He nursed him through the small-pox in 1717; he reinforced the scanty supplies drawn from a somewhat straitened home; above all, he discerned and cultivated his extraordinary talents. Bradley quickly acquired all his instructor's skill and more than his ardour. Every spare moment was devoted to co-operation with him. His handwriting appears in the Wanstead books from 1715, and the journals of the Royal Society notice a communication from him regarding the aurora of 6 March 1716. He was formally introduced to the learned world by Halley, who, in publishing his observation of an appulse of Palilicium to the moon, 5 Dec. 1717, prophetically described him as 'eruditus juvenis, qui simul industria et ingenio pollens his studiis promovendis aptissimus natus est' (*Phil. Trans.* xxx. 853). The skill with which he and Pound together deduced from the opposition of Mars in 1719 a solar parallax between 9″ and 12″, was praised by the same authority (*ib.* xxxi. 114), who again imparted to the Royal Society 'some very curious observations' made by Bradley on Mars in October 1721, implying a parallax for the sun of less than 10″ (*Journal Books R. Soc.* 16 Nov. 1721). The entry of one of these states that 'the 15-feet tube was moved by a machine that made it to keep pace with the stars' (BRADLEY, *Miscellaneous Works*, p. 350), a remarkably early attempt at giving automatic movement to a telescope.

Doubtless with the view of investigating annual parallax, Bradley noted the relative positions of the component stars of γ Virginis, 12 March 1718, and of Castor, 30 March 1719 and 1 Oct. 1722. A repetition of this latter observation about 1759 brought the discovery of their orbital revolution almost within his grasp, and, transmitted by Maskelyne to Herschel, served to confirm and correct its theory (*Phil. Trans.* xciii. 363).

Bradley's first sustained research, however, was concerned with the Jovian system. He early began to calculate the tabular errors of each eclipse observed, and the collation of older observations with his own afforded him the discovery that the irregularities of the three inner satellites (rightly attributed to their mutual attraction) recur in the same order after 437 days. His 'Corrected Tables' were finished in 1718, but, though printed in the following year with Halley's 'Planetary Tables,' remained unpublished until 1749, by which time they had become obsolete. The appended 'Remarks' (*Works*, p. 81), describing the 437-day cycle, are stated by the minutes to have been read before the Royal Society 2 July 1719. Bradley was then already a fellow; he was elected 6 Nov. 1718, on the motion of Halley, and under the presidential sanction of Newton.

The choice of a profession meantime be-

came imperative. He had been brought up to the church, and in 1719 Hoadly, bishop of Hereford, presented him to the vicarage of Bridstow. On this title, accordingly, he was ordained deacon at St. Paul's, 24 May, and priest, 25 July, 1719. Early in 1720 the sinecure rectory of Llandewi-Velfry in Pembrokeshire was procured for him by his friend Samuel Molyneux, secretary to the Prince of Wales, and he also became chaplain to the bishop of Hereford. His prospects of promotion were thus considerable, but he continued to frequent Wanstead, and took an early opportunity of extricating himself from a position in which his duties were at variance with his inclinations. The Savilian chair of astronomy at Oxford became vacant by the death of Keill in August 1721. Bradley was elected to fill it 31 Oct., and, immediately resigning his preferments, found himself free to follow his bent on an income which amounted in 1724 to 138*l.* 5*s.* 9*d.* He read his inaugural lecture 26 April 1722.

In 1723 we find him assisting his uncle in experiments upon Hadley's new reflector (*Phil. Trans.* xxxii. 382); and Hadley's example and instructions encouraged him, about the same time, to attempt the grinding of specula (Smith, *A Compleat System of Opticks*, ii. 302). In this he was only partially successful, though his mechanical skill sufficed at all times for the repair and adjustment of his instruments. His observations and elements of a comet discovered by Halley 9 Oct. 1723 formed the subject of his first paper in 'Philosophical Transactions' (xxxiii. 41; see Newton's *Principia*, 3rd edit. lib. iii. prop. 42, p. 523, 1726). Bradley was the first successor of Halley in the then laborious task of computing the orbits of comets. He published parabolic elements for those of 1737 and 1757 (*Phil. Trans.* xl. iii, l. 408), and by his communication to Lemonnier of the orbit of, and process of calculation applied to, the comet of 1742, knowledge of his method became diffused abroad.

By the death of Pound, which took place 16 Nov. 1724, he lost 'a relation to whom he was dear, even more than by the ties of blood.' He continued, however, to observe with his instruments, and to reside with his widow (visiting Oxford only for the delivery of his lectures) in a small house in the town of Wanstead memorable as the scene of his chief discoveries. On 26 Nov. 1725, a 24½-foot telescope by Graham was fixed in the direction of the zenith at the house of Mr. Samuel Molyneux on Kew Green. It had been resolved by him and Bradley to subject Hooke's supposed detection of a large parallax for γ Draconis to a searching inquiry, and the first observation for the purpose was made by Molyneux at noon 3 Dec. 1725. It was repeated by Bradley, 'chiefly through curiosity,' 17 Dec., when, to his surprise, he found the star pass a little more to the southward. This unexpected change, which was in the opposite direction to what could have been produced by parallax, continued, in spite of every precaution against error, at the rate of about 1″ in three days; and at the end of a year's observation the star had completed an oscillation 39″ in extent.

Meanwhile an explanation was vainly sought of this enigmatical movement, perceived to be shared, in degrees varying with their latitude, by other stars. A nutation of the earth's axis was first thought of, and a test star, or 'anti-Draco,' on the opposite side of the pole (35 Camelopardi) was watched from 7 Jan. 1726; but the *quantity* of its motion was insufficient to support that hypothesis. The friends next considered 'what refraction might do,' on the supposition of an annual change of figure in the earth's atmosphere through the action of a resisting medium; this too was discarded on closer examination. Bradley now resolved to procure an instrument of his own, and, 19 Aug. 1727, a zenith-sector of 12½ feet radius, and 12½° range, was mounted for him by Graham in the upper part of his aunt's house. Thenceforth he trusted entirely to the Wanstead results. A year's assiduous use of this instrument gave him a set of empirical rules for the annual apparent motions of stars in various parts of the sky; but he had almost despaired of being able to account for them, when an unexpected illumination fell upon him. Accompanying a pleasure party in a sail on the Thames one day about September 1728, he noticed that the wind seemed to shift each time that the boat put about, and a question put to the boatman brought the (to him) significant reply that the changes in direction of the vane at the top of the mast were merely due to changes in the boat's course, the wind remaining steady throughout. This was the clue he needed. He divined at once that the progressive transmission of light, combined with the advance of the earth in its orbit, must cause an annual shifting of the *direction* in which the heavenly bodies are seen, by an amount depending upon the ratio of the two velocities. Working out the problem in detail, he found that the consequences agreed perfectly with the rules already deduced from observation, and announced his memorable discovery of the 'aberration of light' in the form of a letter to Halley, read before the Royal Society 9 and 16 Jan. 1729 (*Phil. Trans.* xxxv. 637).

Never was a more minutely satisfactory

explanation offered of a highly complex phenomenon. It was never disputed, and has scarcely been corrected. Bradley found the 'constant' of aberration to be 20·25″ (reducing it, however, in 1748 to 20″). Struve fixed it at 20·445″. Bradley concluded, from the amount of aberration, the velocity of light to be such as to bring it from the sun to the earth in $8^m\ 13^s$, although Roemer had, from actual observation, estimated the interval at 11^m. The best recent determination (Glasenapp's) of the 'light equation' is $8^m\ 21^s$. Bradley's demonstration of his rules for aberration remained unpublished till 1832 (*Works*, p. 287). He observed only the effects in declination; but his theory was verified as regards right ascension also, by Eustachio Manfredi at Bologna in 1729. The subject was fully investigated by Clairaut in 1737 (*Mém. de l'Ac.* 1737, p. 205). An important secondary inference from the Wanstead observations was that of the vast distances of even the brighter stars. Bradley stated decisively that the parallax neither of γ Draconis nor of η Ursæ Majoris reached 1″, and believed that he should have detected half that quantity (*Phil. Trans.* xxxv. 660. *Double* parallaxes are there spoken of). This well-grounded assurance shows an extraordinary advance in exactness of observation.

Bradley succeeded Whiteside as lecturer on experimental philosophy at Oxford in 1729, and resigned the post in 1760, after the close of his seventy-ninth course. There was no endowment, Lord Crewe's benefaction of 30*l.* per annum becoming payable only in 1749; but fees of three guineas a course, with an average attendance of fifty-seven, produced emoluments sufficient for his wants. His lectures were delivered in the Ashmolean Museum, of which he vainly sought the keepership in 1731. In 1732 he took a share in a trial at sea of Hadley's sextants, and wrote a letter warmly commendatory of the invention (*Works*, p. 505). His removal to Oxford occurred in May of the same year, when he occupied a house in New College Lane attached to his professorship. His aunt, Mrs. Pound, accompanied him, with two of her nephews, and lived with him there five years. He transported thither most of his instruments, but left Graham's sector undisturbed. An important investigation was in progress by its means, for the purposes of which he made during the next fifteen years periodical visits to Wanstead.

It is certain that Halley desired to have Bradley for his successor, and it is even said that he offered to resign in his favour. But death anticipated his project, 14 Jan. 1742. Through the urgent representations of George, earl of Macclesfield, who quoted to Lord-chancellor Hardwicke Newton's dictum that he was 'the best astronomer in Europe,' Bradley was appointed astronomer-royal 3 Feb. 1742. The honour of a degree of D.D. was conferred upon him by diploma at Oxford 22 Feb., and in June he went to live at Greenwich. His first care was to remedy, so far as possible, the miserable state of the instruments, and to procure an assistant in the person of John Bradley, son of his eldest brother, who, at a stipend of 26*l.*, diligently carried out his instructions during fourteen years, and was replaced successively by Mason and Green.

With untiring and well-directed zeal Bradley laboured at the duties of his new office. He took his first transit at Greenwich 25 July 1742, and by the end of the year 1500 had been entered. The work done in 1743 was enormous. The records of observations with the transit instrument fill 177, with the quadrant 148 folio pages. On 8 Aug. 255 determinations of the former, 181 of the latter kind were made. His efforts towards a higher degree of accuracy were unceasing and successful; yet he never possessed an achromatic telescope. He recognised it as the first duty of an astronomer to make himself acquainted with the peculiar defects of his instruments, and was indefatigable in testing and improving them. By the addition of a finer micrometer screw, 18 July 1745, he succeeded in measuring intervals of half a second with the eight-foot quadrant erected by Graham for Halley, but was deterred from attempting further refinements by discovering it a year later to be sensibly eccentric. At various times between 1743 and 1749 he made experiments on the length of the seconds pendulum, giving the most accurate result previous to Kater's in 1818. The great comet of 1743 was first seen at Greenwich 26 Dec., and was observed there until 17 Feb. 1744. Bradley roughly computed its trajectory, but went no further, it is conjectured, out of kindness towards young Betts, who had the ambition to try his hand on it. He also observed the first comet of 1748, and calculated that of 1707. His observations of Halley's comet in 1759 have for the most part perished.

The time was now ripe for the publication of his second great discovery. From the first the Wanstead observations had shown the displacements due to aberration to be attended by a 'residual phenomenon.' A slight progressive inequality was detected, occasioning in stars near the equinoctial colures an excess, in those near the solstitial colures a defect of movement in declination, as compared with that required by a precession of

50″. The true explanation in a 'nodding' movement of the axis, due to the moon's unequal action upon the equatorial parts of the earth, was more than suspected early in 1732; but Bradley did not consider the proof complete until he had tracked each star through an entire revolution of the moon's nodes (18·6 years) back to its mean place (allowance being made for annual precession). In September 1747 he was at length fully satisfied of the correspondence of his hypothesis with facts; and 14 Feb. 1748 a letter to the Earl of Macclesfield, in which he set forth the upshot of his twenty years' watching and waiting, was read before the Royal Society (*Phil. Trans.* xlv. 1). The idea of a possible nutation of the earth's axis was not unfamiliar to astronomers; and Newton had predicted the occurrence of a semi-annual, but scarcely sensible, effect of the kind. A phenomenon such as Bradley detected, however, depending on the position of the lunar orbit, was unthought of until its necessity became evident with the fact of its existence. The complete development of its theory went beyond his mathematical powers, and he invited assistance, promptly rendered by D'Alembert in 1749. Bradley's coefficient of nutation (9″) has proved nearly a quarter of a second too small. He might probably have gone even nearer to the truth had he trusted more implicitly to his own observations. His confidence was, however, embarrassed by the proper motions of the stars, the ascertainment of which he, with his usual clear insight into the conditions of exact astronomy, urged upon well-provided observers; while his sagacious hint that they might be mere optical effects of a real translation of the solar system (*Phil. Trans.* xlv. 40) gave the first opening for a scientific treatment of that remarkable subject.

As regards nutation, the novelty of his announcement had been somewhat taken off by previous disclosures. On his return from Lapland, Maupertuis consulted him as to the reduction of his observations, when Bradley imparted to him, 27 Oct. 1737, his incipient discovery. Maupertuis was not bound to secrecy, nor did he observe it. He transmitted the information to the Paris Academy (*Mém. de l'Ac.* 1737, p. 411), while Lalande published in 1745 (*ib.* 1745, p. 512) the confirmatory results of observations undertaken at Bradley's suggestion.

The discovery of aberration earned for its author, 14 Dec. 1730, exemption on the part of the Royal Society from all future payments; that of nutation was honoured in 1748 with the Copley medal. His heightened reputation further enabled him to ask and obtain a new instrumental outfit for the Royal Observatory. He took advantage of the annual visitation by members of the Royal Society to represent its absolute necessity; and a petition drawn up by him and signed by the president and members of council in August 1748 produced an order for 1,000*l.* under the sign-manual, paid, as a note in Bradley's handwriting informs us, by the treasurer of the navy out of the proceeds of the sale of old stores. The wise expenditure of this paltry sum laid the firm foundation of modern practical astronomy. Bradley was fortunate in the co-operation of John Bird. The eight-foot mural quadrant, for which he paid him 300*l.*, was an instrument not unworthy the eye and hand that were to use it. He had also from him a movable quadrant forty inches in radius, and a transit-instrument of eight-feet focal length. From Short a six-foot reflector was ordered, but not delivered until much later; and 20*l.* was paid for a magnetic apparatus, changes in dip and variation having been objects of attention to Bradley as early as 1729. For the Wanstead sector, removed to Greenwich in July 1749, 45*l.* was allowed to him.

The first employment of Bird's quadrant was in a series of observations, 10 Aug. 1750 to 31 July 1753, for the purpose of determining the latitude of the observatory and the laws of refraction. Simultaneously with Lacaille and Mayer, Bradley introduced the improvement of correcting these for barometrical and thermometrical fluctuations. His formula for computing mean refraction at any altitude closely represented the actual amounts down to within 10° of the horizon (Grant, *Hist. Phys. Astr.* pp. 329–30). After its publication by Maskelyne in 1763, it was generally adopted in England, and was in use at Greenwich down to 1833.

In 1751 Bradley made observations for determining the distances of the sun and moon in concert with those of Lacaille at the Cape of Good Hope (*Mém. de l'Ac.* 1752, p. 424). From the combined results for Mars, Delisle deduced a solar parallax of 10·3″ (Bradley, *Misc. Works*, p. 481). A series of 230 comparisons with the heavens of Tobias Mayer's 'Lunar Tables,' between December 1755 and February 1756, enabled Bradley to report them to the admiralty as accurate generally within 1′. His hopes of bringing the lunar method of longitudes into actual use were thus revived; and he undertook, aided by Mason, a laborious correction of the remaining errors founded on 1,220 observations. The particulars of these were inserted in the 'Nautical Almanac' for 1774; but the amended tables, completed from

them in 1760, never saw the light, and were superseded by Mayer's own improvements in 1770. The regular work of the observatory, consisting in meridian observations of the sun, moon, planets, and stars, was meanwhile carried on with unremitting diligence and unrivalled skill.

The salary of astronomer-royal was then, as in Flamsteed's time, 100*l.* a year, reduced to 90*l.* by fees at public offices. This pittance was designed to be supplemented by Mr. Pelham's offer to Bradley, in the king's name, of the vicarage of Greenwich; which was, however, refused on the honourable ground of incompatibility of clerical with official obligations. His disinterestedness was compensated by a crown pension of 250*l.* per annum, granted under the privy seal 15 Feb. 1752, and continued to his successors. Honours now fell thickly upon him. From 1725 he had frequently been chosen a member of the council of the Royal Society, and he occupied that position uninterruptedly from 1752 until his death. In July 1746 Euler wrote to announce his admission to the Berlin Academy of Sciences; he was associated to those of Paris and St. Petersburg respectively in 1748 and 1750, and, probably in acknowledgment of his services in superintending the construction of a quadrant by Bird for the latter body, complimented with its full membership in 1754; while the institute of Bologna enrolled his name 16 June 1757. Scarcely an astronomer in Europe but sought a correspondence with him, which he usually declined, being averse to writing, and leaving many letters unanswered.

No direct descendant of Bradley survives. He married, 25 June 1744, Susannah, daughter of Mr. Samuel Peach of Chalford in Gloucestershire. She died in 1757, leaving a daughter, Susannah, born at Greenwich in 1745, who married in 1771 her first cousin, the Rev. Samuel Peach, and had in turn an only daughter, who died childless in 1806. Bradley's intimacy with the Earl of Macclesfield grew closer after his removal to Oxford in 1732. He co-operated with him in the establishment (about 1739) of an observatory at Shirburn Castle, and in the reform of the calendar, calculating the tables appended to the bill for that purpose. Until near the close of his life he continued to reside about three months of each year at Oxford, but resigned his readership through ill-health in 1760. For several years he had felt the approach of an obscure malady in occasional attacks of severe pain. His labours in correcting the lunar tables overtasked his hitherto robust strength, and from 1760 a heavy cloud of depression settled over his spirits, inducing the grievous apprehension of surviving his mental faculties, which remained nevertheless clear to the end. He attended, for the last time, a meeting of the Royal Society 31 Jan. 1761, and drew up a paper of instructions for Mason, on his departure to observe the transit of Venus, the latest astronomical event in which he took an active interest. But already in May he was obliged to ask Bliss to replace him, and when the day of the transit, 6 June 1761, arrived, he was unable to use the telescope. He, however, took a final observation with the transit-instrument in September, after which his handwriting disappears from the Greenwich registers. The few months that remained he spent at Chalford, being much attached to his wife's relations, and there died, in the house of his father-in-law, after a fortnight's acute suffering, 13 July 1762, in his seventieth year, and was buried with his wife and mother at Minchinhampton. His disease proved on examination to be a chronic inflammation of the abdominal viscera. The case was described by Daniel Lysons, M.D., in the 'Philosophical Transactions' (lii. 635).

In character Bradley is described as 'humane, benevolent, and kind; a dutiful son, an indulgent husband, a tender father, and a steady friend' (*Suppl. to New Biog. Dict.*, 1767, p. 58). Many of his poorer relatives experienced his generosity. His life was blameless, his habits abstemious, his temper mild and placid. He was habitually taciturn, but was clear, ready, and open in explaining his opinions to others. No homage could overthrow his modesty or disturb his caution. He was always more apprehensive of injuring his reputation than sanguine of enhancing it, and thus shrank from publicity; polished composition, moreover, was irksome to him. His only elaborate pieces were the accounts of his two leading discoveries; and the preservation of several unfinished drafts of that on aberration affords evidence of toil unrewarded by felicity of expression. Nor had he any taste for abstract mathematics. His great powers were those of sagacity and persistence. He possessed 'a most extraordinary clearness of perception, both mental and organic; great accuracy in the combination of his ideas; and an inexhaustible fund of that "industry and patient thought" to which Newton ascribed his own discoveries' (Rigaud, *Memoirs of Bradley*, p. cv). Less inventive than Kepler, he surpassed him in sobriety and precision. No discrepancy was too minute for his consideration; his scrutiny of possible causes and their consequences was keen, dis-

passionate, and complete; his mental grasp was close and unrelaxing. He ranks as the founder of modern observational astronomy; nor by the example of his 'solicitous accuracy' alone or chiefly, though this was much. But his discoveries of aberration and nutation first rendered possible exact knowledge of the places of the fixed stars, and thereby of the movements of the other celestial bodies. Moreover, he bequeathed to posterity, in his diligent and faithful record of the state of the heavens in his time, a mass of documentary evidence invaluable for the testing of theory, or the elucidation of change.

The publication, for the benefit of his daughter, of his observations, contained in thirteen folio and two quarto volumes, was interrupted by official demands for their possession, followed up by a lawsuit commenced by the crown in 1767, but abandoned in 1776. The Rev. Mr. Peach, Bradley's son-in-law, thereupon offered them to Lord North, to be printed by the Clarendon Press, and after many delays the first of two volumes appeared in 1798, under the editorship of Dr. Hornsby, with the title 'Astronomical Observations made at the Royal Observatory at Greenwich, from the year 1750 to the year 1762;' the second, edited by Dr. Abram Robertson, in 1805. They number about 60,000, and fill close upon 1,000 large folio pages. A sequel to Bradley's work, in the observations of Bliss and Green down to 15 March 1765, was included in the second volume. A catalogue of 387 stars, computed by Mason from Bradley's original manuscripts, and appended to the 'Nautical Almanac' for 1773, formed the basis of a similar work inserted by Hornsby in vol. i. (p. xxxviii); and 1,041 of Bradley's stars, reduced by Pilati, were added to Piazzi's second catalogue (1814). In the hands of Bessel, however, his observations assumed a new value. With extraordinary skill and labour he deduced from them in 1818 a catalogue of 3,222 stars for the epoch 1755, so authentically determined as to afford, by comparison with their later places, a sure criterion of their proper motions. The title of 'Fundamenta Astronomiæ' fitly expressed the importance of this work. More accurate values for precession and refraction were similarly obtained. Bradley's observations of the moon and planets, when reduced by Airy, supplied valuable data for the correction of the theories of those bodies.

Portraits of him are preserved at Oxford (by Hudson), at Shirburn Castle, at Greenwich, and in the rooms of the Royal Society. A dial, erected in 1831 by command of William IV, marks the spot at Kew where he began the observations which led to the discoveries of aberration and nutation. His communications to the Royal Society, besides those already adverted to, were on 'The Longitude of Lisbon and the Fort of New York, from Wanstead and London, determined by Eclipses of the First Satellite of Jupiter' (*Phil. Trans.* xxxiv. 85); and 'An Account of some Observations made in London by Mr. George Graham, and at Black River in Jamaica by Colin Campbell, Esq., concerning the going of a Clock; in order to determine the Difference between the Lengths of Isochronal Pendulums in those Places' (*ib.* xxxviii. 302). His 'Directions for using the Common Micrometer' were published by Maskelyne in 1772 (*ib.* lxii. 46). The originals of Bradley's Greenwich observations having been deposited in the Bodleian, the confused mass of his remaining papers, disinterred by Professor S. P. Rigaud, afforded materials for a large quarto volume, published by him in 1832 at Oxford, with the title 'Miscellaneous Works and Correspondence of James Bradley, D.D., Astronomer-Royal.' It includes, besides the Kew and Wanstead journals, every record of the slightest value in his handwriting, not omitting papers already printed in the 'Philosophical Transactions,' with many letters addressed to him by persons of eminence in England and abroad, and in some cases his replies. The prefixed memoir embodies all that the closest inquiry could gather concerning him. The investigation of his early observations, thus brought to light after nearly a century's oblivion, was made the subject of a prize by the Royal Society of Copenhagen in 1832; whence the publication by Dr. Busch of Königsberg of 'Reduction of the Observations made by Bradley at Kew and Wanstead to determine the Quantities of Aberration and Nutation' (Oxford, 1838).

(Kippis); Fouchy's Eloge, Mém. de l'Ac. des Sciences, 1762, p. 231 (Hist.); same trans. in Annual Reg. 1765, p. 23, and Gent. Mag. xxxv. 361; Delambre's Hist. de l'Astronomie au xviiie siècle, p. 413; Thomson's Hist. of R. Soc. p. 344; Watt's Bibl. Brit.] A. M. C.

BRADLEY, RALPH (1717–1788), conveyancing barrister, was a contemporary of James Booth [q. v.], who has been called the patriarch of modern conveyancing. Bradley was called to the bar by the society of Gray's Inn, and practised at Stockton-on-Tees with great success for upwards of half a century. He is said to have managed the concerns of almost the whole county of Durham, and,

though a provincial counsel, his opinions were everywhere received with the greatest respect. His drafts, like Booth's, were prolix to excess, but some of them were, to a very recent period, in use as precedents in the northern counties. He published (London, 1779) 'An Enquiry into the Nature of Property and Estates as defined by English Law, in which are considered the opinions of Mr. Justice Blackstone and Lord Coke concerning Real Property.' There was also published in 1804 in London 'Practical Points, or Maxims in Conveyancing, drawn from the daily experience of a late eminent conveyancer (Bradley), with critical observations on the various parts of a Deed by J. Ritson.' This was a collection of Bradley's notes on points of practice, and the technical minutiæ of conveyancing as they were suggested in the course of his professional life. Ritson was a contemporary and fellow-townsman of Bradley. The latter by his will left a considerable sum (40,000*l.*) on trust for the purchase of books calculated to promote the interests of religion and virtue in Great Britain and the happiness of mankind. Lord Thurlow, by a decree in chancery, set aside the charitable disposition of Bradley in favour of his next of kin. Bradley died at Stockton-on-Tees on 28 Dec. 1788, and was buried in the parish church of Greatham, where a mural monument was erected to his memory on the north side of the chancel.

[Gent. Mag. vol. lviii. pt. ii. p. 1184; Davidson's Conveyancing, 4th ed. i. 7; Marvin's Legal Bibliograph, p. 141; Surtees's Hist. of Durham, iii. 140.] R. H.

BRADLEY, RICHARD (*d.* 1732), botanist and horticultural writer, was a very popular and voluminous author. His first essays in print were two papers published in the 'Philosophical Transactions' for 1716, on mouldiness in melons, and the motions of the sap. He was elected F.R.S. in 1720, and professor of botany at Cambridge on 10 Nov. 1724, the latter by means of a pretended verbal recommendation from Dr. William Sherard to Dr. Bentley, with pompous assurances that he would found a public botanic garden in the university by his private purse and interest. Very soon after his election the vanity of his promises was seen, and his entire ignorance of Latin and Greek excited great scandal: Dr. Martyn, who afterwards succeeded him, was appointed to read the prescribed courses of lectures, in consequence of Bradley's neglect to do so. In 1729 he gave a course of lectures on 'Materia Medica,' which he afterwards published. In 1731 it is stated that 'he was grown so scandalous that it was in agitation to turn him out of his professorship,' though the details of his delinquency do not appear to be given. He died at Cambridge 5 Nov. 1732.

The use of Bradley's name was paid for by the publishers of a translation of Xenophon's 'Economics' solely on account of his popularity, as he knew nothing of the original language. His botanical publications show acuteness and diligence, and contain indications of much observation in advance of his time.

Adanson, Necker, and Banks, in succession, named genera to commemorate Bradley, but they have not been maintained distinct by succeeding botanists.

His works include: 1. 'Historia plantarum succulentarum, &c.,' London, 1716-27, 5 decades, 4to, reissued together in 1734. 2. 'New Improvements of Planting and Gardening,' London, 1717 (two editions), 8vo, 1731. 3. 'Gentleman's and Farmer's Calendar,' London, 1718, 8vo; French translations (1723, 1743, 1756). 4. 'Virtue and Use of Coffee with regard to the Plague and Contagious Distempers,' London, 1721, 8vo. 5. 'Philosophical Account of the Works of Nature,' London (1721 and 1739), 8vo. 6. 'Plague of Marseilles considered,' London, 1721, 8vo. 7. 'New Experiments and Observations on the Generation of Plants,' 1724, 8vo. 8. 'Treatise of Fallowing,' Edinburgh, 1724, 8vo. 9. 'Survey of Ancient Husbandry and Gardening collected from Cato, Varro, Columella, &c.,' London, 1725, 8vo, and several small treatises on gardening and agriculture. Part II. of Cowell's 'Curious and Profitable Gardener, concerning the great American Aloe,' has been attributed with little reason to Bradley.

'Bradley'; Seguier's Bibl. Bot. 343-6; Haller's Bibl. Bot. ii. 133-7; Pritzel's Thesaurus, p. 31, id. ed. 2, p. 38.] B. D. J.

BRADLEY, THOMAS (1597-1670), divine, a native of Berkshire, states that he was 72 years old in 1669, and was therefore born in 1597. He became a battler of Exeter College, Oxford, in 1616, and proceeded B.A. on 21 July 1620. He was chaplain to the Duke of Buckingham for several years, and accompanied him in the expedition to Rochelle and the Isle of Rhé in 1627. After Buckingham's murder in the following year he became chaplain to Charles I, and on 16 June 1629 a captain in the expedition to France ap-

plied to the council to take Bradley with him as chaplain of his ship (*Cal. State Papers*, Dom. 1628–9, p. 579). Soon afterwards (5 May 1631) Bradley married Frances, the daughter of Sir John Savile, baron Savile of Pontefract, and he was presented by his father-in-law about the same time to the livings of Castleford and Ackworth, near Pontefract. As a staunch royalist, he was created D.D. at Oxford on 20 Dec. 1642, and was expelled a few years later by the parliamentary committee from both his Yorkshire livings. 'His lady and all his children,' writes Walker, 'were turned out of doors to seek their bread in desolate places,' and his library at Castleford fell into the hands of his oppressors. He published in London in 1658 a curious pamphlet entitled 'A Present for Cæsar of 100,000*l.* in hand and 50,000*l.* a year,' in which he recommended the extortion of first-fruits and tithes according to their true value. The work is respectfully dedicated to Oliver Cromwell. At the Restoration he was restored to Ackworth, but he found it necessary to vindicate his pamphlet in another tract entitled 'Appello Cæsarem' (York, 1661). But his conduct did not satisfy the government, and in an assize sermon preached at York in 1663 and published as 'Cæsar's Due and the Subject's Duty,' he said that the king had bidden him 'preach conscience to the people and not to meddle with state affairs,' and that he had to apologise for his sermons preached against the excise and the excisemen, the Westminster lawyers, and 'the rack-renting landlords and depopulators.' He also expressed regret for having suggested the restoration of the council of the north. In 1666 he was made a prebendary of York. He died in 1670.

His publications consist entirely of sermons. The earliest, entitled 'Comfort from the Cradle,' was preached at Winchester and published at Oxford in 1650; four others, preached at York Minster, were published at York between 1661 and 1670, and six occasional sermons appear to have been issued collectively in London in 1667. Walker describes Bradley as 'an excellent preacher' and 'a ready and acute wit.'

A son, Savile, was at one time fellow of New College, Oxford, and afterwards fellow of Magdalen. Wood, in his autobiography, tells a curious story about his ordination in 1661.

[Wood's Athenæ Oxon., ed. Bliss, i. xliii, iii. 719; Fasti Oxon. i. 392, ii. 52; Walker's Sufferings, ii. 85; Watt's Bibl. Brit.; Brit. Mus. Cat.] S. L. L.

BRADLEY, THOMAS, M.D. (1751–1813), physician, was a native of Worcester, where for some time he conducted a school in which mathematics formed a prominent study. About 1786 he withdrew from education, and, devoting himself to medical studies, went to Edinburgh, where he graduated M.D. in 1791, his dissertation, which was published, being 'De Epispasticorum Usu in variis morbis tractandis.' He settled in London, and on 22 Dec. 1791 was admitted licentiate of the College of Physicians. From 1794 to 1811 he was physician to the Westminster Hospital. For many years he acted as editor of the 'Medical and Physical Journal.' He published a revised and enlarged edition of Fox's 'Medical Dictionary,' 1803, and also a 'Treatise on Worms and other Animals which infest the Human Body,' 1813. In the practice of his profession he was not very successful. He died in St. George's Fields at the close of 1813.

[Munk's Coll. of Phys. (1878), ii. 419–20; Gent. Mag. lxxxiv. (pt. i.) 97–8.]

BRADLEY, WILLIAM (1801–1857), portrait painter, was born at Manchester on 16 Jan. 1801. He was left an orphan when three years old, and commenced life as an errand-boy; but having a natural talent for art, he at the age of sixteen advertised himself as a 'portrait, miniature, and animal painter, and teacher of drawing,' and drew portraits at a shilling apiece. Having received some lessons from Mather Brown, who was then living at Manchester, he came to London when about twenty-one, and, obtaining an introduction to Sir Thomas Lawrence, established himself in the metropolis, where he enjoyed some practice as a portrait painter. Between 1823 and 1846 he exhibited thirteen portraits at the Royal Academy, twenty-one at the Free Society of Artists, and eight at the British Institution. He returned in 1847 to his native city, broken down in health, and he died in poverty on 4 July 1857. Bradley's portraits were successful as likenesses, and well drawn. Among his sitters were Lords Beresford, Sandon, Bagot, and Ellesmere, Sheridan Knowles, W. C. Macready, and the Right Hon. W. E. Gladstone. His portrait of the last-mentioned has been engraved in mezzotinto by W. Walker.

[Redgrave's Dictionary of Artists of the English School, Painters, &c., London, 1878, 8vo; MS. notes in the British Museum.] L. F.

BRADOCK, THOMAS (*fl.* 1576–1604), translator, was educated at Christ's College, Cambridge, proceeded B.A. 1576, and was elected fellow of his college in 1578. In 1579 his name appears in a protest against the

action of Dr. Hawford, the master, in withholding his fellowship from Hugh Broughton. In 1580 he proceeded M.A., and was incorporated M.A. at Oxford in 1584, in which year he was proctor. In 1588 he was elected head-master of the grammar school at Reading, and from 1591 till 1593 vicar of Stanstead Abbots in Hertfordshire. The advowson of Great Munden in Hertfordshire was granted 11 July 1604 to a certain Thomas Nicholson upon trust to present it to Bradock. Bradock never obtained the presentation, which did not fall vacant till 1616; he probably died before that date. Bradock translated into Latin Bishop Jewell's confutation, in six parts, of the attack of Thomas Harding on Jewell's 'Apologia Ecclesiæ Anglicanæ.' The translation, taking up 637 folio pages, was published at Geneva in 1600, and was undertaken that foreign scholars and divines might be able to follow the controversy which the 'Apologia' had occasioned. It is dedicated to John Whitgift, archbishop of Canterbury.

R. B.

BRADSHAIGH, RICHARD. [See BARTON.]

BRADSHAW, ANN MARIA (1801–1862), actress and vocalist, was born in London in August 1801. Her maiden name was Tree, and her father, who lived in Lancaster Buildings, St. Martin's Lane, was in the East India House. After a training in the chorus at Drury Lane, and a short experience in Bath, she appeared in 1818 at Covent Garden as Rosina in 'The Barber of Seville.' Subsequently she played, principally as a substitute for Miss Foote or Miss Stephens, Patty in 'The Maid of the Mill,' Susannah in 'The Marriage of Figaro,' and other similar characters. Her first recorded appearance in an original rôle seems to have been as Princess Stella in the 'Gnome King,' a spectacular piece produced on 6 Oct. 1819 at Covent Garden. On 11 Dec. of the same year she appeared as Luciana in an opera founded by Reynolds on 'The Comedy of Errors.' This led to the series of Shakespearean performances on which her fame rests. In various renderings, musical and otherwise, of Shakespearean comedy, she played with success Ariel, Viola, Imogen, Julia (in the 'Two Gentlemen of Verona'), Ophelia, and Rosalind. With the exception of a solitary appearance at Drury Lane on 19 April 1823, when she was lent by her own management, she appears to have remained at Covent Garden till her retirement. This took place on 15 June 1825 in two of her original characters, Mary Copp in 'Charles II,' by Howard Payne, and Clari in the opera of that name, by the same author. Shortly afterwards she married, under passably romantic circumstances, and after, it is said, an attempt at suicide, James Bradshaw, a man of property. She died on 18 Feb. 1862. Of medium stature and pleasing figure, and with no special claim to beauty, she owed her popularity to the pathos in her voice. Though inferior to her singing, her acting won commendation. She was much praised for the modesty of her performance in male attire. Her sister, Ellen Tree, became the wife of Mr. Charles Kean.

J. K.

BRADSHAW, GEORGE (1801–1853), originator of railway guides, only son of Thomas Bradshaw, by his wife, Mary Rogers, was born at Windsor Bridge, Pendleton, Salford, on 29 July 1801. His parents taxed their limited means to give a good education to their only child by placing him under the care of Mr. Coward, a Swedenborgian minister; thence he removed to a school kept by Mr. Scott at Overton, Lancashire. On leaving school he was apprenticed to Mr. J. Beale, an engraver, who had acquired some reputation by the execution of the plates of 'The Art of Penmanship Improved,' by Duncan Smith, 1817. In 1820 he accompanied his parents to Belfast, and there established himself as an engraver and printer, but, not finding adequate occupation, returned to Manchester in the following year. His attention had been for some time directed to the engraving of maps, and in 1827 he determined to devote himself more especially to that branch of art. The first map projected, engraved, and published by him was one of Lancashire, his native county. This was followed in 1830 by his map of the canals of Lancashire, Yorkshire, &c. This map eventually became one of a set of three known as 'Bradshaw's Maps of Inland Navigation.' Soon after the commencement of the railway system, Bradshaw, the originator of railway guides, produced 'Bradshaw's Railway Time Tables' in 1839, a small 18mo book, bound in cloth, price 6*d*. In 1840 the name was changed to 'Bradshaw's Railway Companion,' which contained more matter, with sectional maps, and was sold at 1*s*. It was not published periodically, but appeared

occasionally, and was supplemented by a monthly time-sheet. The agent in London for the sale of this work was Mr. William Jones Adams, who, it would appear, was the first to suggest the idea of a regular monthly book at a lower price, as an improvement on 'The Companion.' This idea was taken up by Bradshaw, and the result was the appearance in December 1841 of No. 1 of 'Bradshaw's Monthly Railway Guide,' in the well-known yellow wrapper, a work which has gained for itself a world-wide fame. Another undertaking was 'Bradshaw's Railway Map,' produced in 1838. Among his other publications may be mentioned 'Bradshaw's Continental Railway Guide,' printed in Manchester, but of which the first number was published in Paris in June 1847; and 'Bradshaw's General Railway Directory and Shareholder's Guide,' which first appeared in 1849.

Bradshaw when a young man joined the Society of Friends, and was an active coadjutor of Cobden, Pease, Sturge, Scoble, Elihu Burritt, and others in holding peace conferences, in the attempts to establish an ocean penny postage, and other philanthropic labours. Part of his time he devoted to the establishment of schools for the poorer classes. Bradshaw joined the Institution of Civil Engineers as an associate in February 1842. In August 1853 he went to Norway on a tour combining business and recreation, and on 6 Sept., while on a visit to a friend in the neighbourhood of Christiania, he was seized by Asiatic cholera, and died in a few hours. He was buried in the cemetery belonging to the cathedral of Christiania.

He married, on 16 May 1839, Martha, daughter of William Darbyshire of Stretton, near Warrington, and left a son, Christopher.

[Manchester Guardian, 17 Sept. 1853, p. 7; Minutes of Proceedings of Institution of Civil Engineers (1854), xiii. 145–9; Athenæum, 27 Dec. 1873, p. 872, 17 Jan. 1874, p. 95, 24 Jan. p. 126; Notes and Queries, 6th ser., viii. 45, 92, 338, xi. 15.] G. C. B.

BRADSHAW, HENRY (*d.* 1513), Benedictine monk and poet, was a native of Chester. Being from childhood much addicted to religion and learning, he was, while young, received among the monks of St. Werburgh's. Thence he was sent to Gloucester Hall, Oxford, and there passed his course in theology. He then returned to his monastery. He wrote 'De Antiquitate et magnificentia Urbis Cestriæ;' 'Chronicon and a Life of St. Werburgh,' in English verse, including the 'Foundation of the City of Chester,' the 'Chronicle of the Kings,' &c. The date of his death is fixed at 1513, by 'A Balade to the Auctour,' printed with this poem. A full description of this rare volume is given by Dibdin (*Typographical Antiquities*, ii. 491). The title is, 'Here begynneth the Holy Lyfe and History of Saynt Werburge, very frutefull for all christen people to rede. Imprinted by Richarde Pynson . . . A° MDXXI.' 4to. Three ballads follow; at the end of these is the colophon, 'And thus endeth the lyfe and historye of Saynt Werburge. Imprinted, &c.' Herbert (*Typographical Antiquities*, i. 270) says that a few years before he wrote, the very existence of this book was questioned. Five copies are, however, known to be in existence, one in the Minster Library at York, two in the Bodleian Library (*Catal.* iii. 802), one, the copy described by Dibdin as Heber's, in the British Museum, and the fifth in Mr. Miller's collection (*Remains, &c.* Chetham Soc. xv.) It was reprinted for the Chetham Society in 1848, being edited by E. Hawkins. Copious extracts are given, not always exactly, by Warton. The main body of the poem is a translation from a Latin work then in the library of St. Werburgh's, called the 'True or Third Passionary,' by an author of whom Bradshaw says 'uncertayne was his name.' Warton's conjecture, then, that this writer was Goscelin, is, as Hawkins points out (*Introd.* Chetham Soc. xv. 5), unlikely to be correct. The 'prologes' and some other parts of the volume are original. Bradshaw wrote, he says, for the people—

Go forth litell boke, Jesu be thy spede,
And saue the alway from mysreportyng,
Whiche art compiled for no clerke indede
But for marchaunt men, hauyng litell lernyng.
And that rude people thereby may haue knowyng
Of this holy virgin and redolent rose
Whiche hath been kept full longe tyme in close.

Warton speaks slightingly of Bradshaw's powers. Dibdin, who also gives some long extracts, rates them more highly. Many passages are vigorous, and some are certainly picturesque. In his concluding stanza he speaks of Chaucer and Lydgate, of 'preignaunt Barkley,' and of 'inventive Skelton.' Herbert also attributes to Bradshaw a book beginning: 'Here begynneth the lyfe of saynt Radegunde,' also in seven-line stanzas, printed by Pinson, n. d., without the name of the author or translator.

BRADSHAW, JAMES (1636?–1702), ejected minister, of the Bradshaws of Haigh, near Wigan, the elder and royalist branch of the family, was born at Hacken, in the parish of Bolton, Lancashire, about 1636. He was educated at the Bolton grammar school and Corpus Christi College, Oxford, but did not graduate. This was due to the influence of his uncle Holmes, then a minister in Northamptonshire, under whom he studied divinity. Returning to Lancashire, he was ordained minister of Hindley. With other Lancashire ministers, he was concerned in the royalist rising under Sir George Booth [q. v.] He was ejected in 1662, but, continuing to preach, he suffered some months' imprisonment at the instance of his relative Sir Roger Bradshaw, an episcopalian magistrate. On the indulgence of 1672 he got possession of Rainford Chapel, in the parish of Prescot. The neighbouring clergy now and then preached for him, reading the prayer-book; hence the churchwarden was able to say 'yes' to the question at visitations: 'Have you common prayer read yearly in your chapel?' Pearson, the bishop of Chester, would not sustain informations against peaceable ministers, so Bradshaw was not disturbed. He was also one of the Monday lecturers at Bolton. He died at Rainford in 1702, in his sixty-seventh year, his death being the result of a mishap while riding to preach. His son Ebenezer, presbyterian minister at Ramsgate, was ordained 22 June 1694 in Dr. Annesley's meeting-house, Bishopsgate Within, near Little St. Helen's (this was at the first public ordination among presbyterians after the Restoration). Bradshaw published: 1. 'The Sleepy Spouse of Christ alarm'd,' &c., 1677, 12mo (sermons on Cant. v., preface by Nathaniel Vincent, M.A., who died 21 June 1697, aged 52). 2. 'The Trial and Triumph of Faith.' Halley confuses him (ii. 184) with another James Bradshaw, born at Darcy Lever, near Bolton, Lancashire, educated at Brasenose College, Oxford, presbyterian rector of Wigan, who in 1644 encouraged the siege of Lathom House by sermons from Jerem. xv. 14, in which he compared Lathom's seven towers to the seven heads of the beast. He was superseded at Wigan by Charles Hotham for not observing the parliamentary fast, but called to Macclesfield, whence he was ejected in 1662. He preached at Houghton Chapel, and subsequently at Bradshaw Chapel, reading some of the prayers, but not subscribing. He died in May 1683, aged 73.

BRADSHAW, JAMES (1717–1746), Jacobite, born in 1717, was the only child of a well-to-do Roman catholic in trade at Manchester. He was educated at the free school, and learned some classics there. About 1734 he was bound apprentice to Mr. Charles Worral, a Manchester factor, trading at the Golden Ball, Lawrence Lane, London. In 1740 he was called back to Manchester through the illness of his father, after whose death he found himself in possession of a thriving trade and several thousand pounds. About 1741 he took a London partner, Mr. James Dawson, and he married a Miss Waggstaff of Manchester. She and an only child both died in 1743. Bradshaw thereupon threw in his lot with the Pretender. He was one of the courtiers assembled at Carlisle on 10 Nov. 1745. He visited his own city on 29 Nov., and busied himself in recruiting at the Bell Inn. He was a member of the council of war, and, having accepted a captaincy in Colonel Towneley's regiment, he marched to Derby, paying his men out of his own purse; he headed his company on horseback in the skirmish at Clifton Moor; he attended the Pretender's *levée* on the retreat through Carlisle in December; and preferring to be in Lord Elcho's troop of horse when the rebels were striving to keep together in Scotland in the early weeks of 1746, he fought at Falkirk. He was at Stirling, Perth, Strathbogie, and finally at Culloden, on 16 April in the same year, where in the rout he was taken prisoner. His passage to London was by ship, with forty-two fellow-prisoners. He was taken to the New Gaol, Southwark; his trial took place at St. Margaret's Hill on 27 Oct. On that occasion he was dressed in new green cloth, and bore himself somewhat gaily. His counsel urged that he had always had 'lunatick pranks,' and had been driven entirely mad by the death of his wife and child. He was found guilty, and having been kept in gaol nearly a month more, he was executed on Kennington Common, 28 Nov. 1746, aged only 29.

[Howell's State Trials, xviii. 415–24.] J. H.

BRADSHAW, JOHN (1576–1618), Benedictine monk. [See WHITE.]

BRADSHAW, JOHN (1602–1659), regicide, was the second surviving son of Henry Bradshaw, a well-to-do country gentleman,

of Marple and Wibersley halls, Stockport, Cheshire, who died in 1654. His mother was Catherine, daughter of Ralph Winnington of Offerton in the same county, who was married at Stockport on 4 Feb. 1593, and died in January 1603-4. The eldest surviving son, Henry, the heir to the family property, was born in 1600. Francis, the youngest son, was baptised on 13 Jan. 1603-4.

John was born at Wibersley Hall in 1602, and baptised at Stockport Church on 10 Dec. in that year. Educated first at the free school of Stockport, he afterwards attended schools at Bunbury, Cheshire, and Middleton, Lancashire. There is a doubtful tradition that he spent some time in his youth at Macclesfield, and there wrote on a gravestone the lines:

My brother Henry must heir the land,
My brother Frank must be at his command;
Whilst I, poor Jack, will do that
That all the world will wonder at.

He studied law in London, and was called to the bar at Gray's Inn on 23 April 1627. He had previously served for several years as clerk to an attorney at Congleton, and subsequently practised as a provincial barrister. He was mayor of Congleton in 1637, and high steward of the borough several years later (*Gent. Mag.* lxxxviii. i. 328). He formally resigned the office in May 1656. At Congleton he maintained no little state, and possessed much influence in the neighbourhood. He was steward of the manor of Glossop, Derbyshire, in 1630.

'All his early life,' writes Bradshaw's friend, Milton, in the 'Second Defence of the People of England' (1654), 'he was sedulously employed in making himself acquainted with the laws of his country; he then practised with singular success and reputation at the bar.' Before 1643 he had removed from Congleton to Basinghall Street, London, and in that year was a candidate for the post of judge of the sheriffs' court in London. The right of appointment was claimed by both the court of aldermen and the court of common council, and the latter elected Bradshaw on 21 Sept. About the same time the aldermen nominated Richard Proctor, a rival candidate. Bradshaw entered at once upon the duties of the office, and continued in it till his death, although in 1649 other employment compelled him to nominate a deputy. Proctor meanwhile brought an action against him in the king's bench. The suit lingered till February 1654-5, when the claim of the court of common council to the appointment was established.

In October 1644 Bradshaw was one of the counsel employed in the prosecution of Lord Macguire of Fermanagh and Hugh Macmahon for their part in the Irish rebellion of 1641. Bradshaw acted with William Prynne, and the latter received much assistance from Bradshaw in his elaborate argument proving that Irish peers were amenable to English juries. The trial resulted in the conviction of Macguire. In 1645 Bradshaw was counsel for John Lilburne in his successful appeal to the House of Lords against the sentence pronounced on him in the Star-chamber for publishing seditious books eight years before. The commons nominated Bradshaw one of the commissioners of the great seal on 8 Oct. 1646, but the lords declined to confirm this arrangement. On 22 Feb. 1646-7 he was appointed chief justice of Chester, and on 18 March following a judge in Wales. In June he was one of the counsel retained (with Oliver St. John, Jermin, and William Prynne) for the prosecution of Judge Jenkins on the charge of passing judgment of death on men who had fought for the parliament. In a letter to the mayor of Chester (1 Aug. 1648) he promises to resume his practice of holding 'the grand sessions' at Chester after 'the sad impediment' of the wars, but only promises attention to the city's welfare on condition of its inhabitants' constant compliance with the directions of parliament (*Hist. MSS. Comm.* 5th Rep. p. 344). On 12 Oct. 1648 the parliament created Bradshaw and several other lawyers of their party serjeants-at-law.

On 2 Jan. 1648-9 the lords rejected the ordinance of the commons for bringing the king to trial before a parliamentary commission. The commons straightway resolved to proceed on their sole authority. Certain peers and judges had been nominated members of the commission; but the names of the former were now removed (3 Jan.), and those of Bradshaw, Nicholas, and Steele, all lawyers without seats in the house, substituted. On 6 Jan. the ordinance for the trial passed its final stage. On 8 Jan. the commission held its first private meeting in the Painted Chamber at Westminster to discuss the procedure at the trial, but Bradshaw did not put in an appearance. A second meeting took place two days later, from which Bradshaw was also absent. The commissioners then proceeded to elect a president, and the choice fell upon the absent lawyer. Mr. Say filled the post for the rest of that day's sitting, but a special summons was sent to Bradshaw to be present at the meeting to be held on 12 Jan. He then appeared and 'enlarged upon his own want of abilities to undergo so important a charge. . . . And when he was pressed . . . he re-

quired time to consider it.' The next day he formally accepted the office, with (it is said) every sign of humility. It was resolved by the court that he should henceforward bear the title of lord president.

Clarendon is probably right in describing Bradshaw as 'not much known [at this time] in Westminster Hall, though of good practice in the chamber.' There were certainly many lawyers having a higher reputation both in parliament and at the bar who might have been expected to be chosen before Bradshaw president of the great commission. But there were obvious reasons for appointing a lawyer of comparatively little prominence. The proceedings demanded a very precise observance of legal formalities, and a lawyer was indispensable. But the anti-royalists had very few lawyers among them who believed in the justice or legality of the latest development of their policy. Whitelocke and Widdrington both refused to serve on the commission; Serjeant Nicholas, who had been nominated to the commission at the same time as Bradshaw, declined to take part in the trial; the parliamentary judges Rolle, St. John, and Wilde deemed the proceedings irregular from first to last; Edmund Prideaux, an able lawyer, whom the commons had appointed solicitor-general on 12 Oct. 1648, was unwilling to appear against the king, and his place was filled for the occasion by John Cook, a man of far smaller ability. But the commissioners, whether or no they had any misgivings, were resolved to prove their confidence in the man of their choice. Everything was done to lend dignity to the newly elected president. The deanery at Westminster was handed over to him as his residence for the future, but during the trial it was arranged that he should lodge at Sir Abraham Williams's house in Palace Yard to be near Westminster Hall. He was given scarlet robes and a numerous body-guard. Although his stout-heartedness is repeatedly insisted on by his admirers, Bradshaw had some fear of personal violence at this time. 'Besides other defence,' says Kennett, 'he had a high-crowned beaver hat lined with plated steel to ward off blows.' The hat is now in the Ashmolean Museum at Oxford (*Complete Hist.* iii. 181 *n.*; Granger, *Biog. Hist.* ii. 397).

Private meetings of the commission, attended by less than half the full number of members, were held under Bradshaw's presidency in the Painted Chamber at Westminster almost every day of the week preceding the trial, and on the morning of each day of the trial itself. The trial opened at Westminster Hall on Saturday, 20 Jan. 1648–9. Bradshaw's name was read out by a clerk, and he took his seat, a crimson velvet chair, 'having a desk with a crimson velvet cushion before him.' He was surrounded by attendants, and placed in the midst of his colleagues. The president addressed the prisoner as soon as he was brought into court as 'Charles Stuart, king of England,' and invited him to plead, but the king persistently declined the invitation on the ground of the court's incompetency, and Bradshaw's frequent and impatient appeals had no effect upon him. Finally Bradshaw adjourned the proceedings to the following Monday. The same scene was repeated on that and the next two days. The president repeatedly rebuked the prisoner for his freedom of language, and absolutely refused to allow him to make a speech. On 25 Jan. twenty-nine witnesses were hurriedly examined; on 26 Jan. Bradshaw and the commissioners framed a sentence of death at a private sitting in the Painted Chamber. It was read over by them on the morning of the next day (27 Jan.), after which Bradshaw proceeded to Westminster Hall and pronounced judgment in a long-winded and strongly worded oration. Before Bradshaw spoke, Charles made an earnest appeal to be heard in his defence. Some of the commissioners were anxious to grant him this request, but Bradshaw finally disallowed it. After the sentence was pronounced, the king renewed his demand, but Bradshaw roughly told him to be quiet, and ordered the guards to remove him. On 30 Jan., the day of the execution, the commission held its last meeting in private; the death-warrant was duly engrossed and signed by fifty-eight members. Bradshaw's signature headed the list.

Bradshaw was censured by crowds of pamphleteers for his overbearing and brutal behaviour towards the king at the trial (cf. *Reason against Treason, or a Bone for Bradshaw to pick*, 9 July 1649). His friends professed to admire his self-confidence and dignity, and spoke as if he had had no previous judicial experience. On the whole it appears that he behaved very much as might be expected of a commonplace barrister suddenly called from the bench of a city sheriffs' court to fill a high and exceptionally dignified judicial office.

The lord president's court was re-established, with Bradshaw at its head, on 2 Feb. 1648–9, and throughout the month it was engaged in trying leading royalists for high treason. The chief prisoners were the Duke of Hamilton, Lord Capel, and Henry Rich, earl of Holland. Bradshaw, arrayed in his scarlet robes, pronounced sentence of death upon them all in very lengthy judgments. He showed none of these prisoners any

mercy, but he appeared to least advantage as the judge of Eusebius Andrews [q. v.], a royalist charged with conspiracy against the Commonwealth. He sought by repeated cross-examinations to convict Andrews out of his own mouth, and kept him in prison for very many months. Finally Bradshaw condemned him to death on 6 Aug. 1650 (F. Buckley's account of the trial, 1660, reprinted in *State Trials*, v. 1–42). Bradshaw did not continue, however, to perform work of this kind. His place was filled by Serjeant Keeble in 1651, and by Serjeant l'Isle in 1654.

Bradshaw found other occupation in the council of state, to which he was elected by a vote of the commons on its formation (14 Feb. 1648–9), and chosen its president (10 March). He did not attend its sittings till 12 March, after which he was rarely absent. No other member was so regular in his attendance. He was in frequent correspondence with Oliver Cromwell during the campaigns of 1649 and 1650 in Ireland and Scotland, and during those years offices and honours were heaped upon him. On 20 July 1649 parliament nominated him attorney-general of Cheshire and North Wales, and eight days later chancellor of the duchy of Lancaster, a post in which he was continued by a special vote of the house on 18 July 1650. On 19 June 1649 parliament, having taken his great merit into consideration, paid him a sum of 1,000*l.*, and on 15 Aug. 1649 formally handed over to him lands worth 2,000*l.* a year. The estates assigned him were those of the Earl of St. Albans and Lord Cottington. He was re-elected by parliament a member of the council of state (12 Feb. 1649–50, 7 Feb. 1650–1, 24 Nov. 1651, and 24 Nov. 1652), and presided regularly at its sittings, signing nearly all the official correspondence. He was not very popular with his colleagues there. He seemed 'not much versed in such businesses,' writes Whitelocke, 'and spent much of their time by his own long speeches.'

Cromwell's gradual assumption of arbitrary power did not meet with Bradshaw's approval. On 20 April 1653 Cromwell, who had first dissolved the Long parliament, presented himself later in the day before the council of state, and declared it at an end. Bradshaw, as president, rose and addressed the intruder in the words: 'Sir, we have heard what you did at the house in the morning, and before many hours all England will hear it; but, sir, you are mistaken to think the parliament is dissolved, for no power under heaven can dissolve them but themselves; therefore take you notice of that' (Ludlow, *Memoirs*, 195). Bradshaw did not sit in Barebones's parliament, which met on 4 July 1653, but an act was passed (16 Sept.) by the assembly continuing him in the chancellorship of the duchy. He was elected for Stafford to the next parliament, which assembled on 4 Sept. 1654, but declined on 12 Sept. to sign the 'recognition' pledging members to maintain the government 'as it is settled in a single person and a parliament.' He was summoned by Cromwell before the council of state formed by him on becoming protector, together with Vane, Rich, and Ludlow, and was bidden by Cromwell to take out a new commission as chief justice of Chester. He refused to submit to the order. He declared that he had been appointed during his good behaviour, and had done nothing to forfeit his right to the place, as he would prove before any twelve jurymen. Cromwell did not press the point, and Bradshaw immediately afterwards went his circuit as usual. But Cromwell revenged himself by seeking to diminish Bradshaw's influence in Cheshire. In the parliament which met 17 Sept. 1656 Bradshaw failed to obtain a seat, owing to the machinations of Tobias Bridges, Cromwell's major-general for the county (Thurloe, vi. 313). There had been a proposal to nominate him for the city of London, but that came to nothing. 'Serjeant Bradshaw,' writes Thurloe jubilantly to Henry Cromwell in Ireland (26 Aug. 1656), 'hath missed it in Cheshire, and is chosen nowhere else.'

Bradshaw was now an open opponent of the government. According to an anonymous letter sent to Monk he entered early in 1655 into conspiracy with Haslerig, Pride, and others, to seize Monk as a first step towards the army's overthrow (Thurloe, *Papers*, iii. 185). He was also suspected, on no very valid ground, of encouraging the fifth-monarchy men in the following year. In August 1656 an attempt was made by Cromwell to deprive him of his office of chief justice of Chester (Thurloe). In private and public Bradshaw vigorously denounced Cromwell's usurpation of power, and he is credited with having asserted that if such conduct ended in the Protector's assumption of full regal power, he and Cromwell 'had committed the most horrid treason [in their treatment of Charles I] that ever was heard of' (*Bradshaw's Ghost, being a Dialogue between the said Ghost and an apparition of the late King*, 1659). Under date 3 Dec. 1657 Whitelocke writes of the relations between Cromwell and Bradshaw that 'the distaste between them' was perceived to increase. During the last years of the protectorate Bradshaw took no part in politics.

The death of the great Protector (3 Sept. 1658), and the abdication of Richard Crom-

well (25 May 1659), restored to Bradshaw some of his lost influence. The reassembled Long parliament nominated him on 13 May one of the ten members of the reestablished council of state who were not to be members of parliament. On 3 June 1659 he was appointed a commissioner of the great seal for five months with Serjeants Fountaine and Tyrrel. But Bradshaw's health was rapidly failing, and on 9 June he wrote to the parliament asking to be temporarily relieved during indisposition of the duties of commissioner of the seal. On 22 July he took the necessary oath in the house to be faithful to the Commonwealth, but was still unable to attend to the work of the office. Matters went badly in his absence. The Long parliament again fell a victim to the army, and on hearing of the speaker's (Lenthall) arrest, 13 Oct., by Lieutenant-colonel Duckenfield on his way to Westminster, Bradshaw rose from his sick bed, and presented himself at the sitting of the council of state. Colonel Sydenham endeavoured to justify the army's action, but Bradshaw, 'weak and extenuated as he was,' says Ludlow, 'yet animated by ardent zeal and constant affection to the common cause, stood up and interrupted him, declared his abhorrence of this detestable action; and telling the council, that being now going to his God, he had not patience to sit there to hear His great name so openly blasphemed.' According to George Bate, his royalist biographer, he raved like a madman, and flung out of the room in a fury (*The Lives . . . of the prime actors . . . of that horrid murder of . . . King Charles*, 1661). On arriving home at the deanery of Westminster, which he had continued to occupy since his appointment as lord president, he became dangerously ill, and 'died of a quartan ague, which had held him for a year,' on 31 Oct. 1659 (*Mercurius Politicus*, 31 Oct.) 'He declared a little before he left the world that if the king were to be tried and condemned again, he would be the first man that would do it' (Peck, *Desiderata Curiosa*, xiv. 32). He was buried with great ceremony in Westminster Abbey (22 Nov.), and his funeral sermon—an elaborate eulogy—was preached by John Rowe, preacher at the abbey since 1654 (*Merc. Pol.* 22 Nov.) Whitelocke describes him as 'a strict man, and learned in his profession; no friend of monarchy.' Clarendon writes of him with great asperity, while Milton's stately panegyric, written in Bradshaw's lifetime (1654), applauded his honest devotion to the cause of liberty. He was not a great man, but there is no reason to doubt his sincere faith in the republican principles which he consistently upheld. He was apparently well read in history and law. According to the pamphleteers, he had built a study for himself on the roof of Westminster Abbey, which was well stocked with books. Charles II, in a letter to the mayor of Bristol (8 March 1661–2), states that Bradshaw's papers, which were then in the hands of one George Bishop, included 'divers papers and writings' taken by Bradshaw 'out of the office of the King's Library at Whitehall, which could not yet be recovered' (*Hist. MSS. Comm.* 5th Rep. p. 328). Bradshaw is stated to have supplied 'evidences' to Marchmont Needham, when translating Selden's 'Mare Clausum' (Nicolson, *Hist. Libr.* iii. 124). He fully shared the piety of the leaders of the parliament, and, in spite of his high-handed conduct as lord president of the commission, does not seem to have been of an unkindly nature. Mr. Edward Peacock found a document a few years ago which proved that Bradshaw, after obtaining the grant of the estates of a royalist named Richard Greene at Stapeley, heard of the destitute condition of Greene's three daughters; whereupon he ordered (20 Sept. 1650) his steward to collect the rent and pay it to them (*Athenæum*, 23 Nov. 1878). Similarly, on receiving the tithes of Feltham, Middlesex, he issued an address (4 Oct. 1651) to the inhabitants of the parish, stating that his anxiety 'touching spyritualls' had led him to provide and endow a minister for them without putting them to any charge (*Athenæum* for 1878, p. 689).

On 15 May 1660 it was resolved that Bradshaw, although dead, should be attainted by act of parliament, together with Cromwell, Ireton, and Pride, all of whom died before the Restoration. As early as 3 May 1654 Bradshaw had been specially excepted from any future pardon in a proclamation issued by Charles II. On 12 July 1660 the sergeant-at-arms was ordered to deliver to the house Bradshaw's goods (*Commons Journal*, viii. 88). On 4 Dec. 1660 parliament directed that the bodies of Bradshaw, Cromwell, and Ireton 'should be taken up from Westminster' and hanged in their coffins at Tyburn. This indignity was duly perpetrated 30 Jan. 1660–1. The regicides' heads were subsequently exposed in Westminster Hall and their bodies reburied beneath the gallows (Pepys's *Diary*, 4 Feb. 1660–1).

Bradshaw married Mary (*b.* 1596), daughter of Thomas Marbury of Marbury, Cheshire, but had no children. She died between 1655 and 1659, and was buried in Westminster Abbey. On 9 Sept. 1661 directions were given for the removal of her body to the churchyard outside the abbey (*Westminster Abbey Register*, Harl. Soc. p. 522). By his will, made in 1655 and

proved in London 16 Dec. 1659 (printed by Earwaker), Bradshaw bequeathed most of his property, which consisted of estates in Berkshire, Southampton, Wiltshire, Somerset, and Middlesex, to his wife, if she survived him, for her life, with reversion to Henry (*d.* 1698), his brother Henry's son. He also made charitable bequests for establishing a free school at Marple, his birthplace; for increasing the schoolmasters' stipends at Bunbury and Middleton, where he had been educated; and for maintaining good ministers at Feltham and Hatch (Wiltshire), where he had been granted property by parliament. By one codicil he left his houses and lodgings at Westminster to the governors of the school and almshouses there, and added a legacy of 10*l.* to John Milton, the poet. After the Restoration, however, all Bradshaw's property was confiscated to the crown under the act of attainder.

Two engraved portraits of Bradshaw are mentioned by Granger (ii. 397, iii. 71)—one in his iron hat by Vandergucht, for Clarendon's 'History,' and another in 4to, 'partly scraped and partly stippled.'

HENRY BRADSHAW, the president's elder brother, signed a petition for the establishment of the presbyterian religion in Cheshire on 6 July 1646; acted as magistrate under the Commonwealth; held a commission of sergeant-major under Fairfax, and subsequently one of lieutenant-colonel in Colonel Ashton's regiment of foot; commanded the militia of the Macclesfield hundred at the battle of Worcester (1651), where he was wounded; sat on the court-martial which tried the Earl of Derby and other loyalists at Chester in 1652; was charged with this offence at the Restoration; was imprisoned by order of parliament from 17 July to 14 Aug. 1660; was pardoned on 23 Feb. 1660-1; and, dying at Marple, was buried at Stockport on 15 March 1660-1 (EARWAKER'S *East Cheshire*, ii. 62-9; ORMEROD, *Cheshire*, pp. 408-11).

[Noble's Lives of the Regicides, i. 47-66; Foss's Judges, vi. 418 et seq.; Earwaker's East Cheshire, ii. 69-77; Ormerod's Cheshire, iii. 408-9; Brayley and Britton's Beauties of England, ii. 264-8; Clarendon's Rebellion; Whitelocke's Memorials; Ludlow's Memoirs; Thurloe's State Papers; Cal. State Papers (Dom.), 1649-1658; Carlyle's Cromwell; Commons' Journal, vi. vii. viii.; State Trials, iii. iv. v. Many attacks on Bradshaw were published after his death. The chief of them, besides those mentioned above, are The Arraignment of the Divel for stealing away President Bradshaw, 7 Nov. 1659 (fol. sh.); The President of Presidents, or an Elogie on the death of John Bradshaw, 1659; Bradshaw's Ultimum Vale, being the last words that were ever intended to be spoke of him, as they were delivered in a sermon Preach'd at his Interment by J. O. D. D., Time-Server General of England, Oxf. 1660; The Lamentations of a Sinner; or, Bradshaw's Horrid Farewell, together with his last will and testament, Lond. 1659. Marchmont Needham published, 6 Feb. 1660-1, a speech 'intended to have been spoken' at his execution at Tyburn, but 'for very weightie reasons omitted.' The Impudent Babbler Baffled; or, the Falsity of that assertion uttered by Bradshaw in Cromwell's new-erected Slaughter-House, a bitter attack on Bradshaw's judicial conduct, appeared in 1705.] S. L.

BRADSHAW, JOHN (*fl.* 1679), political writer, son of Alban Bradshaw, an attorney, of Maidstone, Kent, was born in that town in 1659. He was admitted a scholar of Corpus Christi College, Oxford, in 1674, and was expelled from that society in 1677 for robbing and attempting to murder one of the senior fellows. He was tried and condemned to death, but after a year's imprisonment was released. Wood says that Bradshaw, 'who was a perfect atheist and a debauchee ad omnia, retir'd afterwards to his own country, taught a petty school, turn'd quaker, was a preacher among them, and wrote and published "The Jesuits Countermin'd; or, an Account of a new Plot, &c.," London, 1679, 4to.' When James II came to the throne, Bradshaw 'turned papist.'

[Wood's Athenæ Oxon. (Bliss), iv. 619.] T. C.

BRADSHAW, LUCRETIA (*fl.* 1714), actress. [See under FOLKES, MARTIN.]

BRADSHAW, RICHARD (*fl.* 1650), diplomatist, and a merchant of Chester, appears in December 1642 as one of the collectors of the contribution raised for the defence of that city (*Hist. MSS. Comm.* 8th Rep. p. 365). During the civil war he served as quartermaster-general of the horse under the command of Sir William Brereton [q.v.] (Petition in *Commons Journals*, 23 Jan. 1651). In the year 1649 he was mayor of Chester, and in January 1650 was appointed by parliament resident at Hamburg. In November 1652 he was for a short time employed as envoy to the king of Denmark, and in April 1657 was sent on a similar mission to Russia. He returned to England in 1659, and was in January 1660 one of the commissioners of the navy (*Mercurius Politicus*, 28 Jan. 1660). He is said by Heath to have been the kinsman of President Bradshaw; and from the tone of his letters, and his attendance at Bradshaw's funeral, this appears to have been the case. The exact relationship is undetermined.

[Bradshaw has left a large correspondence. The Tanner MSS. in the Bodleian contain several let-

ters of 1649–51. In the Sixth Report of the Royal Commission on Historical Manuscripts, 426–44, is a report by Mr. Horwood on a collection of letters to and from Bradshaw in the possession of Miss Ffarington. His official correspondence is contained in the Thurloe State Papers. Some other letters may be found in the Calendar of Domestic State Papers. Mercurius Politicus, Nos. 135 to 144, contains a full account of Bradshaw's Mission to Copenhagen (18 Dec. 1652 to 10 Feb. 1653). Peck's Desiderata Curiosa, pp. 485–90, contains depositions relative to the plot for his murder formed during his stay there. Peck terms him the nephew of President Bradshaw.]

C. H. F.

BRADSHAW, THOMAS (*fl.* 1591), poet, was the author of 'The Shepherd's Starre, now of late seene and at this hower to be obserued, merueilous orient in the East: which bringeth glad tydings to all that may behold her brightnes, having the foure elements with the foure capitall vertues in her, which makes her elementall and a vanquishor of all earthly humors. Described by a Gentleman late of the Right worthie and honorable the Lord Burgh, his companie & retinue in the Briell in North-holland,' London, 1591. The dedication is addressed to the well-known Earl of Essex and to 'Thomas Lord Burgh, baron of Gaynsburgh, Lord Gouernour of the towne of Bryell and the fortes of Newmanton and Cleyborow in North Holland for her Maiestie.' Alexander Bradshaw prefixes a letter to his brother the author (dated 'from the court of Greenewich upon Saint George's day, 1591, Aprill 23') in which he says that he has taken the liberty of publishing this book in its author's absence abroad. The preliminary poems by I. M. and Thomas Groos deal with Bradshaw's departure from England. The volume consists of 'A Paraphrase upon the third of the Canticles of Theocritus,' in both verse and prose. The author's style in the preface is highly affected and euphuistic, but the Theocritean paraphrase reads pleasantly. The book is of great rarity. A copy is in the British Museum. A Thomas Bradshaw proceeded B.A. at Oxford in 1547, and supplicated for the degree of M.A. early in 1549 (*Oxf. Univ. Reg.*, Oxf. Hist. Soc., i. 212).

[Corser's Collectanea (Chetham Soc.), i. 328; Brit. Mus. Cat.] S. L.

BRADSHAW, WILLIAM (1571–1618), puritan divine, son of Nicholas Bradshaw, of a Lancashire family, was born at Market Bosworth, Leicestershire, in 1571. His early schooling at Worcester was paid for by an uncle, on whose death his education was gratuitously continued by George Ainsworth, master of the grammar school at Ashby-de-la-Zouch. In 1589 Bradshaw went to Emmanuel College, Cambridge, where he graduated B.A. and M.A., but was unsuccessful in competing for a fellowship (1595) with Joseph Hall, afterwards bishop of Norwich. Through the influence of Laurence Chaderton [q. v.], the first master of Emmanuel, he obtained a tutorship in the family of Sir Thomas Leighton, governor of Guernsey. Here he came under the direct influence of the puritan leader, Thomas Cartwright [q. v.], who had framed (1576) the ecclesiastical discipline of the Channel Islands on the continental model, and was now preaching at Castle-cornet. Between Cartwright and Bradshaw a strong and lasting affection was formed. Here also he met James Montague (afterwards bishop of Winchester). In 1599, when Montague was made first master of Sidney Sussex College, Cambridge, Bradshaw was appointed one of the first fellows. He had a near escape from drowning (being no swimmer) at Harston Mills, near Cambridge, while journeying on horseback to the university. He took orders, some things at which he scrupled being dispensed with, and preached occasionally at Abington, Bassingbourne, and Steeple-Morden, villages near Cambridge. He left Cambridge, having got into trouble by distributing the writings of John Darrel [q. v.], tried for practising exorcism. In July 1601, through Chaderton's influence, he was invited to settle as a lecturer at Chatham, in the diocese of Rochester. He was very popular, and the parishioners applied (25 April 1602), through Sir Francis Hastings, for the archbishop's confirmation of his appointment to the living. A report that he held unsound doctrine had, however, reached London; and Bradshaw was cited on 26 May to appear next morning before Archbishop Whitgift, and Bancroft, bishop of London, at Shorne, near Chatham. He was accused of teaching 'that man is not bound to love God, unless he be sure that God loves him.' Bradshaw repudiated this heresy, and offered to produce testimony that he had taught no such thing. However, he was simply called upon to subscribe; he declined, was suspended, and bound to appear again when summoned. The vicar, John Philips, stood his friend, and the parishioners applied to John Young, bishop of Rochester, for his restoration, but without effect. Under this disappointment, Bradshaw found a retreat in the family of Alexander Redich, of Newhall, close to Stapenhill, Derbyshire. Redich procured him a license from William Overton, bishop of Coventry and Lichfield, to preach in any part of his diocese. Accordingly he preached at a private chapel in Redich's park, and subsequently (from

1604) in Stapenhill Church. Although he drew no emolument from his public work, the hospitality of his patron was liberally extended to him. Soon after his marriage he settled at Stanton Ward, in Stapenhill parish, and his wife made something by needlework and by teaching a few children. Bradshaw was one of a little knot of puritan divines who met periodically at Ashby-de-la-Zouch, Repton, Burton-on-Trent, and Stapenhill. Neither in form nor in aim was this association a presbyterian classis. Whether Bradshaw ever held Cartwright's views of ecclesiastical jurisdiction is not clear; it is plain that he did not adhere to them. Neal places both him and his neighbour Hildersham, of Ashby, among the beneficed clergy who in 1586 declared their approbation of Cartwright's 'Book of Discipline;' but the chronology in both cases is manifestly wrong. Even Cartwright and his immediate coadjutors declared in April 1592 that they never had exercised any ecclesiastical jurisdiction, or so much as proposed to do so, till authorised by law. The exercises of the association with which Bradshaw was connected were limited to a public sermon and a private conference. In these discussions Bradshaw's balanced judgment gave him a superiority over his brethren, who called him 'the weighing divine.' He was strongly averse to ceremonies, both as unlawful in themselves and imposed by the undue authority of prelates. Bradshaw was in London, probably on a publishing errand, in 1605; he had been chosen lecturer at Christ Church, Newgate; but the bishop would not authorise him. He had already published against ceremonies, and though his tracts were anonymous, their paternity was well understood. He now put forth his most important piece, 'English Puritanisme,' 1605, 4to, which professed to embody the views of the most rigid section of the party. His views of doctrine would have satisfied Henry Ainsworth [q. v.]; he was at one with Ainsworth as regards the independence of congregations, differing only as to the machinery of their internal government; he was no separatist, but he wanted to see the church purified. Moreover, he entertained a much stronger feeling than Ainsworth of the duty of submission to the civil authority. Let the king be a 'very infidel' and persecutor of the truth, or openly defy every law of God, he held that he still retained, as 'archbishop and general overseer of all the churches within his dominions,' the right to rule all churches within his realm, and must not be resisted in the name of conscience; those who cannot obey must passively take what punishment he allots. The key to Bradshaw's own scheme of church polity is the complete autonomy of individual congregations. He would have them disciplined inwardly on the presbyterian plan, the worshippers delegating their spiritual government to an oligarchy of pastors and elders, power of excommunication being reserved to 'the whole congregation itself.' But he would subject no congregation to any ecclesiastical jurisdiction save 'that which is within itself.' To prevent as far as possible the action of the state from being warped by ecclesiastical control, he would enact that no clergyman should hold any office of civil authority. Liberty of conscience is a principle which his view of the royal supremacy precludes him from directly stating; but he very carefully guards against the possible abuse of church censures, and holds it a sin for any church officers to exercise authority over the body, goods, lives, liberty of any man. In spite of the safeguard provided by the autocratic control which he proposed to vest in the civil power, the system of which Bradshaw was the spokesman was not unnaturally viewed as abandoning every recognised security for the maintenance of protestant uniformity. That on his principle congregations might set up the mass was doubtless what was most feared; 'puritan-papist' is the significant title given in 1605 to a writer on Bradshaw's side, who would 'persuade the permission of the promiscuous use and profession of all sorts of heresies.' But before very long the appearance of anabaptist enthusiasts such as Wightman confirmed the impression that the scheme of Bradshaw and his friends would never do. Bradshaw's exposition of puritanism bore no name, but its authorship was never any secret. It was not enough to answer him by the pen of the Bishop of London's Welsh chaplain; his London lodgings were searched by two pursuivants, deputed to seize him and his pamphlets. His wife had sent him out of the way, and, not half an hour before the domiciliary visit, had succeeded in cleverly hiding the books behind the fireplace. They carried this spirited lady before the high commission, but could extract nothing from her under examination, so they bound her to appear again when summoned, and let her go. Ames's Latin version of the 'English Puritanisme' carried Bradshaw's views far and wide (see AMES, WILLIAM, 1576–1633, and BROWNE'S *Hist. of Congregationalism in Norf. and Suff.* 1877, p. 66 seq.) His Derbyshire retreat was Bradshaw's safe sanctuary; thither he returned from many a journey in the cause he loved; his friends there were influential; and there was much in his personal address which, when his surface austerity yielded to the natural play of a bright and companionable

disposition, attached to him the affectionate regard of men who did not share his views. No encomium from his own party gives so sympathetic a picture of his character as we find in the graphic touches of his compeer, Bishop Hall, who puts the living man before us, 'very strong and eager in argument, hearty in friendship, regardless of the world, a despiser of compliment, a lover of reality.' In the year before his death Bradshaw got back to Derbyshire from one of his journeys, and the chancellor of Overall, the bishop of Coventry and Lichfield, 'welcomed him home with a suspension from preaching.' But 'the mediation of a couple of good angels' (not 'two persons of some influence,' as Rose suggests, but coins of the realm) procured the withdrawal of the inhibition, and Bradshaw was left to pursue his work in peace. On a visit to Chelsea he was stricken with malignant fever, which carried him off in 1618. A large company of ministers attended him to his burial in Chelsea Church on 16 May. The funeral sermon was preached by Thomas Gataker [q. v.], who subsequently became his biographer. Bradshaw married a widow at Chatham; but the marriage did not take place till a short time prior to his election by the vestry as afternoon lecturer at Christ Church. He left three sons and a daughter; the eldest son, John, was born in Threadneedle Street, and 'baptized in the church near thereto adjoyning, where the minister of the place, somewhat thick of hearing, by a mistake, instead of Jonathan, nam'd him John.' He became rector of Etchingham, Sussex. Bradshaw published: 1. 'A Triall of Subscription by way of a Preface unto certaine Subscribers, and reasons for lesse rigour against Nonsubscribers,' 1599, 8vo (anon.) 2. 'Humble Motives for Association to maintain religion established,' 1601, 8vo (anon.) 3. 'A consideration of Certaine Positions Archiepiscopall,' 1604, 12mo (anon.; the positions attacked are four, viz. that religion needs ceremonies, that they are lawful when their doctrine is lawful, that the doctrine of the Anglican ceremonies is part of the gospel, that nonconformists are schismatics). 4. 'A shorte Treatise of the Crosse in Baptisme . . . the use of the crosse in baptisme is not indifferent, but utterly unlawful,' 1604, 8vo (anon.) 5. 'A Treatise of Divine Worship, tending to prove that the Ceremonies imposed . . . are in their use unlawful,' 1604, 8vo (anon.); reprinted 1703, 8vo, with preface and postscript, signed D. M. (Daniel Mayo), 'in defence of a book entitled "Thomas against Bennet"' [see BENNET, THOMAS, D.D.] 6. 'A Proposition concerning kneeling in the very act of receiving, . . .' 1605, 8vo (anon.) 7. 'A Treatise of the nature and use of things indifferent, tending to prove that the Ceremonies in present controversie . . . are neither in nature or use indifferent,' 1605, 8vo (anon.; a note prefixed implies that it was circulated anonymously in manuscript and published by an admirer of the unknown author). 8. 'Twelve generall arguments, proving that the Ceremonies imposed . . . are unlawfull, and therefore that the Ministers of the Gospell, for the . . . omission of them in church service are most unjustly charg'd of disloyaltie to his Majestie,' 1605, 12mo (anon.) 9. 'English Puritanisme: containeing the maine opinions of the rigidest sort of those that are called Puritanes . . .' 1605, 8vo (anon.; reprinted as if by Ames, 1641, 4to: the article AMES, WILLIAM, speaks of this as the earliest edition of the original; it was translated into Latin for foreign use, with preface by William Ames, D.D., and title 'Puritanismus Anglicanus,' 1610, 8vo. Neal gives an abstract of this work and No. 10, carefully done; but the main fault to be found with Neal is his introduction of the phrase 'liberty of conscience,' which implies rather more than Bradshaw expressly contends for). 10. 'A Protestation of the King's Supremacie: made in the name of the afflicted Ministers, . . .' 1605, 8vo (anon.; it was in explanation of the statement of the church's attitude towards civil governors, contained in the foregoing, and concludes with an earnest plea for permission openly and peacefully to exercise worship and ecclesiastical discipline, subject only to the laws of the civil authority). 11. 'A myld and just Defence of certeyne Arguments . . . in behalf of the silenced Ministers, against Mr. G. Powell's Answer to them,' 1606, 4to (anon.; Gabriel Powell was chaplain to Vaughan, bishop of London, and had published against toleration (1605). In reply to 9, Powell wrote 'A Consideration of the deprived and silenced Ministers' Arguments, . . .' 1606, 4to; and in reply to Bradshaw's defence he wrote 'A Rejoinder to the mild Defence, justifying the Consideration,' &c., 1606, 4to). 12. 'The Unreasonablenesse of the Separation made apparant, by an Examination of Mr. Johnson's pretended Reasons, published in 1608, whereby hee laboureth to justifie his Schisme from the Church Assemblies of England,' Dort, 1614, 4to. (Francis Johnson's 'Certayne Reasons and Arguments' was written while Johnson was at one with Ainsworth in advocating a separatist congregational polity. John Canne, who subsequently became pastor of Johnson's Amsterdam church, and who lived to distinguish himself as a fifth-monarchy man, published 'A Necessitie of Separation from

the Church of England, proved from the Nonconformists' Principles,' 1634, 4to, in reply to Bradshaw and Alexander Leighton, M.D., a non-separatist presbyterian. Gataker then brought out a supplemented edition of Bradshaw's book, 'The Unreasonableness of the Separation made apparent, in Answere to Mr. Francis Johnson; together with a Defence of the said Answere against the Reply of Mr. John Canne,' 1640, 4to.) 13. 'A Treatise of Justification,' 1615, 8vo; translated into Latin, 'Dissertatio de Justificationis Doctrina,' Leyden, 1618, 12mo; Oxford, 1658, 8vo. (Gataker says that John Prideaux, D.D., a strong opponent of Arminianism, afterwards bishop of Worcester, expressed pleasure at meeting Bradshaw's son, 'for the old acquaintance I had, not with your father, but with his book of justification.') 14. The 2nd edition of Cartwright's 'A Treatise of the Christian Religion, . . .' 1616, 4to, has an address 'to the Christian reader,' signed W.B. (Bradshaw). Probably posthumous was 15, 'A Preparation to the receiving of Christ's Body and Bloud, . . .' 8th edit., 1627, 12mo. Certainly posthumous were 16, 'A Plaine and Pithie Exposition of the Second Epistle to the Thessalonians,' 1620, 4to (edited by Gataker). 17. 'A Marriage Feast,' 1620, 4to (edited by Gataker). 18. 'An Exposition of the XC. Psalm, and a Sermon,' 1621, 4to. (The first of these seems to have been separately published as 'A Meditation on Man's Mortality;' the other is the same as 14.) In addition to the above, Brook gives the following, without dates: 19. 'A Treatise of Christian Reproof.' 20. 'A Treatise of the Sin against the Holy Ghost.' 21. 'A Twofold Catechism.' 22. 'An Answer to Mr. G. Powell' (probably the same as 11, but possibly a reply to one of Powell's earlier tracts). 23. 'A Defence of the Baptism of Infants.' A collection of Bradshaw's tracts was published with the title, 'Several Treatises of Worship & Ceremonies,' printed for Cambridge and Oxford, 1660, 4to; it contains Nos. 3, 4, 5, 6, 7, 8, 9 (which is dated 1604) and 10. From a fly-leaf at the end, it seems to have been printed in Aug. 1660 by J. Rothwell, at the Fountain, in Goldsmith's Row, Cheapside. All the tracts, except 3 and 4, have separate title-pages, though the paging runs on, and are sometimes quoted as distinct issues.

[Life, by Gataker, in Clark's Martyrology, 1677; Neal's Hist. of the Puritans, Dublin, 1759, i. 381, 418; ii. 62 seq., 106; Brook's Lives of the Puritans, 1813, ii. 212, 264 seq., 376 seq.; Brook's Memoirs of Cartwright, 1845, pp. 434, 462; Fisher's Companion and Key to the Hist. of England, 1832, pp. 728, 747; Rose, Biog. Dict. 1857, v. 1; Cooper's Athenæ Cantab. 1861, ii. 236, 405 seq.; Barclay's Inner Life of the Rel. Societies of the Commonwealth, 1876, pp. 67, 99, 101; Wallace's Antitrin. Biog. 1850, ii. 534 seq., iii. 565 seq.; extracts from Stapenhill Registers, per Rev. E. Warbreck. The list of Bradshaw's tracts has been compiled by help of the libraries of the Brit. Museum and Dr. Williams, the Catalogue of the Advocates' Library, Edin., and a private collection. Further search would probably bring others to light. They are not easy to find, owing to their anonymity.] A. G.

BRADSHAW, WILLIAM (*fl.* 1700), hack writer, was originally educated for the church. The eccentric bookseller John Dunton, from whom our only knowledge of him is derived, has left a flattering account of his abilities. 'His genius was quite above the common order, and his style was incomparably fine. . . . He wrote for me the parable of the magpies, and many thousands of them sold.' Bradshaw lived in poverty and debt, and under the additional burden of a melancholy temperament. Dunton's last experience of him was in connection with a literary project for which he furnished certain material equipments; possessed of these, Bradshaw disappeared. The passage in which Dunton records this transaction has all his characteristic naïveté, though it may be doubted whether, if Bradshaw lived to read it, he derived much satisfaction from the plenary dispensation which was granted him —'If Mr. Bradshaw be yet alive, I here declare to the world and to him that I freely forgive him what he owes both in money and books if he will only be so kind as to make me a visit.' Dunton believed Bradshaw to be the author of the 'Turkish Spy,' but this conjecture is negatived by counter claims supported on better authority (*Gent. Mag.* lvi. pt. i. p. 33; Nichols, *Literary Anecdotes*, i. 413; D'Israeli, *Curiosities of Literature*, 5th ed. ii. 134).

[Life and Errors of John Dunton, 1705, ed. 1818.] J. M. S.

BRADSHAW, WILLIAM, D.D. (1671–1732), bishop of Bristol, was born at Abergavenny in Monmouthshire on 10 April 1671 (Cooper, *Biographical Dictionary*). He was educated at New College, Oxford, taking his degree of B.A. 14 April 1697, and proceeding M.A. 14 Jan. 1700. He was ordained deacon 4 June 1699, and priest 26 May 1700, and was senior preacher of the university in 1711. On 5 Nov. 1714, when he was chaplain to Dr. Charles Trimnell, bishop of Norwich, he published a sermon preached in St. Paul's Cathedral. After having been for some time incumbent of Fawley, near Wantage, in Berkshire, he was appointed on 21 March 1717 to a prebend of Canterbury, which he

resigned on his appointment as canon of Christ Church, Oxford, on 24 May 1723. He received the degree of D.D. on 27 Aug. of the same year; and on 29 Aug. 1724 was nominated to both the deanery of Christ Church and the bishopric of Bristol, receiving the two preferments *in commendam*. He published in 1730 a 'Sermon preached before the House of Lords on 30 Jan. 1729-30.' Bradshaw died at Bath on 16 Dec. 1732. He was buried in Bristol Cathedral, where a plain flat stone, about two feet beyond the bishop's stall towards the chancel, was inscribed: 'William Bradshaw, D.D., Bishop of Bristol and Dean of Christ Church, in Oxford; died 16 Dec. 1732, aged 62' (*Rawlinson MSS.* 4to, i. 267). It is also erroneously said that Bradshaw was buried at Bath (Le Neve, *Fasti*); 'ibique jacet sepultus' (Godwin, *De Præsulibus*). Bradshaw left 300*l.* to Christ Church.

[Catalogue of Oxford Graduates, 1851; Cooper's Biog. Dict. 1873; History of the University of Oxford, 1814; Godwin, De Præsulibus, ed. Richardson, 1743; Le Neve's Fasti, 1854; Daily Journal, 19 Dec. 1732; Britton's Abbey and Cathedral Church of Bristol, 1830; Pryce's Popular History of Bristol, 1861.] A. H. G.

BRADSHAWE, NICHOLAS (*fl.* 1635), fellow of Balliol College, Oxford, was the author of 'Canticvm Evangelicvm Summam Sacri Evangelii continens,' London, 1635, 8vo, dedicated to Sir Arthur Mainwaring, knight. This book is unnoticed by all bibliographers.

[Notes and Queries, 3rd series, vi. 143.] T. C.

BRADSTREET, ANNE (1612–1672), poetess, was born in 1612, probably at Northampton, and was the second of the six children of Thomas Dudley, by Dorothy, his first wife (*Works in Prose and Verse*, Introd. p. xiv). Her father was once page to Lord Compton, then steward to the Earl of Lincoln, and finally governor of Massachusetts. In 1628 Anne had the small-pox. Later in the same year she married Simon Bradstreet, son of Simon Bradstreet, a nonconformist minister in Lincolnshire; the younger Simon had been eight years in the Earl of Lincoln's family under Anne's father (*Magnalia Christi Americana*, bk. ii. p. 19), and in 1628 was steward to the Countess of Warwick (*Works*, &c., Introd. p. xxii). On 29 March 1630 the Bradstreets, the Dudleys, and Arbella (the Earl of Lincoln's sister, wife of Isaac Johnson), with many others, set sail for New England, and on 12 June landed at Salem, whence they removed at once to Charlestown (*ib.* p. xxxi). In 1632 Anne had a 'fit of sickness,' and in 1634 the party settled at Ipswich, Massachusetts (*Works*, Introd. p. xxxv). Simon Bradstreet formed a plantation at Merrimac in 1638, the year in which Anne wrote her 'Elogie on Sir Philip Sidney.' At Ipswich, on Monday, 28 Sept. 1640, she at last became a mother, and she could eventually write, 23 June 1659 (*Poems*, p. 245):

> I had eight birds hatcht in one nest,
> Four cocks there were and hens the rest.

In 1641 Anne Bradstreet wrote a poem in honour of Du Bartas, and she shortly made a collection of her poems. The chief of them was entitled 'The Four Elements;' she dedicated the volume in verse to her father, under date 20 March 1642. These poems were distributed in manuscript, and gained her great celebrity. Cotton Mather spoke of her as 'a crown to her father' (*Magnalia*, bk. ii. p. 17), whilst Griswold calls her 'the most celebrated poet of her time in America' (*Poets and Poetry of America*, p. 92). The book was at last published, in London, 1650, under the title 'The Tenth Muse,' . . . 'By a Gentlewoman in Those Parts (i.e. New England).' In 1643, on 27 Dec., Dorothy Dudley, Anne Bradstreet's mother, died (*Poems*, p. 220); in 1644 her father married again (having three more children by this marriage). In 1653 Anne's father died. In 1661 she had a further long and serious illness, and her husband, then secretary to the colony, had to proceed to England on state business. Anne wrote 'Poetical Epistles' to him. By 3 Sept. 1662 he had returned. Anne Bradstreet wrote poems in 1665 and 1669 commemorating the deaths of three grandchildren; and on 31 Aug. 1669 Anne wrote her last poem, beginning

> As weary pilgrim, now at rest.

After this Anne Bradstreet's health failed entirely, and she died of consumption, at Andover, Massachusetts, 16 Sept. 1672, aged 60.

It is not known where Anne Bradstreet was buried. Her poems, says Cotton Mather, are a 'monument for her memory beyond the stateliest marbles;' and these 'Poems' were issued in a second edition, printed by John Foster, at Boston (America), in 1678. Anne Bradstreet also left a small manuscript book of 'Meditations,' designed for the use of her children. Extracts from this book appeared, with the title of 'The Puritan Mother,' in the American 'Congregational Visitor,' 1844; in Dr. Budington's 'History of the First Church in Charlestown,' and in many American newspapers to which they were contributed by Mr. Dean Dudley (*Works*, Introd. p. x). In 1867 Mr. John Harvard Ellis edited Anne Bradstreet's 'Works,' and there these 'Meditations,' together with all that Anne Bradstreet ever wrote, are given in their entirety.

Simon Bradstreet (a portrait of whom is in the senate chamber of the State House, Massachusetts) married again after Anne's death, and became governor of Massachusetts in 1679, not dying till 1697, aged 94. Amongst Anne's descendants are Oliver Wendell Holmes, Dana, and Dr. Channing, besides many other of the best-known Americans.

[Works of Anne Bradstreet, in Prose and Verse (ed. Ellis), U.S.A. 1867; Anne Bradstreet's Poems, 2nd ed. Boston, 1678; Mather's Magnalia Christi Americana, bk. ii. pp. 17, 19.] J. H.

BRADSTREET, DUDLEY (1711–1763), adventurer, was born in 1711 in Tipperary, where his father had obtained considerable property under the Cromwellian grants, which, however, was much reduced by debts. Dudley, his youngest son, was left in his early years in charge of a foster father in Tipperary. While a youth he became a trooper, but soon quitted the army and traded unsuccessfully as a linen merchant, and subsequently as a brewer. For several years, in Ireland and England, Bradstreet led an erratic life, occupied mainly in pecuniary projects. During the rising of 1745, Bradstreet was employed by government officials to act as a spy among suspected persons. He was also engaged and equipped by the Dukes of Newcastle and Cumberland to furnish them with information on the movements of Prince Charles Edward and his army. Bradstreet assumed the character of a devoted adherent to the Stuart cause, and, under the name of 'Captain Oliver Williams,' obtained access to the prince and his council at Derby. There he acted successfully as a spy for the Duke of Cumberland, and, without being suspected by the Jacobites, continued on good terms with them, and took his leave as a friend when they commenced their return march to Scotland. Bradstreet's notices of Prince Charles and his associates are graphic. He describes circumstantially the executions, in August 1746, of the Earl of Kilmarnock and Lord Balmerino, at which he states he was present. Although Bradstreet's services as a secret agent were admitted by the government officials, he was unable to obtain from them either money or a commission in the army, which he considered had been promised to him. He, however, succeeded in bringing his case under the notice of the king, from whom he consequently received the sum of one hundred and twenty pounds. Bradstreet subsequently subsisted for a time on the results of schemes, his success in which he ascribed to the 'superstition' of the English people, and 'their credulity and faith in wondrous things.' The last of his devices at London appears to have been that styled the 'bottle conjurer,' which, with the assistance of several confederates, he carried out with great gains in January 1747–8. On his adventures in connection with the affair Bradstreet wrote a play, in five acts, styled 'The Magician, or the Bottle Conjurer,' which he states was revised for him by some of the best judges and actors in England, including Mrs. Woffington, who gave him 'the best advice she could about it.' This play was four times performed with great success at London, but on the fifth night, when Bradstreet was to have taken the part of 'Spy,' the principal character, it was suppressed by the magistrates of Westminster. 'The Bottle Conjurer' was printed by Bradstreet with his 'Life.' After other adventures, Bradstreet returned to Ireland, where he owned a small property in land. He attempted unsuccessfully to carry on trade as a brewer in Westmeath, and became involved in contests with officials of the excise. To raise funds, he printed an account of his life and adventures. The work is written with vivacity and descriptive power. Bradstreet died at Multifarnham, Westmeath, in 1763. His brother, Simon Bradstreet, was called to the bar in Ireland in 1758, created a baronet in 1759, and died in 1762. Sir Samuel Bradstreet [q. v.], third baronet, was a younger brother of Sir Simon, the first baronet's son and heir.

J. T. G.

BRADSTREET, ROBERT (1766–1836), poet, son of Robert Bradstreet, was born at Higham, Suffolk, in 1766, and educated under the care of the Rev. T. Foster, rector of Halesworth in that county. On 4 June 1782 he was admitted a pensioner of St. John's College, Cambridge, and he became a fellow-commoner of that society on 23 Jan. 1786. The dates of his degrees are B.A. 1786, M.A. 1789. Bradstreet was the possessor of an estate at Bentley in Suffolk, with a mansion called Bentley Grove, which, it is believed, he inherited from his father. He resided for several years abroad, and witnessed many of the scenes of the French revolution, of which he was at one time an advocate. He married in France, but took advantage of the facility with which the marriage tie could there be dissolved, and on his return to England he married, in 1800, Miss Adham of Mason's Bridge, near Hadleigh, Suffolk, by whom he had a numerous family. For some time he lived at Higham

Hall, Raydon, but removing thence, he resided at various places, and at length died at Southampton on 13 May 1836.

He was the author of 'The Sabine Farm, a poem: into which is interwoven a series of translations, chiefly descriptive of the Villa and Life of Horace, occasioned by an excursion from Rome to Licenza,' London, 1810, 8vo. There are seven engraved plates in the work, and an appendix contains 'Miscellaneous Odes from Horace.'

[London Packet, 20-23 May 1836, p. 1, col. 1; Addit. MS. 19167, f. 237; Gent. Mag. ciii. (ii) 420, N.S., vi. 108.] T. C.

BRADSTREET, Sir SAMUEL (1735?-1791), Irish judge, the representative of a family who had settled in Ireland in the time of Cromwell, was born about 1735, being the younger son of Sir Simon Bradstreet, a barrister, who was created a baronet of Ireland on 14 July 1759. Samuel Bradstreet was called to the Irish bar in Hilary term, 1758. He was appointed in 1766 to the recordership of Dublin. In June 1776 Bradstreet—who, at the death of Sir Simon, his elder brother, in 1774, had succeeded to the title as third baronet—was elected representative of the city of Dublin in the Irish House of Commons. He was re-elected in October 1783, and was distinguished as a member of the 'patriotic party,' from which, however, according to Sir Jonah Barrington, he was one of the 'partial desertions.' 'Mr. Yelverton, the great champion of liberty, had been made chief baron, and silenced; Mr. Bradstreet [i.e. Sir Samuel Bradstreet] became a judge [in January 1784], and mute; Mr. Denis Daly had accepted the office of paymaster, and had renegaded' (*Historic Anecdotes*, ii. 166). Bradstreet presided in 1788 at Maryborough, Queen's County, where he summed up for the conviction of Captain (afterwards General) Gillespie, for the murder of William Barrington, younger brother of Sir Jonah Barrington, whom he held to have been unfairly slain by Captain Gillespie in a duel. In 1788 Bradstreet was appointed a commissioner of the great seal, in association with the Archbishop of Dublin and Sir Hugh Carleton, chief justice of the court of common pleas. Bradstreet died at his seat at Booterstown, near Dublin, on 2 May 1791, and was succeeded in the baronetcy by Simon, the eldest of his four sons by his wife Eliza, whom he married in 1771, and who died in 1802, only daughter and heiress of James Tully, M.D., of Dublin.

H. G.

BRADWARDINE, THOMAS (1290?-1349), archbishop of Canterbury, is commonly called Doctor Profundus. His surname is variously spelt Bragwardin (Gerson), Brandnardinus (Gesner), Bredwardyn (Birchington), and Bradwardyn (William de Dene). In public documents he is usually designated as Thomas de Bradwardinâ or de Bredewardinâ. His family may have originally come from Bradwardine near Hereford, but he himself says that he was born in Chichester, and implies that his father and grandfather were also natives of that city. Birchington indeed (Wharton, *Anglia Sacra*, i. 42) says that he was born at Hertfield (Hartfield) in the diocese of Chichester, and William de Dene (*Ang. Sac.* i. 376) gives Condenna (probably Cowden) in the diocese of Rochester as his birthplace, but neither of these writers supports his statement by any evidence.

At Chichester Thomas may have become acquainted with the celebrated Richard of Bury, afterwards bishop of Durham, who held a prebendal stall in Chichester Cathedral early in the fourteenth century, and from that enthusiast in study and diligent collector of books he may have first imbibed a taste for learning. Nothing, however, is known respecting his education before he went to Oxford, nor has the exact date of his going thither been ascertained. All we know for certain is that he was entered at the college, then recently founded by Walter de Merton, and in 1325 his name appears as one of the proctors of the university. In this capacity he had to take part in a dispute between the university and the archdeacon of Oxford. The archdeaconry was held *in commendam* by Galhardus de Morâ, cardinal of St. Lucia; the duties of the office were discharged by deputy, and the emoluments were farmed by men whose object was to make as much gain for themselves as they could. They claimed spiritual jurisdiction over the university for the archdeacon. The chancellor and proctors resisted the claim, maintaining that the discipline of the university pertained to them. The cardinal archdeacon having complained to the pope, the chancellor, proctors, and certain masters of arts were summoned to Avignon to answer for their conduct, but they

declined to appear and lodged a counter suit against the archdeacon in the king's court. The king, Edward III, compelled the archdeacon to submit to the arbitration of English judges, and the controversy ended in favour of the university, which was exempted from all episcopal jurisdiction.

During his residence in Oxford, Thomas Bradwardine obtained the highest reputation as a mathematician, astronomer, moral philosopher, and theologian. At the request of the fellows of Merton he delivered to them a course of theological lectures, which he afterwards expanded into a treatise. This work earned him the title of Doctor Profundus: in his own day it was commonly called 'Summa Doctoris Profundi,' but in later times it has been entitled 'De Causâ Dei contra Pelagium, et de virtute causarum ad suos Mertonenses libri tres.' This treatise was edited by Sir Henry Savile in 1618 in a folio volume of nearly 1,000 pages. It continued to be for ages a standard authority amongst theologians of the Augustinian and Calvinistic school. Dean Milner gives a summary of its contents in his 'Church History' (iv. 79–106). According to Bradwardine the whole church had in his day become deeply infected with Pelagianism. 'I myself,' he says, 'was once so foolish and vain when I first applied myself to the study of philosophy as to be seduced by this error. In the schools of the philosophers I rarely heard a word said concerning grace, but we were continually told that we were the masters of our own free actions, and that it was in our own power to do well or ill.' He endeavours to prove, with much logical force and mathematical precision, that human actions are totally devoid of all merit, that they do not deserve grace even of congruity, that is as being meet and equitable—the most specious form of Pelagianism, and one which was most commonly entertained in that day. He maintains that human nature is absolutely incapable of conquering a single temptation without a supply of divine grace, and that this grace is the free and unmerited gift of God, whose knowledge and power are alike perfect. If God did not bestow His grace freely, He could not foresee how He would confer His gifts, and therefore His foreknowledge would not be absolute; so that the doctrine of God's foreknowledge and free grace are linked together. Underlying all the hard and dry reasoning, however, of this treatise, there is a deep vein of warm and genuine piety which occasionally breaks out into fervent meditation and prayer, full of love, humility, and thankfulness.

The estimation in which Thomas Bradwardine was held as a theologian in his own century is indicated by the way in which Chaucer refers to him. In the 'Nun's Priest's Tale' the speaker, touching on the question of God's foreknowledge and man's free-will, is made to say:

> But I ne cannot boult it to the bren,
> As can the holy doctour S. Austin,
> Or Boece, or the Bishop Bradwirdyn.

About 1335 Bradwardine was, with seven other Merton men, summoned to London by Richard of Bury, who had been made bishop of Durham in 1333 and chancellor in the following year, and who surrounded himself with a large retinue of esquires and chaplains, partly from a love of splendour, partly from a love of the society of men of learning who could assist him in the formation of his library. In 1337 the Bishop of Durham obtained for his chaplain Bradwardine the chancellorship of St. Paul's Cathedral with the prebend of Cadington Minor attached to it. He had in 1333 already accepted a prebendal stall in Lincoln Cathedral, although not without some scruples and hesitation, owing to the objections then becoming prevalent against the non-residence of beneficiaries.

On the joint recommendation of Archbishop Stratford and the Bishop of Durham he was appointed one of the royal chaplains. Although the title of confessor was borne by all the king's chaplains, the language of Birchington seems to imply that Bradwardine actually received the confession of Edward III, which, considering what the life of the king then was, must have been a very difficult and unpleasant office if it was conscientiously discharged. He joined the court in Flanders and accompanied the king, 16 Aug. 1338, in his progress up the Rhine to hold a conference at Coblenz with his brother-in-law Lewis of Bavaria.

At Cologne Bradwardine reminded the king that Richard Cœur de Lion had offered public thanksgiving in the cathedral for his escape from the Duke of Austria. That cathedral had been destroyed by fire, but the new structure, which has not been completed till our own day, was in course of erection. The plans were submitted to the king, and after consultation with Bradwardine he subscribed a sum equal to 1,500*l.* according to the present value of money. Bradwardine continued to be in attendance upon the king up to the date of the victory of Cressy and the capture of Calais. He was so diligent in his exhortations to the king and the soldiers that many attributed the successes of the English arms to the favour of Heaven obtained through the wholesome warnings

and the holy example of the royal chaplain. After the battles of Cressy and Neville's Cross he was appointed one of the commissioners to treat of peace with King Philip.

Archbishop Stratford died 23 Aug. 1348, and the chapter of Canterbury, thinking to anticipate the wishes of the king, elected Bradwardine, who had become archdeacon of Norwich in 1347, to the vacant see without waiting for the *congé d'élire*. The king, offended by the irregularity, requested the pope to appoint John of Ufford by provision. The appointment was merely a device in order to vindicate his own right of nomination, which had been infringed by the premature action of the chapter; for John of Ufford was aged and paralytic, and died of the plague before his consecration.

After the death of John of Ufford the chapter applied for the *congé d'élire*, which was sent with the recommendation to elect Bradwardine. The pope, Clement VI, also issued a bull in which he affected to supersede the election of the chapter, and appointed Thomas by provision. Bradwardine was on the continent at the time of his election, and repaired without delay to the papal court at Avignon for consecration, which took place 19 July 1349. The pope was so completely in the power of Edward at this time that he had once bitterly remarked, if the King of England were to ask him to make a bishop of a jackass, he could not refuse. The cardinals had resented the saying, and one of them, Hugo, cardinal of Tudela, a kinsman of the pope, had the ill taste to make the consecration of Bradwardine an occasion for indulging their spleen. In the midst of the banquet given by the pope, the doors of the hall being suddenly thrown open a clown entered seated upon a jackass and presented a humble petition that he might be made archbishop of Canterbury. Considering the European reputation of Bradwardine for learning and piety, the joke was remarkably unsuitable; the pope rebuked the offender, and the rest of the cardinals marked their displeasure by vying with one another in the respect which they paid to the new archbishop.

Although the Black Death was now raging in England, Bradwardine hastened thither. He landed at Dover on 19 Aug., did homage to the king at Eltham, and received the temporalities from him on the 22nd. Thence he went to London, and lodged at La Place, the residence of the Bishop of Rochester in Lambeth. On the morning after his arrival he had a feverish attack, which was attributed to fatigue after his journey, but in the evening tumours under the arms and other symptoms of the deadly plague which was then ravaging London made their appearance, and on the 26th the archbishop died. Notwithstanding the infectious nature of the disease, the body was removed to Canterbury and buried in the cathedral.

His works are: 1. 'De Causâ Dei contra Pelagium et de virtute causarum,' edited by Sir Henry Savile, London, 1618. 2. 'Tractatus de proportionibus,' Paris, 1495. 3. 'De quadraturâ circuli,' Paris, 1495. 4. 'Arithmetica speculativa,' Paris, 1502. 5. 'Geometria speculativa,' Paris, 1530. 6. 'Ars Memorativa,' manuscript in the Sloane collection, British Museum, No. 3744. This last is an attempt at a plan for aiding the memory by the method of mentally associating certain places with certain ideas or subjects, or the several parts of a discourse.

[Sir Henry Savile, in the preface to his edition of Bradwardine's work De Causâ Dei contra Pelagium, has collected all the notices of his life, which are but scanty. See also Birchington and William of Dene, Hist. Roff., and William de Chambre, Hist. Dunelm., in Wharton's Anglia Sacra, vol. i.; Hook's Lives of the Archbishops, vol. iv.] W. R. W. S.

BRADY, Sir ANTONIO (1811–1881), admiralty official, was born at Deptford on 10 Nov. 1811, being the eldest son of Anthony Brady of the Deptford victualling yard, then storekeeper at the Royal William victualling yard, Plymouth, by his marriage, on 20 Dec. 1810, with Marianne, daughter of Francis Perigal and Mary Ogier. He was educated at Colfe's school, Lewisham, and then entered the civil service as a junior clerk in the Victoria victualling yard, Deptford, on 29 Nov. 1828, and, having served there and at Plymouth and Portsmouth, was, through the recommendation of Sir James Graham, promoted to headquarters at Somerset House as a second-class clerk in the accountant-general's office on 26 June 1844. He was gradually promoted until in 1864 he became registrar of contracts, and having subsequently assisted very materially in reorganising the office, he was made the first superintendent of the admiralty new contract department on 13 April 1869, when an improved salary of 1,000*l.* a year was allotted to him. He held this appointment until 31 March 1870, when he retired on a special pension. He was knighted by the queen at Windsor on 23 June 1870.

After his retirement Sir Antonio devoted himself to social, educational, and religious reform. Having taken a great interest in the preservation of Epping Forest for the people, he was appointed a judge in the 'Verderer's court for the forest of Epping.' He was

associated with church work of all kinds. He published in 1869 'The Church's Works and its Hindrances, with suggestions for Church Reform.' The establishment of the Plaistow and Victoria Dock Mission, the East London Museum at Bethnal Green, and the West Ham and Stratford Dispensary was in a great measure due to him.

Brady was a member of the Ray, the Palæontographical, and Geological Societies. So long ago as 1844 his attention had been attracted to the wonderful deposits of brick-earth which occupy the valley of the Roding at Ilford, within a mile of his residence. Encouraged by Professor Owen he commenced collecting the rich series of mammalian remains in the brickearths of the Thames valley, comprising amongst others the skeletons of the tiger, wolf, bear, elephant, rhinoceros, horse, elk, stag, bison, ox, hippopotamus, &c. This valuable collection of pleistocene mammalia is now in the British Museum of Natural History, Cromwell Road. In his 'Catalogue of Pleistocene Mammalia from Ilford, Essex,' 1874, printed for private circulation only, Brady acknowledges his indebtedness to Mr. William Davies, F.G.S., his instructor in the art of preserving fossil bones. He died suddenly at his residence, Maryland Point, Forest Lane, Stratford, on 12 Dec. 1881. He was buried in St. John's churchyard, Stratford, on 16 Dec. His marriage with Maria, eldest daughter of George Kilner of Ipswich, took place on 18 May 1837, and by her, who survived him, he left a son, the Rev. Nicholas Brady, rector of Wennington, Essex, and two daughters.

[Stratford and South Essex Advertiser, 16 and 23 Dec. 1881; Nature (1881-2), xxv. 174-5, by Henry Woodward; Guardian (1881), p. 1782; and collected information.] G. C. B.

BRADY, JOHN (*d.* 1814), clerk in the victualling office, was the author of 'Clavis Calendaria; or a Compendious Analysis of the Calendar: illustrated with ecclesiastical, historical, and classical anecdotes,' 2 vols., London, 1812, 8vo; 3rd edit., 1815. The compiler also published an abridgment of the work, and some extracts from it appeared in 1826, under the title of 'The Credulity of our Forefathers.' This book, once very popular, has been long since superseded. Brady died at Kennington, Surrey, on 5 Dec. 1814. His son, John Henry Brady, arranged and adapted for publication 'Varieties of Literature; being principally selections from the portfolio of the late John Brady,' London, 1826, 8vo.

[Biog. Dict. of Living Authors, 36, 416; Watt's Bibl. Brit.; Cat. of Printed Books in Brit. Mus.] T. C.

BRADY, SIR MAZIERE (1796-1871), lord chancellor of Ireland, born on 20 July 1796, was a great-grandson of the Rev. Nicholas Brady, D.D. [q. v.], the psalmist, and the second son of Francis Tempest Brady, a gold and silver thread manufacturer in Dublin. In 1812 Brady entered Trinity College, Dublin; in 1814 he obtained a scholarship there, and twice carried off the vice-chancellor's prize for English verse. He proceeded B.A. (1816) and M.A. (1819), and was called to the Irish bar in Trinity term of 1819. In 1833, under the ministry of Earl Grey, he, as an avowed liberal, was appointed one of the commissioners to inquire into the state of the Irish municipal corporations. In 1837 he was made solicitor-general for Ireland, in succession to Stephen Woulfe [q. v.], and became attorney-general in 1839. In the year following he was promoted to the bench as chief baron of the Court of Exchequer. He was raised to the bench of the Irish Court of Chancery, somewhat against his inclination, in 1846. He was lord chancellor of Ireland during the Russell administration, 1846-52. He became in 1850 the first vice-chancellor of the Queen's University, of the principles of which foundation Brady was a constant advocate. From 1853 to 1858 Brady was again lord chancellor of Ireland. He resumed the post once more in 1859, and held it through the second administrations of Lord Palmerston and Earl Russell until the overthrow of the latter in 1866. On 28 June of that year he sat for the last time in the Irish Court of Chancery. He retired amidst general regret. He was fond of scientific studies, especially geology. In 1869 he was created a baronet by Mr. Gladstone. He died at his residence in Upper Pembroke Street, Dublin, on Thursday, 13 April 1871. At the time of his death, besides holding the vice-chancellorship of the Queen's University, he was a member of the National Board of Education, and president of the Irish Art Union, and of the Academy of Music.

Brady was twice married: first, in 1823, to Eliza Anne, daughter of Bever Buchanan of Dublin, who died in 1858; and secondly to Mary, second daughter of the Right Hon. John Hatchell, P.C., of Fortfield House, co. Dublin. His first wife left him five children, by the eldest of whom, Francis William Brady, Q.C., he was succeeded in his title and estates.

[Catalogue of Dublin Graduates, 1869; Freeman's Journal, 14 and 18 April 1871; Daily News, 15 April 1871; Irish Times, 18 April 1871; Times, 15 and 19 April 1871; Burke's Lives of the Lord Chancellors of Ireland, 1872; Wills's Irish Nation, its History and its Biography, 1875; Debrett's Baronetage, 1884.] A. H. G.

BRADY, NICHOLAS (1659-1726), divine and poet, son of Major Nicholas Brady, who served in the king's army in the rebellion, and Martha, daughter of Luke Gernon, a judge, was born at Bandon, county Cork, on 28 Oct. 1659. After he had for some time attended a school called St. Finberry's, kept by Dr. Tindall, he was sent to England at the age of twelve, and admitted into the college of Westminster in 1673. Thence he was elected to Christ Church, Oxford, where he matriculated 4 Feb. 1678-9, proceeding B.A. in Michaelmas term 1682. He then returned to Ireland, lived with his father at Dublin, and took his B.A. degree at the university there in 1685, proceeding M.A. the next year. Entering orders he was instituted prebendary of Kinaglarchy in the church of Cork in July 1688, and a few months later was presented to the livings of Killmyne and Drinagh in Cork diocese. He was also chaplain to Bishop Wetenhall. During the revolution he warmly upheld the cause of the Prince of Orange, and suffered some loss in consequence. His interest with James's general, MacCarthy, enabled him to save the town of Bandon, though James thrice commanded that it should be burnt. The people of the town having suffered considerable loss sent him with a petition to the English parliament praying for compensation. During his visit to London his preaching was much admired; he was chosen lecturer at St. Michael's, Wood Street, and, on 10 July 1691, was appointed to the church of St. Catherine Cree, where he remained until 1696. The sermon he preached on his resignation was printed, London, 1696, 4to. On his resignation he received the living of Richmond, Surrey, which he held until his death. From 1702 to 1705 he also held the rectory of Stratford-on-Avon, which he resigned on his appointment to the rectory of Clapham on 21 Feb. 1705-6. Although his ecclesiastical preferments brought him in an income of 600*l.* a year, his expensive habits, and especially his love of hospitality, obliged him to keep a school at Richmond. This school is mentioned in terms of praise in a paper of Steele's in the 'Spectator' (No. 168). On 15 Nov. 1699 the university of Dublin conferred on him the degrees of B.D. and D.D. in recognition of his abilities, and sent him the diploma of doctor by the senior travelling fellow of the society. Brady was chaplain to William III, to Mary, to Anne both as princess of Wales and as queen, and to the Duke of Ormonde's regiment of horse. In 1690 he married Letitia, daughter of Dr. Synge, archdeacon of Cork, and had by her four sons and four daughters. He died at Richmond 20 May 1726, and was buried in that church. His funeral sermon, preached by the Rev. T. Stackhouse, vicar of Beenham [q. v.], was published under the title of 'The Honour and Dignity of True Ministers of Christ,' London, 1726.

Brady's best known work is (1) the metrical version of the Psalms, which he undertook while minister of St. Catherine Cree in conjunction with Nahum Tate [q. v.] When their work was complete and had been submitted to and revised by the archbishop of Canterbury and the bishops, the authors petitioned the king that he would allow it to be used in the public services of the church, and accordingly William, on 3 Dec. 1696, made an order in council that it might 'be used in all churches . . . as shall think fit to receive the same.' The 'New Version,' as the work of Brady and Tate is called to distinguish it from the version of T. Sternhold and J. Hopkins, was well received by the whigs. Some of the stiffer tories among the clergy, however, objected to it, and their objections, which seem to have been that the new version was too poetical, that there was no need of change, and, as was hinted, that they were offended at the recommendation of the whig bishops and at the 'William R.' on the order allowing its use, were answered by 'A brief and full Account of Mr. Tate's and Mr. Brady's New Version, by a True Son of the Church of England,' London, 1698. The use of the 'New Version' was condemned by Bishop Beveridge [q. v.] in his 'Defence of the Book of Psalms . . . by T. Sternhold, J. Hopkins, and others, with critical observations on the New Version compared with the Old,' London, 1710, and Brady's share in the work was sneered at by Swift in his 'Remarks on Dr. Gibbs's Psalms.' Brady also wrote (2) a tragedy entitled 'The Rape, or the Innocent Impostors,' acted at the Theatre Royal in 1692, the prologue being spoken by Betterton, and the epilogue, the work of Shadwell, by Mrs. Bracegirdle. It was published in 4to the some year, with a dedication to the Earl of Dorset, but without the author's name. The plot is concerned with the history of the Goths and Vandals. It was slightly recast for representation in 1729, the Goths and Vandals being turned into Portuguese and Spaniards. In 1692 (3) an 'Ode for St. Cecilia's Day,' which will be found in Nichols's 'Select Collection of Poems,' v. 302. (4) 'Proposals for the publication of a translation of Virgil's Æneids in blank verse, together with a specimen of the performance.' This translation was published by subscrip-

tion, being completed in 1726. Johnson says that 'when dragged into the world it did not live long enough to cry,' he had not seen it and believed that he had been informed of its existence by 'some old catalogue.' It is not in the library of the British Museum, and has not been seen by the present writer. (5) Two volumes of sermons, 1704–6, republished with a third volume by Brady's eldest son, Nicholas, vicar of Tooting, Surrey, in 1730, a volume of 'Select Sermons preached before the Queen and on other occasions,' 1713. A considerable number of sermons, most of them republished in collections, were also published separately. Among these was a sermon preached in Chelsea Church on the death of Thomas Shadwell, in November 1692 (London, 1693).

BRADY, ROBERT (*d.* 1700), historian and physician, was born at Denver, Norfolk. He was admitted to Caius College, Cambridge, on 20 Feb. 1643, proceeded B.M. 1653, was created doctor by virtue of the king's letters in September 1660 (KENNET, *Register*, 251), and on 1 Dec. of the same year was appointed master of his college by royal mandate (KENNET, 870). At an uncertain date (1670 or 1685) he held the office of keeper of the records in the Tower, and took deep interest in studying the documents under his charge. He was admitted fellow of the College of Physicians on 12 Nov. 1680, and was physician in ordinary to Charles II and James II. In this capacity he was one of those who deposed to the birth of the Prince of Wales on 22 Oct. 1688. He was regius professor of physic at Cambridge, and was M.P. for the university in the parliaments of 1681 and 1685. He died 19 Aug. 1700, leaving land and money to Caius College.

He wrote: 1. A letter to Dr. Sydenham, dated 30 Dec. 1679, on certain medical questions, which is printed in Sydenham's 'Epistolæ Responsoriæ duæ,' 1680, 8vo. 2. 'An Introduction to Old English History comprehended in three several tracts,' 1684, fol. 3. 'A Compleat History of England,' 2 vols., 1685, 1700, fol. 4. 'An Historical Treatise of Cities and Burghs or Boroughs, showing their original,' &c., 1690; 2nd edit. 1704, fol. 5. 'An Inquiry into the remarkable instances of History and Parliamentary Records used by the author (Stillingfleet) of the Unreasonableness of a New Separation,' &c., 1691, 4to. His historical works are laborious, and are based on original authorities; they are marked by the author's desire to uphold the royal prerogative. In his preface to his 'Treatise on Boroughs' he says that he is able to show that they 'have nothing of the greatness and authority they boast of, but from the bounty of our ancient kings and their successors.'

[Kennet's Register and Chronicle, 251, 870; Biographia Britannica, i. 959; Munk's Coll. of Phys. (1878), i. 418; Ackermann's History of the University of Cambridge, i. 106.] W. H.

BRADY, THOMAS (1752?–1827), general (*feldzeugmeister*) in the Austrian army, was born at Cavan, Ireland (one account has it Cootehill), some time between October 1752 and May 1753. He entered the Austrian service on 1 Nov. 1769. In the list for that date his name appears as 'Peter,' but in all subsequent rolls he is called 'Thomas.' He served till 4 April 1774 as a cadet in the infantry regiment 'Wied.' On 10 April 1774 he was promoted ensign in the infantry regiment 'Fabri;' he became lieutenant 30 Nov. 1775, first or ober-lieutenant 20 March 1784, and captain in 1788. He distinguished himself as a lieutenant at Habelschwerdt in 1778, and received the Maria Theresa cross for personal bravery at the storming of Novi on 3 Nov. 1788, during the Turkish war. He was appointed major 20 July 1790, served on the staff till 1793, and on 1 April of that year was nominated lieutenant-colonel of the corps of Tyrolese sharpshooters. He was transferred on 21 Dec. to the infantry regiment 'Murray,' of which he became colonel on 6 Feb. 1794, and fought with it at Frankenthal, in General Latour's corps, in 1795, and distinguished himself on 19 June 1796 at Ukerad. He was promoted to major-general 6 Sept. 1796, in which rank he served in Italy and commanded at Cattaro in 1799. He became lieutenant-general 28 Jan. 1801, and in 1803 was given the honorary colonelcy of the 'Imperial' or first regiment of infantry. In 1804 he was appointed governor of Dalmatia. In 1807 he was made a privy councillor in recognition of his services as a general of division in Bohemia. In 1809 he took a leading part in the battle of Aspern, a large portion of the Austrian army being under his conduct. General Brady was

retired on the pension of a full general on 3 Sept. 1809, and died on 16 Oct. 1827.

[Archives of the Imperial Royal Ministry of War, Vienna; information from local sources.]

BRAGG, PHILIP (*d.* 1759), lieutenant-general, colonel 28th foot, M.P. for Armagh, was at Blenheim as an ensign in the 1st foot guards, his commission bearing date 10 March 1702. He appears to have afterwards served in the 24th foot, which was much distinguished in all Marlborough's subsequent campaigns under the command of Colonel Gilbert Primrose, who came from the same regiment of guards. The English records of this period contain no reference to Bragg, but in a set of Irish military entry-books, commencing in 1713, which are preserved in the Four Courts, Dublin, his name appears as captain in Primrose's regiment, lately returned from Holland to Ireland; his commission is here dated 1 June 1715, on which day new commissions were issued to all officers in the regiment in consequence of the accession of George I. On 12 June 1732 Bragg was appointed master of the Royal Hospital, Kilmainham, in succession to Major-general Robert Stearne, deceased, and on 16 Dec. following he became lieutenant-colonel of Colonel Robert Hargreave's regiment, afterwards known as the 31st foot. On 10 Oct. 1734 he succeeded Major-general Nicholas Price as colonel of the 28th foot, an appointment which he held for twenty-five years, and which originated the name 'The Old Braggs,' by which that regiment was long popularly known. As a brigadier-general Bragg accompanied Lord Stair to Flanders, where he commanded a brigade. He became a lieutenant-general in 1747, and in 1751 was appointed to the staff in Ireland. He died at Dublin, at an advanced age, on 6 June 1759, leaving the bulk of his small fortune of 7,000*l.* to Lord George Sackville.

H. M. C.

BRAGGE, WILLIAM (1823–1884), engineer and antiquary, was born at Birmingham 31 May 1823, his father being Thomas Perry Bragge, a jeweller. After some years of general tuition, Bragge studied practical engineering with two Birmingham firms, and in his leisure applied himself closely to the study of mechanics and mathematics. In 1845 he entered the office of a civil engineer, and engaged in railway surveying. He acted first as assistant engineer and then as engineer-in-chief of part of the line from Chester to Holyhead.

Through the recommendation of Sir Charles Fox, Bragge was sent out to Brazil as the representative of Messrs. Belhouse & Co., of Manchester, and he carried out the lighting of the city of Rio de Janeiro with gas. This was followed by the survey of the first railway constructed in Brazil—the line from Rio de Janeiro to Petropolis—for which he received several distinctions from the emperor Don Pedro. The emperor in later years visited Bragge at Sheffield.

In 1858 Bragge left South America. He became one of the managing directors of the firm of Sir John Brown & Co., and was elected mayor of Sheffield. The rolling of armour plates, the manufacture of steel plates, the adoption of the helical railway buffer-spring, and other developments of mechanical enterprise, were matters in which he rendered effective aid to his firm. Bragge filled the office of master cutler of Sheffield, and took great interest in the town's free libraries, school of art, and museums. In 1872 he resigned his position of managing director to his firm, which had been converted into a limited company, and went over to Paris as engineer to the Société des Engrais, which had for its object the utilisation of the sewage of a large part of Paris. The scheme proved unsuccessful, and resulted in heavy pecuniary loss to the promoters. In 1876 Bragge returned to his native town of Birmingham, settling there, and developing a large organisation for the manufacture of watches by machinery on the American system.

The antiquarian tastes of Bragge, which he found time to cultivate in spite of his labours in business, were manifested in his numerous collections. Amongst these was a unique Cervantes collection, which included nearly every work written by or relating to the great Spanish writer. This collection, which consisted of 1,500 volumes, valued at 2,000*l.*, Bragge presented to his native town, but unfortunately it was destroyed in the fire at the Birmingham Free Libraries in 1879. A cabinet of gems and precious stones which Bragge collected from all parts of Europe was purchased for the Birmingham Art Gallery. The most remarkable collection formed by Bragge was one of pipes and smoking apparatus, in which every quarter of the world was represented. A catalogue prepared and published

by the collector showed that he had brought together 13,000 examples of pipes. China, Japan, Thibet, Van Diemen's Land, North and South America, Greenland, the Gold Coast, and the Falkland Islands, all furnished specimens. 'There were also samples of some hundreds of kinds of tobacco, of every conceivable form of snuff-box, including the rare Chinese snuff-bottles, and also of all known means of procuring fire, from the rude Indian fire-drill down to the latest invention of Paris or Vienna.' This collection was broken up and dispersed. Bragge also made a notable collection of manuscripts, which realised 12,500*l.* He was always ready to place his treasures at the disposal of public bodies for exhibition.

Bragge was a fellow of the Society of Antiquaries, of the Anthropological Society, of the Royal Geographical Society, and of many foreign societies.

Bragge, who married a sister of the Rev. George Beddow, died at Handsworth, Birmingham, on 6 June 1884. For some time before his death he was almost totally blind.

[Bragge's Bibliotheca Nicotiana, a catalogue of books about tobacco, together with a catalogue of objects connected with the use of tobacco in all its forms, Birmingham, 1880; Brief Hand List of the Cervantes Collection, presented to the Birmingham Free Library, Reference Department, by William Bragge, Birmingham, 1874; Times, 10 June 1884; Birmingham Daily Post, 9 June 1884.] G. B. S.

BRAHAM, FRANCES ELIZABETH ANNE (1821–1879), afterwards COUNTESS WALDEGRAVE. [See WALDEGRAVE.]

BRAHAM, JOHN (1774?–1856), tenor singer, was born in London about the year 1774. His parents were German Jews, who died when Braham was quite young, leaving him to what one of his biographers describes as 'the seasonable and affectionate attention of a near relation.' Whether it was at this time, or at an earlier age, that the future singer gained his living by selling pencils in the streets is not chronicled. Braham's first contact with music took place at the synagogue in Duke's Place. There he met with a chorister, a musician of his own race named Leoni, who discovered the germs of his talent. Leoni adopted the orphan, and gave him thorough instruction in music and singing, with such good results that on 21 April 1787 he appeared at Covent Garden on the occasion of a benefit performance for his master, and sang Arne's bravura air, 'The Soldier Tired,' between the acts of the 'Duenna.' About this time John Palmer had started the Royalty Theatre in Wellclose Square, but, not being able to obtain a license for dramatic performances, he opened the house on 20 June 1787 with a mixed entertainment of recitations, glees, songs, &c. Here Braham sang for about two years, until his voice broke. Even at this early period of his career his bravura singing must have been remarkable. His voice had a compass of two octaves, and some of his most successful parts were Cupid in Carter's 'The Birthday,' and Hymen in Reeves's 'Hero and Leander.' He sang again at Covent Garden as Joe in 'Poor Vulcan' on 2 June 1788. About this time Braham's master, Leoni, became bankrupt, and the future tenor was once more thrown upon his own resources. After his voice broke he continued to sing under a feigned name, appearing, it is said, at Norwich, and even at Ranelagh, but his main occupation consisted in teaching the pianoforte. He met with a wealthy patron, a member of the Goldsmid family, and when the change in his voice was settled, on the advice of the flute-player Ashe, went to Bath, where he sang under Rauzzini in 1794. Braham remained at Bath until 1796, when Salomon, having heard him, induced Storace to procure him an engagement at Drury Lane, for which house Storace was just then engaged upon an opera. This work was 'Mahmoud,' but before it was finished the composer died, and the work was completed as a pasticcio by his sister, Nancy Storace, who, with Charles Kemble, Mrs. Bland, and Braham, sang in it on its production, 30 April 1796. Braham's success was signal, and in the following season he appeared in Italian opera, singing Azor in Grétry's 'Azor et Zémire' on 26 Nov. 1796, and afterwards singing with Banti in Sacchini's 'Evelina,' as well as in the annual oratorios, and at the Three Choirs Festival at Gloucester. In the following year, on the advice of the fencer M. St. George, Braham decided to go to Italy to study singing. Accordingly, he left England with Nancy Storace, with whom he lived for several years, and arrived in Paris on 17 Fructidor. Here the two singers gave a series of concerts, under the patronage of Joséphine Beauharnais. These were so successful, that they remained eight months in Paris, and did not reach Italy until 1798. At Florence, which they first visited, Braham sang at the Pergola as Ulysses in an opera by Basili, and as Orestes in Moneta's 'Le Furie d'Oreste.' At Milan he met Mrs. Billington [q. v.], with whom he was forced into rivalry by the jealousy of her husband (Felissent). It is said that, owing to Felissent's machinations, a scena of Braham's was suppressed in Nasolini's 'Trionfo di Clelia,' in which both the

English singers were to appear, and that Braham revenged himself by appropriating all Mrs. Billington's embellishments and florid passages, which it was well known she only acquired by dint of hard work, being quite incapable of any sort of improvisation. Fortunately, the dispute ended in their becoming good friends, and Braham continued to sing at Milan for two years. At Genoa he sang with the famous sopranist Marchesi in 'Lodoiska' for thirty nights successively, which in those days was considered a remarkable run. At the same place he studied composition under Isola. Here Braham and Nancy Storace were offered an engagement at Naples, but declining it, they went to Leghorn, and then to Venice, where they arrived in 1799. During their stay here Cimarosa wrote an opera for Braham—'Artemisia'—which the composer did not live to complete. From Venice the two singers went to Trieste, where Braham sang in Martin's 'Una Cosa Rara,' and thence to Vienna, where the offers of London managers caused the popular tenor and soprano to make for Hamburg without stopping to sing in Germany. They arrived in London early in the winter of 1801, and appeared on 9 Dec. in 'Chains of the Heart,' a feeble composition by Prince Hoare, with music by Mazzinghi and Reeve, which failed in spite of Braham's singing. After a few performances this work was replaced by the 'Cabinet,' the book of which was written by T. Dibdin, the music being supplied by different composers, but principally by Braham himself. The 'Cabinet' was produced on 9 Feb. 1802, Braham, Incledon, and Signora Storace playing the principal characters. It was followed on 15 March by the 'Siege of Belgrade,' a plagiarism from Martin's 'Cosa Rara,' 'Family Quarrels' (18 Dec. 1802), written by Dibdin, with music by Braham, Moorhead, and Reeve, and the 'English Fleet in 1342' (13 Dec. 1803). The music of this opera was entirely by Braham, who received for it what was then considered the enormous sum of 1,000 guineas. It contains one of his best remembered compositions, viz. the duet, 'All's Well.' About the same time Braham wrote music to the 'Paragraph,' and (10 Dec. 1804) sang in 'Thirty Thousand,' in which he collaborated with Reeve and Davy, and 'Out of Place' (28 Feb. 1805), part of the music in which was written by Reynolds. In the summer of 1805 Braham and Nancy Storace sang for six nights at Brighton, where the soprano distinguished herself by replacing a defaulting drummer in an accompaniment played behind the scenes to a great scena of Braham's in the 'Haunted Tower.' In the autumn season of the same year both singers seceded to Drury Lane, where Storace remained until her retirement in May 1808, and Braham continued to sing for many years. Here were produced most of his operas: 'False Alarms,' part of the music by King (3 Jan. 1807), 'Kais,' in which Reeve collaborated (11 Feb. 1808), the 'Devil's Bridge' (10 Oct. 1812), 'Narensky' (11 Jan. 1814), written conjointly with Reeve [see BROWN, CHARLES ARMITAGE], and 'Zuma' (1 Feb. 1818), a collaboration with Bishop. Braham's other operas were the 'Americans' (Lyceum, 27 April 1811), part of the music in which was by King, containing the famous song the 'Death of Nelson,' 'Isidore de Merida' (1827), and the 'Taming of the Shrew' (1828), both of which were collaborations with T. S. Cooke. In 1806 he sang at the King's Theatre in Italian opera, appearing on 4 March in Nasolini's 'Morte di Cleopatra,' and on 27 March as Sesto in Mozart's 'Clemenza di Tito' for Mrs. Billington's benefit, the first performance in England of an opera by Mozart. In 1809 he was engaged at the Royal Theatre, Dublin, for fifteen nights, at the high salary of two thousand guineas; this engagement was so successful that it was extended to thirty-six nights on the same terms. In 1810 he did not appear on the stage, but went on an extended provincial tour with Mrs. Billington. In 1816 he reappeared in Italian opera at the King's Theatre, singing his old part of Sesto in Mozart's 'Clemenza di Tito,' and Guglielmo in the same master's 'Così fan tutte.' In this year he was married to Miss Bolton of Ardwick, near Manchester. It was said that this marriage was the indirect cause of Nancy Storace's death, which took place in the following year.

Braham continued attached to Drury Lane, but for the next fifteen years there is scarcely a provincial festival or important concert or oratorio in the programme of which his name does not occur. He was the original Max in Weber's 'Freischütz' on its production in England at the Lyceum (20 July 1824), and created the part of Sir Huon in the same composer's 'Oberon' (Covent Garden, 12 April 1826), the scena in which, 'O 'tis a glorious sight to see,' was especially written to display his declamatory powers. On 14 Aug. 1825 he sang at the Lyceum in Salieri's 'Tarare,' in which he must have presented an extraordinary appearance, as Phillips (*Recollections*, i. 83) says that he was dressed in a home-made costume of many colours, with a huge turban, 'which would better have become some old lady at a card party than the sultan chief,' from beneath

which 'protruded a long Hebrew nose and a huge pair of black whiskers.'

During his forty years' professional life the popular tenor had accumulated a large fortune, but in 1831 he unwisely joined Yates in buying the Colosseum in Regent's Park for 40,000*l.*, and in 1835 built the St. James's Theatre, which cost 30,000*l.* Both of these speculations proved disastrous, and he was forced once more to return to the stage and concert-room. In 1839 he sang the parts of Tell and Don Giovanni in Rossini's and Mozart's operas, though both are written for baritones, but his voice at this time had suffered from the ravages of time, and he was no longer able to sing his old parts. In 1840 he went to America with his son Charles, but the tour was unsuccessful. On his return he gave a concert in which the father and son were the sole performers. For several years the veteran tenor continued to sing in public, principally in concerts and at provincial festivals, and he did not finally retire until March 1852, when his last appearance took place at the Wednesday concerts. After his retirement he lived at the Grange, Brompton, where he died on 17 Feb. 1856. He was buried in the Brompton cemetery.

Braham left six children. Three of his sons, Charles, Augustus, and Hamilton, adopted the musical profession; one of his daughters (afterwards Frances, countess Waldegrave) was for many years a notable figure in London society. A son by Nancy Storace took orders in the Anglican church. In person Braham was short, stout, and Jewish-looking. At one of the Hereford festivals his small stature gave rise to an amusing incident. Braham was singing the 'Bay of Biscay,' in the last verse of which he was in the habit of making considerable effect by falling on one knee at the words 'A sail! a sail!' On the occasion in question he did this as usual, but unfortunately the platform was constructed with a rather high barrier on the side towards the audience, so that the little tenor was completely lost to sight. The audience, in alarm, thinking he had slipped down a trap-door, rose like one man, and when Braham got up again he was received with shouts of laughter. His voice had a compass of nineteen notes, with a falsetto extending from D to *A* in alt; the junction between the two voices was so admirably concealed that it could not be detected when he sang an ascending and descending scale in chromatics. The volume of sound he could produce was prodigious, and his declamation was magnificent. Even in 1830, when he sang in Auber's 'Masaniello,' his voice is said to have rung out like a trumpet. In spite of all these extraordinary natural gifts, great discrepancies of opinion exist as to the merits of his singing. His great fault seems to have been that though he could sing with the utmost perfection of style and execution, yet he generally preferred to astonish the groundlings by vulgar and tricky displays and sensational effects. In this way he was accused of corrupting the taste of the age, and he certainly injured his voice by shouting and forcing it, so that in his later days he even sang out of tune. He frittered away extraordinary powers of declamation and pathos in trivialities and vulgarities, and used his magnificent talents only as a means of acquiring money. When at the zenith of his career, he entertained the Duke of Sussex at his house, and in the course of the evening sang a number of songs in the most perfectly artistic style. 'Why, Braham,' said the duke, 'why don't you always sing like that?' 'If I did,' was the reply, 'I should not have the honour of entertaining your royal highness to-night.' His own compositions were of the feeblest description, and could only have been endurable by the embellishments he introduced in singing them, but which are never found in the published copies of his operas and songs. In private life he was much liked, especially in his later days, when he enjoyed great reputation for his conversational powers. The best portraits of him are: (1) a water-colour drawing by Deighton, painted in 1830 (now in the possession of Mr. Julian Marshall); (2) a vignette by Ridley, after Allingham (published 26 July 1803); (3) a coloured full-length, as Orlando in the 'Cabinet,' drawn and etched by Deighton (22 March 1802); (4) a vignette by Anthony Cardon, after J. G. Wood (published 30 Nov. 1806); and (5) a vignette by H. Adlard, 'Mr. Braham in 1800,' in Busby's 'Concert Room Anecdotes.'

W. B. S.

BRAHAM, ROBERT (*fl.* 1555), edited in 1555 'The Auncient Historie and onely trewe and syncere Cronicle of the warres

betwixte the Grecians and the Troyans . . . translated into Englyshe verse by J. Lydgate,' Thomas Marshe, London, 1555, folio. Lydgate's work had already appeared in print under the title of 'The hystory, sege, and dystruccyen of Troy' (1513). Braham prefixes a preface of very high interest. He criticises adversely Caxton's uncritical 'Recueil des Histoires de Troye;' speaks in high praise of William Thynne, who had recovered the works of Chaucer; and desired to emulate Thynne's example with respect to Lydgate. Braham condemns severely the carelessness of the printers of the first edition of Lydgate's 'Troy,' and charges them with a fatal ignorance of English. Braham's edition is a well-printed black-letter folio.

S. L.

BRAID, JAMES (1795?–1860), writer on hypnotism, was the son of a landed proprietor of Fifeshire. He was born at Rylaw House in that county about 1795. After receiving his education at the university of Edinburgh, he was apprenticed to Dr. Anderson of Leith and his son, Dr. Charles Anderson. On obtaining the diploma of M.R.C.S.E. he accepted an engagement as surgeon to the miners employed at the Earl of Hopetoun's works in Lanarkshire, and subsequently practised with Dr. Maxwell at Dumfries. While resident there he was called to render assistance to a Mr. Petty of Manchester, who had been injured in a stage-coach accident in the neighbourhood. This gentleman, pleased with Braid's attentions, persuaded him to remove to Manchester, where there was more scope for his talents, and where he became distinguished for his special skill in dealing with some dangerous and difficult diseases, and acquired considerable popularity from his warm-hearted and cheerful disposition. In 1841 circumstances drew his attention to the subject of animal magnetism, on which La Fontaine delivered lectures in Manchester. He entered in a truly scientific way into the investigation of mesmerism, which he then believed to be wholly a system of collusion or illusion; but he soon discovered a reality in some of the phenomena, though he differed from the mesmerists as to their causes. His experiments proved that certain phenomena of abnormal sleep and a peculiar condition of mind and body might be self-induced by fixed gaze on any inanimate object, the mental attention being concentrated on the act. This proved the subjective or personal nature of the influence, and that it did not arise from any magnetic influence passing from the operator into the patient, as alleged by the mesmerists. This artificial condition he appropriately designated 'neuro-hypnotism,' afterwards shortened to 'hypnotism,' a term which has now come into general use. He read a paper at a meeting of the British Association at Manchester on 29 July 1842, entitled 'A Practical Essay on the Curative Agency of Neuro-hypnotism.' This was the first of a series of published results of his investigations, in the pursuit of which he met with much violent opposition from various quarters, especially from writers in the 'Zoist,' the special organ of the mesmerists. He went on, however, prosecuting his researches with care, and advocating the truth and the benefits of his method with good-humoured persistency. He died suddenly in Manchester on 25 March 1860.

Braid's chief works are: 1. 'Satanic Agency and Mesmerism reviewed, in a letter to the Rev. H. McNeile, A.M., in reply to a Sermon preached by him' (1842, 12mo). 2. 'Neurypnology, or the Rationale of Nervous Sleep, considered in relation to Animal Magnetism. Illustrated by numerous cases of its successful application in the cure of diseases' (1843, 12mo, new edit. with introd. by A. E. Waite, 1899). 3. 'The Power of the Mind over the Body: an experimental inquiry into the nature and cause of the phenomena attributed by Baron Reichenbach and others to a New Imponderable' (1846). 4. 'Observations on Trance; or Human Hybernation' (1850). 5. 'Electro-Biological Phenomena considered physiologically and psychologically,' from the 'Monthly Journal of Medical Science' for June 1851, with appendix. 6. 'Magic, Witchcraft, Animal Magnetism, Hypnotism, and Electro-Biology; being a digest of the latest views of the author on these subjects. Third edition, greatly enlarged, embracing observations on J. C. Colquhoun's "History of Magnetism"' (1852). 7. 'Hypnotic-Therapeutics, illustrated by Cases. With an Appendix on Table-moving and Spirit-rapping,' reprinted from the 'Monthly Journal of Medical Science' for July 1853. 8. 'The Physiology of Fascination, and the Critics criticised' (1855). The second part is a reply to attacks made in the 'Zoist.' 9. 'Observations on the Nature and Treatment of certain Forms of Paralysis' (1855). He also wrote contributions to the medical journals on 'Cæsarian section,' &c.

Braid's important hypnotic suggestion was introduced into France in 1859 by Dr. Azam, and was taken up later by Liebault, Charcot, Bernheim, Dumontpallier, P. Richet, and C. Richet. In Germany many of Braid's results have been obtained by following his

methods by Heidenhain of Breslau, who, however, in his work published in 1880, does not mention the earlier investigator. Several translations of Braid's works have been published in France and Germany, one of the most recent being a German rendering of nearly all his writings, issued by W. Preyer in 1882, under the title 'Der Hypnotismus: ausgewählte Schriften von J. Braid.'

Waite, 1899.] C. W. S.

BRAIDLEY, BENJAMIN (1792–1845), writer on Sunday schools, the son of Benjamin Braidley, a farmer, was born at Sedgefield, Durham, on 19 Aug. 1792. He was apprenticed to a firm of linen importers in Manchester, and in 1813 first became an active worker in the Bennett Street Sunday schools. In 1815, 1,635 pupils received prizes for regular attendance, and in 1816, 2,020 scholars were on the rolls of the schools. In 1830 Braidley was constable, and in 1831 and 1832 boroughreeve of Manchester. He was also high constable of the hundred of Salford. In 1835 he was twice the unsuccessful candidate in the conservative interest for the parliamentary representation of Manchester. Braidley visited America in 1837, and his diary during his visit shows his great interest in education, the slavery question, and religion, as regarded from an evangelical standpoint. He was a commission agent, and became wealthy; but by the failure of the Northern and Central Bank he lost the greater part of his fortune. Braidley was the author of 'Sunday School Memorials,' Manchester, 1831, 12mo, which contains short biographies of persons connected with the Bennett Street Sunday schools. This work, some portions of which first appeared in the 'Christian Guardian,' has passed through four editions, the last of which, greatly enlarged, was published in 1880, under the title of 'Bennett Street Memorials.' Braidley also contributed to the 'Shepherd's Voice,' a religious magazine, and wrote several tracts in a local controversy as to the doctrines of the church of Rome. He died of apoplexy 3 April 1845. He was unmarried.

[Memoir of Benjamin Braidley, Esq. (by William Harper), 1845, 12mo, contains extracts from his diary; Bennett Street Memorials, 1880, containing a portrait of Braidley, with a memoir by the Rev. Henry Taylor.] E. C. A. A.

BRAIDWOOD, JAMES (1800–1861), superintendent of the London fire-brigade, was born at Edinburgh in the year 1800, and was the son of a respectable tradesman in that city. He was educated at the High School, and afterwards he followed the building trade. In 1824 he joined the police, and, having been appointed superintendent of fire-engines in Edinburgh, he at once set to work to organise an efficient fire-brigade.

Nor was it too soon; for in that year Edinburgh was visited by a terrible conflagration, which destroyed a great part of the High Street and the steeple of the Tron Church. At this fire his coolness, determination, and daring were conspicuously shown: an ironmonger's shop was in flames, and Braidwood, hearing there was gunpowder on the premises, entered, and at the utmost personal risk to himself carried out first one and then another barrel of powder.

In 1830 he published a pamphlet 'On the Construction of Fire-engines and Apparatus, the Training of Firemen, and the Method of Proceeding in Cases of Fire.' This little work brought him into more than local notoriety, and eventually led to his appointment, in 1832, as superintendent of the London Fire-engine Establishment, then supported by the different insurance companies. On leaving Edinburgh the firemen gave him a gold watch, and the committee made him a present of a valuable piece of plate.

In London he had but the very small force of 120 men under him; yet, by his activity, energy, and perseverance, he kept the fires which occurred in the metropolis in very fair subjection. He fell a victim to his duty on 22 June 1861, while endeavouring to subdue a huge conflagration at Cotton's Wharf and Depôt, Tooley Street, London Bridge, where he was crushed by a falling wall, and buried in the ruins. His body, terribly mutilated, was recovered two days afterwards, and he was buried at Abney Park Cemetery on 29 June.

He was for nearly thirty years an associate of the Institute of Civil Engineers, and to that learned body, as well as to the Society of Arts, he read many papers connected with the prevention and extinction of fires.

[Gent. Mag. 1861, p. 212.] J. A.

BRAIDWOOD, THOMAS (1715–1806), teacher of the deaf and dumb, was born in Scotland in 1715, and educated at Edinburgh University. He was some time assistant in the grammar school at Hamilton, and afterwards opened a mathematical school in Edinburgh. In 1760 a boy named Charles Sherriff, born deaf, and hence mute, was placed with

him to learn writing. In a few years Braidwood taught him to speak. About the end of 1768 some lines purporting to be by this lad, on seeing Garrick act, appeared in the London newspapers (reprinted in 'Gent. Mag.' 1807, p. 38), and called attention to the case. 'A.,' in 'Gent. Mag.' 1807, pp. 305–6, says the verses were really written as a means of getting an introduction to Garrick by Caleb Whitefoord. Sherriff became a successful miniature painter in London, Bath, Brighton, and the West Indies. Lord Monboddo reports of him (*Orig. and Prog. of Language*, 1773, i. 179) that he 'both speaks and writes good English;' on the other hand 'A.' (as above) says he never could understand Sherriff, whom he knew well. Encouraged by his success with Sherriff, Braidwood devoted himself to the teaching of the mute. His only mechanical appliance was a small silver rod 'about the size of a tobacco-pipe,' flattened at one end, and having a bulb at the other. This he employed to place the tongue in the right positions. From about 1770 he was assisted by his kinsman, John Braidwood. Dr. Johnson visited the institution in 1773 at Edinburgh; he calls it a 'subject of philosophical curiosity . . . which no other city has to show; a college of the deaf and dumb, who are taught to speak, to read, to write, and to practise arithmetic.' He set a sum, and 'wrote one of his *sesquipedalia verba*,' which was pronounced to his satisfaction. He says of Braidwood's pupils that they 'hear with the eye.' The number of scholars was 'about twelve.' Arnot says (*Hist. of Edin.* 1779, p. 425) the pupils were 'mostly from England, but some also from America.' Francis Green mentions that there were 'about twenty pupils' in 1783. Braidwood was then about to remove his academy to London, the king having, according to Green, promised 100*l.* a year from his private purse to help to make it a public institution (pp. 183–4). He established himself at Grove House, Mare Street, Hackney, where he died on 24 Oct. 1806, in his ninety-first year. John Braidwood, his coadjutor, was born in 1756, married in 1782 the daughter of Thomas Braidwood, and died 24 Sept. 1798 at Hackney of a pulmonary complaint, leaving a widow, two sons, Thomas and John, and two daughters. The academy was continued by the widow and sons.

[Weeden Butler in Gent. Mag. January 1807; Green's Vox Oculis subjecta; a Dissertation on the most curious and important Art of imparting Speech and the Knowledge of Language to the naturally Deaf and (consequently) Dumb, with a particular account of the Academy of Messrs. Braidwood of Edinburgh, and a proposal to perpetuate and extend the benefits thereof, by a Parent, London, 1783, 8vo (see Biog. Dict. of Living Authors, 1816, p. 136); Johnson's Works, 1806, ix. 337 seq.; Boswell's Life of Johnson (ed. Croker and Wright), 1859, v. 152; Annual Register for 1810, p. 372; references given above.]

A. G.

BRAILSFORD, JOHN, the elder (*fl.* 1712–1739), poetical writer, was educated at St. John's College, Cambridge (B.A. 1712, M.A. 1717), and, after acting as curate at Blaston in Leicestershire, became rector of Kirby in Nottinghamshire. He wrote 'Derby Silk-Mill, attempted in Miltonick Verse,' Nottingham, 1739, fol.

[Creswell's Collections towards the History of Printing in Nottinghamshire, 27; Nichols's Leicestershire, ii. 453; Graduati Cantab. (1823), 59.]

T. C.

BRAILSFORD, JOHN, the younger (*d.* 1775), divine, after completing his education at Emmanuel College, Cambridge (B.A. 1744, M.A. 1766), was appointed in 1766 to the head-mastership of the free school at Birmingham, which situation he held till his death on 25 Nov. 1775. He was also vicar of North Wheatley, Nottinghamshire, and chaplain to Francis, lord Middleton. He published 'The Nature and Efficacy of the Fear of God,' an assize sermon preached at Warwick (London, 1761, 4to); and an octavo volume, containing 'Thirteen Sermons on various Subjects' by him, was published at Birmingham the year after his death.

[Carlisle's Endowed Grammar Schools, ii. 639; Graduati Cantab. (1823), 59; Cooke's Preacher's Assistant (1783), ii. 51.]

T. C.

BRAITHWAITE, JOHN (*fl.* 1660), quaker, was probably born in 1633, as there is an entry in the Cartmel registers of the baptism on 24 March 1633 of John, son of James Braithwaite of Newton. George Fox records in his 'Journal' that, being at Newton-in-Cartmel in 1652, where he attempted to preach to the people after service, he spoke to a youth whom he noticed in the chapel taking notes of the clergyman's sermon. The young man was John Braithwaite, who afterwards became his earnest follower. He published three tracts in support of Fox's doctrines: 1. 'A serious Meditation upon the dealings of God with England and the State thereof in General,' n.d. 2. 'The Ministers of England which are called the Ministers of the Gospel weighed in the Balance of Equity, &c.,' 1660. 3. 'To all those that observe Dayes, Moneths, Times, and Years, &c.,' 1660. In 1658 he, or one of his name, travelled many miles to visit a friend confined in Il-

chester gaol, but was 'unmercifully beaten by the wicked gaoler and not suffered to come in;' and at another time he was sent to prison, along with Thomas Briggs, a Cheshire man, for preaching at Salisbury. A John Braithwaite, who may be identical with the quaker, was resident in the island of Barbadoes between 1669 and 1693, where he suffered frequent fines in default of not appearing in arms, and for refusing to pay church dues. Braithwaite is stated by Smith in his 'Catalogue of Friends' Books' to have died at Chippenham, Wiltshire.

[Fox's Journal, Leeds, 1836, i. 184; Joseph Smith's Descriptive Catalogue of Friends' Books, i. 313; Besse's Sufferings of the Quakers, i. 584, ii. 290, &c.; Whiting's Memoirs.] C. W. S.

BRAITHWAITE, JOHN (1700 ? – 1768 ?), was the author of 'The History of the Revolutions in the Empire of Morocco upon the Death of the late Emperor Muley Ishmael,' a spirited work which was published in 1729, and translated into Dutch 1729, German 1730, and French (Amsterdam) 1731. In his preface Braithwaite describes himself as being in the service of the African Company, and as having, when very young, served in the fleet in Anne's reign, and then having been a lieutenant in the Welsh fusiliers, ensign in the royal guards, and secretary to his kinsman Christian Cole, British resident at Venice, with whom he travelled through Europe. He also states that he was in the Santa Lucia and St. Vincent expeditions, and was present at the siege of Gibraltar (1727). Thence he crossed to Morocco and joined the British consul-general, John Russel, in his expedition in the emperor's dominions, the experiences of which he relates in his book. The diary of the narrative extends from July 1727 to February 1728. A Captain Braithwaite is mentioned in the 'London Gazette' as being appointed in 1749 to command the Peggy sloop, and again in 1761 as commanding the Shannon; and in February 1768 John Braithwaite was 'removed' from the post of secretary to the governor of Gibraltar; but the connection of these notices with the subject of this article is merely conjectural.

[Gent. Mag. for 1749, 1761, and 1768.] S. L.-P.

BRAITHWAITE, JOHN, the elder (*d.* 1818), engineer, is best known as the constructor of one of the earliest successful forms of diving-bell. In 1783 he descended in one of his own construction into the wreck of the Royal George, which had gone down off Spithead in the August of the previous year, and recovered her sheet anchor and many of her guns. In the same year, and by the same means, he recovered a number of guns sunk in the Spanish flotilla off Gibraltar. In 1788 again he made a descent to the wreck of the Hartwell, an East Indiaman, lost off Bonavista, one of the Cape de Verd islands, and recovered dollars to the value of 38,000*l.*, 7,000 pigs of lead, and 360 boxes of tin. In 1806 he raised from the Abergavenny, an East Indiaman, lost off Portland, 75,000*l.* worth of dollars, a quantity of tin, and other property to the value of 30,000*l.*, and successfully blew up the wreck with gunpowder. For these purposes, in addition to perfecting the actual diving apparatus, he devised machinery for sawing ships asunder under water. His ancestors had carried on a small engineers' shop at St. Albans since 1695. His own engineering works were in the New Road, London. Braithwaite died in June 1818 at Westbourne Green from the effects of a stroke of paralysis. His business was afterwards carried on by his two sons, Francis and John. The latter is noticed below.

[Gent. Mag. 1818, pt. i. 644.] R. H.

BRAITHWAITE, JOHN, the younger (1797–1870), engineer, was third son of John Braithwaite the elder [q. v.] He was born at 1 Bath Place, New Road, London, on 19 March 1797, and, after being educated at Mr. Lord's school at Tooting in Surrey, attended in his father's manufactory, where he made himself master of practical engineering, and became a skilled draughtsman. In June 1818 his father died, leaving the business to his sons Francis and John. Francis died in 1823, and John Braithwaite carried on the business alone. He added to the business the making of high-pressure steam-engines. In 1817 he reported before the House of Commons upon the Norwich steamboat explosion, and in 1820 he ventilated the House of Lords by means of air-pumps. In 1822 he made the donkey-engine, and in 1823 cast the statue of the Duke of Kent by Sebastian Gahagan which was erected in Portland Place, London.

He was introduced to Messrs. G. and R. Stephenson in 1827, and about the same time became acquainted with Captain John Ericsson, who then had many schemes in view. In 1829 Messrs. Braithwaite and Ericsson constructed for the Rainhill experiments the locomotive engine, The Novelty. This engine was the first that ever ran a mile within a minute (fifty-six seconds).

At this time Braithwaite manufactured the first practical steam fire-engine, which was ultimately destroyed by a London mob. It

had, however, previously done good service at the burning of the English Opera House in 1830, at the destruction of the Argyle Rooms 1830, and at the conflagration of the Houses of Parliament in 1834. It threw two tons of water per minute, burnt coke, and got up steam in about twenty minutes; but it was looked upon with so much jealousy by the fire brigade of the day that the inventor had to give it up. He, however, soon constructed four others of larger dimensions, two of which, in Berlin and Liverpool respectively, gave great satisfaction. In 1833 he built the caloric engine in conjunction with Captain Ericsson. Next year he ceased to take an active part in the management of the engine works in the New Road, but began to practise as a civil engineer for public works, and was largely consulted at home and abroad, particularly as to the capabilities of and probable improvements in locomotive engines. In 1834 the Eastern Counties railway was projected and laid out by him in conjunction with Mr. Charles Blacker Vignoles. The act of incorporation was passed in 1836, and he was soon after appointed engineer-in-chief for its construction. He adopted a five-feet gauge, and upon that gauge the line was constructed as far as Colchester, the works, however, being made wide enough for a seven-feet gauge. On the recommendation of Robert Stephenson it was subsequently altered to the national gauge of 4 feet 8½ inches. In after years Braithwaite advocated a still narrower gauge. He ceased to be officially connected with the Eastern Counties railway on 28 May 1843. Whilst engineer to that company he introduced on the works the American excavating machine and the American steam locomotive pile-driving machine. He was joint founder of the 'Railway Times,' which he started in conjunction with Mr. J. C. Robertson as editor in 1837, and he continued sole proprietor till 1845. He undertook the preparation of plans for the direct Exeter railway, but the panic of the period, and his connection with some commercial speculations, necessitated the winding up of his affairs (1845). Braithwaite had, in 1844, a share in a patent for extracting oil from bituminous shale, and works were erected near Weymouth which, but for his difficulties, might have been successful. Some years before, 1836–8, Captain Ericsson and he had fitted up an ordinary canal boat with a screw propeller, which started from London along the canals to Manchester on 28 June 1838, returning by the way of Oxford and the Thames to London, being the first and last steamboat that has navigated the whole distance on those waters. The experiment was abandoned on account of the deficiency of water in the canals and the completion of the railway system, which diverted the paying traffic. In 1844, and again in 1846, he was much on the continent surveying lines of railway in France, and on his return he was employed to survey Langston harbour in 1850, and to build the Brentford brewery in 1851. From that year he was principally engaged in chamber practice, and acted as consulting engineer, advising on most of the important mechanical questions of the day for patents and other purposes. Braithwaite was elected a fellow of the Society of Antiquaries in 1819, a member of the Institution of Civil Engineers on 13 Feb. 1838, and at the time of his death he was one of the oldest members of the Society of Arts, having been elected into that body in the year 1819; he was also a life governor of seventeen charitable institutions.

He died very suddenly at 8 Clifton Gardens, Paddington, on 25 Sept. 1870, and his remains were interred in Kensal Green cemetery. He was the author of two publications entitled: 1. 'Supplement to Captain Sir John Ross's Narrative of a second voyage in search of a North-West Passage, containing the suppressed facts necessary to an understanding of the cause of the failure of the steam machinery of the Victory,' 1835. To this work Sir J. Ross published a reply in the same year. 2. 'Guideway Steam Agriculture, by P. A. Halkett, with a Report by J. Braithwaite,' 1857.

[Mechanics' Mag. with portrait, xiii. 235–37, 377–88, 417–19 (1830); Minutes of Proceedings of Institution of Civil Engineers, xxxi. pt. i. 207–11 (1871); Walford's Insurance Cyclop. iii. 348 (1874).] G. C. B.

BRAITHWAITE, RICHARD. [See BRATHWAITE.]

BRAKELONDE, JOCELIN DE. [See JOCELIN.]

BRAMAH, JOSEPH (1748–1814), inventor, was born in 1748 at Stainborough, a village near Barnsley in Yorkshire. He was the son of a farmer, and was, according to Dr. Smiles, originally intended to follow the plough, but an accident which unfitted him for farm work led to his being apprenticed to the village carpenter. His mechanical talents soon showed themselves, and at the end of his apprenticeship he went to London, where, after working for some time at a cabinetmaker's, he set up in the trade on his own account. Being employed to fit up some water-closets on the method invented by Mr.

Allen, he was led by the imperfections of the system to devise improvements on it, and thence, in 1778, came the first of the long series of patents taken out by him. The closet described in the specification of that patent, with certain improvements devised by the inventor, has continued in use, it may be said, until the present day.

His next invention was his lock; this was certainly a great advance on any locks then known, and for long had the reputation of being unpickable. In 1851, however, at the time of the Great Exhibition, Hobbs, an American, picked the lock, and thereby obtained the reward of 200*l.* offered by Bramah to anybody who should perform this feat. The lock, however, was, and indeed is, a most excellent one, and continues to bear a very high reputation.

Bramah's most important contribution to mechanical science was his hydraulic press, patented in 1795. The power which he gave to engineers by this invention of converting into a steady continuous pressure of practically unlimited amount a number of comparatively small impulses, was an entirely new one, and was capable, as it afterwards proved, of enormous development. That this development was not unforeseen by the projector is evident from the proposals he made in several of his patents, proposals which in many cases have only recently been carried into effect. In giving due credit to Bramah for his great inventive genius, it is but proper that mention should be made of Henry Maudslay, to whom is due one particular detail by which the working of the press was rendered possible, the device by which the ram of the press was enabled to work water-tight within the cylinder, whatever the pressure might be, while it was permitted to return freely as soon as the pressure was taken off.

It may be said without disparagement that Bramah's mind, though most ingenious, was not highly original, for the germs of all his inventions might be found in the work of others. The hydraulic press is but a practical application of the principle of the hydrostatic paradox; his water-closet, as above mentioned, was an improvement on Allen's; his lock was suggested by that of Barron, patented ten years before. Still, the bent of his genius was eminently practical, and he was singularly happy in applying scientific discoveries to practical purposes, or in seizing hold of the idea of an imperfect invention and completing it. Besides these, he was the author of a host of minor inventions, among which may be mentioned the beer-engine, the ever-pointed pencil, the machine for numbering bank-notes, the little apparatus once well known for mending quill pens, and the planing machine. He was also one of the first who proposed to apply the screw for the purpose of propelling vessels. In all he took out eighteen patents, some of them covering a number of distinct inventions.

Bramah died at Pimlico, 9 Dec. 1814 (*Gent. Mag.* 1814, ii. 613).

[The chief sources of information about Bramah are a memoir by Dr. Cullen Brown in the New Monthly Magazine for April 1815, and a short Life in Dr. Smiles's Industrial Biography. For a description of his improvements in locks, reference may be made to his own Dissertation on Locks, or to E. B. Denison's Clocks and Locks.]

H. T. W.

BRAMHALL, JOHN (1594–1663), archbishop of Armagh, was of the Bramhalls of Bramhall Hall, Cheshire, and was baptised at Pontefract, 18 Nov. 1594. His father was Peter Bramhall (*d.*1635) of Carleton, near Pontefract. He was at school at Pontefract, and admitted to Sidney Sussex College, Cambridge, on 21 Feb. 1609. His tutor was Howlett, for whom he provided in Ireland. He graduated B.A. 1612, M.A. 1616, B.D. 1623, D.D. 1630 (his thesis being strongly anti-papal). Taking orders about 1616, he held a living in York, also the rectory of (South) Kilvington, Yorkshire, on the presentation of Christopher Wandesforde (afterwards master of the rolls). His marriage to a clergyman's widow gave him a fortune and a library. In 1623 he won laurels in a public discussion at Northallerton with Hungate, a jesuit, and Houghton, a priest. Tobias Matthew, archbishop of York, made him his chaplain (a later archbishop, Richard Neale, gave him the prebend of Husthwaite on 13 June 1633). He was also subdean of Ripon, and had great influence there as a preacher and public man. As one of the high commissioners his manner was thought severe. Resigning his English preferments and prospects (a chaplaincy in ordinary to the king was in store for him), he went to Ireland as Wentworth's chaplain, by Wandesforde's advice, in July 1633. In his letter to Laud from Dublin, 10 Aug. 1633, he draws a lamentable picture of the ruin and desecration of churches (the crypt of Christ's cathedral was let to 'popish recusants,' and used in time of service as an alehouse and smoke-room), the alienation of bishoprics and benefices, and the poverty and ignorance of the clergy. For himself he soon got the archdeaconry of Meath, the richest in Ireland. His exertions as a royal commissioner were successful in obtaining the surrender of fee-farms, by which episcopal and clerical revenues had been scandalously wasted; in four years he is said to have recovered to the church some 30,000*l.* a year.

Meantime he was consecrated bishop of Derry in the chapel of Dublin Castle on 16 May 1634, succeeding the puritan, George Downham. Bramhall, in the Irish parliament which met 14 July 1634, procured the passing of three important acts for the preservation of church property. By the Irish convocation which met in November 1634 the thirty-nine articles were received and approved; not directly in substitution for, but in addition to, the Irish articles of 1615, articles which subsequently formed the basis of the Westminster Confession. The credit of this measure is given to Bramhall by his biographers; but it appears from Wentworth's letter to Laud that he himself, dissatisfied with what the bishops were proposing, drew the canon, and forced it upon the convocation in the teeth of the primate, without permitting a word of discussion. It passed with a single dissentient vote (in the lower house). 'It seems,' says Collier, 'one Calvinist had looked deeper than the rest into the matter.' What Bramhall did was to try to get the English canons of 1604 adopted in Ireland; there were 'some heats' between him and the primate Ussher, ending with the passing of distinct canons, in the compiling of which Bramhall had a large share. The ninety-fourth canon, endorsing a part of the wise policy of Bedell, bishop of Kilmore, provided for the use of the Bible and prayer-book in the vernacular in an Irish-speaking district. This was opposed by Bramhall, to whom the native tongue was a symbol of barbarism, and who failed to see the necessity of instructing a people through the medium of a language they understood. In 1635 Bramhall was in his diocese, and in August of the following year we find him at Belfast assisting Bishop Henry Leslie in his discussion with, and proceedings against, the five ministers who would not subscribe the new canons [see Brice, Edward]. The presbyterian account does full justice to the harshness of his manner. Visiting England in 1637, a trifling accusation brought him before the Star-chamber at the instance of one Bacon, who charged him with using language disrespectful to the king, while executing at Ripon a commission from the Star-chamber court. This he soon disposed of; the words laid to his charge had been uttered by a fellow-commissioner. Laud presented him to the king, and he received signs of royal favour. Returning to Ireland, he employed 6,000*l.*, the proceeds of his English property, in purchasing and improving an estate at Omagh, co. Tyrone, in the midst of Irish recusants. In the same year he was made receiver-general for the crown of all revenues from the estates of the city of London in his diocese, forfeited through non-fulfilment of some conditions of the holding. Further power, which he was not slow to use, was put into his hands on 21 May 1639, when the 'black oath' abjuring the covenant was directed to be taken by all the Ulster Scots. In 1639 he protected and recommended to Wentworth John Corbet, minister at Bonhill, who had been deposed by the Dumbarton presbytery for refusing to subscribe the assembly's declaration against prelacy. Wentworth used Corbet as a sarcastic writer against the Scottish covenanters, and nominated him to the vicarage of Templemore, in the diocese of Achonry. Archibald Adair, bishop of Killala and Achonry, a man of puritan leanings, could not disguise his aversion to the admission of Corbet, who complained of the bishop's language to the high commission court established by Wentworth at the end of 1634. Adair was tried as a favourer of the covenant. Bedell alone voted for his acquittal; the loudest in his condemnation were Bramhall and the infamous John Atherton, bishop of Waterford [q. v.] Adair was deposed on 18 May 1640. The proceedings both exasperated the Scottish settlers and shook the stability of the episcopal system. The Irish commons in October 1640 drew up a remonstrance, in the course of which they speak of the Derry plantation as 'almost destroyed' through the policy of which Bramhall was the administrator. No sooner had the English commons impeached Wentworth (now earl of Strafford) of high treason on 11 Nov. 1640, than the presbyterians of Antrim, Down, Derry, Tyrone, &c., drew up a petition to the English parliament (presented by Sir John Clotworthy about the end of April 1641), containing thirty-one charges against the prelates, and praying that their exiled pastors might be reinstated. Of the Ulster bishops, Bramhall, from his closer connection with state affairs, was the most prominent object of attack. The Irish commons, on the motion of Audley Mervyn and others, 4 March 1641, impeached him, with the lord chancellor, the chief justice of the common pleas, and Sir George Radcliffe, as participants in the alleged treason of Strafford. Bramhall acted a manly part in at once leaving Derry for Dublin, and taking his place in the House of Lords. He was imprisoned and accused of unconstitutional acts; his defence was that he had equitably sought the good of the church, and that his hands were clean from private rapine or family promotions. He wrote, on 26 April, to Ussher in London, through whose exertions with the king Bramhall was liberated without acquittal. He returned to Derry. Vesey states that an

abortive attempt was made by Sir Phelim O'Neil to represent Bramhall as implicated in the Irish insurrection of 1641. The story has an improbable air; but Derry, crowded with Scots seeking sanctuary from the rebels, and soon stricken with fever, was no safe place for him. He obeyed the warning of friends and fled to England. He was in Yorkshire till the battle of Marston Moor (2 July 1644); he sent his plate to the king, and in private, from the pulpit, and by pen supported the royalist cause. With William Cavendish, first marquis of Newcastle, and others, he hurried abroad, landing at Hamburg on 8 July 1644. The Uxbridge convention, in January 1645, excepted him, with Laud, from the proposed general pardon. In Paris he met Hobbes (prior to 1646), and argued with him on liberty and necessity. This led to controversies with Hobbes in after years. Till 1648 he was chiefly at Brussels, preaching at the English embassy, the English merchants of Antwerp having the benefit of his services monthly. He went back to Ireland, but not to Ulster, in 1648; at Limerick he received in 1649 the protestant profession of the dying earl of Roscommon (James Dillon, third earl, brother-in-law of Strafford). While he was in Cork, the city declared for the parliament (October 1649); he had a narrow escape, and returned to foreign parts. He corresponded diligently with Montrose, and disputed and wrote in defence of the church of England. It is said that he was so obnoxious to the papal powers that on crossing into Spain he found his portrait in the hands of innkeepers, with a view to his being seized by the inquisition. Bramhall himself, who reports 'a tedious and chargeable voyage into Spain' (about 1650), does not mention this incident. It would appear that Granger founds upon the story a conjecture that there was a print of Bramhall, which he describes as 'very rare,' and had not seen. He was excluded from the Act of Indemnity of 1652; subsequently to this we find him occasionally adopting in his correspondence the pseudonym of 'John Pierson.' In October 1660 he returned to England. It was supposed that he would be made archbishop of York; but on 18 Jan. 1661 he was translated to the metropolitan see of Armagh (vacant since Ussher's death, 21 March 1655). On 27 Jan. 1661 he presided at the consecration in St. Patrick's Cathedral of two archbishops and ten bishops for Ireland. Not only was Bramhall *ex officio* president of convocation, but on 8 May 1661 he was chosen speaker of the Irish House of Lords. Both houses erased from their records the old charges against Bramhall. Although Parliament passed declarations requiring conformity to episcopacy and the liturgy, and ordering the burning of the covenant, Bramhall could not carry his bills for a uniform tithe-system, and for extending episcopal leases. Nor was there any new Irish act of uniformity till 1667, only the old statute of 1560, enjoining the use of Edward VI's second prayer-book. The ejection of Irish nonconformists was effected by episcopal activity, and was accomplished some time before the passing of the English act of 1662. Armagh was not a specially presbyterian diocese, nor had Bramhall to deal here with the rigid temper of the Scots divines; in pursuing the process of obtaining conformity he used a moderation which contrasts favourably, in spirit and results, with Jeremy Taylor's action in Antrim and Down. Following the lines of the Irish articles, he neither impugned the spiritual validity of presbyterian orders, nor refused to make good the titles to benefices granted under the Commonwealth; but he told his clergy he did not see how they were to recover their tithes for the future, unless they could show letters of orders recognised by the existing law. Accordingly he prepared a form of letters, certifying simply that any previous canonical deficiency had been supplied. Edward Parkinson was one of the ministers whom he thus induced to conform. A very remarkable letter from Sir George Radcliffe on 20 March 1643–4 shows that Bramhall was then inclined to admit the episcopal character of the 'superintendants in Germany.' His view of the articles as terms of peace was framed when he was seeking a standing-ground for Arminianism within a generally Calvinistic church; but he did not, like Taylor, forget his old plea when the tables were turned. Presbyterians hated the name of 'bishop bramble,' and Cromwell called him the 'Irish Canterbury.' Like Laud he had no great presence; he had something of Laud's business power, with an intellect less keen and subtle. His wrangles with Hobbes furnished sportive occupation to a vigorous and busy mind; the 'Leviathan' was not refuted by being called 'atheistical.' Bramhall was defending his rights in a court of law at Omagh against Sir Audley Mervyn when a third paralytic stroke deprived him of consciousness. He died on 25 June 1663. Jeremy Taylor preached his funeral sermon. James Margetson (died 28 Aug. 1678, aged 77) was translated from Dublin as his successor. His wife was Ellinor Halley; the name of her first husband is not given. The wills of Bramhall (5 Jan. 1663) and his widow (20 Nov. 1665) are printed in the 'Rawdon Papers.' He left issue: 1. Sir Thomas Bramhall, bart., who married the daughter of

Sir Paul Davys, and died s. p. 2. Isabella, married Sir James Graham, son of William, earl of Monteith; her daughter Ellinor, or Helen, married Sir Arthur Rawdon, of Moira, lineal ancestor of the Marquis of Hastings. 3. Jane, married Alderman Toxteith of Drogheda. 4. Anne, married Standish Hartstonge, one of the barons of exchequer. His works were collected by John Vesey, archbishop of Tuam, in one volume, Dublin, 1677, fol., arranged in four tomes, and containing five treatises against Romanists (including a confutation of the Nag's Head fable); three against sectaries, three against Hobbes, and seven unclassified, being defences of royalist and Anglican views. Allibone incorrectly says that the 'sermon preached at York Minster, 28 Jan. 1643, before his excellency the Marquess of Newcastle,' &c., York, 1643, 4to, is not included in the collected works. The works were reprinted in the 'Library of Anglo-Catholic Theology,' Oxford, 1842–5, 8vo, 5 vols. Milton thought Bramhall wrote the 'Apologia pro Rege et Populo Anglicano,' 1650, 18mo, but the real author was John Rowland. The posthumous publication of Bramhall's 'Vindication of himself and the Episcopal Clergy from the Presbyterian Charge of Popery, as it is managed by Mr. Baxter,' &c., 1672, 8vo, with a preface by Samuel Parker (afterwards bishop of Oxford), produced Andrew Marvell's 'The Rehearsal Transpros'd,' 1672, 12mo.

BRAMIS or **BROMIS**, JOHN (14th cent.), writer, was a monk of Thetford. He translated the 'Romance of Waldef' from French metre into Latin prose. This romance was originally written in English verse, and had been done into French at the desire of a lady. The manuscript of Bramis *is* in the Corpus Christi College Library, Cambridge, No. 329. 'Incipit prologus super hystoriam Waldei, &c.' An historical compilation entitled 'Historia compendiosa de regibus Britonum,' and attributed to Ralph de Diceto, is printed in Gale, 'Quindecim Scriptores,' p. 553. The author repeatedly refers to a former compilation thus—'Hæc Brom, &c.' There is no reason for making Ralph of Diceto the author, though the 'Historia' is based on his works; it ends 'Hæc Brome,' and is probably the work of Bramis.

BRAMSTON, FRANCIS (*d.*1683), judge, third son of Sir John Bramston the elder [q.v.], was educated at the celebrated school of Thomas Farnabie or Farnaby, in Goldsmiths' Alley, Cripplegate, and at Queens' College, Cambridge, of which Dr. Martin was then the master, where he graduated B.A. in 1637, and M.A. in 1640. He was admitted to the Middle Temple as a student in 1634, but as his health was weakly he for a time entertained the idea of taking holy orders. Shortly before the final rupture between the king and the parliament he was elected a fellow of his college, and after being called to the bar (14 June 1642) left the country. The ensuing four years (1642–46) he spent in travel in France and Italy, falling in with Evelyn and his friend Henshaw at Rome in the spring of 1645, and again at Padua and Venice in the autumn of that year. On his return to this country he dismissed the idea of entering the church, and devoted himself to the study and practice of the law. His history, however, is a blank until the Restoration, when he was made steward of some of the king's courts (probably manorial) in Essex, and of the liberty of Havering in the same county. In 1664 he represented Queens' College, Cambridge, in the litigation respecting the election of Simon Patrick to the presidency, and in the following year was appointed one of the counsel to the university, with a fee of 40*s.* per annum. In 1668 he was elected one of the benchers of his inn, and appointed reader, his subject being the statute 3 Jac. c. 4, concerning popish recusants. The banquet which, according to custom, he gave on this occasion (3 Aug.) is described by Evelyn, who was present, as 'so very extravagant and great as the like hath not been seen at any time.' He mentions the Duke of Ormonde, the lord privy seal (Robartes), the Earl of Bedford, Lord Belasyse, and Viscount Halifax as among the guests, besides 'a world more of earls and lords.' In Trinity term of the following year he was admitted to the degree of serjeant-at-law, presenting the king with a ring inscribed with the motto, 'Rex legis tutamen,' and was appointed steward of the court of common pleas at Whitechapel, with a salary of 100*l.* per annum. In Trinity

term 1678 he was created a baron of the exchequer, but early next year (29 April) was dismissed, without reason assigned, along with Sir William Wild of the king's bench, Sir Edward Thurland of the exchequer, and Vere Bertie of the common pleas, Sir Thomas Raymond being sworn in his place (5 May), though, according to his own account, he 'had laboured, and not without great reason, to prevent it.' It was supposed that either Sir William Temple or Lord-chancellor Finch was at the bottom of the affair. On 4 June a pension of 500*l.* a year was granted him, of which the first three terminal instalments only were paid him. At his death, which occurred at his chambers in Serjeants' Inn 27 March 1683, it was three years and six months in arrear. He was buried 30 March in Roxwell Church. He died heavily in debt, and his brother John, who was his executor, made persistent efforts to get in the amount due in respect of his pension (some 1,750*l.*), and succeeded in 1686 in recovering 1,456*l.* 5*s.*, the balance being, as he plaintively puts it, abated in costs. Sir Francis was never married. In person he was short and rather stout.

[Evelyn's Diary, 1645, 8 Aug., 10 Oct., 1668, 3 Aug.; Autobiogr. of Sir John Bramston (Camden Society), xi. 24, 29, 97, 163, 265; Sir Thos. Raymond's Reports, 103, 182, 244, 251; Foss's Lives of the Judges.] J. M. R.

BRAMSTON, JAMES (1694?–1744), poet, was the son of Francis Bramston, fourth son of Sir Moundeford Bramston, master in chancery, who in his turn was younger son of Sir John Bramston the elder [q.v.], lord chief justice of the king's bench. In 1708 James Bramston went to Westminster School. Thence, in 1713, he passed to Christ Church, Oxford, taking his B.A. degree on 17 May 1717, and his M.A. degree on 6 April 1720. In March 1723 he became vicar of Lurgashall, Sussex, and later (1725) vicar of Harting in the same county, obtaining a dispensation to hold both livings. In 1729 he published the 'Art of Politicks,' an imitation of the 'Ars Poetica' of Horace, accompanied by a clever frontispiece illustrating the opening lines:—

If to a Human Face Sir *James* [Thornhill] should draw
A Gelding's Mane, and Feathers of Maccaw,
A Lady's Bosom, and a Tail of Cod,
Who could help laughing at a Sight so odd?
Just such a Monster, Sirs, pray think before ye,
When you behold one Man both *Whig* and *Tory*.
Not more extravagant are Drunkard's Dreams,
Than *Low-Church* Politicks with *High-Church* Schemes.

The 'Art of Politicks' was followed by 'The Man of Taste. Occasion'd by an Epistle of Mr. Pope's on that subject' (i.e. that to the Earl of Burlington, 1731), 1733. Both these little satires, which hold an honourable place in eighteenth-century verse, abound with contemporary references, and frequently happy lines. They were reprinted in vol. i. of Dodsley's 'Poems by several Hands.' The only other works attributed to Bramston are some Poems in 'Carmina Quadragesimalia;' one in the University Collection on the death of Dr. Radcliffe, 1715; 'Ignorami Lamentatio, 1736; and a not very successful imitation of the 'Splendid Shilling' of John Philips, entitled 'The Crooked Sixpence,' Dodsley, 1743. This, in 'a learned preface,' is ascribed to Katherine Philips (the 'matchless Orinda'). 'Bramston,' say the authors of Dallaway and Cartwright's 'History of Sussex,' ii. (i.) 365, 'was a man of original humour, the fame and proofs of whose colloquial wit are still remembered in this part of Sussex.' He died 16 March 1744.

[Rawlinson MSS. fol. 16, 271, 4to, 5, 217; Thompson Cooper in Notes and Queries, 3rd ser. v. 205; Alumni Wesmonasterienses, 1852, 260; Bramston's Works in British Museum.] A. D.

BRAMSTON, JAMES YORKE, D.D. (1763–1836), catholic bishop, was born 18 March 1763 at Oundle in Northamptonshire. He came of an old and well-to-do race of landowners in that county, his family being staunch protestants. He was educated at a school near his birthplace, and at Trinity College, Cambridge. He was first intended for the Indian civil service and then for the navy, which latter intention was abandoned at the desire of his invalid mother. On 26 April 1785 he was entered as a student at Lincoln's Inn. Although he was never called to the bar, he studied for nearly four years under the distinguished catholic, Charles Butler. He frequently conversed with Charles Butler on religious matters, and in 1790 publicly joined the catholic church. Bramston was bent upon at once becoming an ecclesiastic. He yielded, however, to his father's entreaty that he should remain at least twelve months longer in England. In 1792 he went to Lisbon, where he entered himself as a theological student at the English college. He remained between eight and nine years in Portugal. In 1796 he was ordained to the priesthood. His last five years at Lisbon were given up entirely to his missionary labours, chiefly among the British then in garrison there. While he was thus engaged, early in 1800, a terrible epidemic

broke out in the city. For six weeks together Bramston never once took his clothes off to retire to rest. His father died while he was yet at Lisbon. In 1801 he returned to England, and in 1802 had entrusted to him, by the then vicar apostolic of the London district, Bishop Douglass, the poorest of all the catholic missions in the metropolis, that of St. George's-in-the-Fields. There he remained as the priest in charge for nearly twenty-three years. In 1812 Bishop Poynter, then vicar-apostolic of the London district, appointed Bramston his vicar-general. During that same year he acted as theologian and counsellor at the synodal meeting convened in the city of Durham by Bishop Gibson. In 1814 Bramston went to Rome with Bishop Poynter, and on 5 April 1815, at Genoa, the latter asked Pope Pius VII to constitute his vicar-general his coadjutor. Eight years elapsed, during which Bramston again and again declined the proffered dignity. On 29 June 1823 he was solemnly consecrated by Bishop Poynter at St. Edmund's College, Hertfordshire, as bishop of Usulæ *in partibus infidelium*. On the death of Bishop Poynter, 27 Nov. 1827, Bramston succeeded him as vicar-apostolic of the London district. Nearly the whole of Bramston's life was embittered by a cruel disease, and from 1834 he was yet further afflicted with constantly increasing weakness. Added to this, in the spring of 1836 he began to suffer from erysipelas in the right foot, which from that time forward rendered walking an impossibility. He died at Southampton, in his seventy-fourth year, 11 July 1836. His conversational powers were very remarkable. His discernment was acute and his knowledge profound, but his chief characteristic was his tender charity. His singularly large acquaintance with the national life of England, his exceptional experience and skill in the conduct of business, and his intimate familiarity with the laws and customs of Great Britain peculiarly fitted him to conduct the affairs of the catholics of that period with discretion.

BRAMSTON, Sir JOHN, the elder (1577–1654), judge, eldest son of Roger Bramston by Priscilla, daughter of Francis Clovile of West Hanningfield Hall, Essex, was born at Maldon, in the same county, 18 May 1577, and educated at the free school at Maldon and Jesus College, Cambridge. On leaving the university he went into residence at the Middle Temple, and applied himself diligently to the study of the law. His ability was recognised early by his university, which made him one of its counsel in 1607, with an annual fee of forty shillings. In Lent 1623 he was appointed reader at his inn, the subject of his lecture being the statute 32 Henry VIII (on limitations), and he was reappointed in the autumn of the same year, this time discoursing on the statute of Elizabeth relating to fraudulent conveyances (13 Eliz. c. 5). Shortly after his reading was concluded he was called to the degree of serjeant-at-law (22 Sept. 1623). His son remarks that this was an expensive year for him, the costs entailed by the office of reader being considerable, besides the fee of 500*l.* to the exchequer payable on admittance to the order of serjeants. His practice now became extensive, and during the next few years he was engaged in many cases of the highest importance, not only in the courts of common law, but in chancery and in the courts of wards and star chamber. In 1626 he defended the Earl of Bristol on his impeachment. A dissolution of parliament, however, soon relieved Bramston from this duty, by putting an end to the proceedings. Next year he represented Sir Thomas Darnel and Sir John Heveningham, who had been committed to the Fleet for refusing to contribute to a loan then being raised by the king without the consent of parliament, applying unsuccessfully for a habeas corpus on behalf of the one, and bail on behalf of the other. In the following year he was chosen one of the counsel for the city of London on the motion of Sir Heneage Finch, then recorder, who was a close friend and connection by marriage. In 1629 he was one of the counsel for seven of the nine members of the House of Commons (including Sir John Eliot and Denzil Hollis) who were then indicted for making seditious speeches in parliament. Next year the bishop of Ely (John Buckeridge) appointed him chief justice of his diocese, a position he held until his elevation to the king's bench. In 1632 (26 March) he was made queen's serjeant, and two years later (8 July 1634) king's serjeant, being knighted 24 Nov. in the same year. In 1635 (14 April) he was created chief justice of the king's bench. In this position his first official act of historical importance was, in concert with the rest of the bench, to advise the king (13 Feb. 1636–7) that he might lawfully levy ship-money, and that it belonged to the crown to decide when such levy ought to be made. Sir John's son informs us that his father was in favour of modifying this opinion in at least one essential particular: that he

would have allowed the levy 'during necessity only,' and that he was only induced to subscribe the opinion as it stood by the representation made 'by the ancient judges that it was ever the use for all to subscribe to what was agreed by the majority.' In July of the same year Bramston was a member of the Star-chamber tribunal which tried the bishop of Lincoln on the charge of tampering with witnesses, and committing other misdemeanors. The bishop was found guilty by a unanimous verdict, and sentenced to be deprived of his office, to pay a fine of 10,000*l.*, and to be imprisoned during the king's pleasure. A similar sentence was passed on him at a later date, Bramston being again a member of the court, on a charge of libelling the archbishop of Canterbury and the late lord treasurer Weston. In the celebrated ship-money case (Rex *v.* Hampden), decided in the following year (12 June), Bramston gave his judgment against the king, though on a purely technical ground, viz. that by the record it did not appear to whom the money assessed was due, in that respect agreeing with the lord chief baron, Sir Henry Davenport, who, with Crooke, Hutton, and Denham, also gave judgment in Hampden's favour; but taking care at the same time to signify his concurrence with the majority of the court upon the main question. On 16 April 1640, during the indisposition of the lord keeper Finch, Bramston presided in the House of Lords. On 21 Dec. of the same year proceedings were commenced in the House of Commons to impeach the lord keeper Finch, Bramston, and five other of the judges who had subscribed the opinion on ship-money. Next day it was resolved that the message usual in such cases should be sent to the House of Lords. The message was communicated to the peers the same day, and the judges being present (except the lord keeper) were forthwith severally bound in recognisances of 10,000*l.* to attend parliament from day to day until such time as trial might be had. The lord keeper was bound to the same effect the following day. Bramston was thus unable to attend the king when required without rendering himself liable to immediate committal, and as no progress was made towards his trial, the king terminated so anomalous a condition of affairs by revoking his patent (10 Oct. 1642), sending him shortly afterwards (10 Feb. 1642-3) a patent constituting him serjeant-at-law by way of assurance of his unbroken regard. Meanwhile so far was the parliament from desiring to proceed to extremities with Bramston that in the terms of peace offered the king at Oxford (1 Feb. 1642-3) his reappointment as lord chief justice of the king's bench, not as formerly during the king's pleasure, but during good behaviour ('quamdiu se bene gesserit'), was included. From this time forward until Bramston's death persistent attempts were made to induce him to declare definitely in favour of the parliament, but without success. In 1644 he was consulted by the leaders of the party as to the evidence necessary for the prosecution of Macguire and MacMahon, two prisoners who had made their escape from the Tower and been retaken. In 1647 it was proposed to make him one of the commissioners of the great seal, and it was voted that he should sit as an assistant in the House of Lords, 'which,' says his son, 'he did not absolutely deny, but avoided attending by the help of friends.' In the same year a resolution was come to that he should be appointed one of the judges of the common pleas. Even in the last year of his life Cromwell, then protector, sent for him privately, and was very urgent that he should again accept office as chief justice. Bramston, however, excused himself on the ground of his advanced age. He died, after a short illness, in the seventy-eighth year of his age, 22 Sept. 1654, at his manor of Skreens, in the parish of Roxwell, Essex, which he had bought in 1635 from Thomas Weston, the second son of Weston the lord treasurer. He was buried in Roxwell church. In person he is described as of middle height, in youth slight and active, in later years stout without being corpulent. Fuller characterises him as 'one of deep learning, solid judgment, integrity of life, and gravity of behaviour; in a word, accomplished with all the qualities requisite for a person of his place and profession.' His son adds that he was 'a very patient hearer of cases, free from passion and partiality, very modest in giving his opinion and judgment' (he seems to have shown a little too much of this quality on the occasion of the opinion on ship-money), 'which he usually did with such reasons as often convinced those that differed from him and the auditory. Even the learned lawyers learned of him, as I have heard Twisden, Wild, Windham, and the admired Hales, and others acknowledge often.' The following epitaph, attributed to Cowley, was not placed upon his tomb until 1732:—

Ambitione, ira, donoque potentior omni
Qui judex aliis lex fuit ipse sibi;
Qui tanto obscuras penetravit lumine causas,
Ut convicta simul pars quoque victa foret;
Maximus interpres, cultor sanctissimus æqui,
Hic jacet: heu! tales mors nimis æqua rapit:
Hic alacri expectat supremum mente tribunal,
Nec metuit judex Judicis ora sui.

Bramston married in 1606 Bridget, daughter of Thomas Moundeford, M.D., son of Sir Edward Moundeford, knight, of Feltwell, Norfolk, by whom he had a large family, of whom six survived him, viz. three daughters, Dorothy, Mary, and Catherine, and as many sons, John [see BRAMSTON, SIR JOHN, the younger]; Moundeford, who was created a master in chancery at the Restoration; and Francis [q.v.] Sir John, the son, describes his mother as 'a beautiful, comely person of middle stature, virtuous and pious, a very observant wife, a careful, tender mother;' 'very charitable to the poor, kind to her neighbours, and beloved by them,' and 'much lamented by all that knew her.' She died in the thirty-sixth year of her age (whilst John was still at school at Blackmore, Essex) in Phillip Lane, Aldermanbury, and was buried in a vault in Milk Street church. Sir John continued a widower for some years, his wife's mother, Mary Moundeford, taking charge of his house. In 1631 he married Elizabeth, daughter of Lord Brabazon, sister of the Earl of Meath, and relict of Sir John Brereton, king's serjeant in Ireland. Brereton was her second husband, her first having been George Montgomerie, bishop of Clogher. Bramston's marriage with her was the revival of an old attachment he had formed as a very young man, but which Lord Brabazon had refused to countenance. The ceremony was performed at the seat of the Earl of Meath at Kilruddery, near Dublin. His son John, who accompanied Bramston to Ireland on this occasion, was by no means prepossessed by the appearance of his stepmother. 'When I first saw her,' he says, 'I confess I wondered at my father's love. She was low, fat, red-faced; her dress, too, was a hat and ruff, which though she never changed to her death. But my father, I believe, seeing me change countenance, told me it was not beauty but virtue he courted. I believe she had been handsome in her youth; she had a delicate fine hand, white and plump, and indeed proved a good wife and mother-in-law too.' She died in 1647, and was buried in Roxwell Church.

J. M. R.

BRAMSTON, SIR JOHN, the younger (1611–1700), lawyer and autobiographer, was the eldest son of Sir John Bramston, justice of the king's bench [q.v.], by Bridget, daughter of Thomas Moundeford, M.D., of London. He was born in September 1611, at Whitechapel, Middlesex, in a house which for several generations had been in possession of the family. After attending Wadham College, Oxford, he entered the Middle Temple, where he had as chamber fellow Edward Hyde, afterwards Earl of Clarendon. Throughout life he continued on terms of intimate friendship with Hyde, who presented him with his portrait, the earliest of him now known to exist, and engraved for the edition of the 'History of the Rebellion' published in 1816. He was called to the bar in 1635, and after his marriage in the same year to Alice, eldest daughter of Anthony Abdy, alderman of London, took a house in Charterhouse Yard, and began to practise law with success until 'the drums and trumpets blew his gown over his ears.' Elected for Bodmin to the Long parliament, he, on his father's advice, sold his chambers in the Temple on the outbreak of the civil war, and his wife dying in 1647, he removed with his family to his father's house at Skreens. At his father's death in 1654 he succeeded to the property. In the new parliament, after the dismissal of Richard Cromwell, he served as knight of the shire for Essex, and supported the motion for the Restoration. At the coronation he was created a knight of the Bath, after refusing a baronetcy on account of his dislike to hereditary honours. Subsequently he frequently acted as chairman in committees of the whole house. In 1672 an accusation was brought by Henry Mildmay, of Graces, before the council against him and his brother of being papists, and receiving payment from the pope to promote his interests. The chief witness was a Portuguese, Ferdinand de Macedo, whose evidence bore unmistakable signs of falsehood. Charles II is said to have remarked concerning the affair, that it was 'the greatest conspiracy and greatest forgerie that ever he knew against a private gentleman.' To the parliament of 1679 and to the first parliament of James II Bramston was returned for Maldon. He sat

in no later parliament. He died 4 Feb. 1699–1700.

[The Autobiography of Sir John Bramston, preserved in the archives at Skreens, was published by the Camden Society in 1845. It begins with an account of his early years, and is continued to within a few weeks before his death. Although it casts no important light on historical events, it is of great interest as a record of the social and domestic life of the period.] T. F. H.

BRANCASTRE or BRAMCESTRE, JOHN DE (*d.* 1218), is included among the keepers of the great seal by Sir T. D. Hardy, under the dates of 1203 and 1205; but Mr. Foss gives reasons for believing that the subscriptions to charters supposed to be attached by him as keeper were only affixed in the capacity of a deputy, or a clerk in the exchequer or in the chancery. His signature is found attesting documents from 1200 to 1208. In 1200 or the following year he was made archdeacon of Worcester, in November 1204 was sent to Flanders on the king's service, and on 13 Jan. 1207 was commissioned by King John to take charge of the abbey of Ramsey during a vacancy in the abbacy, and in his capacity of administrator paid thence, in May of the same year, 97*l.* into the exchequer. In the following October he was rewarded by the king (who exercised the right of presentation during the vacancy in the abbacy) with the vicarage of the parish which was doubtless his birthplace, Brancaster in Norfolk, and on 29 May 1208 was appointed prebendary of Lidington in the church of Lincoln. He died in 1218. One of his name, probably the same, appears as party in several lawsuits in Hertfordshire and Sussex in 1199.

[Hardy's List of Lord Chancellors, &c., 1843; Foss's Judges of England, ii. 43–5; Foss's Tabulæ Curiales, 1865, p. 9; Hardy's Le Neve's Fasti, iii. 73; Rot. Pat. 1835, i. 11, 58, 76, 84; Rot. Claus. 1833, i. 14, 83; Rot. Curiæ Regis, 1835.] W. D. M.

BRANCH, THOMAS (*fl.* 1753), was author of 'Thoughts on Dreaming' (1738), and 'Principia Legis et Æquitatis' (1753). The latter work, which presents in alphabetical order a collection of maxims, definitions, and remarkable sayings in law and equity, has been highly commended as a student's text-book; it has found editors both in this country and in the United States. Nothing is known of Branch's personal history, but if the 'lady of Thomas Branch, Esq.' in the obituary of the 'Gentleman's Magazine,' December 1769, was his wife, it may be presumed that he was then alive.

[Lowndes's Bibl. Manual (Bohn), 254; Gent. Mag. xxxix. 608.] J. M. S.

BRANCKER or BRANKER, THOMAS (1633–1676), mathematician, born at Barnstaple in August 1633, was the son of another Thomas Brancker, a graduate of Exeter College, Oxford, who was in 1626 a schoolmaster near Ilchester, and about 1630 head-master of the Barnstaple High School. The family originally bore the name of Brouncker [see BROUNCKER, SIR WILLIAM]. Young Brancker matriculated at his father's college 8 Nov. 1652; proceeded B.A. 15 June 1655, and was elected a probationer fellow of Exeter 30 June 1655, and full fellow 10 July 1656. After taking his master's degree (22 April 1658), he took to preaching, but he refused to conform to the ceremonies of the church of England, and was deprived of his fellowship 4 June 1663. He then retired to Cheshire, changed his views, and applied for and obtained episcopal ordination. He became a 'minister' at Whitegate, Cheshire, but his fame as a mathematician reached William, lord Brereton, who gave him the rectory of Tilston, near Malpas, in 1668. He resigned the benefice (after a very few months' occupation) and became head-master of the grammar school at Macclesfield, where he died in November 1676. He was buried in Macclesfield church, and the inscription on his monument states that he was a linguist as well as a mathematician, chemist, and natural philosopher, and that he pursued his studies 'under the auspices of the Hon. Robert Boyle.'

Brancker gained his first knowledge of mathematics and chemistry from Peter Sthael of Strasburg, 'a noted chimist and Rosicrucian,' who before 1660 settled in Oxford as a private tutor, at the suggestion of Robert Boyle, and numbered Ralph Bathurst, Christopher Wren, with Brancker, Wood, and other less eminent men, among his pupils (Wood's Autobiog. in *Athenæ*, Bliss, i. liii). Brancker's earliest publication was 'Doctrinæ Sphæricæ Adumbratio unà cum usu Globorum Artificialium,' Oxford, 1662. In 1668 he published a translation of an introduction to algebra from the High Dutch of Rhonius, and added a 'Table of odd numbers less than one hundred thousand, shewing those that are incomposit, and resolving the rest into their factors or coefficients.' The book was licensed 18 May 1665, but the publication was delayed to enable Dr. John Pell to add notes and corrections. John Collins, another mathematician, also gave Brancker some assistance over the book, and praised it highly in a letter to James Gregory in 1668. The value of the table and translation is acknowledged in an early paper in the 'Philosophical Transactions' (No. 35, pp. 688–9), and the table and preface were reprinted by Francis Masere

in a volume of mathematical tracts (1795), together with James Bernouilli's 'Doctrine of Permutations' and other papers. Maseres states that Dr. Wallis thought well of Brancker's table, and corrected a few errors in it. In the Rawlinson MSS. (A 45, f. 9) there is 'A Breviat and relation of Thomas Branker against Dame Appollin Hall, alias Appolin Potter, of London, once marryed to William Churchey' (July 1656). A curious manuscript key to an elaborate cipher in the possession of J. H. Cooke, F.S.A., is attributed to Brancker and is fully described in the 'Transactions of the Society of Antiquaries' for 1877.

Exon. 72, 74, 229; Hutton's Mathematical Dictionary; Correspondence of Scientific Men (1841), ii. 177; Notes and Queries, 5th ser. xi. 41, 170, 345, where Mr. J. E. Bailey's notes are of especial value.] S. L.

BRAND, BARBARINA, Lady Dacre (1768–1854), poet and dramatist, was the third daughter of Admiral Sir Chaloner Ogle, bart., by Hester, youngest daughter and coheir of John Thomas, D.D., bishop of Winchester. She was married first to Valentine Henry Wilmot of Farnborough, Hampshire, an officer in the guards, and secondly, on 4 Dec. 1819, to Thomas Brand, twentieth baron Dacre, who died without issue on 21 March 1851. She died in Chesterfield Street, Mayfair, London, on 17 May 1854, in her eighty-seventh year.

Lady Dacre was one of the most accomplished women of her time. In 1821 her poetical works were privately printed in two octavo volumes, under the title of 'Dramas, Translations, and Occasional Poems.' Some of these are dated in the last century. They include four dramas, the first of which, 'Gonzalvo of Cordova,' was written in 1810. In the character of the great captain the author followed the novel of Monsieur de Florian. The next, 'Pedarias, a tragic drama,' was written in 1811, its story being derived from 'Les Incas' of Marmontel. Her third dramatic work was 'Ina,' a tragedy in five acts, the plot of which was laid in Saxon times in England. It was produced at Drury Lane 22 April 1815, under the management of Sheridan, to whose second wife, the daughter of Dr. Ogle, dean of Winchester, the author was related. It was not sufficiently successful to induce its repetition. It was printed in 1815, as produced on the stage, but in Lady Dacre's collected works she restored 'the original catastrophe, and some other parts which had been cut out.' The fourth drama is entitled 'Xarifa.' Lady Dacre's book contains also translations of several of the sonnets of Petrarch. Some of these had been privately printed at an earlier date—in 1815 (?), 1818, and 1819. In 1823, when Ugo Foscolo produced his 'Essays on Petrarch,' he dedicated them to Lady Dacre, and the last forty-five pages of the work are occupied by her ladyship's translations from Petrarch. Her 'Translations from the Italian,' principally from Petrarch, were privately printed at London in 1836, 8vo. In addition to her other accomplishments, Lady Dacre was an excellent amateur artist, and excelled in modelling animals, particularly the horse. She edited in 1831 'Recollections of a Chaperon,' and in 1835 'Tales of the Peerage and Peasantry,' both written by her only daughter, Mrs. Arabella Sullivan, wife of the Rev. Frederick Sullivan, vicar of Kimpton, Hertfordshire.

[A Family Chronicle, ed. Mrs. John Lyster, 1908; Gent. Mag. N.S. xlii. 296; Martin's Privately Printed Books, 276, 466; Quarterly Review, xlix. 228, 231.] T. C.

BRAND, HANNAH (*d.* 1821), actress and dramatist, younger sister of John Brand, *d.* 1808 [q. v.], kept a school at Norwich in conjunction with an elder sister Mary. But Hannah soon abandoned teaching for the stage, and on 18 Jan. 1792 appeared with the Drury Lane Company at the King's Theatre (Opera House) in the Haymarket, in her own tragedy of 'Huniades.' This piece, not without merit, was received during its progress with much favour. It proved too long, however, and the performance of Miss Brand, who was announced as making 'her first appearance upon any stage,' deprived it of what chance it might have had with an actress of more experience as the heroine. After the first representation it was withdrawn, but was reproduced on 2 Feb. with the title of 'Agmunda,' and with the omission of the character of Huniades, originally played by John Kemble. This curious experiment proved no more successful than the first, and piece and author vanished from London. Two years later, 20 March 1794, she appeared at the York Theatre, playing Lady Townly in the 'Provoked Husband.' Formality of manner, a rigour in dress entirely out of keeping with the notions then prevalent, and it may have been a provincialism of pronunciation of which her manager, Tate Wilkinson, complains, stirred against her the feminine portion of the audience, and her first appearance, 'so far from being well received, met with rude marks of disgustful behaviour, and that from ladies who did not add by such demeanour addition to their politeness or good understanding' (Tate Wilkinson, *The Wandering Patentee*, iv. 158). She remained

in York till the last night of the season, 21 May 1794, when she appeared in her own play of 'Agmunda,' in which she was derided. In the summer she played in Liverpool with no greater success. Starched in manner, virtuous in conduct, and resolute in her objection to a low-cut dress, she seems, according to Tate Wilkinson, to have had little chance of succeeding on the stage. Her defeat she attributed to the jealousy of Mrs. Siddons and the Kembles. Of her play she thought so highly that she would not for fear of theft trust the whole manuscript to the prompter, but copied out with her own hand the entire play, except her own part, which she reserved. Many curious stories show how high was her estimate of her own capacity. Wilkinson says that, apart from her tragedy airs, she possessed many good qualities, that she was estimable in her private character, and endowed with a good understanding. The editors of the 'Biographia Dramatica,' who saw her performance in 'Huniades,' find fault with her deportment, but say that her acting was marked by discrimination. In 1798 she published in Norwich, in 8vo, a volume of 'Dramatic and Poetical Works,' containing: (1) 'Adelinda,' a comedy founded on 'La Force du Naturel' of Destouches; (2) 'The Conflict, or Love, Honour, and Pride,' an heroic comedy adapted from 'Don Sanche d'Arragon,' by Pierre Corneille; and (3) 'Huniades, or the Siege of Belgrade,' a tragedy, with some miscellaneous poems. After her failure on the stage, Miss Brand again became a governess. Her pupil was a married lady, and her eccentric conduct was the cause of much unpleasantness between husband and wife. Miss Brand died in March 1821.

[Genest's History of the Stage; Tate Wilkinson's Wandering Patentee; Baker, Reed, and Jones's Biographia Dramatica; History of the Theatres of London from the year 1771 to 1795, 2 vols. (Oulton); Nichols's Lit. Illustrations, vi. 534–7; Beloe's Sexagenarian.] J. K.

BRAND, JOHN (1668?–1738), minister of the church of Scotland, author of 'A Brief Description of Orkney,' was educated at the university of Edinburgh, where he graduated M.A. on 9 July 1688. After completing his divinity course, he was licensed to preach by the presbytery of Edinburgh, and on 3 Jan. 1694–5 was ordained minister of the parish of Borrowstouness, Linlithgowshire. In February 1700–1 he was appointed by the general assembly one of a deputation to visit Shetland, and, if convenient, Orkney and Caithness. His journey occupied from 18 April to 24 June, and after his return he published an account of his experiences under the title, 'A Brief Description of Orkney, Zetland, Pightland-Firth, and Caithness; wherein, after a short journal of the author's voyage thither, these northern places are first more generally described, then a particular view is given of the several isles thereto belonging; together with an account of what is most rare and remarkable therein, with the author's observations thereupon.' The book was reprinted in vol. iii. of Pinkerton's 'Voyages and Travels,' and was also republished separately in 1883. Although, as may be supposed, of no special value in reference either to the antiquities or natural history of the islands, there is considerable interest in its descriptions of their condition, and of the mode of life of the inhabitants at a period when intercourse with the south was of the most limited kind. He died on 14 July 1738, aged about seventy. By his wife, Elizabeth Mitchell, whom he married in 1700, he had a large family, and he was succeeded in the parish by his son William.

[Hew Scott's Fasti Eccl. Scot. vol. i. pt. i. 170, List of Edinburgh Graduates.] T. F. H.

BRAND, JOHN (1744–1806), antiquary and topographer, was born on 19 Aug. 1744 at Washington, in the county of Durham, where his father, Alexander Brand, was parish clerk. His mother dying immediately after his birth, and his father having married again, he was taken, when a child, under the protection of his maternal uncle, Anthony Wheatley, cordwainer, residing in Back Row, Newcastle-upon-Tyne, to whom he was bound apprentice on 4 Sept. 1758. He was educated at the Royal Grammar School in that town under the direction of the Rev. Hugh Moises, where he acquired a taste for classical studies; and after leaving the school he was so indefatigable in the acquisition of learning as to secure the esteem and friendship of his former master, Mr. Moises, who interested some opulent friends in his behalf and assisted in sending him to Oxford. He was entered at Lincoln College, and graduated B.A. in 1775. Previously to this he had been ordained to the curacy of Bolam in Northumberland; in June 1773 he was appointed curate of St. Andrew's, Newcastle; on 6 Oct. 1774 he was presented to the perpetual curacy of Cramlington, a chapel of ease to St. Nicholas at Newcastle, from which town it is distant about eight miles. He was elected a fellow of the Society of Antiquaries 29 May 1777. In 1778 he was appointed under-usher of the grammar school at Newcastle (BRAND, *Hist. of Newcastle*, i. 99), but he does not appear to have held that situation very long. In 1781 he was presented by his

early friend and patron, the Duke of Northumberland, to the rectory of the united parishes of St. Mary-at-Hill and St. Mary Hubbard, in the city of London; and two years later he was appointed one of the duke's domestic chaplains.

In 1784 he was elected resident secretary to the Society of Antiquaries, and was annually re-elected to that office until his death, which took place very suddenly in his rectory house on 11 Sept. 1806. He was buried in the chancel of his church.

We are told that 'his manners, somewhat repulsive to a stranger, became easy on closer acquaintance; and he loved to communicate to men of literary and antiquarian taste the result of his researches on any subject in which they might require information. Many of his books were supplied with portraits drawn by himself in a style not inferior to the originals, of which they were at the same time perfect imitations' (Nichols, *Literary Anecdotes*, ix. 653). Brand, it may be added, was never married. There is a small silhouette likeness of him in the frontispiece to his 'History of Newcastle.' An account of some of the rarer tracts in his library, which was sold by auction in 1807–8, is given in Dibdin's 'Bibliomania,' 605–611.

His works are: 1. A poem 'On Illicit Love. Written among the ruins of Godstow Nunnery, near Oxford,' Newcastle-upon-Tyne, 1775, 4to, pp. 20. Godstow was the burial-place of Fair Rosamond, the paramour of Henry II. 2. 'Observations on Popular Antiquities: including the whole of Mr. Bourne's "Antiquitates Vulgares," with Addenda to every chapter of that work; as also an Appendix, containing such articles on the subject as have been omitted by that author,' London, 1777, 8vo. Brand left an immense mass of manuscript collections for the augmentation of this work. These were purchased by some booksellers and placed in the hands of Mr. (afterwards Sir Henry) Ellis, who incorporated them in a new edition published at London in 2 vols. 1813, 4to, under the title of 'Observations on Popular Antiquities: chiefly illustrating the origin of our Vulgar Customs, Ceremonies, and Superstitions.' Among the printed books in the British Museum is a copy of this edition with numerous interleaved additions; and in the manuscript department there is another copy annotated by the Rev. Joseph Hunter, F.S.A. (*Addit. MSS.* 24544, 24545). Other editions appeared in Knight's 'Miscellanies,' 3 vols. London, 1841–2, 4to, and in Bohn's 'Antiquarian Library,' 3 vols. London, 1849. This work contains much interesting information, but the author takes no general view of his subject; his desultory collections are made with little care, and the notes and text are frequently at variance with each other. Mr. William Carew Hazlitt made an attempt to remedy some of these defects in his new edition, entitled 'Popular Antiquities of Great Britain, comprising notices of the movable and immovable feasts, customs, superstitions, and amusements, past and present,' 3 vols. London, 1870, 8vo. 3. 'The History and Antiquities of the Town and County of Newcastle-upon-Tyne,' 2 vols. London, 1789, 4to; a very elaborate work, embellished with views of the public buildings, engraved by Fittler at a cost of 500*l.* An index, compiled by William Dodd, treasurer to the Newcastle Society of Antiquaries, was printed by that society in 1881. 4. Papers in the 'Archæologia,' vols. viii. x. xiii. xiv. xv. 5. 'Letters to Mr. Ralph Beilby of Newcastle-upon-Tyne,' Newcastle, 1825, 8vo.

[MSS. Addit. 6391, ff. 36, 45, 99, 144, 146, 182, 237; 22838, ff. 61, 77, 82, 86; 22901, ff. 51, 135; 26776, ff. 103, 105; Brand's Newcastle, i. 99, 196, 323; Cat. of Oxford Graduates (1851), 80; MS. C.

BRAND, JOHN (*d.* 1808), clergyman and writer on politics and political economy, was a native of Norwich, where his father was a tanner. Entering at Caius College, Cambridge, he distinguished himself in mathematics, taking his B.A. degree in 1766, and proceeding M.A. in 1772. In 1772 he published 'Conscience, an ethical essay,' a poem which he had written in a competition for the Seatonian prize. Having taken orders and held a curacy he was appointed reader at St. Peter's Mancroft, Norwich, and was afterwards presented to the vicarage of Wickham Skeith in Suffolk. To eke out his scanty income he contributed to the periodical press, particularly to the 'British Critic,' papers on 'Political Arithmetic.' Some of these attracted the notice of Lord-chancellor Loughborough, and he presented Brand in 1797 to the rectory of St. George's, Southwark, which he held until his death on 23 Dec. 1808.

Brand was a staunch tory, and his toryism coloured all his disquisitions. In his first

pamphlet, 'Observations on some of the probable effects of Mr. Gilbert's Bill, to which are added Remarks on Dr. Price's account of the National Debt' (1776), his object was to reply to the economists who bewailed the increase of local taxation and of the national debt. He drew a rather ingenious distinction between fiscal charge and fiscal burden. As long as prices steadily rose he argued that though more money might be taken out of the taxpayer's pocket, the quantity of commodities which the sum levied by taxation would purchase steadily decreased, and that thus if 'burden' were interpreted to be the amount of commodities of the power of purchasing which the community was deprived by taxation, its increase need not be and had not been at all proportionate to the increase of charge. In this way he proved to his own satisfaction that the burden of the amount paid to the creditors of the nation at the peace of Utrecht was nearly the same as when he wrote, and that the alarm of Dr. Price and others at the increase of the national debt was wholly baseless. Of such other of Brand's pamphlets on economic subjects as are in the library of the British Museum, the most interesting is his 'Determination of the average price of wheat in war below that of the preceding peace, and of its readvance in the following.' Here he sought to prove on theoretical grounds that war lowers while peace raises the price of wheat, and he then proceeded to endeavour to confirm the soundness of this position by an appeal to statistics. Of Brand's political pamphlets the chief appears to be his 'Historical Essay on the Principles of Political Associations in a State, chiefly deduced from the English and Jewish histories, with an application of those principles in a comparative view of the Association of the year 1792 and of that recently instituted by the Whig Club' (1796). The intended drift of this elaborate disquisition was that the existing tory associations were praiseworthy and useful.

The main authority for Brand's meagre biography is chapter xxiv. of Beloe's 'Sexagenarian,' which is devoted to him, but in which, as usual in that work, the name of the subject of the notice is not mentioned. Brand's name is, however, supplied together with what appears to be a complete list of his separate publications (the library of the British Museum is without several of them), in the memoir of him in Nichols's 'Illustrations of the Literary History of the Eighteenth Century,' vi. 528–34, which is an expansion of the chapter in the 'Sexagenarian.' Nichols enumerates thirteen pamphlets in all.

[Brand's Pamphlets; Beloe's Sexagenarian, cxxiv.; Nichols's Illustrations, vi. 528–34; Cat. Brit. Mus. Lib.] F. E.

BRAND, THOMAS (1635–1691), nonconformist divine, born in 1635, was the son of the rector of Leaden Roothing, Essex. He was educated at Bishop's Stortford, Hertfordshire, and Merton College, Oxford. There he specially studied law, and afterwards entered the Temple. An acquaintance formed with Dr. Samuel Annesley [q. v.] led to a resolution to join the ministry. He entered the family of the Lady Dowager Roberts of Glassenbury, Kent, the education of whose four children he superintended. He caused the whole of his salary to be devoted to charity. He soon preached twice every Sunday, and frequently a third time in the evening, at a place two miles distant. He established weekly lectures at several places, and monthly fasts. On the death of the Rev. Mr. Poyntel of Staplehurst, he left Lady Roberts, went to Staplehurst, and was ordained. About two years after he married a widow, by whom he had several children, who all died young. He continued at Staplehurst till driven away by persecution. After many wanderings he settled near London. He built many meeting-houses, and contributed to their ministers' salaries. Catechising the young was also a favourite occupation, in which he was very successful. He gave away thousands of catechisms and other books, and even went to the expense of reprinting twenty thousand of Joseph Alleine's 'Treatise on Conversion' to be given away, altering the title to a 'Guide to Heaven.' A portion of this expense was defrayed by some of his friends. Many other small books were given away by him, and he and his friends sold bibles much under cost price to all who desired them, provided they would not sell them again. Brand maintained children of indigent parents, and put them to trades. Dr. Earle, many years a distinguished minister of the presbyterian congregation in Hanover Street, London, was one of his protégés. Brand spent little on himself. His charities were computed to amount to above 300*l.* a year. He said he 'would not sell his estate because it was entailed, but he would squeeze it as long as he lived.' Brand died 1 Dec. 1691, and was buried in Bunhill Fields. The inscription on his gravestone is recorded in 'Bunhill Memorials,' by J. A. Jones.

[Memoirs of the Rev. Thomas Brand (with a sermon preached on the occasion of his death), by the Rev. Samuel Annesley, LL.D. 1692 (reprinted with additions, and dedicated to Thomas Brand, Lord Dacre, by William Chaplin), Bishop's

Stortford, 1822; Nonconformist Memorial, iii., 1803; Jones's Bunhill Memorials, 1849.]

J. H. T.

BRANDARD, ROBERT (1805–1862), engraver, was born at Birmingham. He came to London at the age of nineteen, and after studying for a short time with Edward Goodall, the eminent landscape-engraver, practised with much ability in the same branch of the art. His earliest efforts were plates for Brockedon's 'Scenery of the Alps,' Captain Batty's 'Saxony,' and Turner's 'England' and 'Rivers of England.' He also engraved after Stanfield, Herring, Callcott, and others for the 'Art Journal,' and produced some etchings from his own designs, one series of which was published by the Art Union in 1864. Amongst his best works were two plates after Turner entitled 'Crossing the Brook' and 'The Snow-storm,' which were exhibited after his death at the International Exhibition of 1862. Brandard also practised painting both in oils and water-colours, and exhibited frequently at the British Institution, the Royal Academy, and Suffolk Street, between 1831 and 1858. He died at his residence, Campden Hill, Kensington, on 7 Jan. 1862. One of his oil-paintings, entitled 'The Forge,' was purchased by the second Earl of Ellesmere, and three others, views of Hastings, are in the South Kensington Museum, forming part of the Sheepshanks Collection.

BRANDE, WILLIAM THOMAS (1788–1866), chemist, and editor of the 'Dictionary of Science and Art,' was born in Arlington Street, St. James's, on 11 Feb. 1788, his father being an apothecary. He was educated in private schools at Kensington and at Westminster. It was his father's wish that his son William should enter the church; but the boy expressed so strong an inclination for the medical profession that he was, on 2 Feb. 1802, apprenticed to his brother, who was a licentiate of the Company of Apothecaries. About this period the family removed from Arlington Street to Chiswick. The young Brande here became acquainted with Mr. Charles Hatchett, who was devoting his attention to chemical investigations, and especially to the analysis of minerals. Mr. Hatchett allowed him to assist in his laboratory, and he encouraged him in the study of the classification of ores and rocks, supplying him with duplicates from his own cabinets. This formed the foundation of the mineralogical series which were in future years used in the lectures and classes of the Royal Institution. Mr. Charles Hatchett, whose daughter Brande subsequently married, sedulously encouraged his love of science.

In 1802 Brande visited his uncle at Hanover, and in 1803 was in Brunswick and Göttingen. The breaking out of the war, and the advance of the French on Hanover, interfered with his linguistic and scientific studies, and he had much difficulty in escaping to Hamburg, where he embarked in a Dutch merchant-vessel for London, which he reached after passing a month at sea. Brande re-entered his brother's employment in 1804. He became a pupil at the Anatomical School in Windmill Street, and studied chemistry under Dr. George Pearson at St. George's Hospital. He also made the acquaintance of Mr. (afterwards Sir Benjamin) Brodie, and formed friendships with Sir Everard Home, Dr. Pemberton, and other men of eminence.

Brande has left us an interesting note of this date. He says: 'I was now full of ardour in the prosecution of chemistry; and although my brother—with whom I still lived, whose apprentice I was, and in whose shop, notwithstanding all other associations, I still worked, and passed a large part of my time—threw every obstacle in the way of my chemical progress that was decently in his power, I found time, however, to read, and often to experiment, in my bedroom late in the evening. I thus collected a series of notes and observations which I fondly hoped might at some future period serve as the basis of a course of lectures, and this in time they actually did. It was at this period that, in imitation of Mr. Hatchett's researches, I made some experiments on benzoin, the results of which were published in "Nicholson's Journal" for February 1805.' This, his first contribution to scientific literature, appeared when he was only a little more than sixteen years of age. In 1805 Brande became a member of the Westminster Medical Society, and in June of that year he read before the members a paper on 'Respiration,' which he contributed afterwards to 'Nicholson's Journal.'

Early in life Brande appears to have been introduced to Davy, and shortly after the return of the latter from Germany he renewed the acquaintance and attended his lectures at the Royal Institution.

In 1805 Mr. Hatchett presented to the Royal Society a paper by Brande 'On some Experiments on Guaiacum Resin,' which was printed in the 'Philosophical Transactions' for 1806. Sir Everard Home entrusted Brande with the analysis of calculi selected

from the collection in the College of Surgeons. The results were communicated to the Royal Society on 19 May 1808, and published—with some observations by Sir Everard Home—in the 'Transactions.' Two other important papers by him were published by the Royal Society in 1811 and 1813. These were 'On the State and Quantity of Alcohol in Fermented Liquids,' and for them Brande received the Copley medal.

In 1808 Brande commenced lecturing, giving two courses on pharmaceutical chemistry at Dr. Hooper's Medical Theatre in Cork Street, Burlington Gardens. He subsequently lectured at the New Medico-Chemical School in Windmill Street, on physics and chemistry, and gave a course of lectures on 'Materia Medica' at the house of Dr. Pearson.

In 1809 Brande was elected a fellow of the Royal Society. In 1812 he accepted the appointment of professor of chemistry and superintending chemical operator to the Apothecaries' Company. He soon after became professor of materia medica, and delivered annually a course of lectures on that subject. In the spring of this year Sir Humphry Davy 'could not pledge himself to continue the lectures which he has been accustomed to deliver to the Royal Institution;' but he was willing to accept the offices of professor of chemistry and director of the laboratory and mineralogical collection without salary, and on 1 June he was, at a special general meeting, appointed to these offices. Under this arrangement with Sir Humphry Davy, Brande was elected in December of the same year to lecture on 'Chemical Philosophy.' In April 1813 Davy 'begged leave to resign his situation of honorary professor.' Brande was then elected to the professorship of chemistry. The rooms in the Royal Institution building which had been occupied by Sir Humphry Davy were prepared for him, and a few months later he was appointed superintendent of the house, and was allowed to transfer his chemical class of medical students from Windmill Street to the laboratory of that establishment.

Brande delivered, for Sir Humphry Davy, a course of lectures on 'Agricultural Chemistry' before the Board of Agriculture. On the death of Dr. Pearson the chemical lectures were transferred from St. George's Hospital to the Royal Institution, and Brande, now assisted by Faraday, devoted himself entirely to chemical investigations and to lectures on the science. For several years Brande's position was a responsible one. Officially he must be regarded as the leading chemist of the metropolis at the time; his assistant Faraday was travelling with Davy on the continent.

In 1823 the government consulted Brande on the manufacture of iron and steel, the object of the proposed inquiry being to obtain a more coherent metal for the dies used in the coinage. The report, which was of an especially practical character, led to considerable improvement and much economy in the Mint. As soon as it became possible Brande was appointed by the crown as superintendent of the die department. This appointment he held conjointly with his other posts for many years. In 1854 he was appointed the chief officer of the coinage department at the Royal Mint, when he resigned the professorship at the Royal Institution.

On the return of Faraday from the continent in 1825 he was associated with Brande in the lectures delivered in the theatre of the Royal Institution, and in editing the 'Quarterly Journal of Science and Art,' which had been published since 1816. From 1816 to 1826 Brande was one of the secretaries of the Royal Society. In 1836 he was named one of the original fellows of the University of London and a member of the senate of that body. In 1846 he became examiner in chemistry, which office he retained until 1858. He died 11 Feb. 1866.

Brande received the honorary degree of doctor of civil law in the university of Oxford. He was a fellow of the Royal Society of Edinburgh, and a member of several foreign societies.

Brande published in the 'Transactions of the Royal Society,' and in several scientific journals, twenty-seven papers, all of them the result of close investigation. Among the more important were 'Chemical Researches on the Blood and some other Animal Fluids,' in 1811; 'On some Electro-chemical Phenomena,' which was the subject of the Bakerian lecture for 1813; 'On Electro-magnetic Clocks,' in 1817; several papers on the 'Destructive Distillation of Coal,' and on 'Coal Gas as an Illuminant,' between 1816 and 1819. 'The Outlines of Geology' were published in the 'Quarterly Journal of Science' in 1825 to 1827. The other papers were connected with his position as chemist to the Apothecaries' Company, and related mainly to pharmaceutical inquiries. The 'London Pharmacopœia,' which was an ill-arranged collection of recipes, was greatly improved by Brande, especially in its chemistry. Brande's 'Manual of Chemistry,' which went through six editions, was the text-book of the day. His 'Dictionary of Pharmacy and Materia Medica' was one of the most useful books ever placed in the

hands of a medical student. His 'Dictionary of Science and Art,' of which he became the editor in 1842, was a laborious undertaking, supplying a serious want. He was engaged in revising a new edition of this work when death brought his active life to a close.

During forty-six years Brande laboured most industriously in the front ranks of science. Although, unlike his friends Davy and Faraday, he failed to connect his name with any important discovery, he aided in the development of several branches of science, and by his earnest truthfulness—preferring demonstration to speculation—he fitted himself for an important position at a time when science was undergoing remarkable changes.

[Dr. Bence-Jones in Proceedings of Royal Institution; Proceedings of the Royal Society, vol. xvi. pt. ii. and Catalogue of Scientific Papers, i. 564; Quarterly Journal of Science, iv. 1818-1822; Nicholson's Journal of Natural Philosophy.] R. H-T.

BRANDER, GUSTAVUS (1720-1787), merchant and antiquary, descended from a Swedish family, was born in London in 1720, and brought up to trade, which he carried on with great success in the City. For many years he was a director of the Bank of England. Having inherited the fortune of his uncle, Mr. Spicker, he employed much of his wealth in forming collections of literary interest. Among his principal curiosities was the magnificent chair in which the first emperor of Germany was said to have been crowned. Engraved upon it in polished iron were scenes from Roman history, from the earliest times to the foundation of the empire. Brander was a fellow of the Royal Society, a curator of the British Museum, and one of the first supporters of the Society for the Encouragement of Arts. While he lived in London in partnership with Mr. Spalding, his library and pictures narrowly escaped the flames which destroyed their house in White Lion Court, Cornhill, on 7 Nov. 1766. Thence he removed to Westminster, and at length into Hampshire, where he purchased the site of the old priory at Christchurch. Having completed his villa and gardens in this beautiful spot, he married, in 1780, Elizabeth, widow of John Lloyd, vice-admiral of the blue, daughter of Mr. Gulston of Widdial, Hertfordshire. In the winter of 1786 he had just completed the purchase of a house in St. Alban's Street, London, when he was seized with an illness which carried him off on 21 Jan. 1787.

To him the British Museum is indebted for a collection of fossils found in the cliffs about Christchurch and the coast of Hampshire. Copper-plate engravings of them, executed by Green, and accompanied by a scientific Latin description by Dr. Solander, were published in a volume entitled 'Fossilia Hantoniensia collecta, et in Museo Britannico deposita, à Gustavo Brander,' 1766. Brander communicated an account of the effect of lightning on the Danish church in Wellclose Square to the 'Philosophical Transactions' (xliv. 298); and from a manuscript in his possession Dr. Pegge printed in 1780, for private circulation, 'The Forme of Cury. A Roll of antient English Cookery, compiled about the year 1390.'

BRANDON, first VISCOUNT (*d.* 1694). [See GERARD, CHARLES.]

BRANDON, CHARLES, DUKE OF SUFFOLK (*d.* 1545), was the son and heir of William Brandon, who was Henry VII's standard-bearer at Bosworth Field, and was on that account singled out by Richard III, and killed by him in personal encounter. This William, who with his brother Thomas had come with Henry out of Brittany, does not appear to have been a knight, though called Sir William by Hall the chronicler, and thus some confusion has arisen between him and his father, Sir William Brandon, who survived him.

It is quite uncertain when Charles Brandon was born, except that (unless he was a posthumous child) it must of course have been before the battle of Bosworth. It is not likely, however, to have been many years earlier. No mention of him has been found before the accession of Henry VIII, with whom he appears to have been a favourite from the first. In personal qualities, indeed, he was not unlike his sovereign; tall, sturdy, and valiant, with rather a tendency to corpulence, and also with a strong animal nature, not very much restrained at any time by considerations of morality, delicacy, or gratitude. In 1509, the first year of Henry's reign, he was squire of the royal body, and was appointed chamberlain of the principality of North Wales (*Calendar of Henry VIII*, i. 695). On 6 Feb. 1510 he was made marshal of the king's bench, in the room of his uncle, Sir Thomas Brandon [q. v.], recently deceased (*ib.* 859). On 23 Nov. 1511 the office of marshal of the royal household was granted to him and Sir John Carewe in survivorship (*ib.* 1989). On 29 March 1512 he was appointed keeper of the royal manor and park of Wanstead, and on 2 May following ranger of the New Forest (*ib.* 3103, 3170). By this time he was no longer esquire, but knight of the royal body. On 3 Dec. the same year he re-

ceived a grant of the wardship of Elizabeth, daughter and sole heiress of John Grey, viscount Lisle (*ib.* 3561), of which he very soon took advantage in a rather questionable way, by making a contract of marriage with her; and next year, on 15 May, he was created Viscount Lisle, with succession to the heirs male of himself and Elizabeth Grey, viscountess Lisle, his wife, as she is called in the patent (*ib.* 4072). But in point of fact she was not his wife, for when she came of age she refused to marry him, and the patent was cancelled.

Other grants he continued to receive in abundance; stewardships of various lands in Warwickshire or in Wales, either temporarily or permanently in the hands of the crown (*ib.* 3841, 3880, 3920–1). But his first conspicuous actions were in the year 1513, when, under the title of Lord Lisle, he was appointed marshal of the army that went over to invade France. He took a prominent part in the operations against Terouenne, and at the siege of Tournay he first of all obtained possession of one of the city gates (*ib.* 4459). While before Terouenne he sent a message to Margaret of Savoy, the regent of the Netherlands, through her agent in the camp Philippe de Brégilles, who, in communicating it, said he was aware that Brandon was a second king, and he advised her to write to him a kind letter, 'for it is he,' wrote Brégilles, 'who does and undoes' (*ib.* 4405). Early in the following year (1514) the king determined to send him to Margaret to arrange about a new campaign (*ib.* 4736, 4831). On 1 Feb. he was created Duke of Suffolk, and, adorned with that new title, he went over to the Low Countries. On 4 March Henry VIII wrote to Margaret's father, the emperor Maximilian, that a report had reached England that Suffolk was to marry his daughter, at which the king affected to be extremely displeased. Henry pretended that the rumour had been got up to create differences between them. In point of fact Henry was not only fully cognisant of Suffolk's aspirations, but had already pleaded his favourite's cause with Margaret personally at Tournay; and this notwithstanding the engagement he was still under to Lady Lisle. Some curious flirtation scenes had actually taken place between them at Lille, of which Margaret seems afterwards to have drawn up a report in her own hand (*ib.* 4850–1).

In October following, immediately after the marriage of Louis XII to Henry VIII's sister Mary, Suffolk was sent over to France to witness the new queen's coronation at St. Denis, and to take part in the jousts to be held at Paris in honour of the event. This at least seemed to be the principal object of his mission, and as regards the tourney he certainly acquitted himself well, overthrowing his opponent, horse and man. But another object was to make some arrangements for a personal interview between the English and French kings in the following spring (*ib.* 5560), and also to convey a still more secret proposal for expelling Ferdinand of Arragon from Navarre (*ib.* 5637); both which projects were nipped in the bud by the death of Louis XII on 1 Jan. following.

When the news of this event reached England, it was determined at once to send an embassy to the young king, Francis I, who had just succeeded to the throne; and Suffolk, who had not long returned from France, was appointed the principal ambassador. They had a formal audience of the king at Noyon on 2 Feb., after which Francis sent for the duke to see him in private, and to his consternation said to him, 'My lord of Suffolk, there is a bruit in this my realm that you are come to marry with the queen, your master's sister.' Suffolk in vain attempted to deny the charge, for Francis had extracted the confession from Mary herself—by what dishonourable overtures we need not inquire—and Francis, to put him at his ease, promised to write to Henry in his favour. The truth was that Henry himself secretly favoured the project, and only wished for some such letter from Francis to make it more acceptable to the old nobility, who regarded Suffolk as an upstart. Wolsey, too, then at the commencement of his career as a statesman, was doing his best to smooth down all obstacles. But the precipitancy of the two lovers nearly forfeited all their advantages. Mary was by no means satisfied that, although Henry favoured her wishes to some extent, he might not be induced by his council to break faith with her and sacrifice her to political considerations again. Suffolk's discretion was not able to subdue his own ardour and hers as well, and they were secretly married at Paris.

So daring and presumptuous an act on the part of an upstart nobleman was not easily forgiven. Many of the king's council would have put Suffolk to death; the king himself was extremely displeased. But there was a way of mitigating the king's displeasure to some extent, and the king was satisfied in the end with the gift of Mary's plate and jewels and a bond of 24,000*l.*, to repay by yearly instalments the expenses the king had incurred for her marriage with Louis. Suffolk and his wife—the French queen as she was continually called—lived for a time in comparative retirement as persons under a cloud; but after a while they were seen more fre-

quently at court, and Suffolk rose again into favour. But the most marvellous thing is that he should have escaped so easily when other circumstances are taken into account, to which little or no allusion seems to have been made at the time, even by his enemies. Either the facts were unknown, or, what is more probable, they were not severely censured by the spirit of the times. Whatever be the explanation, it is certain that Suffolk when he married Mary had already had two wives, and that the first was still alive. Some years later he applied to Clement VII for a bull to remove all objections to the validity of his marriage with Mary, and from the statements in this document it appears that his early history was as follows: As a young man during the reign of Henry VII he had made a contract of marriage with a certain Ann Brown; but before marrying her he obtained a dispensation and married a widow named Margaret Mortymer, *alias* Brandon, who lived in the diocese of London. Some time afterwards he separated from her, and obtained from a church court a declaration of the invalidity of the marriage, on the grounds, first, that he and his wife were in the second and third degrees of affinity; secondly, that his wife and his first betrothed were within the prohibited degrees of consanguinity; and thirdly, that he was first cousin once removed of his wife's former husband. These grounds being held sufficient to annul the marriage, he actually married the lady to whom he had been betrothed, Ann Brown, and had by her a daughter, whom, after his marriage with Mary, he for some time placed under the care of his other love, Margaret of Savoy. Years afterwards the bull of Clement was required to defeat any attempt on the part of Margaret Mortymer to call in question either of his succeeding marriages. When all this is considered, together with the fact that he had the same entanglements even at the time he proposed to make Lady Lisle his wife, we can understand pretty well what a feeble bond matrimony was then considered to be. Suffolk's father had been a grossly licentious man (*Paston Letters*, iii. 235). So were most of Henry VIII's courtiers, and so, we need not say, was Henry himself. The laxity of Suffolk's morality was certainly no bar to his progress in the king's favour. He went with Henry in 1520 to the Field of the Cloth of Gold. He was one of the peers who sat in the year following as judges upon the Duke of Buckingham. In 1522, when Charles V visited England, he received both the king and the emperor at his house in Southwark, and they dined and hunted with him. In 1523 he commanded the army which invaded France. From Calais he passed through Picardy, took Ancre and Bray, and crossed the Somme, meeting with little resistance. His progress created serious alarm at Paris; but the end of the campaign was disgraceful. As winter came on, the troops suffered severely. Suffolk, though brave and valiant, was no general, and he actually, without waiting for orders, allowed them to disband and return home.

On the arrival of Cardinal Campeggio in England in 1528, Suffolk's house in the suburbs (probably the house in Southwark already mentioned) was assigned him as a temporary lodging. Suffolk undoubtedly was heartily devoted to the object for which Campeggio came, or was supposed to come—the king's divorce from Catherine of Arragon. Nor did he scruple to insinuate that it was another cardinal, his old benefactor Wolsey, who was the real obstacle to the gratification of the king's wishes. With an ingratitude which shrank from no degree of baseness he had been carefully nourishing the suspicions entertained by the king of his old minister upon this subject, and being sent to France in embassy while the divorce cause was before the legates, he actually inquired of the French king whether he could not give evidence to the same effect. So also, being present when Campeggio adjourned the legatine court in England from July to October, and probably when every one was convinced even at that date that it would not sit again, Suffolk, according to the graphic account in Hall, 'gave a great clap on the table with his hand, and said: "By the mass, now I see that the old said saw is true, that there was never legate nor cardinal that did good in England!"' But Hall does not give us the conclusion of the story, which is supplied by Cavendish. 'Sir,' said Wolsey to the duke in answer, 'of all men in this realm ye have least cause to dispraise or be offended with cardinals; for if I, simple cardinal, had not been, you should have had at this present no head upon your shoulders wherein you should have had a tongue to make any such report in despite of us, who intend you no manner of displeasure.' And after some allusions, of which Suffolk well understood the meaning, he concluded: 'Wherefore, my lord, hold your peace and frame your tongue like a man of honour and wisdom, and speak not so quickly and so reproachfully by your friends; for ye know best what friendship ye have received at my hands, the which I yet never revealed to no person alive before now, neither to my glory ne to your dishonour.'

But Suffolk rose upon Wolsey's fall. The old nobility, which had once been jealous both of him and Wolsey as upstarts promoted by the king, had now freer access to the council

board, at which Suffolk took a position second only to that of Norfolk. The readers of Shakespeare know how he and Norfolk went together from the king to demand the great seal from Wolsey without any commission in writing. The fact is derived from Cavendish, who tells us that they endeavoured to extort its surrender to them by threats; but Wolsey's refusal compelled them to go back to the king at Windsor and procure the written warrant that he required. Soon after this (1 Dec. 1529) we find Suffolk signing, along with the other lords, the bill of articles drawn up against Wolsey in parliament, and a few months later he signed with the other lords a letter to the pope, to warn him of the dangers of delaying to accede to Henry VIII's wishes for a divorce.

In 1532 Suffolk was one of the noblemen who accompanied Henry VIII to Calais to the new meeting between him and Francis I. This was designed to show the world the entire cordiality of the two kings, who became in turn each other's guests at Calais and Boulogne, and at the latter place, on 25 Oct., the Dukes of Norfolk and Suffolk were elected and received into the order of St. Michael at a chapter called by Francis for the purpose. In the beginning of April 1533 he was sent with the Duke of Norfolk to Queen Catherine, to tell her that the king had now married Anne Boleyn, and that she must not pretend to the name of queen any longer. Not long afterwards he was appointed high steward for the day at the coronation of Anne Boleyn. On 24 June, little more than three weeks later, his wife, 'the French queen,' died; and after the fashion of the times he immediately repaired his loss by marrying, early in September, Katharine, daughter of the widowed Lady Willoughby, an heiress, whose wardship had been granted to him four years before (*Calendar of Henry VIII*, iv. 5336 (12), vi. 1069). That same month he was present at the christening of the Princess Elizabeth at Greenwich. At the close of the year he was sent, along with the Earl of Sussex and some others, to Buckden, where the divorced Queen Catherine was staying, to execute a commission which, it is somewhat to his credit to say, he himself regarded with dislike. They were to dismiss the greater part of Catherine's household, imprison those of her servants who refused to be sworn to her anew as 'Princess of Wales' and no longer queen, and make her remove to a less healthy situation—Somersham, in the Isle of Ely. He and the others did their best, or rather their worst, to fulfil their instructions; but they did not give the king satisfaction. They deprived Catherine of almost all her servants, but though they remained six days they did not succeed in removing her. Suffolk himself, as he declared to his mother-in-law, devoutly wished before setting out that some accident might happen to him to excuse him from carrying out the king's instructions (*ib.* vi. 1541–3, 1508, 1571).

In 1534 he was one of the commissioners appointed to take the oaths of the people in accordance with the new Act of Succession, binding them to accept the issue of Anne Boleyn as their future sovereigns (*ib.* vii. 392). Later in the year he was appointed warden and chief justice of all the royal forests on the south side of the Trent (*ib.* 1498 (37)). But his next conspicuous employment was in the latter part of the year 1536, when he was sent against the rebels of Lincolnshire and afterwards of Yorkshire, whom, however, he did not subdue by force of arms, but rather by a message of pardon from the king, who promised at that time to hear their grievances, though he shamefully broke faith with them afterwards. Within the next two or three years took place the suppression of the greater monasteries, and Suffolk got a large share of the abbey lands. It is curious that he obtained livery of his wife's inheritance only in the thirty-second year of Henry VIII, seven years after he had married her; but the grant seems to apply mainly to reversionary interests on her mother's death.

For some years after the rebellion he took no important part in public affairs. He was present at the christening of the young prince, afterwards Edward VI, and at the burning of the Welsh image called Darvell Gadarn, in Smithfield. He was a spectator of the great muster in London in 1539, and was one of the judges who tried the accomplices of Catherine Howard in 1541. On 10 Feb. 1542 he and others conveyed that unhappy queen by water from Sion House to the Tower of London prior to her execution. That same year he was appointed warden of the marches against Scotland (*Undated Commission on the Patent Rolls*, 34 Hen. VIII). In 1544, the king being then in alliance with the emperor against France, Suffolk was again put in command of an invading army. He made his will on 20 June before crossing the sea. He was then great master or steward of the king's household, an office he had filled for some years previously. He crossed, and on 19 July sat down before Boulogne, on the east side of the town. After several skirmishes he obtained possession of a fortress called the Old Man, and afterwards of the lower town, called Basse Boulogne. The king afterwards came in person and encamped on the north side of the town, which, being terribly battered, after

a time surrendered, and the Duke of Suffolk rode into it in triumph.

Early next year (1545) he sat at Baynard's Castle in London on a commission for a 'benevolence' to meet the expenses of the king's wars in France and Scotland. On St. George's day he stood as second godfather to the infant Henry Wriothesley, afterwards Earl of Southampton, the father of Shakespeare's friend; but he was now near his end. On 24 Aug. he died at Guildford. In his will he had desired to be buried at Tattershall in Lincolnshire; but the king caused him to be buried at Windsor at his own charge.

[Besides the Calendar above mentioned the original authorities are Hall and Wriothesley's Chronicles, Cavendish's Life of Wolsey, and Dugdale's Peerage and the documentary authorities there referred to.] J. G.

BRANDON, HENRY (1535-1551) and CHARLES (1537?-1551), DUKES OF SUFFOLK, were the sons of Charles, duke of Suffolk [q. v.], by his last wife, Katharine Willoughby. Henry was born on 18 Sept. 1535, and Charles, the younger, probably two years later. The date in the former case is fixed by the *inquisitio post mortem* held after the father's death (1545). Henry succeeded to the dukedom, and held it for nearly six years. Their mother seems to have been very careful of their education, and appointed Thomas Wilson, afterwards the celebrated Sir Thomas, secretary of state to Queen Elizabeth, their tutor. The elder, Henry, was then sent to be educated with Prince Edward, afterwards King Edward VI, by Sir John Cheke. In 1550 we find Henry named as a hostage on the peace with France (RYMER, xv. 214); but he does not seem to have been required to go thither. By this time he and his brother were pursuing their studies at St. John's College, Cambridge, from which place, after the sweating sickness broke out in July 1551, they were hastily removed to the bishop of Lincoln's palace at Buckden in Huntingdonshire; but there they both caught the infection and died in one day, 16 July. As the younger survived the elder for about half an hour, they were both considered to have been dukes of Suffolk; and their fate made a remarkable impression on the world at the time. They seem to have attained to a wonderful proficiency in learning, and a brief memoir of the two—a work now of extreme rarity—published the same year by their old tutor, Wilson, contains epistles, epitaphs, and other tributes to their praise from Walter Haddon and other learned men both of Cambridge and of Oxford. Of the elder it was said by Peter Martyr that he was the most promising youth of his day, except King Edward. Their portraits by Holbein were engraved by Bartolozzi.

[Vita et obitus duorum fratrum Suffolcensium, 1551; Machyn's Diary, 8, 318; Dugdale's Baronage; Cooper's Athenæ Cantabrigienses, i. 105, 541; Original Letters (Parker Soc.), ii. 496.] J. G.

BRANDON, JOHN (*fl.* 1687), divine, son of Charles Brandon, a doctor of Maidenhead, was apparently born at Bray, near that town, about 1644. He entered Oriel College, Oxford, as a commoner on 15 Feb. 1661-2, and proceeded B.A. on 11 Nov. 1665. Wood says that 'he entertained for some time certain heterodox opinions, but afterwards being orthodox,' took holy orders. He became rector of Finchamstead, and for some years preached a weekly lecture on Tuesdays at Reading. He was the author of 'Τὸ πῦρ τὸ αἰώνιον, or Everlasting Fire no Fancy; being an answer to a late Pamphlet entit. "The Foundations of Hell-Torments shaken and removed,"' London, 1678. The book was dedicated to Henry, earl of Starlin, from 'Wargrave (Berks), 20 July 1676.' The pamphlet to which Brandon replied here was 'The Torments of Hell' (London, 1658), by an anabaptist, named Samuel Richardson. Nicholas Chewney had anticipated Brandon in answering the work in 1660. Brandon also published, besides a number of sermons, 'Happiness at Hand, or a plain and practical discourse of the Joy of just men's souls in the State of Separation from the Body,' London, 1687. This was dedicated to Dr. Robert Woodward, chancellor of the bishop of Salisbury's court.

[Wood's Athenæ Oxon. iv. 505; Brit. Mus. Cat.] S. L.

BRANDON, JOHN RAPHAEL (1817-1877), architect, and joint author with his brother, Joshua Arthur Brandon, of several architectural works, received his early professional training from Mr. W. Parkinson, architect, to whom he was articled in 1836. Although fairly successful in private practice, which he carried on along with his brother at Beaufort Buildings, Strand, the brothers Brandon are best known as authors. They were both ardent students of Gothic architecture, and directed their studies entirely to English examples. The result of their labours is a series of three works ably illustrative of the purest specimens of Early English ecclesiastical architecture. The most important of these is their work on 'Parish Churches' (Lond. 1848), which consists of a series of perspective views of sixty-three churches selected from most of the counties of England,

accompanied by plans of each drawn to a uniform scale and a short letterpress description. It was first published in parts between March 1846 and December 1847. The work is a faithful record of antiquities which few can visit for themselves. Their 'Analysis of Gothic Architecture' (London, 1847), which the authors say aims at being a practical rather than an historical work on English church architecture, consists of a collection of upwards of 700 examples of doors, windows, and other details of existing ecclesiastical architecture industriously compiled from actual measurements taken from little known parish churches throughout the country, with illustrative remarks on the various classes of items. The last of the series, and probably the most useful to the profession, is their 'Open Timber Roofs of the Middle Ages' (London, 1849), a collection of perspective and geometric and detail drawings of thirty-five of the best roofs found in different parish churches in eleven different English counties, with an introduction containing some useful hints and information as to the timber roofing of the middle ages. The drawings given show at a glance the form and principle of construction of each roof, and the letterpress proves how fully the authors appreciated the spirit of the mediæval builders. The work 'serves the one useful and necessary purpose of showing practically and constructively what the builders of the middle ages really did with the materials they had at hand, and how all those materials, whatever they were, were made to harmonise' (*Builder*, xxxv. 1051). Of Brandon's original professional labours the best known are the large church in Gordon Square, London, executed in conjunction with Mr. Ritchie for the members of the catholic apostolic church; the small church of St. Peter's in Great Windmill Street, close to the Haymarket; and a third in Knightsbridge, unfortunately not favourably situated for architectural display. In these he faithfully endeavoured to carry out the mediæval spirit and mode of work, and no doubt in the first case he has to a great extent succeeded. But he failed to become a successful architect. His temperament was over-sensitive, and he latterly fell into extreme mental dejection; on 8 Oct. 1877 he committed suicide by shooting himself in his chambers, 17 Clement's Inn. His wife and one child predeceased him.

Brandon, Joshua Arthur (1802–1847), architect and joint author with his brother, John Raphael Brandon, prosecuted his profession with zeal and ability, and had before his early death at the age of twenty-five attained what promised to become a considerable practice, particularly in church architecture, for which his studies along with his brother and the fame of their joint publications so well fitted him. The brothers were most intimately associated in their professional studies and labours, and their names cannot be separated.

[Builder, vol. v. 1847, xxxv. 1041 and 1051; Times, 12 Oct. 1877,] G. W. B.

BRANDON, RICHARD (*d.* 1649), executioner of Charles I, was the son of Gregory Brandon, common hangman of London in the early part of the seventeenth century, and the successor of Derrick. Anstis tells the story that Sir William Segar, Garter king of arms, ignorant of the elder Brandon's occupation, was led by Ralph Brooke, York herald, to grant him a coat of arms in December 1616 (*Register of the Garter*, ii. 399). Both father and son were notorious characters in London, the former being commonly called 'Gregory,' and the latter 'Young Gregory,' on account of the elder Brandon's long tenure of office. From an early age 'Young Gregory' is said to have prepared himself for his calling by decapitating cats and dogs. He succeeded his father shortly before 1640 (*Old Newes Newly Revived*, 1640). In 1641 he was a prisoner in Newgate on a charge of bigamy, from which he seems to have cleared himself (*The Organ's Eccho*, 1641). He was the executioner of Strafford (12 May 1641) and of Laud (10 Jan. 1644–5) (cf. *Canterbury's Will*, 1641). Brandon asserted, after judgment had been passed on Charles I (27 Jan. 1648–9), that he would not carry out the sentence. On 30 Jan., however, he was 'fetched out of bed by a troop of horse,' and decapitated the king. He 'received 30 pounds for his pains, all paid in half-crowns, within an hour after the blow was given,' and obtained an orange 'stuck full of cloves' and a handkerchief out of the king's pocket; he ultimately sold the orange for 10*s.* in Rosemary Lane, where he lived. He executed the Earl of Holland, the Duke of Hamilton, and Lord Capel in the following March, with the same axe as he had used on the king, suffered much from remorse, died on 20 June 1649, and was buried the next day in Whitechapel churchyard. On 15 Oct. 1660 William Hulett, or Howlett, was condemned to death for having been Charles's executioner; but three witnesses asserted positively that Brandon was the guilty person, and their statement is corroborated by three tracts, published at the time of Brandon's death—'The Last Will and Testament of Richard Brandon, Esquire, headsman and hangman to the Pretended Parliament,' 1649;

'The Confession of Richard Brandon, the Hangman,' 1649; 'A Dialogue, or a Dispute between the Late Hangman and Death,' 1649. Other persons who have been credited with executing Charles I are the Earl of Stair (HONE, *Sixty Curious Narratives*, pp. 138–140), Lieutenant-colonel Joyce (LILLY, *Life and Times*), and Henry Porter (*Cal. State Papers*, Dom. 29 April 1663; *Lords' Journal*, xi. 104), but all the evidence points to Brandon as the real culprit. Very many references to Brandon and his father are met with in contemporary dramatic and popular literature.

[Cat. of Satirical Prints in Brit. Mus., Div. I; Ellis's Orig. Letters, 2nd ser. iii. 340–41; Notes and Queries, 1st ser. ii. v. vi., 2nd ser. ix. xi., 3rd ser. vii., 4th ser. iii., 5th ser. v.] S. L.

BRANDON, SAMUEL (16th cent.), is the author of 'The Tragi-comœdi of the Virtuous Octavia,' 1598, 12mo. Concerning his life no particulars whatever are preserved. His solitary play is a work of some merit and of considerable value and rarity. The plot, taken from the life of Augustus by Suetonius, and that of Mark Antony by Plutarch, follows to some extent classical models. Its scene is Rome, and its catastrophe the death of Mark Antony. The fact that at the close the heroine, who oscillates between love for her husband and jealousy of Cleopatra, is still alive, is the excuse for calling it a tragi-comedy. Weak in structure and deficient in interest, the 'Virtuous Octavia' has claims to attention as poetry. It is written in decasyllabic verse with rhymes to alternate lines, and includes choruses lyrical in form and fairly spirited. Two epistles between Octavia and Mark Antony, 'in imitation of Ovid's style, but writ in long Alexandrins' (LANGBAINE, p. 30, ed. 1691), are added. These epistles 'are dedicated to the honourable, virtuous, and excellent Mrs. Mary Thin' (*ib.*) The play itself is dedicated to Lady Lucia Audelay. At the close of the work are the Italian words: 'L'acqua non temo dell' eterno oblio.'

BRANDON, SIR THOMAS (*d.* 1510), diplomatist, was the son of William Brandon and Elizabeth Wynfyld, and uncle to the celebrated Charles Brandon [q. v.], duke of Suffolk. His family were staunch supporters of the Lancastrian cause. His brother, William, was slain at the battle of Bosworth gallantly defending the standard of Henry VII. A contemporary manuscript speaks of Sir Thomas as having 'greatly favoured and followed the party of Henry, earl of Richmond.' He married Anne, daughter of John Fiennes, Lord Dacre, and widow of the Marquis of Berkeley. She died in 1497 without issue. He was appointed to the embassy charged with concluding peace with France in 1492, and again in 1500 he formed one of the suite which accompanied Henry VII to Calais to meet the Archduke Philip of Austria. In 1503, together with Nicholas West, subsequently bishop of Ely, he was entrusted with the important mission of concluding a treaty with the Emperor Maximilian at Antwerp. The principal object of this treaty was to induce Maximilian to withdraw his support from Edmund de la Pole, duke of Suffolk, and banish him and the other English rebels from his dominions. Other points touched upon were the treatment of Milan and the question of Maximilian receiving the garter. Maximilian, according to his custom, behaved with much indecision, and, after solemnly ratifying the treaty, allowed the English ambassadors to leave, 'marvailing of this soden defection seyng divers matters as undetermyned.' On his return to England, Brandon was treated with much consideration by Henry VII, and we find him holding such offices as those of master of the king's horse, keeper of Freemantill Park, and marshal of the King's Bench. He was noted for his prowess as a knight and skill in military affairs. In the records of a tournament held in 1494 to celebrate the creation of the king's second son as knight of the Bath and Duke of York, Thomas Brandon is mentioned as having distinguished himself. For his prowess in arms he was made a knight of the Garter. In October 1507 he was sent to meet Sir Balthasar de Castiglione, ambassador to the Duke of Urbino, who came to England to receive the Garter for his master. Brandon died on 29 Jan. 1509–10.

[Add. MS. 6298; The Order of the Garter (Ashmole), 1672; Anstis's Order of the Garter, 1724; Rymer's Fœdera, xiii. 35; Gairdner's Letters and Papers illustrative of the reigns of Rich. III and Henry VII; Collins's Peerage of England, 1812; Brewer's Letters and Papers, Foreign and Domestic, of the reign of Henry VIII.] N. G.

BRANDRETH, JEREMIAH, otherwise styled JEREMIAH COKE (*d.* 1817), leader of an attempted rising against the government in the midland counties, was, according to three several accounts, a native of Ireland, of Exeter, and—the most probable—of Wilford, Nottingham, but nothing is known regarding his parentage and very little regarding his

early life. For some time he was in the army, but shortly before the attempted rising he lived with his wife and three children at Sutton-in-Ashfield, where he was occupied as a framework knitter. His striking personal appearance and his daring and reckless energy seem to have exercised an extraordinary influence over his associates, by whom he was known merely as the 'Nottingham Captain.' In reality he was the tool and dupe of a person of the name of Oliver, who encouraged him to undertake his quixotic enterprise, by asserting that he was acting in concert with others, who were fomenting a general insurrection thoughout England. Acting on the instructions and assurances of Oliver, Brandreth, on 9 June 1817, assembled about fifty associates, collected from adjoining districts, in Wingfield Park. Having made a number of calls at farmhouses for guns, in the course of which they shot a farm-servant dead, the insurgents were proceeding on their march towards Nottingham, which they supposed was already in the hands of their friends, when they were suddenly confronted by a company of hussars. Brandreth attempted to rally his straggling followers to meet the threatened attack of the cavalry, but they at once threw down their arms and fled in all directions. Brandreth remained in concealment till 50*l.* was offered for his capture, upon which a friend betrayed him to the government. He was tried by a special commission at Derby in October following, and along with two of his associates was executed at Nuns Green, Derby, 7 Nov. He is said to have been about twenty-five years of age. He refused to make any confession or to give any particulars regarding his past life.

[Sutton's Nottingham Date Book, pp. 335-42; Bailey's Annals of Nottingham, iii. 292-9; Howell's State Trials (1817), xxxii. 755-955; Trial of Jeremiah Brandreth for High Treason, 1817; Hunt's Green Bag Plot, 1819; Gent. Mag. lxxxvii. pt. ii. 358-60, 459-62.] T. F. H.

BRANDRETH, JOSEPH, M.D. (1746-1815), physician, was born at Ormskirk, Lancashire, in 1746. After graduating M.D. at Edinburgh in 1770, where his thesis, 'De Febribus intermittentibus,' was published, he exercised his profession in his native town until about 1776, when he succeeded to the practice of Dr. Matthew Dobson, at Liverpool, on the retirement of that gentleman to Bath. He remained at Liverpool for the remainder of his life, and became an eminently successful and popular practitioner. He was a man of wide and various reading, and possessed a most accurate and tenacious memory, which he attributed to his habit of depending on it without referring to notes. He established the Dispensary at Liverpool in 1778, and for thirty years gave great attention to the Infirmary. The discovery of the utility of applying cold in fever is ascribed to him. This remedy he described in a paper 'On the Advantages arising from the Topical Application of Cold Water and Vinegar in Typhus, and on the Use of Large Doses of Opium in certain Cases' (*Med. Commentaries*, xvi. p. 382, 1791). He died at Liverpool, 10 April 1815.

[Monthly Repository, 1815, p. 254; Gent. Mag. lxxxv. pt. i. 472 (taken from Liverpool Mercury, 14 April 1815); Picton's Memorials of Liverpool, 2nd ed. 1875, pp. 133, 147, 355; Evans's Cat. of Portraits, ii. 49; Watt's Bibl. Brit.] C. W. S.

BRANDRETH, THOMAS SHAW (1788-1873), mathematician, classical scholar, and barrister-at-law, descended from a family that has been in possession of Lees in Cheshire from the time of the civil war, was born 24 July 1788, the son of Joseph Brandreth, M.D. [q. v.] He was sent to Eton, and was prepared by Dr. Maltby, afterwards bishop of Durham, for Trinity College, Cambridge, where he took his B.A. degree in 1810, with the distinctions of second wrangler, second Smith's prizeman, and chancellor's medallist, and his degree of M.A. in 1813. He was elected to a fellowship at his college, was called to the bar, and practised at Liverpool, but his taste for scientific inventions interfered not a little with his success as a barrister. He was elected a fellow of the Royal Society in 1821 for his 'distinguished mathematical attainments.' He had previously invented his logometer, or ten-foot gunter. He also invented a friction wheel and a double-check clock escapement, all of which he patented. His scientific tastes drew him into close friendship with George Stephenson, and he was one of the directors of the original Manchester and Liverpool railway, but resigned shortly before its completion. He took an active part in the survey of the line, especially of the part across Chatmoss. The famous House of Commons limitation of railway speed to ten miles an hour, which threatened to destroy the hopes of the promoters of steam locomotion, led Brandreth to invent a machine in which the weight of a horse was utilised on a moving platform, and a speed of fifteen miles an hour was expected; but the success of the 'Rocket' soon established the supremacy of steam, and Brandreth's invention was only used where steam power proved too expensive, as in Lom-

bardy and in some parts of the United States, where it is still employed. These scientific pursuits and his removal to London, where he had no longer the legal connection, considerably reduced his practice, and though he was offered a judgeship at Jamaica, he decided to retire to Worthing and devote himself to the education of his children. He had married in 1822 a daughter of Mr. Ashton Byrom of Fairview, near Liverpool, and had, besides two daughters, five sons, who all distinguished themselves in the navy, at Cambridge, or in India. At Worthing he resumed his classical studies, and pursued a learned and difficult inquiry into the use of the digamma in the Homeric poems, and published the results in a treatise entitled 'A Dissertation on the Metre of Homer' (Pickering, 1844), and also a text of the 'Iliad' with the digamma inserted and Latin notes (ΟΜΗΡΟΥ ΓΙΛΙΑΣ, *littera digamma restituta*, Pickering, 2 vols. 1841). This was followed by a translation of the 'Iliad' into blank verse, line for line (Pickering, 2 vols. 1846), which was well received as an accurate and scholarly version. He also took a lively interest in the affairs of the town, and was largely instrumental in perfecting the extensive water and drainage improvements of Worthing, where he was chairman of the first local board, and J.P. for West Sussex. He died 27 May 1873.

[Private information.] S. L.-P.

BRANDT, FRANCIS FREDERICK (1819–1874), barrister and author, eldest son of the Rev. Francis Brandt, rector of Aldford, Cheshire, 1843–50, who died 1870, by Ellinor, second daughter of Nicholas Grimshaw of Preston, Lancashire, was born at Gawsworth Rectory, Cheshire, in 1819. He was educated at the Macclesfield grammar school, entered at the Inner Temple in 1839, and practised for some years as a special pleader. Called to the bar at the Inner Temple on 30 April 1847, he took the North Wales and Chester circuit. He was a successful and popular leader of the Chester and Knutsford sessions, had a fair business in London, especially as an arbitrator or referee, was one of the revising barristers on his circuit, and was employed for many years as a reporter for the 'Times' in the common pleas. About 1864 he was offered and declined an Indian judgeship. In his earlier days he was a writer in magazines and in 'Bell's Life.' The first of his books appeared in 1857, and was entitled 'Habet! a Short Treatise on the Law of the Land as it affects Pugilism,' in which he attempted to show that prize-fighting was not of itself illegal. His next work was a novel called 'Frank Morland's Manuscripts, or Memoirs of a Modern Templar,' 1859, which was followed by 'Fur and Feathers, the Law of the Land relating to Game, &c.,' 1859, 'Suggestions for the Amendment of the Game Laws,' 1862, and 'Games, Gaming, and Gamesters' Law,' 1871, a book of considerable legal and antiquarian research, which reached a second edition. He died at his chambers, 8 Figtree Court, Temple, London, on Sunday, 6 Dec. 1874, having suffered much from a neuralgic complaint, and was buried at Christ Church, Todmorden. He was a zealous and efficient member of the Inns of Court Rifle Corps. Brandt was never married.

[Law Times (1874), lviii. 125.] G. C. B.

BRANDWOOD, JAMES (1739–1826), quaker, was born at New House in Entwisle, near Rochdale, on 11 Nov. 1739, where his parents were of yeoman stock. After a visit to the Friends' meeting at Crawshawbooth, Brandwood ceased to attend the services at Turton chapel. He never married, and practised as a land surveyor and conveyancer, and is also said to have acted as the steward of the Turton estate. He had the character of a plain, conscientious countryman, and after his death a selection from his letters on religious subjects was published. Brandwood joined the quakers in 1761, and a meeting was shortly afterwards settled at Edgworth, where he resided many years. His religious views deprived him of his fair share in the patrimonial inheritance, and he received only an annuity of 25*l.* As a recognised minister of the Society of Friends he visited various parts of England, and in 1787 went to Wales in company with James Birch. In the 'testimony' respecting him we are told: 'About the sixtieth year of his age, this, our dear friend, through a combination of circumstances, appeared to be in some degree under a cloud; he became less diligent in attending meetings, and in 1813 was discontinued as an acknowledged minister.' In 1824, when he settled at Westhoughton, he was reinstated as a minister, and visited many of the southern meetings. He died on 23 March 1826. He was buried in the Friends' burial-ground at Westhoughton. A selection was made from his letters and papers. These were edited by John Bradshaw of Manchester, and deal with matters of religious experience, ranging in date from 1782 to 1823. The earliest is an essay 'On War, Oaths, and Gospel Ministry,' and the latest is a letter to a clergyman of the church of England, written when the author was in his eighty-fourth year. They were published in 1828, two years after Brandwood's death.

[Letters and Extracts of Letters of the late James Brandwood (a minister of the Society of Friends), of Westhoughton, formerly of Edgworth, Manchester, 1828; Scholes's Biographical Sketch of James Brandwood, Manchester, 1882; Smith's Catalogue of Friends' Books, London, 1867.] W. E. A. A.

BRANKER, THOMAS. [See BRANCKER.]

BRANSBY, JAMES HEWS (1783–1847), unitarian minister, was a native of Ipswich. His father, John Bransby (*d.* 17 March 1837, aged seventy-five), was an instrument maker, a fellow of the Royal Astronomical Society, author of a treatise on 'The Use of the Globes, &c.,' 1791, 8vo, and editor of the 'Ipswich Magazine,' 1799. The son became heterodox in opinion, and was educated for the unitarian ministry, in the academy maintained at Exeter from 1799 to 1804 by Timothy Kenrick and Joseph Bretland. On 1 May 1803 (*Letter*, p. 15) he was invited to become minister at the 'new meeting' (opened 31 Oct. 1802) to the old presbyterian congregation at Moreton Hampstead, Devonshire. Here he kept a school, and among his pupils was John Bowring, afterwards Sir John Bowring, in whose autobiography are some amusing particulars of his master. In 1805 Bransby removed to Dudley. He continued to keep a preparatory school for boys. He was by no means unpopular, but his eccentricities gradually excited considerable remark, particularly as he developed a tendency which is perhaps best described as kleptomania. At length he committed a breach of trust, involving forgery, which was condoned on condition of his quitting Dudley in 1828 for ever. He was succeeded, on 1 July 1829, by Samuel Bache [q. v.] Bransby retired to Wales, and supported himself by teaching, by editing a paper, and by odd jobs of literary work. His peculiarities accompanied him in this department, for he would borrow a manuscript and, after improvements, send it to a magazine as his own. An irresistible impulse led him on one occasion to revisit Dudley for a few hours; as he stood gazing at his old meeting-house he was recognised, but spared. Late in life he occasionally preached again. He died very suddenly at Bron'r Hendref, near Carnarvon, on 4 Nov. 1847, aged 64 years. His wife, Sarah, daughter of J. Isaac, general baptist minister at Moreton Hampstead, predeceased him on 28 Oct. 1841. Bransby left behind him a mass of very compromising papers, which fell accidentally into the hands of Franklin Baker [q. v.], and were probably destroyed.

Besides many addresses, sermons, and pamphlets, Bransby published: 1. 'Maxims Reflections, and Biographical Anecdotes, 1813, 12mo. 2. 'Selections for Reading and Recitation,' 1814, 8vo, 2nd edit. 1831, with title 'The School Anthology.' 3. 'A Sketch of the History of Carnarvon Castle,' 1829, 8vo, 3rd edit. 1832, 8vo (plate). 4. 'An Account of the . . . Wreck of the Newry,' 1830 (not published; reprinted 'Christian Reformer,' 1830, pp. 486 sq.) 5. 'A Narrative of the . . . Wreck of the Rothsay Castle,' 1831, 12mo (chart; reprinted 'Christian Reformer,' 1831, pp. 405 sq.; this and the foregoing are full of details derived from personal knowledge, and are admirably written). 6. 'Brief Notices of the late Rev. G. Crabbe,' Carnarvon, 1832, 12mo. 7. 'The Port Folio . . . anecdotes,' 1832, 12mo. 8. 'A Brief Account of the remarkable Fanaticism prevailing at Water Stratford . . . 1694,' Carnarvon, 1835, 12mo. 9. 'Description and Historical Sketch of Beddgelert,' Carnarvon, 1840, 8vo. 10. 'Evans' Sketch . . . eighteenth edition . . . with an account of several new sects,' 1842, 16mo (best edition of this useful compendium of 'all religions,' first published 1794, 12mo; Bransby includes 'Puseyites,' and works in, without acknowledgment, the contributions of several friends). 11. 'A Description of Carnarvon, &c.,' Carnarvon, 1845, 12mo. 12. 'A Description of Llanberis, &c.,' Carnarvon, 1845, 8vo. In 1834 Bransby printed in the 'Christian Reformer' (p. 837) a letter from S. T. Coleridge, 19 Jan. 1798, explaining his withdrawal from 'the candidateship for the ministerial office at Shrewsbury.' In 1835 he reprinted in the same magazine (p. 12) a forgotten letter of John Locke; and in 1841 a series of papers, signed 'Monticola,' contained most of his additions to Evans.

BRANSTON, ALLEN ROBERT (1778–1827), wood-engraver, the son of a general copper-plate engraver and heraldic painter, was born at Lynn in Norfolk in 1778. He was apprenticed to his father, and when in his nineteenth year settled at Bath, where he practised both as a painter and engraver. He came to London in 1799, and after a while devoted himself to wood-engraving, in which branch of the art of engraving he was self-taught. He was employed chiefly in book-illustration, after the designs of Thurston and

others. He soon became the head of his profession in London, where nothing equal to Bewick and his pupils had been produced before his arrival. With Bewick he was always in hopeless rivalry, yet, though he was no designer and some twenty-three years the junior of the Newcastle master, he may claim to be the founder of the 'London school' of wood-engraving, and to some extent to share with Bewick the credit of raising the character of his art in England. He specially excelled in engraving figures and interiors, but was less successful in outdoor scenes. The 'Cave of Despair,' after Thurston, in Savage's 'Practical Hints on Decorative Printing,' 1822, is generally considered his best plate, and shows his skill both in 'white' and 'black' line. Amongst the works illustrated in whole or in part by him were 'The History of England' published by Wallis and Scholey, 1804–10; Bloomfield's 'Wild Flowers,' 1806; and poems by George Marshall, 1812. He had many pupils, the most celebrated of whom was John Thompson. The work of Branston and Thompson can be compared in the illustrations to Puckle's 'Club,' 1817. Branston projected a volume of fables in rivalry with those of Bewick after designs by Thurston, but after a few of them were cut he abandoned the enterprise. He also engraved a few cuts of birds to show his superiority to the Newcastle engraver; but though beautifully cut, they were essentially inferior to Bewick's. Branston died at Brompton in 1827. He is generally called Robert Branston.

BRANTHWAITE, WILLIAM, D.D. (*d.* 1620), translator of the Bible, was a member of an ancient family possessed of some property in the county of Norfolk, and one branch of which was settled at Hethel, near Wymondham. He was entered at Clare Hall, Cambridge, in 1578, and there took his B.A. degree in 1582. Two years afterwards, in 1584, he was admitted a fellow of Emmanuel College, which had been founded in the earlier part of that year. He proceeded to the usual degrees—M.A. in 1586, B.D. in 1593, and D.D. in 1598—and in 1607 was elected master of Gonville and Caius College. In 1607–11 he was on one of the two Cambridge committees appointed by James I to revise the translation of the Bible; the part of the work which fell to his committee being the Apocrypha, for which he was especially fitted by an extensive knowledge of Greek. He died during his vice-chancellorship in February 1619–20, leaving his books and considerable property to Caius College. There is a portrait of him in the Lodge of Caius, and in the gallery of Emmanuel College, to which foundation also he was a benefactor.

[Documents relating to the University and Colleges of Cambridge, ii. 389; Fuller's History of Cambridge, p. 226; Westcott's History of the English Bible, p. 116; references to property, church preferments, &c., held by various members of the family will be found in Blomefield's Norfolk.] E. S. S.

BRANWHITE, CHARLES (1817–1880), landscape painter, son of Nathan Branwhite [q.v.], was born at Bristol in 1817, and there studied art under his father, beginning as a sculptor. His association and friendship, however, with William John Muller, also a native of Bristol, induced him to give his undivided attention to water-colour painting, and his pictures, from the year 1849, formed no small attraction in the gallery in Pall Mall East. He adopted this change of art notwithstanding the fact that he had gained silver medals for bas-reliefs in 1837 and 1838 at the Society of Arts. His style of painting shows much of Muller's influence. Some of his most striking landscapes represent frost scenes. Among his works are: 'Post Haste,' 'April Showers on the Eastern Coast,' 'An old Lime-kiln,' 'Kilgarren Castle,' 'Winter Sunset,' 'Old Salmon Trap on the Conway,' 'The Environs of an Ancient Garden,' 1852, 'A Frozen Ferry,' 1853 (this and the previous picture received prizes from the Glasgow Art Union), 'Ferry on the Thames' (at the London International Exhibition, 1862), 'A Black Frost,' 'Snow Storm, North Wales,' 'Salmon Poaching,' 'On the River Dee, North Wales.'

[Art Journal (N.S.), xix. 208; Bryan's Dict. of Painters and Engravers (ed. Graves), 178.] T. C.

BRANWHITE, NATHAN (*fl.* 1825), miniature painter and engraver, eldest son of Peregrine Branwhite, the minor poet [q. v.], was probably a native of Lakenham in Suffolk. Devoting himself to the study of art, he became a pupil of Isaac Taylor's, and settled at No. 1 College Green, Bristol, where he practised painting with considerable success. He exhibited thirteen miniatures at the Royal Academy between the years 1802 and 1825. He was also a very good stipple engraver. Branwhite made an excellent engraving of Medley's picture of the Medical Society of London. A curious fact about this work was that Jenner came into great notice during the painting of the picture, and after it was finished it was decided to add his portrait.

The plate was partially engraved before the decision to put him in was arrived at, and a piece of copper had to be let in, as background details had been worked over the spot upon which Jenner's head and shoulders were subsequently placed.

[MS. Addit. 19166, f. 234; Redgrave's Dict. of Artists (1878), 52; Graves's Dict. of Artists, 29.] T. C.

BRANWHITE, PEREGRINE (1745–1795?), minor poet, was son of Rowland Branwhite and Sarah (Brooke) his wife, and was baptised at Lavenham in Suffolk 22 July 1745. He was brought up to the bombazine trade, which he carried on for some time at Norwich. He was not very successful, however, as he seems to have paid more attention to books than to the shop. He afterwards established a branch of the St. Anne's School (London) at Lavenham, and conducted it personally for some years. A year or two before his death he removed to Hackney, and died, in or about 1795, at 32 Primrose Street, Bishopsgate Street, London. He wrote: 1. 'Thoughts on the Death of Mr. Woodmason's children, destroyed by fire 18 Jan. 1782' (anon.) 2. 'An Elegy on the lamented Death of Mrs. Hickman, wife of the Rev. Thomas Hickman of Bildeston, Suffolk, who died 7 Sept. 1789, when but just turned of 19,' Bury St. Edmund's, 1790, 4to. 3. 'Astronomy, or a description of the Solar System,' Sudbury, 1791. 4. 'The Lottery, or the Effects of Sudden Affluence,' manuscript.

[MS. Addit. 19166, f. 234, in Brit. Mus.] T. C.

BRAOSE, PHILIP DE (*fl.* 1172), warrior, was a younger son of Philip de Braose, lord of Bramber, and an uncle of William de Braose [q. v.] He was one of the three captains of adventurers left in charge of Wexford at Henry's departure in 1172, and later in the same year he received a grant of North Munster ('Limericense videlicet regnum'). Supported by Robert Fitz-Stephen and Miles de Cogan, he set out to take possession of it, but, on approaching Limerick, turned back in a panic. He was presumably dead on 12 Jan. 1201, when North Munster was granted to his nephew William. His widow, Eva (*Fin.* 4 *Hen. III*, p. 1, m. 2), or Maud (*Claus.* 11 *Hen. III*, p. 1), married Philip, the baron of Naas, and survived him.

[Giraldus Cambrensis' Expugnatio (ed. Dimock).] J. H. R.

BRAOSE, WILLIAM DE (*d.* 1211), rebel baron, was the descendant and heir of William de Braose (alias Braiose, Breause, Brehus, &c.), lord of Braose, near Falaise in Normandy, who had received great estates in England at the Conquest. The family fixed their seat at Bramber in Sussex, and were lords of its appendant rape. Through his grandmother, a daughter of Judhael de Totnes, lord of Totnes and Barnstaple, William had also a claim to one of those fiefs, and through his mother, Bertha, second daughter of Miles and sister of Roger, earls of Hereford, he inherited the vast Welsh dominions of her grandfather, Bernard de Neufmarché [q. v.] He has been confused by Dugdale and Foss with his father and namesake; it was, however, as 'William de Braiose, junior,' that he made (as lord of the honour of Brecon) a grant to Walter de Clifford (*Reports*, xxxv. 2, but there wrongly dated), and that he tested a charter at Gloucester in 1179 (*Mon. Angl.* vi. 457), so that his father must have been then alive. It was probably, however, he, and not his father, who in 1176 invited the Welshmen to Abergavenny Castle, and there slew them, nominally in revenge for the death of his uncle Henry de Hereford the previous Easter (MATT. PARIS, ii. 297), a crime avenged on Braose's grandson by Llewelyn in 1230 (*Ann. Marg.* 38). Under Richard I, though withstanding the royal officers on his own estates in Wales, he was sheriff of Herefordshire in 1192–9 (*Rot. Pip.*), and a justice itinerant for Staffordshire in 1196. In 1195 he was with Richard in Normandy, and in 1196 he secured both Barnstaple and Totnes for himself by an agreement with the other coheir. In 1198 he was beleaguered by the Welsh in Castle Maud (or Pains Castle) in Radnorshire, but relieved by the justiciary, Geoffrey Fitz Piers, who defeated the Welsh in Elvael (ROG. HOV. iv. 53; MATT. PARIS, ii. 447). According, however, to the Welsh authorities, Castle Maud (or Pains Castle) was taken, and he had to save himself by a compromise (*Brut y Tywysogion*).

On John's accession, William was foremost in urging that he should be crowned (*Ann. Marg.* 24). High in the king's favour, he accompanied him into Normandy in the summer of 1200 (*Cart.* 2 *John*, m. 31), and there had a grant of all such lands as he should conquer from the Welsh in increase of his barony of Radnor, and was made sheriff of Herefordshire for 1206–7 (*Rot. Pip.* 2 *John*). On 12 Jan. 1201 he obtained the honour of Limerick (without the city), as his uncle Philip had received it in 1172 from Henry II (*Cart.* 2 *John*, m. 15), for which he agreed to pay 5,000 marks at the rate of 500 a year (*Obl.* 2 *John*, m. 15). This was the origin

of the misleading statement [see BUTLER, THEOBALD] that John sold him all the land of Philip de Worcester and Theobald Walter (ROG. HOV. iv. 152–3; WALT. COV. ii. 179–80). He next received (23 Oct. 1202) the custody of Glamorgan Castle (*Pat.* 4 *John*, m. 8), and four months later (24 Feb. 1203) he had a grant of Gowerland, which he claimed as his inheritance (*Plac. Parl.* 30 *Ed. I*, 234). He was in close attendance on John at the time of Arthur's death, being at Rouen on 1 April (*Cart. Ant.* [*Chancery*] 20, 26), and at Falaise on 11 April 1203 (*Cart.* 4 *John*, m. 1), but he publicly refused to retain charge of the prince, suspecting that his life was in danger (BOUQUET, xvii. 192), and it may have been in order to silence him that he received on 8 July 1203 a grant of the city of Limerick at ferm. He was still at the king's court on 18 Nov. (*Cart.* 5 *John*, m. 18). Three years later (16 Dec. 1206) he was placed in possession of Grosmont, Llantilio (or White Castle), and Skenfrith Castles (*Cart.* 7 *John*, m. 3), but shortly after his fall began. Its causes and details have always been obscure. The chief authority on the subject is an *ex-parte* statement put forward by John after William's ruin (i.e. *circ.* 1211), entered in the 'Red Book' of the exchequer and printed in Rymer's 'Fœdera' (i. 162–3). From this it would appear that the quarrel was pecuniary in its origin. Checking the king's assertions by the evidence of the 'Pipe Rolls,' it is clear that in 1207 (i.e. six years after obtaining the honour of Limerick), he had only paid up 700 marks in all (*Pip.* 8 *John*, rot. 6), instead of 500 a year. He was also in arrear for the ferm of Limerick itself, and Mr. Pearson (*England in the Middle Ages*, ii. 49), on the evidence of the Worcester Annals, holds him to have been suspected of conniving at the capture of the town in Geoffrey Marsh's rebellion; but that rebellion did not take place till later. On his becoming five years in arrear, the crown had recourse to distraint on his English estates. He had, however, removed his stock, and the king's bailiff was then ordered to distrain him in Wales. His friends, however, met the king at Gloucester (i.e. in November 1207), and on their intercession William was allowed to come to him at Hereford, and to surrender his castles of Hay, Brecknock, and Radnor in pledge for his arrears. But he still paid nothing further (*Pip.* 9 *John*, rot. 4, dors.), and upon the interdict being laid on England on 26 April 1208, his younger son Giles, bishop of Hereford (since 1200), was one of the five bishops who withdrew to France with the primate (MATT. PARIS, ii. 522; *Ann. Wig.* 396). John, suspecting the conduct of the family, sent to demand hostages of William, but his wife (it is said against his advice) refused them (MATT. PARIS, i. 523–524). Thus committed to resistance, he strove to regain his three castles by surprise, and, failing in this, stormed and sacked Leominster. On the approach of the royal forces he fled with his family into Ireland (*ib.*; *Ann. Wav.* 261–2; *Mon. Angl.* i. 557), whereupon his estates were seized into the king's hands.

In Ireland he was harboured by William Marshall and the Lacys, who promised to surrender him within a certain time, but failed to do so till John's invasion of Ireland became imminent, when he was sent over with a safe-conduct to the court. He came, however, no nearer than Wales, where he harried the country till John's arrival at Pembroke in June 1210; he then offered 40,000 marks for peace and the restoration of his lands. But John declared he must treat with his wife, as the principal, in Ireland. William, refusing to accompany him, remained in Wales in rebellion. His wife, besieged by John in Meath (MATT. PARIS, ii. 530), fled to Scotland, but was captured in Galloway, with her son and his wife, by Duncan of Carrick, and brought back to John at Carrickfergus by the end of July. John extorted from her a confirmation of her husband's offer, and took her with him to England. William met them at Bristol on 20 Sept. 1210, and finally agreed to pay the 40,000 marks; but as neither he nor his wife would pay anything, he was outlawed in default, and fled from his port of Shoreham in disguise ('quasi mendicus') to France (*Ann. Wav.* 265; *Ann. Osn.* 54). He died at Corbeuil the following year (9 Aug. 1211), and was buried the next day in St. Victor's Abbey, Paris (MATT. PARIS, ii. 532), by Stephen Langton, the exiled primate (*Ann. Marg.* 31).

His wife, Maud de St. Valérie, or De Haye, to whose arrogance his fall was largely attributed, was imprisoned, with her eldest son, by John in Windsor Castle, where they are said to have been starved to death (*Ann. Wav.* 265; *Ann. Osn.* 54). Matthew Paris (ii. 531) states, but erroneously, that the son's wife shared their fate, while Mr. Pearson (*England in the Middle Ages*, p. 53, *n.*) denies even the mother's death, on the ground that she appears as living in 1220 (*Royal Letters*, i. 136); but the Maud there mentioned was clearly her son's wife (as is proved by *Coram rege roll Mich.* 3 *Hen. III*, No. 1, m. 2, Sussex), who, with the third son Reginald, had escaped capture.

The second son, the bishop of Hereford, returned to England with the primate on 16 July 1214, and paid a fine of 9,000 marks

for his father's lands on 21 Oct. 1215 (*Pat.* 17 *John*, m. 14). As he died very soon after, John allowed the lands to pass without further fine to the third son Reginald on 26 May 1216 (*Pat.* 18 *John*, m. 9), who also, under Henry III, recovered the Irish estates.

William's daughter, Margaret, married Walter de Lacy, and on 10 Oct. 1216 received a license to found a religious house for the souls of her mother Maud and her brother William, the victims of John's revenge.

[Matthew Paris (ed. Luard); Annales Monastici (Rolls Series); Chronica R. Hovedeni (ib.); Brut y Tywysogion (ib.); Shirley's Royal Letters (ib.); Pipe Rolls temp. John; Charter and Patent Rolls; Reports of the Deputy-keeper; Rymer's Fœdera; Monasticon Anglicanum; Dugdale's Baronage; Genealogist, vol. iv.] J. H. R.

BRASBRIDGE, JOSEPH (1743-1832), autobiographer, began business as a silversmith, with a good capital, in Fleet Street, London. Pleasure continually seduced him from his shop, and bankruptcy followed as a matter of course; but eventually he was re-established in business through the kindness of friends. In the hope that his own indiscretions might prove a warning to others, he published, when in his eightieth year, his memoirs under the title of 'The Fruits of Experience,' which passed through two editions in 1824. His portrait is prefixed. He died at Highgate on 28 Feb. 1832.

[Gent. Mag. xciv. (i.) 234, cii. (i.) 567; Blackwood's Edinburgh Mag. xvi. 428; Lowndes's Bibl. Man. (Bohn), 256; Evans's Cat. of Engraved Portraits, ii. 50.] T. C.

BRASBRIDGE, THOMAS (*fl.* 1590), divine and author, born in 1547, was of a Northamptonshire family, but lived at Banbury in his childhood. He was elected a demy of Magdalen College, Oxford, in 1553, a probationer fellow of All Souls' in 1558, when he graduated B.A. (18 Nov.), and a fellow of Magdalen in 1562. He proceeded M.A. on 20 Oct. 1564. At Oxford he studied both divinity and medicine, and remained to tend the plague-stricken during the severe epidemic of 1563–4. He supplicated for the degree of B.D. on 27 May 1574, but does not appear to have been granted it. About 1578 he resigned his fellowship. He describes himself as an inhabitant of London in that year, and engaged in tuition there. He subsequently obtained a living at Banbury, where he also opened a school and practised medicine. At Christmas-time 1558 he was seriously assaulted by a number of his parishioners belonging to the hamlet of Wickham, who refused to come to church. His assailants, who preferred 'dancing, or some other like pastime,' to church-going, were charged with recusancy before the privy council in March 1588–9 (*Cal. State Papers*, Dom. 1581–90).

Brasbridge was the author of: 1. 'Abdias the Prophet. Interpreted by T. B., Fellow of Magdalen College in Oxford,' London, 1574, dedicated to Henry Hastings, earl of Huntingdon. 2. 'The Poore Man's Ievvel, that is to say, a Treatise of the Pestilence. Unto the which is annexed a declaration of the Vertues of the Heart's Carduus Benedictus and Angelica; which are very medicinable, both against the Plague and also against many other diseases,' London, 1578, dedicated to Sir Thomas Ramsey, lord mayor of London. Other impressions are dated 1579 and 1580. A second enlarged edition was issued by Brasbridge in 1592, with a dedication (dated 'Banburie, the 20 of Ianuarie, 1592') to Anthony Cope and his wife Frances. In both editions Turner's 'Herball' is laid under frequent contribution. 3. 'Quæstiones in Officia M. T. Ciceronis, compendiariam totius opusculi Epitomen continentes,' Oxford, 1615, dedicated to Lawrence Humphrey, president of Magdalen College, Oxford, 1586. The date of Brasbridge's death is not known.

[Wood's Athenæ Oxon. (Bliss), i. 526; Wood's Fasti, i. 154, 165, 196; Brasbridge's works; Brit. Mus. Cat.; Watt's Bibl. Brit.] S. L.

BRASBRIGG or BRACEBRIGGE, JOHN (*fl.* 1428), appears as a priest of the convent of Syon in 1428 (Aungier). He is said to have given a large number of books to the convent, and to have written a treatise entitled 'Catholicon continens quatuor partes grammaticæ,' which, with other manuscripts belonging to Syon monastery, passed to Corpus Christi College, Cambridge, its place in the old catalogue being O. 16, and in Nasmith cxliii. The name of Brasbrigg is not to be found in Nasmith's catalogue.

[Aungier's History of Syon Monastery, 52; Tanner's Bibl. Brit. 118; Nasmith, Catalogus Librorum MSS. in Academia Cantab.] W. H.

BRASS or BRASSE, JOHN (1790–1833), educational writer, was educated at Trinity College, Cambridge, where he obtained a fellowship in 1811. He graduated B.A. as sixth wrangler in the same year, proceeded M.A. in 1814, B.D. in 1824, and D.D. in 1829. He was presented by his college to the living of Stotfold, Bedfordshire, in 1824, which he held till his death, in 1833. He edited Euclid's 'Elements of Geometry,' Lon-

don, 1825 (?), and the 'Œdipus Rex' (1829 and 1834), the 'Œdipus Coloneus' (1829), the 'Trachiniæ' (1830), and the 'Antigone' (1830) of Sophocles. He published a Greek Gradus in 1828, which was reissued, in two volumes, at Göttingen, under the editorship of C. F. G. Siedhof, in 1839–40, and in England in 1847, under the editorship of the Rev. F. E. J. Valpy. He spelt his name Brass in early life, and Brasse in later years.

[Gent. Mag. 1833, i. 473–4; Brit. Mus. Cat.]
S. L.

BRASSEY, THOMAS (1805–1870), railway contractor, was born on 7 Nov. 1805 at Buerton, Aldford, Cheshire. The Brasseys claimed to have lived for 'nearly six centuries' at Bulkeley, near Malpas, Cheshire, whence they had moved to Buerton by 1663. They retained a property of three or four hundred acres at Bulkeley, which still belongs to the family. Brassey's father farmed land of his own at Buerton, besides holding a neighbouring farm under the Marquis of Westminster at a rent of 850*l.* a year. Brassey was sent to school at Chester, and when sixteen was articled to a land surveyor named Lawton, agent to F. R. Price of Bryn-y-pys. Lawton took him into partnership, and placed him about 1826 at the head of a new business in Birkenhead. On Lawton's death, Brassey became Price's agent. In 1834 he made acquaintance with George Stephenson, and, through him, obtained a contract for the Penkridge viaduct on the 'Grand Junction line,' then in course of construction. Locke succeeded Stephenson as engineer in chief to this line, and, upon its completion, was employed on the London and Southampton railway. Brassey, at his request, contracted for various works upon this line, and moved to London in 1836. He had married (27 Dec. 1831) Maria, second daughter of Joseph Harrison, a 'forwarding agent in Liverpool, and the first resident in the new town of Birkenhead.' Mrs. Brassey encouraged her husband to take up the career of railway contractor, though it involved constant absence from home and frequent changes of residence. Large contractors had already been required for canals, harbours, and other works, but the rapid development of railways now caused an opening, of which Brassey's extraordinary business faculties enabled him to take full advantage. He extended his operations, until he was interested in enterprises in every quarter of the globe. Locke, on becoming engineer to the Paris and Rouen railway in 1841, introduced Brassey as contractor, and on the completion of that line in 1843 he undertook the works for the Rouen and Havre railway, which was completed in two years, according to the agreement, in spite of the fall of the Barentin viaduct, which had cost 50,000*l.* His sphere of action now rapidly extended. From 1847 to 1851 he was contractor for the Great Northern railway, employing from five to six thousand men, who presented him with a silver-gilt shield, shown at the Great Exhibition of 1851, besides portraits of himself and family. A list of his numerous contracts is given in Sir A. Helps's 'Life and Labours of T. Brassey,' pp. 161–6. Amongst his chief undertakings were: Italian railways (1850–3), the Grand Trunk Railway of Canada (1852–9), the Crimean railway (carried out with Sir Morton Peto and Mr. Betts in 1854), Australian railways (1859–63), the Argentine railway (1861), several Indian railways (1858–65), and Moldavian railways (1862–8). In 1866 Brassey had to surmount great financial difficulties, and showed remarkable energy in completing at the same time a line in Austria, in spite of the war with Prussia. The anxiety probably affected his health. In 1867 he made a business tour abroad. A breakdown at the opening of the Fell railway over Mont Cenis caused him much anxiety, and he exposed himself in witnessing the experiments. He had a serious illness and a paralytic stroke, which, though he recovered at the time, was followed by another in September 1868. He refused to allow himself relaxation, and his health soon declined. He spent his last days at Hastings, and died on 8 Dec. 1870. He was buried at Catsfield, Sussex. He left a widow and three sons, Thomas (now Sir Thomas), Henry Arthur, and Albert.

Brassey is described by his biographer as a man almost without faults. The only defect mentioned was a difficulty in saying no, which led to involvement in some disastrous undertakings. His ruling passion was the execution of great works of the highest utility with punctuality and thoroughness. He possessed the highest business talent, power of calculation, and skill in organisation. He knew how to trust subordinates and distribute responsibility. He was beloved by the men he employed, and made the fortunes of many subordinates who rose by his help. He was liberal, and indifferent to honours and to money, though he made a large fortune without suspicion of unfair dealing. His domestic life was perfect. Although his education had been scanty, and he never acquired any command of foreign languages, he was a man of great natural refinement, with a keen taste for art and for natural beauty. His courtesy and shrewdness made him an excel-

lent diplomatist, and in all his undertakings he was on the most cordial terms with his associates. Brassey's experience in the employment of labourers of different races was enormous, and he made many interesting observations, of which some account is given in his life. Sir T. Brassey's 'Work and Wages' (1872) embodies some information derived from this and other sources.

[Life and Labours of Mr. Brassey, by Arthur Helps, 1872, with full information from the family and many of Brassey's assistants and friends.]

BRATHWAITE, RICHARD (1588?–1673), poet, belonged to a Westmoreland family who variously spelt their name Brathwaite, Brathwait, Brathwayte, Braithwaite, Braythwait, and Braythwayte. The poet uses indifferently the first three of these forms. His great-grandfather, also Richard, the squire of Ambleside, had one son, Robert, who had two sons, Thomas and James, and five daughters. Thomas, the poet's father, was a barrister and recorder of Kendal, and purchased the manor of Warcop, near Appleby, where he lived until his father's death put him in possession of an estate at Burneshead or Burneside, in the parish of Kendal. He married Dorothy, daughter of Robert Bindloss of Haulston, Westmoreland. Richard Brathwaite was their second surviving son. He was born about 1588, and it is supposed at Burneside, since in two of his pieces he speaks of Kendal as his 'native place.' That 1588 was the year of his birth is clear from the inscription on his portrait, 'An° 1626, Æt. 38,' and from the statement of Anthony à Wood that he 'became a commoner of Oriel College A.D. 1604, aged 16.' 'He was matriculated,' Wood adds, 'as a gentleman's son.' He remained at Oxford for several years, enjoying a scholarly life, until his father desired him to take up the law as a profession. To prepare for this he was sent to Cambridge, probably to Pembroke, since he was under the authority of Lancelot Andrewes, who was master of that college. On leaving this university he went up to London, and according to his own account in 'Spiritual Spicerie: containing sundrie sweet tractates of Devotion and Piety,' 1638, devoted himself at once to poetry, and particularly to dramatic writing. These early plays, however, are entirely lost, and probably were never printed. Thomas Brathwaite died in 1610, soon after his son came up to London, and the latter seems soon after this to have gone down to live in Westmoreland on the estates his father had left him.

In 1611 he published his first volume, a collection of poems entitled 'The Golden Fleece,' in which he refers to family bickerings, caused by his father's will, all which are by this time happily concluded. This book is dedicated to his uncle, Robert Bindlosse, and to his own elder brother, Sir Thomas Brathwaite. An appendix contains some 'Sonnets or Madrigals,' but an essay on the 'Art of Poesy,' which appears on a subsidiary title-page, does not occur in any known copy of the very rare volume. In 1614 Brathwaite published three works: a book of pastorals, entitled 'The Poet's Willow;' a moral treatise, 'The Prodigals Teares;' and 'The Schollers Medley,' afterwards reprinted as 'A Survey of History, or a Nursery for Gentry,' 1638 and 1651. In 1615 he began to emulate Decker, Rowlands, and Wither, with a collection of satires entitled 'A Strappado for the Devil'—a volume founded directly on 'The Abuses Whipt and Stript' of George Wither, whom Brathwaite calls 'my bonnie brother.' The second part of the volume is entitled 'Love's Labyrinth,' an adaptation of the story of Pyramus and Thisbe. He continued for many years after this to pour forth volumes from the press, few of them of much merit. The most interesting of his early works is 'Nature's Embassie: or the Wilde-mans Measvres: Danced naked by twelve Satyres,' a collection of his odes and pastorals, published in 1621. The titles of his other works are given below.

On 4 May 1617 he was married at Hurworth, near Darlington, to Frances, daughter of James Lawson of Nesham. This lady bore him nine children, five of them sons. His elder brother, Sir Thomas Brathwaite, died in 1618, leaving a son, George, who matriculated at St. John's College 6 July 1631 (Mayor's *Admissions*, p. 7), but Richard was henceforth regarded as the head of the family. He lived at Burneside, and became captain of a company of foot in the trained bands, deputy-lieutenant of the county of Westmoreland, and justice of the peace. His wife died on 7 March 1633, and the pathetic terms in which he speaks of her merit and his loss prove that he was sincerely attached to her. On 27 June 1639 he married a widow, the daughter of Roger Crofts of Kirtlington in Yorkshire. He was lord of the manor of Catterick, and drew up a conveyance at the time of his second marriage making the property over to his wife in the event of his death. They had one son, afterwards the gallant Sir Strafford Brathwaite, who was killed in a sea-fight with Algerine pirates.

The most famous of Brathwaite's works appeared in 1638 with the title of 'Barnabæ

Itinerarium, or Barnabee's Journal,' under the pseudonym 'Corymbæus.' This is a sprightly record of English travel, in Latin and English doggerel verse; it was neglected in its own age, but being reprinted under the title of 'Drunken Barnaby's Four Journeys,' achieved a considerable success during the eighteenth century, and is still in some vogue. The eleventh edition appeared in 1876. The authorship was not ascertained until the publication of the seventh edition by Joseph Haslewood in 1818. Southey pronounced the original the best piece of rhymed Latin in modern literature. The English part is best remembered by the often-quoted lines—

> To Bambury came I, O profane one!
> Where I saw a puritane one
> Hanging of his cat on Monday
> For killing of a mouse on Sunday.

Brathwaite is said to have served on the royalist side in the civil war. He was a short man, well proportioned and singularly handsome. He removed to Catterick, and seems to have retained his strength up to old age, for he was one of the trustees of a free school there, and is spoken of as in full possession of his authority and powers on 12 April 1673. He was, however, at that time near his end, for he died on 4 May following, at East Appleton, near Catterick, being eighty-five years of age. He was buried three days later on the north side of the chancel of the parish church of Catterick.

The writings of Brathwaite not yet mentioned are the following:—1. 'A Solemne Ioviall Disputation,' 1617, a prose description of 'The Laws of Drinking.' A second part bears the title 'The Smoaking Age, or the man in the mist: with the life and death of Tobacco,' 1617 and 1703. This is anonymous. A Latin version, under the pseudonym 'Blasius Multibibus,' appeared in 1626. 2. 'A New Spring Shadowed' (under the pseudonym of Mvsophilvs), 1619, verse. 3. 'Essaies upon the Five Senses,' 1620, 1635, 1815. 4. 'The Shepheards Tales,' 1621, a collection of pastorals. 5. 'Times Cvrtaine Drawne,' 1621, verse. 6. 'Britain's Bath,' 1625, which included an elegy on the Earl of Southampton; of this no copy is now known to be extant. 7. 'The English Gentleman,' 1630, 1641, 1652. 8. 'The English Gentlewoman,' 1631, 1641. 9. 'Whimzies, or a new cast of characters,' 1631. 10. 'Novissima Tuba,' 1632, a religious poem in Latin. A translation by John Vicars appeared in 1635. 11. 'Anniversaries upon his Panarete,' 1634, 1635, a poem in memory of his first wife. 12. 'Ragland's Niobe,' 1635, a poem in memory of Elizabeth, wife of Edward Somerset, lord Herbert. 13. 'The Arcadian Princess,' 1635, a novel from the Italian in prose and verse. 14. 'The Lives of all the Roman Emperors,' 1636 (the dedication is signed R. B.) 15. 'A Spiritual Spicerie,' 1638, in prose and verse. 16. 'The Psalmes of David,' (by R. B.), 1638. 17. 'Ar't asleepe Husband?' 1640, a collection of 'bolster lectures,' in prose, on moral themes, with the history of Philocles and Doriclea, by Philogenes Panedonius. 18. 'The Two Lancashire Lovers, or the Excellent History of Philocles and Doriclea,' by Musæus Palatinus, 1640, a novel in prose. 19. 'Astræa's Tears,' 1641, an elegy on the judge, Sir Richard Hutton, Brathwaite's godfather and kinsman. 20. 'A Mustur Roll of the Evill Angels,' 1655, 1659, an account, in prose, of the most noted heretics, by 'R. B. Gent.' Some copies bore the title 'Capitall Hereticks.' 21. 'Lignum Vitæ,' 1658, a Latin poem. 22. 'The Honest Ghost,' 1658, an anonymous satire in verse. 23. 'The Captive Captain,' 1665, a medley, by 'R. B.,' in prose and verse. 24. 'A Comment upon Two Tales of our Ancient . . . Poet Sr Jeffray Chavcer, knight,' by 'R. B.,' 1665. Brathwaite's 'Good Wife; or, a Rare One amongst Women. By Musophilus,' was published in 1618; an unique copy which once belonged to Sir Edward Dering was sold by Messrs. Sotheby in November 1897. A second edition appeared in 1619 (*Athenæum*, 1897, ii. 751, 787). In the marginal note to the 'English Gentleman' (1630), p. 198, Brathwaite mentions the 'Huntsman's Raunge,' a work by himself, now lost.

[Joseph Haslewood published a very elaborate memoir and bibliography in 1820 as a preface to the ninth edition of Barnabee's Journal. Some genealogical information has been supplied by Mr. W. Wiper of Manchester.] E. G.

BRAVONIUS (*d.* 1207), prior of Worcester. [See SENATUS.]

BRAXFIELD, LORD (1722–1799), Scottish judge. [See MACQUEEN, ROBERT.]

BRAY, ANNA ELIZA (1790–1883), novelist, daughter of John Kempe, bullion porter in the Mint, and Ann, daughter of James Arrow of Westminster, was born in the parish of Newington, Surrey, on 25 Dec. 1790. Miss Kempe at one time contemplated the career of an actress, and she was announced to appear at the Bath Theatre on 27 May 1815, but the opportunity was lost owing to illness, and did not recur. In February 1818 she married Charles Alfred Stothard [q. v.], an artist,

whose talents were devoted to the illustration of the sculptured monuments of Great Britain. With him she journeyed in France, and her first work consisted of 'Letters written during a Tour in Normandy, Brittany, &c., in 1818.' Her husband was unfortunately killed through a fall from a ladder in Beer Ferrers church, Devonshire, on 28 May 1821, while he was engaged in collecting materials for his work, 'The Monumental Effigies of Great Britain.' By Stothard she had one child, a daughter, born posthumously 29 June 1821, who died 2 Feb. 1822. Mrs. Stothard undertook to complete the book her husband left unfinished, with the aid of her brother, Mr. Alfred John Kempe, F.S.A. When Stothard died it had advanced as far as the ninth number, and the entire volume, which was published in 1832, proved a severe strain upon his widow's resources. She subsequently (1823) brought out a memoir of her late husband. Many years later she communicated to the 'Gentleman's Magazine' and to 'Blackwood's Magazine' reminiscences of her father-in-law, Thomas Stothard, R.A., and these were afterwards (1851) expanded into a life of that admirable artist. At her death she left to the British Museum the original drawings of her husband's great work.

A year or two after the decease of Stothard his widow married the Rev. Edward Atkyns Bray [q. v.], the vicar of Tavistock. She then entered upon novel writing, and from 1826 to 1874 she issued at least a dozen works of fiction. Some of these, such as 'The Talba, or the Moor of Portugal'—on the publication of which she became acquainted with Southey, and worshipped him throughout her career—dealt with foreign life; but the most popular of her novels were those which were based on the history of the principal families (the Trelawneys of Trelawne, the Pomeroys, and the Courtenays of Walreddon) of the counties of Devon and Cornwall. They were all of them of an historical character, and proved so popular that they were issued in a set of ten volumes by Longmans in 1845–6, and were reprinted by Chapman & Hall so recently as 1884. Her second husband died in 1857, and Mrs. Bray then removed to London, where she employed herself at first with selecting and editing some of his poetry and sermons, and afterwards again betook herself to original work. Her last years were embittered by the report that during a visit to Bayeux in 1816 she had stolen a piece of the tapestry for which that city is famous; but her character was cleared by the correspondence and leading articles which appeared in the columns of the 'Times' on the subject. After a long life spent in literary labours, she died in London on 21 Jan. 1883. Her autobiography to 1843 was published by her nephew, Mr. John A. Kempe, in 1884; but it is neither so complete nor so accurate as might have been expected. It discloses an accomplished and kindly woman, proud of her own creations, and enthusiastic in praise of the literary characters with whom she had come in contact.

Mrs. Bray was the author of many works in addition to those which have been already enumerated. The most entertaining and the most valuable of all was 'The Borders of the Tamar and the Tavy' (1836, 3 vols.), describing, in a series of letters to Robert Southey, the traditions and the superstitions which surround the town of Tavistock. It was reviewed by Southey in the 'Quarterly Review.' The remainder copies were issued with a new title-page by Mr. H. G. Bohn in 1838, and a new edition, compressed by Mrs. Bray herself into two volumes, appeared in 1879. With this may be read a series of tales for 'young people' on the romantic legends connected with Dartmoor and North Cornwall, entitled, 'A Peep at the Pixies, or Legends of the West' (1854). The interest of her travels, 'The Mountains and Lakes of Switzerland, with Notes on the Route there and back' (1841), may be said to have evaporated by this time, though their value at a time when the continent was less explored than it is now was generally recognised. When after a silence of some years she again in 1870 appeared as an author, she issued three compilations in French history, 'The Good St. Louis and his Times,' 'The Revolt of the Protestants of the Cevennes,' and 'Joan of Arc.' All of them were pleasantly written, but they lacked that historical research which could make them of permanent value. Of all Mrs. Bray's works, the most lasting will probably prove to be her letters to Southey on the legends and superstitions on the borders of the twin-streams of the Tamar and the Tavy.

W. P. C.

BRAY, CHARLES (1811–1884), author of various works on philosophy and education, was born in Coventry on 31 Jan. 1811. He was the son of a ribbon manufacturer in that city, to whose business he succeeded in 1835. From this he retired in 1856. While yet a young man, he established an infants' school in one of the poorest neighbourhoods

in Coventry, and, in opposition to a church movement conceived on straiter lines, took an active part in promoting an unsectarian school which should be available for dissenters. His first publication was an 'Address to the Working Classes on the Education of the Body' (1837). This was followed by the 'Education of the Feelings' (1838), of which there have been several editions, the last of them taking the form of a school manual ('The Education of the Feelings: a Moral System for secular schools,' 1872). In 1841 he published the 'Philosophy of Necessity, or the Law of Consequences as applicable to Mental, Moral, and Social Science;' this work contained an appendix (afterwards separately published) by the author's sister-in-law, Mary Hennell, giving an historical outline of communities founded on the principle of co-operation. The socialistic theories at this time in the air specially attracted him, and in 1842 he attended Robert Owen's 'Opening of the Millennium' at Queenwood, Hampshire. The failure of this experiment limited his social aspirations to more practicable objects. He helped to establish (1843) the Coventry Labourers' and Artisans' Society, which developed into a co-operative society, of which he was president; he started (1845) a working man's club, which failed owing to the rival attractions of the public-house; and he took an active share in the management of the Coventry Mechanics' Institute and the Coventry Provident Dispensary. In addition to the works already named, he published the 'Philosophy of Necessity,' 2nd. ed. 1861 (in great part re-written); 'On Force and its Mental Correlates,' 1866; 'A Manual of Anthropology, or Science of Man based upon Modern Research (1st ed. 1871, 2nd ed. 1883); 'Psychological and Ethical Definitions on a Physiological Basis,' 1879; and a number of pamphlets on speculative and practical subjects. The possession of a local paper (1846–74) gave him an additional field for his opinions, which at all times, and on all subjects, he stated with a candour that took no account of consequences. Converted to phrenology by George Combe, with whom he formed an intimate association, he never abandoned it. Phrenology and the doctrine of necessity form the groundwork of all his writings. Among his early friends was Mary Ann Evans (George Eliot), who while young and uncelebrated was for some time a member of his household. In his autobiography ('Phases of Opinion and Experience during a Long Life,' 1884) he gives an interesting account of her, and George Eliot's 'Life as related in her Letters and Journals' (1885) is largely based on correspondence with 'the Brays' (i.e. Bray, his wife, and his sister-in-law, Miss Sara Hennell). A postscript to the 'Phases of Opinion and Experience,' dictated rather less than three weeks before his death, which took place on 5 Oct. 1884, contains the following: 'My time is come, and in about a month, in all probability, it will be finished. . . . For fifty years and more I have been an unbiassed and an unprejudiced seeker after truth, and the opinions I have come to, however different from those usually held, I am not now, at the last hour, disposed to change. They have done to live by, they will do to die by.'

BRAY, EDWARD ATKYNS (1778–1857), poet and miscellaneous writer, the only son of Edward Bray, solicitor, and manager of the Devonshire estates of the Duke of Bedford, was born at the Abbey House, Tavistock, 18 Dec. 1778. His mother, Mary, a daughter of Dr. Brandreth of Houghton Regis, and the widow of Arthur Turner, would not allow her son to be sent to a public school, and he was educated by himself, a circumstance which engendered in him habits of isolation and restraint. At an early age he cultivated poetry, two small selections from his effusions circulating among his friends before he was twenty-three. Bray became a student at the Middle Temple in 1801 and was called to the bar in 1806. For some time he went the western circuit, but the profession of the law had from the first ill accorded with his disposition, and after five years of trial he abandoned it for the church. He was ordained by the Bishop of Norwich about 1811, and in the following year, by the favour of the Duke of Bedford, became the vicar of Tavistock and the perpetual curate of Brent Tor. Almost immediately after his ordination he entered himself at Trinity College, Cambridge, and took the degree of B.D. as a ten-year man in 1822. In Tavistock he resided for the rest of his life, and if he differed from his parishioners on politics or preached over their heads, he retained their respect. He married the widow of C. A. Stothard [see BRAY, ANNA ELIZA], and an amusing account of the habits of the worthy vicar and his wife is embodied in the latter's autobiography. Bray died at Tavistock 17 July 1857. During his lifetime he published several selections of sermons: 1. 'Sermons from the Works of the most

eminent Divines of the 16th, 17th, and 18th Centuries,' 1818. 2. 'Discourses from Tracts and Treatises of eminent Divines,' 1821. 3. 'Select Sermons by Thomas Wilson, Bishop of Sodor and Man,' and a volume of his own, 'Discourses on Protestantism,' 1829. His poetical productions were for the most part circulated privately. After Bray's death his widow collected and published his 'Poetical Remains' (1859, 2 vols.), and also 'A Selection from the Sermons, General and Occasional, of Rev. E. A. Bray' (1860, 2 vols.) At one time he projected a history of his native town of Tavistock, and made considerable collections for it, but the undertaking was never completed. Many extracts from his journals describing the curiosities of Dartmoor and many of his poems are inserted in Mrs. Bray's 'Tamar and Tavy.' When she published her work on Switzerland she embodied with it many passages in the diary which her husband kept whilst on the tour.

[Memoir prefixed to Poetical Remains; Mrs. Bray's Tamar and Tavy (1879 ed.), ii. 304–373.] W. P. C.

BRAY, JOHN (*fl.* 1377), physician and botanist, received a pension of 100*s.* a year from William, earl of Salisbury, which was confirmed by Richard II. He wrote a list of herbs in Latin, French, and English, 'Synonyma de nominibus herbarum.' This manuscript was formerly part of the collection of F. Bernard; it is now in the Sloane Collection in the British Museum.

[Tanner's Bibl. Brit. 122; Catal. Sloane MSS. 282.] W. H.

BRAY, SIR REGINALD (*d.* 1503), statesman and architect, was the second son of Sir Richard Bray, one of the privy council to Henry VI, by his wife Joan Troughton. The father was of Eaton-Bray in Bedfordshire, and lies buried in the north aisle of Worcester cathedral; Leland speaks of him as having been, by the report of some, physician to Henry VI (*Itinerary*, 113 *a*). The son was born in the parish of St. John Bedwardine, near Worcester (NASH, *Worcestershire*, ii. 309). He held the situation of receiver-general and steward of the household to Sir Henry Stafford, the second husband of Margaret, countess of Richmond (mother of the Earl of Richmond, afterwards King Henry VII), and he continued in her service during her subsequent marriage with Thomas, lord Stanley (afterwards Earl of Derby), by whom he was appointed a trustee for her dower of 500 marks per annum. In 1 Richard III (1483) he had a general pardon granted to him, probably for having taken part with Henry VI.

When the Duke of Buckingham had concerted with Morton, bishop of Ely (then his prisoner at Brecknock in Wales), the marriage of the Earl of Richmond with the Princess Elizabeth, eldest daughter of Edward IV, and the earl's advancement to the throne, the bishop recommended Bray for the communication of the affair to the countess, telling the duke that he had an old friend who was in her service, a man sober, secret, and well witted, called Reginald Bray, whose prudent policy he had known to have compassed matters of great importance; and accordingly he wrote to Bray, then in Lancashire with the countess, to come to Brecknock with all speed. Bray readily obeyed the summons, entered heartily into the design, and was very active in carrying it into effect, having engaged Sir Giles Daubeney (afterwards Lord Daubeney), Sir John Cheney, Richard Guilford, and many other gentlemen of note, to take part with Henry (HALL, *Chronicle*, f. 37). After the defeat of Richard III at Bosworth he became a great favourite with Henry VII, who liberally rewarded his services; and he retained the king's confidence until his death. He was created a knight of the Bath at the king's coronation, and afterwards a knight of the Garter. In the first year of the king's reign he had a grant of the constableship of the castle of Oakham in Rutland, and was appointed joint chief justice, with Lord Fitzwalter, of all the forests south of Trent, and chosen of the privy council. After this he was appointed high-treasurer and chancellor of the duchy of Lancaster.

In 3 Henry VII he was appointed keeper of the parks of Guilford and Henley, with the manor of Claygate in Ash for life; and the year following, by letters patent dated at Maidstone 23 Dec. 1488, a commissioner for raising the quota of archers to be furnished by the counties of Surrey, Hampshire, and Middlesex for the relief of Brittany. By indenture dated 9 May 1492 he was retained to serve one whole year in parts beyond the seas, with twelve men of arms, including himself, each having his custrel (shield-bearer) and page, twenty-four half-lances, seventy-seven archers on horseback, and two hundred and thirty-one archers and twenty-four bill-men on foot; being at the same time made paymaster of the forces destined for this expedition (RYMER, *Fœdera*, ed. 1711, xii. 480). On the king's intended journey to France, Sir Reginald was one of those in whom the king vested his estates belonging to the duchy of Lancaster for the purpose of

fulfilling his will. In the tenth year of the king he had a grant for life of the Isle of Wight, castle of Carisbrook, and the manors of Swainston, Brixton, Thorley, and Welow in that isle, at the rent of 308*l.* 6*s.* 8*d.* (RYMER, xii. 480). In October 1494 he was made high steward of the university of Oxford, and he is believed to have also held the same office in the university of Cambridge. In 11 Henry VII he was in the parliament then summoned, but, the returns being lost, it is not known for what place he served.

In June 1497 he was at the battle of Blackheath when Lord Audley, who had joined the Cornish rebels, was taken prisoner. On this occasion Bray was made a knight banneret (HOLINSHED, *Chronicles*, iii. 1254), and after the execution and attainder of Lord Audley, that nobleman's manor of Shire, with Vacherie and Cranley in Surrey, and a large estate there, was given to Sir Reginald. On the marriage of Prince Arthur he was associated with persons of high rank in the church and state as a trustee for the dower assigned to the Princess Catherine of Arragon.

The chapel of St. George at Windsor, and that of his royal master King Henry VII at Westminster, are standing monuments of his liberality and of his skill in architecture. To the former of these he was a considerable benefactor as well by his attention in conducting the improvements made upon that structure by the king, as by his contributions to the support of it after his death. He built also, at his own expense, in the middle of the south aisle, a chapel which still bears his name, and in various parts of which, as well as on the ceiling of the church, his arms, crest, and the initial letters of his name may still be seen, as may also a device of his frequently repeated both on the outer and inner side of the cornice dividing this chapel from the south aisle of the church, representing an instrument used by the manufacturers of hemp, and called a hemp-bray. The design of Henry VII's chapel at Westminster is supposed to have been his; and the first stone was laid by him, in conjunction with the Abbot Islip and others, on 24 Jan. 1502–3. Sir Reginald did not live to see the completion of the edifice, for on 5 Aug. 1503 he died, and was interred in the chapel of his own foundation at Windsor. On opening a vault in this place for the interment of Dr. Waterland in 1740, a leaden coffin of an ancient form was discovered which was supposed to be Sir Reginald's, and by order of the dean it was immediately arched over. Sir Reginald is said to have been the architect of the nave and aisles of St. Mary's, Oxford, and it has been conjectured that he also designed St. Mary's Tower at Taunton. He was a munificent benefactor to churches, monasteries, and colleges.

Bray married Catharine, daughter of Nicholas Husee, a descendant of the ancient barons of that name in the reign of Edward III. He had no issue, and his elder brother John having only one daughter, married to Sir William Sandes, afterwards Lord Sandes of the Vine, he left the bulk of his fortune to Edmund, eldest son of his younger brother John (for he had two brothers of that name). This Edmund was summoned to parliament in 1530, as Baron of Eaton-Bray; but his son John, lord Bray, dying without issue in 1557, the estate was divided among six daughters of Edmund. Sir Reginald left very considerable estates to Edward and Reginald, younger brothers of Edmund.

His portrait was in a window of the Priory church of Great Malvern in Worcestershire, and is engraved in Strutt's 'View of the Manners, Customs, &c. of the Inhabitants of England,' ii. pl. 60, and more accurately in Carter's 'Ancient Sculpture and Painting.'

Bray is represented as being 'a very father of his country, a sage and a graue person, and a feruent louer of iustice. In so muche that if any thinge had bene done against good law or equitie, he would, after an humble fassion, plainly reprehende the king, and geue him good aduertisement how to reforme that offence, and to be more circumspect in another lyke case' (HALL, *Union of the two famelies of Lancastre and Yorke*, ed. 1548, Hen. VII, fol. 55 *b*). Bacon says of him, however, 'that he was noted to have had with the king the greatest freedom of any counsellor, but it was but a freedom the better to set off flattery.'

In the library at Westminster are many original letters addressed to Bray by Smyth, bishop of Lincoln, and other prelates and noblemen, and many other letters relating to his own private business.

BRAY, THOMAS (1656–1730), divine, was born at Marton in Shropshire, and educated at Oswestry School, whence he proceeded to Oxford. He took his B.A. degree (All Souls, 11 Nov. 1678), and that of M.A. (Hart Hall, 12 Dec. 1693). Having received holy orders he served for a short time a curacy near Bridgnorth, and then became chaplain in the family of Sir T. Price of Park Hall in Warwickshire. Sir Thomas presented him to the donative of Lea Marston or Marson, and his diligence in this post introduced him to John Kettlewell, vicar of Coleshill, and also to Kettlewell's patron, Simon, Lord Digby, and Sir Charles Holt. He also made a favourable impression by an assize sermon which he preached at Warwick while quite a young man. Lord Digby was one of the congregation, and afterwards recommended him to his brother and successor to the title, William, lord Digby, who presented him to the vicarage of Over-Whitacre, and subsequently endowed it with the great tithes. In 1690 Bray was presented by the same patron to the rectory of Sheldon, vacant by the refusal of the rector, Mr. Digby Bull, to take the oaths at the Revolution. At Sheldon, Bray composed the first volume of his 'Catechetical Lectures,' which were published by the 'authoritative injunctions' of Dr. Lloyd, bishop of Lichfield and Coventry, to whom the volume was dedicated. The work at once became popular, and made Bray's name well known in London. About the year 1691 the governor and assembly of Maryland determined to divide that province into parishes, and to appoint a legal maintenance for the ministers in each parish. In 1695 they wrote to request the bishop of London to send them over some clergyman to act as his commissary, and Bishop Compton selected Bray for the post. Bray accepted it, but was unable to set out for Maryland until the return of a new act thence to be confirmed by the sovereign; the first act for the establishment of the church being rejected, because it was wrongly stated in it that the laws of England were in force in Maryland. Meanwhile he was employed under Bishop Compton in seeking out missionaries to be sent abroad as soon as the new act could be obtained. He found that he could only enlist poor men unable to buy books, and he seems to have made the help of the bishops in providing libraries a condition of his going to Maryland. From a paper still extant in Lambeth library it appears that the two archbishops and five bishops agreed to 'contribute cheerfully towards these parochial libraries.' Meanwhile Bray had extended his plans, and set himself to provide libraries for the clergy at home as well as abroad. He projected a scheme for establishing parochial libraries in every deanery throughout England and Wales, and so far succeeded that before his death he saw upwards of eighty established. No less than thirty-nine libraries, some containing more than a thousand volumes, were established in North America, besides many in other foreign lands during Bray's lifetime. His 'premier library' was founded at Annapolis, the capital of Maryland, called after Anne, Princess of Denmark, who gave a 'noble benefaction' towards the valuable library there. The library scheme soon became part of a larger scheme which took shape in the 'Society for Promoting Christian Knowledge.' In 1697 a bill was brought into parliament to alienate lands given to superstitious uses, and vest them in Greenwich Hospital. Bray petitioned that a share of them should be appropriated to the 'propagation of true religion in our foreign plantations.' The petition was well received in the house, but the bill fell through; so he received no help from that quarter. In 1698 he addressed the king for a grant of some arrears of taxes due to the crown, and actually followed the king to Holland to get the grant completed; but it was found that the arrears were all but valueless. He drew up a plan 'for having a protestant congregation pro propagandâ fide by charter from the king;' but 'things were not yet ripe for the charter society,' so to prepare the way he tried to form a voluntary society, laid the plan of it before the bishop of London, and found 'several worthy persons willing to unite.' The first sketch of the objects of the society, which included the libraries at home and abroad, charity schools, and missions both to colonists and the heathen, was prepared by Bray, and he was one of the first five members, and the only clergyman among them, who composed the first meeting on 8 March 1698-9. All this while Bray was entirely without any provision to support him. Two preferments were offered him at home, the office of sub-almoner and the living of St. Botolph, Aldgate; but he was not the man to be so diverted. Having waited for more than two years, he determined to set forth. He had previously, at the request of the governor of Maryland, taken the degrees of B.D. and D.D.

at Oxford (Magdalen, 17 Dec. 1696), though he could ill afford to pay the fees. No allowance was made him for expenses, and he was obliged to dispose of his own small effects and raise money on credit. On 16 Dec. 1699 he set sail for Maryland. Knowing that missionaries were often detained in the seaports, he determined to found seaport libraries; he was able himself to deposit books on his way at Gravesend, Deal, and Plymouth. Arriving in Maryland in March, he 'at once set about repairing the breach made in the settlement of the parochial clergy,' and was well backed up by the governor Nicholson. But it was felt on all sides that Bray would do better service to the church in Maryland by returning home and endeavouring to get the law, which had been twice rejected there, re-enacted with the royal assent. If Bray had consulted his own interests, he would have remained in Maryland, for the commissary's office would yield him no profits if he left the country; but he returned to England at once, and found that the quakers had raised prejudices against the establishment of the church in Maryland. Bray refuted these in a printed memorial, and the bill was at last approved. Before he resigned his office of commissary he made a vigorous effort to obtain a bishop for Maryland. Bray had borne all the cost of his voyage and outfit; it was rightly thought unfair to allow him to impoverish himself for the public good. Viscount Weymouth therefore presented him with 300*l.*, and two other friends with 50*l.* each; but he characteristically devoted it all to public purposes. On his return to England he found the work of the society so largely increased that it was necessary to make one of its departments the work of a separate society. Bray therefore obtained from King William a charter for the incorporation of a society for propagating the gospel throughout our plantations, June 1701. Thus Bray may almost be regarded as the founder of our two oldest church societies. The living of St. Botolph Without, Aldgate, which he had refused before he went to Maryland, was again offered to him in 1706. He accepted it, and set himself with characteristic energy to work the parish thoroughly. Meanwhile he never forgot his earliest project of erecting libraries, and in 1709 he had the gratification of seeing an act passed, through the instrumentality of Sir Peter King, afterwards lord chancellor, 'for the better preservation of parochial libraries in England.' He took a deep interest in the condition of the negroes in the West Indies and North America. When he was in Holland he had conversed much on the subject with Mr. D'Allone, King William's secretary, at the Hague, and this gentleman gave him 900*l.*, to be devoted to the instruction of the negroes. In 1723 Bray was attacked with a dangerous illness, and, feeling that his life was very insecure, he nominated certain persons to carry out his work with him and after him. These were called 'Dr. Bray's associates for founding clerical libraries and supporting negro schools.' A decree of chancery confirmed their authority soon after Bray's death. The association still exists, and publishes a report of its labours every year, to which is always attached a memoir of Bray. He continued to work diligently in his parish. In 1723 Ralph Thoresby records in his diary that he 'walked to the pious and charitable Dr. Bray's in Aldgate, and was extremely pleased with his many pious, useful, and charitable works.' A week later he 'heard the charity children catechised at Dr. Bray's church,' and remarks on 'the prodigious pains so aged a man takes.' 'He is,' Thoresby adds, 'very mortified to the world, and takes abundant trouble to have a new church, though he would lose 100*l.* per annum.' The 'aged man' was not content with the work of his own parish. So late as 1727 'an acquaintance made a casual visit to Whitechapel prison, and his representation of the miserable state of the prisoners had such an effect on the doctor that he applied himself to solicit benefactions to relieve them;' and he also employed intended missionaries to read and preach to the prisoners. This work brought him into connection with the benevolent General Oglethorpe, who joined the 'associates' of Bray, and persuaded others to do so. And it was probably owing to his acquaintance with Oglethorpe that to the two designs of founding libraries and instructing negroes he added a third, viz. the establishing a colony in America to provide for the necessitous poor who could not find employment at home. He died on 15 Feb. 1730.

Bray is a striking instance of what a man may effect without any extraordinary genius, and without special influence. It would be difficult to point to any one who has done more real and enduring service to the church. His various appeals are plain, forcible, and racy. He cannot be reckoned among our great divines, but his writings produced more immediate practical results than those of greater divines have done. His first publication was entitled 'A Course of Lectures upon the Church Catechism, in 4 volumes, by a Divine of the Church of England,' Oxford, 1696. The first volume only, 'Upon the Preliminary Questions and Answers,' was published; it contains 303 folio pages, and consists of 26 lectures. In 1697 he

published 'An Essay towards promoting all Necessary and Useful Knowledge, both Divine and Human, in all parts of his Majesty's Dominions.' The essay with this ambitious title is of course connected with his library scheme. In the same year he published another work on the same design, entitled 'Bibliotheca Parochialis, or a Scheme of such Theological Heads as are requisite to be studied by every Pastor of a Parish.' In 1700–1 he published his circular letters to the clergy of Maryland, 'A Memorial representing the Present State of Religion on the Continent of North America,' and 'Acts of Visitation at Annapolis;' in 1702 'Bibliotheca Catechetica, or the Country Curates' Library;' in 1708 a single sermon entitled 'For God or Satan,' preached before the Society for the Reformation of Manners at St. Mary-le-Bow. In 1712 he appeared in print in a new light. He had always been a strong anti-Romanist, and on this ground he expressed two years later his intense satisfaction at the 'protestant succession' of George I in an interesting letter still preserved in the British Museum. During the last four years of Queen Anne's reign it is well known that there was great alarm about the return of popery. Bray issued a seasonable publication, entitled 'A Martyrology, or History of the Papal Usurpation,' consisting of 'choice and learned treatises of celebrated authors, ranged and digested into a regular history.' Only one volume of this work was published in Bray's lifetime; but he left materials for the remainder, which he bequeathed to Sion College. In 1726 he published his 'Directorium Missionarium.' This was quickly followed by a work entitled 'Primordia Bibliothecaria,' in which are given 'several schemes of parochial libraries, and a method laid down to proceed by a gradual progression from strength to strength, from a collection not much exceeding in value 1*l.* to 100*l.*' In 1728 he reprinted the 'Life of Bernard Gilpin,' and then Erasmus's 'Ecclesiastes,' a treatise on the pastoral care, the separate publication of which he thought would be of great use, as it was not likely to be much read when it was 'mixed up,' as it had hitherto been, in Erasmus's voluminous works. Finally, Bray published 'A Brief Account of the Life of Mr. John Rawlet,' a clergyman of like mind with himself, and author of the once famous work, 'The Christian Monitor.'

[Rawlinson MSS., J. folio, in the Bodleian Library, Oxford; Report of the Association of the late Rev. Dr. Bray and his Associates, &c., published annually; Public Spirit illustrated in the Life and Designs of Dr. Bray (1746); An Account of the Designs of the Associates of the late Dr. Bray, &c. (1769); Anderson's History of the Colonial Church; and Bray's Works, passim.]

J. H. O.

BRAY, THOMAS, D.D. (1759–1820), an Irish catholic prelate, was born in the diocese of Cashel on 5 March 1759. He became archbishop of Cashel in 1792, and died in 1820. He was author of the following privately printed work: 'Statuta Synodalia pro unitis Diœcesibus Cassel. et Imelac. lecta, approbata, edita, et promulgata in Synodo Diœcesana; cui interfuit clerus utriusque Diœceseos, habita prima hebdomada mensis Septembris, anno M.DCCC.X.,' 2 vols., Dublin, 1813, 12mo. This rare book contains a papal bull against freemasonry; a decree of the council of Trent against duellists, with an explanation of it in English to be given by each priest to his flock; and short memoirs of the archbishops of Cashel and the bishops of Emly. The second volume bears the following title: 'Regulations, Instructions, Exhortations, and Prayers, &c., &c., in English and Irish: with the manner of absolving heretics, in Latin and English: for the united dioceses of Cashel and Emly.'

T. C.

BRAY, WILLIAM (*d.* 1644), chaplain to Archbishop Laud, was educated at Christ's College, Cambridge, where he graduated B.A. in 1616–17, M.A. in 1620, and B.D. in 1631. At the outset of his clerical career he was a popular lecturer in puritan London, but changing his views he became one of Archbishop Laud's chaplains in ordinary, and obtained considerable church preferment. He was rector of St. Ethelburga in London, 5 May 1632; prebendary of Mapesbury in the church of St. Paul, 12 June following; and vicar of St. Martin-in-the-Fields, 2 March 1632–3. The king presented him, on 7 May 1634, to the vicarage of Chaldon-Herring in Dorsetshire, and by letters patent, dated 15 Jan. 1637–8, bestowed on him a canonry in the church of Canterbury.

After he had licensed two obnoxious books by Dr. John Pocklington, the Long parliament bade him preach a recantation sermon at St. Margaret's, Westminster. On 12 Jan. 1642–3 the house proceeded to sequester him from the vicarage of St. Martin's, and in the latter end of March following his books were seized; he was also imprisoned, plundered, and forced to fly into remote parts, where, it is said, he died in 1644.

His recantation sermon was published with the title: 'A Sermon of the Blessed Sacra-

ment of the Lord's Supper; proving that there is therein no proper sacrifice now offered; Together with the disaproving of sundry passages in 2 Bookes set forth by Dr. Pocklington; the one called Altare Christianum, the other Sunday no Sabbath: Formerly printed with Licence. Now published by Command,' London, 1641, 4to.

BRAY, WILLIAM (1736–1832), antiquary, the fourth and youngest son of Edward Bray of Shere in Surrey, who married Ann, daughter of Rev. George Duncomb, was born in 1736. When only ten years old he was entered at Rugby, and cultivated literature by means of occasional purchases from an itinerant bookseller from Daventry. On one occasion, having ordered a single number of the 'Rambler,' the bookseller, to his amazement, ordered all the copies which had then appeared, a proceeding which, as Bray was wont to declare, nearly ruined him. On leaving school he was placed with an attorney, Mr. Martyr, at Guildford, but not long afterwards obtained a position in the board of green cloth, which he held for nearly fifty years and was then superannuated. On the death of his elder brother, the Rev. George Bray, on 1 March 1803, he inherited the family estates in Shere and Gomshall. In 1758 he married Mary, daughter of Henry Stephens of Wipley, in Worplesdon, who died 14 Dec. 1796, aged 62, having had numerous children, though only three, one son and two daughters, lived to maturity, and the son predeceased his father. Bray was an incessant worker. His position in the county and his legal training caused him to be associated in many charitable and civil trusts in Surrey. He died at Shere 21 Dec. 1832, aged 96, and a mural monument is erected to his memory in its church. Bray was elected F.S.A. in 1771, became the treasurer of the society in 1803, and contributed frequently to the 'Archæologia.' His first publication was the 'Sketch of a Tour into Derbyshire and Yorkshire;' originally published anonymously in 1777, the second edition appearing with the author's name in 1783, and though its pages were somewhat overburdened with antiquarian lore, it was frequently reprinted and included in Pinkerton's 'Travels.' His next work, which was printed privately, was 'Collections relating to Henry Smith, sometime Alderman of London.' When the Rev. Owen Manning, who had begun a history of Surrey, died in 1801, Bray undertook to complete the work, and in its prosecution visited every parish and church within the county's borders. The first volume was issued in 1804, the second in 1809, and the third in 1814; it still remains one of the best county histories that England can boast of. In the British Museum there exists a duplicate of this work in thirty folio volumes, with a special title-page dated 1847, and with over 6,000 prints and drawings collected by Mr. R. Percival. Bray's last literary labour was the printing and editing of the 'Memoirs of the Life and Writings of John Evelyn, comprising his Diary, &c.,' which was first published in 1818 in two volumes, appeared in 1827 in five volumes, and has been often reissued.

[Manning and Bray's Surrey, i. 495, 523, iii. 687; Gent. Mag. 1833, pp. 87, 88; Rugby School Register, i. 34; Anderson's British Topography, 268.] W. P. C.

BRAYBROC, HENRY DE (*d.* 1234?), judge, was undersheriff of Rutlandshire, Buckinghamshire, and Northamptonshire, in 1210–1219, and of Bedfordshire 1211, and sheriff of the same three counties in the next and three succeeding years. He is included by Roger of Wendover (1211) with his father, Robert Braybroc, in the list of the evil counsellors of John in his struggle with the pope. He remained loyal until 1215, when the insurgent barons induced him to join their party. His estates, which were extensive, were immediately confiscated, and on John's making his peace with the pope, Braybroc was one of those who were excommunicated as enemies to the king (ROGER DE WENDOVER, ed. Coxe, iii. 237). In 1217 he defended the castle of Montsorel, near Dunstable, against the protector, William Marshall, until relieved by Louis; but after the battle of Lincoln he did homage, and was reinstated in his lands. In 1224 he was sent to Dunstable with two colleagues to hold assizes of novel disseisin for the counties of Bedford and Buckingham, when Falkes de Breauté [q. v.] was so incensed by being fined 100*l.* upon each of thirty verdicts found against him for forcible disturbance of his neighbours, that he ordered his brother William, who was in command of Bedford Castle, to seize the offending justices and confine them in the dungeon. They were warned of the impending danger, and quitted the town. His colleagues made good their escape, but Braybroc was taken, roughly handled, and imprisoned in the castle. His wife carried the news to the king, then in parliament at Northampton, who immediately marched upon the town.

William de Breauté, refusing to surrender on the king's summons, was promptly excommunicated by the archbishop, and the castle was reduced by a regular siege, after a stubborn resistance lasting sixty days (16 June–15 Aug.), the commandant and the garrison, with the exception of three templars, being hanged on the spot. The king ordered the tower and outer battlements to be razed to the ground, the inner works to be dismantled and the moats filled up, and appointed Braybroc to superintend the execution of this work. The ruins of that portion of the building which was left standing were extant in Camden's time. Braybroc was justice itinerant for the same counties next year (1225), and in the year following (1226) justice itinerant for Lincolnshire and Yorkshire. In an exchequer record of the year 1227 he is described as justice of the bench. The last mention of him is in 1228, when Dugdale notices a fine as having been levied before him. That he was dead in 1234 appears from the record of a fine which his widow Christiana in that year paid to the king for the privilege of marrying whom she pleased. She was the daughter of Wischard Ledet, a rebel, part of whose estates had been confiscated by John, and granted to Master Michael Belet in 1216. The portion which remained unforfeited devolved upon his daughter on his death in 1221-2, Braybroc then paying a fine of 100*l.* upon the succession. It was situate in Northamptonshire, where he had estates, as also in Bedfordshire, Buckinghamshire, Leicestershire, Lincolnshire, and Cambridgeshire. Braybroc had two sons, (1) Wischard, who took his mother's name of Ledet; (2) John, a descendant of whom, Sir Reginald Braybroc, knight, married in the reign of Henry IV a granddaughter of John de Cobham, whose only child Joan married Sir Thomas Brooke, father of Sir Edward Brooke of Cobham, ancestor of the noble family of Cobham.

BRAYBROKE, ROBERT DE (*d.* 1404), ecclesiastic and judge, son of Sir Gerard Braybroke, knight of Braybroke Castle in Northamptonshire, a descendant of Henry de Braybroc [q. v.], studied civil law at Oxford, taking the degree of licentiate therein. After taking holy orders he obtained (1360), by papal provision, the rectory of Hinton, Cambridgeshire, which, in 1379, he surrendered for the rectory of Girton, Lincolnshire, and this again for that of Horsenden soon afterwards. He was appointed to the prebend of Fenton, in the church of York, 9 Nov. 1366; to that of Fridaythorpe, in the same church, 19 Oct. 1370; to that of All Saints in Hungate, in the church of Lincoln, about 1378; and to that of Colwich, in the church of Lichfield, in the following year. He became dean of Salisbury in 1379–80; archdeacon of Cornwall July 1381; bishop of London, by bull of Pope Urban, 9 Sept. of the same year, to which he was consecrated at Lambeth 5 Jan. 1381–2. The same year (9 Sept.) he was created chancellor at Bristol, receiving the seal on the 20th following, but he resigned the office 10 March 1382–3. In 1382 he gave great offence to the Londoners, then much under the influence of Wycliffe, by refusing to proclaim the nullity of the statute against preachers of heresy passed in the previous year. His laxity in enforcing the laws against prostitutes also produced disturbances. In 1385 he made a vigorous attempt to vindicate the sanctity of St. Paul's by denouncing excommunication against all who were guilty of buying and selling, or playing at ball, within the precincts of the cathedral, or of shooting the birds which made the roof of the edifice their home. In the following year he established the festival of St. Erkenwald, in commemoration of St. Paul. In 1387 Richard II, having been forced by the barons, headed by the Duke of Gloucester, to dismiss the chancellor Michael de la Pole, earl of Suffolk, and to vest the executive power in a 'continual council,' sought to regain his former position by compelling the judges to declare the ordinances by which the revolution had been carried into effect null and void. At this juncture Braybroke attempted, at the instance of the Duke of Gloucester, to mediate between the king and the barons, and at first with some effect; but on Pole, who was present at the interview, breaking out into abuse of the duke, the bishop rejoined with more energy than the king deemed respectful, bidding the late chancellor remember that as he owed his life to the favour of the king, it was unseemly in him to speak evil of others. Braybroke was forthwith dismissed the king's presence, and the barons impeached and executed or banished the chiefs of the king's party. In 1392 Braybroke tried to induce the London cobblers to give up work on Sunday by a threat of excommunication. In 1394 he made a journey to Ireland, to represent to the king, then engaged in attempting to reform the adminis-

tration of that country, the necessity of taking steps to curb the insolence of the Lollards, who had nailed the principal articles of their creed to the door of St. Paul's. Braybroke was so far successful that Richard, on his return to England, compelled the principal offenders, Thomas Latimer and Richard Story, under pain of death, to take an oath of recantation. In the following year he was appointed, with the archbishop of York, to levy a contribution of 4*d.* per pound upon the value of all benefices in the kingdom, imposed by the pope for the benefit of the archbishop of Canterbury. The death of the archbishop (Courtney) soon relieved him from this unpopular duty. The bishop's last important public act was the reform of the chapter of St. Paul's. The canons residentiary had for some time past steadily refused to fill up any vacancies in their body unless the candidate for election would give security that he would expend in the first year after his election, in eatables and drinkables and other creature comforts, at least seven hundred marcs, a sum many times exceeding the annual value of the richest prebend. As a result the number of canons in residence had dwindled down from thirty, the full complement, to two, who divided between themselves the whole revenue of the church, and, not content with that, engrossed even the bread and ale, which from time immemorial had been the due of the non-resident canons. To put an end to this fraud the bishop obtained from the king a writ, dated 26 April 1398, addressed to himself and the dean and chapter, commanding them upon their allegiance, and under pain of a fine of 4,000*l.*, to make by Michaelmas, at the latest, statutes regulating the mode of election modelled on those in force at Salisbury, and to observe them faithfully for the future. Braybroke was a trier of petitions in most of Richard II's parliaments; he celebrated high mass in the lady chapel at St. Paul's, on occasion of a convocation of the clergy there in 1399, and was a member of Henry IV's privy council for the first three years of his reign. As to the precise date of his death there was formerly much doubt, five several dates being assigned by different writers, viz. 8 Dec. 1401, 17 Aug. 1404, 27 Aug. 1404, 28 Aug. 1404, and 27 Aug. 1405. He was buried in the lady chapel at St. Paul's, and a fine brass above his tomb remained intact as late as 1641, when Dugdale, who gives an engraving of it, saw it. The inscription on the plate assigns 27 Aug. 1404 as the date of death, and with this Godwin (*De Præsul.* 186) agrees. Braybroke was throughout his life a close friend of William of Wykeham. The brass was destroyed during the civil war. Dugdale relates that on the burning of the church in 1666 Braybroke's coffin was shattered by the fall of a portion of the ruins, and the body was taken out in a state of perfect preservation, 'the flesh, sinews, and skin cleaving fast to the bones,' so 'that being set upon the feet it stood as stiff as a plank, the skin being tough like leather, and not at all inclined to putrefaction, which some attributed to the sanctity of the person, offering much money for it.'

BRAYBROOKE, Barons of. [See Griffin, John Griffin, first Baron, 1719–1797; Neville, Richard Aldworth Griffin-, second Baron, 1750–1825; Neville, Richard Griffin, third Baron, 1783–1858; Neville, Richard Cornwallis, fourth Baron, 1820–1861.]

BRAYLEY, EDWARD WEDLAKE, the elder (1773–1854), topographer and archæologist, born in the parish of Lambeth, Surrey, in 1773, was apprenticed to one of the most eminent practitioners of the art of enamelling in the metropolis. Before the term of his indentures had expired he became acquainted with John Britton, 1771-1857 [q.v.], whom he used to meet at the shop of Mr. Essex in Clerkenwell. Both the young men had literary and artistic tastes and aspirations, and longed to emancipate themselves from the mechanical pursuits in which they were engaged. They formed a close friendship, which was maintained for the long period of sixty-five years, and they produced together many beautifully illustrated volumes on topographical subjects. They began their literary partnership in a very humble way. Their first joint speculation was a song called 'The Powder Tax, or a Puff at the Guinea Pigs,' written by Brayley and sung by Britton publicly at a discussion club meeting at the Jacob's Well, Barbican. The ditty was very popular, and seventy or eighty thousand copies of it were sold. Soon afterwards Brayley wrote 'A History of the White Elephant' for Mr. Fairburn in the Minories. In 1801 Brayley assisted Britton in producing the 'Beauties of Wiltshire.'

About the same time the two friends entered into a mutual copartnership as joint editors of the 'Beauties of England and Wales.' Having concluded arrangements with a publisher, they made in 1800 a pedestrian tour from London through several of the western and midland counties, and visited every county of North Wales in search of materials for the work. They soon discovered that they possessed but few qualifications for the adequate execution of their self-imposed task; but as the work progressed they gradually extended the sphere of their studies, and finally they acquired a fair, if not a profound, knowledge of the essential branches of topography and archæology. The first volume appeared in 1801, and contained descriptions of Bedfordshire, Berkshire, and Buckinghamshire. Accounts followed of the other counties in their alphabetical order. The first six volumes, ending with Herefordshire, were jointly executed by Brayley and Britton, the greater part of the letterpress being supplied by Brayley, while most of the travelling, correspondence, labour of collecting books and documents, and the direction of draughtsmen and engravers devolved on his partner. Although it had been at first announced that the work would be comprised in about six volumes, and finished in the space of three years, it extended to no fewer than twenty-five large volumes, and was in progress of publication for nearly twenty years. This once famous and highly popular work was beautifully embellished with copper-plate engravings. Dissensions arose, however, between the two authors and their publishers. At length the former practically withdrew from the undertaking (1814), and other writers filled their places. Brayley produced the accounts of Hertfordshire, Huntingdonshire, Kent, and part of the description of London (vols. vi.–x. pt. 2); but his name does not appear in any subsequent volume, and Britton was only responsible later for parts of vols. xi. and xv. The other volumes were compiled by the Rev. Joseph Nightingale, Mr. James Norris Brewer, and others. The 'Beauties' were completed in 1816. Upwards of 50,000*l.* had been expended on the work, and the number of illustrations exceeded seven hundred.

After the termination of his apprenticeship Brayley had been employed by Henry Bone [q. v.] (afterwards a Royal Academician) to prepare and fire enamelled plates for small fancy pictures in rings and trinkets. Subsequently, when that artist was endeavouring to elevate painting in enamel to the position it eventually acquired in his hands as a legitimate branch of pictorial art, Brayley prepared enamel plates for Bone's use, and he continued to do so for some years after he had become eminent as a topographer. The plates for the largest paintings in enamel which Bone executed—the largest ever produced until they were exceeded in several instances by those of Charles Muss—were not only made by Brayley, but the pictures also were conducted by him throughout the subsequent process of 'firing,' or incipient fusion on the plate, in the muffle of an air-furnace, requisite for their completion.

After as well as during the publication of the 'Beauties of England and Wales,' Brayley wrote a number of other popular topographical works. His literary activity was most remarkable. 'Mr. Brayley,' remarks Britton, 'was constitutionally of a healthy and hardy frame, and was thus enabled to endure and surmount great bodily as well as mental exertion. I have known him to walk fifty miles in one day, and continue the same for three successive days. After completing this labour, from Chester to London, he dressed and spent the evening at a party. At the end of a month, and when pressed hard to supply copy for the printer, he has continued writing for fourteen and for sixteen hours without sleep or respite, and with a wet handkerchief tied round a throbbing head.' Brayley was elected a fellow of the Society of Antiquaries in 1823, and in 1825 he was appointed librarian and secretary of the Russell Institution in Great Coram Street, which offices he held until his death. He continued his topographical labours, in addition to discharging his official duties, and nearly the whole of his most extensive work, the 'Topographical History of the County of Surrey,' was written by him between the ages of sixty-eight and seventy-six. His death occurred on 23 Sept. 1854.

Subjoined is a list of his publications: 1. 'Beauties of England and Wales, or Delineations Topographical, Historical, and descriptive of each County,' 1801–14. We have already indicated the portions of this great work that were written by Brayley. 2. 'Sir Reginalde, or the Black Tower. A Romance of the Twelfth Century. With Tales and other Poems,' 1803 (conjointly with William Herbert). 3. 'The Works of the late Edward Dayes, edited with Illustrative Notes,' 1805. The topographical portion of this volume was reprinted in 1825 under the title of 'A Picturesque Tour through the Principal Parts of Yorkshire and Derbyshire.' 4. 'Views in Suffolk, Norfolk, and Northamptonshire, illustrative of the Works of Robert Bloomfield; accompanied with descriptions; to which is annexed a Memoir of the Poet's Life,' 1806. 5. 'Lambeth Palace

illustrated by a series of Views representing its most interesting Antiquities,' 1806. 6. 'The British Atlas; comprising a series of maps of all the English and Welsh counties; also plans of the Cities and principal Towns,' 1810. 7. 'Cowper: illustrated by a series of views accompanied with copious descriptions, and a brief sketch of the Poet's Life,' 1810. 8. Descriptions of places represented in 'Middiman's Views of Antiquities of Great Britain,' 1813. 9. 'Popular Pastimes: a selection of Picturesque Representations, accompanied with Historical Descriptions,' 1816. 10. 'Delineations, Historical and Topographical, of the Isle of Thanet and the Cinque Ports,' 1817. 11. 'The History and Antiquities of the Abbey Church of St. Peter, Westminster: including Notices and Biographical Memoirs of the Abbots and Deans of that Foundation; illustrated by J. P. Neale,' 2 vols. 1818. 12. Article on 'Enamelling' in vol. xiii. of Rees's 'Cyclopædia,' 1819. 13. 'The Ambulator, or Pocket Companion for the Tour of London and its Environs; twelfth edition, with an appendix containing lists of pictures in all the royal palaces and principal mansions round London,' 1819. 14. 'A Series of Views in Islington and Pentonville by A. Pugin, with a description of each subject by E. W. Brayley,' 1819. 15. 'Topographical Sketches of Brighthelmstone and its neighbourhood; with engravings,' 1825. 16. 'An Inquiry into the Genuineness of Prynne's "Defence of Stage Plays," &c., together with a reprint of the said tract, and also of Prynne's "Vindication,"' 1825. 17. 'The History and Antiquities of the Cathedral Church of Exeter,' in Britton's 'Cathedral Antiquities,' 1826–7. 18. 'Historical and Descriptive Accounts of the Theatres of London. Illustrated by a view of each theatre drawn and engraved by D. Havell,' 1826. 19. 'Catalogue of the Library of the Russell Institution,' 1826, 1849. 20. 'Devonshire illustrated in a series of views of Towns, Docks, Churches, Antiquities, Abbeys, Picturesque Scenery, Castles, Seats of the Nobility, &c.' 1829. 21. 'Londiniana, or Reminiscences of the British Metropolis,' 4 vols., 1829. 22. 'Outlines of the Geology, Physical Geography, and Natural History of Devonshire.' In Moore's 'History of Devonshire,' vol. i. 1829. 23. 'Memories of the Tower of London,' 1830 (conjointly with Britton). 24. 'Devonshire and Cornwall illustrated; with Historical and Topographical descriptions,' 1832 (conjointly with Britton). 25. 'The Graphic and Historical Illustrator: an Original Miscellany of Literary, Antiquarian, and Topographical Information,' 4to. This periodical contained a variety of essays, criticisms, biographical and archæological papers, with woodcut illustrations. It was carried on from July 1832 to November 1834, when it was discontinued. 26. 'The Antiquities of the Priory of Christchurch, Hants, consisting of plates, sections, &c., accompanied by historical and descriptive accounts of the Priory Church, &c., by B. Ferrey. The literary part by E. W. Brayley,' 1834. There is a copy printed on vellum in the British Museum. 27. A revised edition of De Foe's 'Journal of the Plague Year,' 1835, reprinted 1872 and 1882. 28. 'The History of the Ancient Palace and late Houses of Parliament at Westminster,' 1836. 29. 'Illustrations of Her Majesty's Palace at Brighton, formerly the Pavilion; executed under the superintendence of John Nash, architect: to which is prefixed a History of the Palace,' 1838. 30. 'A Topographical History of the County of Surrey. The geological section by G. Mantell,' 5 vols., Dorking and London, 1841–8, 4to; new edition by Edward Walford, 4 vols., London, 1878–81, 4to.

T. C.

BRAYLEY, EDWARD WILLIAM, the younger (1802–1870), writer on science, eldest son of Edward Wedlake Brayley the elder [q. v.], was born in London in 1802. He was educated, together with his brothers Henry and Horatio, under an austere system. Secluded from all society except that of their tutors, the boys led a cheerless and monotonous life. The solace of pocket-money was denied them, and they were not allowed to take a walk unaccompanied by a tutor. Henry and Horatio both died of consumption. Edward William, who survived, studied science both in the London and the Royal Institution, where he attended Professor Brande's lectures on chemistry. Early in life, following in his father's footsteps, he gave some attention to topographical literature, and wrote the historical descriptions in a work on the 'Ancient Castles of England and Wales' (2 vols. 1825), the views being engraved by William Woolnoth from original drawings. However, he soon abandoned antiquarian studies and devoted his attention exclusively to scientific investigation. He had already published in the 'Philosophical Magazine' (1824) a paper on

luminous meteors, a subject which occupied his attention to nearly the close of his life; and he afterwards published a work 'On the Rationale of the Formation of the Filamentous and Mamillary Varieties of Carbon, and on the probable existence of but two distinct states of aggregation in ponderable matter,' London, 1826, 8vo. For some years he held the office of joint-librarian of the London Institution in Finsbury Circus. He was one of the editors (between 1822 and 1845) of the 'Annals of Philosophy,' the 'Zoological Journal,' and the 'Philosophical Magazine.' To all these he contributed original papers and notices, chiefly on subjects of mineralogical chemistry, geology, and zoology, together with special communications on igneous meteors and meteorites, and a few articles of scientific biography. His principal contribution to geological science was a paper on the formation of rock-basins, published in the 'Philosophical Magazine' in 1830. In 1829 and 1830 he was engaged by Mr. (afterwards Sir) Rowland Hill, and the father and brother of that gentleman, to take charge, as lecturer and tutor, of a department of instruction in physical science which they were desirous of making a permanent part of the system of education carried on in their schools of Hazelwood near Birmingham, and Bruce Castle, Tottenham, near London. The scheme, however, did not receive adequate encouragement from the public. The original views on this subject of the Messrs. Hill and Brayley were explained and advocated by the latter in a work entitled 'The Utility of the Knowledge of Nature considered; with reference to the General Education of Youth,' London, 1831, 8vo.

At the London Institution he took part in the system of lectures, both illustrative and educational. He occasionally delivered discourses on special subjects at the Friday-evening meetings of the Royal Institution; in one, 11 May 1838 (*Phil. Mag.* S. 3, xii. 533), 'On the Theory of Volcanoes,' he showed that the thermotic theory of plutonic and volcanic action, indicated by Mr. George Poulett Scrope, M.P., F.R.S., and explicitly proposed and developed by Mr. Babbage and Sir John F. W. Herschel, necessarily included, as an integrant part, contrary to Herschel's opinion, the chemical theory on the same subject of Sir Humphry Davy, founded on his discovery of the metallic bases of alkalies and alkaline earths. This subject was resumed in a course of lectures on 'Igneous Geology,' also delivered at the Royal Institution, in 1842, on the state of the interior of the earth and the effective thickness of its crust.

Brayley prepared the last genuine edition of Parkes's 'Chemical Catechism' (1834). To the biographical division of the 'English Cyclopædia' he contributed the lives of several men of science; and to the arts and sciences division of the same work the articles Meteors, Correlation of Physical Forces, Refrigeration of the Globe, Seismology, Waves and Tides, Winds, and others on cognate branches of physics. He also wrote the elaborate papers on the 'Physical Constitution and Functions of the Sun,' in the 'Companion to the Almanac' for the years 1864, 1865, and 1866, and that on the 'Periodical Meteors of November' in the volume for 1868. Brayley gave assistance to several men of science in conducting their works through the press, and assisting them to give perfect expression to their own views. Among these works may be particularised the 'Origines Biblicæ' of Dr. Charles Beke, F.S.A.; the 'Correlation of Physical Forces' of Mr. (now Sir) William Robert Grove, F.R.S. (the first and second editions); and the 'Barometrographia' of Mr. Luke Howard, F.R.S. It is deserving of note that when Sir William Grove first achieved the decomposition of water by heat there were only three persons present besides the discoverer, namely, Faraday, Gassiot, and Brayley.

Brayley was elected a fellow of the Royal Society in 1854; he was an original member of the Zoological and Chemical Societies, a corresponding member of the Societas Naturæ Scrutatorum at Basle, and a member of the American Philosophical Society. Brayley died on 1 Feb. 1870, at his residence in London, of heart disease.

BREARCLIFFE, JOHN. [See Briercliffe.]

BREAUTÉ, FALKES de (*d.* 1226), military adventurer, a Norman of mean and illegitimate birth, was appointed sheriff of Glamorgan by King John about 1211. He soon gained a high place in his master's favour, for he was an able, unscrupulous, and godless man. The disturbed state of the Welsh border must have invested his office

with special importance; he became one of the chief of the king's evil counsellors, and was made sheriff of Oxfordshire. In the copy of the great charter given by Matthew Paris his name occurs in the list of those alien disturbers of the peace whom the king swore to banish from the kingdom. At the same time Paris mentions him as one of those who joined themselves to the twenty-five guardians of the charter. A St. Albans historian certainly had good reason to write him down as a disturber of the peace, even if his name was not in the original document (Matt. Paris, ii. 604, *n.* 1, ed. Luard; Rog. Wend. iv. 10; *Gesta Abbatum*, i. 267). On the outbreak of the war between the king and the barons in the autumn of 1215 Falkes was appointed one of the leaders of the army which was left by John to watch London and cut off the barons' supplies while he marched northward. The royal forces wasted the eastern counties, destroyed the castles and parks of the barons, and set fire to the suburbs of London. Falkes took the town of Hanslape from William Mauduit and destroyed it, and soon after reduced the castle of Bedford. Greatly pleased at his success, John gave him to wife Margaret, the widow of Baldwin, earl of Albemarle, son of William of Redvers (de Ripariis), earl of Devon, and the daughter and heiress of Warin Fitzgerald. He also gave him the custody of the castles of Windsor, Oxford, Northampton, Bedford, and Cambridge. From these castles Falkes drew a large number of men as unscrupulous as himself. In 1216, in company with Randulph de Blundevill [q. v.], earl of Chester, he took Worcester for the king after a stout resistance, plundered the abbey, and put the citizens to the torture, to compel them to give up their wealth. His men ill-treated the monks of Warden (Bedfordshire), for Falkes had a dispute with them about a certain wood; one monk was slain and some thirty were dragged off as prisoners to Bedford. In this case, however, Falkes showed a better spirit than was usual with him, for he submitted to discipline, made restitution, and took the house under his protection (*Ann. de Dunstaplia*). Late in the year he joined forces with the Earl of Salisbury and Savaric de Mauleon, and invaded the isle of Ely. He destroyed a tower that guarded the island and made a new fortification. He depopulated the country, spoiled the churches, and exacted 209 marks of silver from the prior as the ransom of the cathedral church. The next year, on St. Vincent's day (22 Jan. 1217), he made a sudden attack on St. Albans in the dusk of the evening, and sacked the town. He then entered the abbey. The abbot's cook was slain as he ran for refuge to the church, for Falkes would not give the monks the advantage of treating with him from a place of security. He demanded 100 pounds of silver of the abbot, bidding him give the money at once, or he would burn the town, the monastery, and all its buildings, and the abbot was forced to comply with the demand. He then marched off, taking many captives with him. In the forest of Wabridge he took Roger of Colville, and more than sixty men, clerks and laymen, with him, who had betaken themselves to the forest and formed a band of robbers. Falkes remembered the wrong he had done the great abbey with uneasiness, for men deemed that St. Alban was not to be offended with impunity. One night when he and his wife were at Luton he dreamed that a huge stone fell from the abbey church and ground him to powder. He woke in terror and told his dream to his wife, who bade him hasten to St. Albans and make his peace. He took her counsel and went off early the next day to the abbey. There he kneeled before the abbot, made his confession, and prayed that he might ask pardon of the brethren. He entered the chapter-house with his knights; they held rods in their hands, and bared their backs. He confessed his sin, and he at least received a whipping from each monk. Then he put on his clothes and advanced to the abbot's seat. 'My wife,' he said, 'has made me do this for a dream; but if you want me to restore you what I took from you I will not listen to you,' and so he turned and went out (Matt. Paris, iii. 12, v. 324; *Gesta Abbatum*, i. 267–269).

By the spring of 1217 the party of Henry III, who had been crowned in the autumn of the year before, had won many advantages over Louis, the French claimant. Mountsorel was besieged on Henry's behalf by the Earl of Chester, and Falkes led the men of his castles to help the earl. The siege was raised by Robert Fitz Walter, and Falkes marched to Newark to join the king's army, which was gathered under the Earl Marshall for the relief of the castle of Lincoln. When the royal army came before the city, the leaders said that it was most important for them to introduce a force into the castle, so as to attack Louis's men in front and rear at the same time. There was some hesitation about undertaking this dangerous duty. Finally they sent Falkes, who succeeded in entering the castle with all his band. From the parapets of the castle and the roofs of the houses he rained down missiles on the enemy's chargers, and when he saw that he had thrown them into confusion with his artillery he made a furious sally into the streets. He was taken and

rescued. Meanwhile the king's troops broke into the city, and Louis's men, thus hemmed in by Falkes on the one side and the main body of the army on the other, were cut to pieces in the streets. The victory of the royal army, which virtually ended the war, was in no small degree due to the desperate courage of Falkes and his men. During the Christmas festival 1217–18 he entertained the king and all his court at Northampton. He obtained livery of the manor of Plympton, his wife's dower, and of all the lands she inherited from her father, and was also made guardian of the young Earl of Devon, his stepson, and of his lands. His power was now great. Keeper of several strong castles which were garrisoned by his own men, and commanded by his own castellans, sheriff of six counties, lord of vast estates, and executor of the late king's will, he is described as being at this period 'something more than the king in England' (*Ann. de Theok.* p. 68; STUBBS, *Const. Hist.* ii. 35).

The policy of Hubert de Burgh, who demanded the surrender of the king's demesne, was highly distasteful to Falkes and the rest of John's foreign favourites. Although outwardly acting for the king, Falkes abetted the revolt of the Earl of Albemarle in 1220, and secretly supplied him with forces. The failure of the revolt was evidently a severe blow to his hopes, for the next year he and Peter des Roches, bishop of Winchester, who upheld the foreign party in the kingdom, determined to go on the crusade. He was, however, prevented from carrying out this design by the news of the fall of Damietta. He continued, therefore, for a little longer to act as one of the king's officers under the government of the justiciar, Hubert de Burgh. As sheriff he caused a deacon, who had apostatised to Judaism, and who was condemned by the council held at Osney and delivered over to the secular arm, to be burnt at Oxford in 1222. In the same year a dangerous insurrection broke out in London under the leadership of Constantine FitzAthulf, one of the principal citizens. This was more than a local riot, for Constantine was a partisan of Louis of France, and led the citizens with the cry 'Montjoie! Montjoie! God and our Lord Louis to the rescue!' He and two others were taken. The justiciar was afraid to put them to death openly, because of the people. Falkes, however, came to his help. Foreigner as he was, he had no desire for a French king. What he and his party aimed at was not a change of dynasty, but the establishment of their own power at the expense of the royal authority. Besides, he probably had little sympathy with a citizen movement. Early in the morning he took the prisoners across the Thames to hang them. When the rope was round his neck, Constantine, who up to the last had hoped for a rescue, offered 15,000 marks as a ransom for his life. Falkes, however, would not hearken to him, and hanged all three. Then at the head of his men he rode into the city along with the justiciar, and seized all who had taken part in the sedition. At the same time he was by no means prepared to submit without a struggle to the justiciar's policy of resumption. He may have carried on some negotiations with France, though the part he took in quelling the rising of the Londoners shows that at that time at least he had little expectation of help from that quarter. It is tolerably certain that he and the Earl of Chester were at least in sympathy with the rising of the Welsh under Llewelyn ap Iorwerth and Hugh of Lacy in 1223. Even after the insurrection was quelled the danger was still great, and Pope Honorius III, who as guardian of the kingdom pressed the resumption of the castles, urged the bishops to do all they could to maintain peace. Falkes joined the Earl of Chester and other lords in a scheme for seizing the Tower. Finding themselves unable to carry out their design, the conspirators sent to the king, demanding the dismissal of the justiciar. Henry, however, held firmly to his minister. At Christmas 1223–4 a great council was held at Northampton, and there the archbishop and bishops pronounced a general excommunication against the disturbers of the peace. Falkes and the other malcontents assembled at Leicester were informed that unless they submitted to the king on the morrow sentence of excommunication would be pronounced against them by name. This threat and the consciousness of the inferiority of their forces brought them to submission. Falkes and his castellans, together with the other rebel lords, appeared before the king at Northampton, and surrendered into his hands the castles, honours, and wardships that pertained to the crown.

The justiciar lost no time in following up the victory gained at Northampton. In June the king's justices itinerant held an assize of novel disseisin at Dunstable. Falkes was found guilty of more than thirty (ROG. WEND. iv. 94, and *Chron. Maj.* iii. 84; thirty-five, *Ann. Dunst.* p. 90; sixteen, *Royal Letters*, i. 225; and *Rot. Claus.* i. 619, 655; see STUBBS, *Const. Hist.* ii. 35) acts of wrongful disseisin. He was adjudged to lie at the king's mercy, and a fine of immense amount was laid on him. In revenge he ordered his garrison at Bedford Castle to seize the justices. The justices heard of their danger and fled. One

of them, however, Henry de Braybroc [q. v.] was captured, ill-treated by the soldiers, and imprisoned at Bedford. Falkes provisioned the castle, which was commanded by his brother William. He was excommunicated by the archbishop, and retreated to Wales, taking shelter in the earldom of Chester. The king demanded the release of his judge. William returned answer that he would not let him go without the order of his lord Falkes, and 'for this above all, that he and the garrison were not bound to the king by homage or fealty' (Rog. Wend. iv. 95). The answer expressed the very essence of feudal anarchy, and should be compared with the plea urged by the barons in Stephen's reign on behalf of the garrison of Exeter (*Gesta Stephani*, 27; see under Baldwin of Redvers). A large force, including clergy as well as laymen, gathered at the king's summon, and the siege of Bedford was formed 20 June. The siege was a matter of national importance, for the land could have no rest so long as Falkes was in a position to defy the law. The king swore by the soul of his father (surely a strange oath) that he would hang the garrison. For the purposes of the siege the assembled magnates granted a carucage of ½ mark on their demesnes, of 2*s*. on the lands of their tenants, and two days' work at making military engines. Still Falkes was not frightened, for he reckoned that the castle could be held for a year. The Earl of Chester, however, at last joined the king's side. He was forced to leave the earldom, and took refuge at Northampton. The pope wrote earnestly on his behalf. The garrison at Bedford made a desperate defence. The castle was surrendered on 14 Aug., and William de Breauté and some eighty of the garrison were hanged. Soon after the surrender Falkes was taken in the church of Coventry. He was not held captive, for men feared to violate the right of sanctuary. Seeing, however, that he had no other hope, he placed himself under the protection of the bishop (Alexander Stavensby), and in his company went to the king at Bedford. He threw himself at Henry's feet and asked for mercy, reminding him how well and at what cost he had served him and his father in time of war. By the advice of his council the king pronounced all his possessions forfeited, and committed him to the keeping of the bishop of London until it should be decided what should be done with him. His fall was looked on as a judgment for a special act of impiety, for in past days he had destroyed the church of St. Paul at Bedford, and used the materials for the construction of the castle in which he now found himself a prisoner. When the abbess of Elstow heard how he destroyed St. Paul's church, and saw that the offence remained unavenged, she taunted the apostle by taking away the sword from the hand of his image which stood in her convent. After the fall of Falkes she gave the apostle back his sword, for he had at last shown that he knew how to use it (*Chron. Maj.* iii. 87). When Falkes was in prison, his wife Margaret came before the king and the archbishop, and prayed for a divorce, for she said that she had been taken in time of war and married against her will. A day was fixed for hearing her case, and the king granted her all her own estates, on condition that she paid 300 marks a year towards extinguishing her husband's debts to the crown, placing her and her lands under the wardship of William of Warenne.

Falkes's case was laid before the great council held at Westminster in March 1225. The nobles decided that, forasmuch as he had faithfully served the king and his father for many years, he should not suffer in life or limb, but all agreed that he should be banished from England for ever. Accordingly the king bade William of Warenne see him safely out of the land. Falkes was then absolved from his excommunication, and, wearing the cross which he had assumed when he contemplated going on the crusade, was put on board a vessel with five of his attendants by the Earl of Warenne. As he parted from the earl he bade him with many tears carry his salutation to the king, and tell him that, whatever troubles he had wrought in his kingdom, he had acted throughout at the prompting of the nobles of England. On his landing in Normandy he was seized and carried before the French king. Louis was minded to hang him for all the ill he had done the French in England, and Falkes scarcely saved himself by swearing, as he had sworn to the earl, that he had been simply the tool of others. As, however, he wore the cross, the king let him go. He went on to Rome, bearing letters to the pope, whom he hoped to prevail on to interfere on his behalf. Meanwhile the legate Otho prayed the king in the pope's name to give Falkes back his wife and his lands, of mere charity to one that had served him and his father so well. Henry replied that he had been banished by the judgment of his peers, and that for open treason, of which he had been convicted by all the clergy and people of England, and that, king as he was, it behoved him to obey the laws and good customs of the kingdom. At Rome he had to spend much to forward his cause. He obtained an interview with the pope, who, it appears, made one more attempt on his behalf. The legate, however, met with the same answer as before. Meanwhile Falkes was allowed by the king of France to stay

at Troyes. He went on his way again towards Rome, and was hoping to be allowed to return to England, for it may be that he had not heard of the second repulse of the request made on his behalf, when he died suddenly at St. Cyriac in 1226. His death was put down to poison, and Hubert de Burgh [q. v.] was afterwards accused of having caused it. When at the same time the justiciar was accused of having caused the loss of Poitou, his counsel answered that the rebellion of Falkes was the true cause of the loss of Rochelle. Falkes was certainly a greedy, cruel, and overbearing man. For greediness and cruelty, however, he was surpassed by many men of the same time—by John, for example, and, to make a less hateful comparison, probably by Richard also; nor, to quote men more nearly of his own rank, was he more greedy than William Brewer, or more cruel than the Earl of Chester. That he was not wholly without some religious feelings is shown by his repentance and penances for the wrongs done to the monks of Warden and St. Albans, and perhaps also by his assumption of the cross. At St. Albans, however, his love of mockery and his habit of insolence broke through his probably sincere expression of penitence. This insolence made a strong impression on the men of his age; it rendered the injuries he inflicted on others doubly hard to bear. The abbot of St. Albans, for example, complained of the injury done to the crops of his house by the overflow of water from a pool Falkes had made at Luton. 'I wish,' he answered, 'I had waited until your grain had been garnered, and then the water would have destroyed it all.' His evil doings were characteristic of the class of military adventurers to which he belonged. In common with others of that class he was brave, and indeed his courage seems to have been of no ordinary sort. The foremost part he played in the history of his time shows that he was not a mere leader of men-at-arms. He was, however, no match for the wary politicians with whom he had to do, and his statement that he had simply carried out the devices of others was doubtless to some extent true. The Earl of Chester, for example, seems to have used him for a while, and then left him in his time of need. His fall was a crushing blow to the hopes of the malcontent party, and put an end to the importance of the foreign faction. Unlike most other adventurers, Falkes was faithful to his masters. His revolt was not against the king, but against orderly administrative government, which was hateful and ruinous to him. He left one daughter, Eva, married to Llewelyn ap Iorwerth, prince of North Wales.

BRECHIN, Sir DAVID (*d.* 1321), lord of Brechin, a royal burgh in Angusshire, was eldest son of Sir David of Brechin, one of the barons of Scotland who attended Edward I into France 1297: his mother, whose christian name is not known, was one of the seven sisters of King Robert Bruce, but his father seems to have favoured the English side up to the king's victory at Inverary in 1308, when he retired to his castle of Brechin. Being besieged, however, he made his peace and ranged himself under the standard of his brother-in-law. We do not know when and where the younger Sir David was born, or what were those feats of arms in the Holy Land said to have won him the poetical title of 'The Flower of Chivalry.' Like his father, he attached himself to the English, and in 1312 was made warden of the town and castle of Dundee, then in English hands. He received at this time a pension out of the customs duties on hides and wool at the port of Berwick-on-Tweed, through Piers Gaveston, the king's favourite. At the battle of Bannockburn (1314) he was taken prisoner, but afterwards came into great favour with King Robert. It is said, however, that he still received pay from Edward, and held special letters of protection from him. Brechin was one of the nobles who signed the letter of 6 April 1320, soliciting the pope's interference. De Brechin was implicated in Lord Soulis's conspiracy against King Robert. The plans were revealed to him on an oath of secrecy. He refused co-operation, but kept silence. The plot was divulged, and Bruce instantly arrested Soulis, Brechin, and others, and called a parliament at Perth (August 1320) to try them. Brechin and others were executed. The records of the trial are lost, but Tytler, without giving references, says there is evidence in the archives of the Tower of Brechin's complicity in the treason. Other writers doubt his guilt. The old Scottish poets commemorate him in their historical poems as 'the gud Schir David the Brechyn,' and his death left a stain on his uncle's character. He is called 'the flower of chivalrie,' 'the prime young man of his age for all arts of both peace and war.' All speak of his connection with the crusades, but if there is truth in

this part of his little-known history, he could not have been a young man at the time of his execution.

His lands of Brechin, Rothernay, Kinloch, and Knoegy were given by the king to David of Barclay, who, in 1315, had married his sister Margaret, and from whom the present possessors, the earls of Panmure, are descended.

J. W.-G.

BREE, ROBERT, M.D. (1759–1839), physician, was born at Solihull, Warwickshire, in 1759. He was educated at Coventry and at University College, Oxford, where he matriculated on 6 April 1775, and took his B.A. degree on 10 Nov. 1778, and, having studied medicine at Edinburgh, proceeded M.A. on 10 July 1781. He was admitted, 31 July 1781, an extra-licentiate of the College of Physicians; took his bachelor's degree in medicine on 4 July 1782, and that of M.D. on 12 July 1791. He had first settled at Northampton, and was appointed physician to the general infirmary in that town, which after a short stay he left for Leicester, to the infirmary of which he became physician. An obstinate attack of asthma caused in 1793 a temporary retirement from his profession. In 1794 he accepted the command of a company in a regiment of militia, and in 1796 settled at Birmingham, where he was appointed in March 1801 physician to the General Hospital. Bree published 'A Practical Inquiry into Disordered Respiration, distinguishing the Species of Convulsive Asthma, their Causes, and Indications of Cure,' 8vo, London, 1797. It reached a fifth edition in 1815, and was translated into several languages. 'In this work,' says Dr. Munk, the author 'embodied the numerous experiments in his own case, gave a more full and complete view of asthma and dyspnœa than had hitherto appeared, and laid down some important therapeutic rules, the practical value of which has been universally acknowledged.' Bree was consulted for asthma by the Duke of Sussex, by whose advice Bree removed in 1804 to Hanover Square, London. He was admitted a candidate of the Royal College of Physicians on 31 March 1806, and a fellow on 23 March of the following year. He was censor in the years 1810, 1819, and 1830, and on 2 July in the last-mentioned year was named an elect. In 1827 Bree was chosen Harveian lecturer, and published the lecture course he delivered.

Bree withdrew from practice in 1833, and, after suffering from renewed asthma, died in Park Square West, Regent's Park, on 6 Oct. 1839. He contributed two papers 'On the Use of Digitalis in Consumption' to the 'Medical and Physical Journal,' 1799. He was also the author of a paper 'On Painful Affections of the Side from Tumid Spleen,' read 1 Jan. 1811 before the Medical and Chirurgical Society, of which Bree, who had some years before been elected a fellow of the Royal Society, became a member of council and a vice-president in March following; and of a second paper on the same subject, read 26 May 1812, 'A Case of Splenitis, with further Remarks on that Disease.' These papers were afterwards published in the first and second volumes of the 'Medico-Chirurgical Transactions.' Bree was further the author of a small tract on 'Cholera Asphyxia,' 8vo, London, 1832.

[Introduction to the various editions of Bree's Practical Inquiry into Disordered Respiration; Watt's Bibl. Brit. 1824; Gent. Mag. November 1839; Catalogue of Oxford Graduates, 1851; Munk's College of Physicians, 1878.] A. H. G.

BREEKS, JAMES WILKINSON (1830–1872), Indian civil servant and author of 'An Account of the Primitive Tribes and Monuments in the Nilagiris,' was born at Warcop, Westmoreland, on 5 March 1830, and entered the Madras civil service in 1849. After filling various subordinate offices in the revenue and financial departments, he was appointed private secretary to Sir William Denison, governor of Madras, in 1861, holding that appointment until the latter part of 1864, when, owing to ill-health, he left India and joined a mercantile firm in London, with the intention of retiring from the public service; but this arrangement not proving satisfactory, he returned to Madras in the autumn of 1867, and was shortly afterwards appointed to the newly constituted office of commissioner of the Nilagiris, the principal sanatorium of the south of India. While thus employed, Breeks, in common with other heads of districts in the Madras presidency, was, in 1871, called upon by the government, at the instance of the trustees of the Indian Museum at Calcutta, to make a collection of arms, ornaments, dresses, household utensils, tools, agricultural implements, &c., which would serve to illustrate the habits and modes of life of the aboriginal tribes in the district, as well as a collection of objects found in ancient cairns and monuments.

The discharge of this duty, which he performed in a very thorough and satisfactory manner, cost him his life; for having occasion, towards the close of his investigation, to visit a feverish locality in a low part of the mountain range, he there laid the seeds of an illness which a few months later caused his death. In the meantime he had made a complete collection of the utensils, arms, &c., in use among the four aboriginal tribes of the Nílagiris, the Todas, Kotas, Kurumbas, and Irulas, and of the contents of many cairns and cromlechs, and had written the greater part of the rough draft of a report, which, completed and edited by his widow, who had been closely associated with him in his inquiries, was published in London by order of the secretary of state.

This report contains a very full account of each of the four tribes above mentioned, illustrated by drawings and photographs, and supplemented by a brief notice of some similar remains in other parts of India. Photographs of the men and women of the several tribes, of their villages, houses, temples, &c., are also given; as well as a vocabulary of the tribes, and descriptive catalogues of the ornaments, implements, &c., now in use. The book is a valuable record of intelligent and accurate research.

The Breeks Memorial School at Ootacamund, for the children of poor Europeans and Eurasians, was erected by public subscription shortly after his death as a memorial of his services to the Nílagiri community.

Breeks married in 1863 Susan Maria, the eldest surviving daughter of Colonel Sir William Thomas Denison, R.E., K.C.B., at that time governor of Madras. He left three sons and one daughter.

A. J. A.

BREEN, JAMES (1826–1866), astronomer, was the second son of Hugh Breen, senior, who superintended the lunar reductions at the Royal Observatory, Greenwich. He was born at Armagh, in Ireland, 5 July 1826, was engaged at the age of sixteen as a calculator at Greenwich, and exchanged the post for that of assistant in the Cambridge Observatory in August 1846. In 1854 he published 'The Planetary Worlds: the Topography and Telescopic Appearance of the Sun, Planets, Moon, and Comets,' a useful little work suggested by discussions on the plurality of worlds, showing considerable acquaintance with the history of the subject, as well as the practical familiarity conferred by the use of one of the finest refractors then in existence. After twelve years' zealous cooperation with Challis, he resigned his appointment towards the close of 1858, and cultivated literature in Paris until 1860, when he went to Spain, and observed the total eclipse of the sun (18 July) at Camuesa, with Messrs. Wray and Buckingham of the Himalaya expedition. In the following year, after some months in Switzerland, he settled in London, and devoted himself to literary and linguistic studies, reading much at the British Museum, and contributing regularly, but for the most part anonymously, to the 'Popular Science Review' and other periodicals. He had made arrangements for the publication of a work on stars, nebulæ, and clusters, of which two sheets were already printed, when his strength finally gave way before the ravages of slow consumption. He died at noon, 25 Aug. 1866, aged 40, and was buried with his father at Nunhead. He had been elected a fellow of the Royal Astronomical Society, 10 June 1862. Extracts from his observations at Cambridge 1851–8 appeared in the 'Astronomische Nachrichten' and 'Monthly Notices.' He calculated the orbits of the double star ξ Ursæ Majoris, assigning a period of 63·14 years; of Petersen's third (1850), and Brorsen's (1851, iii.) comets (*Monthly Notices*, x. 155, xxii. 158; *Astr. Nach.* No. 786). His observations of Donati's comet with the Northumberland equatorial were printed in the 'Memoirs of the R. A. Soc.' xxx. 68.

[Monthly Notices, xxvii. 104; R. Soc. Cat. Sc. Papers, i. 594.] A. M. C.

BREGWIN or BREGOWINE (*d.* 765), archbishop of Canterbury, the son of noble parents dwelling in the old Saxon land, came to England for the sake of the learning spread abroad here by Theodore and Hadrian. In this learning he is said to have excelled. He was elected archbishop in the presence of a large and rejoicing crowd, and was consecrated on or about St. Michael's day 759 (Flor. Wig. i. 57, ed. Thorpe; *Anglo-Saxon Chron.*; *Eccl. Documents*, iii. 397). In the account of the synod held at Clovesho in 798 there is a notice of a synod held by Bregwin, in which complaint was made of the unjust detention of an estate granted to Christ Church by Æthelbald of Mercia (*Eccl. Documents*, iii. 399, 512). A letter is extant addressed by Bregwin to Lullus, archbishop of Mentz, informing him of the death of the Abbess Bugge, or Eadburh (*Epp. Bonif.* ed. Jaffé, No. 113). From this letter it appears that Bregwin made the acquaintance of Lullus during a visit to Rome.

where he had much friendly converse with him. The duration of Bregwin's archiepiscopate is variously stated; by the 'Anglo-Saxon Chronicle' as four, by Eadmer as three, and by Osbern as seven years. As he signs charters in 764 (*Codex Dipl.* civ., cxi.), the date of his death given by Osbern (25 Aug. 765) may be accepted as correct. The place of his burial was a matter of interest. His predecessor, Cuthberht, caused the custom of making St. Augustine's the burying-place of the archbishops to be broken through, and was laid in his cathedral church. This greatly angered the monks of St. Augustine's; for the miracles and offerings at the tombs of archbishops brought them both honour and profit. In order to secure the new privilege of their church, the clergy of Christ Church observed the same secrecy on the death of Bregwin as they had done in the case, and by the order, of Cuthberht. They concealed the illness of the archbishop, and on his death buried him before they rang the bell for him. When Jaenberht, abbot of St. Augustine's, heard of the death, he came down with a band of armed men to claim the body, but found that he was too late (THORN, 1772-4). An attempt was made in aftertimes to deprive Christ Church of Bregwin's body. After the marriage of Henry I and Adeliza of Louvain a monk named Lambert came from the queen's old home to see her, and was lodged at Canterbury. He begged the body of Bregwin of Archbishop Ralph, who promised to allow him to have it to carry back with him. Finding that the archbishop repented of his weakness, Lambert set out for Woodstock to lay his case before the queen. On his way he died at London. This attempt to despoil the church of Canterbury was naturally followed by a vision, in which the departed archbishop expressed his indignation.

Documents, iii. 397-99; Kemble's Codex Dipl. i. 129-35, 137, 140; Chron. W. Thorn, ed. Twysden, 1772-4; Hook's Lives of the Archbishops of Canterbury, i. 234.] W. H.

BREKELL, JOHN (1697-1769), presbyterian minister, born at North Meols, Lancashire, in 1697, was educated for the ministry at Nottingham. His first known settlement was at Stamford, apparently as assistant, but he did not stay long. He went to assist Christopher Bassnett [q. v.] at Kaye Street, Liverpool, 1729 (so Dr. EVANS's manuscript; HENRY WINDER, D.D., in his manuscript funeral sermon (2 Tim. iv. 7, 8) for Brekell, preached on 7 Jan. 1770, says he was minister in Liverpool 'for upwards of forty years;' a manuscript letter of WINDER's, 2 June 1730, mentions Brekell as a Liverpool minister). Toulmin prints a letter (dated Liverpool, 3 Dec. 1730) from Brekell to Rev. Thomas Pickard of Birmingham, showing that Brekell had been asked to Birmingham, but had 'handsome encouragement to continue' where he was. The date, April 1732, given by Dr. Martineau, may be that of Brekell's admission to the status of a colleague after ordination. On Bassnett's death on 22 July 1744 Brekell became sole pastor. His ministry covers the period between the rise of the evangelical liberalism of Doddridge (his correspondent, and the patron of his first publication), and the avowal of Socinianism by Priestley, to whose 'Theological Repository' he contributed in the last year of his life. Brekell, though his later treatment of the atonement shows Socinian influence, stood firm on the person of Christ. In his sermons he makes considerable use of his classic literature. Lardner quotes him (*Hist. of Heretics*, bk. i.) as a critic of the ante-Nicene writers. His first publication was 'The Christian Warfare . . . a Discourse on making our Calling and Election sure; with an Appendix concerning the Persons proper to be admitted to the Lord's Supper,' 1742, 8vo. Following the example of his predecessor, he preached and published a sermon to sailors, 'Euroclydon, or the Dangers of the Sea considered and improved,' &c. (Acts xxvii.), 1744, 12mo. Then came 'Liberty and Loyalty,' 1746, 8vo (a Hanoverian pamphlet). More important is 'The Divine Oracles, or the Sufficiency of the Holy Scriptures,' &c., 1749, 8vo, in reply to a work by Thomas Deacon, M.D., of Manchester, a nonjuring bishop of the irregular line. At this date (see pp. 72, 74) Brekell sides with Athanasius against the Arians. He published also on 'Holy Orders,' 1752, and two tracts in vindication of 'Pædobaptism,' 1753 and 1755. Brekell's name appears among the subscribers to a work by Whitfield, a Liverpool printer and sugar refiner, who had left the presbyterians, entitled 'A Dissertation on Hebrew Vowel-points.' After Whitfield's lapse, Brekell wrote 'An Essay on the Hebrew Tongue, being an attempt to shew that the Hebrew Bible might be originally read by Vowel Letters without the Vowel Points,' 1758, 8vo, 2 pts., in which he is generally admitted to have had the best of the argument. Brekell wrote tracts on 'Baptizing sick and dying Infants,' Glasgow, 1760, and on 'Regeneration,' 1761. Soon arose a burning question among Liverpool presby-

terians in reference to a form of prayer. At length a section of the Liverpool laity, holding what they termed 'free' views in theology, built a chapel in Temple Court, printed a 'Form of Prayer and a new Collection of Psalms,' 1763, and secured a minister from London. The leading spirit in this movement was Thomas Bentley (1731–1780) [q. v.], Wedgwood's partner. His manuscript correspondence deals pretty freely with Brekell, whom he treats as representing 'the presbyterian hierarchy.' Brekell did all he could by pamphlets in 1762 to show the inexpediency of forms of prayer. The new chapel 'was sold to a Liverpool clergyman on 25 Feb. 1776.' Meantime Brekell was publishing a dissertation on 'Circumcision,' 1763, a volume of sermons, 'The Grounds and Principles of the Christian Revelation,' 1765, 8vo, and 'A Discourse on Music,' 1766. He died on 28 Dec. 1769. He married, on 11 Nov. 1736, Elizabeth ——, and had five children. Toulmin gives the titles of sixteen of his publications. To complete it should be added: 'All at Stake: or an Earnest Persuasive to a Vigorous Self-defence, &c. By J. B., author of the Christian Warfare, &c.,' Liverpool, 1745, 16mo (a sermon (Luke xxii. 36) dedicated 'more especially to the Gentlemen Volunteers of Liverpool, and the Regiment of Blues raised at their own expence by that Loyal Town and Corporation.' At the end is a warlike 'Hymn suitable to the Occasion of the general Fast to be observed with a view to the present War, both Foreign and Domestic'); also a 'Sermon (Phil. i. 11) on the Liverpool Infirmary,' 1769, 8vo (his last publication). The signature to his papers in the 'Theol. Repos.,' vol. i. 1769, and vol. ii. 1771, is 'Verus.'
